Central de Control SMARTGEN
Control con Arranque Automático por Fallo de la Red

DESCRIPCIÓN

Función

El modulo de control tipo SMARTGEN es una Central de Control con Arranque Automático por Fallo de la Red. Se utiliza para vigilar el suministro de la Red eléctrica y para arrancar un grupo electrógeno automáticamente en caso de fallo de la Red.
El estado del funcionamiento del grupo y condiciones de fallos son controlados a través de microprocesador y se indican en la pantalla LCD.
Esta unidad puede conectarse directamente a la central de control electrónico del motor a través del puerto J1939 CANBUS dando esta información del estado del motor en su display.
En función AUTOMATICO, la central controla el voltaje de la red, el arranque o parada del grupo electrógeno así como la transferencia de carga.
Los fallos están divididos en dos categorías: avisos y alarmas, cada uno de los cuales tiene valores de medida programados por separado pudiendo dar avisos de fallo remoto (

Programación

Los temporizadores y alarmas seleccionadas poden ser alteradas por el operador desde la frontal por medio de pulsadores. Se puede programar el sistema completo por medio de una interfase tipo 810 y un PC. Esta interfase también facilita el diagnostico de la operación en tiempo real y es posible controlar la operación desde un PC localmente por cable hasta 100 metros.

# 2 DESCRIPCIÓ I FUNCIONALITATS DEL SISTEMA AIRVOICE SMART

## 2.1 AirVoice Smart Megafonia I CCTV

El sistema de megafonia i CCTV AirVoice Smart de ADTEL, consta d'una base de control local i un conjunt de dispositius de seguretat distribuïts per la zona a cobrir. Per a la comunicació entre aquests punts (Punt Remot i Base) es fa servir infraestructura de cable i alimentació 230Vca., d'aquesta manera es donarà cobertura pràcticament a la totalitat del àrea d'interès.

## Aplicaciones: Prestaciones de alta gama para entornos monofásicos de hasta 3 kVA

Las posibles pérdidas originadas por un fallo en el suministro eléctrico en los sistemas IT son la suma del tiempo de inactividad provocado por el propio corte, el tiempo necesario para restablecer el normal funcionamiento del sistema y los posibles daños ocasionados al hardware de red. Asimismo, muchas otras perturbaciones (microcortes, oscilaciones de tensión, variaciones de frecuencia, armónicos, ráfagas de transitorios,...) pueden afectar al correcto funcionamiento de los entornos IT.

## ESTABILITZADORS DE TENSIÓ ELECTRÒNICS

## RE: La regulació electrònica més ràpida i precisa del mercat

En l'entorn electrònic actual, saturat i altament inestable on les fluctuacions en la tensió de subministrament són més que freqüents, els estabilitzadors de tensió desenvolupen un paper importantíssim a l'hora de garantir una tensió estable en aquelles càrregues més sensibles a aquestes variacions.

La sèrie d'estabilitzadors electrònics **RE** de SALICRU, basats en una estructura completament estàtica, d'alt rendiment, gran velocitat de resposta i excel·lent precisió de sortida, es fabrica en configuració monofàsica o trifàsica i en un rang de potències que va des dels 300 VA fins als 150 kVA.

Els equips trifàsics estan concebuts amb una regulació totalment independent per fase, amb la finalitat d'evitar eventuals problemes de regulació a causa de desequilibris en les càrregues. A més, els equips incorporen un bypass estàtic que garanteix el subministrament en cas d'una eventual avaria.

## PRESTACIONS

- Regulació ultra ràpida: Velocitat de resposta inferior als 100 ms.
- Control i test de tots els paràmetres mitjançant un microprocessador per fase.
- Estructura completament estàtica, sense elements mòbils, major fiabilitat.
- Bypass estàtic, càrregues sempre alimentades.
- En els equips trifàsics, regulació independent per fase, immune als desequilibris.
- Precisió de sortida millor del 2%.
- Marges de regulació d'entrada del 15%, de sèrie.
- Rendiment superior al 97%.
- Voltímetre de sèrie a partir de 6 kVA-trifàsic o 15 kVA-monofàsic.
- Commutador de voltímetre de sèrie en equips trifàsics.
- Transformador separador o d'ultra aïllament a la sortida de l'equip.(1)
- Interface a relés.(1)
- Proteccions de tensió màxima i mínima.(1)

## APLICACIONS: Processos industrials assegurats

Són molts els processos industrials on l'estabilitat de la tensió és indispensable: des d'un ampli ventall d'aplicacions on els processadors de control numèric i els autòmats són els encarregats de garantir el resultat final, fins a tot tipus de centres de càlcul, perifèrics informàtics, equips de transmissió i comunicacions, equips de laboratori, etc.

# 1 Introducció

Al present annex es recullen tots els càlculs relatius a les instal·lacions elèctriques que formen part del conjunt de les obres que componen aquest projecte.

La instal·lació elèctrica es separa en dues parts, mitja tensió i baixa tensió.

## 1.1 Mitja tensió

El punt de connexió a la xarxa de distribució serà al tram de LAMT "FCBARCEL.1" que correspon a una línia de mitja tensió, per tant per la nova extensió de línia fins al punt de consum es requereix la col·locació d'un centre de transformació (CT).

De conformitat amb el que disposa la legislació vigent, els treballs que afecten a les instal·lacions de la xarxa de distribució en servei, hauran de ser realitzats per la companyia distribuïdora, Endesa Distribución Eléctrica S.L., en la seva condició de propietària d'aquestes xarxes i per raons de seguretat, fiabilitat i qualitat del subministrament, a cost del contractista.

Per altra banda, segons el que indica l'article 25.3 del Real Decret 1048/2013, els treballs necessaris per la nova extensió de línia poden ser executats per qualsevol empresa instal·ladora legalment autoritzada o per l'empresa distribuïdora (ENDESA).

En aquest projecte s'ha demanat a l'empresa distribuïdora el projecte de connexió a la xarxa de distribució i extensió de la línia. Tenint en compte que aquesta última té dues parts, des del punt de subministrament fins al CT amb mitja tensió i des del CT a la Caixa General de Protecció (CGP) amb baixa tensió.

Es pot veure aquest projecte a l'annex 16. Escomeses de serveis.

## 1.2 Baixa tensió

La línia de baixa tensió es pot diferenciar en tres parts:

- Del CT a la CGP: executat per empresa distribuïdora
- De la CGP al transformador (quadre elèctric): executat pel contractista d'acord al plànol 7.2 del DOCUMENT 2. PLÀNOLS
- Del transformador a tots els equips i il·luminaries de la instal·lació: que es detallen els càlculs al següent apartat.

# 2 Càlculs elèctrics de la instal·lació

A l'hora de realitzar els càlculs s'ha tingut present la legislació vigent per a les instal·lacions en baixa tensió, recopilada en el Reglament Electrotècnic de Baixa Tensió (R.E.B.T.) i Instruccions Complementàries, que fa menció en cada cas als valors a calcular (coeficients, valors màxims, etc..), depenent de si les línies són trifàsiques o monofàsiques.

A més, aquest reglament també marca la pauta a seguir a l'hora de l'execució de la instal·lació amb els diferents tipus de materials i premisses adequades a cada situació.

## 2.1 Intensitat màxima admissible

La intensitat ve determinada per la fórmula següent i és determinant a l'hora de calcular la secció del conductor. Es basa en las instruccions MI-BT-004, MI-BT-007 i MI-BT-017, depenent del tipus de muntatge que es realitzi i de l'aïllament del conductor:

$I = P / (\sqrt{3} \cdot V \cdot \eta \cdot \cos\varphi)$ per a corrent trifàsica

$I = P / (V \cdot \eta \cdot \cos\varphi)$ per a corrent monofàsica

On:

I, és la intensitat, en Ampers,

P, és la potència, en Watts,

V, és la tensió aplicada, en Volts,

Cos φ, és el factor de potència.

η, és el rendiment.

## 2.2 Caiguda de tensió

Per a calcular la caiguda de tensió s'utilitza la fórmula següent, obtenint-se com a resultat un valor en tant per cent (%) que no pot ser superior a 3 en el cas de receptors de llum, i a 5 en els de força.

$e = (P \cdot L \cdot 100) / (K \cdot V^2 \cdot S)$ per a corrent trifàsica

$e = (P \cdot L \cdot 200) / (K \cdot V^2 \cdot S)$ per a corrent monofàsica

On:

e, és la caiguda de tensió, en %,

P, és la potència, en Watts,

V, és la tensió aplicada, en Volts,

L, és la longitud, en metres

K, és una constant (56 per a coure i 35 per a alumini),

S, és la secció del cable, en $mm^2$

### 2.3 Conductors de protecció

Per al càlcul d'aquests conductors s'apliquen les instruccions MI-BT-003 i MI-BT-017 a partir del conductor actiu, tant per al conductor neutre como de protecció.

### 2.4 Coeficients correctors

Es tindran en compte a l'hora de fer els càlculs, uns coeficients correctors determinats pel R.E.B.T., i que s'han d'aplicar en cada cas depenent del tipus d'instal·lació, conduccions, receptors, etc...

- Secció de conductors que alimenten motors: $I_{càlcul} = 1,25\ I$
- Cables de 0,6/1kV: $I_{càlcul} = 0,8\ I$

### 2.5 Grau de protecció

El grau de protecció dels materials per a les característiques específiques d'aquest projecte seran les següents:

- IP-XX7, per als tubs
- IP-X4X, per a la aparamenta

### 2.6 Taula de resultats

Es presenta a continuació una taula dels resultats dels càlculs realitzats per a la línia elèctrica, d'acord a la configuració que es reflexa als plànols unifilars (veure Document nº 2: Plànols).

# 1. Introducció

S'exposen a continuació les fases d'actuació previstes per a l'acabament de les obres d'ampliació del canal així com els processos constructius corresponents.

Les fases es poden trobar detallades també al plànol 4.2 del Document 2. Plànols

# 2. Fases de l'obra

## 2.1 Fase 1. Neteja i formació de la mota

La fase 1 correspon a la neteja dels sediments acumulats al canal i a la formació de la mota.

Els sediments acumulats al canal s'aniran acumulant, mitjançant una pala carregadora, al pericó de comportes. Una part d'aquests sediments seran utilitzats per la formació d'una mota que servirà per mantenir la zona de treball de la fase 2 seca.

La mota serà executada per una pala carregadora i una retroexcavadora. Mentre que els sediments sobrants seran extrets amb la retroexcavadora bivalva.

*Figura 1. D'esquerra a dreta: Pala carregadora, retroexcavadora i retroexcavadora bivalva*

## 2.2 Fase 2. Instal·lació d'equips nous dins el pericó de comportes

La fase 2 correspon a la instal·lació d'equips dins el pericó de comportes. Aquesta zona es mantindrà seca gràcies a la mota provisional realitzada durant la fase 1.

La reixa automàtica i la comporta s'instal·laran amb un camió grua, així com el previ desmuntatge de la gàbia i reixa manual que hi ha actualment.

*Figura 2. Camió grua*

La resta d'actuacions de la fase 2 que són la instal·lació d'una escala de pates, escala limnimètrica, boia i sensor de nivell es faran amb una escala manual i les eines corresponents.

Cal tenir en comptes que durant la fase 2, les comportes romandran obertes i s'abocarà aigua al riu, per tant, és de vital importància que s'avisi a l'explotador de la potabilitzadora de Sant Joan Despí dels dies que tindran lloc les obres, ja que la qualitat d'aigua del riu es pot veure afectada.

## 2.3 Fase 3. Eliminació de la mota

Un cop finalitzades les actuacions al pericó de comportes, s'eliminarà la mota. Per extreure els sediments s'utilitzarà, igual que a la fase 1, una retroexcavadora bivalva.

Un cop s'elimini la mota, es baixaran les comportes i l'aigua abocarà al riu, mitjançant el tub del Governador, aigües avall de la potabilitzadora de Sant Joan Despí.

## 2.4 Fase 4. Instal·lació d'equips fora del pericó de comportes

Es comptarà amb un camió grua per la instal·lació dels equips fora del pericó de comportes: cinta transportadora (vis sense fi), sistema de megafonia i vídeo així com el manteniment dels eixos de les comportes.

En aquesta fase també s'inclou la reparació dels actuadors de les comportes.

## 2.5 Fase 5. Actuacions en caseta

Les actuacions a la caseta elèctrica consisteixen en el manteniment i actualització del grup electrogen, realització d'una sortida de fums i la reparació de l'esquerda.

També s'inclou en aquesta fase l'actualització del quadre i el cablejat elèctric.

## 2.6 Fase 6. Escomesa elèctrica

L'escomesa elèctrica des del punt de subministrament fins a la Caixa General de Protecció l'executa l'empresa distribuidora Endesa.

Des de la Caixa General de Protecció fins a la caseta elèctrica, s'executarà com a part del cablejat elèctric de la fase anterior.

### 2.7 Fase 7. Creació de pendent al muret

Aquesta fase consisteix en la creació d'un perfil tipo *Creager* al muret per tal que aquest sigui utilitzat com a sobreeixidor de la cambra de càrrega. Aquest perfil es realitzarà amb formigó en massa col·locat amb bomba.

### 2.8 Fase 8. Instal·lació d'una valla perimetral

A tot el traçat del canal de descàrrega es col·locarà una valla de fusta així com cartells d'advertència.

Les bases de la valla de fusta seran de formigó i aquest s'abocarà directament de la formigonera o camió formigonera.

### 2.9 Fase 9. Desbrossada

Els laterals del canal es desbrossaran mitjançant una desbrossadora.

## 3. Explotació durant l'obra

Durant la fase d'obra, un cop instal·lada la reixa automàtica de gruixuts, el contractista s'haurà de fer càrrec de l'operació i manteniment d'aquesta reixa fins la finalització de les obres.

Serà necessari que, mitjançant un grup electrogen, l'accioni almenys un cop el dia per retirar el sòlids que hi pugin quedar atrapats per tal que la infraestructura funcioni correctament i no afecti la captació aigües avall del riu Llobregat.

Caldrà també que s'ocupi de la gestió dels residus extrets, si fos necessari.

# 1 Introducció

En aquest annex es detallen les expropiacions a realitzar per la instal·lació de l'escomesa elèctrica.

Es distingeix en dos tipus d'afeccions:

- Expropiació de ple domini: es realitzarà en els terrenys que queden permanentment afectats per l'execució de les obres del present projecte. Es considera expropiació la zona on es situarà el centre de transformació.
- Ocupació temporal: franges del terreny que resulten estrictament necessàries ocupar per a portar a terme la correcta execució de les obres durant un espai de temps determinat. Es considera ocupació temporal ambdós costats de la zona d'expropiació, de forma que quedi una zona de pas amb espai suficient per moviments de maquinaria.

Les expropiacions i ocupacions temporals es detallen al plànol número 9 del DOCUMENT 4 d'aquest projecte.

# 2 Parcel·les afectades

Per la instal·lació de l'escomesa elèctrica i el centre de transformació es veuen afectades les parcel·les que es detallen a continuació:

| Nº polígon | Nº parcel·la | Expropiació ($m^2$) | Servitud ($m^2$) | Ocupació temporal ($m^2$) |
|---|---|---|---|---|
| 9 | 71 | 46 | 0 | 88 |

La resta de terrenys afectats per les obres d'execució del projecte ja estan expropiades a l'empara del "Projecte d'ampliació del canal lateral de l'A2 des de la Riera de Sant Just al Riu Llobregat" amb clau G-AA-00008.

El detall de la parcel·la afectada es troba a l'Apèndix I d'aquest document.

# 3 Valoració de les expropiacions

El cost d'expropiacions ascendeix a CINQUANTA-SIS EUROS AMB CINQUANTA-TRES CÈNTIMS (56,53€).

# 4 Relació de Bens i Drets

A continuació s'indica la relació detallada d'afectats indicant la superfície d'expropiació i ocupació temporal:

# 5 Serveis afectats

Durant les obres, la qualitat d'aigua del riu es pot veure afectada per l'obertura de comportes. En conseqüència es podria veure afectada la captació d'aigua de riu per la ETAP de Sant Joan Despí.

Caldrà establir uns protocols entre l'empresa adjudicatària del projecte i Aigües de Barcelona per l'obertura de comportes i per tant, l'abocament de l'aigua del canal al riu.

## SUBMINISTRAMENTS INDIVIDUALS SUPERIORS A 15 kW

**Industrials, Comercials i de Serveis**

**Sol·licitant:** AGENCIA CATALANA DE L'AIGUA **REFERÈNCIA:** 603104

**Adreça:** PE EL PLÀ, POL 9 - PCL 9015 **Població:** SANT JOAN DESPÍ **Data:** 18/01/2019

## INSTRUCCIONS GENERALS

### · CARACTERÍSTIQUES GENERALS

· Tensió nominal de la instal·lació 400/230 V en trifàsic.
· Factor de potència 1 (a efectes de càlcul).
· Valor màxim previst del corrent de curtcircuit de la xarxa de baixa tensió 10 kA.

### · EMBRANCAMENT

L'embrancament es farà d'acord amb el Reglament Electrotècnic de BT vigent i la Norma Tècnica Particular de FECSA ENDESA.

### · CAIXA GENERAL DE PROTECCIÓ

La CGP s'instal·larà en el límit de la propietat, sobre la façana de l'edifici o a la tanca d'una posella o en el mateix recinte on s'instal·li el conjunt de mesura. En tots els casos seran llocs de lliure i permanent accès. La seva situació es fixarà en comú acord entre la propietat i FECSA ENDESA. El tipus de la CGP, així com el calibre dels fusibles, seran indicats per FECSA ENDESA.

### · CONJUNT DE PROTECCIÓ I MESURA

Quan la CGP no formi part del Conjunt de Mesura es denominarà CM, quan hi formi part es denominarà CPM. Aquest conjunts estaran constituits per mòduls prefabricats de material aïllant de classe tèrmica A, com a mínim segons Norma UNE 21305, formant globalment, un conjunt de doble aïllament. Compliran tot el que sobre el particular s'indica en la Norma UNE-EN 60439-1-3. Tindran les condicions de resistència al foc d'acord amb la Norma UNE-EN 60695-2-1 (Sèrie). Les tapes seran de material transparent resistent a les radiacions UV. Un cop instal·lats tindran un grau de protecció IP43 segons UNE 20324 i IK09 segons UNE-EN 50102. Els mòduls estaran dotats de ventilació i seran precintables. Els conjunts de mesura d'un corrent assignat superior a 630 A, s'integraran en armaris metàl·lics.
Constarà de les següents unitats funcionals: unitat funcional de CGP, unitat funcional de transformadors de mesura, unitat funcional de comprovació, unitat funcional de interruptor de protecció i intensitat regulable i unitat funcional de dispositius de sortida.
El CPM o CM s'instal·larà a l'exterior, s'ubicarà a l'interior de recintes destinats únicament a aquest fi, en llocs de lliure i permanent accès des del carrer. La seva situació es fixarà de comú acord entre la Propietat i FECSA ENDESA. Per determinar les dimensions del recinte on s'instal·li el CPM o CM es tindrà en compte la superficie ocupada per les unitats funcionals, i es deixarà una separació entre parets laterals i sostre respecte al terra serà com a mínim de 0,4 m i l'espai lliure davant del CPM o CM no serà inferior a 1,10 m. Es desitjable que els quadrants de lectura estiguin a 1,70 m per damunt del terra. No obstant això, aquesta alçada podrà reduir-se a 1,15 m o augmentar-se a 1,80 m en cas justificat.

### · QUADRE DE COMANDAMENT I PROTECCIÓ

Els dispositius generals de comandament i protecció (protecció contra sobrecàrregues i curtcircuits, contactes directes i indirectes i sobretensions), se situaran com més a prop possible del punt d'entrada de la derivació individual al local o habitatge de l'usuari. Quan calgui, al costat del Quadre de Comandament i Protecció, inmediatament al davant d'aquest, es col·locarà una caixa o mòdul per a la instal·lació de l'ICP-M. Aquesta caixa o mòdul podrà estar integrada al mateix Quadre General de Protecció formant un compartiment independent separat físicament i precintable.

### · INTERRUPTOR DE CONTROL I INTENSITAT REGULABLE

Els interruptors fins a 63 A, hauran de satisfer les condicions fixades en la Norma UNE 20317. Els de corrent assignat superior compliran el que està indicat en la Norma UNE EN 60947-2 i disposaran de relés tèrmics regulables entre el 80% i el 100% del seu corrent assignat. La regulació dels relés de protecció i els borns de connexió seran precintables. El comandament exterior serà bloquejable. L'acció del bloqueig, en posició connectat o desconnectat, serà executable a criteri del client o usuari.

### · CONDUCTORS

Els conductors que enllacin la CGP amb el EM i el CM amb el quadre privat de comandaments i protecció seran de coure, unipolars i aïllants de tensió de 0,6/1 kV. Seran no propagadors de l'incendi i amb emissió de llums i opacitat reduïdes. S'allotjaran a l'interior de tubs aïllants. Els conductors dels circuits secundaris seran de coure, de classe 5 segons Norma UNE EN 60228, dúna tensió de 450/750 V. La secció dels circuits de corrent serà de 4 mm2 i la de tensió de 1,5 mm2. Per a la seva identificació, els colors de les cobertes seran negre, marró i gris per a les fases i blau clar per al neutre.

### · TERRES

La instal·lació de posada a terra es farà d'acord al que s'indica en la ITC-BT-18 del Reglament Electrotècnic de Baixa Tensió. Caldrà preveure sobre el conductor de terra i en lloc accessible, un dispositiu que permiti mesurar la resistència de la presa de terra.

### · OBSERVACIONS

Aquest informe queda sense efecte quan es produeixin modificacions al Reglament Electrotècnic de BT vigent que afectin al seu contingut, així com un cop passat tres mesos des de la seva data d'emissió.

# 1. Antecedents i objecte del document

## 1.1. Antecedents

Al 1995 la Junta d'Aigües va encarregar un projecte anomenat "*Projecte de desguàs del Canal lateral de l'autopista A-2 des de la Riera de Sant Just al riu Llobregat*". Aquest canal pretén donar solució al correcte drenatge de les rieres laterals del marge esquerre del Llobregat, entre els municipis de Molins de Rei i Sant Just Desvern, eliminant les afeccions produïdes per la seva interrupció arran de la construcció de l'autopista A2, que provoca un efecte dic en el desguàs de les rieres esmentades al riu Llobregat.

Més tard, l'any 2002, l'Agència Catalana de l'Aigua va encarregar un estudi de viabilitat del projecte que dictamina la necessitat de la redacció d'un nou projecte per tal d'actualitzar les dades. Aquest va ser adjudicat a Proyectos y Servicios, S. A. anomenant-se "*Projecte d'ampliació del canal lateral de l'A2 des de la riera de Sant Just fins al riu Llobregat*" i formava part d'un conjunt de quatre actuacions a realitzar per tal de millorar la capacitat hidràulica del canal lateral de l'autopista A2 i la capacitat de desguàs del canal cap al Riu Llobregat. El projecte fou redactat el gener de 2004. L'apartat 9 de la memòria del projecte esmentava les afeccions a llera pública i a espais d'interès natural:

> *"Segons la llei 6/2001, de 8 de maig, de modificació del Reial Decret Legislatiu 1302/1986 de 25 de juny, sobre avaluació d'impacte ambiental, s'indica en l'article 1 que s'hauran de sotmetre a avaluació d'impacte ambiental els projectes, públics o privats, consistents en la realització d'obres, instal·lacions o qualsevol altra activitat compresa en l'Annex I d'aquest Reial Decret. El projectes que es trobin continguts en l'Annex II s'hauran de sotmetre a avaluació en la forma prevista en aquesta disposició quan així ho decideixi l'òrgan ambiental en cada cas.*
>
> *L'obra objecte de projecte no es troba en cap dels apartats de l'Annex I ni de l'Annex II Grup 7 Projectes d'enginyeria hidràulica i de gestió de l'aigua, per tant, no és necessària avaluació d'impacte ambiental.*
>
> *Quant als impactes previsibles, les aigües que circulen pels canals seran en la pràctica totalitat aigües pluvials. S'han instal•lat dispositius de retenció per tal de retenir els materials gruixuts en les reixes de l'obra de sortida.*
>
> *Per últim, no existeixen zones d'interès natural catalogades en l'àmbit del projecte".*

Aquesta millora que preveia el projecte al tram final del canal, entre d'altres, es va començar a executar al 2008 però no es va arribar a finalitzar.

Per aquest motiu, aquest any 2018 s'ha licitat el present "*Projecte d'acabament de les obres d'ampliació del canal lateral de l'A2 des de la riera de Sant Just al riu Llobregat*", adjudicat a PROTECMED.

## 1.2. Objecte del Document Ambiental

L'objecte del Document Ambiental és la descripció i avaluació preliminar dels impactes ambientals vinculats al projecte, en aquest cas "l'*acabament de les obres d'ampliació del canal lateral de l'A2 des de la riera de Sant Just al riu Llobregat*", i així determinar les mesures preventives i correctores que minimitzin l'impacte ambiental associat.

La normativa actualment vigent en el tràmit de l'avaluació d'impacte ambiental de projectes és la *Llei 21/2013, de 9 de desembre, d'avaluació ambiental*. El tràmit queda regulat per a diferents tipus de projectes, tant de l'Annex I com de l'Annex II, així com en aquells que puguin afectar a espais naturals protegits.

Segons la dimensió de les actuacions projectades (amb una ubicació molt concreta), el seu objectiu (millora de les instal·lacions bàsicament en la zona de comportes d'un projecte del 2004 gairebé ja executat) i la situació (fora dels espais naturals protegits, Xarxa Natura 2000 i àrees protegides per instruments internacionals, segons la regulació de la Llei 42/2007, de 13 de desembre, del patrimoni natural i de la biodiversitat), el projecte no s'inclouria dins els supòsits d'Avaluació d'Impacte Ambiental, segons la *Llei 21/2013, de 9 de desembre, d'avaluació ambiental*. Sí cal dir, no obstant, que l'àmbit d'actuació se situa dins el Parc Agrari del Baix Llobregat, per la qual cosa caldrà atendre a les mesures que implanti l'òrgan gestor.

No obstant l'anterior, el projecte, essent el promotor l'Agència Catalana de l'Aigua, caldrà que incorpori un Document Ambiental (el present document) que segueix les directrius establertes a les "*Normes de redacció de projectes. Estructura i contingut dels projectes en suport digital*", editat per l'Agència Catalana de l'Aigua el 15 de març de 2018, en concret la pàgina 27 del document. La pàgina 27 de les normes de l'ACA detallen el contingut del Document Ambiental:

> *1) Descripció ambiental de l'àmbit d'actuació.*
>
> *2) Descripció dels aspectes ambientals a considerar durant la fase d'obra i explotació, si s'escau.*
>
> *3) Identificació dels impactes més crítics d'acord els següents punts:*

## 2. Descripció ambiental de l'àmbit d'actuació

El projecte s'engloba dins les instal·lacions del canal lateral de l'A2 en el terme municipal de Sant Joan Despí, dins de la comarca del Baix Llobregat, municipi situat al Pla del Llobregat, a l'esquerra del riu. El límit del terme municipal confronta amb els de Sant Feliu de Llobregat, Sant Just Desvern, Esplugues de Llobregat, Cornellà de Llobregat, Sant Boi de Llobregat i Santa Coloma de Cervelló. El cens de població consta de 33.502 habitants (2016) i l'extensió del municipi és de 6,39 km².

Els principals eixos viaris de la zona corresponen a la carretera B23 i el Cinturó del Litoral (Autopista A2), ambdues són vies d'entrada a Barcelona, molt transitades, a més de les dues línies ferroviàries de RENFE i d'Alta velocitat. En general la zona està dominada per la forta pressió industrial, urbana i les grans infraestructures viàries.

Al terme es distingeixen clarament dos tipus de territori: per una banda hi ha les terres fèrtils al·luvials, situades a banda i banda del riu Llobregat, molt productives agrícolament. I de l'altre es descriu la regió planera situada al peu del massís de Collserola, formada per l'acumulació de materials, arrossegats per torrents i rius, i prèviament arrencats a la muntanya pels efectes de l'erosió, aquesta zona és la que correspon al samontà. En aquest context la zona àmbit del projecte es situa a la zona al·luvial, la qual correspon a la vall baixa del Llobregat, que orientada de NW a SE a poca distància desemboca al Mediterrani

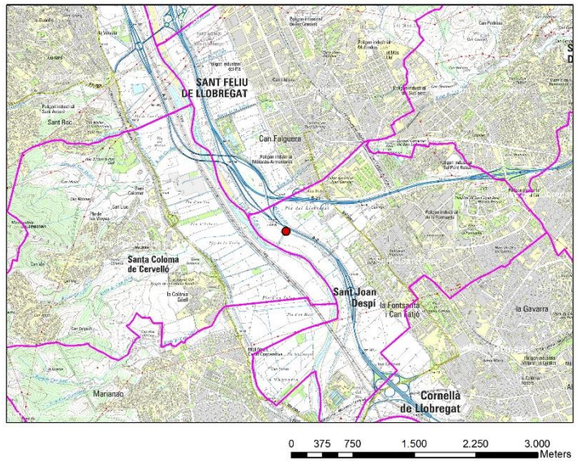

**Figura 1. Emplaçament sobre base topogràfica 1:5.000 i ortofotomapa 1:5000. Font: ICC.**

La zona on es concentra la present avaluació es situa al Nord-oest del municipi de Sant Joan Despí, a la zona coneguda com el Pla del Llobregat, en la qual hi ha una concentració de diferents infraestructures com la ronda Litoral A2, el camí lateral de la Ronda Litoral Oest i el canal Col·lector que en aquest punt transfereix les seves aigües al Llobregat.

La zona en concret correspon al tram que afecta el Canal Lateral de la Autopista A-2 i el desguàs del canal lateral cap el riu Llobregat. Les coordenades UTM de referència de la zona àmbit del projecte (punt mig de l'obra) són:

UTM X: 419793 / UTM Y: 4580224 i Z (m): 15,82

Els accessos fins a la zona són: des de la AP7, cal agafar la sortida 606 des de E-90/A2 en direcció Molins de Rei, fins a Sant Joan Despí, seguir per la carretera BV-2001, fins a les rotondes que ens permeten accedir al camí de la Moixeta del Parc Agrari del Baix Llobregat, a través del qual arribarem fins al canal Col·lector, al costat de la zona de pícnic de la riera Pahissa. El punt en concret es situa a uns 20 metres de l'A-2 i a 180 metres del Llobregat.

## 3.1. Climatologia

A Sant Joan Despí el clima és temperat i càlid. La classificació del clima de Köppen-Geiger és Csa. La temperatura mitjana anual és de 16,6°C, essent el mes més calorós el juliol, amb una mitjana de 24.2°C. Les temperatures mitjanes més baixes de l'any es produeixen al gener, al voltant de 9.8°C. La variació de les temperatures durant tot l'any és de 14.4°C. La temperatura mitjana presenta la típica distribució mediterrània.

Les precipitacions mitjanes són de 607 mm/any, la major quantitat de precipitació es dóna a l'octubre, amb una mitjana de 91 mm, mentre que al juliol la mitjana és de 25 mm. La precipitació varia 66 mm entre el mes més sec i el mes més humit.

Aquestes condicions climàtiques són molt indicades per als cultius que es produeixen majoritàriament al delta i la vall baixa: horta i fruiters a l'aire lliure i cultius protegits..

## 3.2. Qualitat de l'aire

D'acord amb l'estudi "*Delimitació de zones de Qualitat de l'Aire (ZQA)*" de la Generalitat de Catalunya, Sant Joan Despí pertany a la **Zona 1: Àrea de Barcelona.**

COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA

- **Condicions de dispersió:** Aquesta zona és una plana litoral situada entre mar i muntanya, afectada principalment pel règim de brises.
- **Emissions:** Nivells alts d'emissions difuses provinents del trànsit urbà i interurbà i de les d'activitats domèstiques. La IMD de les principals vies interurbanes es caracteritza per ser arreu superior a 20.000 vehicles per dia. No existeixen vies interurbanes amb trànsit escàs o moderat. Hi ha trams amb IMD superior a 100.000 vehicles per dia. Gran concentració d'àrees industrials (Zona Franca, Besòs, Baix Llobregat…). D'acord amb el catàleg d'activitats potencialment contaminants de l'atmosfera (CAPCA), a un 90% de municipis d'aquesta zona hi ha activitats industrials de tipus A o B per la qual cosa una gran part del territori d'aquesta zona es pot veure afectada per les fonts de tipus industrial. Hi ha un predomini dels focus de tipus B respecte als de tipus A.

En la següent figura es presenta la delimitació abans esmentada en el municipi de Sant Joan Despí:

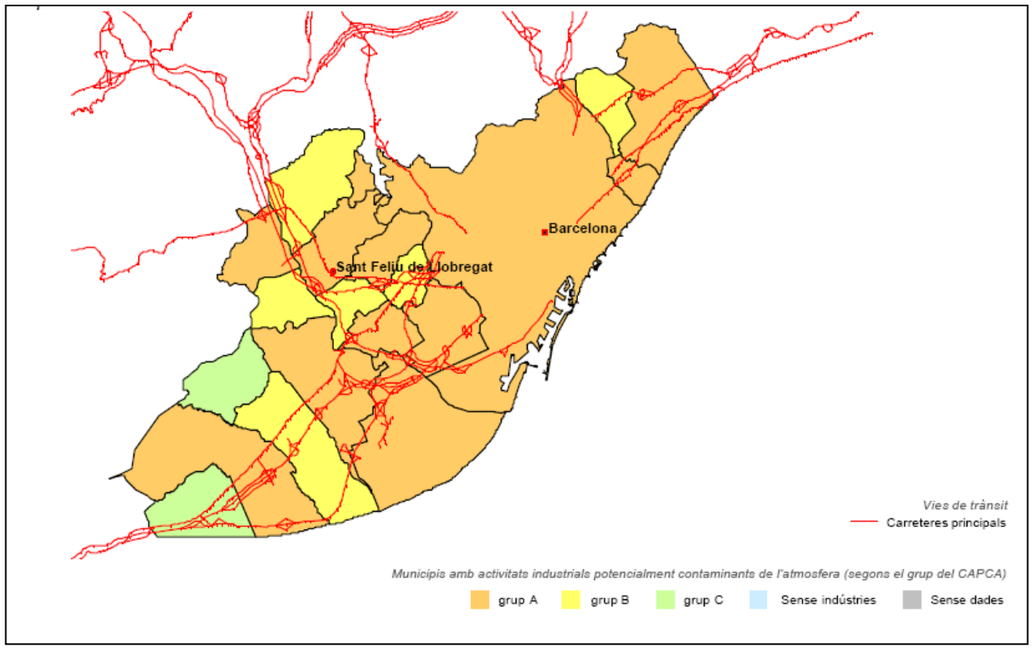

**Figura 5. Municipis de la Zona 1 amb activitats potencialment contaminants. Font: Delimitació de zones de Qualitat de l'Aire (ZQA) - DTS.**

En aquesta zona, la Xarxa de Vigilància i Previsió de la Contaminació Atmosfèrica (XVPCA) disposa de 30 punts de mesura, 2 dels quals es troben propers a l'àrea d'estudi:

| ZQA 1: Àrea de Barcelona | | | |
|---|---|---|---|
| **MUNICIPI** | **UBICACIÓ** | **AUTOMÀTICA** | **MANUAL** |
| St. Feliu de Llobregat | CEIP Martí i Pol | NOx, $SO_2$ | PM10, PM2.5 |

**Figura 6. Punts de mesura en la Zona 1 (actualitzat a 24/05/2018). Font: Departament de Territori i Sostenibilitat**

A partir de les dades obtingudes en l'any 2017 en els diferents punts de mesura de la **Zona 1**, es realitza una valoració general:

- A la Zona de Qualitat de l'Aire 1, Àrea de Barcelona, els nivells de qualitat de l'aire mesurats pel diòxid de sofre, el monòxid de carboni, les partícules en suspensió de diàmetre inferior a 10 micres, les partícules en suspensió de diàmetre inferior a 2.5 micres, el benzè i el plom són inferiors als valors límit legislats aplicables per a l'any 2017.
- Pel que fa als nivells mesurats d'arsènic, cadmi, níquel i benzo(a)pirè, no s'han superat els valors objectius establerts a la legislació.
- Respecte a l'ozó troposfèric, no s'ha detectat cap superació del llindar d'informació horari a la població ni del llindar d'alerta. Per altra banda, no s'ha produït cap superació del valor objectiu per a la protecció de la salut humana. En relació al valor objectiu per a la protecció de la vegetació s'ha superat a les estacions de Gavà (parc del Mil·leni) i Viladecans (Atrium).
- Finalment, per complir el Reial decret 102/2011, de 28 de gener, relatiu a la millora de la qualitat de l'aire, s'ha portat a terme la determinació de precursors de l'ozó troposfèric al punt de mesurament de Barcelona (Sants).
- En relació amb el diòxid de nitrogen, el nombre d'estacions en les quals hi ha hagut superació del valor límit anual per a la protecció de la salut humana ha estat a 3 de les 18 estacions considerades per l'avaluació d'aquesta zona, que representa un 17%. Les superacions s'han donat a les estacions de Barcelona (Gràcia-Sant Gervasi), Barcelona (Eixample) i Barcelona (Poblenou).
- D'altra banda, s'ha complert l'objectiu de qualitat de l'aire horari (la normativa permet superar el valor límit de 200 µg/m3 fins a 18 en un any). Les superacions puntuals del

agrícoles forestals COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

valor límit horari de 200 µg/m3, s'han produït en 4 ocasions en un únic punt de trànsit de la zona.

- Per tal de restablir els nivells de qualitat de l'aire en relació amb el diòxid de nitrogen i partícules en suspensió de diàmetre inferior a 10 micres, el Govern de la Generalitat va redactar el "Pla d'actuació per a la millora de la qualitat de l'aire a les zones de protecció especial de l'ambient atmosfèric, horitzó 2020", en què s'inclouen mesures que impulsen, incentiven i afavoreixen una nova visió de la mobilitat a la vegada que es treballa conjuntament i de manera coordinada amb els agents responsables d'executar les mesures.
- D'altra banda, el 6 de març de 2017 es va aprovar l'acord polític per a la millora de la qualitat de l'aire a la Conurbació de Barcelona. L'Acord polític és el marc d'actuació establert per les diferents administracions implicades (Estat, Generalitat, Àrea Metropolitana de Barcelona i els diferents ajuntaments afectats) que ha de permetre definir un nou model de mobilitat sostenible, desenvolupant les accions i mesures del "Pla d'actuació per a la millora de la qualitat de l'aire, horitzó 2020" i que tenen com a objectiu principal la millora de la qualitat de l'aire, actuant en quatre línies estratègiques:
    - La renovació del parc de vehicles.
    - La identificació dels vehicles.
    - La gestió de la mobilitat.
    - La restricció amb alternatives.
- Pel que fa a l'avaluació dels nivells de la resta de contaminants, d'acord amb l'inventari d'emissions i les condicions de dispersió de la zona, s'estima que els nivells compleixen els objectius de qualitat de l'aire establerts a la normativa vigent.
- Sant Joan Despí se situa dins la Delimitació territorial de la zona de protecció especial de l'ambient atmosfèric respecte a diferents contaminants.

Segons la informació que facilitat el mateix web de l'**Ajuntament de Sant Joan Despí**, els principals contaminants que afecten la qualitat de l'aire a la ciutat són:

- El **diòxid de nitrogen (NO2)**. Les principals fonts emissores són el trànsit i la indústria. Aquest contaminant té efectes sobre la salut en forma d'inflamació de les vies respiratòries i reducció de la funció pulmonar.
- Les **partícules en suspensió**. Les principals fonts emissores són el trànsit, la indústria i les emissions domèstiques. L'exposició prolongada a aquestes partícules augmenta el risc de patir malalties cardiovasculars, respiratòries i càncer de pulmó. Les partícules de mides petites (de fins a 2,5 micres) tenen un impacte superior ja que penetren en els alvèols pulmonars.

A l'Àrea Metropolitana de Barcelona (AMB) es produeixen superacions de les concentracions de partícules en suspensió (PM2,5/PM10) i de diòxid de nitrogen (NO2).

A banda de l'avaluació contínua que fan l'AMB i la Generalitat, l'Ajuntament de Sant Joan Despí instal·la periòdicament unitats mòbils de vigilància de la contaminació atmosfèrica a diferents ubicacions de la ciutat per tal d'avaluar la qualitat de l'aire. Els resultats d'aquestes mesures (dades de l'any 2014) conclou que les estacions fixes de la XPVCA properes a St. Joan Despí, i les mesures de PM10 fetes al municipi amb equipaments mòbils al llarg dels últims anys, presenten la tendència generalitzada i significativa, a partir de 2010, de disminuir els valors d'aquest contaminant indicador de la qualitat de l'aire. I que els valors de partícules menors de 10 micres (PM10), obtinguts al captador situat al pati de la Policia-ASP (Av. Barcelona 41-45) estan per sota dels valors límits establerts per la legislació (Expedient: 2012/1728 Estudi de partícules PM10 a Sant Joan Despí. Diputació de Barcelona OTAGA, 2014).

### 3.3. Contaminació acústica

D'acord amb la *Llei 16/2002 i el Decret 176/2009 qual s'aprova el Reglament de la Llei, amb protecció contra la contaminació acústica*, els ajuntaments tenen l'obligació d'elaborar un mapa de capacitat acústica, que estableixi els nivells de immissió a les zones urbanes, els nuclis de població i, si cal, en el medi natural, mitjançant l'establiment de les zones de sensibilitat acústica que determinen els objectius de qualitat. La Llei 16/2002 estableix com a mínim les següents zones:

- **Zona de sensibilitat acústica alta (A)**: comprèn els sectors del territori que requereixen una protecció alta contra el soroll.
- **Zona de sensibilitat acústica moderada (B)**: comprèn els sectors del territori que admeten una percepció mitjana del soroll.
- **Zona de sensibilitat acústica baixa (C)**: comprèn els sectors del territori que admeten una percepció elevada del soroll.

Els valors límits d'immissió per a les zones descrites es presenten en la següent figura:

**Figura 7. Zonificació acústica del territori i valors límit en funció dels usos del sòl. Font: Departament de Territori i Sostenibilitat.**

Sant Joan Despí disposa del **mapa de capacitat acústica** (publicat al BOPB del 05/08/2011), que és l'instrument que estableix la zonificació acústica del territori i els valors límit d'immissió d'acord amb les zones de sensibilitat acústica. Aquest mapa fixa els objectius de qualitat acústica per a cada zona del territori i per a tres períodes temporals diferenciats: de dia, al vespre i a la nit, tot incorporant també els usos del sòl. Alhora, el mapa de capacitat acústica determina quins són els límits màxims que han de complir les activitats a l'exterior i les infraestructures.

El municipi disposa d'un **Pla d'Acció de Soroll 2013-2018**, el qual parteix dels resultats dels mapes de soroll realitzats i proposa accions per tal de millorar la qualitat acústica d'aquells indrets amb nivells més alts de soroll i per tal de preservar els espais que gaudeixen d'una bona qualitat acústica.

La zona àmbit del projecte se situa fora de la zona de cartografia acústica, donat que està a l'extraradi de la zona urbanitzada (sòl no urbanitzada) i el mapa estratègic de soroll serveix per avaluar l'exposició de la població al soroll produït per diferents tipus de fonts en una zona determinada.

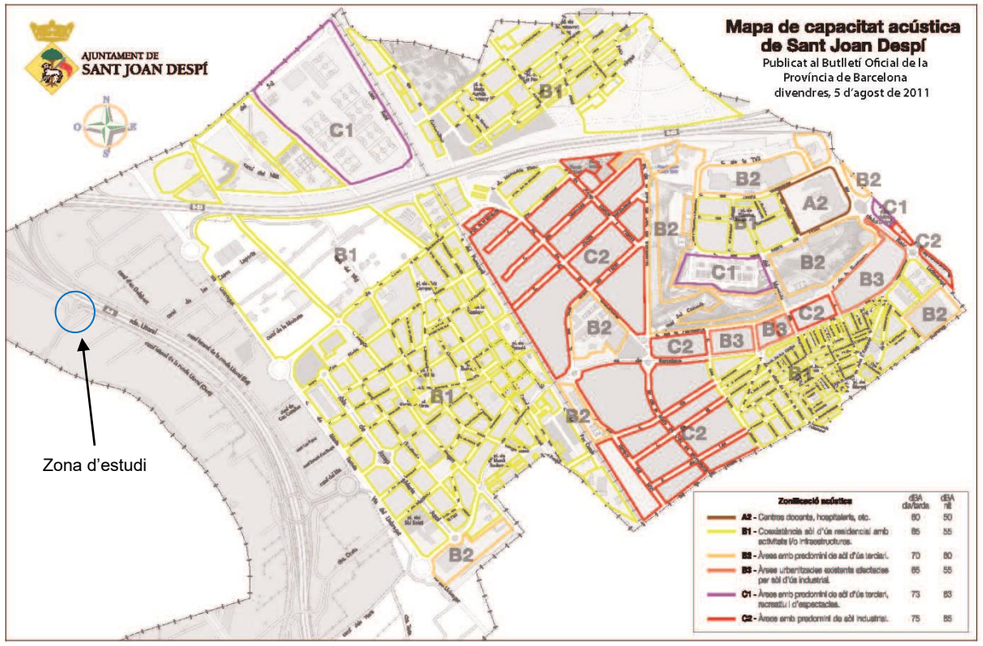

**Figura 8. Mapa de capacitat acústica de Sant Joan Despí. Font: web Ajuntament de Sant Joan Despí.**

En base al mapa de capacitat acústica de Sant Joan Despí, s'estima que l'àmbit del projecte forma part d'una zona acústica assimilable al **C3 (sensibilitat acústica baixa)**, ja que és una àrea afectada per un sistema general d'infraestructura de transport (autovia A-2).

Tanmateix, el pas de l'autovia per la zona de comportes no està protegida per barreres acústiques, ja que no cal protegir-les del soroll.

Tanmateix, la *Directiva 2002/49/CE del Parlament Europeu i del Consell sobre avaluació i gestió del soroll ambiental* va definir el mapa estratègic de soroll, per poder avaluar globalment l'exposició al soroll en una zona determinada, a causa de l'existència de diferents fonts de soroll, o per poder realitzar prediccions globals per a aquesta zona. Per tant, és un instrument dissenyat per avaluar l'exposició al soroll, és a dir, és diferent al que s'ha denominat com a mapa de soroll o mapa de nivells sonors.

Per tant, els mapes estratègics de soroll contenen informació sobre nivells sonors i sobre la població exposada a determinats intervals d'aquests nivells de soroll, a més d'altres dades exigides per la Directiva 2002/49/CE i la Llei estatal del soroll.

El Ministeri de Foment del Govern Espanyol va elaborar el mapa estratègic de soroll de l'autovia A-2 entre juny del 2012 i juny del 2017. Segons el mapa, lògicament la zona d'estudi es troba **dins la zona d'afecció**, aproximadament sobre la isòfona de 75 dB.

## 3.4. Contaminació lluminosa

El principal objectiu d'aquest apartat ha de ser garantir el compliment de la *Llei 6/2001, de 31 de maig, d'ordenació ambiental de l'enllumenat per a la protecció de medi nocturn i del Decret 190/2015, de 25 d'agost,* que desenvolupa aquesta llei. A part de la llei i del decret que la desenvolupa, la normativa de referència sobre la contaminació lluminosa és el *Reial Decret 1890/2008, de 14 de novembre, pel qual s'aprova el Reglament d'eficiència energètica en instal·lacions d'enllumenat exterior i les seves instruccions tècniques complementàries EA-01 a EA-07*, especialment el que estableix la instrucció tècnica ITC-EA-03.

D'acord amb el mapa de la protecció envers la contaminació lluminosa aprovat recentment per la Generalitat de Catalunya (2018), l'àmbit estudiat es troba íntegrament en **zona de protecció alta (E2).** Les zones E2, amb una protecció alta de la contaminació lumínica, són les àrees que el planejament urbanístic classifica com a sòl no urbanitzable fora de les zones E1, i també les àrees que els ajuntaments han proposat d'augmentar-ne la protecció dins el seu terme municipal.

Per facilitar el compliment de la llei vigent, es presenta a continuació la taula de prevenció de la contaminació lluminosa i els valors d'il·luminació, en el cas del projecte cal tenir en compte les determinacions de la zona E2:

Làmpades Tipus II. Llums que tinguin menys del 5% de radiància per sota dels 440 nm, dins el rang de longituds d'ona comprès entre 280 i 780 nm. En el cas de LED, han de tenir menys del 15% per sota dels 500 nm.

Làmpades Tipus III. Llums que tinguin menys del 15% de radiància per sota dels 440 nm, dins el rang de longituds d'ona comprès entre 280 i 780 nm.

Els llums han de complir amb el percentatge de radiacions electromagnètiques establertes anteriorment. En el cas de no poder justificar documentalment aquest percentatge, s'accepten les llums que emeten llum de temperatura de color igual o inferior a 3.000 K com tipus II, i com a tipus III els llums amb temperatura de color superior a 3.000 K i igual o inferior a 4.200 K. en tots els casos es pot utilitzar una tipologia de làmpada establerta per a zones de protecció més elevada.

Totes les llums que s'instal·lin en l'enllumenat exterior han de ser de classe d'eficiència energètica A, A + o A ++ i complir amb les restriccions de mercuri de les directives de la Unió Europea, amb l'excepció de les làmpades instal·lades en enllumenats de seguretat, senyals i anuncis lluminosos i en l'enllumenat nadalenc.

En el cas que, per les exigències funcionals de la instal·lació hagin d'utilitzar làmpades diferents a les anteriors, es tindran en compte les millors tecnologies disponibles en eficàcia energètica i d'acord amb l'art. 9.d) de la Llei 6/2001, de 31 de maig, d'ordenació ambiental de l'enllumenat per a la protecció del medi nocturn, emetran preferentment en la zona de l'espectre visible de longitud d'ona llarga.

* La luminància emesa per l'enllumenat exterior comercial i publicitari en funció de la zona de protecció contra la contaminació lumínica en la qual està ubicat i la seva superfície (S) ha de ser inferior al nivell més restrictiu que li correspongui.

** En el cas d'il·luminació per realçar elements singulars de la superfície de façanes o monument s'apliquen els valors de luminància màxima. L'enllumenat exterior ornamental es mantindrà apagat en horari de nit.

Actualment, no hi ha enllumenat públic ni d'emergència a la instal·lació objecte del projecte.

### 3.5. Geologia

Des del punt de vista geològic la zona es situa dins la plana al·luvial i deltaica del Llobregat, formada per dipòsits sedimentaris del Quaternari (Holocè). Fisiogràficament aquesta zona deltaica es situa dins de les conegudes com depressions litorals del Sistema Mediterrani, la qual, en aquest sector, s'obre pas entre la Serralada Litoral pròpiament dita, quedant al marge nord del delta el bloc de la serra de Collserola i, al sud el massís del Garraf.

Litològicament la zona es situa sobre els materials quaternaris formats de sorres, graves, llims i materials fins que el riu Llobregat transporta i va depositant. Els dipòsits fluvials s'obren pas, gràcies al camí excavat pel riu Llobregat, entre dos grans blocs que formen part de la Serralada Litoral: la serra de Collserola, al Nord-est, constituïda principalment per materials pissarrosos

d'edat paleozoica, i el massís del Garraf al Sud-oest, format per terrenys calcaris mesozoics, principalment del Cretaci.

Geomorfològicament la zona constitueix el tram final de la vall del riu Llobregat, cap a la sortida de les poblacions de Molins de Rei i Sant Feliu de Llobregat, on es desenvolupa el conegut delta del Llobregat, en el context del qual l'àmbit d'actuació ocuparia la posició del marges interior d'aquest delta.

En el context de la zona d'estudi apareixen els dipòsits típicament al·luvials format per:

- **Dipòsits al·luvials**: localitzats principalment als marges i a la llera actual del riu Llobregat. Es tracta de dipòsits formats per graves i sorres, en algunes ocasions, amb nivells superficials de materials fins.
- **Dipòsits de transició**: el trànsit entre els dipòsits al·luvials anteriors i els típicament deltaics es produeix gradualment, de manera que existeix una zona de trànsit entre els dos ambients, continental i marí. Litològicament aquesta zona està constituïda per una alternança de nivells granulars de sorres i graves de característiques semblants a les anteriors.
- **Dipòsits deltaics**: a grans trets, el delta està format per dos nivells de sediments detrítics, separats per una intercalació de tipus llim-argila. En el nivell detrític superior predominen les sorres, aquest nivell està cobert per una capa edàfica o per materials aportats de reblert. Per sobre d'aquest apareix un nivell lenticular llimós-argilós d'origen fluviodeltaic, que correspon a la zona de prodelta.

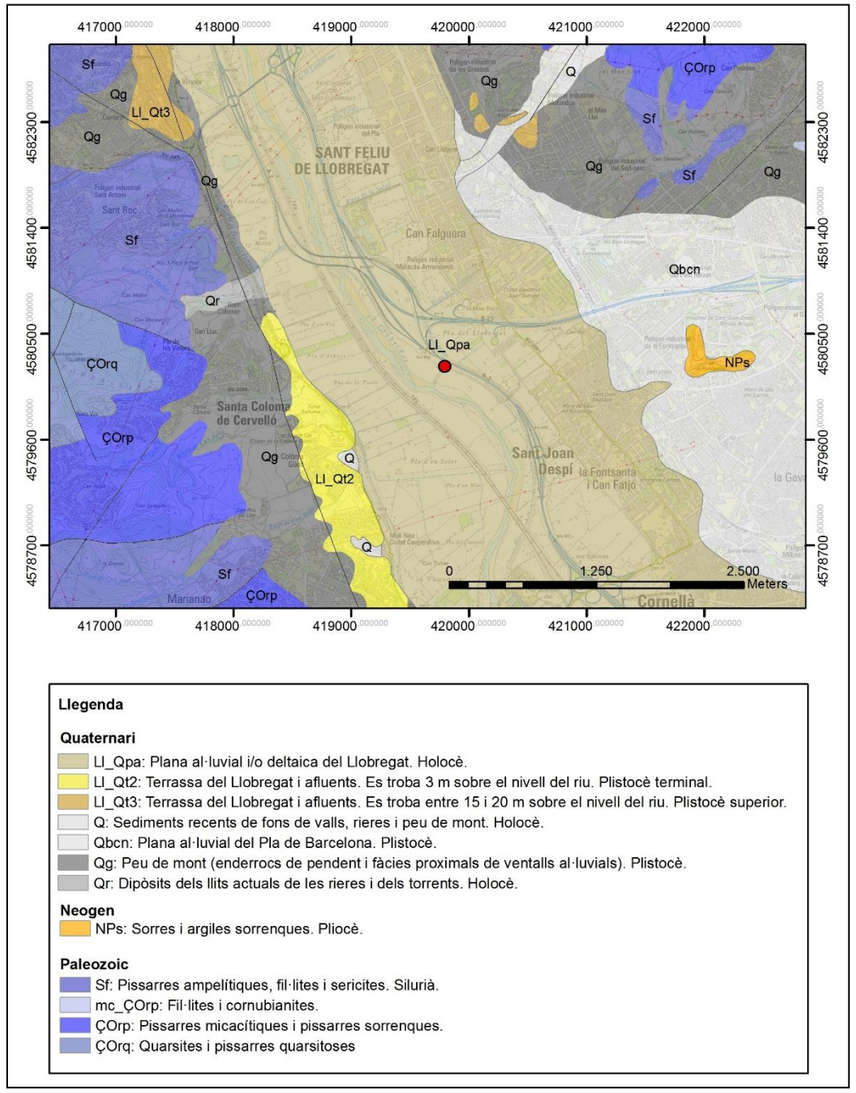

**Figura 12. Mapa geològic de la zona. Font: Pròpia i ICGC (cartografia geològica 1:50.000).**

Segons l'informe geotècnic dut a terme (GEOPAYMA SA, 2003) es pot confirmar que a la zona on es pretén dur a terme l'obra la successió de materials és la següent:

- **Nivell R:** reblert i terreny vegetal, que pot oscil·lar entres 0,7 a 1,2 m. Aquests corresponen als materials de reblert per la construcció del camí lateral al canal i estan formats de runes diverses (maons, plàstics, etc), sorres, llims, graves i blocs.

- **Nivell AL:** sorres llimoses o llims sorrencs de color marró. Per sota de la unitat anterior assoleix una profunditat màxima de 3,5 m. Correspon a un nivell al·luvial format de graves llimoses, llims sorrencs, poc compactes, amb graves heteromètriques i algun bloc.
- **Nivell AG:** sorres de tonalitats gris o blau. Situada estratigràficament per sota de l'anterior i fins a una profunditat de 4m (límit de les observacions efectuades). Litològicament es tracta d'un nivell al·luvial format per unes sorres de gra mig a fi de tonalitat gris, de poc a mitjanament compacte, amb graves i gravetes heteromètriques i poligèniques subarrodonides i amb algun bloc. En profunditat augmenta el contingut en graves.

### 3.6. Hidrografia i hidrologia

Des del punt de vista hidrogràfic la zona se situa en la conca del riu Llobregat. De fet, el projecte es desenvolupa en l'ampliació del canal lateral de l'A-2 des de la Riera de Sant Just fins el Riu Llobregat, per tant, en el canal Col·lector que porta aigua fins a la llera del riu Llobregat. Aquest canal recull les aigües de les conques urbanes de Molins de Rei, Sant Feliu de Llobregat i Sant Just Desvern, desembocant al riu Llobregat a través d'un pericó de sortida, que el separa del canal de descàrrega al riu, situat sota una obra de fàbrica de l'autopista, al seu enllaç amb la Ronda Litoral, al terme municipal de Sant Joan Despí. La xarxa fluvial forma part de la part baixa de la conca hidrogràfica del riu Llobregat, dins del propi delta que a poca distància, uns 11 km aproximadament, desemboca les seves aigües al mar Mediterrani.

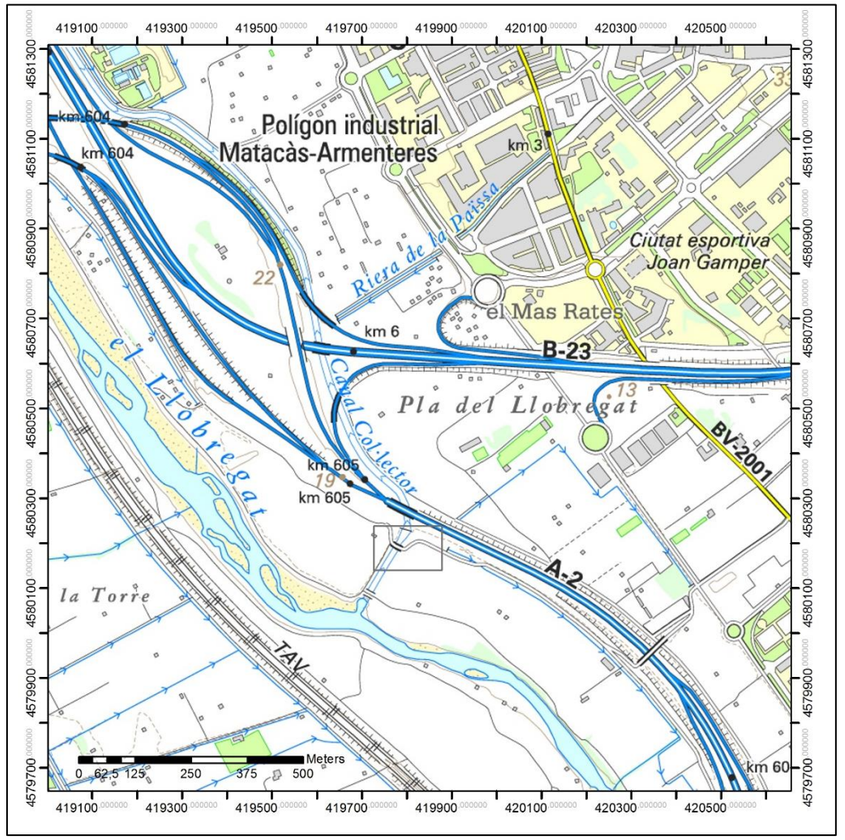

**Figura 13. Distribució de la xarxa hídrica superficial. Font: Pròpia i ICGC (1:25.000)**

Segons el Mapa d'Àrees Hidrogeològiques de Catalunya 1:250.000 (ICGC), la zona objecte d'anàlisi correspon:

- **Àrea Hidrogeològica**: Àrea fluviodeltaica del Llobregat. Sector quart. Àrees fluviodeltàiques costaneres. Dipòsits de fons de vall, al·luvials, deltaics i de planes costaneres.
- **Demarcació hidrogràfica**: conques internes de Catalunya.
- **Tram de riu afectat**: El Llobregat, des de la confluència de la riera de Rubí fins a Sant Joan Despí.
- **Formació hidrogeològica**: Formacions de graves, sorres i llims quaternaris.
- **Massa d'aigua**: Cubeta de Sant Andreu i vall Baixa del Llobregat.

- **Característiques de l'aqüífer**: correspon a un aqüífer al·luvial, porós, per tant de porositat intergranular, en medi al·luvial-col·luvial, de tipus lliure.
- **Característiques de l'aqüífer**: correspon a un aqüífer al·luvial, porós, per tant, de porositat intergranular, en medi al·luvial-col·luvial, de tipus lliure. Els materials que conformen l'aqüífer corresponen a: graves, sorres, llims i argiles. Corresponen a la Terrassa 1 del Llobregat. Edat: Holocè. Componen un medi granular, heterogeni amb predomini de graves, que passen progressivament en sentit vertical a llims. Es tracta d'un medi granular permeable, amb valors entre $10^{-3}$ i $10^{2}$ m/dia. Aqüífer de regular a bo.
- L'àmbit del projecte i el conjunt del terme municipal de Sant Joan Despí no es troba sobre zona vulnerable per nitrats, d'acord amb la legislació vigent en la matèria.

### 3.8. Vegetació i Hàbitats

El treball de camp sobre terreny ha permès descriure la vegetació diversa i els hàbitats presents en l'àmbit del projecte i voltants.

Herbassars (espai lliure d'arbres, amb paviment, al marge de la llera)

- **Descripció**: és l'hàbitat principal dels terrenys dels voltants de la llera on es volen dur a terme les obres de millora de la instal·lació. L'estrat herbaci és de tipus espontani amb plantes oportunistes després de l'ocupació dels terrenys al llarg dels últims anys. Apareixen principalment: canyes, herbassar amb vegetació ruderal, alguns matolls de ginesta i cards.

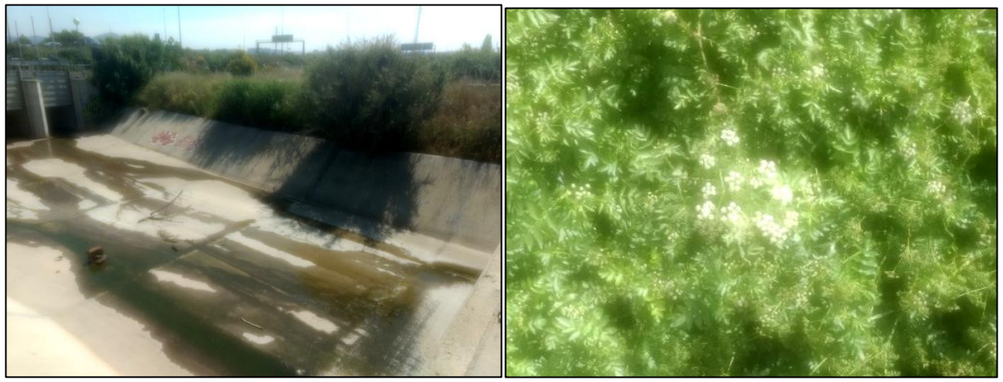

**Figura 16. Imatges de la vegetació ruderal que envolta la instal·lació. Font: pròpia**

- **Arbres i arbustos**: sense arbres i arbustos, exceptuant un exemplar de figuera (*Ficus carica*) que creix al límit sud de la instal·lació, però amb un estat de conservació dolent.

**Figura 17. Imatge de la figuera a tocar la instal·lació. Font: pròpia**

- La zona **no està inclosa dins de la cartografia d'hàbitats d'interès comunitari** (Annex I de la *Directiva 92/43 / CEE, modificada per la Directiva 97/62 / CE*), tot i que cal remarcar que el Llobregat al seu pas a 170 metres de la zona de projecte, sí està catalogat dins de l'hàbitat de "Riu mediterrani amb vegetació de Glaucioni flavi". Les comportes se situen entre un espai urbà amb vegetació ruderal inclosa, una zona de conreu abandonada i una zona de fruiters, principalment de regadiu.

### 3.9. Fauna

L'entorn on s'engloba l'actuació no acull fauna d'interès, ja que les espècies que es poden trobar en l'àmbit són de tipus generalista.

Tampoc la zona s'inclou dins de les zones de protecció per a l'avifauna, àrees de prioritàries de reproducció, alimentació, dispersió i concentració d'aus amenaçades o àrees d'interès faunístic i florístic. La zona no està dins de cap àrea catalogada com d'interès faunístic i florístic.

### 3.10. Paisatge

A nivell de planificació, a l'àmbit metropolità està aprovat el Catàleg de Paisatge de la Regió Metropolitana de Barcelona, mitjançant *Edicte de 15 de gener de 2015, sobre una resolució del conseller de Territori i Sostenibilitat d'aprovació definitiva del Catàleg de Paisatge de la Regió Metropolitana de Barcelona*, i que afecta al municipi de Sant Joan Despí.

L'àmbit d'estudi se situa a la Unitat del Paisatge de la **Vall Baixa del Llobregat** (codi 10), que es caracteritza pels següents trets:

- Vall del tram baix del Llobregat, encaixada entre les muntanyes predominantment forestals de Collserola i Ordal. S'estén des del congost de Martorell fins que el riu s'obre en un ventall deltaic, a l'alçada de Sant Boi de Llobregat.
- El Llobregat se situa al bell mig de la vall i està canalitzat per prevenir inundacions i permetre el pas d'infraestructures diverses. La vegetació natural al voltant del riu és escassa.
- És significativa la presència de camps de fruiters al fons de la plana al·luvial, un parcel·lari agrari característic de regadiu que es beneficia dels dos canals laterals del s.XIX (de la Infanta i Dreta del Llobregat), a partir dels quals les sèquies reguen els camps per gravetat.
- La construcció de nombroses infraestructures lineals al fons de vall (autovies, tren d'alta velocitat, conductes de gas, col·lector de salmorres, etc.) ha malmès molts camps i ha reduït força l'àmbit fluvial.
- Pobles tradicionalment localitzats a la línia de contacte del pla amb la muntanya, que han crescut cap amunt dels vessants i també han ocupat una important superfície de la plana al·luvial, sobretot amb polígons industrials. Dos fronts urbans continus a cada samontà, que pràcticament en la seva totalitat interrompen el contacte físic entre la vall i les muntanyes del voltant.

De l'avaluació del paisatge i l'anàlisi DAFO cal destacar:

**Debilitats**

- Abandonament de conreus a causa d'expectatives urbanístiques.
- Valoració creixent dels conreus i del riu, ja que bona part de la població de la Vall Baixa del Llobregat no ha valorat els conreus (del Parc Agrari o dels vessants d'Ordal o de Collserola) o el riu, i de fet hi ha viscut d'esquena.

COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA
Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

- Gran concentració de polígons industrials i comercials, amb una manca evident d'integració paisatgística i alt grau d'exposició visual, que condiciona en bona part la percepció que es té de la unitat.
- Gran concentració d'infraestructures viàries i ferroviàries en una vall estreta i tancada.
- Pràctica compleció dels continus urbanitzats a banda i banda de la vall.
- Aïllament del Parc agrari del Baix Llobregat respecte als espais naturals protegits de Collserola i Muntanyes d'Ordal.

**Amenaces**

- Pas de noves infraestructures de mobilitat i de serveis, amb afecció de sòl i servituds afegides.
- Els creixements urbanístics previstos s'han de fer amb la màxima integració paisatgística possible, i aprofitar els seus espais lliures i equipaments, per donar continuïtat als espais oberts.

**Fortaleses**

- La major part del fons de vall de la Vall Baixa és inundable, per tant, segons la legislació urbanística, en principi no pot ser urbanitzable.
- Existència del Parc agrari del Baix Llobregat, que en principi és garantia del manteniment i desenvolupament de les activitats agràries a l'àmbit territorial que li és propi.
- Existència d'uns sòls agraris molt productius, amb diverses collites anyals en el cas de l'hortalissa, que donen lloc a uns conreus de qualitat i que potencialment són apreciats i valorats com a frescos i de proximitat per un mercat molt nombrós.
- Creixement de les explotacions amb producció ecològica o integrada.
- Existència del Consorci de Recuperació i Conservació del riu Llobregat, que ha invertit en el riu i el seu entorn immediat, millorar-ne la qualitat paisatgística.

**Oportunitats**

- Previsible millora progressiva de la qualitat de les aigües del riu Llobregat, dels seus afluents i dels canals de regadiu.
- Previsible augment de les polítiques de marca dels productes agraris de qualitat, que motivaran que els productes de la Vall Baixa siguin cada vegada més reconeguts i identificables.
- El parc fluvial del Llobregat és una actuació a gran escala capaç de generar connexions entre els municipis d'ambdós costats de la vall fomentant la cohesió social.
- La millora de l'accés públic a l'espai fluvial del Llobregat comporta posar a l'abast de la població metropolitana un gran espai per al lleure, l'esbarjo i l'educació ambiental.

## 3.11. Usos del sòl

Segons el mapa de cobertes del sòl del CREAF (4a edició 2009), la zona de treball se situa en un espai classificat com canals artificials, el qual es troba voltat de zones de moviment de runes (color taronja), prats i herbassars, zones verdes viàries i la mateixa via asfaltada de les carreteres.

## 3.12. Planejament i figures de protecció

### 3.12.1 Pla Territorial Metropolità de Barcelona

L'Àrea Metropolitana de Barcelona comprèn les comarques del Barcelonès, Baix Llobregat, Maresme, Garraf, Vallès Occidental, Vallès Oriental i Alt Penedès.

El Pla Territorial Metropolità de Barcelona (PTMB), planejament territorial que afecta l'àmbit, fou aprovat definitivament pel Govern de la Generalitat mitjançant l'*Acord GOV/77/2010, de 20 d'abril* i publicat al DOGC núm. 5627 del 12/05/2010, i té com a objectiu bàsic definit la regulació dels usos del sòl a escala metropolitana, trencant el procés de dispersió de les zones urbanes i tendint cap a un model més compacte.

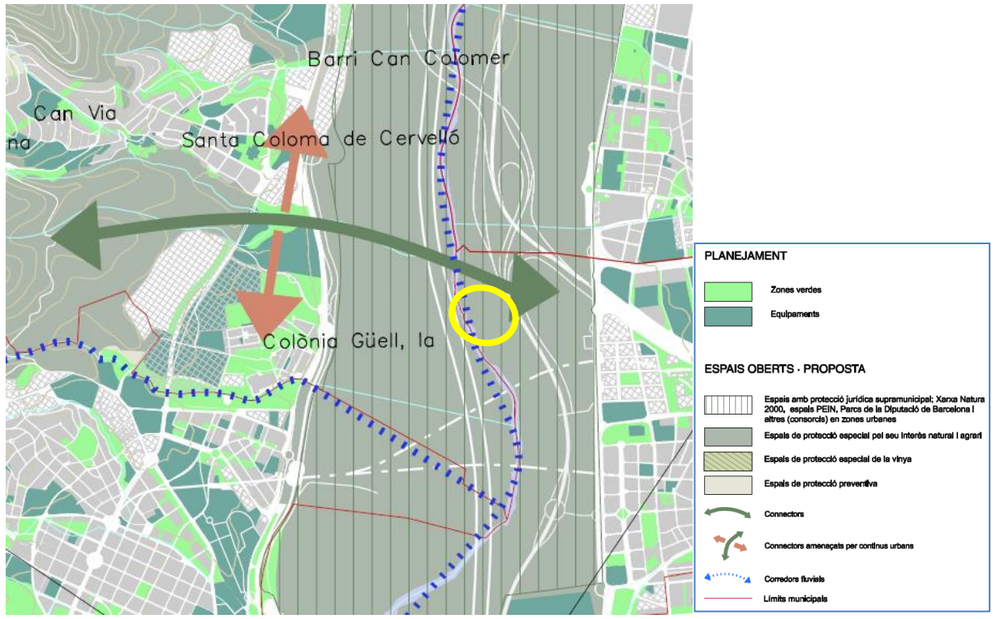

**Figura 20. Detall de la proposta d'espais oberts del PTMB. Font: Elaboració pròpia a partir del PTMB.**

El Pla zonifica el sòl objecte del pla especial com a **espais de protecció especial pel seu interès natural i agrari, amb protecció jurídica supramunicipal** (en aquest cas, dins els Parcs de la Diputació de Barcelona). A l'article 2.5, apartat 1 de la normativa territorial, indica que "*comprèn aquell sòl que, pels seus valors naturals i agraris o per la seva localització en el territori, el Pla considera que és el més adequat per a integrar una xarxa permanent i contínua d'espais oberts que ha de garantir la biodiversitat i vertebrar el conjunt d'espais oberts del territori amb els seus diferents caràcters i funcions. El sòl de protecció especial incorpora aquells espais que han estat protegits per la normativa sectorial com el Pla d'Espais d'Interès Natural i la Xarxa Natura 2000".*

L'article 2.6, apartat 2 indica que "*amb relació a les actuacions en sòl no urbanitzable que es poden autoritzar a l'empara de la legislació vigent, s'entén que els espais de protecció especial estan sotmesos a un règim especial de protecció i que són incompatibles totes aquelles actuacions d'edificació o de transformació de sòl que puguin afectar de forma clara els valors que motiven la protecció especial*".

Segons l'article 2.11, són de **tipus C, aquelles que són d'interès públic d'acord amb la legislació vigent**. "*comprèn les infraestructures i equipaments d'interès públic que han de situar-se en el medi rural, entre els quals, i als efectes de les determinacions d'aquest Pla territorial, es distingeixen: infraestructures lineals (C1) com carreteres, ferrocarrils, conduccions i altres elements significatius; elements d'infraestructures (C2) com parcs solars, parcs eòlics, antenes de telecomunicacions, **instal·lacions de tractament del cicle de l'aigua**, plantes de tractament de residus, i altres elements, així com elements d'equipament públic que la legislació urbanística no prohibeix en sòl no urbanitzable (C3) com cementiris, establiments penitenciaris i d'altres*".

Segons l'article 2.6.3 en els espais de protecció especial, només es poden autoritzar les següents edificacions de nova planta o ampliació de les existents:

"*b) Les edificacions i ampliacions que podrien ser admissibles d'acord amb el que estableix l'article 47 del Text refós de la Llei d'urbanisme, quan es compleixin les condicions i exigències que assenyalen els apartats 4, 5, 6 i 7 del present article per tal de garantir que no afectaran els valors que motiven la protecció especial d'aquests espais. Aquestes edificacions corresponen als tipus B i C de l'article 2.11.*

*Les edificacions que puguin derivar-se de plans i projectes que afectin de forma apreciable els espais que formen part de la Xarxa Natura 2000 han de ser avaluades atenent a les condicions legals específiques*".

Per això, l'article 2.6, apartat 6, indica que "*els nous elements d'infraestructures que s'hagin d'ubicar necessàriament en espais de protecció especial, com també la millora dels que hi ha en aquesta classe d'espais, han d'adoptar solucions que minimitzin els desmunts i terraplens, i han d'evitar interferir els connectors ecològics, corredors hidrogràfics i els elements singulars del patrimoni natural (hàbitats d'interès, zones humides i espais d'interès geològic) i cultural.*

COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA
Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

*L'estudi d'impacte ambiental, quan sigui requerit per la naturalesa de l'obra, ha de tenir en compte la circumstància de la seva ubicació en espais de protecció especial. Quan no es requereixi l'estudi d'impacte ambiental és preceptiva la realització, dins l'estudi d'impacte i integració paisatgística que disposen les Directrius del paisatge, d'una valoració de la inserció de la infraestructura en l'entorn territorial que expressi el compliment de les condicions esmentades sense perjudici del que s'assenyala a l'apartat 8*".

Tanmateix, el PTMB defineix el **corredor fluvial del Llobregat** i el **connector amenaçat per continus urbans entre Sant Feliu/Sant Just i Santa Coloma de Cervelló**.

**Figura 21. Detall del connector ecològic amenaçat prop de la zona d'estudi. Font: Elaboració pròpia a partir del PTMB.**

L'article 2.23, apartat 5 de la normativa del PTMB sobre Connectors ecològics, indica que: "*Els plans i projectes que afectin les àrees identificades com a punts crítics per la connectivitat a l'Informe de sostenibilitat ambiental, han de vetllar pel compliment de les propostes de protecció i millora de la connectivitat recollides a l'annex 2 de l'esmentat informe*". Pel que fa a l'Informe de Sostenibilitat Ambiental del PTMB, en el seu Annex 2, s'analitzen els **punts crítics per a la connectivitat ecològica** i la fitxa 10 analitza l'àmbit de Santa Coloma de Cervelló. Tot i que el projecte planteja una actuació molt puntual sobre la instal·lació del canal lateral, i tenint en compte la baixa afectació que pot tenir sobre un corredor biològic molt antropitzat, es creu oportú reproduir aquí les línies d'actuació que es plantegen per afavorir la permeabilitat entre la serra de Collserola i les serres del Baix Llobregat a través del riu, recolzant en la xarxa de rius i torrents i en les espais encara lliures que hi estan vinculats.

- *Mantenir lliure la faixa erma al voltant del torrent de can Miano i establir mesures per permeabilitzar la xarxa viària que la travessa (terme de Molins de Rei) per tal de millorar la seva funcionalitat com a corredor natural entre Collserola i el riu Llobregat.*
- *Revegetar alguns trams dels marges del riu Llobregat a fi de facilitar la millor permeabilitat entre la llera i les vores, atès que la làmina d'aigua circula a uns 4 m per sota les planes fluvials.*
- *Establir mesures per a permeabilitzar les tanques existents en les parcel·les agrícoles de la plana del Llobregat.*
- *Dissenyar un programa de recuperació de l'hàbitat de ribera de la riera de can Mallol, aprofitant el seu potencial climàcic i com a reservori de flora i fauna d'elevat interès natural, així com les de can Vià i can Julià.*
- *Habilitar una estructura (tipus passera pètria) a la llera del riu Llobregat (a l'alçada de Sant Vicenç dels Horts) que millorés la mobilitat d'algunes de les espècies animals. Aquesta actuació facilitaria que en els moments de mínim règim hídric del riu Llobregat s'incrementés la permeabilitat connectora d'aquest espai fluvial entre una riba i l'altra.*
- *Millorar el pas soterrat de la riera de can Mallol sota la via del tren i la zona industrial per fer-lo més funcional per al flux de fauna.*
- *Establir les mesures necessàries per a que les noves infraestructures facilitin la connectivitat ecològica.*

### 3.12.2 Parc Agrari del Baix Llobregat

El Parc Agrari del Baix Llobregat es troba en un context metropolità, formant part del sistema de grans espais naturals i agraris amb identitat geogràfica que envolten l'àrea central metropolitana de Barcelona. Les terres que formen l'àmbit actual del Parc Agrari es reparteixen en 13 municipis i quatre dels quals aporten més de les dos terceres parts de la superfície total. Entre

agrícoles forestals COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA Demarcació: Barcelona
VISAT: 2019/220098

els municipis es troben els terrenys de la plana al·luvial del Llobregat de Sant Joan Despí, objecte d'estudi.

El **Pla especial de protecció i millora** del Parc Agrari del Baix Llobregat és la figura cabdal de protecció del parc i la que determina bàsicament el règim de protecció i gestió actuals, en aplicació de la legislació urbanística. El Pla Especial va ser aprovat definitivament amb dates 17 de desembre de 2003 i 16 de juny de 2004, i publicada la seva publicació en el DOGC número 4.216 de 10 de setembre de 2004.

Amb data 18 de setembre de 2015 es va publicar també al DOGC núm. 6959 l'Aprovació definitiva de la **Modificació Puntual del Pla General Metropolità** en l'àmbit del Parc Agrari del Baix Llobregat, dels municipis de Castelldefels, Cornellà de Llobregat, el Papiol, el Prat de Llobregat, Gavà, Molins de Rei, Pallejà, Sant Boi de Llobregat, Sant Feliu de Llobregat, Sant Joan Despí, Sant Vicenç dels Horts, Santa Coloma de Cervelló i Viladecans i l'Aprovació definitiva de la **Revisió del Pla especial** de Protecció i millora del Parc agrari del Baix Llobregat al terme municipal de Castelldefels i 12 municipis més.

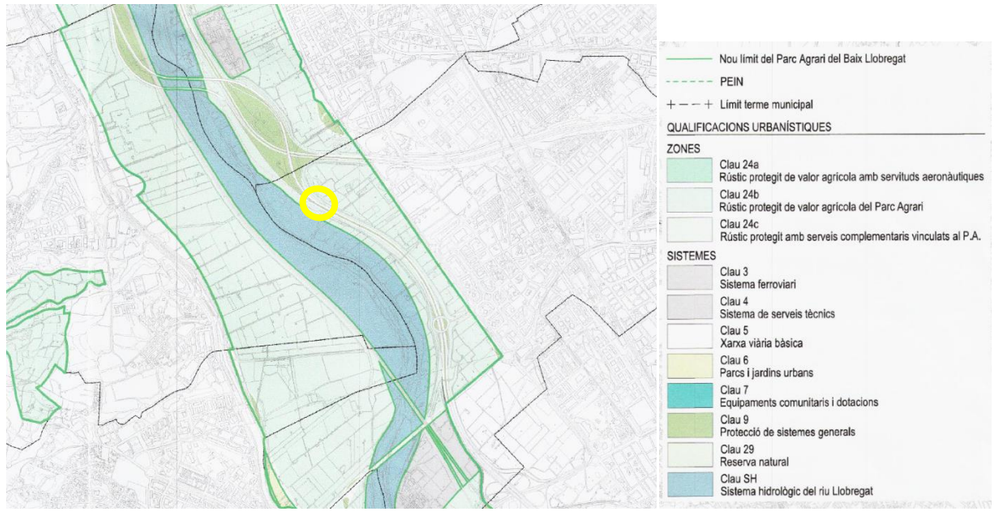

**Figura 22. Detall de la zonificació del Parc Agrari a la zona d'estudi. Font: Elaboració pròpia a partir del Pla Especial del Parc Agrari (DIBA).**

El Parc Agrari zonifica les comportes del canal lateral objecte del projecte, en coherència amb el planejament urbanístic vigent, com a **clau 24b (rústic protegit de valor agrícola del Parc Agrari)**.

Les definicions corresponents, tipus d'ordenació i condicions d'ús i edificació són les establertes en les Normes urbanístiques del Pla general metropolità, llevat de les precisions i ampliacions que s'esmenten tot seguit.

En primer lloc, l'article 25 de la normativa del Parc estableix que qualsevol afecció sobre les diferents xarxes bàsiques d'infraestructures de serveis dins el Pla Especial, hauran de complir amb les condicions establertes per la legislació sectorial.

L'article 31 del pla especial determina els usos admesos en clau 24b, entre els que hi ha els "*petits equipaments propis del Parc Agrari i infraestructures mediambientals i de xarxes de serveis que s'hagin d'emplaçar en el medi rural*".

L'article 50 estableix les determinacions per a la xarxa de reg i drenatge del Parc Agrari i que es considera d'interès públic pel Pla Especial:

"*1. La xarxa de reg i drenatge del Parc Agrari que està grafiada al plànol d'ordenació I.06 Jerarquia de la xarxa de reg i drenatge és considera d'interès públic per aquest Pla especial. En aquest sentit, la xarxa primària i secundària que la defineixen, no podran ser suprimides.*

*A més, caldrà tenir en compte que, atès que l'àmbit forma part d'una plana dèltica amb problemes de drenatge per manca de pendent, les actuacions hauran de mantenir el sistema natural de les escorrenties d'aigua per tal que els cursos d'aigua actuals no es vegin afectats pels canvis de superfície de recepció.*

*2. La gestió i modificacions d'aquesta xarxa aniran a càrrec de l'Agència Catalana de l'Aigua (d'ara endavant, ACA), en virtut de les seves competències, així com dels organismes reguladors competents en aquesta matèria. Les modificacions en la xarxa de reg i drenatge requeriran d'**informe previ i preceptiu de l'òrgan gestor del Parc Agrari***".

En aquest sentit, el Pla Especial preveu que el Consorci del Parc Agrari, com a òrgan gestor del Parc, haurà de promoure la redacció d'un Pla de gestió i desenvolupament dels recursos hídrics, amb la participació de tots el agents i administracions implicades.

### 3.12.3 Pla General Metropolità

A Sant Joan Despí hi regeix el **Pla General Metropolità d'Ordenació Urbana (PGM-76)**, aprovat per la Comisión Provincial de Urbanismo de Barcelona el 14 de juliol de 1976, l'objecte del qual és l'ordenació urbanística del territori que integrava l'anterior Entitat Municipal Metropolitana de Barcelona, i que comprenia un total de 27 municipis.

COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA
Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

El PGM ha rebut moltes modificacions puntuals, però la que ha afectat més és l'anteriorment esmentada MPPGM en l'àmbit del Parc Agrari del Baix Llobregat, publicat el 18 de setembre de 2015.

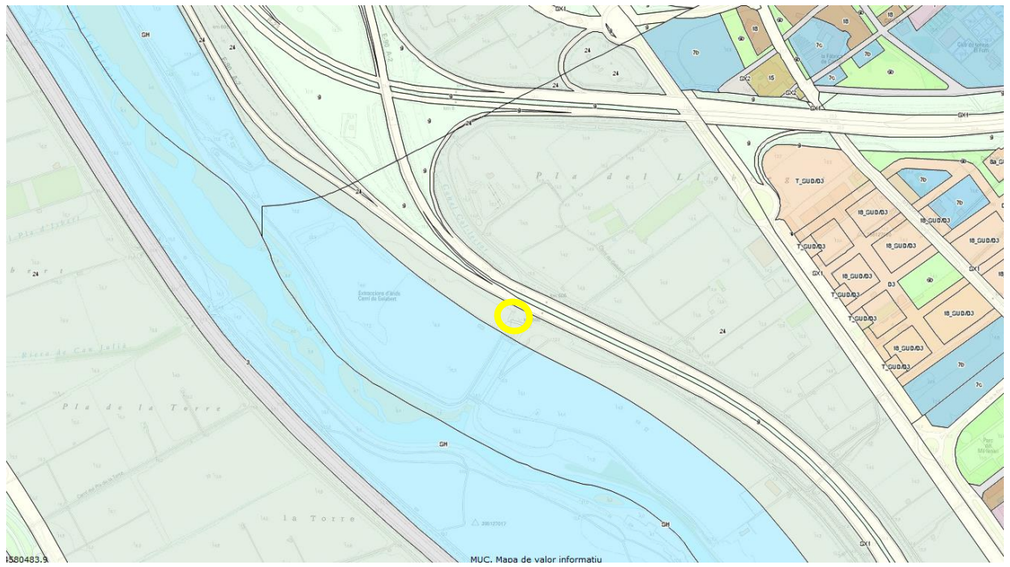

**Figura 23. Detall del PGM a la zona d'estudi. Font: Elaboració pròpia a partir del Mapa Urbanístic de Catallunya (MUC).**

La qualificació del sòl no urbanitzable per a les comportes del canal és la **clau 24, rústic protegit de valor agrícola**, i les seves determinacions van quedar complementades per la modificació puntual esmentada.

L'article 151 de la normativa metropolitana indica que "*és qualificat de rústic protegit de valor agrícola el sòl no urbanitzable que per la seva destinació agrícola o per la seva situació, hagi de preservar-se del procés d'incorporació a àrees urbanes*".

El PGM estableix les condicions d'edificació i d'usos admesos, però sense afectacions importants al projecte objecte d'aquest estudi.

### 3.12.4 Figures de protecció

Detallant les diferents figures i proteccions del territori, es pot dir que:

- L'àmbit del projecte no es troba inclòs **dins de cap figura de protecció**, com pot ser: Espai d'Interès Natural (PEIN) o Xarxa Natura 2000. Tampoc afecta zones d'aplicació de la *Directiva 2009/147/CE del Parlament Europeu i del Consell, de 30 de novembre de 2009, relativa a la conservació de les aus silvestres (Directiva d'Aus)*.
- L'espai protegit més proper correspon al Parc Natural de Collserola, situat al Nord-est de la zona; i la zona perifèrica de protecció de la Reserva Natural parcial de la Ricarda-Ca l'Arana, la qual es situa dins dels espais d'aiguamolls litorals del Delta del Llobregat, al sector Sud-est de la zona.
- La zona no està dins de **cap àrea catalogada com d'interès faunístic i florístic**.
- La zona **no està inclosa dins de l'inventari de punts d'interès geològic** de Catalunya.
- La zona **no està inclosa dins de la cartografia d'hàbitats d'interès comunitari**, tal i com s'ha vist anteriorment.
- La zona **està inclosa dins del Parc Agrari del Baix Llobregat**, com s'ha vist anteriorment.
- La ubicació del projecte en una zona ja urbanitzada o en procés d'urbanització, prop d'una gran via de comunicació per carretera i lluny d'espais d'especial interès, implica que en aquest punt concret la rellevància connectora sigui poc significativa.

## 3.13. Patrimoni cultural

Pel que correspon al patrimoni cultural, segons la consulta a les bases cartogràfiques del Departament de Cultura de la Generalitat de Catalunya, **no es detecta** cap jaciment arqueològic, ni paleontològic actualment en l'àmbit d'estudi. A la zona tampoc hi ha cap element arquitectònic d'interès.

## 3.14. Riscos ambientals

### 3.14.1 Perillositat geològica en quant a despreniments

Segons la informació disponible de l'Institut Cartogràfic i Geològic de Catalunya (ICGC), s'ha consultat el Geoíndex de l'IGC, la base de dades LLISCAT (sobre esllavissaments i despreniments a Catalunya) així com la cartogràfica temàtica DIBA (Diputació de Barcelona) i els mapes editats per l'ICGC. En cap d'aquestes bases de dades i referències cartogràfiques no **consten antecedents** d'esdeveniments relacionats amb moviments de vessant, esfondraments o fluxos torrencials, en l'àmbit del terme municipal.

COL·LEGI D'ENGINYERS TÈCNICS AGRÍCOLES I FORESTALS DE CATALUNYA
Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

Afegir en aquest context que la morfologia local és plana amb un relleu que en cap cas assoleix un cert pendent susceptible de desenvolupar processos d'esllavissament, més enllà dels que puguin estar provocat per l'obra o el moviment exprés de materials. La litologia de la zona, no contempla cap sistema càrstic associat a possibles cavitats susceptibles d'esfondraments, i tampoc consta de cap activitat minera subterrània que pugui desencadenar processos d'inestabilitat del terreny.

### 3.14.2 Perillositat geològica en quant a inundacions

Segons les dades de l'Agència Catalana de l'Aigua:

- La zona **no és potencialment inundable** amb criteris geomorfològics. A la figura següent es mostren les zones que sí estarien subjectes a aquests riscos potencials, properes a l'àmbit d'actuació (marcades en color blau).
- L'àmbit d'actuació es troba **dins la zona inundable-Màxima Crescuda Ordinària**. Associada aquesta al riu Llobregat, tal i com es mostra a la figura següent (zona marcada en color vermell.

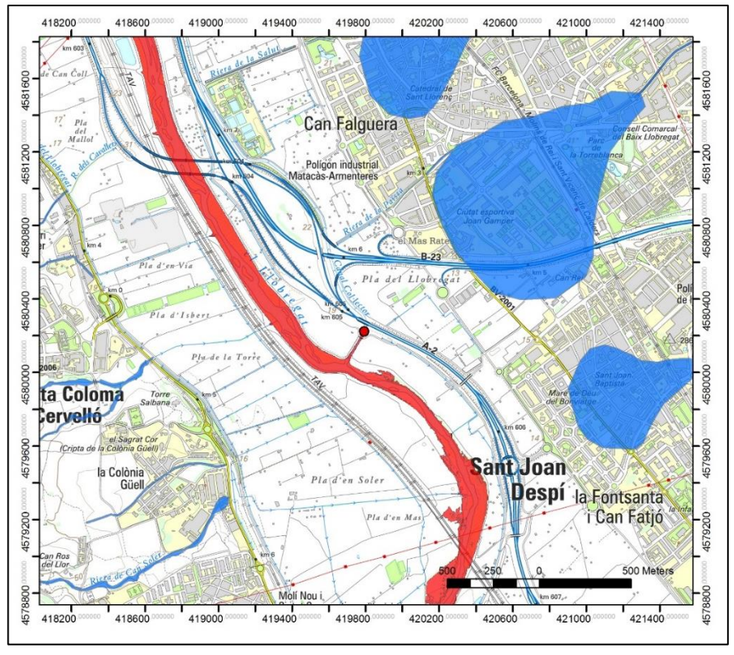

**Figura 24. Figura 16.- Mapa d'inundabilitat. En color blau s'indiquen les zones potencialment inundables amb criteris geomorfològics, i en color vermell la Zona inundable-Màxima Crescuda Ordinària. Font: Elab. pròpia a partir de l'ACA.**

- L'àmbit d'actuació es troba **al límit de la zona inundable** pels períodes de retorn de 10, 50 i 100 anys, tal i com es mostra a la figura següent (color verd) i també pel període de retorn de 500 anys (color blau).
- Sant Joan Despí no ha quedat exempt de patir les conseqüències de les crescudes, ans el contrari, el fet de trobar-se al costat d'un meandre i una àrea amb escàs pendent, les terres del municipi encara estaven més **exposades a l'embat de les avingudes**, ja que en la crescuda fluvial, les aigües abandonen els marges del riu i es crea una plana d'inundació. La cerca d'informació efectuada en les hemeroteques digitals de La Vanguardia i al Llistat d'inundacions històriques a nivell de municipi que disposa l'ACA, detalla que a Sant Joan Despí s'han produït els següents episodis relacionats:
  - Riuada de Sant Miquel 29/09/1913. Van resultar inundades la ciutat i els camps.
  - Inundacions del 18 i 19 d'octubre 1977. Afecció al nucli de Sant Joan Despí pel desbordament del Llobregat.
  - Inundacions del 17 de setembre 1974. La crescuda del Llobregat va afectar la carretera de Sant Feliu a Cornellà
  - Riuada de setembre de 1971. Inundacions pel desbordament del Llobregat.
  - Inundacions del 25 de setembre de l'any 1962, associades a les devastadores inundacions que van afectar principalment al Vallès.
- Amb dades de març del 2018, el municipi disposa del corresponent PAM INUNCAT caducat (homologat el 27/07/2011)

### 3.14.3 Risc sísmic

La classificació sísmica de Sant Joan Despí es situa dins de la **zona tectònica A2** (Sistema Mediterrani), al que correspon segons el mapa de zones sísmiques considerant l'efecte de sòl una **intensitat de VI-VII**.

Les actuacions d'un municipi davant d'una emergència sísmica queden reflectides en el Pla d'Actuació Municipal (PAM). També consten, a més, les actuacions encaminades a garantir l'operativitat dels mitjans humans i materials de què disposa. Han d'elaborar el corresponent Pla d'Actuació Municipal:

- Els municipis que tinguin una intensitat sísmica prevista igual o superior a VII en un període de retorn associat de 500 anys segons el mapa de Perillositat Sísmica presentat al punt 2.1. del SISMICAT.
- Els municipis pels que s'ha calculat que es superaria el llindar de dany de referència (Dany sofert per un municipi consistent en més de 50 edificis inhabitables o més d'un 10% del total d'edificis del municipi inhabitables) al parc d'edificis d'habitatge en cas que es produeixi el màxim sisme esperat en l'esmentat període de 500 anys, segons els estudis de risc elaborats per la redacció d'aquest pla [SISMICAT].

D'acord amb el Pla Sismicitat (SISMICAT), el terme municipal supera el llindar del dany de referència amb una intensitat sísmica igual o superior a 7 i una acceleració bàsica de 0,04g. No obstant això, el municipi no disposa de Pla d'Actuació Municipal.

Respecte a terratrèmols la sismicitat històrica registrats, segons informació consultada a través del Geoíndex Sismologia de l'ICGC sobre sismes percebuts per la població (880 aC-2013) i sismes localitzats per sismògrafs (1977-2013) per l'ICGC, **no inclou cap episodi sísmic** significatiu en els segles XX i XXI. A la zona de Sant Joan Despí, els moviments sísmics que s'han produït sempre han estat per sota de 2 graus de magnitud, i mai han produït danys.

### 3.14.4 Risc d'incendis

Sant Joan Despí no està considerat municipi d'alt risc d'incendi forestal, d'acord amb el que disposa el *Decret 64/1995, de 7 de març, pel qual s'estableixen mesures de prevenció d'incendis forestals*. En conseqüència, segons l'INFOCAT i sobre la base del *Decret 155/2014, de 25 de novembre, pel qual s'aprova el contingut mínim per a l'elaboració i homologació dels plans de protecció civil municipals i s'estableix el procediment per a la tramitació conjunta*, Sant Joan Despí no està obligat a disposar d'un Pla d'actuació municipal (PAM) per incendis, amb una vigència de 4 anys. No obstant, amb dades de març del 2018, el municipi disposa del corresponent PAM INFOCAT caducat (homologat el 04/10/2012).

### 3.14.5 Risc tecnològic

Segons el Pla Especial d'Emergències per accidents en el transport de mercaderies perilloses per carretera i ferrocarril a Catalunya (TRANSCAT, 2015) i sobre la base del *Decret 155/2014, de 25 de novembre, pel qual s'aprova el contingut mínim per a l'elaboració i homologació dels plans de protecció civil municipals i s'estableix el procediment per a la tramitació conjunta*, Sant Joan Despí està obligat a disposar d'un Pla d'actuació municipal (PAM) per al transport de mercaderies perilloses, amb una vigència de 4 anys. Amb dades de març del 2018, el municipi disposa del corresponent PAM TRANSCAT caducat (homologat el 27/07/2011). El municipi, segons el TRANSCAT, queda definit com de **risc molt alt per al transport de mercaderies perilloses per carretera i molt alt en transport ferroviari**, degut al pas de l'autovia A-2 per la vora.

D'altra banda, el municipi disposa del Pla Especial d'Emergències Químiques de Catalunya (PLASEQCAT) caducat (homologat el 17/10/2006). La zona d'estudi es troba en **zona d'alerta** per risc químic, però fora de la cobertura de sirenes.

En relació als apartats desenvolupats fins ara, i segons el Departament d'Interior Direcció General de Protecció Civil, l'estat de la planificació municipal a nivell de protecció civil a Sant Joan Despí és la següent:

| Sant Joan Despí | | | |
|---|---|---|---|
| PROCICAT | Obligat | PBEM Sant Joan Despí | 18/02/2010 |

El pla d'Acció Municipal de Sant Joan Despí (2016-2019) contempla, en relació a l'esmentat, el següents punts a tenir en consideració:

- Medi Ambient: Elaborar un pla d'adaptació al canvi climàtic a Sant Joan Despí. Acció iniciada al 2018
- Control periòdic de la qualitat de l'aire. Acció completada
- Pla d'acció de soroll del mapa estratègic de l'aglomeració Baix Llobregat. Acció completada

# 4. Anàlisi dels potencials impactes

En aquest apartat es pretén identificar i avaluar l'alteració-impacte generat per cadascuna de les accions del projecte, sobre cadascun dels factors ambientals considerats.

Com s'ha vist en apartats anteriors, s'han analitzat els elements i característiques originals de la zona sotmesa a estudi, tant les seves característiques físiques i geogràfiques, així com els seus valors naturals o paisatgístics. Un cop identificats aquests aspectes, es realitzarà una descripció dels impactes sobre el medi físic, biològic i antròpic, adjuntant un quadre resum en què s'indiquen els principals impactes i una valoració qualitativa.

S'emprarà la terminologia establerta en l'annex VI de la *Llei 21/2013, de 9 de desembre, d'avaluació ambiental*, així, l'avaluació dels impactes serà:

- **Impacte Crític (CRI)**: Aquell la magnitud és superior al llindar acceptable. Amb aquest es produeix una pèrdua permanent de la qualitat de les condicions ambientals, sense possible recuperació, fins i tot amb l'adopció de mesures protectores o correctores.
- **Impacte Sever (S)**: Aquell en què la recuperació de les condicions del medi exigeix mesures preventives o correctores, i en el qual, fins i tot amb aquestes mesures, aquella recuperació requereix un període de temps dilatat.
- **Impacte Moderat (M)**: Aquell la recuperació no requereix mesures preventives o correctores intensives, i en què la consecució de les condicions ambientals inicials requereix cert temps.
- **Impacte Compatible (COM)**: Aquell la recuperació és immediata després del cessament de l'activitat, i no requereix mesures preventives o correctores.

## 4.1. Impactes sobre la qualitat atmosfèrica

### 4.1.1 Fase de construcció

El projecte afectarà a l'atmosfera de diferents formes: contaminació acústica, qualitat de l'aire i contaminació lluminosa. Els efectes en aquesta fase seran:

- Tant el trànsit de maquinària, personal o transport de materials, així com els treballs d'enderroc i excavacions, provocaran un impacte acústic significatiu sobre la qualitat del medi.
- Els efectes sobre la qualitat de l'aire es generaran per l'augment de partícules en suspensió, provocat pel moviment de la maquinària, transport de materials i equips, en els diferents treballs de l'obra i moviment de terres.
- Els treballs durant la fase d'obres, possiblement requeriran d'il·luminació exterior, sobretot durant les èpoques de l'any en què es redueix la il·luminació natural. Donada la situació de l'àmbit en sòl no urbanitzable, en una zona oberta, l'impacte serà moderat.

### 4.1.2 Fase d'explotació

Els efectes sobre l'atmosfera habituals seran:

- El principal impacte acústic provindrà del grup electrogen que té la instal·lació dins la caseta, però que mai ha estat posat en marxa ni en funcionament des de l'any 2008. L'impacte del projecte d'insonorització i revisió/posta a punt de l'equip serà del tot positiu per la qualitat acústica.
- La fase d'explotació únicament pot afectar la qualitat de l'aire per a la combustió de la gasolina/gasoil del grup electrogen, que tindrà un funcionament únicament de suport puntual en cas de manca d'electricitat a través de xarxa (escomesa). Tanmateix, també hi haurà la combustió puntual dels vehicles del personal de manteniment de les comportes, però de forma puntual. És un impacte poc significatiu.
- L'enllumenat exterior d'emergència que es pugui preveure és molt probable que compleixi amb la legislació vigent (especificacions tècniques del Decret 190/2015).

## 4.2. Impactes sobre la geologia, geomorfologia i residus

### 4.2.1 Fase de construcció

Els probables impactes afectaran als següents vectors:

- Hi haurà excavacions relacionades amb l'escomesa elèctrica.
- Els efectes de l'emmagatzematge dels materials i de circulació de personal i maquinària durant l'obra tindran un caràcter temporal i reversible, alterant l'edafologia de forma moderada.
- Com a conseqüència de les obres, hi haurà generació de diferents tipus de residus: restes de desbrossa i d'altres en petites quantitats o residus generals del personal de l'obra. L'annex de Gestió de Residus del Projecte inclou un estudi del tipus, volum i gestió dels mateixos. ~~No es~~ preveu una generació mínima de residus perillosos.

- Per tal de realitzar algunes de les obres a les comportes serà essencial mantenir la zona seca. Per tal fi, es preveu la construcció d'una mota amb el fang acumulat (sediments) a la zona de comportes. Aquest sediment, un cop utilitzat, serà gestionat com a residu inert.

#### 4.2.2 Fase d'explotació

Els probables efectes d'aquesta fase seran els següents:

- Es produirà una ocupació del sòl per al subministrament elèctric (ara no existeix) de l'equipament. L'ocupació serà major en cas d'ésser soterrada (majors moviments de terres, generació de terres...) i menor en cas de línies aèries (només pels suports de les torres).
- El funcionament habitual de les comportes no generarà un residu addicional a l'actual.

### 4.3. Impactes sobre la hidrologia i hidrografia

#### 4.3.1 Fase de construcció

Els impactes en aquests vectors habitualment vénen determinats per la qualitat de les aigües superficials i subterrànies pròximes:

- Els efectes sobre la qualitat de les aigües subterrànies podran venir produïts principalment per abocaments accidentals o per l'execució d'unes males pràctiques ambientals. Per tant, es fa necessari preveure mesures preventives o correctores.
- Durant aquesta fase no s'haurien de produir impactes sobre la inundabilitat, donat que l'actuació no tindrà efectes sobre el canal de desguàs, sinó dins la instal·lació de les comportes.
- Per l'execució de mota provisional i instal·lació de reixa i comporta, les comportes actuals s'hauran d'obrir i desguassar l'aigua al riu. Això afectarà a la captació de l'ETAP de Sant Joan Despí, ubicada aigües avall. S'haurà de comunicar a l'ETAP aquesta situació per a que no captin aigua durant aquests dies.

#### 4.3.2 Fase d'explotació

En aquesta fase, s'hauran de corregir els efectes de la depuració actual:

- L'únic impacte que tindrà l'execució del projecte sobre la xarxa hidràulica i en aqüífers serà positiu, donat que podran entrar en funcionament unes instal·lacions necessàries per regular el cabal d'avinguda d'algunes rieres de la banda esquerra del Llobregat.

### 4.4. Impactes sobre la biodiversitat i el paisatge

#### 4.4.1 Fase de construcció

Els impactes en aquest apartat de referència als vectors com són les comunitats vegetals, les comunitats faunístiques, la connectivitat ecològica i el paisatge i patrimoni cultural:

- L'impacte d'unes obres sobre la vegetació té a veure amb dos factors principals, l'eliminació de vegetació i hàbitats i l'augment del risc d'incendi. En ambdós casos, aquests no seran significatius, pel fet que la vegetació del fons del canal i dels talussos no és d'interès, i perquè el risc d'incendi es pot considerar menyspreable.
- Els impactes sobre la fauna en aquest tipus d'obres poden produir-se per la fragmentació d'hàbitats naturals o per les molèsties produïdes durant les obres. En el nostre cas, l'únic hàbitat que s'afectaria directament són la vegetació ruderal de les comportes i els talussos, el qual no resulta significatiu. D'altra banda, sí que poden produir-se molèsties per soroll o vibracions a la zona, que caldrà minimitzar.
- La connectivitat de la zona és poc important en l'àrea del projecte, tot i que territorialment es considera significatiu la connexió est-oest a través de la Riera de Can Julià a Santa Coloma de Cervelló i la Riera de Can Miano a Sant Feliu.
- L'impacte sobre el patrimoni natural també serà nul, ja que no apareixen espais naturals ni elements protegits. Caldrà atendre les determinacions del Consorci del Parc Agrari.
- El trànsit de personal, maquinària i elements temporals de l'obra modificaran el paisatge de l'àmbit del projecte, però ho faran de forma temporal.
- El projecte no afectarà cap element del patrimoni cultural.

#### 4.4.2 Fase d'explotació

- Igual que durant les obres, la connectivitat de la zona no es veurà afectada directament pel funcionament de les comportes, però podrà afavorir el flux hídric pel canal.
- La percepció sobre el paisatge no variarà significativament respecte a la situació inicial.

VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

- No hi haurà tampoc un impacte sobre elements patrimonials, un cop acabades les obres de construcció.

### 4.5. Impactes sobre els riscos ambientals

#### 4.5.1 Fase de construcció

- Les males pràctiques que es puguin originar en l'obra determinarà el grau de risc d'incendi, en una zona amb risc estàtic baix. La bona gestió de la vegetació eliminada i evitar l'inici de focs previndrà l'augment de risc.
- Segons els estudis d'inundabilitat generals, no hi ha risc d'inundabilitat sobre els quals es pugui impactar en fase d'obres.

#### 4.5.2 Fase d'explotació

- La instal·lació haurà de complir el *Reial Decret 2267/2004, de 3 de desembre, pel qual s'aprova el Reglament de Seguretat Contra Incendis en els establiments industrials*. D'altra banda, sempre que es compleixi la legislació vigent, la instal·lació no generarà un risc d'incendi significatiu.
- La instal·lació no està obligada a redactar un Pla d'Autoprotecció de la instal·lació per als casos d'aparició de riscos de protecció civil, ja que no es troba inclosa dins dels supòsits del *Decret 30/2015, del 3 de març*.
- Tampoc hi haurà risc d'inundabilitat a la zona en explotació.

## 5. Proposta de mesures correctores

### 5.1. Fase de construcció

#### 5.1.1 Geomorfologia

- Delimitar les zones d'actuació i de moviments de terra per a restringir l'àrea d'ocupació per part de la maquinària i el personal de l'obra i no afectar superfície de sòl en excés.

#### 5.1.2 Gestió de residus

- Els excedents de terres, procedents dels sediments del fons del canal es portaran a un gestor de residus autoritzat.
- S'ha d'assegurar la recollida de tots els residus que es puguin generar durant la millora de les instal·lacions, incloent-hi els possibles residus de demolicions i enderrocs.
- Els residus es traslladaran al magatzem del contractista corresponent, o es disposaran a la deixalleria existent situat a prop de l'actuació, i es discriminaran en contenidors segons la seva naturalesa, i seran gestionats a posteriori per un gestor de residus autoritzat. L'obra només generarà els residus que poden comportar l'execució dels treballs, residus que seran retirats pels operaris abans d'acabar l'obra.
- S'evitarà l'abandonament o abocament de qualsevol tipus de residu a la zona d'influència de les comportes. Per a això, es realitzaran recollides periòdiques de residus, amb la qual cosa s'evitarà la dispersió dels mateixos i que l'aparença de la zona sigui la més respectuosa amb el medi ambient.
- Es disposarà d'un registre de tots els residus generats per la millora de la instal·lació, acreditant la codificació i classificació dels residus d'acord amb el Codi del Catàleg Europeu de Residus (CER) i amb la legislació vigent (*Decret legislatiu 1/2009 , de 21 de juliol, pel qual s'aprova el Text refós de la Llei reguladora dels residus*).
- Si es produïssin abocaments accidentals i incontrolats de material de rebuig, es procedirà a la seva retirada immediata i la neteja del terreny afectat.
- En el lloc on s'ubiquin instal·lacions auxiliars d'obres, es col·locaran banys químics per a l'ús per part dels treballadors implicats. La recollida i gestió dels residus generats anirà a

càrrec d'un gestor apropiat (possiblement el mateix agent que ha habilitat el bany químic), al qual se li demanaran els albarans de recollida i lliurament dels residus.

- Les dimensions mínimes de la rasa per abocar les restes de formigó serien 1,5 x 1,5 m de secció i 1 m de profunditat. També es pot emprar un contenidor per abocar les restes de formigó. Aquesta ha d'estar impermeabilitzada i senyalitzada per facilitar l'ús per part dels operaris. Més tard, un cop acabades les tasques de formigonat, es procedirà al farcit i tapat.
- Es comprovarà que tot el personal d'obra es troba informat sobre les zones habilitades per a la deposició dels residus en funció de la seva naturalesa i sobre la correcta gestió dels mateixos.

#### 5.1.3 Qualitat de les aigües subterrànies

- S'evitaran accions com el rentat de maquinària o la posada a punt de la mateixa. Si cal fer-les, s'utilitzarà la zona pavimentada creada per a la ubicació dels contenidors de recollida de residus.
- S'ha de disposar d'equips d'emergència per actuar en cas de vessaments incontrolats sobre el sòl d'olis, greixos, hidrocarburs, dissolvents, pintures, etc.
- En cas que es produeixin vessaments directes sobre el sòl natural s'aplicarà un material absorbent, retirar el sòl afectat i tractar-lo com a residu.

#### 5.1.4 Qualitat de les aigües superficials

- Es tindran a punt tots els permisos i autoritzacions de l'Agència Catalana de l'Aigua.

#### 5.1.5 Contaminació acústica

- Es respectaran els nivells sonors que determina la legislació aplicable.
- Es limitarà la velocitat de tots els vehicles a 20 km / h, per tal d'evitar l'aixecament de pols i l'emissió d'uns majors nivells de pressió sonora i disminuir el risc d'accidents.
- Revisar i mantenir la maquinària en bon estat i comprovar que disposi de la certificació CEE i / o ITV en vigor.
- L'horari de treball ha d'estar comprès entre les 8 i les 21 hores els dies laborables, o segons determinin les Ordenances Municipals corresponents.

#### 5.1.6 Qualitat de l'aire

- Regar periòdicament el sòl desproveït de vegetació i els accessos a les obres.
- Per reduir, en la mesura possible, les emissions gasoses procedents dels tubs d'escapament de la maquinària, així com les emissions de sorolls procedents del funcionament de la mateixa, es durà a terme una posada a punt dels motors de la maquinària que intervé en les obres, realitzada per un servei autoritzat.
- La maquinària ha de disposar dels corresponents certificats CEE i / o ITV per assegurar que les emissions de gasos de combustió es troba dins dels límits permesos.

#### 5.1.7 Comunitats vegetals

- No es permetrà el trànsit de maquinària fora de les zones delimitades, amb l'objectiu de no provocar impactes sobre la vegetació superiors als estrictament necessaris.
- Durant les operacions de muntatge, l'aplec de materials es realitzarà aprofitant espais ja utilitzats en l'obra i, si escau, en àrees determinades on la seva afectació a la vegetació sigui menor.
- Qualsevol actuació de tractament silvícola requerirà l'autorització de l'Administració forestal, tal com especifica l'article 58.2, apartat a) de la Llei 6/1988, de 30 de març, forestal de Catalunya.
- Si es requerís la revegetació d'alguna zona malmesa, les espècies emprades seran sempre autòctones i en cas que s'introdueixin espècies al·lòctones (especialment per a tasques de jardineria), han de ser innòcues quant a potencial bioinvasor.

#### 5.1.8 Comunitats faunístiques

- S'incorporaran totes les mesures preventives proposades per al factor de comunitats vegetals, ja que redundaran en la protecció de la fauna afectada per la construcció de l'obra.
- Es delimitarà la zona afectada per les obres i accessos per a no envair més terreny que l'imprescindible.
- S'evitarà la realització de treballs en horaris nocturns i crepusculars, així com durant les èpoques més sensibles (època de cria i nidificació).

Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

#### 5.1.9 Paisatge

- Es procedirà al desmantellament de les instal·lacions auxiliars d'obra (casetes, contenidors de residus ...) una vegada concloses les mateixes, deixant el terreny ocupat com es va trobar abans de l'actuació.
- Els aplecs de terra i materials sobrants, així com les zones auxiliars d'obra, es localitzaran en les zones de menor qualitat paisatgística.
- Comprovar que es restauren totes aquelles àrees de nova creació que no està previst enjardinar ni urbanitzar.

#### 5.1.10 Risc d'incendi

- El material procedent de restes de vegetació quedarà trossejat per ser retirat. Si el material és d'una mida superior, es realitzaran gestions per a la seva retirada i reutilització en la mesura del possible, i si no hi ha un altre remei es durà a dipòsit controlat, per tal de no abandonar material vegetal que un cop sec, es converteix en combustible fàcilment inflamable que pot provocar incendis. Aquestes mesures seran especialment tingudes en compte en el període de màxim risc d'incendis (*Decret 64/1995, de 7 de març, pel qual s'estableixen mesures de prevenció d'incendis*).
- Es prohibeix la realització de fogueres, fogueres, abandonament de cigarrets, i en definitiva, qualsevol tipus d'actuació que comporti risc de provocar incendis.

### 5.2. Fase d'explotació

#### 5.2.1 Gestió de residus

- Es donarà compliment a la normativa sobre residus, especialment el *Decret 93/1999, de 6 d'abril, sobre procediments de gestió de residus i el Decret Legislatiu 1/2009, de 21 de juliol, pel qual s'aprova el Text refós de la Llei reguladora dels residus*.
- Les instal·lacions de les comportes disposaran d'un espai pels residus que puguin quedar en les reixes del tub del Governador
- Els residus perillosos se separaran en contenidors correctament etiquetats i, si fos el cas, amb cubetes per evitar vessaments. Els residus perillosos es gestionaran a través de gestor autoritzat per l'Agència de Residus de Catalunya.

#### 5.2.2 Contaminació lumínica

- El nou enllumenat complirà la *Llei 6/2001, de 31 de maig, així com Decret 190/2015, de 25 d'agost, de desplegament de la Llei 6/2001, de 31 de maig* per a les zones E2.

#### 5.2.3 Consum d'energia

- Donada la influència que té el manteniment dels equips i instal·lacions sobre el funcionament de les comportes i la seva optimització energètica, es proposa un control per part dels titulars de tots els manteniments.

#### 5.2.4 Comunitats faunístiques

- Les mesures correctores vinculades a la contaminació acústica i lumínica aniran a favor d'un menor impacte sobre la fauna propera.

## 6. Pla de seguiment del compliment de les mesures correctores

En aquest apartat es pretén donar resposta a la necessitat d'establir un sistema que garanteixi el compliment de les indicacions i mesures protectores i correctores, reflectides en l'apartat anterior, detallant les tasques de vigilància i seguiment que s'han de realitzar per aconseguir el compliment de les mateixes.

El Pla de Seguiment proposat en el present Document Ambiental, compleix en part amb el que estableix la *Llei 21/2013, de 9 de desembre, d'avaluació ambiental*, en el sentit que estableix una sistemàtica (objectius, descripció de la mesura / actuacions, lloc d'inspecció, paràmetres de control i llindars, periodicitat de la inspecció, mesures de prevenció i correcció, entitat responsable de la seva gestió / execució) per al control del compliment de les mesures correctores proposades:

"*El programa de vigilància ambiental ha d'establir un sistema que garanteixi el compliment de les indicacions i les mesures, preventives i correctores i compensatòries contingudes en l'estudi d'impacte ambiental tant en la fase d'execució com en la d'explotació. Aquest programa ha d'atendre la vigilància durant la fase d'obres i el seguiment durant la fase d'explotació del projecte*".

El control s'efectuarà sobre les instal·lacions de les comportes en el canal lateral a Sant Joan Despí.

Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

### 6.1. Objectius

El Pla de Seguiment té uns objectius que es concreten en:

- Controlar la correcta execució de les mesures previstes en l'apartat de mesures preventives, protectores i correctores del present document.
- Verificar el grau d'eficàcia de les mesures establertes i executades. En cas que es consideri insatisfactòria, determinar les causes i establir els remeis adequats.
- Detectar impactes no previstos al Document Ambiental i preveure les mesures adequades per reduir-los, eliminar-los o compensar-los.
- Oferir un mètode sistemàtic, el més senzill i econòmic possible, per a realitzar la vigilància d'una forma eficaç.

### 6.2. Fases i durada

El Seguiment Ambiental es divideix en tres fases, clarament diferenciades:

- **Fase de construcció**: aquesta fase comprèn dues subfases:
  - Fase prèvia: En aquesta fase prèvia s'executarà el replanteig de l'obra i el jalonament de la mateixa (s'inclouen els elements del medi que, pel seu valor, s'han de protegir especialment), es localitzaran les activitats auxiliars d'obra (préstecs, abocadors, parc de maquinària, camins d'obra ...) quan sigui necessari.
  - Primera fase: Es correspon amb la fase d'execució de les obres, i s'estén des de la data de l'acta de replanteig fins a l'Acta de Recepció. La durada serà la de les obres.
- **Fase d'explotació**: S'estén des de la data de l'Acta de Recepció fins al final de la vida útil de les comportes.

### 6.3. Personal

El compliment, control i seguiment de les mesures són responsabilitat del promotor, el qual l'executarà amb personal propi o mitjançant assistència tècnica. Per a això, nomenarà una Direcció Ambiental d'Obra que es responsabilitzarà de l'adopció de les mesures correctores, de l'execució del Pla de Seguiment, de l'emissió dels informes tècnics mensuals periòdics i l'informe final sobre el grau de compliment del Document Ambiental i de seva remissió a l'òrgan ambiental si cal. Serà el responsable, en definitiva, d'ocupar-se de tota la problemàtica mediambiental que comporta l'execució de les obres de construcció.

El personal encarregat de la Direcció Ambiental d'Obra estarà compost per tècnics de Medi Ambient. Donades les característiques de les obres, el responsable serà un tècnic d'alguna branca especialitzada en matèria mediambiental i amb experiència en aquest tipus de treballs. Aquest serà el responsable tècnic del programa de vigilància ambiental i l'interlocutor amb la direcció d'Obra.

Haurà de tenir també coneixements de gestió mediambiental (gestió de residus, control d'emissions atmosfèriques, control d'abocaments, control d'emissions acústiques), de Medi Natural (sòls, vegetació, aigües, etc.), analítiques de caràcter mediambiental (presa de mostres, mesuraments, etc.) i legislació mediambiental.

### 6.4. Aspectes generals de control d'obra

Durant la fase prèvia de replanteig de l'obra, la Direcció Ambiental de l'Obra executarà les següents mesures:

#### 6.4.1 Fase prèvia: actuacions d'àmbit general del replanteig de l'obra

- Realització del Pla de Medi Ambient per part del Contractista, incloent-hi, les prescripcions del present Pla se Seguiment.
- Contemplar els condicionants ambientals establerts en el projecte i en el Document Ambiental.
- Dur a terme totes les mesures previstes per a la preservació i millora del medi ambient incloses en el projecte i en el Document Ambiental.
- Complir els condicionants establerts en la normativa aplicable relativa als aspectes ambientals.
- Es comprovarà que les zones d'afecció contemplades en el Projecte hagin estat assenyalades i delimitades.

#### 6.4.2 Fase d'obres: seguiment del programa d'obra

- L'equip de control i vigilància haurà de realitzar un seguiment de l'avanç i ritme dels treballs i de les modificacions que puguin produir-se en el programa d'obres.

- Informe ocasional: A emetre pel responsable del Seguiment o del PMA de l'obra, abans de l'emissió de l'Acta de Recepció Provisional de les Obres. El contingut d'aquest informe serà informació sobre les actuacions de caràcter ambiental realment executades, diferenciant entre les mesures correctores inicialment previstes i les que finalment s'han dut a la pràctica.
- Informes especials: A emetre pel responsable del Seguiment o del PMA de l'obra. S'emetrà un informe especial quan es presentin circumstàncies o fets excepcionals que impliquin deterioraments ambientals o situacions de risc.
- Es reportarà informació del seguiment ambiental en el Llibre d'assistències, suggeriments i incidències ambientals de les obres.

## 7. Conclusions

Segons la dimensió de les actuacions projectades, el seu objectiu i situació (fora dels espais naturals protegits, Xarxa Natura 2000 i àrees protegides per instruments internacionals, segons la regulació de la Llei 42/2007, de 13 de desembre, del patrimoni natural i de la biodiversitat), el projecte no s'inclouria dins els supòsits d'Avaluació d'Impacte Ambiental, segons la *Llei 21/2013, de 9 de desembre, d'avaluació ambiental*, sens perjudici de les mesures que pugui implantar l'òrgan gestor del Parc Agrari del Baix Llobregat.

El "Projecte d'ampliació del canal lateral de l'A-2 des de la Riera de Sant Just fins el Riu Llobregat" tindrà un efecte COMPATIBLE d'impacte ambiental, sempre i quan se segueixin les mesures preventives i correctores del present Document Ambiental.

## 1. Introducció

És objecte d'aquest document la redacció de l'estudi de gestió dels residus de construcció i enderrocs, d'acord amb les exigències de la normativa vigent més recent per tal d'establir la quantitat i tipus dels residus que es generaran durant l'execució de l'obra i el seu posterior tractament.

El present annex estableix un pla de gestió de residus amb el fi de fomentar, per aquest ordre, la seva prevenció, reutilització i reciclat o altres formes de valorització, i l'adequat tractament dels destinats a eliminació.

En aquest annex, en primer lloc s'exposen les mesures per poder minimitzar i prevenir la quantitat de residus que es generen habitualment en les obres de construcció. A continuació s'estimen i tipifiquen els residus que s'han considerat en el projecte, i posteriorment es descriuen les operacions i instal·lacions previstes mínimes destinades a la gestió dels residus. Per últim, es pressuposta el cost d'aquesta gestió.

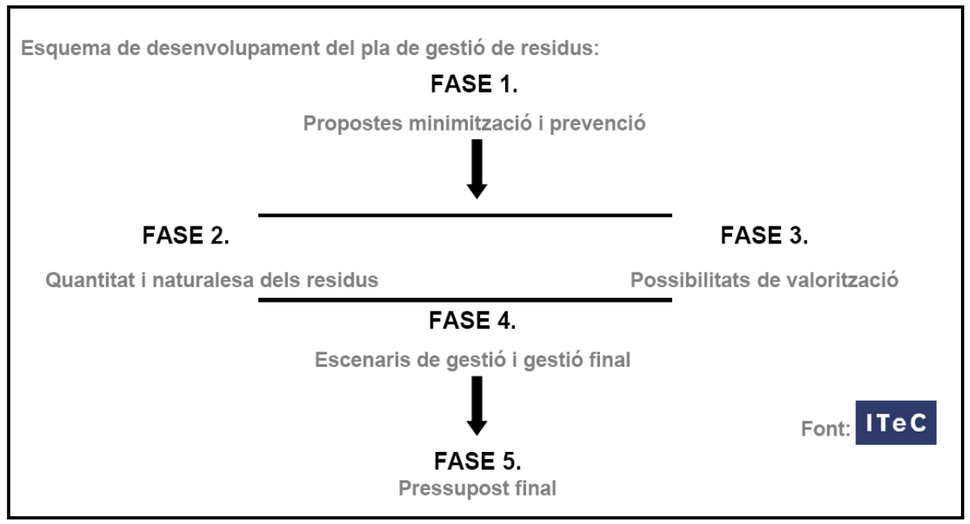

*Figura 1. Esquema a seguir del pla de gestió de residus.*

## 2. Mesures de minimització i prevenció de residus

S'identifiquen en la següent fitxa les mesures de minimització dels residus que s'han considerat en el projecte, per tal de prevenir la generació de residus de construcció durant la fase d'obra i per reduir-ne la seva producció.

Es busca la planificació de "residu nul", és a dir que la pròpia obra sigui lloc de digestió de tots els residus que origina.

| ACCIONS DE MINIMITZACIÓ I PREVENCIÓ DES DE LA FASE DE PROJECTE | |
|---|---|
| **1** | S'ha programat el volum de terres excavades per minimitzar els sobrants de terra i per utilitzar-la al mateix emplaçament. |
| **2** | Els sistemes constructius són sistemes industrialitzats i prefabricats que es munten a obra sense gairebé generar residus. |
| **3** | S'ha modulat el projecte per minimitzar els retalls. |
| **4** | S'ha dissenyat l'obra tenint en compte criteris de desconstrucció o desmuntabilitat. (Considerar en el procés de disseny unir de manera irreversible només aquells materials que tenen el mateix potencial de reciclabilitat, o bé preveure fixacions fàcilment desmuntables, de manera que sigui viable la seva separació una vegada finalitzada la seva vida útil). |

## 3. Estimació i tipologia dels residus

L'estimació i tipologia dels residus està relacionada amb la naturalesa dels residus i amb la quantitat que es preveu generar per poder planificar la seva correcta gestió.

A la taula següent es presenten els residus que es preveu que es generaran durant les obres, detallant:

- Quantificació per tipologies.
- Valors en tones i en metres cúbics.
- Codificació segons el Catàleg Europeu de Residus (codis CER)

Els ratis de pes i volum de residu per superfície construïda, s'han extret de la "Guia per a la redacció de l'Estudi de Gestió dels Residus de construcció i enderroc", versió 1.0, publicació a disposició del públic en la pàgina web de l'Agència de Residus de Catalunya.

A continuació es detallen les fases fonamentals on hi té lloc la generació de residus:

- Fase de reparació de l'esquerda
- Adequació del mur: construcció de perfil tipo *creager*
- Fase d'execució d'instal·lacions i muntatge d'equips**.**

Es consideren també com a residus,

- L'esbrossada, que es realitza en una franja de 3 metres des del PK 0+000 al PK 0+440, a banda i banda del canal, excepte la zona de creuament amb vies de comunicació (autopista, carreteres, etc..) i al canal de descàrrega.S'estima un volum de 328,2 $m^3$.

- Els sediments depositats al tram final del canal (PK 0+420 a PK 0+480) i zona de comportes, estimat en 242,52 $m^3$:

| **Sediments entre PK 0+420 a PK 0+480** | | |

| Cota fons | 11,9 | m |
| Cota coronació mur | 14,89 | m |
| Distància mesurada coronació mur a superficie fang | 1,7 | m |

| Volum de fang en cambra de comportes | 178,02 | $m^3$ |
| | | |
| Volum total de fang sedimentat | **242,52** | $m^3$ |

## 4. Operacions de gestió de residus

En aquest apartat s'inclouen les operacions i instal·lacions previstes mínimes destinades a la gestió dels residus.

Caldrà realitzar, però, totes les operacions de reutilització, reciclatge, valorització i disposició de rebuig segons les determinacions del Plec de Prescripcions Tècniques del present projecte i del *Reial Decret 105/2008, de 1 de febrer, pel que se regula la producció i gestió dels residus de construcció i enderroc* i demés normativa vigent.

*Figura 2. Model Català de Residus de la Construcció*

El Model Català de Residus de la Construcció es fonamenta en les accions de prevenció, en la reutilització i valorització material màxima dels residus, i també estableix el principi de responsabilitat del productor.

Una obra té dos tipus de gestió, dins de l'obra i fora de l'obra. En aquest apartat es defineixen les operacions més adequades, ja siguin dins o fora de l'obra, atenent a:

- L'espai disponible per realitzar la separació selectiva dels residus a l'obra.
- La possibilitat de reutilització i reciclatge in situ.
- La proximitat de valoritzadors de residus i la distància als dipòsits controlats, els costos econòmics associats a cada opció de gestió, etc.

S'ha considerat l'abocament en dipòsits controlats com a última opció en la gestió de residus de construcció i, s'ha tendit, per aquest ordre, a la reutilització, al reciclatge i a la valorització.

La gestió mínima de separació selectiva que es realitzarà durant les obres consistirà en la segregació dels residus Inerts, dels residus No Especials i dels residus Especials (aquests sempre han d'anar separats de la resta).

A més, caldrà també separar a part els materials que es poden reutilitzar o reciclar dins la pròpia obra, o si es cal gestionar-los externament.

La classificació en origen es realitzarà acuradament, obtenint residus el més homogenis possibles per facilitar-ne la gestió.

- **D0501:** Dipòsit controlat de residus inerts
- **D0502:** Dipòsit controlat de residus no perillosos
- **R0401:** Reciclatge i/o recuperació de ferralla
- **R0306:** Tractament d'altres residus orgànics per a la posterior fabricació o producció de nous productes.

- **R0101:** Utilització principal com a combustible en instal·lacions d'incineració de residus.
- **R0503:** Reciclatge de residus de vidre en la fabricació del vidre
- **R0306:** Tractament d'altres residus orgànics per a la posterior fabricació o producció de nous productes.

El decret preveu que en cas que els residus no s'utilitzin o que es reciclin a la mateixa obra, cal gestionar-los en instal·lacions de reciclatge o de disposició del rebuig. Les alternatives de gestió dels residus són diverses: reutilització, reciclatge, deposició en dipòsit controlat, etc.

Les possibilitats de reutilització d'elements de construcció són diverses i poc previsibles. Depenen de la possibilitat de reutilitzar-los a la pròpia obra, en una altra obra que es trobi situada a prop o de l'existència d'algú interessat a quedar-se'ls.

La deposició controlada de residus de la construcció que finalment no es poden aprofitar s'ha de fer en abocadors específics (dipòsits controlats).

## 5. Escenaris de gestió

En aquest apartat s'inclou una fitxa d'identificació i definició dels escenaris interns de gestió a l'obra. Aquest escenari intern preveu les opcions de reutilització, valorització i eliminació dels residus a l'emplaçament de l'obra i es resumeixen en la següent taula:

| Fitxa resum de l'escenari intern de gestió | | |

Entre d'altres recomanacions, es destaquen les següents:<br>– No tenir-los emmagatzemats a l'obra més de 6 mesos.<br>– El contenidor de residus especials haurà de situar-se en un lloc pla i fora del trànsit habitual de la maquinària d'obra, per tal d'evitar vessaments accidentals. |

## 6. Senyalització dels contenidors

La classificació en origen dels residus de la construcció i demolició és el factor que més influeix en el seu destí final. És a dir, qualsevol operació de reciclatge o de reutilització ha d'estar sotmesa a una destria inicial que permeti disposar d'una matèria prima uniforme i d'un material resultant de qualitat.

A continuació es mostren com s'hauran de senyalitzar els contenidors en funció del tipus de residu que continguin i d'acord amb la separació prevista.

*Figura 3. Fotografies exemple de la senyalització de diferents escenaris de gestió interna*

## 7. Gestió de residus

La deposició controlada de residus de la construcció s'ha de fer en abocadors específics (dipòsits controlats).

## 8. Pressupost per la Gestió de Residus a l'Obra

Aplicant els preus unitaris que figuren als Quadres de Preus als Amidaments resulta un Pressupost d'Execució Material de ONZE MIL SEIXANTA-TRES EUROS AMB NORANTA-SET CÈNTIMS (11.063,97 €).

A continuació s'adjunten les prescripcions del Plec de Prescripcions Tècniques Particulars del Projecte adequades a la gestió de residus de construcció i enderroc i que regulen les feines d'emmagatzematge, maneig, separació i, en el seu cas, altres operacions de gestió dels residus de construcció i demolició dintre de l'obra.

## 1. DEFINICIONS

- **Residu de construcció i demolició:**

Qualsevol substància u objecte que es generi a l'obra construint o demolint.

- **Residu inert:**

És el residu no perillós que no experimenta transformacions físiques, químiques o biològiques significatives, no és soluble ni combustible, ni reacciona física ni químicament ni de cap altra forma que pugui donar lloc a la contaminació del medi ambient o perjudicar la salut humana. La lixiviabilitat total, el contingut de contaminants del residu i la ecotoxicitat del lixiviat deuran ser insignificants, i en particular, no deuran suposar un risc per a la qualitat de les aigües superficials o subterrànies.

- **Residu no especial:**

És el residu que pot experimentar transformacions físiques, químiques o biològiques però sense perjudicar la salut humana o contaminar el medi ambient.

- **Residu especial:**

És el residu que necessita un tractament especial perquè pot ser contaminant o perillós per a la salut humana.

- **Productor dels residus:**

El productor és tota persona física o jurídica que produeix residus amb la seva activitat constructora.

- **Posseïdor dels residus:**

És el titular de l'empresa que efectua les operacions d'enderrocament, construcció, reforma, excavació o d'altres operacions generadores dels residus, o la persona física o jurídica que els té en possessió i que no té la condició de gestor de residus. El posseïdor és qui fa materialment els treballs de desmuntatge, desmantellament i enderrocament d'una construcció o els treballs d'excavació, per més que no rep aquesta consideració si, a més, és el gestor de residus.

- **Gestor del residu:**

És el titular de les instal·lacions en què s'efectuen les operacions de valorització dels residus i el titular de les instal·lacions en què s'efectua la disposició dels rebuigs.

## 2. NORMATIVA

A continuació es llista un resum de les principals Normatives d'aplicació:

- Reial Decret 105/2008, de 1 de febrer, per el que se regula la producció i gestió dels residus de construcció i enderroc.
- Reial Decret 21/2006, de 14 de febrer, pel qual es regula l'adopció de criteris ambientals i d'ecoeficiència en els edificis.
- Reial Decret 396/2006, de 31 de Març, pel qual s'estableixen les disposicions mínimes de seguretat i salut aplicables als treballs amb risc d'exposició a l'amiant. («BOE» 86, d'11-4-2006.)
- Ordre MAM/304/2002, de 8 de febrer, per la qual es publiquen les operacions de valorització i

eliminació de residus i la llista europea de residus.

- Decret 201/1994, de 26 de juliol, modificat pel Decret 161/2001, de 12 de juny, regulador dels enderrocs i altres residus de la construcció.
- Reial Decret 833/1988, pel que s'aprova el Reglament per a l'execució de la Llei 20/1986, Bàsica de Residus Tòxics i Perillosos.
- Llei 15/2003, de modificació de la Llei 6/199, reguladora dels residus.
- Plan Nacional de residuos de la construcción y demolición (PNRCD) 2001-2006
- Ley 10/98, de 21 de abril, de residus

## 3. OBLIGACIONS DEL PRODUCTOR I POSSEÏDOR DELS RESIDUS

Per al productor i posseïdor dels residus es determinen les obligacions següents:

a) Garantir que les operacions de reutilització, reciclatge, valorització i disposició dels rebuigs es duen a terme segons les determinacions del *Reial Decret 105/2008, de 1 de febrer, per el que se regula la producció i gestió dels residus de construcció i enderroc* i demés normativa vigent.

b) Garantir que en les operacions de gestió en origen dels residus es compleixen les prescripcions de l'esmentada normativa i del present plec.
c) Abonar els costos que s'originin per a la gestió dels residus.

El cost total de la gestió és la suma dels costos de destriament i recollida selectiva en el lloc, més els costos propis del transportista i del gestor, a causa de la valorització i disposició dels rebuigs.

## 4. GESTIÓ DE RESIDUS

Abans de començar l'obra, el contractista haurà de presentar al client un Pla de Gestió de Residus que reflecteixi les seves obligacions en relació amb els residus de construcció i demolició que es vagin a produir, sempre seguint les prescripcions previstes a la normativa d'aplicació. El pla una vegada aprovat per el Director d'obra i acceptat pel client, serà un dels documents contractuals de l'obra.

Els residus de construcció i demolició es destinaran preferentment, i per aquest ordre, a operacions de reutilització, reciclatge o a altres formes de valorització.

Durant les obres es realitzarà una separació selectiva segregant primer dels residus Inerts, dels residus No Especials i dels residus Especials (aquests sempre separats de la resta). A més, caldrà també separar els materials que es poden reutilitzar o reciclar dins la pròpia obra, o els que cal gestionar-los externament.

La classificació en origen es realitzarà acuradament, obtenint residus el més homogenis possibles per facilitar-ne la gestió.

Els residus hauran de mantenir-se en condicions adequades d'higiene i seguretat, i s'haurà d'evitar la mescla de fraccions ja seleccionades que impedeixi o dificulti la seva posterior valorització o eliminació.

S'incorporaran les operacions de destriament i recollida selectiva en el mateix lloc on es produeixin els residus.

Els residus es separaran en les següents fraccions, quan, de forma individualitzada per cada una d'aquestes fraccions, la quantitat prevista de generació per al total de l'obra superi les següents quantitats:

- Formigó: 80 t.
- Maons, teules, ceràmics: 40 t.
- Metall: 2 t.
- Fusta: 1 t.
- Vidre: 1 t.
- Plàstic: 0,5 t.
- Paper i cartró: 0,5 t.

Els contenidors s'hauran de senyalitzar en funció del tipus de residu que continguin, d'acord amb la separació prevista.

Quan els residus de construcció i demolició no puguin ser gestionats pel contractista, haurà d'entregar-los a un gestor de residus o participar en un acord voluntari o conveni de col·laboració per a la seva gestió.

L'entrega dels residus de construcció i demolició haurà de constar en un document amb la identificació del propietari i el seu productor, l'obra de procedència i, en el seu cas, el número de llicencia de l'obra, la quantitat, expressada en tones o en metres cúbics, el tipus de residus entregats, codificats pel catàleg de europeu de residus i la identificació del gestor de les operacions de destí.

Quan el gestor a qui li siguin entregats els residus de construcció i demolició realitzi únicament operacions de recollida, emmagatzematge, transferència o transport, en el document d'entrega haurà de figurar també el gestor de valorització o d'eliminació posterior dels residus.

Els residus que no es poden valoritzar caldrà disposar-los de manera que no puguin causar danys a les persones ni a la naturalesa, i que no es converteixin en factors agressius del paisatge.

Si no són perillosos i no es poden valoritzar, o si no es poden valoritzar i estan formats per materials inerts, s'han de llençar en un abocador controlat.

Si són perillosos s'han de dipositar adequadament en un abocador específic per a productes d'aquest tipus i, si cal, sotmetre'ls prèviament a un tractament a fi que resultin menys perillosos.

# 1. Objecte de l'estudi

Aquest estudi de Seguretat i Salut del "PROJECTE D'ACABAMENT DE LES OBRES D'AMPLIACIÓ DEL CANAL LATERAL DE L'A2 DES DE LA RIERA DE SANT JUST AL RIU LLOBREGAT" estableix, per totes les actuacions que s'han de dur a terme, les previsions respecte a prevenció de risc d'accidents i malalties professionals, així com els derivats dels treballs de reparació, conservació i manteniment, i les instal·lacions preceptives d'higiene i benestar dels treballadors.

Els objectius d'aquest Estudi són els següents:

1. Conèixer el projecte a construir i, definir la tecnologia adequada per a la realització tècnica de l'obra.
2. Analitzar totes les unitats d'obra contingudes al projecte a construir.
3. Definir tots els riscos, humanament detectables, que puguin aparèixer al llarg de la realització dels treballs.
4. Dissenyar les línies preventives a posar en pràctica, és a dir, la protecció col·lectiva i equips de protecció individual a implantar durant tot el procés de construcció.
5. Divulgar la prevenció decidida per a aquesta obra, a través del seu corresponent Pla de Seguretat i Salut a tots els que intervenen en el procés de construcció.
6. Crear un ambient de Salut laboral a l'obra.
7. Definir les actuacions a seguir en el cas de que es produeixi l'accident.
8. Dissenyar una línia formativa per a prevenir els accidents.
9. Fer arribar la prevenció de riscos, a cada empresa subcontractista o autònoms que treballin en l'obra.
10. Dissenyar la metodologia necessària per a efectuar, en les degudes condicions de Seguretat i Salut, els treballs de reparació, conservació i manteniment.

### 2.5. Descripció de les obres

El canal de l'A2 dona solució al correcte drenatge de les rieres laterals del marge esquerre del Llobregat, entre els municipis de Molins de Rei i Sant Just Desvern, i les aigües procedents de l'efluent de la depuradora de Sant Feliu de Llobregat.

Com que es vol evitar que aquestes aigües arribin al Llobregat, donat que aigües avall de la desembocadura del canal es troba la captació de la potabilitzadora de Sant Joan Despí, són interceptades mitjançant comportes i enviades al riu pel tub del Governador aigües avall de la potabilitzadora.

Les obres d'ampliació del canal no es van finalitzar i el present projecte estableix que les obres necessàries per l'acabament d'aquesta actuació són, principalment, les següents:

- Actualització i insonorització del grup electrogen
- Reparació esquerda caseta
- Reparació i actualització dels actuadors de les comportes
- Instal·lació escomesa elèctrica
- Reparació i col·locació de la reixa automàtica de gruixuts
- Instal·lació d'una comporta prèvia a la reixa.
- Instal·lació vis-sense fi.
- Adequació muret de la cambra de càrrega del tub del governador amb perfil tipo *creager*.
- Desbrossar i netejar el canal i la zona de comportes
- Instal·lació sistema de megafonia i videovigilància
- Instal·lació de cartells d'advertència i una tanca perimetral al canal de descàrrega

### 2.6. Termini d'execució

## 4. Anàlisis i avaluació inicial dels riscos

Al present capítol es realitza l'anàlisi i avaluació inicial dels riscos, tal com ho demana el Reial Decret 1627/1997 de 24 d'octubre pel que s'estableixen disposicions mínimes de seguretat i salut a les obres de construcció, article 5.

La següent anàlisi i avaluació inicial de riscos, s'ha realitzat en base al projecte de l'obra, en conseqüència de la tecnologia decidida per a construir, que pot ser variada per cada Contractista adjudicatari en els seus Plans de Seguretat i Salut, quan ho adapti a la tecnologia de construcció que li sigui pròpia.

En tot cas, els riscos aquí analitzats, es podran controlar mitjançant la protecció col·lectiva necessària, els equips de protecció individual i la senyalització oportuna.

El Pla de Seguretat i Salut que composi el Contractista adjudicatari respectarà la metodologia i concreció aconseguides per aquest treball.

En la matèria d'identificació i avaluació dels riscos, se l'assigna la probabilitat amb la qual pot recórrer.

Les probabilitats s'han qualificat com:

| | |
|---|---|
| Probabilitat baixa | **B** |
| Probabilitat mitjana | **M** |
| Probabilitat alta | **A** |

S'avaluen les conseqüències dels riscos que poden ser:

| | |
|---|---|
| Lleugerament danyós | **LD** |
| Danyós | **D** |
| Extremadament danyós | **DE** |

Demarcació: Barcelona
VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

En funció de la probabilitat i conseqüència es qualifica el risc estimat:

| | |
|---|---|
| Trivial | **T** |
| Tolerable | **TO** |
| Moderat | **M** |
| Important | **I** |
| Intolerable | **IN** |

La qualificació s'assigna segons la següent taula:

| | Qualificació de les conseqüències previsibles | | |
|---|---|---|---|
| | Lleugerament danyós | Danyós | Extremadament danyós |
| Probabilitat Baixa de que ocorri | **Risc Trivial** | **Risc Tolerable** | **Risc moderat** |
| Probabilitat Mitjana de que ocorri | **Risc Tolerable** | **Risc moderat** | **Risc important** |
| Probabilitat alta de que ocorri | **Risc moderat** | **Risc important** | **Risc intolerable** |

A cada risc se l'assigna el tipus de protecció a aplicar:

- Protecció col·lectiva
- Protecció individual

Els riscos s'analitzen i s'avaluen per activitats, per oficis que intervenen, per medis auxiliars a utilitzar, per la maquinària que s'empra, per les instal·lacions de l'obra, per les instal·lacions provisionals de l'obra, pel manteniment posterior en el període de garantia i per riscos de danys a tercers.

Sempre es tindran en compte els riscos propis del lloc, factors de forma i d'ubicació del tall a la instal·lació de les canonades, així com el canvis que pateixen en la seva periodicitat.

Al Plec de Condicions Tècniques i Particulars, es donen les normes a complir pel Contractista adjudicatari al seu Pla de Seguretat i Salut, amb l'objectiu de posar-les en pràctica durant la realització de l'obra.

### 4.8. Riscos per al manteniment posterior del construït

Una vegada executada l'obra i en servei es preveu que els riscos seran molt baixos, degut a que el personal que l'executarà serà qualificat i preparat amb formació específica per al

seu treball. A mode general es centraran en la precaució de senyalitzar la zona a treballar i arribar els medis de protecció individual adequats.

La prevenció per aquest riscos són com prevenció col·lectiva la senyalització de la zona de treball si és la via pública.

Com a mitjans de protecció més eficaços per al treballador ens podem remetre als medis de protecció individual com són els:

- Cascos
- Guants d'ús general
- Botes d'aigua
- Botes de seguretat de cuir
- Granotes de treball
- Ulleres contra impactes i antipols
- Caretes antipols
- Protectors auditius
- Roba reflectant
- Mascaretes
- Impermeables

És important que la professionalitat dels treballadors sigui evident i que tinguin uns costums de treball que faran reduir els sinistres de forma important.

### 4.9. Riscos de danys a tercers

Als enllaços amb les carreteres i camins existents hi haurà riscos derivats de l'obra, fonamentalment per circulació de vehicles.

Els danys a tercers també deriven de la circulació dels vehicles de transport, tant de terres com d'altres materials, per carreteres públiques.

Els camins actuals comporten un risc, degut a la circulació de persones alienes a l'obra, una vegada iniciats els treballs.

També deriven de la circulació dels vehicles d'excavació i transport de materials i de l'obertura de rases i pous, així mateix els derivats de la possibilitat de projecció de materials sobre persones i vehicles

## 5. Mitjans per a l'eliminació i prevenció de riscos

### 5.1. Proteccions col·lectives a utilitzar en obra

De l'anàlisi de riscos laborals que s'ha realitzat i els problemes específics que planteja la construcció de l'obra, es preveu utilitzar les contingudes al següent llistat:

En moviment de terres:

- Xarxes o robes metàl·liques de protecció per a despreniments localitzats
- Tanca de limitació i protecció
- Cinta de balissament
- Entibacions per a rases
- Senyals acústiques i lluminoses d'avís en maquinària
- Baranes
- Senyals de tràfic
- Senyals de seguretat

En transport, abocament, estesa i compactació:

- Tanques de limitació i protecció
- Barana de balisament
- Senyals acústiques i lluminoses d'avís en maquinària
- Senyals de tràfic
- Senyals de seguretat
- Regat de pistes

En formigons:

- Il·luminació d'emergència
- Passadís de seguretat
- Barana de limitació i protecció
- Cinta de balisament

- Senyals de seguretat
- Baranes

En soldadures:

- Interruptors diferencials
- Preses de terra
- Transformadors de seguretat
- Pòrtics limitadors de gàlib per a línies elèctriques

En incendis:

- Extintors portàtils

En les zones conflictives, hauran d'establir-se itineraris obligatoris pel personal.

Les rases, forats, desguassos, etc..., hauran de protegir-se amb tanques o baranes i senyalitzar-se adequadament. Si la profunditat és major de 1,5 metres, s'hauran d'estudiar les possibles alteracions del terreny abans de començar l'excavació. En tot cas, hauran d' instal·lar-se escales de mà cada 15 metres com a màxim.

En les proximitats de línies elèctriques no es treballarà amb maquinària de la qual la part més sortint pugui quedar a menys de dos metres de les mateixes, excepte si està tallat el corrent elèctric. En aquest cas serà necessari curt-circuitar la línia i posar-la a terra mitjançant una presa de terra de coure de 35 mil·límetres quadrats de secció mínima, connectada amb una pica ben humida.

S'hauran d'inspeccionar les zones on puguin produir-se fissures, esquerdes, erosions, eixamplaments, embalums, etc..., per si fos necessari prendre mides.

### 5.2. Proteccions individuals

De l'anàlisi de riscos efectuat, es desprèn que existeix una sèrie d'ells que no s'han pogut resoldre amb la instal·lació de la protecció col·lectiva. Són riscos intrínsecs de les activitats individuals a realitzar pels treballadors i per la resta de persones que intervenen a l'obra. Conseqüentment s'ha decidit utilitzar les contingudes al següent llistat:

- Cascos
- Guants d'ús general
- Botes d'aigua
- Botes de seguretat de cuir
- Granotes de treball
- Ulleres contra impactes i antipols
- Caretes antipols
- Protectors auditius
- Roba reflectant
- Mascaretes
- Impermeables

### 5.3. Prevenció específica

- **Treballs amb maquinària dins al canal**

Es posarà una senyalització provisional del nivell als laterals del canal, que s'hauran de revisar 3 cops al dia en dies assolellats i 1 cop cada hora en dies de pluja.

A més a més, si es preveuen pluges torrencials o tempestes, s'evitarà baixar maquinària al canal i s'aplaçaran les tasques relacionades.

També caldrà enviar la planificació de tasques a tots els organismes que controlin abocaments d'aigua al canal per evitar pujades de nivell sobtades.

Finalment, serà necessari que el contractista detalli un protocol d'evacuació en el cas d'avinguda inesperada.

- **Atropellaments per màquines o vehicles**

Es senyalitzaran els talls amb cartells de seguretat per tal d'evitar la presència de persones i evitar riscs.

En els talls de compactació d'aglomerat i terres, es col·locaran cartells adossats a les màquines i portàtils, prohibint la presència de personal.

Al front dels estenedors, segons l'avanç, es col·locaran cartells prohibint-ne la presència de personal en aquest front, per tal d'evitar atropellament per part dels camions que facin marxa enrere.

En les cruïlles amb carreteres i camins es senyalitzaran les zones de treball, els desviaments i els treballs en calçades i voreres de la mateixa.

El personal que treballi en els enllaços i cruïlles utilitzarà armilles reflectants sempre que sigui necessari.

- **Col·lisions i bolcades de màquines i camions**

Les pistes, cruïlles i incorporacions a vies públiques es senyalitzaran segons normativa vigent. Qualsevol senyalització que afecti la via pública serà autoritzada per la Direcció Facultativa de l'Obra u Organismes autònoms pertinents.

Els talls de càrrega i descàrrega es senyalitzaran marcant espais per a maniobres i aparcaments.

Els cantells de pista que presentin riscs de bolcades es protegiran adequadament.

Quan la descàrrega de camions es faci a abocadors, hauran de col·locar-se topalls.

- **Pols per circulació, vent, etc.**

Les pistes i traçats per on circulin màquines es regaran periòdicament amb cisterna d'aigua.

El personal que treballi en ambient de pols utilitzarà caretes o ulleres antipols.

- **Atrapaments**

Les màquines que girin: retroexcavadores, grues, carregadores, etc. portaran cartells indicatius, prohibint quedar-se sota el radi d'acció de la màquina.

Pel maneig de grans peces suspeses: tubs, etc., s'utilitzaran cordes auxiliars, guants i calçat de seguretat.

Els ganxos que s'utilitzin en els elements auxiliars d'elevació portaran sempre baldó de seguretat.

Totes les instal·lacions i màquines de taller portaran les seves transmissions mecàniques protegides.

- **Caigudes a diferent nivell**

S'utilitzaran escales de mà amb dispositius antirrelliscants per l'accés a interiors d'excavacions, etc.

Les excavacions es senyalitzaran amb cordó de abalisament.

- **Caigudes a mateix nivell**

El personal haurà d'utilitzar botes de seguretat adequades al treball que realitzi.

Per a la cruïlla de rases es disposaran passarel·les. Les màquines portaran en els accessos a cabines plaques antirrelliscants.

- **Caigudes d'objectes**

Tot el personal de l'obra utilitzarà casc. Els aplecs de tubs a prop de les excavacions, rases, etc. estaran calçats.

En els treballs amb grues, especialment si són repetitius, es situaran cartells que recordin la prohibició de circular o de quedar-se sota càrregues suspeses.

Les plataformes de treball i cantells d'estructures al buit portaran baranes amb el seu corresponent sòcol.

Si hi ha esllavissades en talussos, s'utilitzaran paranys amb malla metàl·lica.

De manera general, es senyalitzaran els talls recordant la necessitat d'ORDRE i NETEJA.

Quan el personal hagi de caminar per ferralla hauran d'habilitar-se passarel·les de fusta.

- **Electrocucions**

Els quadres elèctrics de distribució s'instal·laran amb interruptor diferencial de mitja sensibilitat (300 mA) i presa de terra.

Les màquines de mà i la xarxa d'enllumenat aniran protegides amb interruptor diferencial d'alta sensibilitat (30 mA). Cadascuna de les màquines elèctriques disposarà de presa de terra.

Els electricistes tindran a la seva disposició guants dielèctrics.

- **Èczemes, causticacions**

El personal que treballi en llocs humits o amb aigua, en foragitant de fonaments, soleres, fossats, gunitat, etc., utilitzarà botes d'aigua i guants.

Igualment, el personal de taller en contacte amb olis portarà guants.

Els encarregats dels líquids desencofrants portaran guants, ulleres i caretes.

- **Projecció de partícules**

S'utilitzaran ulleres en els treballs següents:

- En els treballs de taller mecànic, pedra d'esmeril, desbarbadores, etc.

- Per obrir regates, caixetins, etc. amb punter i maça, martell picador o martell i escarpa.

- Al realitzar demolicions per tal d'evitat projeccions i cops als ulls.

- Al realitzar treballs de neteja amb aire a pressió.

- **Cremades**

Els soldadors utilitzaran l'equip complet de protecció.

- **Incendis-Explosions**

Es disposaran d'extintors d'incendi segons el tipus de foc previsible.

El equips oxiacetilènics portaran incorporats vàlvules d'antiretrocés.

- **Vibracions, lumbàlgies**

Els operaris de màquines de moviment de terres, els conductors de camions de trabuc, els operaris de piconadores, especialment les vibrants, i els treballadors que utilitzin martells trencadors, portaran cinturó antivibratori.

- **Punxades i talls**

Tot el personal portarà calçat de seguretat, que haurà de portar plantilla anticlaus, en els treballs amb els encofrats de fusta i en els de ferralla.

- **Sorolls**

Totes les màquines i camions disposaran de silenciador adequat que esmorteeix el soroll.

Quan no sigui possible reduir o anul·lar el soroll de la font, el personal portarà proteccions acústiques.

- **Intoxicacions per fums, pintures, etc.**

Quan existeixin concentracions de fums per soldadures es disposarà de ventilació i els operaris utilitzaran caretes.

- **Radiacions**

Els soldadors hauran de portar pantalla adequada al treball que realitzin.

### 5.4. Interferències amb serveis

- **Interferències amb servei d'aigua i xarxa de clavegueres**

És fonamental la utilització de botes quan s'està treballant en rases, així com casc i guants, augmentant les precaucions si dits treballs es realitzen en zona urbana i amb proximitat de línies elèctriques, intercalant pantalles si fos necessari al costat on pugui produir-se el contacte.

Dites rases hauran de senyalitzar-se i protegir-se adequadament per a informació dels ciutadans, acotant la zona de treball i aplecs de materials per tal d'evitar tot tipus de perill.

- **Interferències amb línies elèctriques**

En general a l'àmbit de treball existeixen línies elèctriques aèries que no es trobaran desviades durant l'execució de les obres. Es senyalaran i tancaran degudament les zones sensible per evitar el pas de grues i maquinaria d'alçada, de tal manera que es garanteixi que no es produiran trencaments de les línies.

### 5.5. Senyalització dels riscos

La prevenció dissenyada, per a millorar la seva eficàcia, requereix la utilització d'una senyalització adequada. A continuació s'adjunta una relació de les més comuns segons la seva finalitat.

#### *5.5.1 Senyalització dels riscos del treball*

Com complement de la protecció col·lectiva i dels equips de protecció individual previstos, es decideix la utilització d'una senyalització normalitzada que recordi en tot moment els riscos existents a tots els que treballen a l'obra. El plec de condicions defineix el necessari per a l'ús d'aquesta senyalització. La senyalització escollida és la del llistat que s'ofereix a continuació, a mode informatiu.

- Banda d'advertència de perill
- Prohibit el pas a vianants

#### *5.5.2 Senyalització vial*

Els treballs a realitzar, originen riscos importants per als treballadors de l'obra, per la presència o veïnat del trànsit rodat, en conseqüència, és necessari instal·lar l'oportuna senyalització vial, que organitzi la circulació de vehicles de la forma més segura possible.

- Cordó de balisament reflectant
- Xarxa de plàstic per limitació d'accés

### 5.6. Formació i informació en seguretat i salut

La formació i informació dels treballadores en els riscos laborals i en els mètodes de treballs segurs a utilitzar, són fonamentalment per a l'èxit de la prevenció.

El Contractista adjudicatari està legalment obligat a formar a tot el personal al seu càrrec, de tal forma, que tots els treballadors tindran coneixement dels riscos propis de la seva activitat laboral, de les conductes a observar en determinades maniobres, de l'ús correcte de les proteccions col·lectives i del dels equips de protecció individual necessaris per a la seva protecció.

A la contractació de cada treballador i periòdicament, s'informarà de les mesures de seguretat i salut que hauran d'adoptar-se en el treball, així com de l'obligatorietat que tenen de complir-les.

Abans de començar el treball haurà de comprovar-se que cada operari conegui perfectament l'ús de les eines, útils i maquinària que se'l faciliti, i que les utilitza sense perill per si mateix i per les persones de l'entorn. En altre cas s'haurà de facilitar l'ensenyament i les normes necessàries per garantir el citat fi.

Triant el personal més qualificat, es faran cursets de socorrisme i primers auxilis, de manera que totes les obres disposin d'algun socorrista.

### 5.7. Serveis comuns

Es disposarà de vestuaris i serveis higiènics degudament dotats.

El vestuari disposarà de caselles individuals amb clau, seients i calefacció.

Els serveis higiènics constaran de lavabo i inodor químic.

### 5.8. Serveis sanitaris i primers auxilis

- **Reconeixement mèdic**

Tot el personal que comenci a treballar en l'obra haurà de passar un reconeixement mèdic previ al treball, i que serà repetit en el període d'un any.

S'analitzarà l'aigua destinada al consum dels treballadors per tal de garantir la seva potabilitat, si no procedeix de la xarxa de proveïment de la població.

- **Farmaciola**

Es disposarà d'una farmaciola contenint el material especificat en l'Ordenança General de Seguretat i Higiene en el Treball, que consisteix en, mínim, el següent equipament:

- desinfectants i antisèptics autoritzats
- gases estèrils
- benes
- esparadraps
- apòsits adhesius
- tisores
- pinces
- guants d'un sol ús

- **Assistència a accidentats**

S'haurà d'informar a l'obra de l'emplaçament dels diferents Centres Mèdics a on hauran de traslladar-se els accidentats per seu més ràpid i efectiu tractament.

És molt convenient disposar a l'obra, i en un lloc ben visible, d'una llista de telèfons i direccions dels centres assignats per a urgències, ambulàncies, taxis, etc., per garantir un ràpid transport dels accidentats als centres d'assistència.

### 5.9. Prevenció de risc de danys a tercers

Es senyalitzaran els accessos a l'obra d'acord amb la normativa vigent. A l'enllaç dels obrers amb les carreteres i camins que existeixen, adoptant-se les mesures de seguretat que cada cas requereixi.

## 6. Instal·lacions provisionals, àrees auxiliars, acopis i maquinària

Les instal·lacions provisionals per als treballadors s'allotjaran a l'interior de mòduls metàl·lics prefabricats, comercialitzats en xapa emparedada amb aïllant tèrmic i acústic.

Es muntaran sobre una fonamentació lleugera de formigó o sobre una superfície existent si té la suficient solidesa salvaguardant la seva integritat. Tindran un aspecte senzill però digne. Han de retirar-se al finalitzar l'obra i hauran d'arreglar-se els possibles desperfectes que la seva ubicació hagi produït.

A l'obra es destinarà una zona per l'emmagatzematge del material. Aquesta zona estarà vallada i protegida de la zona de treball. Els materials inflamables i explosius es protegiran de la intempèrie i senyalitzant el seu risc.

En cas que sigui necessària maquinària pesada, s'habilitarà un espai per aparcar-la fora de la zona de treball.

## 7. Serveis provisionals

El contractista haurà de proveir-se de serveis provisionals d'electricitat pel funcionament dels seus equipaments, així com un dipòsit d'aigua potable per al seu consum.

## 8. Localització de serveis assistència , salvament i seguretat i mitjans d'evacuació

Els telèfons i adreces d'interès en cas de necessitat durant l'execució de les obres són els següents:

**Hospital de Sant Joan Despí Moisès Broggi**

C/ Jacint Verdaguer, 90, 08970 – Sant Joan Despí

## 9. Tractament de residus i substàncies perilloses

Es gestionaran els sobrants de l'obra de conformitat amb les directius del D. 201/1994, de 26 de juliol, i del RD 105/2008, d'1 de febrer, regulador dels enderrocs i d'altres residus de construcció, a fi i efecte de minimitzar la producció de residus de construcció com a resultat de la previsió de determinats aspectes del procés.

Al projecte s'ha avaluat el volum i les característiques dels residus perillosos i no perilloses que previsiblement s'originaran, així com el seu emmagatzematge. Tots els residus s'hauran de lliurar a un gestor autoritzat.

Si a les excavacions i/o buidats de terres apareixen antics dipòsits o canonades, no detectades prèviament, que continguin o hagin pogut contenir productes tòxics i contaminants, es buidaran prèviament i s'aïllaran els productes corresponents de l'excavació per ser evacuats independentment de la resta i es lliuraran a un gestor autoritzat.

## 10. Sistema projectat per a la prevenció

### 10.1. Sistema decidit per al control de nivell de seguretat i salut, i documents de nomenaments

El Pla de Seguretat i Salut és el document que haurà de recollir el sistema decidit per al control del nivell de Seguretat i Salut exactament, segons les condicions contingudes al Plec de Condicions Tècniques i Particulars de Seguretat i Salut.

La protecció col·lectiva i la seva posta en obra es controlarà mitjançant l'execució del pla d'obra previst i les llistes de seguiment i control esmentades al punt anterior.

El control de lliurament d'equips de protecció individual serà:

1. Mitjançant la signatura del treballador que els rep, en una part de magatzem que es defineix al Plec de Condicions Tècniques i Particulars.
2. Mitjançant la conservació en apilament, dels equips de protecció individual utilitzats, ja inservibles, fins que la Direcció Facultativa de Seguretat i Salut pugui amidar les quantitats rebutjables.

Es preveu fer servir els mateixos documents que utilitzi normalment per a aquesta funció, el Contractista adjudicatari, formalitats recollides al Plec de Condicions Tècniques i Particulars i ser coneguts i aprovats per la Direcció Facultativa de Seguretat i Salut com parts integrants del Pla de Seguretat i Salut que com a mínim, són els continguts al següent llistat (això afectarà tant als contractistes com als subcontractistes).

### 10.2. Prevenció assistencial en cas d'accident laboral

- **Medicina Preventiva**

El Contractista adjudicatari, en compliment de la legislació laboral vigent, realitzarà els reconeixements mèdics previstos a la contractació dels treballadors d'aquesta obra i els preceptius de ser realitzats a l'any de la seva contractació. I així mateix, exigirà puntualment aquest compliment, a la resta de les empreses que sigui subcontractades per ell a aquesta obra.

Al Plec de condicions tècniques i particulars s'expressen les obligacions empresarials en matèria d'accidents i assistència sanitària.

# 5 CONDICIONS DELS MITJANS DE PROTECCIÓ

Totes les peces de protecció personal o elements de protecció col·lectiva tindran fixat un període de vida útil, rebutjant-se al seu termini.

Quan per les circumstàncies del treball es produeixi un deteriorament més ràpid en una determinada peça o equip, es reposarà aquesta, independentment de la durada prevista o data d'entrega.

Tota peça o equip de protecció que hagi sofert un tracte límit, és a dir, el màxim pel que va ser concebut (per exemple, per un accident) serà rebutjat i reposat al moment).

Aquelles peces que pel seu ús hagin adquirit més folgades o toleràncies de les admeses pel fabricant, seran reposades immediatament.
L'ús d'una peça o equip de protecció mai representarà un risc en si mateix.

**Proteccions personals**

Tot element de protecció personal s'ajustarà a les Normas de Homologación del Ministerio de Trabajo (O.M. 17/05/72, BOE 29/05/74) i al d'equips de protecció individual (R.D. 773/1997 de 30 de maig de l'Estat espanyol, sempre que existeixi en el mercat.

En els casos en que no existeixi norma d'homologació oficial, seran de qualitat adequada a les seves respectives prestacions.

**Proteccions col·lectives**

Els elements de protecció col·lectiva tindran sempre preferència sobre els de protecció individual i s'adjuntaran a les característiques fonamentals següents:

- Tanques de limitació i protecció:
  - Tindran com a mínim 90 cm d'alçada, estan construïdes a base de tubs metàl·lics.
  - Disposaran de potes per a mantenir la seva verticalitat.
- Límits de desplaçaments de vehicles:
  - Es podran realitzar amb un parell de taulons embridats, fixats al terreny per mitjà de rodons clavats al mateix, o d'altra forma eficaç.
- Corredors de seguretat:
  - Podran realitzar-se a base de portalons amb peus drets i llinda a base de taulons embridats, fermament subjectes al terreny i coberta quallada de taulons.

    Aquests elements també podran ser metàl·lics (els pòrtics a base de tub o perfils i la coberta de xapa).

    Seran capaços de suportar l'impacte dels objectes que es previngui puguin caure, col·locant elements amortidors sobre la coberta (sacs, capa de sorra, etc.).
- Baranes:
  - Disposaran de llistó superior a una alçada de 90 cm, de suficient resistència per a garantir la retenció de persones, i portaran un llistó horitzontal intermedi, així com el corresponent sòcol.

- Filats:
  - Seran de poliamida. Les seves característiques generals seran tals que compleixin, amb garantia, la funció protectora per a la que estan previstos.
- Lones:
  - Seran de bona qualitat i de gran resistència a la prolongació de la flama.
- Cables de subjecció de cinturó de seguretat, els seus ancoratges, suports i ancoratges de xarxes:
  - Tindran suficient resistència per a suportar els esforços a que puguin ser sotmesos d'acord amb la seva funció protectora.
- Interruptors diferencials i connexió a terra (massa):
  - La sensibilitat mínima dels interruptors diferencials serà per l'enllumenat de 30 mA i per a força de 300 mA. La resistència de les connexions de terra no serà superior a la que garantitzi, d'acord amb la sensibilitat de l'interruptor diferencial, una tensió màxima de 24 V.

  Es mesurarà la seva resistència periòdicament i, al menys, en la època més seca de l'any.
- Extintors:
  - Seran adequats en agent extintor i grandària al tipus d'incendi previsible i es revisaran cada sis mesos com a màxim.
- Riscs:
  - Les pistes per a vehicles es regaran convenientment per a evitar aixecaments de pols pel trànsit dels mateixos.

# 6 SERVEIS DE PREVENCIÓ

## 6.1 COORDINADORS EN MATÈRIA DE SEGURETAT I SALUT

Quan en l'execució de l'obra intervingui més d'una empresa, o una empresa i treballadors autònoms o diversos treballadors autònoms, el promotor, abans de l'inici dels treballs, designarà un coordinador en matèria de seguretat i salut durant l'execució de l'obra.

El coordinador en matèria de seguretat i salut durant l'execució de l'obra haurà de desenvolupar les següents funcions:

a) Coordinar l'aplicació dels principis generals de prevenció i de seguretat:

El llibre d'incidències serà facilitat per:

- El col·legi professional al que pertanyi el tècnic que hagi aprovat el pla de seguretat i salut.

- La oficina de Supervisió de Projectes o organisme equivalent quan es tracti d'obres de les Administracions públiques.

El llibre d'incidències, que haurà de mantenir-se sempre en l'obra, estarà en poder del coordinador en matèria de seguretat i salut durant l'execució de l'obra o, quan no fos necessària la designació de coordinador, en poder de la direcció facultativa. A l'esmentat llibre tindran accés la direcció facultativa de l'obra, els contractistes i subcontractistes i els treballadors autònoms, així com les persones o òrgans amb responsabilitats en matèria de prevenció a les empreses intervinents en l'obra, els representants dels treballadors i els tècnics dels òrgans especialitzats en matèria de seguretat i salut en el treball de les Administracions públiques competents, les quals podran fer anotacions en el mateix, relacionades amb la finalitat que al llibre se li reconeixen en l'apartat 1.

Efectuada una anotació al llibre d'incidències, el coordinador en matèria de seguretat i salut durant l'execució de l'obra o, quan no sigui necessària la designació de coordinador, la direcció facultativa, estaran obligades a remetre, en el termini de vint-i-quatre hores, una còpia a la Inspecció de Treball i Seguretat Social de la província en que es realitza l'obra. Igualment hauran de notificar les anotacions en el llibre al contractista afectat i als representants dels treballadors d'aquest.

## 6.3 SERVEI TECNIC DE SEGURETAT I SALUT

L'obra haurà de comptar amb un Tècnic de Seguretat, en règim permanent, la missió del qual serà la prevenció de riscs que puguin presentar-se durant l'execució dels treballs i assessorar al Cap d'Obra sobre les mesures de seguretat a adoptar.

Així mateix, investigarà les causes dels accidents esdevinguts per a modificar els condicionants que els van produir per a evitar la seva repetició.

Quan en l'execució de l'obra intervingui més d'una empresa, o una empresa i treballadors autònoms, o diversos treballadors autònoms, la direcció de l'obra, abans de l'inici dels treballs designarà un coordinador en matèria de seguretat i salut durant l'execució de l'obra.

## 6.4 SERVEI MÈDIC

L'empresa constructora comptarà amb Servei Mèdic d'empresa propi o mancomunat.

# 7 VIGILANT DE SEGURETAT I COMITÈ DE SEGURETAT I SALUT

Es nomenarà Vigilant de Seguretat d'acord amb el previst en l'Ordenança general de Seguretat i Higiene del Treball.

Es constituirà el Comitè quan el nombre de treballadors superi el previst en l'Ordenança Laboral de Construcció o, en el seu cas, el que disposi el Conveni Col·lectiu provincial.

# 8 INSTAL·LACIONS MÈDIQUES

Es disposarà d'un local destinat a Farmaciola central, equipat amb el material sanitari i clínic per a atendre qualsevol accident, a més de tots els elements d'assistència als treballadors i altres funcions necessàries pel control de la sanitat en l'obra.

Serà obligatòria l'existència d'una farmaciola de tall en aquelles zones de treball que estiguin llunyanes a la farmaciola central, per a poder atendre petites cures, dotats amb l'imprescindible material actualitzat.

## 1. Introducció

En aquest annex s'exposen les possibles afeccions a la llera pública, al Pla d'Espais d'Interès Natural (PEIN), la Xarxa Natura 2000 (XN2000), als Espais Naturals de Protecció Especial (ENPE) i a la zona de domini públic marítimo-terrestre (ZMT) degudes a les obres d'ampliació del canal lateral.

## 2. Afeccions a llera

Es preveu una afecció a llera pública durant l'explotació habitual de la instal·lació ja que l'obra és, en si mateix, un canal de descàrrega al Riu.

## 3. Afeccions al Pla d'Espais d'Interès Natural i a la Xarxa Natura 2000

No hi ha cap afectació ni al PEIN ni a la Xarxa Natura 2000, tal i com es pot veure a la figura següent.

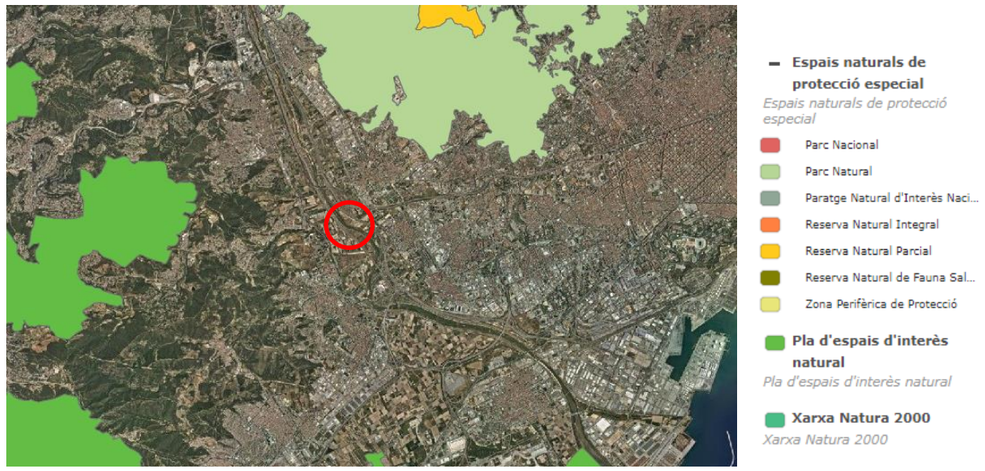

*Figura 1. Situació de les àrea pròximes a la instal·lació (cercle vermell) del PEIN i Xarxa Natura 2000*

## 4. Zona marítimo-terrestre

La llei 22/1988 de costes regula l'espai de la costa espanyola que considera mereixedor d'una especial protecció. Aquest espai, denominat de domini públic marítimo-terrestre, es configura com a bé de domini públic.

Per aquest motiu, els terrenys integrats en el mateix són de propietat de l'Estat i es troben sotmesos a un règim jurídic especial de Dret Administratiu, que estableix una sèrie de facultats a favor de l'Administració per a la seva protecció i conservació.

Tal i com es pot veure a la figura següent, la instal·lació no afecta cap zona de domini públic marítimo-terrestre.

## 1 Introducció

En aquest annex es presenta el Pla de Control de Qualitat del Projecte d'acabament de les obres d'ampliació del Canal lateral de l'A2.

Degut a que la major part d'obra civil i hidràulica es va realitzar durant les obres de 2008 i que les actuacions a realitzar per acabar la instal·lació són, majoritàriament, d'instal·lació elèctrica i d'equips, el present pla de control de qualitat es basa únicament en l'adequació del muret amb un perfil tipus *Creager*.

El control de qualitat de l'obra inclourà:

A. El control de materials

B. El control de l'execució de l'obra

C. El control de l'obra executada

De l'acreditació del control de recepció en obra, del control de execució i del control de recepció de l'obra executada, se'n deixarà constància a la documentació de l'obra executada.

## 2 Control de materials

## 4 Control de l'obra executada

En aquest cas no hi ha cap actuació que exigeixi de control a l'obra executada.

## 1 OBJECTE

L'objecte d'aquest document és conèixer la possibilitat d'inundacions en la zona on s'ubica el canal lateral de l'A2 i la cambra de càrrega del tub del Governador, al TM de Sant Joan Despí, al final del canal lateral de la A2.

## 2 METODOLOGIA

- S'han consultat les dades d'inundacions pels períodes de retorn de 10, 50, 100 i 500 anys disponibles a la web de l'Agència Catalana de l'Aigua. (veure imatge 3).

- També s'ha realitzat el càlcul hidràulic tenint present dades del Pla Director d'Aigües Pluvials, el qual es presenta a l'Annex 5 de Càlculs Hidràulics. D'ell es desprèn que per al període de retorn de disseny T=100, la cota del riu a la zona arriba fins a la 15,14 i per al període de retorn de T=500 arriba fins la 16,21 (veure imatges 1 i 2).

  Així doncs, donat que l'estructura té la cota de coronació a la 16,00, en el cas de l'avinguda de 500 anys del Llobregat el rebeig de la mateixa inundaria tota l'estructura.

  En el cas de l'avinguda de 100 anys, es podrien tancar les comportes i aquesta no afectaria aigües amunt de l'estructura.

## 3 CONCLUSIONS

La operativa definida per les comportes (tanquen automàticament quan la cota d'aigua al canal de descàrrega és superior a la cota d'aigua al pericó de comportes), farà que no hi hagi problemes d'inundació per a  un període de retorn de 100 anys.

En el cas de període de retorn de 500 anys, l'avinguda del riu sobrepassaria la estructura, cosa que només es solucionaria amb una actuació global de la instal·lació actual, que es surt de l'àmbit d'aquest projecte.

## 1. Automatització

El sistema d'automatisme i control disposarà de tres nivells de control:

- Un primer nivell que constarà dels automatismes de seguretat bàsica i de funcionament manual amb PLC. Aquests automatismes es resoldran amb elements clàssics com relés, contactors, elements de protecció, etc.
- Un segon nivell d'automatisme general integrat que comprendrà el control automàtic a través d'un autòmat programable.
- El tercer nivell serà el del sistema de supervisió. Aquest nivell estarà compost per equip informàtic que serveixen d'interfase per l'entrada i sortida de dades per la supervisió automàtic dels processos.

El sistema de control permetrà el funcionament automàtic de la instal·lació amb la màxima fiabilitat, facilitarà informació precisa per conèixer l'estat al personal encarregat de l'explotació i gestió de la mateixa, així com poder actuar sobre ella.

Constarà d'un PLC que realitzarà les següents funcions:

1. El sistema de control tindrà comandament directe sobre tots i cada un dels motors elèctrics existents, així com vàlvules motoritzades, control de proteccions, etc. sempre que els selectors es situïn en la posició d'automàtic.
2. El PLC tindrà el número d'entrada i sortides suficients per efectuar un funcionament completament automàtic. En principi, la relació de senyals que concreta l'autòmat és la següent:
    - Comunicació industrial (*Profibus*)
    - Entrades digitals
    - Entrades analògiques
    - Sortides digitals
    - Sortides analògiques
3. El disseny del software s'adapta a les necessitats d'explotació i es poden variar les condicions en qualsevol moment per modificació d'alguna de les variables.
4. Mitjançant la instal·lació dels elements de control es realitzaran les lectures necessàries en els punts adequats pel bon funcionament.
5. Les senyals de maniobra i comunicació es portaran amb cables de control que discorreran per camins de cables independents dels de potència, fins al quadre.

L'autòmat programable anirà instal·lat en el propi CCM de la instal·lació.

L'autòmat treballarà en forma d'intel·ligència distribuïda de forma autònoma, tot i amb falta de comunicació amb qualsevol dels altres elements de la xarxa. Ha de disposar de la memòria necessària per les lògiques de funcionament, més d'un arxiu de dades, analògiques i digitals, per un temps mínim de 72 hores, més un 25% de reserva.

A la instal·lació es disposa d'un grup electrogen per alimentar l'autòmat i perifèrics, dimensionat suficientment per garantir el correcte funcionament del conjunt en possibles talls de subministrament de la xarxa.

No s'inclou la programació de l'autòmat ni la comunicació amb centre de control extern.

## 2. Instrumentació

Tots els instruments requereixen una alimentació des del CCM a 230VCA o 24VDC, reenviant a la vegada al PLC, una senyal de 4-20mA, proporcional al valor del paràmetre mesurat.

Les canalitzacions pel cablejat entre el CCM i instruments, han de ser canonades de PE de 110/90 mm de diàmetre en els trams subterranis i tubs o plates de PVC, segons convingui, en instal·lació superficial dins dels edificis.

Els cables d'alimentació als instruments des de CCM, seran tipo RV 0,6/1 KV (F+N+TT) amb cordes conductores de coure, i els de transmissió de senyal des d'ells, seran tipus RCHV.

La instrumentació emprada en la instal·lació és la següent:

- Nou sensor de nivell aigües amunt
- Sensor de nivell existent aigües amunt (al mur entre comportes)
- Sensors de nivells existents entre comportes (5 unitats, una per cada parell de comportes)
- Sensor de nivell existent aigües avall (al mur entre comportes)
- Boia en derivació a tub del Governador

El funcionament de cadascú és el que es presenta a la següent taula:

# 1. Introducció

En aquest annex es detalla el manual d'explotació de la instal·lació amb les corresponents recomanacions així com les instruccions de manteniment dels equips.

S'inclou també una estimació dels costos d'explotació de la instal·lació.

# 2. Manual d'explotació

L'esquema de funcionament de l'obertura i tancament de les comportes que es detalla a continuació juntament amb l'accionament de la reixa i vis sense fi que es descriu al punt 2.2. seran el que ha de regir la programació de l'autòmat per tal que la instal·lació pugui funcionar de forma automàtica. S'estima que el cost de la **programació de l'autòmat** serà de 5.000 €.

Aquesta proposta de funcionament i les hipòtesis de partida podran ser objecte de modificació per part de l'ens que es faci càrrec del sistema en base a l'experiència assolida amb l'explotació del mateix.

No es preveu que l'explotació dels equips la realitzi directament l'Agència Catalana de l'Aigua, sinó que hauria d'articular-se amb algun altre ens (Ajuntament o altres) a través d'un conveni de col·laboració o encàrrec de gestió (ens públic gestió de l'explotació – Agència Catalana de l'Aigua finançament).

## 2.1. Obertura i tancament de comportes

Es planteja un sistema automatitzat per al funcionament de les comportes. El funcionament del sistema de comportes estarà regulat per les mesures de nivell d'aigua realitzades per:

a) Nou sensor de nivell aigües amunt

b) Sensor de nivell existent aigües avall (al mur entre comportes)

Al plànol de la figura 1 es pot observar la situació dels elements descrits.

Al final del present annex s'adjunta com annex l'esquema de funcionament general

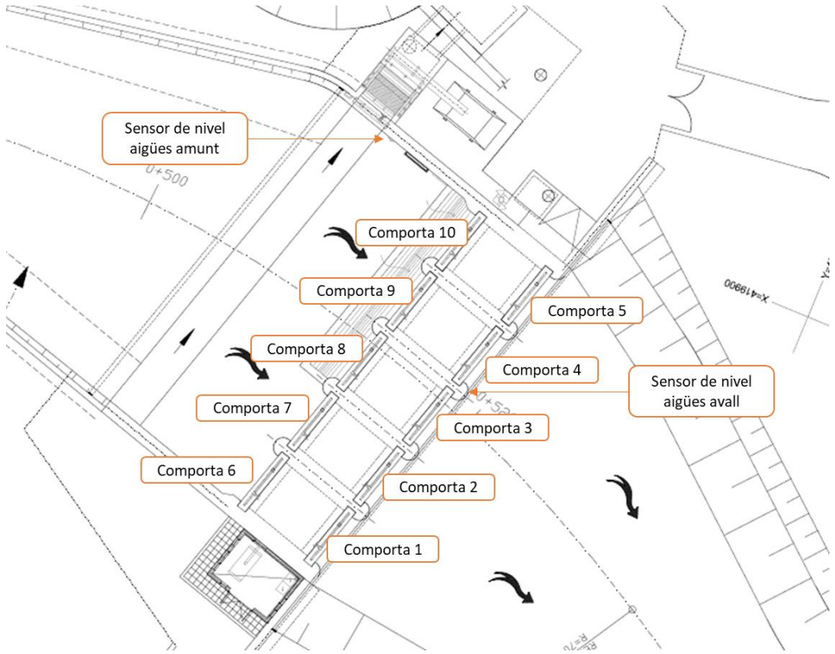

*Figura 1. Plànol d'ubicació dels elements*

### 2.1.1 Situació 0: Situació normal

La situació de funcionament normal serà aquella en que la mesura de a) estigui per sota de la cota de coronació del muret (13,25 m). En aquesta situació, totes les comportes estaran obertes a excepció de les comportes 6 i 7.

En aquesta situació, les aigües desguassen pel tub del Governador sense superar la cota del muret (13,25m).

A la figura següent es pot veure l'esquema de funcionament:

### 2.1.2 Situació 1: Situació de crescuda aigua canal i Llobregat baix

En el cas que hi hagi una avinguda del Canal però el Llobregat es mantingui baix, el procediment serà el que es detalla a continuació.

Si el nivell mesurat per a) assoleix un valor lleugerament inferior al de la cota de coronació del muret (13,25 m), s'activarà el sistema de megafonia, alertant mitjançant un missatge a la gent que hi pugui haver-hi dins del canal de descàrrega cap al riu Llobregat, que es procedirà en poc temps a l'obertura de les dues comportes que romanen tancades en situació normal.

A més d'activar-se la senyal de megafonia, s'activarà el sistema de vídeo de manera que pugui tenir-se un control visual remot de la situació del canal de descàrrega en el moment previ, durant l'operació d'obertura de les comportes i fins el tancament de les mateixes.

L'obertura de les comportes aigües amunt 6 i 7 serà de manera seqüencial en funció del nivell d'aigua en la zona del pericó de comportes, tal i com es detalla a la següent taula. El tancament de dites comportes també serà seqüencial, però en sentit invers.

| Cota d'aigua al pericó de comportes | Operació |
|---|---|
| 13.75 | Obertura de comporta 6 |
| 13.90 | Obertura de comporta 7 |
| 13.40 | Tancament de comporta 7 |
| 13.25 | Tancament de comporta 6 |

En la següent figura es pot veure l'esquema de funcionament.

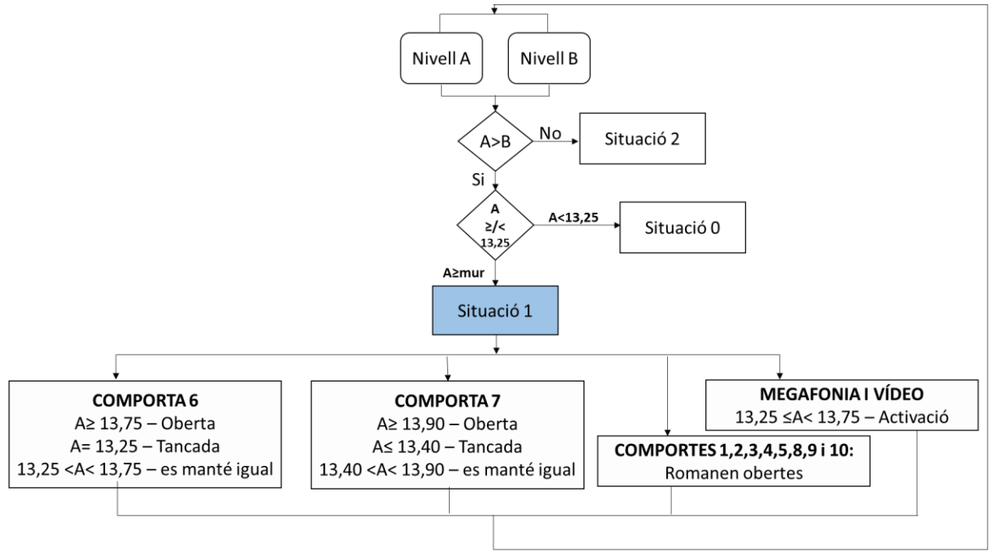

*Figura 3. Esquema de funcionament en situació de crescuda del Canal i Llobregat baix*

En el moment que el sensor b) detecti la circulació d'aigua, la senyal haurà d'arribar al gestor de la instal·lació, de manera que pugui comunicar-ho a la ETAP de Sant Joan Despí, en tant que és un servei afectat per l'abocament d'aigua del canal cap al riu Llobregat, del qual la ETAP capta l'aigua que ha de tractar.

### 2.1.3 Situació 2: Situació crescuda Llobregat

Situació 2.1. El canal baix

En el cas que es produeixin crescudes importants en el riu Llobregat i el nivell d'aigua detectat pel sensor b) sigui superior al nivell d'aigua detectat pel sensor a), es procedirà al tancament automàtic de totes les comportes, per evitar el flux de l'aigua del riu cap al canal.

Quan la crescuda del riu minvi i el nivell d'aigua detectat pel sensor b) sigui inferior al nivell d'aigua detectat pel sensor a), es tornarà a la situació normal. És a dir, l'autòmat obrirà totes les comportes excepte la 6 i 7.

Situació 2.2. El canal alt

En aquest cas, quan hi hagi crescuda per ambdós costats, el que s'haurà de fer serà obrir totes les comportes per intentar evitar que s'inundi la instal·lació.

*Figura 4. Esquema de funcionament situació crescuda del riu (situació 2)*

### 2.2. Accionament de reixa i vis sense fi

S'instal·larà una boia a l'entrada a la derivació al tub el Governador (abans de la reixa). A mesura que es vagi colmatant la reixa, augmentarà el nivell d'aigua aigües amunt de la reixa i la boia enviarà senyal a l'autòmat que posarà en marxa automàticament el sistema de neteja de la reixa i el vis sense fi. Un cop neta, el nivell aigües amunt de la reixa baixarà i la boia enviarà senyal a l'autòmat que aturarà el sistema de neteja de la reixa i el vis sense fi.

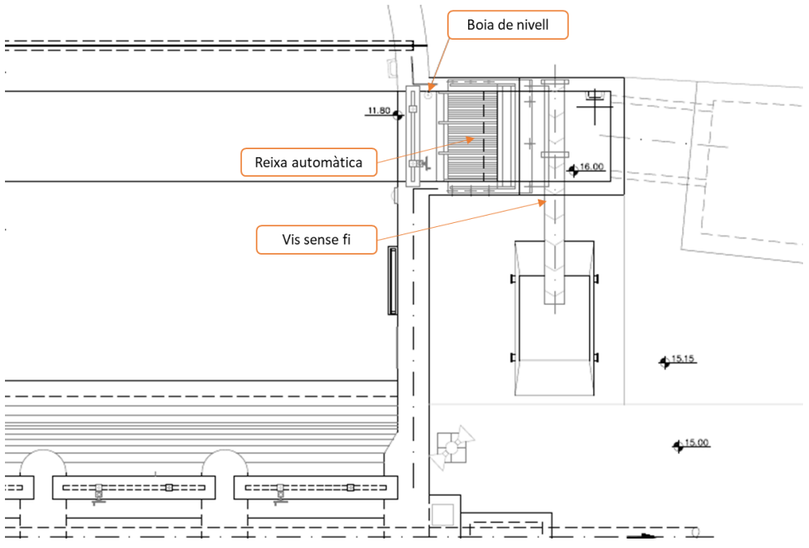

*Figura 5. Plànol d'ubicació dels elements descrits*

## 3. Manteniment

A la instal·lació es compta amb diferents equips que necessiten un manteniment periòdic per tal de garantir el seu bon funcionament durant la seva vida útil.

Es consideren les següents accions de manteniment dels equips:

| | Reixa automàtica | Vis sense fi | Comportes | Grup electrogen | Sensors de nivell | Megafonia i video |
|---|---|---|---|---|---|---|
| Retirada de residus | Bimensual | Bimensual | | | | |

| Neteja de filtres | | | | Anual | | |
| Calibració | | | | | Trimestral | |

*Taula 1.Accions d'operació i manteniment previstes*

A banda d'això, es realitzaran també:

- Comprovació setmanal de la il·luminació de la instal·lació i la caseta.
- Comprovació setmanal que les senyals d'alerta funcionen correctament.

## 4. Llibre de registres i incidències

El llibre de registres i d'incidències de l'explotació es mantindran en la mateixa instal·lació, o en una oficina central destinada per això, dintre de l'entitat responsable de l'explotació.

Hauran de contenir:

- El volum de residus extrets, en $m^3$
- Totes les incidències d'explotació.
- Les avaries dels equips.
- Totes les actuacions correctores o de caràcter preventiu.

A més, les avaries dels equips que activin un senyal d'alarma, seran anotades i conservades en el llibre d'incidències. S'inclourà el moment i la causa de l'avaria, així com les mesures correctores adoptades.

## 5. Estimació econòmica dels costos d'explotació

Els costos estimats d'explotació són els que es detallen a continuació.

Es diferencien per una banda els costos d'operació i manteniment, detallats a la *Taula 1.Accions d'operació i manteniment previstes* i per l'altra banda els costos associats a la despesa elèctrica.

# CAPÍTOL I. DESCRIPCIÓ DE LES OBRES I NORMES APLICABLES

## ARTICLE 1.1. OBJECTE D'AQUEST PLEC

El present Plec de Prescripcions Tècniques Generals constitueix el conjunt d'instruccions, normes, prescripcions i especificacions que, a més dels indicats a la memòria, plànols i pressupost, defineixen tots els requisits de les obres.

Aquests documents contenen a més a més de la descripció general i localització de les obres, les condicions que han de complir els materials, les instruccions per a l'execució, mesurament i abonament de les unitats d'obra i són, per tant, la norma i guia que ha de seguir en tot moment el Contractista.

A més del que es determini en els diferents apartats d'aquest Plec, seran d'obligat compliment en l'execució de les obres contemplades en aquest Projecte, en els seus àmbits respectius d'aplicació, les normes i disposicions que es relacionen en l'article 1.9. de Plecs, Instruccions i normes aplicables, sense que la llista aquí inclosa tingui un caràcter limitador ni desautoritzi les normes de rang superior al present Plec que siguin d'aplicació.

## ARTICLE 1.2. DESCRIPCIÓ DE LES OBRES I TERMINI D'EXECUCIÓ

Les obres a què fa referència el present Plec són les corresponents al projecte d'acabament de les obres d'ampliació del canal de lateral de l'A2 des de la Riera de Sant Just al Riu Llobregat.

Es realitza una descripció detallada de les obres en el Document nº 1 Memòria d'aquest projecte.

S'ha previst un termini de cinc (5) setmanes per a l'execució completa de les obres.

## ARTICLE 1.3. PLÀNOLS

Els plànols del Projecte contenen la descripció gràfica de les obres a realitzar. A partir d'ells es definirà el procés d'execució i els mesuraments d'obra, tenint en compte les prescripcions d'aquest Plec.

A partir dels plànols de Projecte es realitzaran els plànols de detall, que definiran els elements constructius per a la seva execució en obra o en taller. Tots els plànols de detall, preparats durant l'execució de les obres, hauran d'estar subscrits pel Director, sense aquest requisit no podran executar-se els treballs corresponents.

Els plànols que facin referència a les instal·lacions actuals tindran un caràcter temptatiu, tenint el Contractista que verificar la seva existència i localització real.

## ARTICLE 1.4. DOCUMENTS QUE ES LLIUREN AL CONTRACTISTA

- Els documents del Projecte que obliguen al Contractista en l'execució de l'obra
- Els terminis establerts
- Les clàusules que siguin conseqüència dels modificats vàlidament propostes i acceptades

Una còpia autoritzada dels documents contractuals del Projecte haurà de ser conservada pel Contractista a l'oficina d'obra.

Documents informatius

Les dades sobre sondejos, procedència de materials, assaigs, condicions locals, estudis de maquinària, de programació, de condicions climàtiques, de justificació de preus i, en general, tots els que s'inclouen en els annexos de la memòria, són documents informatius.

Aquests documents representen una opinió fundada de la Promotor. No obstant això, això no suposa que es responsabilitzi de la certesa de les dades que es subministren i, en conseqüència, han d'acceptar-tan sols com a complements de la informació.

## CAPÍTOL IV. DISPOSICIONS GENERALS

### ARTICLE 4.1. CONTRADICCIONS, OMISSIONS O ERRORS

Les contradiccions entre els diferents documents del Projecte i, especialment, entre els Plànols i el Plec, es resoldran amb la prevalença d'aquest últim document, així com la del Projecte enfront de qualsevol Plec de caràcter general.

L'esmentat en el Plec i omès en Plans, o viceversa, haurà de ser realitzat com si estigués exposat en ambdós documents, sempre que estigui prou definida la unitat d'obra corresponent i aquesta figuri en el Quadre de Preus.

Les contraindicacions, omissions o errors que s'adverteixin en els Documents del Projecte, tant pel director com pel Contractista, abans de la iniciació de l'obra, hauran de reflectir-se en l'acta de comprovació del Replanteig.

Les omissions o descripcions errònies en els Plans i al plec que el contractista hagués detectat, o presumit que existeixen, en l'obligatori examen d'aquests documents, s'han de comunicar al director dels treballs en un termini no superior a deu (10) dies a partir de la data de lliurament de la documentació al Contractista.

El Contractista serà responsable de les conseqüències derivades de l'incompliment o deficiència en la revisió esmentada.

En el cas d'existir contradiccions entre els diversos documents esmentats anteriorment, l'ordre de precedència entre ells serà el següent:

1r Plec de prescripcions tècniques particulars

2n Plans

3r Pressupost

Les omissions en aquests documents o les descripcions errònies dels detalls de l'obra que siguin manifestament millorables per dur a terme l'esperit o intenció exposats en els documents, o que, per ús i costum, hagin de ser realitzats, no només, no eximeixen el contractista de l'obligació d'executar aquests detalls d'obra, omesos o erròniament descrits, sinó que, per contra, han de ser executats com si haguessin estat completa i correctament especificats en els documents. Només si el detall o obra menor omès o incomplet té prou entitat segons el parer de la Promotor, podrà ser replantejada la seva inclusió en pressupostos.

Totes les referències a normatives no vigents, tant en el present Plec, com en la resta de documents del Projecte, s'han d'adaptar a especificacions de normativa vigent.

### ARTICLE 4.2. COMPROVACIÓ DEL REPLANTEIG

En el termini de quinze (15) dies hàbils a partir de l'adjudicació definitiva es comprovarà, en presència de l'Adjudicatari o el seu representant el replantejament li les obres efectuat abans de la licitació estenent la corresponent Acta de Comprovació del Replanteig.

L'Acta de comprovació del replanteig reflectirà la conformitat o disconformitat del replanteig respecte als documents contractuals del projecte, referint expressament a les característiques geomètriques del terreny i obra de fàbrica, a la procedència de materials, així com qualsevol punt que, cas de disconformitat, pugui afectar el compliment del Contracte.

Quan l'acta de comprovació del Replantejament reflecteixi alguna variació respecte als documents contractuals del Projecte, haurà de ser acompanyada d'un nou pressupost valorat als preus del Contracte.

### ARTICLE 4.3. FIXACIÓ I CONSERVACIÓ DELS PUNTS DE REPLANTEIG

Des de la comprovació del replanteig, el Contractista serà l'únic responsable del replanteig de les obres, i els plànols contradictoris serviran de base als mesuraments d'obra.

El Contractista construirà a càrrec seu fites, bases de replanteig i referències a llocs i números adequats, segons el parer de la Direcció de l'Obra, per a la perfecta comprovació de la marxa, qualitat i exactitud del replanteig i dimensionament de l'obra i les seves parts. Així mateix, està obligat a la seva conservació i a mantenir expedites les visuals des d'aquests punts.

Totes les coordenades de les obres, així com les dels plans d'obres executades, seran referides a la malla ortogonal que assenyali la Direcció d'Obra.

El Contractista serà responsable de la conservació dels punts, els senyals i fites, tant terrestres com marítims.

Si en el transcurs de les obres, són destruïts alguns, haurà de col·locar altres sota la seva responsabilitat i al seu càrrec, comunicant-ho per escrit a la Direcció d'Obra que comprovarà les coordenades dels nous vèrtexs o senyals.

El director de l'obra sistematitzarà normes per a la comprovació de replantejaments parcials i pot supeditar el progrés dels treballs als resultats d'aquestes comprovacions, la qual cosa en cap cas, eliminarà la total responsabilitat del Contractista, pel que fa al compliment de plans parcials, i per descomptat, del termini final.

Les despeses ocasionades per totes les operacions i materials realitzades o usats per a la comprovació del replanteig general i els de les operacions de replanteig i aixecament esmentats en aquests apartats seran a compte del Contractista, així com les despeses derivades de la comprovació d'aquests replantejaments.

### ARTICLE 4.4. PROGRAMACIÓ DEIS TRABalls

El Contractista està obligat a presentar un programa de treball en el termini d'un (1) mes comptat a partir del dia següent a la recepció de l'autorització per iniciar les obres. Aquest haurà de ser compatible amb el termini total i parcials indicats en aquest mateix Plec i en el PCAP, tenint en compte les folgances necessàries per cobrir les possibles contingències, predictibles per la pràctica habitual segons el tipus d'obra.

El Programa es confeccionarà d'acord amb l'Estudi d'Execució i amb les indicacions que a aquest aporti el Director dels treballs, contenint, com a mínim:

- Descripció i ordenació en parts de les unitats que integren el projecte, amb expressió del seu volum.

- Determinació del personal i característiques. Temps de permanència.

- Materials a emprar, fabricant, procedència, característiques, certificats de qualitat i assaigs previs.

- Maquinària a disposició d'obra, marca, model, característiques, i permanència en obra.

- Organització dels treballs i rendiments.

- Estimació, en dies calendari, dels terminis d'execució de les diferents obres o parts, dates d'inici i terminació.

- Valoració mensual i acumulada de l'obra programada.

- Gràfics de les diferents activitats o treballs.

- Descripció i nombre d'assaigs en cada fase.

- Mesures per a prevenció d'accidents

No obstant l'anterior, el Director dels treballs podrà determinar les parts d'obra i activitats que, de manera explícita, figurin en el Programa de treball i els possibles programes específics de parts d'obra.

El programa de treball inclourà diagrames de barres, tipus Gantt, i gràfics de programació, tipus PERT, per a una millor comprensió de la interrelació d'activitats, alhora que haurà de tenir en compte els temps que la Direcció necessiti per inspeccions, comprovacions, assajos i proves de la seva competència.

El Programa de treball té caràcter contractual, i com a tal, obliga al Contractista al seu estricte compliment, segons preveu l'art. 129 del vigent Reglament General de Circulació, sent objecte el seu incompliment de les sancions o penalitats que la Promotor estableixi en les clàusules del contracte de les obres. No obstant, serà revisat trimestralment o quan ho exigeixi el director, modificant i actualitzant els seus possibles desviacions, sempre amb l'aprovació, per escrit, del Director.

En aquest sentit, les alteracions al programa de treball que consideri necessari realitzar el Cap d'Obra, seran propostes al director, el qual les admetrà, rebutjarà o modificarà. En el primer cas, passaran a ser part del Pla d'Obra i, en conseqüència, obligatòries per al Contractista. En el segon cas, seguirà en ple vigor el Pla d'Obra que, per a l'obra objecte de la petició d'alteració, estigués vigent. En el tercer cas, si el Contractista admet les modificacions proposades pel Director d'Obra, aquestes passaran a ser part integrant del Pla d'Obra, com en el primer cas, i si no és així, seguirà vigent el Pla d'Obra prèviament existent, com en el segon cas.

El Contractista haurà de comunicar per escrit al director l'acabament de cada fase de treball que es consideri en el Programa, per a la seva aprovació i autorització de la següent. En cas de no tractar-se de fases successives, sempre es demanarà el permís d'inici i final.

En cas que el director comprovi la insuficiència de mitjans per al correcte acabament de les obres, tant a nivell general com de qualsevol tall en particular, encara que s'estigués complint el que preveu el Programa de Treball, podrà sol·licitar l'increment dels recursos humans o

materials assignats a l'obra, havent el Contractista procedir a la seva assignació de forma immediata.

### ARTICLE 4.5. EQUIPS I MAQUINÀRIA

El Contractista està obligat a situar a les obres els equips i maquinària que es va comprometre a aportar en la licitació, i que l'Enginyer Director de les obres consideri necessaris per al desenvolupament de les mateixes.

L'Enginyer Director haurà d'aprovar els equips de maquinària o instal·lacions que s'hagin d'utilitzar per a les obres.

La maquinària i altres elements de treball hauran d'estar en perfectes condicions de funcionament i quedar adscrites a l'obra durant el curs d'execució de les unitats que s'hagin d'utilitzar. No podran retirar-se sense el consentiment de l'Enginyer Director. Si, un cop autoritzada la retirada i efectuada aquesta, hagués necessitat d'aquest equip o maquinària el Contractista haurà de reintegrar a l'obra al seu càrrec i sense que el temps necessari per al seu trasllat i posada en ús sigui computable a l'efecte de compliment de terminis, que no experimentaran variació per aquest motiu.

### ARTICLE 4.6. ASSAIGS

Els assaigs s'efectuaran i supervisaran d'acord amb les Normes d'Assajos aprovades pel Ministeri d'Obres Públiques i, si no la NLT, per Laboratoris d'Obres homologats.

Qualsevol tipus d'assaig que no estigui inclòs en aquestes normes s'ha de fer d'acord amb les instruccions que dictin les administracions competents.

L'adjudicatari abonarà el cost dels assajos que es realitzin, que no podrà superar un u per cent (1%) del pressupost d'adjudicació, que suposa inclòs en els preus oferts.

### ARTICLE 4.7. MATERIALS

No es procedirà a l'ocupació de qualsevol dels materials que integren les unitats d'obra sense que abans siguin examinats i acceptats per l'Enginyer Director, llevat del que disposi en contra el present Plec.

Quan la procedència de materials no estiguin fixades en el plec de prescripcions tècniques, els materials necessaris per a l'execució del Contracte seran obtinguts pel Contractista de les pedreres, jaciment o fonts de subministrament que estimi oportú.

El canvi de procedència dels materials no suposarà en cap cas motiu de variació dels preus oferts ni del termini de l'obra.

El Contractista notificarà a l'Enginyer Director, amb suficient antelació, les procedències dels materials que es proposa utilitzar; aportant, quan així ho sol·liciti l'esmentat enginyer, les mostres i les dades necessàries per demostrar la possibilitat d'acceptació, tant pel que fa a la seva qualitat com a la quantitat.

En cap cas podran ser arreplegats i utilitzats en obres materials la procedència dels quals no hagi estat prèviament aprovada per l'Enginyer Director.

En el cas que les procedències dels materials fossin assenyalades concretament en el Plec de Prescripcions Tècniques, o en els Plans, el Contractista haurà d'utilitzar obligatòriament les esmentades procedències. Si, posteriorment, es comprovés que aquestes procedències són inadequades o insuficients, el Contractista vindrà obligat a proposar noves procedències sense excusa, sense que aquest motiu ni la major o menor distància de les mateixes poden originar augment dels preus ni dels plans oferts.

En el cas de no compliment dins d'un termini raonable, no superior a un mes, de l'anterior prescripció, l'Enginyer Director podrà fixar les diverses procedències dels materials sense que el Contractista tingui dret a reclamació dels preus oferts i podent incórrer en penalitats per retard en el compliment dels terminis

### ARTICLE 4.8. APLECS

Quedarà totalment prohibit, tret d'autorització escrita de l'Enginyer Director, efectuar provisions de materials, qualsevol que sigui de la seva naturalesa, sobre la plataforma de l'obra i en aquelles zones marginals que defineixi el citat enginyer.

Els materials s'emmagatzemaran de tal manera que s'asseguri la preservació de la seva qualitat per a la seva utilització en l'obra, requisit que haurà de ser comprovat en el moment d'aquesta utilització.

Les superfícies emprades en zones d'aplecs s'han de condicionar un cop acabada la utilització dels materials acumulats en elles, de manera que puguin recuperar el seu aspecte original.

Totes les despeses requerides per efectuar els aplecs i les operacions esmentades en aquest Article, seran de compte del Contractista.

### ARTICLE 4.9. TREBALLS NOCTURNS

Els treballs nocturns hauran de ser prèviament autoritzats per l'Enginyer Director i realitzats només en les unitats d'obra que ell indiqui. El Contractista haurà d'instal·lar els equips d'il·luminació del tipus i intensitat que l'Enginyer ordeni i mantenir-los en perfecte estat mentre durin els requerits treballs nocturns.

Els treballs executats pel Contractista, modificant el que prescriuen els documents contractuals del Projecte sense la deguda autorització, hauran de ser enderrocats a càrrec seu, si l'Enginyer Director ho exigeix i en cap cas seran abonables.

Totes les mesures de senyalització i adopció de precaucions davant de riscos, hauran de comptar amb l'aprovació explícita del Director d'Obra, sense que això impliqui assumir, en cap moment, la responsabilitat que pogués derivar de l'ocurrència de qualsevol tipus d'accident.

En el cas que les obres afectin a vials, abans d'iniciar la instal·lació dels senyals i cartells verticals de circulació, el Contractista sotmetrà a l'aprovació del Director de les Obres els sistemes de senyalització per protecció del trànsit, personal, materials i maquinària durant el període d'execució de les mateixes.

El Contractista quedarà així mateix obligat a senyalitzar, a càrrec seu la resta de les obres objecte del Contracte d'acord amb les instruccions i ús dels aparells que prescrigui l'Enginyer Director i a les indicacions d'altres autoritats en l'àmbit de la seva competència i sempre en el compliment de totes les Disposicions vigents.

Seran de compte i risc del Contractista els subministraments, instal·lació, manteniment i conservació de totes les boies, llums, elements i instal·lacions necessàries per a complir el que indiquen els paràgrafs anteriors.

### ARTICLE 4.19. PERSONAL DEL CONTRATISTA

El Contractista estarà obligat a dedicar a les obres el personal tècnic a què es va comprometre en la licitació. A peu d'obra i al capdavant de la mateixa haurà d'haver un Enginyer capacitat per a això.

L'Enginyer Director podrà prohibir la permanència en obra de determinat personal del Contractista, per motiu de faltes d'obediència i respecte, o a causa d'actes que comprometin o pertorbin, segons el parer del mateix la marxa dels treballs.

El Contractista podrà recórrer si entén que no hi ha motiva fundat per aquesta prohibició.

El Contractista estarà obligat al compliment del que estableix la Llei sobre el Contracte de Treball, reglamentacions de treball, disposicions reguladores dels Subsidis i Assegurances Socials, vigents o que en endavant es dictin.

### ARTICLE 4.20. MESURAMENT DE LES OBRES

La forma de realitzar el mesurament i les unitats de mesura a utilitzar, seran les definides en el plec de prescripcions tècniques per a cada unitat d'obra.

Excepcionalment, es pot utilitzar la conversió de pes a volum, o viceversa, quan expressament ho autoritzi el Plec de Prescripcions Tècniques. En aquest cas, els factors de conversió seran definits per l'esmentat Plec o, si no, per l'Enginyer Director, qui, per escrit, justificarà al Contractista els valors adoptats, abans de l'execució de la unitat o aplec corresponent.

Quan aquest plec de prescripcions tècniques indiqui la necessitat de pesar materials directament, el Contractista haurà de situar, en els punts que designi l'Enginyer Director, les bàscules a instal·lacions, degudament contrastades, per efectuar els mesuraments per pes requerides; seva utilització haurà d'anar precedida de la corresponent aprovació del citat Enginyer.

Per al mesurament només seran vàlids els aixecament topogràfics i les dades que hagin estat conformats per l'Enginyer Director.

Tots els mesuraments basics per a l'abonament hauran de ser conformats per l'Enginyer Director i el representant del Contractista.

Les unitats que hagin de quedar ocultes o enterrades hauran de ser mesures abans de la seva ocultació. Sí el mesurament no es va efectuar en el moment oportú, seran de compte del Contractista les operacions necessàries per dur-les a terme.

### ARTICLE 4.21. ABONAMENT DE LES OBRES. CERTIFICACIONS

L'import de les obres executades s'acreditarà mensualment al Contractista per mitjà de Certificacions, expedides per l'Enginyer Director en la forma legalment establerta.

Preus unitaris

Els preus unitaris fixats en el Contracte per a cada unitat d'obra tindran inclosos tots els treballs, mitjans auxiliars, energia, maquinària, materials i mà d'obra necessaris per a deixar la unitat completament acabada, totes les despeses generals directes i indirectes, com transports, comunicacions , càrrega i descàrrega, proves i assajos, desgast de materials auxiliars, costos indirectes, instal·lacions, impostos, drets, a més d'altres despeses i costos que s'enuncien en els diferents apartats d'aquest Plec. El Contractista no tindrà dret a cap indemnització excedent dels preus consignats per aquests conceptes.

Tant els terraplens com els dragats s'abonaran pel seu volum, mesurat en perfils mitjançant la diferència entre els perfils presos abans d'efectuar les corresponents unitats d'obra i després d'estar completament acabades d'acord amb el seu perfil teòrica. En el preu o preus dels terraplens s'inclouran totes les operacions necessàries per executar la unitat, sigui quina sigui la procedència dels materials i la distància i mitjans de transport, fins i tot les operacions de compactació i consolidació que siguin necessàries. Els dragatges s'abonaran mitjançant un preu únic, qualsevol que sigui la naturalesa del terreny i la duresa i consolidació que present, no sent d'abonament el volum de dragatge en excés sobre les cotes que s'hagi previst dragar en el projecte i que s'hagin sobrepassat tant en profunditat com en planta. Tampoc seran d'abonament els farcits que siguin necessaris efectuar com a conseqüència d'excés en l'execució dels dragatges.

Així mateix el Contractista haurà d'executar al seu càrrec les obres o operacions necessàries perquè l'obra s'adapti als perfils teòrics sense que li siguin d'abonament els excessos previs ja executats. L'Enginyer Director podrà acceptar perfils en excés sense cap repercussió econòmica o de termini, sempre que consideri que no perjudiquen tant a l'obra com a les futures ampliacions.

Seran de compte del Contractista els increments de materials emprats i l'execució de les unitats d'obres necessàries, fins i tot les no previstes, destinades a corregir els efectes conseqüència de fallades, errors o omissions en els càlculs del Projecte o en l'execució de les obres i referents especialment a l'estabilitat, seients, esllavissades, reposicions, dragatges per aixecament del fons o altres motius, etc.

Partides alçades

S'abonaran íntegres al Contractista les partides alçades que es consignen en aquest Plec, sota aquesta forma de pagament.

Les partides alçades a justificar s'abonaran consignant les unitats d'obra que comprenen als preus del Contracte; als preus contradictoris aprovats, si es tractés de noves unitats.

Materials emmagatzemats

En aquest sentit es seguirà el que estableix el Plec de Clàusules Administratives Generals per a la contractació d'Obres de l'Estat Decret de 31/12/70.

### ARTICLE 4.23. TERMINI DE GARANTIA I CONSERVACIÓ DE LES OBRES

S'estableix un període de garantia d'un (1) any comptat a partir de la data d'aixecament de l'acta de Recepció, durant el qual el Contractista serà responsable de la vigilància i policia de les obres realitzades, així com de la seva conservació i reparació per el manteniment de l'estat i aspecte de recepció provisional i de l'esmena dels possibles vicis ocults o reparació de deficiències no detectades en la recepció però posades a descobert per l'ús o inspecció de les instal·lacions, tot i que no estiguessin contemplades en Projecte però foren necessàries per a l'adequat fi de les obres.

Per complir els fins anteriors el Contractista haurà de tenir disposat el personal, maquinària i mitjans necessaris durant aquest període, han de presentar al Director d'Obra per a la seva aprovació, prèviament a l'inici del Termini de Garantia, el Programa de Conservació de les obres, sobre el qual el Director d'Obra podrà realitzar les puntualitzacions lògiques que estimi convenient.

### ARTICLE 4.24. RECEPCIÓ I LIQUIDACIÓ

El contracte d'obres s'entendrà complert pel contractista quan aquest hagi realitzat, d'acord amb els termes del mateix i a satisfacció de la Promotor, la totalitat del seu objecte.

En tot cas, la constatació exigeix per part del Promotor un acte formal i positiu de recepció o conformitat dins del mes següent d'haver-se lliurat o realitzat l'objecte del contracte. A la Intervenció del Promotor corresponent se li ha comunicat l'acte per a la seva assistència potestativa a aquest en les seves funcions de comprovació de la inversió. A aquesta recepció concorrerà un facultatiu designat pel Promotor representant d'aquesta, el director de les obres i el contractista assistit, si ho estima oportú, del seu facultatiu.

Si es troben les obres en bon estat i d'acord a les prescripcions previstes, el funcionari tècnic designat per Promotor contractant i representant d'aquesta les donarà per rebudes, aixecant-se la corresponent acta i començant llavors el termini de garantia.

De l'acta aixecada en aquest acte es faran tantes còpies com a assistents, signant tots ells. En cas de no assistir el Contractista o el seu representant, el director li remetrà còpia de l'acta amb justificant de recepció, sense que això li s'excusi de qualsevol responsabilitat que es pogués derivar.

L'incompliment dels terminis anteriors per part del Promotor li donarà dret al Contractista, si aquest ho sol·licita per escrit, a l'abonament de les despeses derivades de la conservació i policia en el període excedit del termini de garantia. Aquest import s'abonarà proporcionalment al temps i als preu establerts en pressupost per a la conservació en el període de garantia o, en cas de situació extraordinària, als que fixi la Promotor a proposta del Contractista, visada pel Director d'Obra.

El Director d'Obra procedirà a redactar la Liquidació de les obres en el termini de sis (6) mesos a partir de la data de Recepció, notificant-la per escrit al Contractista, que disposarà d'un termini d'un mes a partir de la seva recepció per presentar les al·legacions que estimi pertinents a aquest document. Aquestes, si escau, li seran remeses al Promotor mitjançant el Director d'Obra, qui les elevarà juntament amb el seu informe a les mateixes, havent de ser resoltes aquestes en el termini d'un mes. L'absència de contestació a la liquidació en el termini d'un mes, suposarà l'acceptació d'aquestes per part del Contractista. L'aprovació definitiva d'aquesta pel Promotor li serà notificada al Contractista.

Un cop aprovada la liquidació, el Director d'Obra procedirà a la certificació de la liquidació. Si el saldo és favorable al Promotor, se li requerirà el seu abonament al Contractista, retenint la fiança fins que aquest no es produeixi.

Si es produís demora en el pagament del saldo de liquidació, el contractista tindrà dret a percebre l'interès legal del mateix, incrementat en 1,5 punts, a partir dels sis mesos següents a la recepció.

### ARTICLE 4.25. OBLIGACIONS DEL CONTRACTISTA

El Contractista tindrà l'obligació d'obtenir els locals, zones per a tallers, oficines, etc., que consideri necessaris per a la realització de les obres.

No obstant això s'han de tenir en consideració els següents punts:

- En cap cas es considerarà que les pedreres o la seva explotació forma part de l'obra. La paralització dels treballs en les pedreres no tindrà, en cap cas, cap repercussió en els preus ni en els terminis oferts.
- El Contractista haurà de satisfer pel seu compte la compra de terrenys o la indemnització per ocupació temporal dels mateixos, cànons, etc., els quals estaran inclosos en el preu unitari de les unitats afectades.
- En qualsevol cas és de total responsabilitat del Contractista, l'elecció i explotació de pedreres, tant pel que fa a qualitat de materials com el volum explotable dels mateixos. El Contractista és responsable d'aconseguir davant les autoritats oportunes els permisos i llicències que siguin necessaris per a l'explotació de les pedreres.
- Totes les despeses derivades d'aquests conceptes es consideraran inclosos en els preus.
- Els accessos a pedreres, així com els enllaços entre aquestes i l'obra correran a càrrec del Contractista, i no han d'interferir amb altres obres que s'estan realitzant en l'àrea.
- El Contractista està obligat a eliminar, a càrrec seu, els materials de qualitat inferior a l'exigida que aparegui durant els treballs d'explotació de la pedrera.
- Seran a costa del Contractista, sense que per això pugui reclamar cap indemnització, els danys que es puguin ocasionar amb motiu de les preses de mostres, extracció, preparació, transport i dipòsit dels materials.
- El Contractista, sota la seva responsabilitat, queda obligat a complir totes les disposicions de caràcter social contingudes en la Reglamentació del Treball en la Indústria de la Construcció i Obres Públiques vigents i altres dictades que siguin aplicables sobre el règim de treball o que en endavant es dictin.

### ARTICLE 4.26. PRESCRIPCIONS PARTICULARS

En tots aquells casos en què segons el parer de l'Enginyer Director de les Obres, es faci aconsellable, per a l'execució de les obres previstes, la fixació de determinades condicions específiques, es redactarà per aquest l'oportú plec de prescripcions particulars, que ha de ser acceptat pel contractista, quedant obligat al seu compliment.

### ARTICLE 4.27. EXECUCIÓ DE LES OBRES

Les obres s'efectuaran amb estricta subjecció a les clàusules estipulades en el Contracte i al Projecte que serveixi de base al mateix i d'acord amb les instruccions que en interpretació d'aquest donés al Contractista l'Enginyer Director de l'Obra, que seran d'obligat compliment per a aquell sempre que ho siguin per escrit.

El Contractista és completament responsable de l'elecció del lloc d'emplaçament dels tallers, magatzems, parc de maquinària i lloc de fabricació dels blocs de formigó o altres elements prefabricats, sense que pugui comptar per a ella amb superfícies o llocs compresos en l'actual recinte portuari i sense que tingui dret a cap reclamació per aquest fet o per la necessitat o conveniència de canviar tots o algun dels emplaçaments abans o després d'iniciats els treballs.

Durant el desenvolupat de les obres i fins que tingui lloc la recepció definitiva, el Contractista és responsable de les faltes que puguin advertir-se en la construcció.

rentat, cribatge o mescla, assoleixi les condicions exigides.

CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i la norma EHE.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'ha d'acceptar la sorra que no compleixi totes les especificacions indicades al plec de condicions. Si la granulometria no s'ajusta a la utilitzada per a l'establiment de les dosificacions aprovades, s'hauran de projectar i aprovar noves fórmules de treball.
No s'han d'utilitzar àrids fins els quals l'equivalent de sorra sigui inferior a:
- 70, en obres sotmeses a les classes I, IIa o IIb, i no sotmeses a cap classe específica d'exposició
- 75, en la resta de casos
En cas que les sorres procedents del matxuqueig de roques calcàries o de roques dolomítiques que no compleixin l'especificació de l'equivalent de sorra, s'han de poder acceptar si l'assaig del blau de metilè (UNE-EN 933-9) compleix el següent:
- Per a obres amb classe general d'exposició I, IIa o IIb (i sense classe específica): <= 0,6% en pes
- Resta de casos: <= 0,3% en pes
Si el valor del blau de metilè fos superior als valors anteriors, i es presentin dubtes de la presència d'argila en els fins, s'ha de poder realitzar un assaig de rajos X per a la seva detecció i identificació: s'ha de poder utilitzar l'àrid fi si les argiles són del tipus caolinita o illita, i si les propietats del formigó amb aquest àrid són les mateixes que les d'un que tingui els mateixos components però sense els fins.
S'han de poder utilitzar sorres rodades, o procedents de roques matxucades, o escòries siderúrgiques adequades, en la fabricació de formigó d'ús no estructural.

Els àrids no han de presentar reactivitat potencial amb els àlcalis del formigó. Per a comprovar-ho, s'ha de realitzar en primer lloc un anàlisi petrogràfic, per a obtenir el tipus de reactivitat que, en el seu cas, puguin presentar. Si d'aquest estudi es dedueix la possibilitat de reactivitat àlcali sílice o àlcali silicat, s'ha de realitzar l'assaig descrit a l'UNE 146.508 EX. Si el tipus de reactivitat potencial és àlcali carbonat, s'ha de realitzar l'assaig descrit a l'UNE 146.507 EX Part 2.
Els àrids no han de ser reactius amb el ciment. No s'utilitzaran àrids procedents de roques toves, friables, poroses, etc., ni els que continguin nòduls de guix, compostos ferrosos, sulfurs oxidables, etc, en quantitats superiors a les contemplades a l'EHE

GRAVA PER A DRENATGES:
El granulat ha de ser procedent d'un jaciment natural, del matxuqueig de roques naturals, o del reciclatge d'enderrocs. No ha de presentar restes d'argila, margues o altres materials estranys.
La mida màxima dels grànuls ha de ser de 76 mm (tamís 80 UNE) i el garbellat ponderal acumulat pel tamís 0,08 UNE ha de ser <= 5%. La composició granulomètrica ha de ser fixada explícitament per la DF segons les característiques del terreny per drenar i del sistema de drenatge.
Plasticitat: No plàstic
Coeficient de desgast (assaig "Los Ángeles" UNE-EN 1097-2): <= 40
Equivalent de sorra (UNE-EN 933-8): > 30
Condicions generals de filtratge:
- F15/d85: < 5
- F15/d15: < 5
- F50/d50: < 5

(Fx = grandària superior de la fracció x% en pes del material filtrant, dx = grandària superior de la proporció x% del terreny a drenar)
A més, el coeficient d'uniformitat del filtre ha de ser:
- F60/F10: <20

- Per a tubs amb juntes obertes: F85/ Obertura de la junta: > 1,2
- Per a tubs de formigó porós: F85/d15 de l'àrid del tub: > 0,2
- Si es drena per metxinals: F85/ diàmetre del metxinal: > 1

Quan no sigui possible trobar un material granular d'aquestes condicions es faran filtres granulars compostos de vàries capes. La més gruixuda es col·locarà al costat del sistema d'evacuació. Aquesta complirà les condicions de filtre respecte a la següent i així successivament fins arribar al replè o al terreny natural. Es podrà recórrer a l'ús de filtres geotèxtils.
Quan el terreny natural estigui constituït per materials amb graves i boles a efectes del compliment de les condicions anteriors, s'atendrà únicament a la corba granulomètrica de la fracció del mateix inferior a 25 mm.
Si el terreny no és cohesiu i està compost per sorra fina i llims, el material drenant [illegible]

1.- DEFINICIÓ I CARACTERÍSTIQUES DELS ELEMENTS

Conglomerant hidràulic format per diferents materials inorgànics finament dividits que, amassats amb aigua, formen una pasta que, mitjançant un procés d'hidratació, endureix i un cop endurit conserva la seva resistència i estabilitat fins i tot sota l'aigua.
S'han considerat els ciments regulats per la norma RC-08 amb les característiques següents:
- Ciments comuns (CEM)
- Ciments d'aluminat de calci (CAC)

No ha de tenir grumolls ni principis d'aglomeració.
En activitats manuals en les que hi hagi risc de contacte amb la pell i d'acord amb l'establert a l'Ordre Presidencial 1954/2004 de 22 de juny, no s'han d'utilitzar o comercialitzar ciments amb un contingut de crom (VI) superior a dos parts per milió del pes sec del ciment.

OPERACIONS DE CONTROL:
La recepció del ciment haurà d'incloure al menys, dues fases obligatòries:
- Una primera fase de comprovació de la documentació
- Una segona fase d'inspecció visual del subministrament
Es pot donar una tercera fase, si el responsable de recepció ho considera oportú, de comprovació del tipus i classe de ciment i de les característiques físiques químiques i mecàniques mitjançant la realització d'assaigs d'identificació i, si es el cas, d'assaigs complementaris.
Per a la primera fase, al iniciar el subministrament el Responsable de recepció ha de comprovar que la documentació es la requerida. Aquesta documentació estarà compresa per:
- Albarà o full de subministrament.
- Etiquetatge
- Documents de conformitat, com pot ser el marcatge CE o bé la Certificació de Conformitat del Reial Decret 1313/1988
- Pel cas dels ciments no subjectes al marcatge CE, el certificat de garantia del fabricant signat.
- Si els ciments disposen de distintius de qualitat, caldrà també la documentació precisa de reconeixements del distintiu.
En la segona fase, un cop superada la fase de control documental, cal sotmetre el ciment a una inspecció visual per comprovar que no ha patit alteracions o barreges indesitjades.
La tercera fase s'activarà quan es pugui preveure possibles defectes o en el cas que el Responsable així ho estableixi per haver donat resultats no conformes en les fases anteriors o per haver detectat defectes en l'ús de ciments d'anteriors remeses.
En aquest supòsit es duran terme, abans de començar l'obra i cada 200 t de ciment de la mateixa designació i procedència durant l'execució, assaigs d'acord amb l'establer en els Annexes 5 i 6 de la RC-08.

CRITERIS DE PRESA DE MOSTRES:
Les mostres es prendran segons l'indicat en la RC-08. Per a cada lot de control sotmès a assaig s'extrauran tres mostres, una per tal de realitzar els assaigs de comprovació de la composició, l'altra per als assaigs físics, mecànics i químics i l'altra per a ser conservada preventivament.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
A efectes de la fase primera, no s'aprovarà l'ús de ciments els quals el etiquetatge i la documentació no es correspongui amb el ciment sol·licitat, quan la documentació no estigui completa i quan no es reuneixin tots els requisits establerts.
A efectes de la segona fase, no s'aprovarà l'ús de ciments que presentin símptomes de meteorització rellevant, que contingui cossos estranys i que no resulti homogènia en el seu aspecte o color.
A efectes de la tercera fase, no s'aprovarà l'ús de ciments que no compleixin els criteris establerts en l'apartat A5.5 de la RC-08.
Quan no es compleixi alguna de les prescripcions del ciment assajat, es repetiran els assaigs per duplicat, sobre dues mostres obtingudes de l'aplec existent a obra. S'acceptarà el lot únicament si els resultats obtinguts en les dues mostres són satisfactoris.

Assaigs característics de comprovació de la dosificació aprovada. Per a cada tipus de formigó es realitzaran 6 sèries de 2 provetes que s'assajaran a compressió a 28 dies, segons UNE EN 12390-3. No seran necessaris aquests assaigs si el formigó procedeix de central certificada,  o es disposa de suficient experiència en el seu ús.
Abans del inici de l'obra, i sempre que sigui necessari segons l'article 37.3.3 de la norma EHE-08, es realitzarà l'assaig de la fondària de penetració d'aigua sota pressió, segons UNE EN 12390-8.
Inspeccions no periòdiques a la planta per tenir constància que es fabrica el formigó amb la dosificació correcte.
Per a totes les amassades es durà a terme el corresponent control de les condicions de subministrament.
Control estadístic de la resistència (EHE-08): Per a formigons sense distintiu de qualitat, es realitzaran lots de control de com a màxim:

- Volum de formigonament:  <= 100 m3
- Elements o grups d'elements que treballen a compressió:

- Massissos:
    - Temps de formigonament <= 1 setmana

El número de lots no serà inferior a 3. Totes les pastades d'un lot procediran del mateix subministrador, i tindran la mateixa dosificació.
En cas de disposar d'un distintiu oficialment reconegut, es podran augmentar els valors anteriors multiplicant-los per 2 o per 5, en funció del nivell de garantia per al que s'ha efectuat el reconeixement, conforme a l'article 81 de l'EHE-08.
Control 100x100 (EHE-08): Serà d'aplicació a qualsevol estructura, sempre que es faci abans del subministrament del formigó. La conformitat de la resistència es comprova determinant la mateixa en totes les pastades sotmeses a control i calculant el valor de la resistència característica real.
Control indirecte de la resistència (EHE-08): Només es podrà aplicar en formigons que disposin d'un distintiu de qualitat oficialment reconegut i que s'utilitzin en:

- Elements d'edificis de vivendes d'una o dues plantes, amb llums inferiors a 6,00 metres
- Elements d'edificis de vivendes de fins a 4 plantes, que treballin a flexió, amb llums inferiors a 6,00 metres

La DF podrà eximir la realització dels assaigs característics de dosificació quan el formigó que es vagi a subministrar estigui en possessió d'un distintiu de qualitat oficialment reconegut, o quan es disposi d'un certificat de dosificació amb una antiguitat màxima de 6 mesos.

En cas contrari, s'haurà d'esperar als 28 dies i s'introduiran les modificacions necessàries en la dosificació, i es repetiran els assaigs de resistència.
Control de fabricació i recepció.

Es seguiran els criteris que en cada cas, indiqui la DF. Cada sèrie de provetes es prendrà d'amassades diferents.
Quan s'indica una freqüència temporal de 2 assaigs per dia, es realitzarà un pel mati i l'altre per la tarda.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT, EN FORMIGÓ ESTRUCTURAL:
No s'ha d'acceptar el subministrament de formigó que no arribi identificat segons les condicions del plec.
Control estadístic: La conformitat del lot en relació a la resistència es comprovarà a partir dels valors mitjos dels resultats obtinguts sobre 2 provetes agafades de cada una de les N pastades controlades d'acord amb:
- Resistència característica especificada en projecte Fck (N/mm2): <= 30
    - Formigons amb distintius de qualitat oficialment reconeguts conforme a l'article 81 de l'EHE-08: N >= 1
    - Altres casos: N >= 3
- Resistència característica especificada en projecte Fck (N/mm2): >= 35 i <= 50
    - Formigons amb distintius de qualitat oficialment reconeguts conforme a l'article 81 de l'EHE-08: N >= 1
    - Altres casos: N >= 4
- Resistència característica especificada en projecte Fck (N/mm2): >= 50
    - Formigons amb distintius de qualitat oficialment reconeguts conforme a l'article 81 de l'EHE-08: N >= 2
    - Altres casos: N >= 6

La presa de mostres es realitzarà aleatòriament entre les pastades de l'obra sotmesa a control.
Un cop efectuats els assaigs, s'ordenaran els valors mitjos, xi, de les determinacions de resistència obtingudes per a cadascuna de les N pastades controlades: x1 <= x2 <= ... <= xn
En els casos en que el formigó estigui en possessió d'un distintiu de qualitat oficialment reconegut, s'acceptarà quan xi >= fck. A més, es considerarà com un control d'identificació, per tant els criteris d'acceptació en aquest cas tenen per objecte comprovar la pertinença del formigó del lot a una producció molt controlada, amb una resistència certificada i estadísticament avaluada amb un nivell de garantia molt exigent.
Si el formigó no disposa de distintiu, s'acceptarà si:
f(x) = x K2rN >= fck
on:
- f(x) Funció d'acceptació
- x Valor mig dels resultats obtinguts en les N pastades assajades
- K2 Coeficient:
Coeficient:
- Número de pastades:
    - 3 pastades: K2 1,02; K3: 0,85
    - 4 pastades: K2 0,82; K3: 0,67
    - 5 pastades: K2 0,72; K3: 0,55
    - 6 pastades: K2 0,66; K3: 0,43
- rN: Valor del recorregut mostral definit com a: rN = x (N) x (1)
- x(1): Valor mínim dels resultats obtinguts en les últimes N pastades
- x(N): Valor màxim dels resultats obtinguts en les últimes N pastades
- fck: Valor de la resistència característica especificada en el projecte
Si el formigó no disposa de distintiu, però es fabrica de forma contínua a central d'obra o són subministrats de forma contínua per la mateixa central de formigó preparat, en els que es controlen a l'obra més de 36 pastades del mateix formigó, s'acceptarà si: f(x(1)) = x(1) K3s35* >= fck.
On: s35* Desviació típica mostral, corresponent a les últimes 35 pastades
Quan la consistència s'hagi definit pel seu tipus, segons l'art. 31.5, s'acceptarà el formigó si la mitjana aritmètica dels dos valors obtinguts està compresa dins del interval corresponent.
Si s'ha definit pel seu assentament, s'acceptarà el formigó quan la mitjana dels dos valors estigui compresa dins de la tolerància exigida.
El incompliment d'aquests criteris suposarà el rebuig de la pastada.
Control 100x100: Per a elements fabricats amb N pastades, el valor de la fc,real correspon a la resistència de la pastada que, un cop ordenades les N determinacions de menor a major, ocupa el lloc n=0,05 N, arrodonint-se n per excés. Si el número de pastades a controlar és igual o inferior a 20, fc,real serà el valor de la resistència de la pastada més baixa trobada a la sèrie.
S'acceptarà quan: fc,real >= fck
Control indirecte: S'acceptarà el formigó subministrat quan es compleixi a la vegada que:
- Els resultats dels assaigs de consistència compleixen amb els apartats anteriors
- Es manté la vigència del distintiu de qualitat del formigó durant la totalitat del subministrament
- Es manté la vigència del reconeixement oficial del distintiu de qualitat

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN FORMIGÓ PER A PAVIMENTS:
- Interpretació dels assaigs característics:
Si la resistència característica a 7 dies resulta superior al 80 % de l'especificada a 28 dies, i els resultats del contingut d'aire ocluit i de la consistència es troben dins dels límits establerts, es podrà iniciar el tram de prova amb el formigó corresponent. En cas contrari, s'haurà d'esperar als resultats a 28 dies i, en el seu cas, s'introduiran els ajustos necessaris a la dosificació, repetint-se els assaigs característics.
- Interpretació dels assaigs de control de resistència:
- El lot s'accepta si la resistència característica a 28 dies és superior a l'exigida. En altre cas:
    - Si fos inferior a ella, però no al seu 90%, el Contractista podrà escollir entre acceptar les sancions previstes en el Plec de Prescripcions Tècniques Particulars, o sol·licitar la realització d'assaigs d'informació. Aquestes sancions no podran ser inferiors a l'aplicació d'una penalització al preu unitari del lot, la quantia de la qual sigui igual al doble de la merma de resistència, expressades ambdues en proporció.
    - Si està per sota del 90%, es realitzaran, a càrrec del contractista, els corresponents assaigs d'informació.
- Assaigs d'informació:
Abans dels 54 dies d'acabada l'estesa del lot, s'extrauran 6 testimonis cilíndrics (UNE 83302) que s'assajaran a tracció indirecta (UNE 83306) a edat de 56 dies. La conservació dels testimonis durant les 48 hores anteriors a l'assaig es realitzarà segons la norma UNE 83302.
El valor mig dels resultats dels assaigs d'informació del lot es compararan amb el resultat mig corresponent al tram de prova. El lot s'accepta si la resistència mitjana del lot és superior.
En cas d'incompliment, cal distingir tres casos:
    - Si fos inferior a ell, però no al seu 90%, s'aplicaran al lot les sancions previstes en el Plec de Prescripcions Tècniques Particulars.
    - Si fos inferior al seu 90%, però no al seu 70%, el Director de les Obres podrà anul·lar

les sancions previstes en el Plec de Prescripcions Tècniques Particulars, o bé ordenar la demolició del lot i la seva reconstrucció, a càrrec del Contractista.
- Si fos inferior al seu 70% es demolirà el lot i es reconstruirà, a càrrec del Contractista.

Les sancions referides no podran ser inferiors a l'aplicació d'una penalització al preu unitari del lot, la quantia del qual sigui igual al doble de la merma de resistència, expressades ambdues en proporció.
La resistència de cada pastada a una determinada edat, es determinarà com a mitjana de les resistències de les provetes fabricades amb un formigó de la pastada en qüestió i assajades a l'edat determinada. A partir de la mínima resistència obtinguda en qualsevol pastada del lot, es podrà estimar la característica multiplicant aquella per un coeficient donat per la taula següent:
Coeficient (En funció del nombre de sèries que formen el lot):
- 2 sèries: 0,88
- 3 sèries: 0,91
- 4 sèries: 0,93
- 5 sèries: 0,95
- 6 sèries: 0,96

Quan l'assentament en el con d'Abrams no s'ajusti als valors especificats a la fórmula de treball, es rebutjarà el camió controlat.

VISAT: 2019/220098
Data: 14/03/2019 Col·legiat: 5000 - Vendrell Figueras, Santiago Jorge

En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Sempre que hi canviï el subministrador, i al menys en una ocasió al llarg de l'obra, es realitzaran els assaigs de comprovació de les característiques mecàniques del filferro. ((UNE-EN 10218-1)
- Comprovació geomètrica del diàmetre del filferro i del pas de malla (5 determinacions).
- Comprovació del galvanitzat: si s'escau, assaigs d'adherència i massa del recobriment (mètodes no destructius) (5 determinacions). L'acabat galvanitzat, seguirà les normes UNE-EN ISO 1461, UNE-EN ISO 14713, i així ho certificarà el fabricant

CRITERIS DE PRESA DE MOSTRES EN TELA METÀL·LICA DE TORSIÓ:
Els controls es realitzaran segons les instruccions de la DF i els criteris indicats a les normes UNE-EN ISO 1461 i UNE-EN 10257-1.
De cada lot d'inspecció (comanda individual) es pren, a l'atzar, una mostra de control per realitzar l'assaig de gruix de recobriment. El número mínim de peces per realitzar el control serà l'indicat a Taula 1 (UNE-EN ISO 1461, Apartat 5)

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN TELA METÀL.LICA DE TORSIÓ:
No s'acceptaran el materials que no arribin acompanyats del corresponent certificat de garantia.
Els assaigs de comprovació de característiques mecàniques han de resultar d'acord a les condicions especificades.
Si s'observen irregularitats en les característiques geomètriques o del recobriment, es rebutjaran les peces afectades i es repetirà l'assaig sobre 10 noves mostres que hauran de resultar conformes a les especificacions per tal d'acceptar el subministrament. En cas contrari, s'intensificarà el control fins al 100% dels elements rebuts.

CONDICIONS GENERALS:
La senyalització de seguretat es caracteritza per cridar ràpidament l'atenció sobre la circumstància a ressaltar, facilitant la seva immediata identificació per part del destinatari.
La seva finalitat és la d'indicar les relacions causa-efecte entre el medi ambient de treball i la persona.
La senyalització de seguretat pot tenir característiques diferents, així doncs, podem classificar-la de la següent forma:
- Senyal de prohibició: Un senyal que prohibeix un comportament susceptible de provocar un perill.
- Senyal d'advertència: Un senyal que adverteix d'un risc o perill.

- Atraure l'atenció del destinatari.
- Donar a conèixer el missatge amb suficient antelació.
- Facilitar la suficient informació de forma que en cada cas concret se sàpiga com actuar.
- Que existeixi la possibilitat real de posar en pràctica allò que s'ha indicat.
- La senyalització ha de ser percebuda, compresa i interpretada en un temps inferior al necessari perquè el destinatari entri en contacte amb el perill.
- Les disposicions mínimes relatives a les diverses senyalitzacions de seguretat estan especificades a l'Annex VII del RD 485/1997, de 14 d'abril, amb els següents epígrafs de referència:

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Formigonament d'estructures i elements estructurals, amb formigó en massa, armat, per a pretensar, formigó autocompactant i formigó lleuger, de central o elaborat a l'obra en planta dosificadora, que compleixi les prescripcions de la norma EHE, abocat directament des de camió, amb bomba o amb cubilot, i operacions auxiliars relacionades amb el formigonament i la cura del formigó.
S'han considerat els elements a formigonar següents:
- Murs de contenció
L'execució de la unitat d'obra inclou les operacions següents:
Formigonament:
- Preparació de la zona de treball
- Humectació de l'encofrat
- Abocada del formigó
- Compactació del formigó mitjançant vibratge, en el seu cas
- Curat del formigó

CONDICIONS GENERALS:
En l'execució de l'element s'han de complir les prescripcions establertes en la norma EHE-08, en especial les que fan referència a la durabilitat del formigó i les armadures (art.8.2 i 37 de l'EHE-08) en funció de les classes d'exposició.
El formigó estructural ha de fabricar-se en centrals específiques
El formigó col·locat no ha de tenir disgregacions o buits a la massa.
Després del formigonament les armadures han de mantenir la posició prevista a la DT.
La secció de l'element no ha de quedar disminuïda en cap punt per la introducció d'elements de l'encofrat ni d'altres.
L'element acabat ha de tenir una superfície uniforme, sense irregularitats.
Si la superfície ha de quedar vista ha de tenir, a més, una coloració uniforme sense regalims, taques, o elements adherits.
En el cas d'utilitzar matacà, les pedres han de quedar distribuïdes uniformement dins de la massa de formigó sense que es toquin entre elles.
La resistència característica del formigó es comprovarà d'acord amb l'article 86 de l'EHE-08
Les toleràncies d'execució han de complir l'especificat en l'article 5 de l'annex 11 de la norma EHE-08.
Les toleràncies en el recobriment i la posició de les armadures han de complir l'especificat a l'UNE 36831.
No s'accepten toleràncies en el replanteig d'eixos en l'execució de fonaments de mitgeres, buits d'ascensor, passos d'instal·lacions, etc., fora que ho autoritzi explícitament la DF.

MURS DE CONTENCIÓ:
Toleràncies d'execució:
- Replanteig parcial dels eixos: ± 20 mm
- Replanteig total dels eixos: ± 50 mm
- Distància entre junts: ± 200 mm
- Amplària dels junts: ± 5 mm
- Desviació de la vertical (H alçària del mur):
    - H <= 6 m.  Extradòs: ± 30 mm, Intradòs: ± 20 mm
    - H > 6 m.  Extradòs: ± 40 mm, Intradòs: ± 24 mm
- Gruix (e):
    - e <= 50 cm: + 16 mm, - 10 mm
    - e > 50 cm: + 20 mm, - 16 mm
    - Murs formigonats contra el terreny: + 40 mm
- Desviació relativa de les superfícies planes intradòs o extradòs: ± 6 mm/3 m
- Desviació de nivell de l'aresta superior de l'intradòs, en murs vistos: ± 12 mm
- Acabat de la cara superior de l'alçat en murs vistos: ± 12 mm/3 m

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

FORMIGONAMENT:
Si la superfície sobre la que s'ha de formigonar ha sofert gelada, s'ha d'eliminar prèviament la part afectada.
La temperatura dels elements on s'aboca el formigó ha de ser superior als 0°C.
El formigó s'ha de posar a l'obra abans que comenci l'adormiment, i a una temperatura >= 5°C.
La temperatura per a formigonar ha d'estar entre 5°C i 40°C. El formigonament s'ha de suspendre quan es prevegi que durant les 48 h següents la temperatura pot ser inferior a 0°C. Fora d'aquests límits, el formigonament requereix precaucions explícites i l'autorització de la DF
En aquest cas, s'han de fer provetes amb les mateixes condicions de l'obra, per a poder verificar la resistència realment assolida.
Si l'encofrat és de fusta, ha de tenir la humitat necessària per tal que no absorbeixi l'aigua del formigó.
No s'admet l'alumini en motlles que hagin d'estar en contacte amb el formigó.
No es procedirà al formigonat fins que la DF doni el vist-i-plau havent revisat armadures col·locades en posició definitiva.
La DF comprovarà l'absència de defectes significatius en la superfície de formigó. En cas de considerar els defectes inadmisibles d'acord amb el projecte la DF valorarà la reparació.
No es col·locarà en obra capes o tongades de formigó amb un gruix superior al que permeti una compactació completa de la massa
Si l'abocada del formigó es fa amb bomba, la DF ha d'aprovar la instal·lació de bombeig prèviament al formigonament.
No pot transcórrer més d'1,5 hora des de la fabricació del formigó fins el formigonament, a menys que la DF ho cregui convenient per aplicar medis que retardin l'adormiment.
No s'han de posar en contacte formigons fabricats amb tipus de ciments incompatibles entre ells.
L'abocada s'ha de fer des d'una alçària petita i sense que es produeixin disgregacions.
La compactació del formigó es realitzarà mitjançant processos adequats a la consistència de la mescla i de manera que s'eliminin forats i s'eviti la segregació.
S'ha de garantitzar que durant l'abocat i compactat del formigó no es produeixen desplaçaments de l'armadura.
La velocitat de formigonament ha de ser suficient per assegurar que l'aire no quedi agafat i assenti el formigó.
El formigonament s'ha de suspendre en cas de pluja o de vent fort. Eventualment, la continuació dels treballs, en la forma que es proposi, ha de ser aprovada per la DF.
En cap cas s'ha d'aturar el formigonament si no s'ha arribat a un junt adequat.
Els junts de formigonament han de ser aprovats per la DF abans del formigonat del junt.
En tornar a iniciar el formigonament del junt s'ha de retirar la capa superficial de morter, deixant els granulats al descobert i el junt net. Per a fer-ho no s'han d'utilitzar productes corrosius.
Abans de formigonar el junt s'ha d'humitejar, evitant que es facin tolls d'aigua en el junt.
Es poden utilitzar productes específics (com les resines epoxi) per a l'execució de junts sempre que es justifiqui i es supervisi per la DF.
Un cop reblert l'element no s'ha de corregir el seu aplomat, ni el seu anivellament.
Durant l'adormiment i primer període d'enduriment del formigó cal assegurar el manteniment de la humitat de l'element de formigó mitjançant el curat adequat i d'acord amb EHE-08.
Durant l'adormiment s'han d'evitar sobrecàrregues i vibracions que puguin provocar la fissuració de l'element.

FORMIGÓ ESTRUCTURAL:
La compactació s'ha de realitzar per vibratge. El gruix màxim de la tongada depèn del vibrador utilitzat. S'ha de vibrar fins que s'aconsegueixi una massa compacta i sense que es produeixin disgregacions.
El vibratge ha de fer-se més intens a les zones d'alta densitat d'armadures, a les cantonades i als paraments.

MURS DE CONTENCIÓ:
Si sobre de l'element es recolzen altres estructures, s'ha d'esperar al menys dues hores abans d'executar-los per tal que el formigó de l'element hagi assentat.

3.- UNITAT I CRITERIS D'AMIDAMENT

## H - PARTIDES D'OBRA DE SEGURETAT I SALUT

## HB - SENYALITZACIÓ PROVISIONAL

## HBB - SENYALITZACIÓ VERTICAL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

HBBAE00P.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Senyalització que referida a un objecte, activitat o situació determinades, proporcioni una indicació o una obligació relativa a la seguretat o la salut en el treball mitjançant un senyal en forma de plafó o un color, segons procedeixi.

CONDICIONS D'UTILITZACIÓ:
Principis generals:
Per a la utilització de la senyalització de seguretat s'ha de partir dels següents principis generals:
- La senyalització mai no elimina el risc.
- Una correcta senyalització no dispensa de l'adopció de mesures de seguretat i protecció per part dels projectistes i responsables de la seguretat en cada tall.
- Els destinataris hauran de tenir un coneixement adequat del sistema de senyalització.
- La senyalització indiscriminada pot provocar confusió o despreocupació en qui ho rebi, eliminant la seva eficàcia preventiva.

CRITERIS DE SENYALITZACIÓ PROVISIONAL EN LES OBRES DE CONSTRUCCIÓ:
La seva forma, suport, colors, pictogrames i dimensions es correspondran amb els establerts en el RD 485/1997, de 14 d'abril, i estaran advertint, prohibint, obligant o informant en els llocs en què realment es necessiti, i solament en aquests.
En aquelles obres en les quals la intrusió de persones alienes hi sigui una possibilitat, hauran de col·locar-se els senyals de seguretat, amb llegendes al seu peu (senyal addicional), indicatives del seus respectius continguts.
S'instal·laran preferentment a una altura i posició adequades a l'angle visual dels seus destinataris, tenint en compte possibles obstacles, en la proximitat immediata del risc o objecte a senyalitzar o, quant es tracti d'un risc general, en l'accés a la zona de risc.
L'emplaçament del senyal será accessible, estarà ben il·luminat i serà fàcilment visible.
No se situaran gaires senyals pròxims entre sí. Nota: Cal recordar que el rètol general enunciatiu dels senyals de seguretat, que acostuma a situar-se a l'entrada de l'obra, té únicament la consideració de plafó indicatiu.
Els senyals hauran de retirar-se quan deixi d'existir la situació que justificava el seu emplaçament.
No s'iniciaran obres que afectin a la lliure circulació sense haver col·locat la corresponent senyalització, abalisament i, en el seu cas, defenses. La seva forma, suport, colors, pictogrames i dimensions es correspondran amb l'establert en la Norma de Carreteres 8.3.- IC i catàleg d'Elements de Senyalització, Abalisament i Defensa per a circulació vial.
La part inferior dels senyals estaran a 1 m sobre la calçada. S'exceptua el cas dels senyals "SENTIT PROHIBIT" i "SENTIT OBLIGATORI" en calçades divergents, que podran col·locar-se sobre un pal solament, a la mínima altura.
Els senyals i plafons direccionals, es col·locaran sempre perpendiculars a l'eix de la via, mai inclinats.
El fons dels senyals provisionals d'obra serà de color groc.
Està prohibit posar cartells amb missatges escrits, diferents dels que figuren en el Codi de Circulació.
Tot senyal que impliqui una PROHIBICIÓ o OBLIGACIÓ haurà de ser repetida a intervals d'1 min. (s/velocitat limitada) i anul·lada en quant sigui possible.
Tota senyalització d'obres que exigeixi l'ocupació de part de l'esplanada de la carretera, es composarà, com a mínim, dels següents elements:
- Senyal de perill "OBRES" (Placa TP 18)
- Barrera que limiti frontalment la zona no utilitzable de l'esplanada
La placa "OBRES" haurà d'estar, com a mínim, a 150 m i, com a màxim, a 250 m de la barrera, en funció de la visibilitat del tram, de la velocitat del tràfic i del número de senyals complementaris, que es necessitin col·locar entre senyal i barrera. Finalitzats els treballs hauran de retirar-se totalment, si no queda cap obstacle en la calçada.
Per a aclarir, completar o intensificar la senyalització mínima, podrà afegir-se, segons les circumstàncies, els següents elements:
- Limitació progressiva de la velocitat, en escalons màxims de 30 km/h, des de la màxima permesa a la carretera fins la detenció total si fos necessari (Placa TR 301). El primer senyal de limitació pot situar-se prèviament a la de perill "OBRES"
- Avís de règim de circulació a la zona afectada (Plaques TP 25, TR 400, TR 5, TR 6, TR 305)
- Orientació dels vehicles per les possibles desviacions (Placa TR 401).
- Delimitació longitudinal de la zona ocupada.
No s'ha de limitar la velocitat per sota de 60 km/h en autopista o autovies, ni a 50 km a la resta de les vies, llevat del cas d'ordenació en sentit únic alternatiu, que podrà rebaixar-se a 40 km/h.
L'ordenació en sentit únic "ALTERNATIU" es durà a terme per un dels següents sistemes:
- Establiment de la prioritat d'un dels sentits mitjançant senyals fixos. Circular, amb fletxa vermella i negra. Quadrada, amb fletxa vermella i blanca.
- Ordenació diürna mitjançant senyals manuals (paletes o discos), si els senyalitzadors es poden comunicar visualment o mitjançant radio telèfon. Nota: El sistema de "testimoni" està totalment proscrit.
- Mitjançant semàfor regulador.
Quan s'hagi de tallar totalment la carretera o s'estableixi sentit únic alternatiu, durant la nit, la detenció serà regulada mitjançant semàfors. Durant el dia, poden utilitzar-se senyalitzadors amb armilla fotoluminiscent.
Quan per la zona de calçada lliure puguin circular dues files de vehicles s'indicarà la desviació de l'obstacle amb una sèrie de senyals TR 401 (direcció obligatòria), inclinades a 45° i formant en planta una alineació recta, l'angle de la qual amb el cantell de la carretera sigui inferior quant major sigui la velocitat permesa en el tram.
Tots els senyals seran clarament visibles, i per la nit reflectors.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

Es seguiran les recomanacions d'emmagatzematge i atenció, fixats pel fabricant i la DGT.
Es reemplaçaran els elements, es netejaran, es farà un manteniment i es col·locaran en el lloc assignat, seguint les instruccions del fabricant i la DGT.
S'emmagatzemaran en compartiments amplis i secs, amb temperatures compreses entre 15 i 25 °C.
Els estocs i les entregues estaran documentades i custodiades, amb justificant de recepció i rebut, per un responsable delegat per l'empresa.
La vida útil dels senyals i abalisaments és limitada, degut tant al seu desgast prematur per l'ús, com a actuacions de vandalisme o atemptat patrimonial, amb independència que hagin estat o no utilitzades.

3.- UNITAT I CRITERIS D'AMIDAMENT
