## 1. ANTECEDENTS

L'any 2009 es va fer el descobriment de les restes arqueològiques de la reserva arqueològica del carrer Eivissa, i es va fer una campanya arqueològica que va donar com a resultat l'excavació del solar, la identificació de les restes i la redacció d'una Memòria Arqueològica l'any 2011.

Davant la voluntat del Departament de Patrimoni Històric de l'Ajuntament de Tarragona, s'inicia el procés de recuperació i posada en valor de les restes arqueològiques del solar de la reserva arqueològica del carrer Eivissa. Es dona la circumstància que el solar on s'hi ubiquen aquestes restes presenta importants problemes en els talussos que el delimiten perimetralment i que poden representar un problema de seguretat que impedeix desenvolupar treballs de recuperació de forma continuada.

Es contracta, doncs, el servei de redacció d'un projecte tècnic que defineixi les actuacions necessàries per tal de garantir la seguretat del solar i d'aquells amb els que delimita, alhora que per la correcta conservació del jaciment, el qual representa un dels punts arqueològics amb més interès de la part Baixa de Tarragona, i com a pas previ i ineludible a la seva posada en valor, difusió i socialització. El present document és el Projecte tècnic esmentat.

Imatge 1. Vista general de la zona de Projecte.

## 2. OBJECTE

L'objecte d'aquest contracte és definir les obres d'execució de les estructures de fixació-estabilització dels talussos perimetrals de la reserva arqueològica del carrer Eivissa.

## 3. SITUACIÓ ACTUAL

La zona de projecte pertany al municipi del Tarragona, a la part baixa de la ciutat, entre la Quinta de Sant Rafael al nord, l'edifici de la Tabacalera a l'oest, la plaça de toros a l'est i el Sarrallo al sud; i fora del nucli emmurallat de la ciutat romana.

L'aixecament taquimètric que conforma l'àmbit del projecte està delimitat de la següent manera:

- Al nord del jaciment, l'aparcament municipal Bastos.
- A l'oest del jaciment, l'avinguda del Cardenal Vidal i Barraquer.
- A l'est jaciment, el carrer Francesc Bastos en sentit transversal i el carrer Eivissa en sentit longitudinal.
- Al sud del jaciment, la Casa del Mar.

Actualment, no és convenient accedir al solar a executar feines arqueològiques o de manteniment per causa de la inestabilitat dels talussos a arranjar.

Imatge 2. Vista des del carrer Francesc Bastos de les restes arqueològiques d'època romana alt-imperial i baix-imperial.

Imatge 3. Estat d'un tram dels talussos perimetrals del jaciment (TRAM 2), amb la saba del muret de separació de l'Aparcament Municipal Bastos descalçat.

## 4. TOPOGRAFIA

Per a la redacció del present projecte constructiu s'ha emprat la següent informació:

- Base cartogràfica: 1:1000 disponibles a l'Institut Cartogràfic i Geològic de Catalunya (ICGC).
- Ortofotos format SID del ICGC.
- Aixecament topogràfic 1:300 de l'àmbit, de la MEMÒRIA DE LES INTERVENCIONS ARQUEOLÒGIQUES REALITZADES A LA RESERVA ARQUEOLÒGICA DEL CARRER EIVISSA. (TARRAGONA, TARRAGONÈS), de l'any 2011, facilitats per l'Ajuntament de Tarragona.

En l'Annex 01. Topografia es recull tota la informació relativa a la topografia del Projecte.

## 5. GEOLOGIA I GEOTÈCNICA

L'any 2023 es van dur a terme dos estudis geotècnics elaborats per Windmill Structural Consultats, per a l'Empresa Municipal de Transports de Tarragona, per analitzar les patologies de l'aparcament municipal Bastos i estudiar-ne el subsòl.

Atès que la tipologia del sòl que es va excavar el 2009 per descobrir el jaciment del present Projecte era la mateixa que la que s'estén sota l'Aparcament Municipal

Bastos, es prenen les dades dels sondeigs pertanyents i més propers a l'àmbit com a referència de les dades geotècniques dels talussos de l'àmbit.

Aquest sòl s'etiqueta com a Nivell 0, i es defineix com un reblert de llims, runes de construcció i graves, d'una mala qualitat resistent.

En l'Annex 02. Geologia i Geotècnia es recull tota la informació relativa a la geologia i geotècnia del Projecte.

## 6. INFORMACIÓ ARQUEOLÒGICA

Al llarg del present Projecte, es dona la següent nomenclatura als trams dels talussos de la reserva arqueològica del carrer Eivissa, en funció del seu estat respecte de l'estabilitat, de la seva ubicació i de la seva geometria:

- TRAM 1: Al nord del jaciment, el compon el tram de talús que ressegueix longitudinalment l'Aparcament Municipal Bastos, a una cota superior, fins a l'inici del descalçament del mur, al final de l'accés de l'aparcament.
- TRAM 2: El tram en pitjor estat d'estabilitat. Al nord i a l'est del jaciment, el compon el talús que ressegueix longitudinalment el tram de mur descalçat de l'accés a l'Aparcament Municipal Bastos (el tram amb l'estabilitat més compromesa) i el tram del carrer Francesc Bastos adjacent al jaciment (el tram de major altura).
- TRAM 3: Al sud del jaciment, el compon el talús adossat al mur que delimita la parcel·la del jaciment amb la Casa del Mar, a la parcel·la veïna.

A continuació es mostra un croquis en planta amb els tres trams a estudiar.

Imatge 4. Planta arqueològica del jaciment, amb superfícies ratllades segons l'època de les restes. Els requadres indiquen els trams dels talussos, segons el color: Vermell, TRAM 1. Blau, TRAM 2. Marró, TRAM 3.

D'acord amb la informació obtinguda en les visites in situ amb l'equip tècnic de Patrimoni Històric de l'Ajuntament de Tarragona, el jaciment de l'àmbit del present Projecte conté les restes arqueològiques d'un seguit d'estructures funeràries romanes i de la via romana al costat de la qual es van construir, restes arqueològiques que són majoritàriament d'epoca alt-imperial i baix-imperial, amb presència d'elements d'època tardo-republicana. També hi ha, puntualment, elements d'època visigòtica.

Les restes arqueològiques del jaciment del present Projecte tenen continuïtat en les restes existents a la veïna Casa del Mar; amb les que probablement hi ha, d'acord amb l'observació de camp, amb l'estudi de la Memòria Arqueològica i amb l'Estudi Geotècnic amb georadar consultats, sota l'Aparcament Municipal Bastos; amb les restes que hi ha sota el carrer Eivissa; i amb les restes que hi ha a l'avinguda Vidal i Barraquer, en sentit cap a la necròpoli paleocristiana.

Per tant, l'estructura de fixació-estabilització dels talussos del jaciment es dimensiona tenint en compte el següent:

- Que no afecti les restes vistes, estrictament situades dins el jaciment de l'àmbit.
- Que no afecti, tampoc, les restes que hipotèticament es troben (per determinar en la seva forma, en la seva ubicació, etc.), a continuació o

adjacents a les restes del jaciment de l'àmbit, en particular sota l'aparcament municipal Bastos.

Les unitats estratigràfiques 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599 són les més superficials amb presència de restes arqueològiques. Marquen la cota arqueològica a partir de la qual les noves estructures no poden penetrar.

En l'Annex 03. Informació arqueològica es recull tota la informació arqueològica disponible del jaciment.

## 7. SERVEIS AFECTATS I EXPROPIACIONS

No hi ha expropiacions. L'àmbit del Projecte és completament municipal.

Quant als serveis afectats, analitzant l'àmbit, s'identifiquen les superfícies que poden ser afectades per l'estructura de fixació-estabilització projectada i on al mateix temps hi poden haver serveis existents, facilitats pel Departament d'Urbanisme de l'Ajuntament, per l'Enginyer de Camins Municipal, i es determina el següent:

- Al llarg del vial d'accés a l'aparcament municipal Bastos no hi ha serveis existents.
- Al llarg de la vorera adjacent al jaciment de l'àmbit, del carrer de Francesc Bastos, hi ha serveis existents, facilitats per a la redacció del present Projecte pel Departament d'Urbanisme de l'Ajuntament de Tarragona. Són els següents:
    - Una línia d'abastament d'aigua potable d'EMATSA.
    - Una línia de baixa tensió d'e-distribución.
    - Una línia de mitja tensió d'e-distribución.
    - Una línia de telecomunicacions de Telefónica.
    - Una línia de telecomunicacions d'Ono.
    - Una línia de gas de Nedgia.
    - Una línia d'enllumenat.
    - Les línies de sanejament queden fora de la vorera, a la calçada.
- Al llarg del talús de la part sud, adossat al mur de mamposteria que tanca el perímetre de la Casa del Mar, no hi ha serveis existents.

Per tant, l'estructura de fixació-estabilització dels talussos del jaciment es dimensiona tenint en compte també la no afetació d'aquests serveis.

En l'Annex 04. Serveis afectats i expropiacions es recull tota la informació disponible al respecte.

# 8. ESTRUCTURES DE FIXACIÓ-ESTABILITZACIÓ

D'entre totes les solucions constructives per fixar i estabilitzar talussos, la que considerem que s'adequa més al fet de no afectar zones amb presència confirmada i possible de restes arqueològiques és el soil nailing.

El soil nailing és una tècnica de reforç del terreny amb la qual s'introdueixen al talús existent barres d'acer (ancoratges) en posició subhoritzontal (perpendicular al pla del talús), s'injecta morter fluid a les perforacions i es revesteix el talús reperfilat amb formigó projectat (gunita) o amb una mall, conferint, tot plegat, estabilitat al talús a arranjar.

Ja que l'estructura funciona en direcció subhoritzontal, es pot dimensionar de manera que afecti els estrats superficials que no contenen restes arqueològiques, consultats a la Memòria Arqueològica del 2011, evitant alterar els estrats que sí que en contenen.

A més a més per minimitzar el màxim la probabilitat d'afectar possibles restes, s'optimitza el dimensionament de l'estructura de manera que als talussos de l'àmbit s'executi el menor nombre possible d'ancoratges, amb el menor diàmetre possible i amb la longitud mínima possible.

Un cop executat el soil nailing, els ancoratges o claus s'uneixen entre si els amb uns cables d'acer i una geomalla, que eeté els despreniments superficials (no estructurals) del sòl del talús a causa de les precipitacion, i que presenta un acabat estèticament més adient a una reserva arqueològica que el formigó projectat o gunitat.

S'utilitza el programa Slide 2 per dimensionar l'estructura en tots els talussos del Projecte.

Els treballs a executar es defineixen a continuació:

## 8.1. Feines prèvies al jaciment

- Es durà a terme una neteja prèvia arqueològica. S'executaran els treballs de reblert i cobriment de terres que siguin necessaris, a considerar:
    - Revisió arqueològica superficial de tota la parcel·la per avaluar i protegir les restes.
    - S'adoptaran mesures de protecció com geotèxtils i/o taulons de fusta, de manera molt puntual mentre durin els treballs, de poc abast, atès que només es preveu l'actuació d'un sol operari.
    - Supervisió arqueològica de la superfície amb el retall d'expolicació, UE 1058 segons la Memòria arqueològica, que es reomplirà amb graves.

- Excavació arqueològica de la capçalera del talús del costat casa del Mar que es reperfila on es rebaixen uns 40 cm
- Excavació-neteja de la zona de contacte del perfil i el terra en la zona de la tanca del pàrquing.

### 8.2. Estructura de fixació-estabilització al TRAM 1, límit amb l'aparcament Municipal Bastos fins a l'inici del descalçament del mur

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- No reperfilada del talús. És recomamable executar el soil nailing sense modificar la geometria del talús a estabilitzar. Com a cas excepcional, un cop dut a terme el desbrossament, es procedirà a sanejar localment els trams que la Direcció de les Obres consideri.

- Execució d'un filera d'ancoratges o claus de soil nailing de 2m de longitud separats en horitzontal cada 4m, en altura per sobre dels estrats que indiquen la cota arqueològica a partir de la qual els ancoratges no poden penetrar, que són el 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. La fixació de la geomalla al talús es farà amb unes piquetes d'acer galvanitzat de l'ordre de 80cm, més curtes que les piquetes habituals, i en la posició més horitzontal possible.

### 8.3. Estructura de fixació-estabilització al TRAM 2, des de l'inici del descalçament del mur fins al final del tram del carrer Francesc Bastos adjacent

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- No reperfilada del talús. És recomanable executar el soil nailing sense modificar la geometria del talús a estabilitzar. Com a cas excepcional, un cop dut a terme el desbrossament, es procedirà a sanejar localment els trams que la Direcció de les Obres consideri.

- Execució de dues fileres d'ancoratges o claus de soil nailing de 2m de longitud separats en horitzontal cada 3m i en vertical en 1m, en altura per sobre dels estrats que indiquen la cota arqueològica a partir de la qual els ancoratges no poden penetrar, que són el 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. La fixació de la geomalla al talús es farà amb unes piquetes d'acer galvanitzat de l'ordre de 80cm, més curtes que les piquetes habituals, i en la posició més horitzontal possible.

### 8.4. Estructura de fixació-estabilització al TRAM 3, límit amb el mur de la Casa del Mar

Reblert terres al peu del talús. Enretirada de puntals que donen suport al talús.

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- Reperfilada del talús: rebaix homogeni de 40cm de la seva coronació. En aquest cas, per estabilitzar el talús, no és necessari executar el soil nailing. El rebaix en la coronació i el reblert de terres al peu del talús són suficients per donar-li estabilitat.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. S'estén la geomalla per evitar despreniments superficials petits a causa de les pluges, no estructurals.

En l'Annex 05. Estructures de fixació-estabilització es recull el disseny i els càlculs duts a terme per al dimensionament de l'estructura del Projecte.

Imatge 5. Execució de l'estesa de la geomalla, amb els cables d'acer que uneixen els caps dels ancoratges de soil nailing.

## 9. PLA DE TREBALLS I GARANTIA

Es preveu una durada de les obres de 4 mesos.

El termini de garantia s'estableix en un (1) any a partir de l'acabament de les obres. Una vegada transcorregut aquest termini es donaran les obres per rebudes.

## 10. SEGURETAT I SALUT

A l'Annex 06 es redacta l'Estudi de Seguretat i Salut per a l'execució de les tasques previstes i en compliment del RD 1627/97 de 24 d'octubre sobre les disposicions mínimes de seguretat i salut a les obres de construcció.

De l'Estudi de Seguretat i Salut es considera una partida desglossada de 4.002,63 € al Pressupost de l'obra.

## 11. GESTIÓ DE RESIDUS

L'Annex 07 recull l'Estudi de Gestió de Residus.

## 12. JUSTIFICACIÓ DE PREUS

La justificació de preus d'aquest projecte es basa en el banc de preus BEDEC del programari TCQ2000 i la introducció manual de partides. A l'Annex 09 *Justificació de preus* es mostra la relació de preus emprada al pressupost.

## 13. CLASSIFICACIÓ DEL CONTRACISTA

Segons l'article 77 de la Llei 9/2017, de 8 de novembre, de contractes del sector públic, s'exigeix la classificació per a contractar amb les Administracions Públiques l'execució de contractes d'obres per un import igual o superior a 500.000 €.

El pressupost de les obres és menor d'aquesta xifra i per tant no es necessària la classificació del contractista, atès que no es supera l'import de 500.000 € (sense IVA).

## 14. REVISIÓ DE PREUS

En compliment del Capítulo II Revisión de precios en los contratos de las entidades del Sector Público, artículo 103. Procedencia y límites, per tractar-se d'un contracte d'obra el

termini d'execució del qual no supera el dotze (12) mesos, no s'inclou en el Projecte clàusula de revisió de preus.

## 15. DECLARACIÓ D'OBRA COMPLERTA

En compliment de la Ley 9/2017, de 8 de Noviembre, de Contratos del Sector Público es manifesta que el projecte comprèn una obra completa ja que conté tots i cadascun dels elements que són precisos per a la utilització de l'obra i és susceptible d'ésser lliurada a l'ús general.

## 16. PRESSUPOST PER A CONEIXEMENT DE L'ADMINISTRACIÓ

Aplicant els preus unitaris que figuren en el Quadre de Preus als amidaments del Projecte, s'obtenen els següents pressuposts, d'Execució Material i per Contracte:

PRESSUPOST D'EXECUCIÓ MATERIAL..... 58.180,72 €

13 % Despeses Generals SOBRE 58.180,72.....7..563,49 €
6 % Benefici Industrial SOBRE 58.180,72.....3.490,84.€

Subtotal 69.235,05 €

21 % IVA SOBRE 69.235,05..... 14.539,36 €
**TOTAL PRESSUPOST PER CONTRACTE..... 83.774,41 €**

Aquest pressupost d'execució per contracte puja a la quantitat de:
**(VUITANTA-TRES MIL SET-CENTS SETANTA-QUATRE EUROS AMB QUARANTA-UN CÈNTIMS)**

# TOPOGRAFIA I CARTOGRAFIA

# ÍNDEX

**1. TOPOGRAFIA I CARTOGRAFIA .....3**

# 1. TOPOGRAFIA I CARTOGRAFIA

Per a la redacció del present projecte constructiu s'ha emprat la següent informació:

- Base cartogràfica: 1:1000 disponibles a l'Institut Cartogràfic i Geològic de Catalunya (ICGC).
- Ortofotos format SID del ICGC.
- Aixecament topogràfic 1:300 de l'àmbit, de la MEMÒRIA DE LES INTERVENCIONS ARQUEOLÒGIQUES REALITZADES A LA RESERVA ARQUEOLÒGICA DEL CARRER EIVISSA. (TARRAGONA, TARRAGONÈS), de l'any 2011, facilitats per l'Ajuntament de Tarragona.

La zona de projecte pertany al municipi del Tarragona, a la part baixa de la ciutat, entre la Quinta de Sant Rafael al nord, l'edifici de la Tabacalera a l'oest, la plaça de toros a l'est i el Sarrallo al sud; i fora del nucli emmurallat de la ciutat romana.

L'aixecament taquimètric que conforma l'àmbit del projecte està delimitat de la següent manera:

- Al nord del jaciment, l'aparcament municipal Bastos.
- A l'oest del jaciment, l'avinguda del Cardenal Vidal i Barraquer.
- A l'est jaciment, el carrer Francesc Bastos en sentit transversal i el carrer Eivissa en sentit longitudinal.
- Al sud del jaciment, la Casa del Mar.

# 01. INTRODUCCIÓ

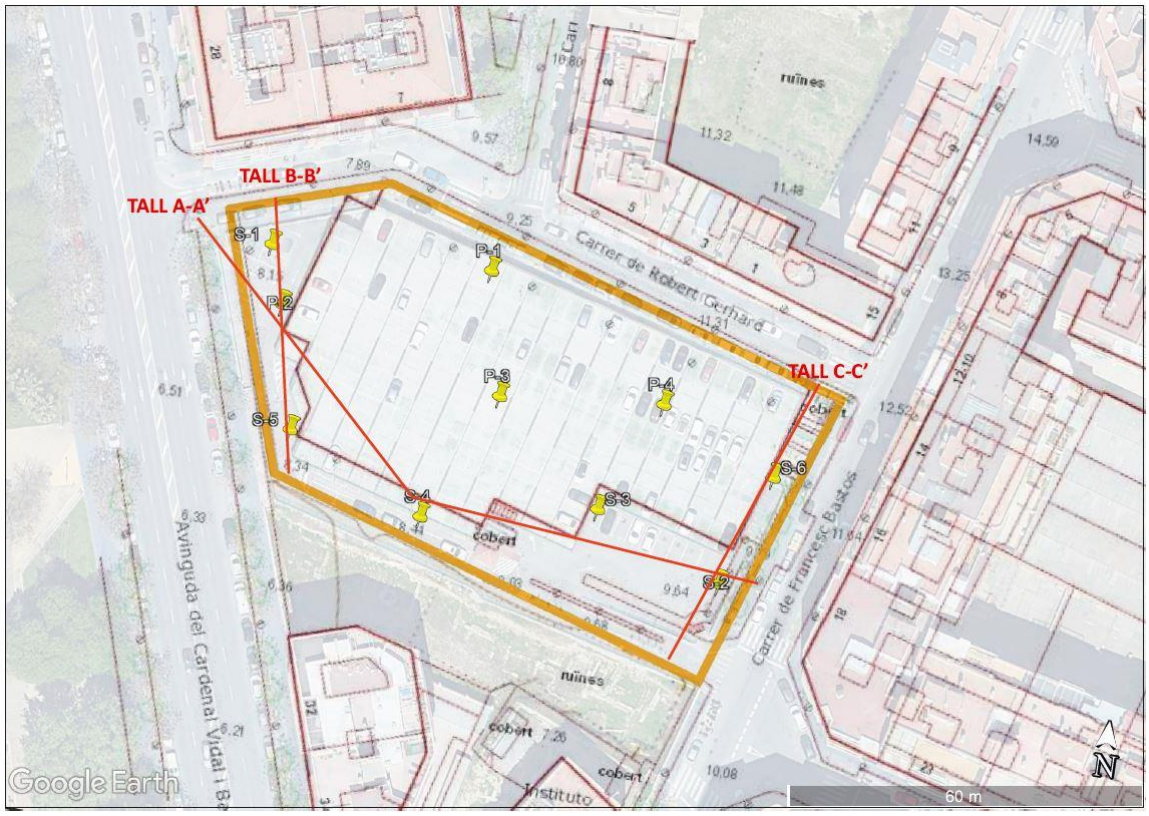
El present Annex recull la informació geològica i geotècnica de l'àmbit de projecte.

Per poder dimensionar les estructures de fixació i establització de talussos de l'àmbit del Projecte, es consulta la informació geotècnica disponible.

# 02. ESTUDI GEOTÈCNIC PER ANALITZAR LES PATOLOGIES DE L'APARCAMENT MUNICIPAL BASTOS

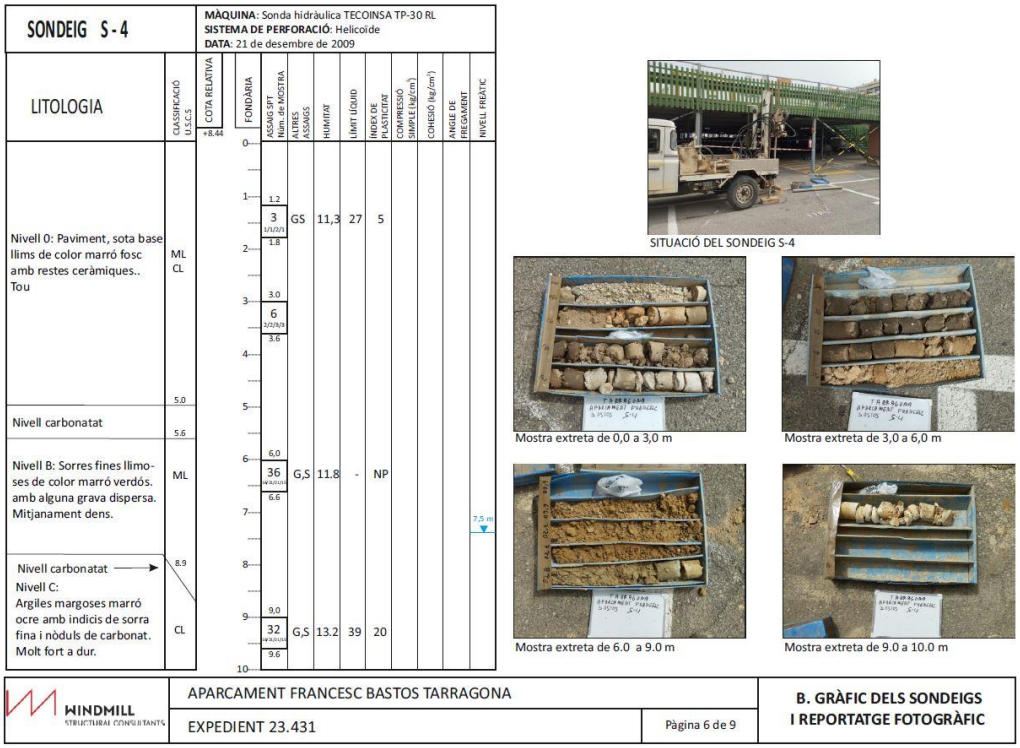
L'any 2023 es van dur a terme dos estudis geotècnics elaborats per Windmill Structural Consultats, per a l'Empresa Municipal de Transports de Tarragona, per analitzar les patologies de l'aparcament municipal Bastos i estudiar-ne el subsòl. L'ajuntament de Tarragona facilita tots dos estudis per a la seva consulta de cara al dimensionament de l'estructura de fixació-estabilització dels talussos del jaciment.

De l'Estudi geotècnic per analitzar les patologies de l'aparcament municipal Bastos, obtenim la informació següent sobre l'àmbit del present Projecte:



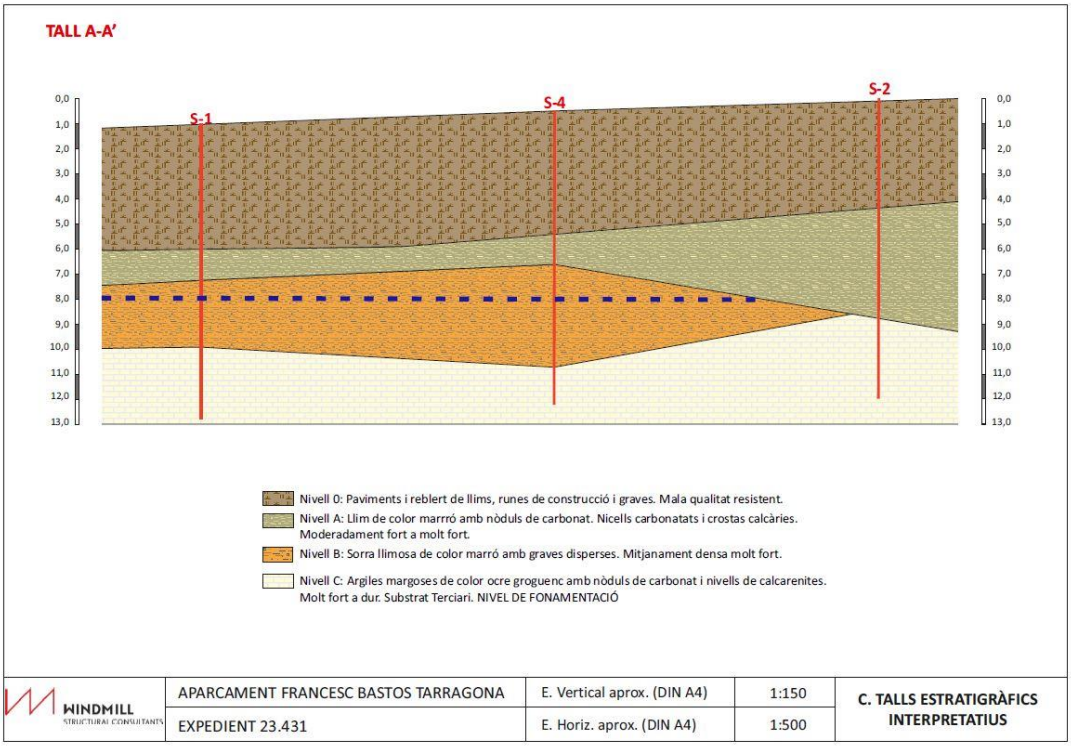
- Dels sondeigs a rotació i clavament a pressió amb obtenció de mostra contínua mitjançant una sonda hidràulica, s'observa que se n'ha executat un al trasdós del talús amb més longitud de l'àmbit del present Projecte a estudiar, el sondeig S-4.
- Tenint en compte que els talussos, amb problemes d'estabilitat, estan consolidats des del 2009, es fa una inspecció visual de l'estat dels talussos de l'àmbit.
- Atès que la tipologia del sòl que es va excavar el 2009 per descobrir el jaciment del present Projecte era la mateixa que la que s'estén sota l'Aparcament Municipal Bastos, es prenen les dades del sondeig S-4 com a referència de les dades geotècniques dels talussos de l'àmbit.
- Observant la topografia de l'àmbit, s'identifica que els talussos de l'àmbit tenen una altura màxima de 4,5m. Atès que l'estructura a dimensionar s'aplicarà acotada a aquesta altura, es pren com a referència de treball la informació geotècnica de les capes de sòl dels primers 4,5m d'altura. Segons l'estudi geotècnic esmentat, en el sondeig S-4, la primera capa és el Nivell 0, de fins a 5m de gruix.
- Segons l'estudi geotècnic esmentat, '*Sota els paviments actuals i la seva sota base que arriba fins als 0.6 m, es troba una capa de reblert heterogeni a base de llims argilosos de color marró fosc amb restes ceràmiques, que normalment engloben les restes arqueològiques de la zona'. 'Des del punt de vista geotècnic es tracta de materials de baixa resistència i elevada deformabilitat i que, per tant, poden ser considerats com una unitat geotècnica dolenta per a fonamentacions'*.
- Les dades geotècniques de referència, preses del Nivell 0 de l'estudi geotècnic, que són necessàries per al càlcul de l'estructura de fixació i estabilització són les següents:

| | |
|---|---|
| Resistència SPT ($N_{30}$) | 4-23 |
| Penetració dinàmica ($N_{20}$) | 2-30 (n.cops/20cm) |
| Resistència dinàmica ($R_d$) | 15-250 kg/cm$^2$ |



| | |
|---|---|
| Classificació USCS | ML |
| % de fins (llim i argila) | 59-62% |
| Humitat | 12.3-12.8 % |
| Límit líquid | 27 |
| Índex de plasticitat | 5 |
| Contingut en sulfats | 189-213 mg/kg |

| | |
|---|---|
| Permeabilitat Kz | $10^{-5}$ - $10^{-7}$ m/s |
| Coeficient de balast $K_{30}$ | 2.5-3.5 kp/cm$^3$ |
| Mòdul de elasticitat | 80-110 kg/cm$^2$ |
| Coeficient de Poisson | 0.3 |
| Cohesió c | 0.06 kg/cm$^2$ |
| Pes específic aparent $\delta$ | 1,85-1.89 tn/m$^3$ |
| Angle de fregament intern $\varphi$ | 25-28º |

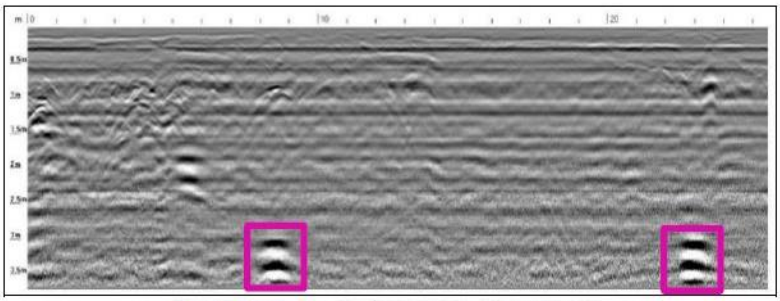


Taula 1. Característiques del sòl del sondeig S-4.

Imatge 1. Sondeigs a rotació i clavament a pressió amb obtenció de mostra contínua mitjançant una sonda hidràulica de l'estudi geotècnic per analitzar les patologies de l'aparcament municipal Bastos de l'any 2023.

Imatge 2. Sondeig S-4 de l'estudi geotècnic per analitzar les patologies de l'aparcament municipal Bastos de l'any 2023.

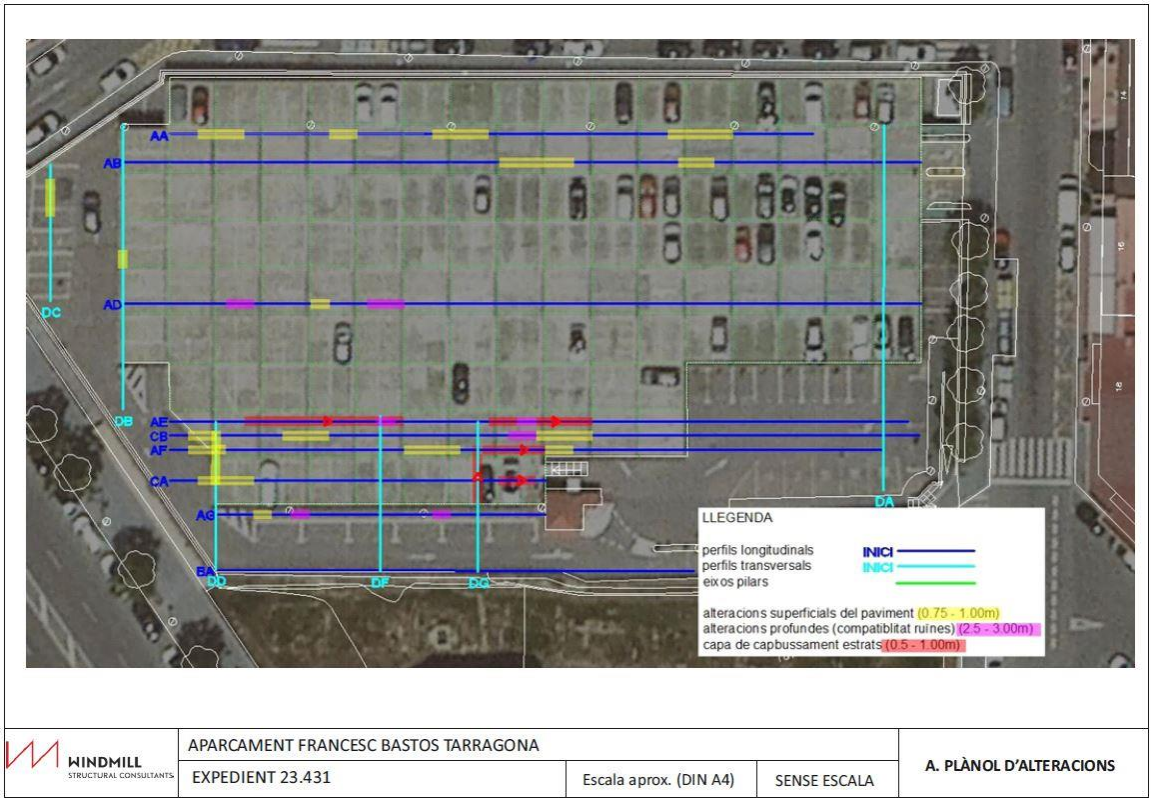
Imatge 3. Secció A-A' de l'estudi geotècnic per analitzar les patologies de l'aparcament municipal Bastos de l'any 2023.



## 03. ESTUDI AMB GEORADAR DEL SUBSÒL DE L'APARCAMENT MUNICIPAL BASTOS

De l'Estudi amb georadar del subsòl de l'aparcament municipal Bastos, obtenim la següent informació sobre l'àmbit del present Projecte:

L'informe, que té per objecte l'estudi d'alteracions per senyalitzar els punts conflictius degut a la subsidència produïda al aparcament, recull els resultats de realitzar un estudi de perfils per a senyalitzar alteracions compatibles amb subsidència, alteracions del paviment, o ruïnes.



En els plànols de l'estudi, es mostra en blau els longitudinals i en coloració turquesa els transversals a totes les zones lliures de vehicules.

- Alteracions profundes (comptabilitat ruïnes) (2.50-3.00m)
-

***Imatge 4-4.-*** *Radargrama 400 MHz AG*

Imatge 4. Radargrama amb identificació de possibles restes arqueològiques sota l'aparcament municipal Bastos, de l'Estudi amb georadar del subsòl de l'aparcament municipal Bastos de l'any 2023.

Imatge 5. Plànol d'alteracions amb identificació de possibles restes arqueològiques sota l'aparcament municipal Bastos, de l'Estudi amb georadar del subsòl de l'aparcament municipal Bastos de l'any 2023.

Les observacions in situ al jaciment, la informació disponible a la Memòria Arqueològica de l'any 2011 i la informació dels radargrames ens permet acotar les ubicacions on és més probable que hi hagi restes arqueològiques al trasdós dels talussos del jaciment de l'àmbit, de manera que aportarà informació dels punts on no és convenient aplicar elements de l'estructura de fixació-estabilització projectada.

A continuació s'adjunten els dos estudis esmentats consultats.

# 1 INTRODUCCIÓ

## 1.1 OBJECTE D'ESTUDI I ANTECEDENTS

Per encàrrec de Empresa Municipal de Transports de Tarragona, i segons les instruccions rebudes per part de la Direcció Facultativa, s'ha realitzat l'estudi geotècnic en l'obra de referència a on s'han donat patologies en el subsol que han afectat o poden afectar l'estructura metal.lica que conforma l'aparcament.

Els continguts del present estudi geotècnic faran referència a:

a. Anàlisi del context de la zona des del punt de vista geològic i geotècnic.

b. Definició del perfil litològic del subsòl i de les característiques geotècniques d'identificació, resistència i deformabilitat de les capes travessades.

c. Determinació de la cota del nivell freàtic, sempre que es detecti a la profunditat investigada.

d. Sismicitat de la zona.

e. Anàlisi dels resultats obtinguts per tal de donar un seguit de consideracions respecte a les possibles causes i les possibles solucions a la problemàtica actual.

# 2 TREBALLS REALITZATS

## 2.1 ASSAIGS *IN SITU*

### 2.1.1 Sondeigs a rotació

Durant els dies 4 a 8 de setembre de 2023 es van realitzar **6 sondeigs (S-1 a S-6)** a rotació i clavament a pressió amb obtenció de mostra contínua mitjançant una sonda hidràulica TECOINSA TP-30 amb les següents característiques:

| CARACTERÍSTIQUES TECOINSA TP-30 | |
|---|---|
| Pes total | 35000 kg |
| Potència motor | Td turbosiesel-1950rpm |
| Empenta | 9.8 kN |
| Tir màxim | 215 kNg |

El barnillatge utilitzat van ser bateries simples de 86 mm de diàmetre equipades amb corones de vídia.

### 2.1.2 Sondeigs a percussió

Durant els mateixos dies es van realitzar **4 sondeigs** (**P-1 a P-4)** o assaigs a percussió dinàmica, de tipus DPSH, seguint les especificacions establertes en la norma UNE-EN ISO 22476-2:2008. S'ha utilitzat una sonda de penetració dinàmica hidràulica instal·lada en la sonda TECOINSA PDP.

Aquest tipus d'assaig o sondeig consisteix a clavar un barnillatge metàl·lic i normalitzat que avança en el terreny mitjançant la caiguda d'un pes lliure. El nombre de cops que són necessaris per a penetrar 20 cm proporciona una dada qualitativa de la resistència del terreny anomenada $N_{20}$.

La sonda emprada presenta les següents característiques, tal i com indica la normativa:

| CARACTERÍSTIQUES SONDA PERCUSSIÓ | |
|---|---|
| M Pes martell | 63,5 kg |
| H alçada de caiguda de M | 76 cm |
| A Secció de la punta | 20 $cm^2$ |

El colpejament $N_{20}$ que s'obté en l'assaig penetromètric es pot correlacionar empíricament amb el colpejament N obtingut en un assaig SPT (*Standard Penetration Test*).

En el cas de litologies majoritàriament cohesives podem aplicar l'expressió de Dapena et. al (2000) següent:

$$\mathbf{N_{SPT} = (13 \cdot \log N_{DPSH}) - 2}$$

Mentre que per a litologies detrítiques es recomana l'expressió de Daghler (1987):

$$N_{SPT\ (AUT.)} = 25 \cdot \log (1.22 N_{DPSH}) - 15,16/1,27$$

### 2.1.3 Cotes

Els treballs de camp han estat en tot moment controlats i/o supervisats per un geòleg especialista en geotècnia, que va recollir les dades de camp necessàries per complimentar l'estudi de camp.

Tot seguit es detalla la cota relativa d'inici i la profunditat assolida en els sondeigs:

| SONDEIG | COTA D'INICI | PROFUNDITAT ASSOLIDA |
|---|---|---|
| S-1 | +8.15 | 11.0 m |
| S-2 | +9.20 | 12.0 m |
| S-3 | +9.00 | 10.0 m |
| S-4 | +8.44 | 10.0 m |
| S-5 | +8.34 | 12.0 m |
| S-6 | +9.20 | 11.0 m |
| P-1 | +8.44 | 1.2 m (rebuig) |
| P-2 | +8.15 | 8.0 m (rebuig) |
| P-3 | +8.44 | 10.0 m |
| P-4 | +9.10 | 2.0 m (rebuig) |

Les cotes dels sondeigs s'han agafat del plànol topogràfic del ICGC. Cal tenir en compte que els valors de les cotes són orientatius (no s'han utilitzat mètodes de mesura exactes).

La profunditat assolida s'ha mesurat considerant com a cota de referència 0,0 m la d'inici del sondeig.

La columna litològica obtinguda en cada sondeig es representa en forma de gràfic esquemàtic a l'annex B.

### 2.1.4 Assaigs SPT

A l'interior dels sondeigs es van realitzar un total de **21 SPT** (*Standard Penetration Test*), prova que consisteix a clavar un aparell normalitzat bipartit mitjançant la caiguda lliure d'una massa de 63,5 kg de pes, des d'una alçada de 76 cm, tal i com estableixen les especificacions definides en la norma UNE-EN ISO 22476-3:2006.

Les característiques del mostrejador bipartit són les següents:

| CARACTERÍSTIQUES MOSTREJADOR | |
|---|---|
| Longitud | 813 mm |
| Diàmetre exterior | 51 mm |
| Diàmetre interior | 35 mm |
| Pes total | 7,14 kg |

Aquest aparell bipartit permet la recuperació d'una mostra representativa del subsòl assajat.

La introducció de l'aparell s'efectua en tres o quatre trams de 15 cm cadascun, i s'anota el número de cops que ha de fer la massa per permetre la penetració de l'aparell en el terreny.

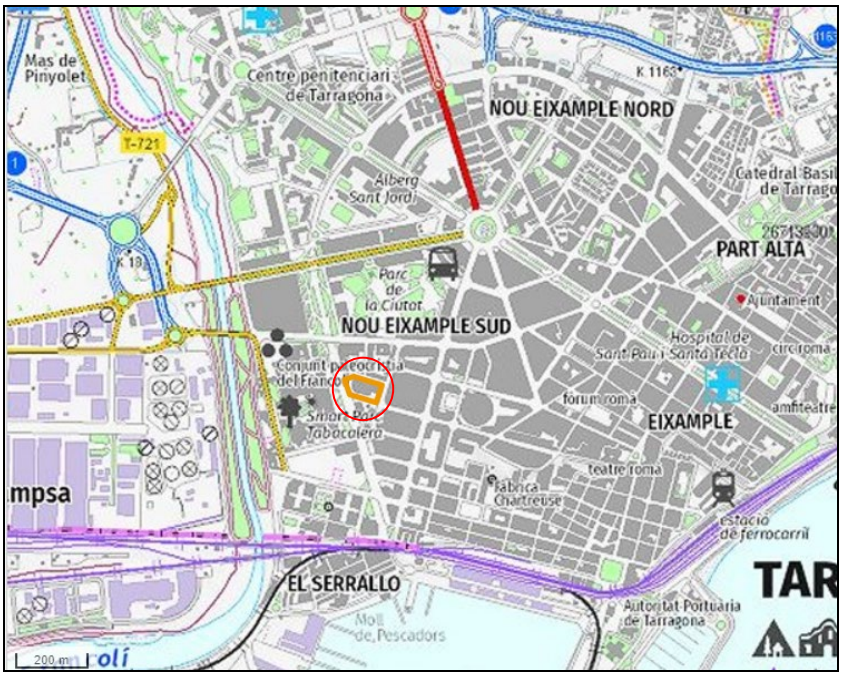
El número de cops necessari per clavar l'aparell el primer tram de 15 cm s'anomena "penetració d'assentament ($N_0$)".

S'anomena resistència a la penetració $N_{30}$ el valor total de la suma de cops necessaris per clavar dins el terreny el mostrejador bipartit el segon i tercer trams de 15 cm.

Es pot finalitzar l'assaig si s'assoleix un número de cops ≥ 50, i es considerarà rebuig (Rb). Per a roques toves aquest rebuig (Rb) es podria considerar en un número de cops ≥ 100.

Tota la testificació litològica recollida en els treballs de camp queda reflectida en els gràfics dels sondeigs, adjunts en l'annex B.

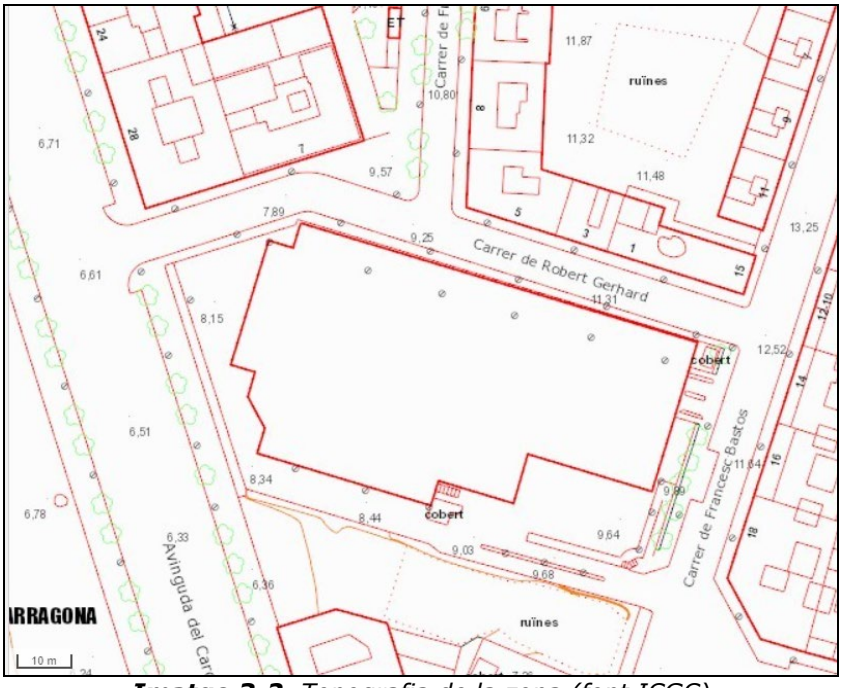
## 2.2 ASSAIGS DE LABORATORI



Totes les mostres recollides en els treballs de camp han estat traslladades i seleccionades per ser sotmeses als assaigs de caracterització mecànica i química necessaris per a la definició geotècnica del subsòl, seguint sempre la normativa vigent.

A continuació es desglossen el assaig de laboratori realitzats, els resultats dels quals s'exposen en capítols posteriors i se n'adjunten les actes de laboratori a l'annex D:

| ASSAIG REALITZAT | NORMATIVA | NÚMERO |
|---|---|---|
| Granulomètrica en sòls per tamisat | UNE 103101:1995 | 11 |
| Determinació dels límits d'Atterberg: | | |
| Determinació del límit líquid d'un sòl pel mètode de l'aparell de Casagrande | UNE 103104:1993 | 11 |
| Determinació del límit plàstic d'un sòl | UNE 103103:1994 | 11 |
| Humitat de sòl mitjançant l'assecat en estufa | UNE 103300:1993 | 11 |
| Sòls agressius. Determinació del contingut d'ió sulfat en sòls. Durabilitat del formigó. | UNE 83963:2008 | 11 |

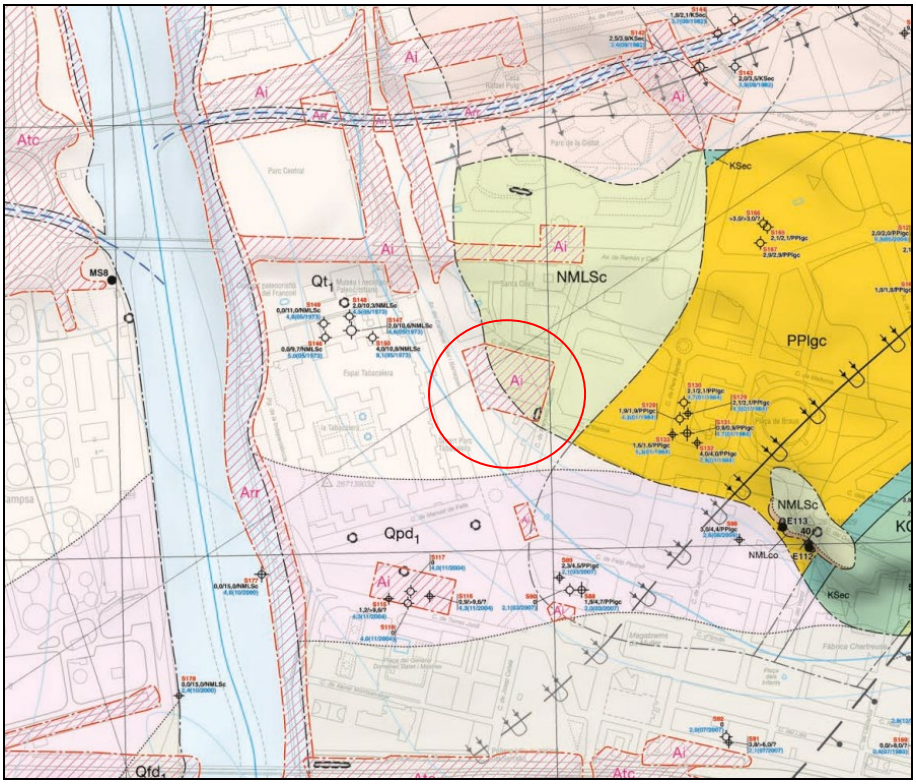


# 3 CONTEXT GEOGRÀFIC I GEOLÒGIC DE LA ZONA

Geogràficament, la zona estudiada se situa a la zona situada per sota la necròpolis i a tocar de l'antic edifici de la Tabacalera.

***Imatge 3-1**. Situació geogràfica de la zona d'estudi (font ICGC)*

Topogràficament la zona estudiada se situa entre les cotes +8.15 i la 9.20, segons el ICGC.



***Imatge 3-2**. Topografia de la zona (font ICGC)*

Geològicament el terme municipal de Tarragona se situa a cavall entre les últimes estribacions de la Serralada Litoral Catalana, constituïda aquí per litologies carbonatades, calcàries i dolomies, i la Depressió Reus-Valls o Camp de Tarragona, fossa de l'edat Terciària, de caràcter tectònic, situada entre les Serralades Prelitoral i Litoral Catalanes.

A grans trets aquesta fossa està colmatada per litologies Terciàries, constituïdes per margues, sorres i gresos, que es troben recoberts de forma discontínua per litologies col·luvials i al·luvials, argiles, llims, graves, crostes carbonatades, de l'edat Quaternària.

Segons la cartografia de l'Institut Cartogràfic i Geològic de Catalunya (ICGC), els materials aflorants en aquesta zona són els següents:

NMLSc i PPlgc:Calcarenites i lumaquel.les. Miocè.
PPlgc:Lutites, gres i conglomerats. Pliocè.
Qpd1 i Qt1: Graves, sorres i llims. Quaternari.
Arr i Ai: Reblerts associats a rieres i antròpics.
***Imatge 3-3****. Cartografia geològica (font ICGC).*

# 4 LITOLOGIES I/O UNITATS GEOTÈCNIQUES

A partir dels treballs realitzats, i juntament amb els coneixements de la zona, es poden definir els següents nivells o unitats geotècniques:

## 4.1 NIVELL 0: Paviment, reblert heterogeni.

Sota els paviments actuals i la seva sota base que arriba fins als 0.6 m, es troba una capa de reblert heterogeni a base de llims argilosos de color marró fosc amb restes ceràmiques, que normalment engloben les restes arqueològiques de la zona.

*Imatge **4-1**. Nivell 0 de paviments i reblert de llims marró fosc.*

El gruix d'aquest nivell es variable entre un mínim entre 3.6 m en la part més a tocar del carrer de Francesc Bastos, a un màxim de 5.0 m en la part baixa a tocar de l'avinguda Vidal i Barraquer.

| SONDEIG | GRUIX |
|---|---|
| S-1 | 5.0 m |
| S-2 | 3.9 m |
| S-3 | 5.0 m |
| S-4 | 5.0 m |
| S-5 | 5.0 m |
| S-6 | 3.6 m |

Des del punt de vista geotècnic es tracta de materials de baixa resistència i elevada deformabilitat i que, per tant, poden ser considerats com una unitat geotècnica dolenta per a fonamentacions.

Dades obtingudes a partir dels assaigs de camp o *in situ* realitzats:

| | |
|---|---|
| Resistència SPT ($N_{30}$) | 4-23 |
| Penetració dinàmica ($N_{20}$) | 2-30 (n.cops/20cm) |
| Resistència dinàmica ($R_d$) | 15-250 kg/cm$^2$ |

Dades que s'obtenen a partir dels assaigs de laboratori realitzats:

| | |
|---|---|
| Classificació USCS | ML |
| % de fins (llim i argila) | 59-62% |
| Humitat | 12.3-12.8 % |
| Límit líquid | 27 |
| Índex de plasticitat | 5 |
| Contingut en sulfats | 189-213 mg/kg |

Paràmetres estimats segons taules de valors recomanades en el CTE:

| | |
|---|---|
| Permeabilitat Kz | $10^{-5}$ - $10^{-7}$ m/s |
| Coeficient de balast $K_{30}$ | 2.5-3.5 kp/cm$^3$ |
| Mòdul de elasticitat | 80-110 kg/cm$^2$ |
| Coeficient de Poisson | 0.3 |
| Cohesió c | 0.06 kg/cm$^2$ |
| Pes específic aparent $\delta$ | 1,85-1.89 tn/m$^3$ |
| Angle de fregament intern $\varphi$ | 25-28º |

## 4.2 NIVELL A: Llim de color marró amb nòduls de carbonat.

Per sota el nivell 0, es troba un nivell de llims de color marró amb nòduls de carbonat que en la part alta del nivell s'acumulen donant lloc a un nivell carbonatat o crosta calcària, de gruix centimètric a decimètric.

El gruix d'aquest nivell varia entre 0.5 m en S-5 a 5.5 m en S-2.

| SONDEIG | GRUIX |
|---|---|
| S-1 | 1.0 m |
| S-2 | 5.5 m |
| S-3 | 3.5 m |
| S-4 | 0.6 m |
| S-5 | 1.6 m |
| S-6 | 3.4 m |

Des del punt de vista geotècnic podem catalogar aquest nivell com un sòl de gra fi, de plasticitat baixa a mitja, amb un contingut en sulfats inapreciable i amb consistència moderadament forta.

Dades obtingudes a partir dels assaigs de camp o *in situ* realitzats:

| | |
|---|---|
| Resistència SPT ($N_{30}$) | 34-36 |

*Imatge **4-2**. Nivell A de llims amb nòduls de carbonat.*

Dades que s'obtenen a partir dels assaigs de laboratori realitzats:

| | |
|---|---|
| Classificació USCS | ML |
| % de fins (llim i argila) | 71-78% |
| Humitat | 12.3-12.8 % |
| Límit líquid | 27 |
| Índex de plasticitat | 6-8 |
| Contingut en sulfats | 98-129 mg/kg |

Paràmetres estimats segons taules de valors recomanades en el CTE:

| | |
|---|---|
| Permeabilitat Kz | $10^{-6}$ - $10^{-7}$ m/s |
| Coeficient de balast $K_{30}$ | 4.5-5.5 kp/cm$^3$ |
| Mòdul de elasticitat | 225-315 kg/cm$^2$ |
| Coeficient de Poisson | 0.3 |
| Cohesió c | 0.06-0.09 kg/cm$^2$ |
| Pes específic aparent $\delta$ | 1,89-1,92 tn/m$^3$ |
| Angle de fregament intern $\varphi$ | 27-29º |

## 4.3 NIVELL B: Paquet detrític de sorra fina llimosa

Per sota el nivell A en els sondeigs S-1, S-3, S-4 i S-5, es troba un paquet de sorres fines llimoses de color marró taronja i verdós, amb graves disperses i algun tram lleugerament carbonatat.

En ocasions, la fracció més grollera pot arribar a superar en percentatge a la fracció mitja i fina, donant lloc a dipòsits lenticulars erràtics de graves sorrenques.

El guix d'aquest nivell oscil.la entre els 3.0 a 3.4 m.

Geotècnicament, es tracta d'un paquet detrític de gra fi, de baixa granuloclassificació, que presenta una plasticitat nul·la i una agressivitat inapreciable enfront del formigó segons criteris establerts en la EHE.

Pel que fa a les seves característiques resistents es poden catalogar de mitjanament dens en general.

*Imatge **4-3**. Nivell B de sorres llimoses amb gaves disperses.*

Dades obtingudes a partir dels assaigs de camp o *in situ* realitzats:

| | |
|---|---|
| Resistència SPT ($N_{30}$) | 10-36 |

Dades que s'obtenen a partir dels assaigs de laboratori realitzats:

| | |
|---|---|
| Classificació USCS | SM |
| % de fins (llim i argila) | 12-18 % |
| Humitat | 11.8-18.8 % |
| Índex de plasticitat | No plàstic |
| Contingut en sulfats | 218-325 mg/kg |

Paràmetres estimats segons taules de valors recomanades en el CTE:

| | |
|---|---|
| Permeabilitat Kz | $10^{-4}$ - $10^{-5}$ m/s |
| Coeficient de balast $K_{30}$ | 4.5-5.2 kp/cm$^3$ |
| Mòdul de elasticitat | 175-375 kg/cm$^2$ |
| Coeficient de Poisson | 0.3 |
| Cohesió c | 0.04-0.06 kg/cm$^2$ |
| Pes específic aparent $\delta$ | 1,90-1.93 tn/m$^3$ |
| Angle de fregament intern $\varphi$ | 30-32º |

## 4.4 NIVELL C: substrat terciari. Argiles margoses, calcarenites i argil.lites.

Per sota el nivell A o B, a fondàries que varien entre 7.9 a 10.0 m de fondària, es troba el substrat de la zona.

Aquest substrat es troba constituït principalment per unes argiles margoses de color ocre groguenc i verdós amb abundants nòduls de carbonat, que en ocasions donen lloc a nivells carbonatats, i nivells amb indicis de fracció sorra fina.

Cap a la part baixa en direcció a l'avinguda Vidal i Barraquer la coloració pot canviar a vermellós i presenten a sostre un nivell decimètric a mètric de calcarenites.

***Imatge 4-4.-*** *Nivell C Argiles margoses amb nivells de calcarenites i nivells carbonatats.*

Des del punt de vista geotècnic es pot tractar com un sòl cohesiu amb trams de roca tova, de plasticitat baixa a mitja, i no agressius al formigó per contingut de sulfats en sòls i amb una consistència molt forta a dura.

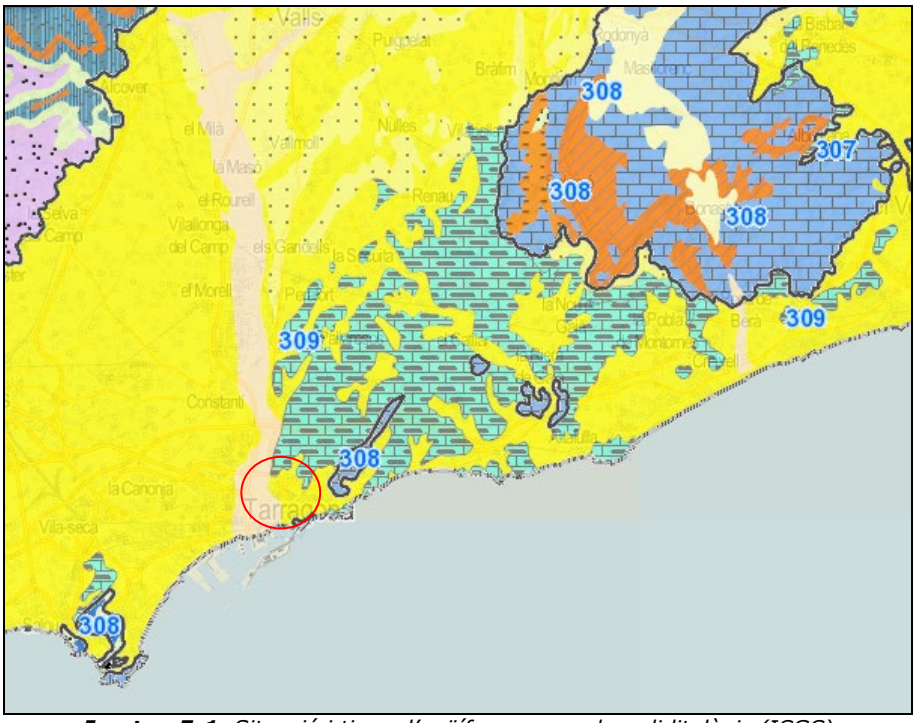
Dades obtingudes a partir dels assaigs de camp o *in situ* realitzats:

| | |
|---|---|
| Resistència SPT ($N_{30}$) | Rebuig |

Dades que s'obtenen a partir dels assaigs de laboratori realitzats:

| | |
|---|---|
| Classificació USCS | CL |
| % de fins (llim i argila) | 82-85 % |
| Humitat | 11.2- 13.2 % |
| Límit líquid | 38-39 |
| Índex de plasticitat | 11-20 |
| Contingut en sulfats | 178-259 mg/kg |

Paràmetres estimats segons taules de valors recomanades en el CTE:



| | |
|---|---|
| Permeabilitat Kz | $10^{-8}$ - $10^{-9}$ m/s |
| Coeficient de balast $K_{30}$ | 5.5-75 kp/cm$^3$ |
| Mòdul de elasticitat | 275-455 kg/cm$^2$ |
| Coeficient de Poisson | 0.3 |
| Cohesió c | 0.12-0.18 kg/cm$^2$ |
| Pes específic aparent $\delta$ | 1,90-1.98 tn/m$^3$ |
| Angle de fregament intern $\varphi$ | 28-29º |

Per informació geològica d'arxiu, es pot pensar que aquest substrat pot presentar diverses desenes de metres.

# 5 HIDROLOGIA SUBTERRÀNIA

## 5.1 CONTEXT HIDROGEOLÒGIC

La zona objecte d'estudi es troba situada dins la conca hidrogràfica del Gaià, més concretament en l'àrea hidrogeològica 309 o Depressió del Camp de Tarragona.

***Imatge 5-1**. Situació i tipus d'aqüífer segons el medi litològic (ICGC)*

Els aqüífers que es troben en aquesta zona acostumen ser amb recàrrega intergranular i/o fissuració en els materials sedimentaris.

## 5.2 GRAU D'IMPERMEABILITAT DEL TERRENY

Com a valors de permeabilitat del massís rocós podem agafar un valor de $10^{-05}$ cm/s, i unes condicions de presencia d'aigua baixa.

## 5.3 NIVELL FREÀTIC

Durant l'execució del sondeig (08/09/23) es va trobar aigua en els sondeigs S-1, S-3, s-4 i S-5 a fondàries respecte a la boca dels sondeigs entre 7.0 a 7.75, que es correspon a una cota +1.0 m.s.n.m.

Aquest nivell freàtic es troba associat a la dinàmica del riu Francolí, així com al moviment del nivell del mar, i pot presentar oscil·lacions de fins a ± 1,0 m, en funció de l'època de l'any, les extraccions artificials d'aigua, i del règim de pluges de la conca.

Respecte a la química d'aquestes aigües per dades d'arxiu, presenten una exposició o agressivitat química ***Qb***, ***atac mig,*** com a conseqüència del seu contingut en sulfats.

# 6 SISMICITAT

## 6.1 SISMICITAT DE LA ZONA

Segons la *Norma Básica de la Edificación (NCSE)*, el terme municipal de Tarragona presenta una acceleració sísmica bàsica ($\mathbf{a_b}$) de 0,04·g, és a dir 0,392 m/s$^2$, i amb un coeficient de contribució k d'1,0.

## 6.2 ACCELERACIÓ SÍSMICA DE CÀLCUL

L'acceleració sísmica de càlcul ($\mathbf{a_c}$), respon a la següent equació:

$$\mathbf{a_c = S \cdot \rho \cdot a_b}$$

On:

$\mathbf{a_b}$ és l'acceleració sísmica bàsica, definida aquí com 0,04·g (m/s$^2$)

$\rho$ és el coeficient adimensional de risc, funció de la probabilitat acceptable que s'excedeixi $\mathbf{a_c}$ en el període de vida que es projecti en la construcció prevista. Se'n consideren 2 valors:

*construccions d'importància normal* $\rho=1,0$
*construccions d'importància especial* $\rho=1,3$

**S** és el coeficient d'amplificació del terreny, que per valors on $\mathbf{\rho \cdot a_b < 0,1 \cdot g}$ , com seria el cas estudiat, s'aplica S=C/1,25.

I on C és un coeficient de terreny que depèn de les característiques geotècniques, agafat aquí amb valor I on C és un coeficient de terreny que depèn de les característiques geotècniques, agafat aquí amb valor 1,45 (mitja ponderada) considerant un terreny tipus II a IV fins a fondàries d'uns 30,0 metres.

Per tant, s'obtenen uns valors d'acceleració sísmica de càlcul ($a_c$), segons el tipus de construcció:

| Tipus de construcció | Acceleració de càlcul, $a_c$ | |
|---|---|---|
| Normal | 0,0463 g | 0,4537 m/s$^2$ |
| Especial | 0,0602·g | 0,5898 m/s$^2$ |

# 7 CONSIDERACIONS GEOTÈCNIQUES

Considerant que la fonamentació de l'estructura metal.lica és de tipus superficial a base de sabates, aquestes, amb els resultats obtinguts en la campanya geotècnica, es trobarien reposant damunt del nivell 0, constituït per un reblert de llims de color marró fosc amb restes ceràmiques.

Aquest nivell mostra unes característiques resistents baixes a partir dels resultats obtinguts en els assaigs SPT.

Tot i que les càrregues pugin ser baixes, la deformabilitat que pot presentar aquest nivell, degut a l'esgotament de la tensió o ve per l'entrada d'aigua, pot haver donat lloc als assentaments que han afectat i afecten a l'estructura.

Davant aquesta situació, per poder rehabilitar l'estructura, donat que aquest reblert presenta un gruix important, entre els 3.6 a 5.0 m de gruix, s'haurà d'estudiar una solució de recalç a base de micropilots encastats en el nivell C, substrat d'argiles margoses amb nivells carbonatats i nivells de calcarenita, que es troben a fondàries entre els 8.0 a 10.0 m respecte a la topografia actual.

Aquesta solució vindrà condicionada en gran part per les dimensions de la fonamentació actual, ja que la transmissió de les càrregues depèn d'aquestes.

Per calcular la capacitat de càrrega d'aquests micropilots, considerant un tipus IGU, partint dels resultats obtinguts en els assaigs SPT, compressions simples i aplicant els criteris de càlcul de Bustamante (*Boletín de la Sociedad Española de Mecánica del Suelo, nº 81-82*, 1986), es poden donar els següents valors de resistència unitària en fust:

Resistència unitària per fust (rf):

| Nivell | Litologia | Resistència unitària en fust | |
|---|---|---|---|
| | | kg/cm$^2$ | kN/m$^2$ |
| 0 | Reblert | No es considera | |
| A | Llims amb nòduls de carbonat | 0,3-0,4 | 30-40 |
| B | Sorres llimoses | 1.0-1.2 | 100-120 |
| C | Argiles margoses | 1.4-1.6 | 140-160 |

Aquests valors ja porten incorporat un factor de seguretat F=2.

Pel que fa al valor de resistència unitària en punta es pot aplicar, segons Bustamante, en un 15% de la resistència per fust, si bé per tal de situar-nos al costat de la seguretat normalment no es considera.

El número de micropilots, diàmetre, longitud i la seva distribució, vindrà condicionada per les càrregues a absorbir i de les dimensions de la fonamentació actual.

**WINDMILL Structural Consultants, S.L.P.** resta a la vostra disposició per a tots aquells comentaris o aclariments que, respecte d'aquest estudi, ens vulgueu fer, així com per a qualsevol dubte que es plantegi durant els moviments de terres i l'obertura de rases de fonamentació quant al tipus de terreny observat, per tal de determinar el tipus d'actuació més convenient a seguir.

El present estudi ha estat redactat en tot moment considerant els requisits establerts per la normativa i la legislació vigent.

Tarragona, 6 d'octubre de 2023:

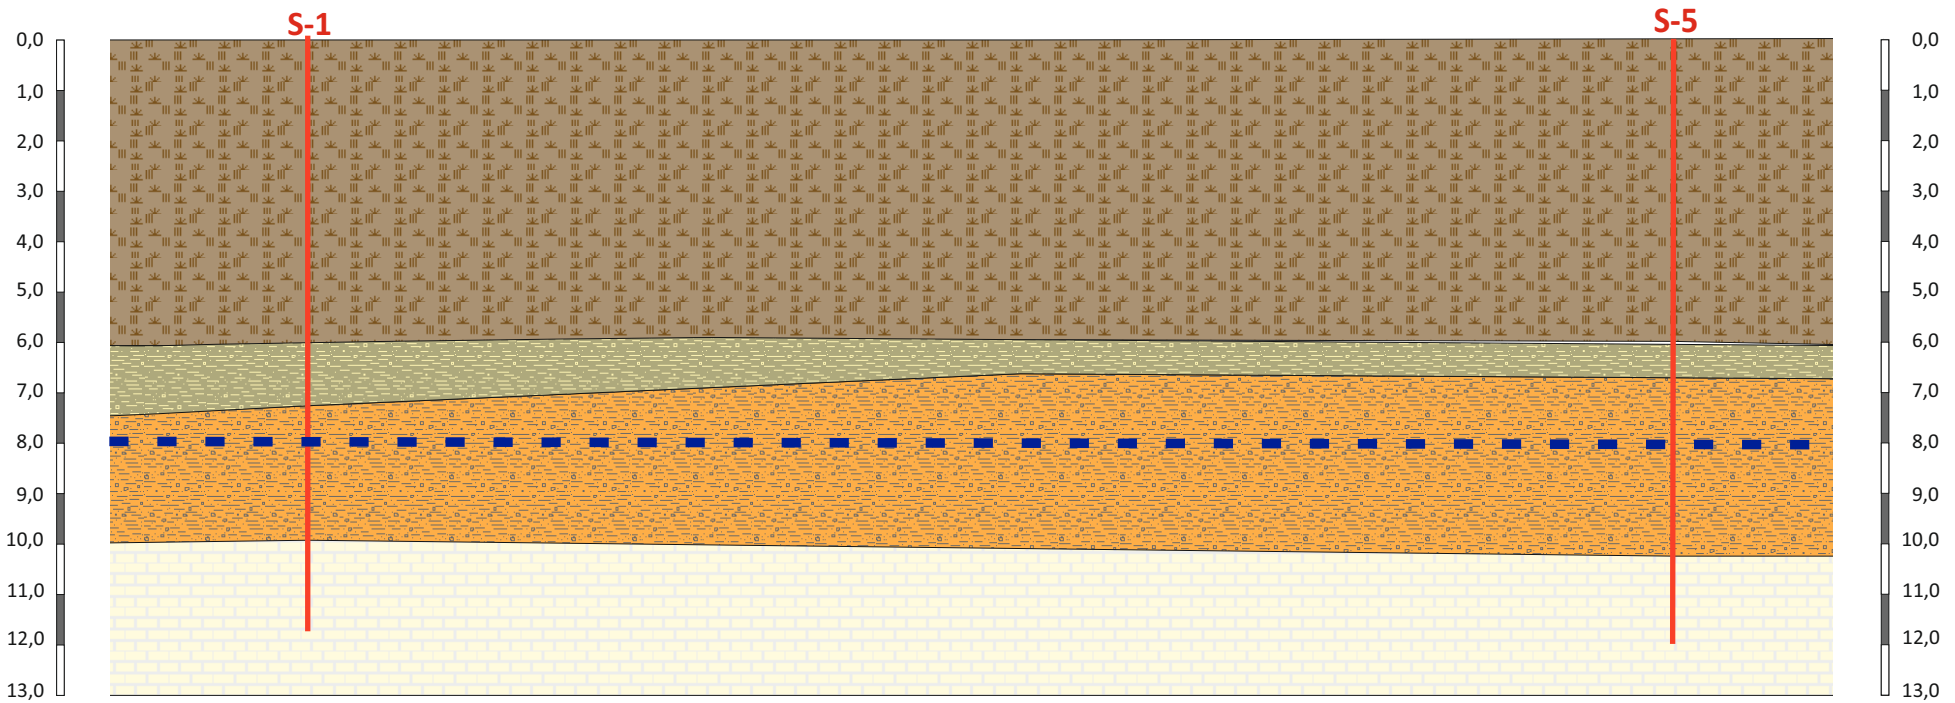
# ANNEX C. TALLS ESTRATIGRÀFICS INTERPRETATIUS

## TALL A-A'

Nivell 0: Paviments i reblert de llims, runes de construcció i graves. Mala qualitat resistent.



Nivell A: Llim de color marrró amb nòduls de carbonat. Nicells carbonatats i crostas calcàries. Moderadament fort a molt fort.

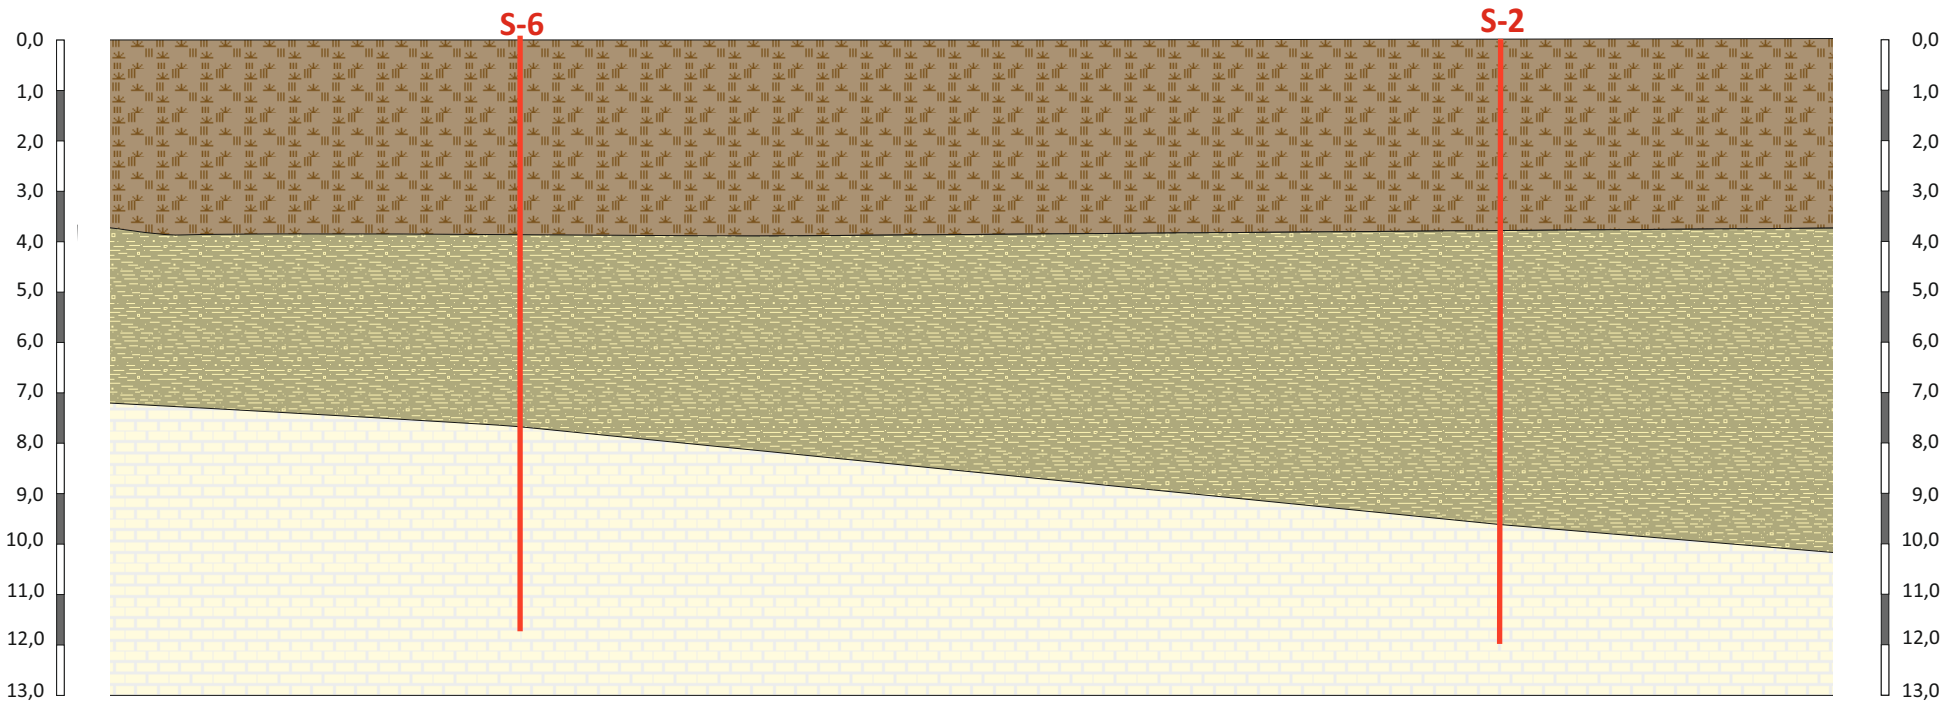
Nivell B: Sorra llimosa de color marró amb graves disperses. Mitjanament densa molt fort.

Nivell C: Argiles margoses de color ocre groguenc amb nòduls de carbonat i nivells de calcarenites. Molt fort a dur. Substrat Terciari. NIVEL DE FONAMENTACIÓ

| | | | | |
|---|---|---|---|---|
| WINDMILL STRUCTURAL CONSULTANTS | APARCAMENT FRANCESC BASTOS TARRAGONA | E. Vertical aprox. (DIN A4) | 1:150 | **C. TALLS ESTRATIGRÀFICS INTERPRETATIUS** |
| | EXPEDIENT 23.431 | E. Horiz. aprox. (DIN A4) | 1:500 | |

## TALL B-B’

Nivell 0: Paviments i reblert de llims, runes de construcció i graves. Mala qualitat resistent.



Nivell A: Llim de color marrró amb nòduls de carbonat. Nicells carbonatats i crostas calcàries. Moderadament fort a molt fort.

Nivell B: Sorra llimosa de color marró amb graves disperses. Mitjanament densa molt fort.

Nivell C: Argiles margoses de color ocre groguenc amb nòduls de carbonat i nivells de calcarenites. Molt fort a dur. Substrat Terciari. NIVEL DE FONAMENTACIÓ

| | | | | |

**Informe**

El present informe consta de 11 actes de resultats, numerades correlativament i segellades. Els resultats obtinguts en aquest informe només afecten els materials sotmesos a assaig.

L'informe no podrà ser reproduït totalment o parcial sense l'autorització per escrit del laboratori d'assaig.

# ANNEX E. FORMULACIÓ

## E. FORMULACIÓ

### *E1. <u>Capacitat portant admisible per a sòls cohesius</u>*

La capacitat portant admissible ($q_{adm}$) és aquella que compleix el criteri de seguretat enfront de la ruptura i que no genera assentaments inadmissibles.

Així en el cas de materials cohesius, cal estudiar la condició a curt termini on l'angle de fregament intern tendeix a 0 ($\varphi$=0).

En conseqüència la forma general expressada en el CTE :

$$q_h = c_u N_c d_c s_c i_c t_c + q_0 N_q d_q s_q i_q t_q + \frac{1}{2} B \gamma N_\gamma d_\gamma s_\gamma i_\gamma t_\gamma$$

queda reduïda a la següent expressió:

$$q_{adm} = \frac{c_u N_c d_c s_c i_c t_c}{F} + q_0 N_q d_q s_q i_q t_q$$

on:

$c_u$ és la cohesió del terreny (kN/m$^2$)
$q_0$ és la pressió vertical efectiva a la cota de fonamentació (kN/m$^2$)
B és l'amplada del fonament (m)
$\gamma$ és el pes específic del terreny on es recalza la fonamentació (kN/m$^3$)
$N_c$, equival a 5,14 en el cas de les sabates continues i a 6,2 en el cas de les sabates quadrades
$N_q$ equival a 1
$d_c$, $d_q$, $d_\gamma$ són coeficients correctors de profunditat (adimensionals)
$s_c$, $s_q$, $s_\gamma$ són coeficients correctors depenent de la forma del fonament (adimensionals)
$i_c$, $i_q$, $i_\gamma$ són coeficients correctors en funció de la resultant d'accions respecte de la vertical (adimensionals)
$t_c$, $t_q$, $t_\gamma$ són coeficients correctors, aplicables quan la fonamentació és a prop d'un talús (adimensionals)
F és el factor de seguretat, que en aquest cas equival a F=3

## E. FORMULACIÓ

### E2. Fonamentació superficial en nivells detrítics

Segons el CTE, en materials granulars la capacitat portant admissible es troba més limitada per l'assentament que no pas pel enfondrament.

En conseqüència podem utilitzar les següents expressions extretes del CTE:

Si B<1,2 m

$$q_{as} = 12N\left(1+\frac{D}{3B}\right)\left(\frac{S}{25}\right)$$

Si $B \geq 1{,}2$ m

$$q_{as} = 8N\left(1+\frac{D}{3B}\right)\left(\frac{S}{25}\right)\left(\frac{B+0{,}3}{B}\right)^2$$

On:

**N** és un valor mitjà de l'assaig SPT en la zona d'influència (adimensional)
**D** és la profunditat d'encastament de la sabata (m)
**B** és l'amplada del fonament (m)
**S** és l'assentament màxim admissible (mm)

### E3. Assentaments

Pel què respecta al càlcul dels assentaments, s'ha partit de la fórmula de Menard, que integra en el càlcul la part elàstica i la part plàstica.

$$W = \left[\frac{2qB_0}{9E_d}\right]\cdot\left[\frac{f_dB}{B_0}\right]^{\alpha} + \left[\frac{f_cqB\alpha}{9E_c}\right]$$

on:

**W** és l'assentament previsible
**q** és la pressió mitjana efectiva que aplica el fonament
$\mathbf{B_0}$ és la longitud de referència igual a 60 cm
**B** és el diàmetre del fonament
**E** és el mòdul de deformació del terreny. Aquí *E = Nspt/k*
$\mathbf{f_d}$ i $\mathbf{f_c}$ són els coeficients de forma que depenen de la relació *L/B* del fonament
$\alpha$ és el coeficient que depèn del tipus de terreny i de la relació *E/Pl*

# ANNEX F. TAULES DE REFERÈNCIA

## Taules de referència

| | | | **OH** | Argiles i llims orgànics de plasticitat mitjana a alta. |
| **SÒLS ORGÀNICS.**<br>Molt compressibles i de fàcil identificació, generalment de color gris. | | | **PT** | Turbes i sòls molt orgànics. |

**Taula 7. Estabilitat del terreny**

| *GRAU* | *CARACTERÍSTIQUES* |
|---|---|
| molt bona | Les parets de fins a 3,0 m es mantindran verticals durant períodes de temps raonables, habituals en la construcció. |
| bona | Les parets de fins a 3,0 m es mantindran verticals durant períodes de temps raonables, habituals en la construcció, si bé es poden detectar petits punts inestables que no suposarien problemes importants, però que cal tenir en compte durant els treballs d'excavació. |
| mitjana | Les parets de fins a 3,0 m es mantindran verticals durant períodes de temps habituals en la construcció, tot i que cal preveure que les heterogeneïtats degudes a les variacions litològiques poden significar inestabilitats puntuals, que caldrà tenir en compte sobretot per a la seguretat del personal que treballi a prop de les parets. |
| baixa | Les parets no s'aguanten en la vertical i, per tant, es preveuen caigudes constants de fragments i falques de terreny, fet que dificultarà treballar a prop de les excavacions. |
| molt baixa | Les parets no s'aguanten en la vertical i s'esfondren immediatament després de cada passada de la maquinària. No s'hi pot treballar sense sistemes de contenció en les parets. |

**Taula 8. Ripabilitat del terreny**

| *GRAU* | *CARACTERÍSTIQUES* |
|---|---|
| molt difícil | L'excavació del terreny presentarà certes dificultats de forma generalitzada, per la qual cosa caldrà preveure maquinària de potència elevada auxiliada per un martell hidràulic o picador. |
| difícil | L'excavació del terreny es podria realitzar amb maquinària convencional de potència mitjana, si bé cal preveure la intercalació de trams més durs, on sigui necessari emprar maquinària de potència alta, auxiliada per un martell hidràulic o picador. |
| normal | L'excavació del terreny es pot realitzar amb maquinària convencional de potència mitjana de forma general, sense descartar que en alguns trams més o menys endurits disminueixi, de forma puntual, el rendiment de la maquinària. |
| fàcil | L'excavació del terreny es pot realitzar amb maquinària convencional de potència mitjana sense cap dificultat. |
| molt fàcil | L'excavació del terreny es pot realitzar amb maquinària convencional de potència mitjana sense cap dificultat, fins i tot es pot preveure excavar-lo manualment. |

**Taula 9. Classificació de la roca mare**

| *ASSAIG APROXIMAT* | *RESISTÈNCIA A LA COMPRESSIÓ SIMPLE* | *VALOR ESTIMAT $q_u$ (MPa)* |
|---|---|---|
| Es pot ratllar amb l'ungla | Especialment dèbil | <1 |
| Es trenca a cops de martell moderats<br>Es pot ratllar fàcilment amb navalla | Molt baixa | 1 a 5 |
| Es ratlla difícilment amb navalla | Baixa | 5 a 25 |
| No és pot ratllar amb navalla<br>Es pot trencar amb un cop de martell | Mitjana | 25 a 50 |
| Calen diversos cops de martell per trencar-la | Alta | 50 a 100 |
| Difícil de trencar amb el martell (> 3 cops) | Molt alta | 100 a 250 |
| Amb el martell sols es poden produir fragments | Extremadament alta | >250 |

**Taula 10. Obertura de les discontinuïtats**

| *General* | *Detall* | *Obertura* |
|---|---|---|
| Juntes tancades | Molt tancades<br>Tancades<br>Parcialment obertes | <0,1 mm<br>0,1 a 0,25 mm<br>0,25 a 0,50 mm |
| Massís rocós esquerdat | Obertes<br>Bastant obertes<br>Obertura amplia | 0,50 a 2,5 mm<br>2,5 a 10 mm<br>>1 cm |
| Juntes obertes | Obertura molt amplia<br>Obertura especialment amplia<br>Estructura buida | 1 a 10 cm<br>10 a 100 cm<br>>1 m |

**Taula 11. Rugositat de les discontinuïtats**

| *Descripció* | *Detall* |
|---|---|
| A gran escala , longituds d'ordre mètric, es classificarà com: | Esglaonada<br>Ondulada<br>Plana |
| A menor escala , longituds d'ordre centimètric, es classificarà com: | Rugosa<br>Suau<br>Especular |

**Taula 12. Reompliment de les discontinuïtats**

| |
|---|
| Classe 1: Reompliment sec i de baixa permeabilitat |
| Classe 2: Reompliment humit sense presència d'aigua lliure |
| Classe 3: Reompliment molt humit amb aportacions d'aigua lliure |
| Classe 4: Reompliment rentat amb flux d'aigua continuo |
| Classe 5: Reompliment descalçat amb importants vies d'aigua |

**Taula 13. Espaiat de les discontinuïtats**

| *CLASSIFICACIÓ* | *ESPAIAT (cm)* |
|---|---|
| Especialment petit | <2 (0,02 m) |
| Molt petit | 2 a 6 |
| Petit | 6 a 20 |
| Moderat | 20 a 60 |
| Ampli | 60 a 200 |
| Molt ampli | 200 a 600 |
| Especialment ampli | >600 (6 m) |

# 1 INTRODUCCIÓ

## 1.1 OBJECTE D'ESTUDI

Per encàrrec de Empresa Municipal de Transports de Tarragona, i segons les instruccions rebudes per part de la Direcció Facultativa s'ha realitzat una campanya de georadar.

El present informe té per objecte l'estudi d'alteracions per senyalitzar els punts conflictius degut a la subsidència produïda al aparcament.

L'assaig s'ha realitzat mitjançant l'equip de georadar IDS RIS MF Hi-mod amb antenes de 400 i 900 MHz.

Les característiques de l'equip es presenten a l'annex 1.

# 2 ZONA D'ESTUDI

**Adreça:** C/ Francesc Bastos 15
**Municipi:** Tarragona **Província:** Tarragona

***Imatge 2-1.-****Emplaçament de la zona d'estudi. Font: Google EarTH*

# 3 TREBALLS REALITZATS

## 3.1 Treballs previs

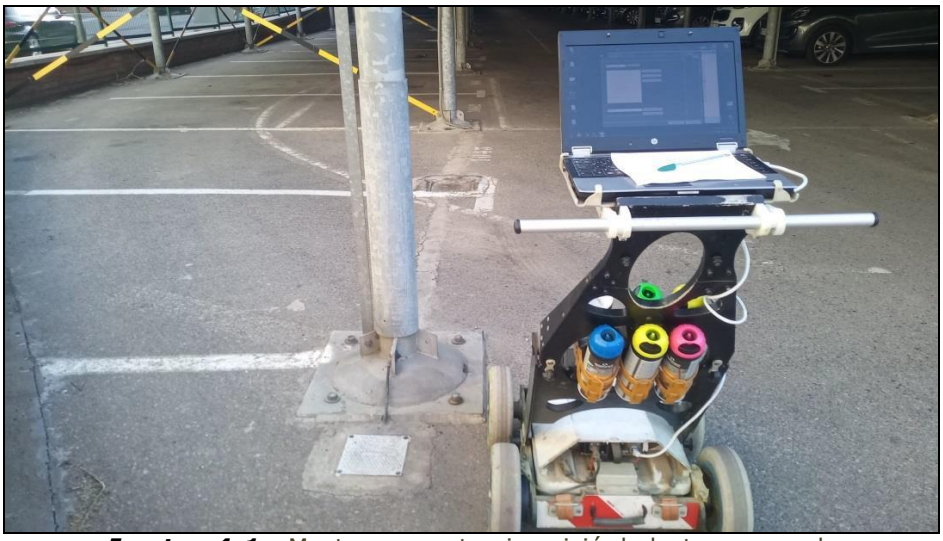
- S'ha comprovat, mitjançant inspecció visual, la ubicació de possibles murs, serveis, així com altres elements que puguin transcórrer pel subsòl i no interfereixen en la correcta mesura.

## 3.2 Prospecció

- S'ha utilitzat l'equip de georadar HI-MOD per realitzar la inspecció en els perfils indicats i sense vehicules.

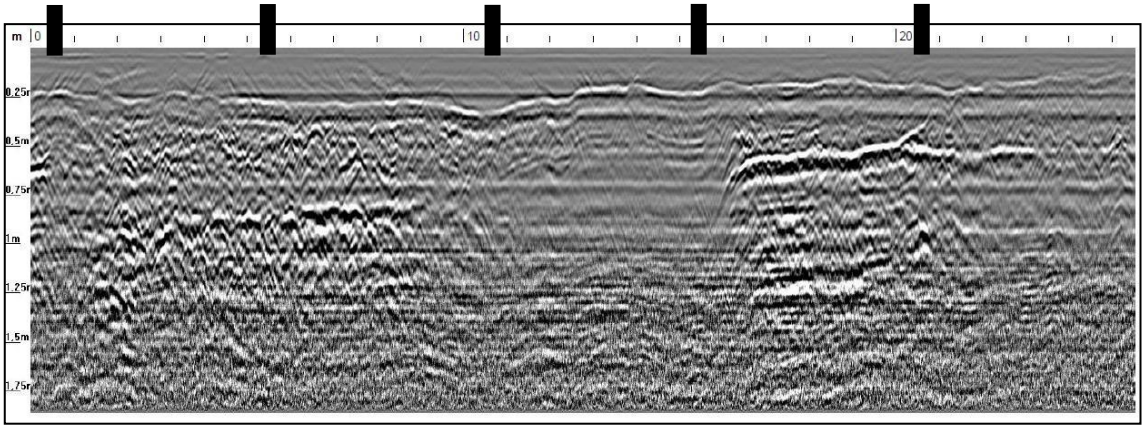
Es realitza els perfils en tots els vials transitables a la mínima distancia dels pilars en sentit longitudinal est-oest. I alguns perfils de interès transversals (annex plànol 4 ubicació perfils)

## 3.3 Redacció d'informe



- S'entrega informe amb la metodologia de treball i les alteracions detectades mostrant alguns radargrames exemple.

Es realitza una llegenda segons la tipologia d'anomalia que es presenta, així com una cota de profunditat a la que es troba.



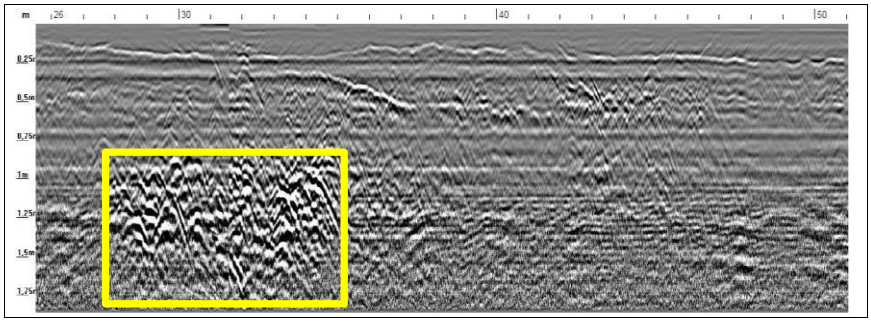
# 4 RESULTATS OBTINGUTS

- No es possible la determinació de les sabates dels pilars, aquest fet pot ser degut a aquestes presenten unes dimensions suficientment petites per a la lectura amb el georadar. El georadar per evitar alteracions no pot sobrepassar elements metàl·lics. És per aquest motiu que la traçada es realitza segons la imatge 4.1., amb la aproximació aquests ancoratges sense passar per damunt.

S'observa al radargrama de la imatge 4.2. com no es mostra cap alteració, ni cap cantonada de sabata, per tant es creu que la sabata podria ser la dimensió d'aquest ancoratge. Caldria la realització de cales per aquesta verificació.

***Imatge 4-1.-*** Mostra ancoratge i posició de lectura georadar

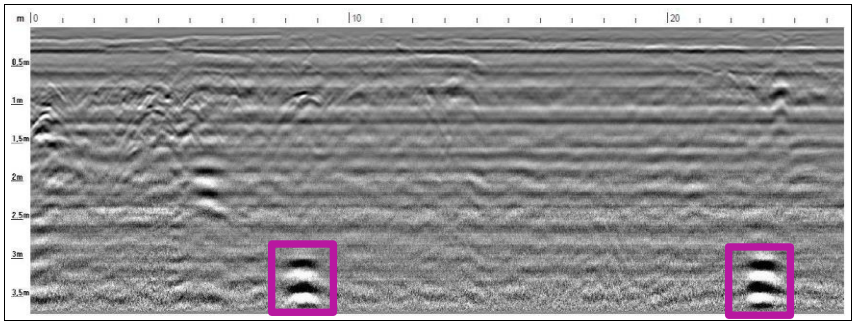
***Imatge 4-2.-*** *Radargrama 900 MHz AA, en verd posició pilars i ancoratges*



- Es realitza un estudi de perfils per a senyalitzar alteracions compatibles amb subsidència, alteracions del paviment, o ruïnes.

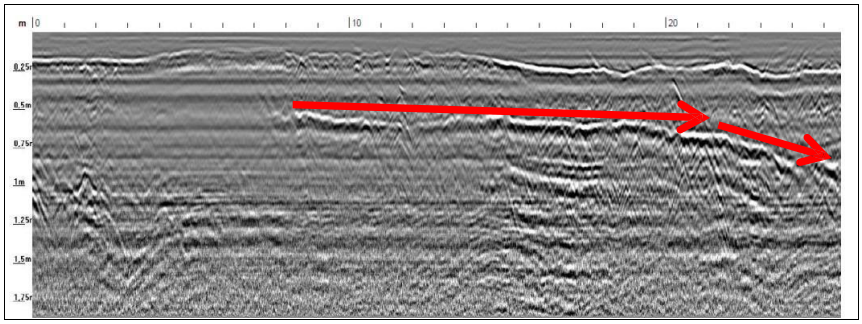
Es realitzen els perfils segons la llegenda del plànol, en blau els longitudinals i en coloració turquesa els transversals a totes les zones lliures de vehicules.

En el present es mostren els resultats i alguns radargrames exemple, no la totalitat dels perfils realitzats. (annex 4)



Es cataloguen les alteracions segons:

- Alteracions superficials del paviment (0.75-1.00m)



***Imatge 4-3**.- Radargrama 900 MHz AA*

- Alteracions profundes (comptabilitat ruïnes) (2.50-3.00m)
- 

***Imatge 4-4.-** Radargrama 400 MHz AG*

- Deformacions d'estrats (0.50-1.00m)
- 

***Imatge 4-5.-**Radargrama 900 MHz AE*

La zona amb major nombre de alteracions es la més pròxima a la zona de subsidència, on es mostren diverses deformacions totes en el mateix sentit dels perfil AE es a dir Est- Oest i un paviment més irregular. La zona nord també presenta zones lleugerament alterades.

De totes maneres, es recorda que els valors obtinguts amb mètodes indirectes, com els obtinguts en la present campanya, es basen en una interpretació subjectiva i no són concloents, per la qual cosa es recomana la verificació de resultats mitjançant mètodes directes.

**WINDMILL Structural Consultants, S.L.P.** resta a la vostra disposició per a tots aquells comentaris o aclariments que, respecte d'aquest informe, ens vulgueu fer.

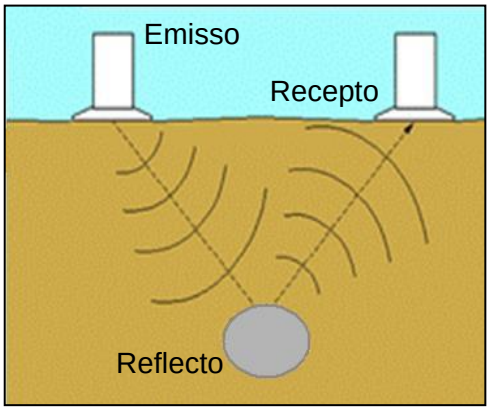
# 5 ANNEX 1 – EQUIPS

Equip de georadar amb les corresponents certificacions CE del fabricant: **IDS RIS MF Hi-mod**, amb antenes apantallades de 400 i 900 MHz.

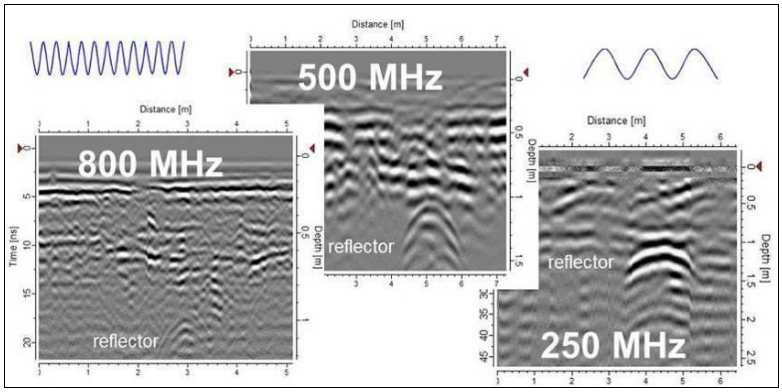


***Imatge 5-1.-*** *Mostra ancoratge i posició de lectura georadar*

# 6 ANNEX 2 – FONAMENTS DE LA METODOLOGIA

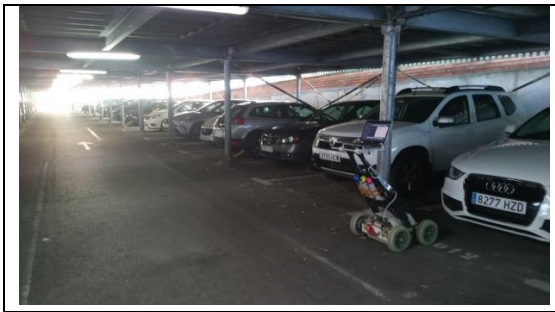
## Georadar (GPR)

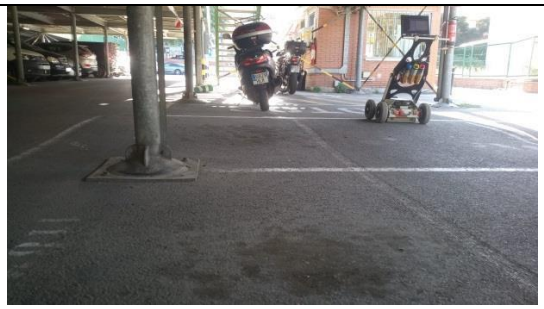
L'assaig de reflexió electromagnètic mitjançant georadar o també conegut com a "Ground Penetrating Radar" (GPR) és un mètode de prospecció geofísica basat en l'emissió i propagació d'ones electromagnètiques sobre un medi i la seva posterior recepció, reflectint les irregularitats i discontinuïtats detectades durant el seu recorregut.



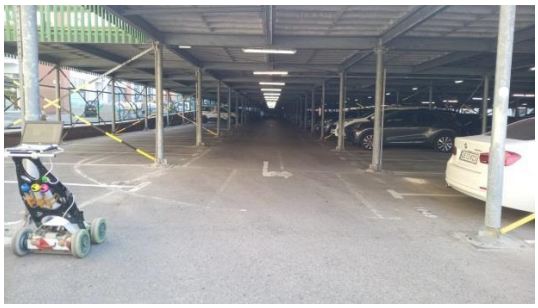
***Imatge 6-1.-*** *Esquema mètoder*

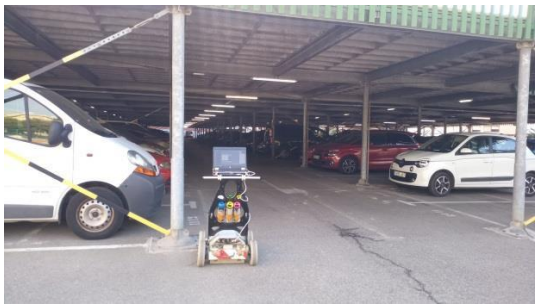
L'anàlisi de la senyal resultant permet detectar canvis d'estat del subsòl de caràcter estratigràfic, serveis urbans o altres elements aïllats. Gràcies al paràmetre temps transcorregut entre emissió i recepció de cada pols magnètic, el sistema permet mitjançant un càlcul de velocitat de propagació d'ona determinar la profunditat a la que es troba el reflector o l'element enterrat.



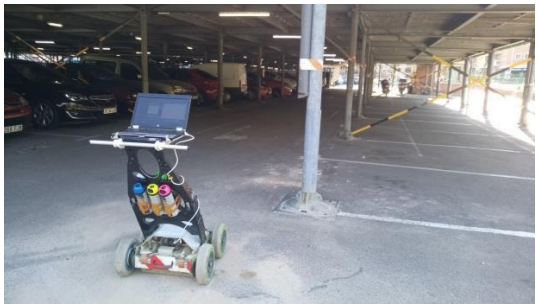


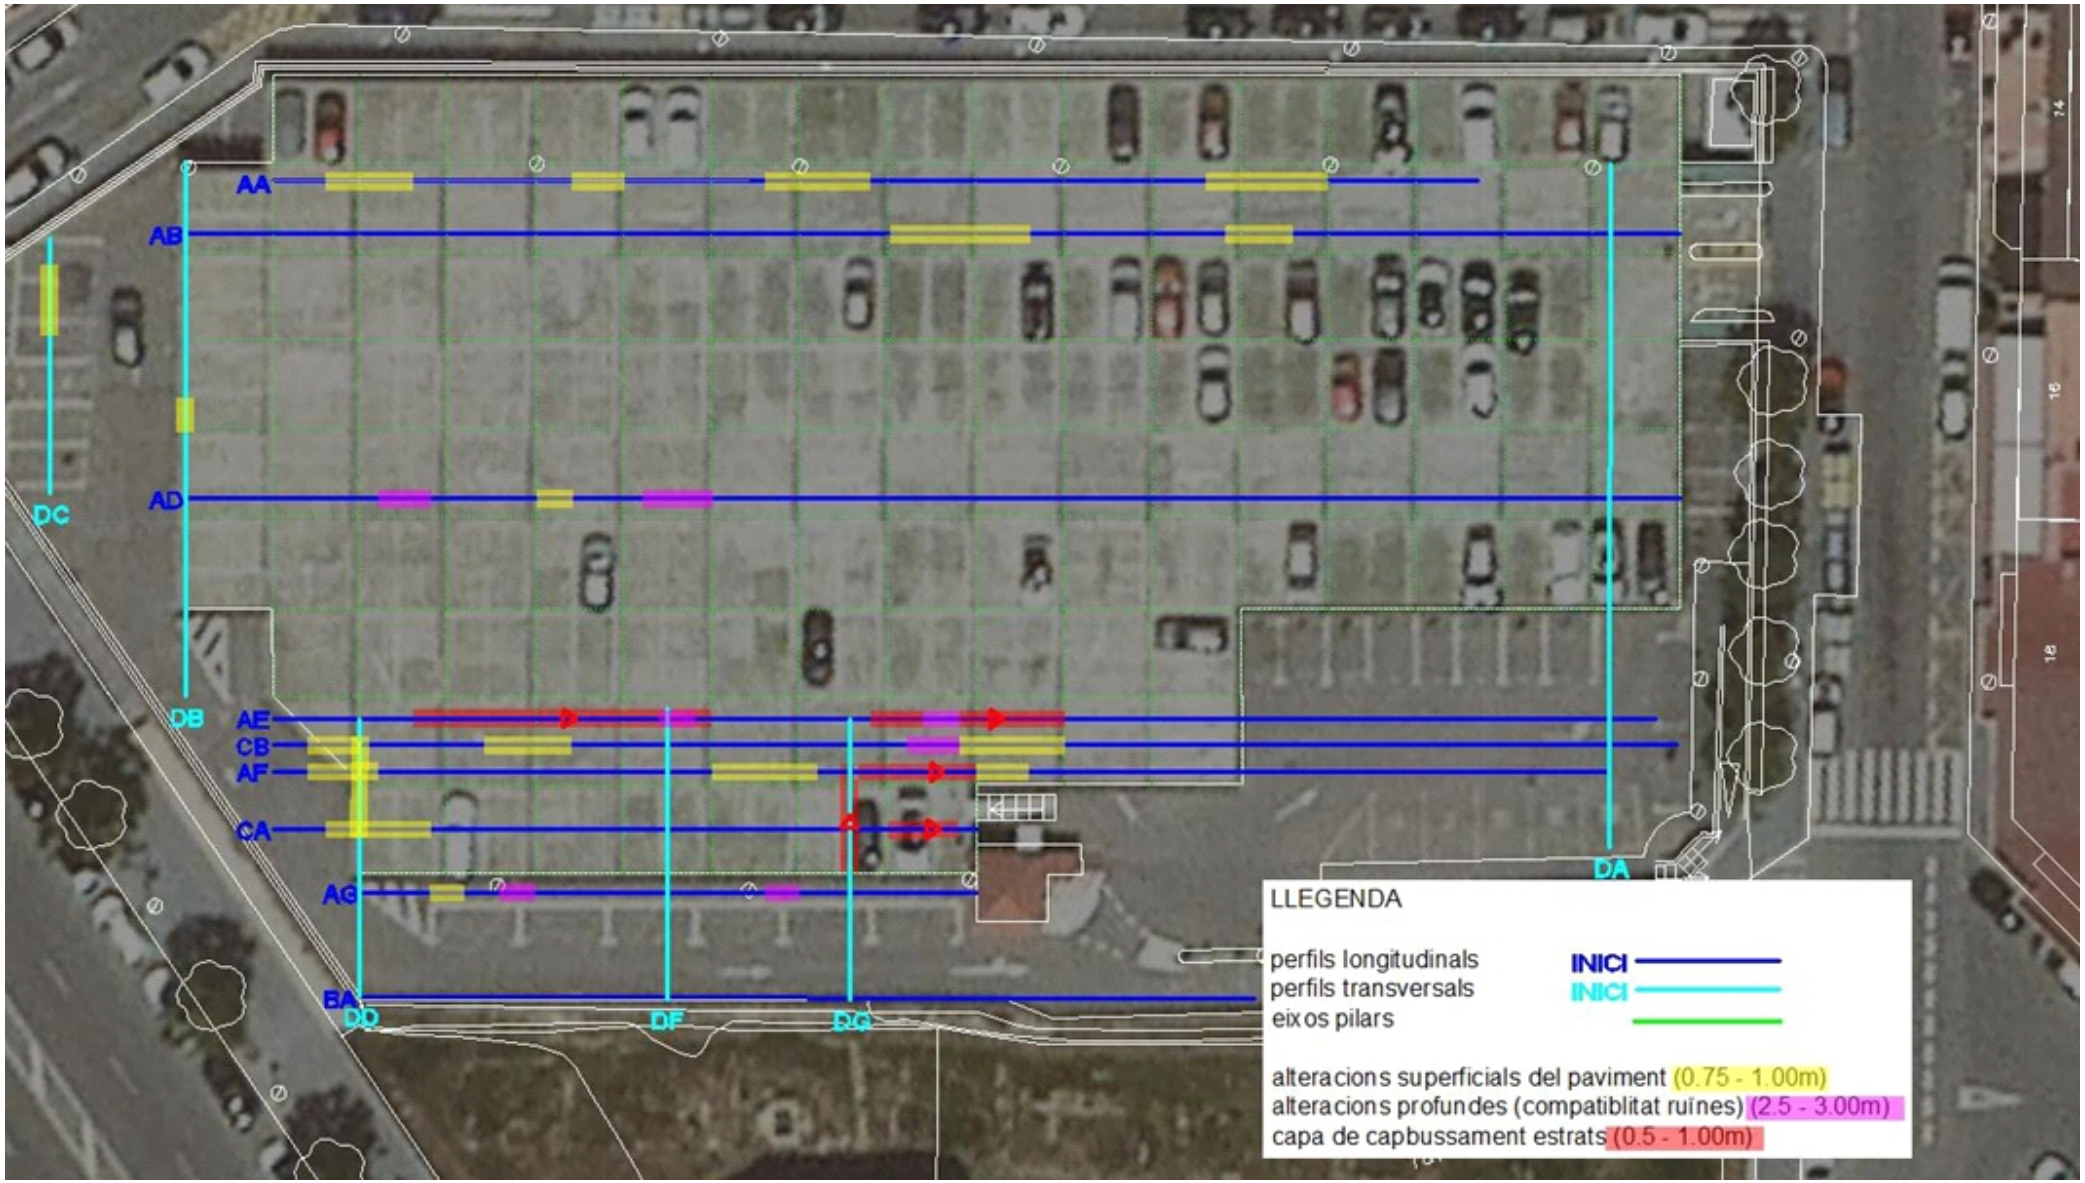
En funció de l'objectiu de l'estudi correspon triar correctament la freqüència d'emissió d'ona (que depèn de l'antena utilitzada): a major freqüència d'emissió, menor longitud d'ona, per tant la resolució és més elevada, produint-se major atenuació de la senyal. En conseqüència menor és la capacitat de penetració del sistema.





El rang de freqüències més utilitzat per la localització de serveis és de 100 MHz a 1 GHz:





***Imatge 6-2.-*** *Frecuencies*

# 1. INTRODUCCIÓ

En el present Annex es recull la informació arqueològica disponible de l'àmbit del present Projecte, que condiciona el dimensionament de l'estructura de fixació-estabilització dels talussos de l'àmbit

L'any 2009 es va fer el descobriment de les restes arqueològiques de l'àmbit, i es va fer una campanya arqueològica en la qual es va redactar una Memòria Arqueològica.

La cota del sòl del solar de l'àmbit, abans de l'excavació arqueològica, es trobava al peu del muret de separació entre l'Aparcament Municipal Bastos i el mateix solar, entorn de la cota 10,20m. L'excavació arqueològica va baixar fins a més de 4m, en funció del lloc, i va deixar, com a contenció de les estructures situades a cota superior, els tres talussos de terres a estabilitzar en el present Projecte.

Al llarg del present Projecte, es dona la següent nomenclatura als trams dels talussos de la reserva arqueològica del carrer Eivissa, en funció del seu estat respecte de l'estabilitat, de la seva ubicació i de la seva geometria:

- TRAM 1: Al nord del jaciment, el compon el tram de talús que ressegueix longitudinalment l'Aparcament Municipal Bastos, a una cota superior, fins a l'inici del descalçament del mur, al final de l'accés de l'aparcament.
- TRAM 2: El tram en pitjor estat d'estabilitat. Al nord i a l'est del jaciment, el compon el talús que ressegueix longitudinalment el tram de mur descalçat de l'accés a l'Aparcament Municipal Bastos (el tram amb l'estabilitat més compromesa) i el tram del carrer Francesc Bastos adjacent al jaciment (el tram de major altura).
- TRAM 3: Al sud del jaciment, el compon el talús adossat al mur que delimita la parcel·la del jaciment amb la Casa del Mar, a la parcel·la veïna.

A continuació es mostra un croquis en planta amb els tres trams a estudiar.

Imatge 1. Planta arqueològica del jaciment, amb superfícies ratllades segons l'època de les restes. Els requadres indiquen els trams dels talussos, segons el color: Vermell, TRAM 1. Blau, TRAM 2. Marró, TRAM 3.

A continuació es recull la informació arqueològica de la Memòria de les intervencions arqueològiques realitzades a la reserva arqueològica del carrer Eivissa (Tarragona, Tarragonès) redactada per Còdex Arqueologia i Patrimoni l'any 2011.

## 2. MEMÒRIA DE LES INTERVENCIONS ARQUEOLÒGIQUES REALITZADES A LA RESERVA ARQUEOLÒGICA DEL CARRER EIVISSA. (TARRAGONA, TARRAGONÈS), de l'any 2011

D'acord amb la informació obtinguda en les visites in situ amb l'equip tècnic de Patrimoni Històric de l'Ajuntament de Tarragona, el jaciment de l'àmbit del present Projecte conté les restes arqueològiques d'un seguit d'estructures funeràries romanes i de la via romana al costat de la qual es van construir, restes arqueològiques que són majoritàriament d'epoca alt-imperial i baix-imperial, amb presència d'elements d'època tardo-republicana. També hi ha, puntualment, elements d'època visigòtica.

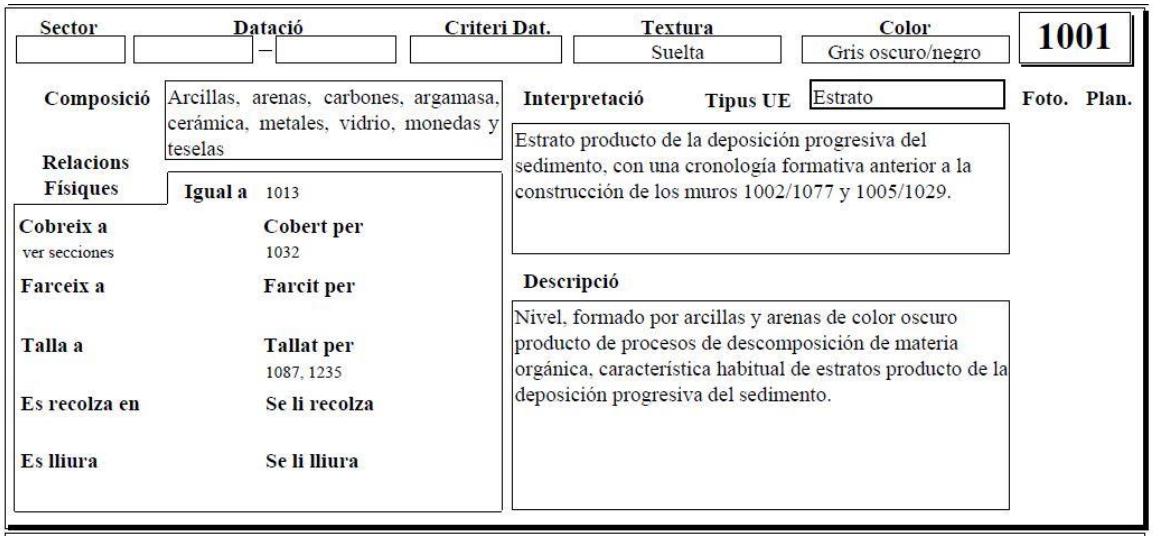
D'acord amb la MEMÒRIA DE LES INTERVENCIONS ARQUEOLÒGIQUES REALITZADES A LA RESERVA ARQUEOLÒGICA DEL CARRER EIVISSA. (TARRAGONA, TARRAGONÈS) de l'any 2011, "*arqueològicament, la Reserva Arqueològica del Carrer Eivissa es troba situada en una zona amb alta densitat de restes arqueològiques, fet que queda evidenciat per les restes documentades a la Necròpolis Paleocristiana de Tarragona, al subsòl de la Tabacalera, al subsòl de la Sofrera Pallarés, als treballs d'urbanització de la perllongació de l'Avinguda*

*Vidal i Barraquer i les diferents intervencions realitzades a les parcel·les del PERI 2*".

Les restes arqueològiques del jaciment del present Projecte tenen continuïtat en les restes existents a la veïna Casa del Mar; amb les que probablement hi ha, d'acord amb l'observació de camp, amb l'estudi de la Memòria Arqueològica i amb l'Estudi Geotècnic amb georadar consultats, sota l'Aparcament Municipal Bastos; amb les restes que hi ha sota el carrer Eivissa; i amb les restes que hi ha a l'avinguda Vidal i Barraquer, en sentit cap a la necròpoli paleocristiana.

És per aquest motiu que l'estructura de fixació-estabilització dels talussos del jaciment, rere el trasdós dels quals probablement es troben restes arqueològiques en ubicacions encara per determinar, es dimensiona seguint aquests criteris:

- Que no afecti les restes vistes, estrictament situades dins el jaciment de l'àmbit.
- Que no afecti, tampoc, les restes que hipotèticament es troben (per determinar en la seva forma, en la seva ubicació, etc.), a continuació o adjacents a les restes del jaciment de l'àmbit, en particular sota l'aparcament municipal Bastos.
- Que, en el cas òptim, no afecti, tampoc, els serveis existents dels vials actuals.



Per tant, l'estructura de fixació-estabilitzacio ha de poder afectar, dels talussos del jaciment, només les capes de sòl lliures de possibles restes arqueològiques.

Per determinar les capes que poden ser afectades per l'estructura i aquelles que no, s'estudia la MEMÒRIA DE LES INTERVENCIONS ARQUEOLÒGIQUES REALITZADES A LA RESERVA ARQUEOLÒGICA DEL CARRER EIVISSA. (TARRAGONA, TARRAGONÈS) de l'any 2011.

Estudiant-ne la planimetria, s'identifica per a cada perfil transversal, des de l'A-A' fins al T-T', cada una de les seves unitats estratigràfiques, i es determina quina és la primera que conté restes arqueològiques. Les unitats estratigràfiques 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599 són les més superficials amb presència de restes arqueològiques. Marquen la cota arqueològica a partir de la qual les noves estructures no poden penetrar.

Les capes superior en cota a aquestes unitats estratigràfiques es considera que contenen materials de reblert molt posteriors i exempts de restes arqueològiques. I, per tant, poden ser afectades per l'estructura de fixació-estabilització dels talussos.

Aquest criteri s'exposa i es confirma amb Patrimoni Històric de l'Ajuntament de Tarragona i el Departament de Cultura de la Generalitat de Catalunya.

ANNEX 04

# SERVEIS AFECTATS I EXPROPIACIONS

# ÍNDEX

1. INTRODUCCIÓ ..... 3
2. EXPROPIACIONS ..... 3
3. SERVEIS EXISTENTS ..... 3
APÈNDIX 01. PLÀNOLS DE SERVEIS EXISTENTS ..... 5
SERVEIS EXISTENTS 1. XARXA D'ABASTAMENT D'EMATSA ..... 6
SERVEIS EXISTENTS 2. XARXA D'ELECTRICITAT D'E-DISTRIBUCIÓN ..... 7
SERVEIS EXISTENTS 3. XARXA DE GAS DE NEDGIA ..... 8
SERVEIS EXISTENTS 4. XARXA DE TELECOMUNICACIONS DE TELEFÓNICA ..... 9
SERVEIS EXISTENTS 5. XARXA DE TELECOMUNICACIONS D'ONO ..... 10

# 1. INTRODUCCIÓ

En el present Annex es recull la informació dels serveis existents de l'àmbit del present Projecte, que condiciona el dimensionament de l'estructura de fixació-estabilització dels talussos de l'àmbit.

# 2. EXPROPIACIONS

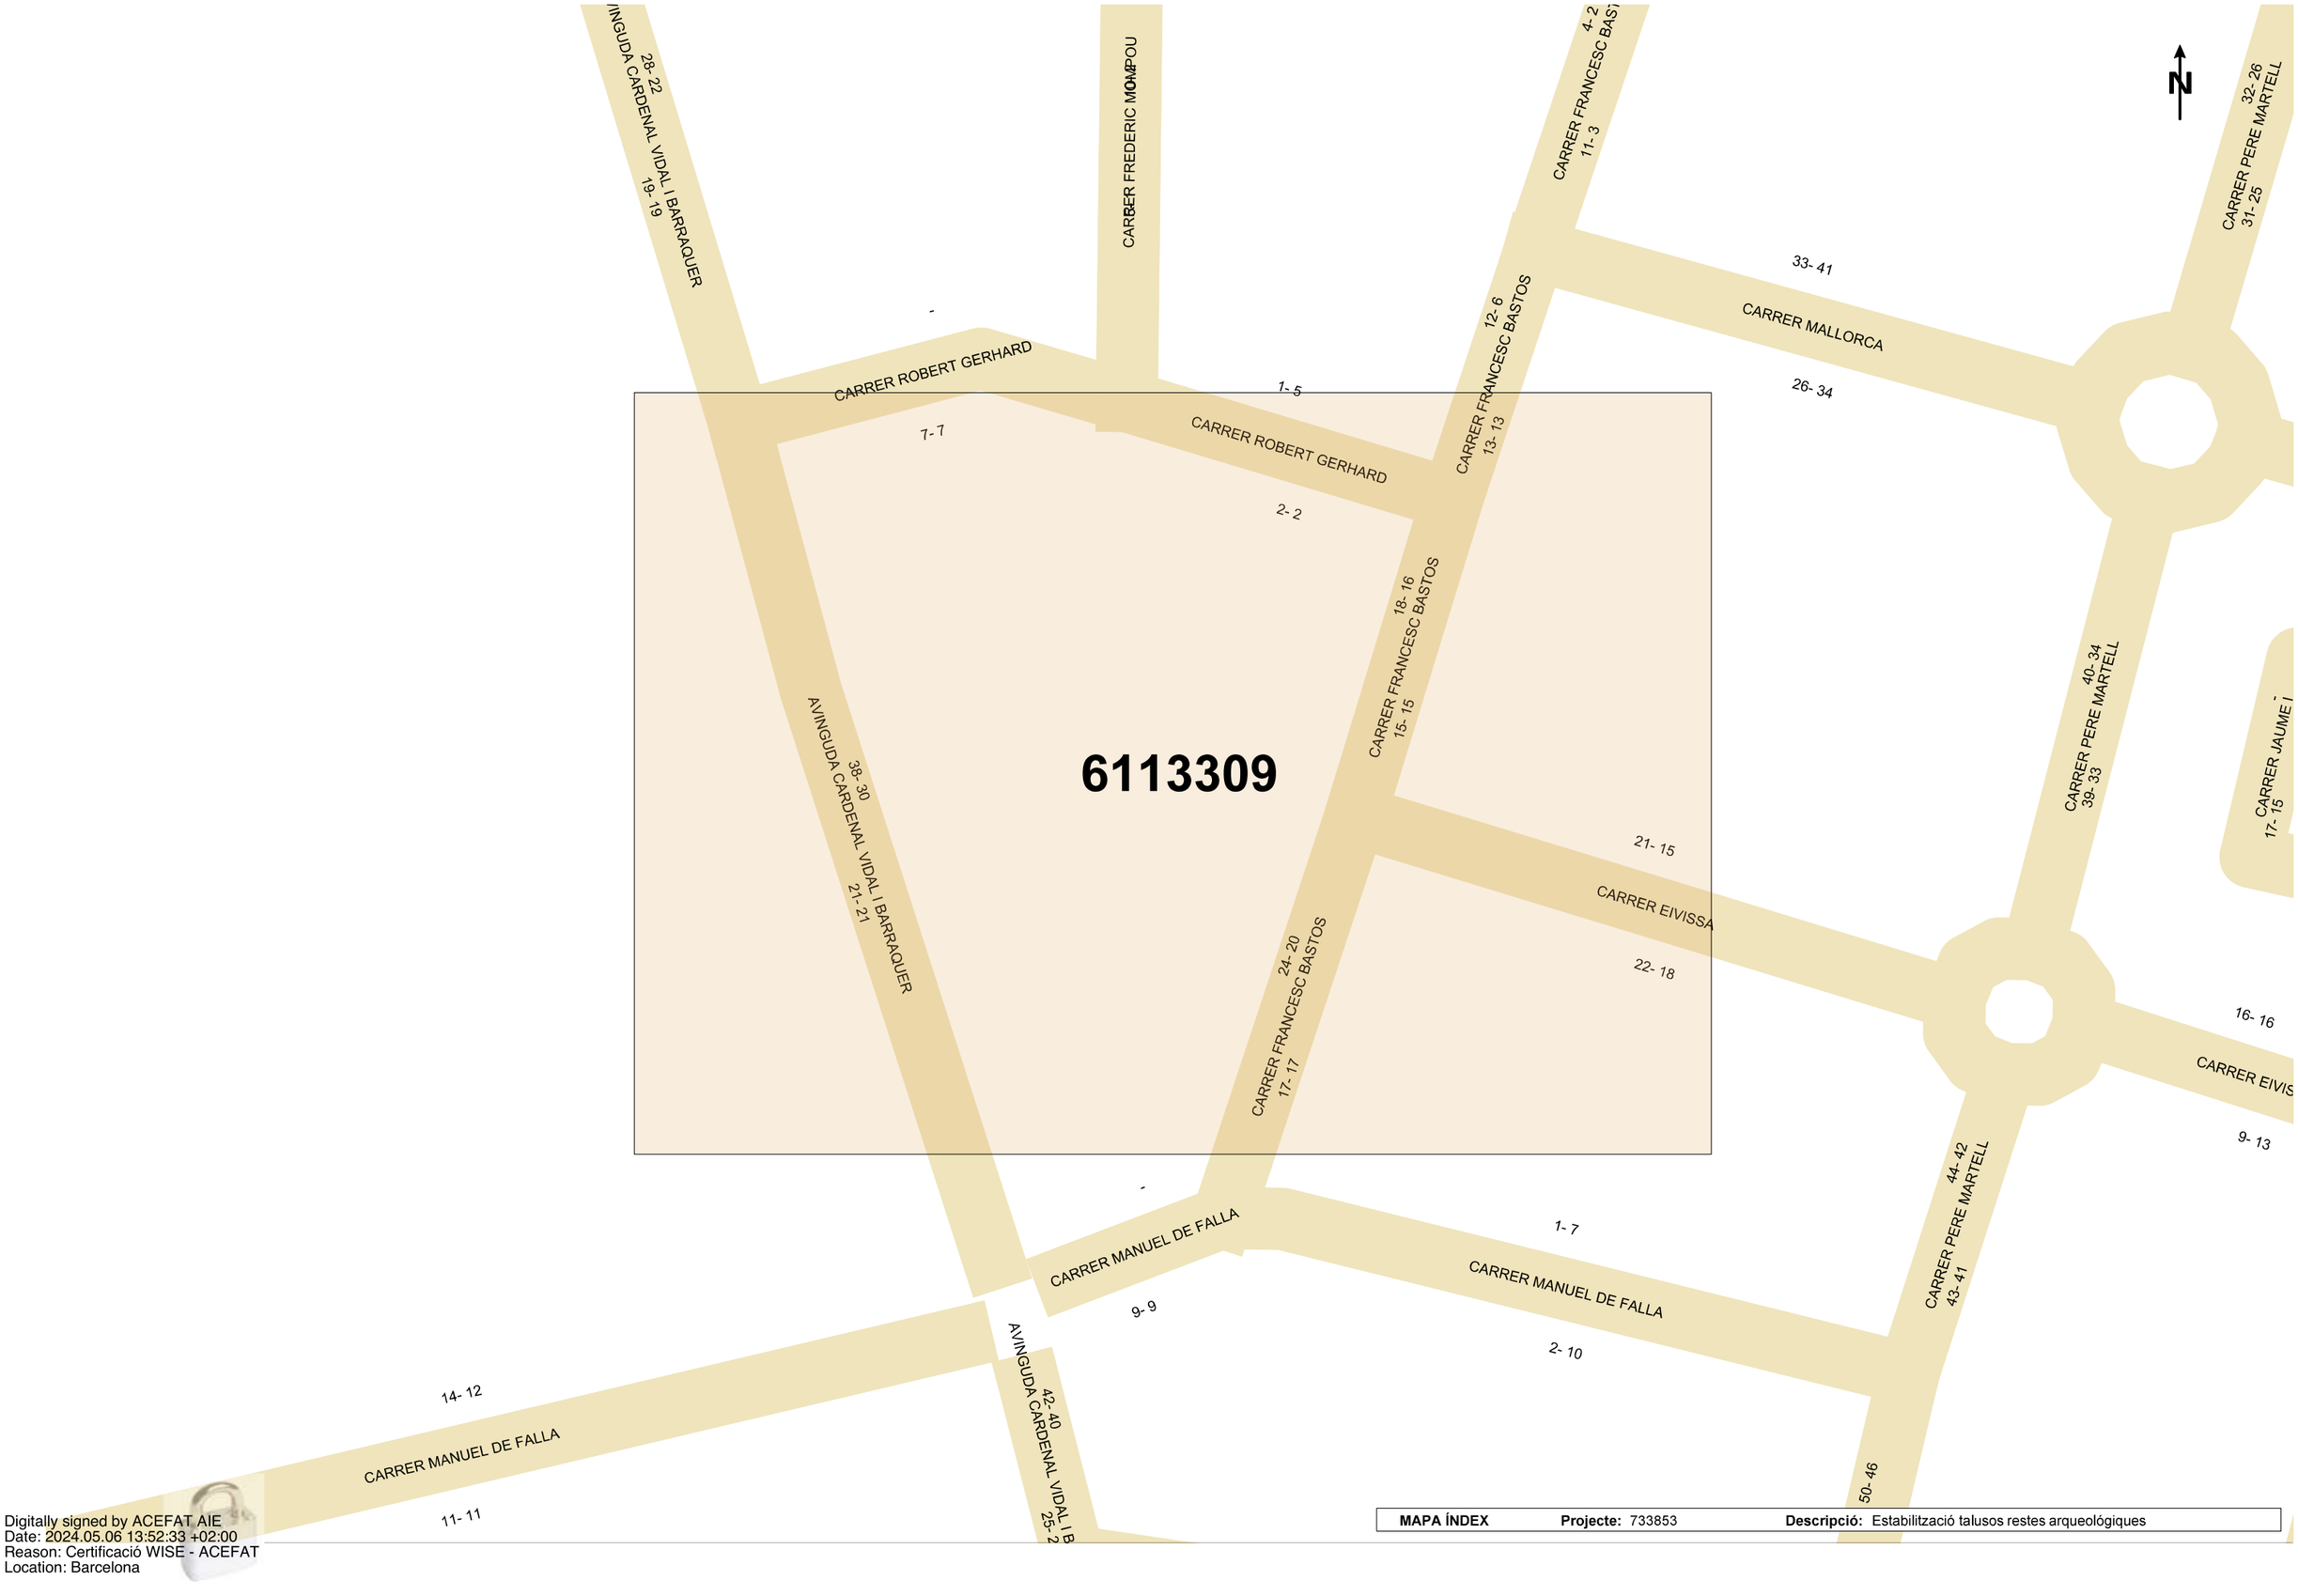
No hi ha expropiacions. L'àmbit del Projecte és completament municipal.

# 3. SERVEIS EXISTENTS

Analitzant l'àmbit, s'identifiquen les superfícies que poden ser afectades per l'estructura de fixació-estabilització projectada i on al mateix temps hi poden haver serveis existents, facilitats pel Departament d'Urbanisme de l'Ajuntament, per l'Enginyer de Camins Municipal, i es determina el següent:

- Al llarg del vial d'accés a l'aparcament municipal Bastos no hi ha serveis existents.
- Al llarg de la vorera adjacent al jaciment de l'àmbit, del carrer de Francesc Bastos, hi ha serveis existents, facilitats per a la redacció del present Projecte pel Departament d'Urbanisme de l'Ajuntament de Tarragona. Són els següents:
    - Una línia d'abastament d'aigua potable d'EMATSA.
    - Una línia de baixa tensió d'e-distribución.
    - Una línia de mitja tensió d'e-distribución.
    - Una línia de telecomunicacions de Telefónica.
    - Una línia de telecomunicacions d'Ono.
    - Una línia de gas de Nedgia.
    - Una línia d'enllumenat.
    - Les línies de sanejament queden fora de la vorera, a la calçada.
- Al llarg del talús de la part sud, adossat al mur de mamposteria que tanca el perímetre de la Casa del Mar, no hi ha serveis existents.

L'estructura de fixació-estabilització dels talussos del jaciment es dimensiona, doncs, adequant-se als serveis existents per tal de no afectar-los.



La vorera del carrer Francesc Bastos conté serveis de xarxa elèctrica de baixa tensió i mitja tensió, xarxa d'aigua potable i xarxa de gas. Els serveis existents no s'afectaran en cap cas i es podrà ajustar en obra la ubicació, inclinació i longitud dels claus per evitar-ho. A tal fi, a la zona del carrer Francesc Bastos (seccions A, B i C), els ancoratges penetraran principalment el talús de terres, a continuació el muret i, al seu últim tram, per sota de 1,5m de profunditat mínima, la vorera.

A continuació s'adjunten els plànols amb els serveis existents grafiats, de la plataforma EWISE d'Acefat.

Es proposa que, d'acord amb els criteris de la Direcció de les Obres, es facin cales per determinar la ubicació precisa dels serveis existents més propers a l'estructura de fixació-estabilització projectada.

| MAPA ÍNDEX | **Projecte:** 733853 | **Descripció:** Estabilització talusos restes arqueológiques |
|---|---|---|

En relació a la seva sol·licitud, els adjuntem la informació dels serveis existents gestionats per l'EMPRESA MUNICIPAL MIXTA D'AIGÜES DE TARRAGONA S.A**.** (en endavant EMATSA) a la zona sol·licitada.

La informació aportada és d'ús exclusiu per al sol·licitant i pel projecte indicat, el qual té una validesa màxima de 3 mesos, a partir de la data de la seva obtenció, sent responsabilitat del peticionari, l'ús que se'n faci de la informació facilitada.

Els indiquem que la informació facilitada és tan sols a títol orientatiu, ja que pot haver resultat afectada per la topografia del terreny i/o altres treballs de tercers en la zona. Per aquest motiu aquesta informació no pot ser interpretada com a garantia absoluta de respondre fidelment a la ubicació exacta de les infraestructures existents.

L'entrega d'aquesta informació no suposa cap autorització ni conformitat per part d'EMATSA al projecte en curs. En el cas de què vostès produeixin qualsevol dany a les infraestructures gestionades per EMATSA no podran eludir cap responsabilitat pels danys i perjudicis, directes o indirectes, ocasionats a EMATSA o a tercers, al·legant que la informació lliurada és defectuosa.

## 1. Condicions Particulars sobre serveis afectats en la redacció de Projectes

S'entendrà com a servei afectat, no només aquell servei existent que impossibilita l'execució d'una obra (que afecta l'execució de l'obra), sinó que també ho és tot aquell servei existent al que se li modifiquen les seves condicions inicials, sobretot les d'accessibilitat per futurs manteniments i/o reparacions del mateix (que és afectat per l'obra). Per tant, cal considerar i preveure totes les condicions assenyalades en l'apartat 3 d'aquest escrit *Condicions Particulars d'obligat compliment per a garantir la integritat i l'accessibilitat a les instal·lacions d'EMATSA.*

En cas de detectar una possible afectació a la xarxa existent d'aigua potable en fase de projecte, l'estudi tècnic-econòmic de les solucions a les diferents afeccions que es puguin produir, sigui del tipus que sigui, haurà de ser realitzat o, com a mínim validat, per EMATSA.

Per tant, en cas de detectar una possible afectació sobre la xarxa existent serà necessari que es posin en contacte amb EMATSA per a poder estudiar i analitzar les solucions més adients:

| Zona | Adreça Electrònica |
|---|---|
| EMATSA | operacions.ematsa@ematsa.cat |

Els municipis on EMATSA disposa de serveis són:

| MUNICIPIS |
|---|
| TARRAGONA |
| LA CANONJA |
| ELS PALLARESOS |
| EL CATLLAR |

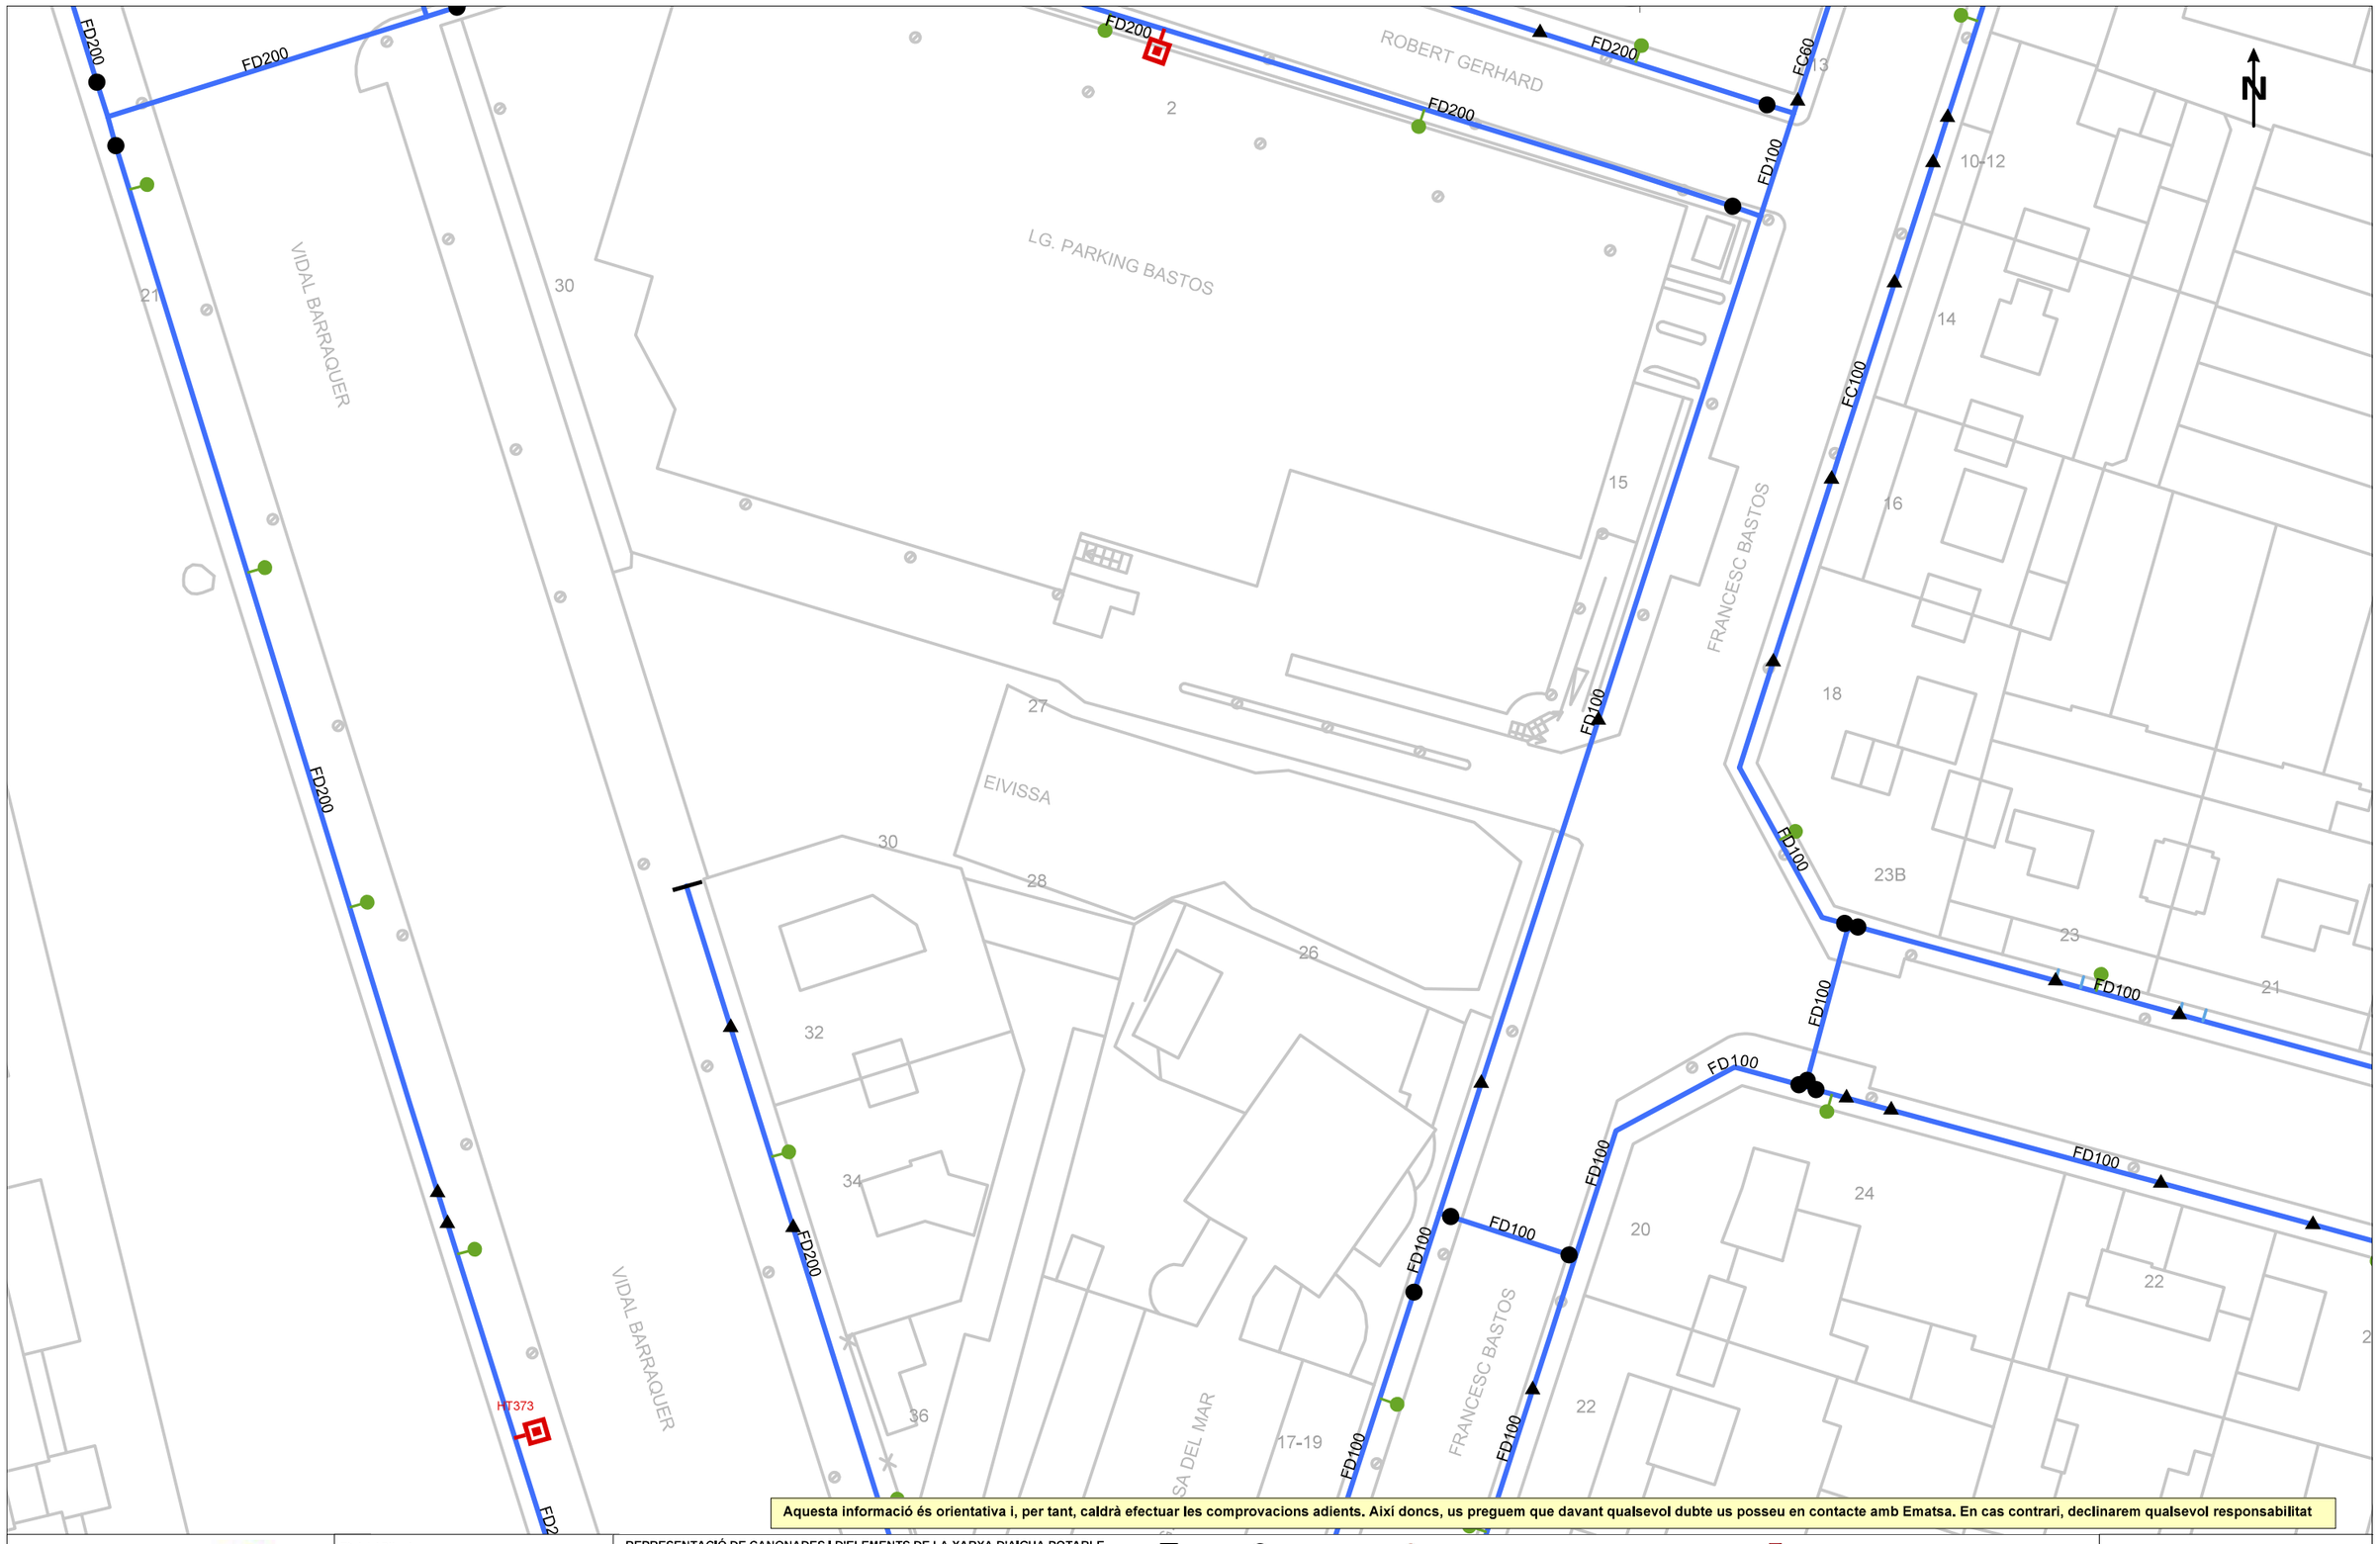
## 2. Condicions Particulars sobre els serveis afectats en l'execució d'Obres

L'empresa executora dels treballs haurà de tenir a l'obra la informació vigent referent als serveis existents a la zona gestionats per EMATSA.

El caràcter orientatiu de la informació facilitada obliga en conseqüència a que, en cas d'existir a la zona qualsevol infraestructura gestionada per EMATSA, s'haurà de verificar abans d'iniciar les obres, les possibles afectacions no contemplades en la fase de Projecte amb la realització de cales manuals que permetin localitzar adequadament les canonades a la zona afectada. En aquest cas s'haurà de contactar mitjançant l'adreça electrònica anteriorment esmentada per tal de, en cas necessari, acordar la data de realització de les cales per tal d'assistir a les mateixes el personal d'EMATSA.

En cas de no produir-se cap afectació sobre la xarxa, és igualment obligatori prendre les precaucions necessàries, com també posar els mitjans que calguin per garantir la integritat i accessibilitat a les canonades gestionades per EMATSA, als elements de maniobra i control i a les escomeses dels diferents edificis.

L'enviament de la informació sobre els serveis existents, no suposa l'autorització ni la conformitat per part d'EMATSA al projecte d'obra en curs, ni allibera als executors de l'obra de les responsabilitats per danys i perjudicis directes o indirectes causats a les instal·lacions d'EMATSA. Per tant, en cas de produir-se danys a les instal·lacions, EMATSA es reserva el dret a emprendre les accions legals que consideri oportunes, així com el dret a reclamar les indemnitzacions pels danys i perjudicis causats. A més, tots els danys i perjudicis, directes o indirectes que se'n puguin derivar a tercers, siguin materials o personals, també seran a compte i risc del promotor o executor de l'obra, incloent els danys i perjudicis derivats d' un eventual tall de subministrament.



## 3. Condicions Particulars d'obligat compliment per a garantir la integritat i l'accessibilitat a les instal·lacions d'EMATSA

Les instal·lacions subterrànies d'EMATSA:

1. No podran quedar formigonades en cap tram, per petit que sigui aquest.
2. Hauran de quedar lliures d'elements de mobiliari urbà (contenidors, papereres, senyals de trànsit, fanals, armaris elèctrics, parterres, arbrat, semàfors, arquetes, marquesines, pilones, aparcaments…) sobre d'elles.
3. Les canonades no estan dissenyades per suportar grans sobrecàrregues, amb el que no es podrà muntar bastides o grues ni encara menys construir murs sobre les mateixes.
4. Queda prohibit l'acopi de material o equips sobre de les canalitzacions així com a sobre dels registres i arquetes d'accés als elements de maniobra i control i hidrants de protecció contra incendis.
5. Caldrà respectar i per tant complir, les disposicions legals vigents, en quan a distàncies de seguretat en els paral·lelismes i encreuaments amb d'altres serveis i col·locar les proteccions adients en cas de ser necessari.

En aquells casos en els que no fos possible complir amb aquests condicionants es contactarà amb EMATSA per a poder estudiar i analitzar les solucions més adients i especialment caldrà una notificació prèvia quan:

1. Fos necessari modificar les profunditats de les canonades respecte la rasant de vorera i/o calçada.
2. Per l'execució de l'obra, les infraestructures soterrades quedin al descobert.

**Aquesta informació és orientativa i, per tant, caldrà efectuar les comprovacions adients. Així doncs, us preguem que davant qualsevol dubte us posseu en contacte amb Ematsa. En cas contrari, declinarem qualsevol responsabilitat**

**RECOMENDACIONES BÁSICAS EN LA REALIZACIÓN DE OBRAS CON EXISTENCIA DE RED ELÉCTRICA**

## RECOMENDACIONES DE SEGURIDAD

1. Como cumplimiento del artículo 24 apartado 2 de la Ley 31 de 1995 de Prevención de Riesgos Laborales, les informamos de los riesgos inherentes a la propia instalación eléctrica: riesgo de paso de corriente y riesgo de cortocircuito.

2. El personal que efectúe la apertura, en el momento de realización de catas para la localización de cables eléctricos, añada a su equipo de protección individual (EPI), elementos que aumenten la seguridad personal ante posibles contactos eléctricos, directos e indirectos, y cortocircuitos, tales como:

a) Guantes aislantes que se puedan colocar debajo de los de protección mecánica.

b) Botas aislantes

c) Gafas de protección

3. Señalizar la zona de existencia de cables.

4. No descubrir los cables hasta que no sea necesario.

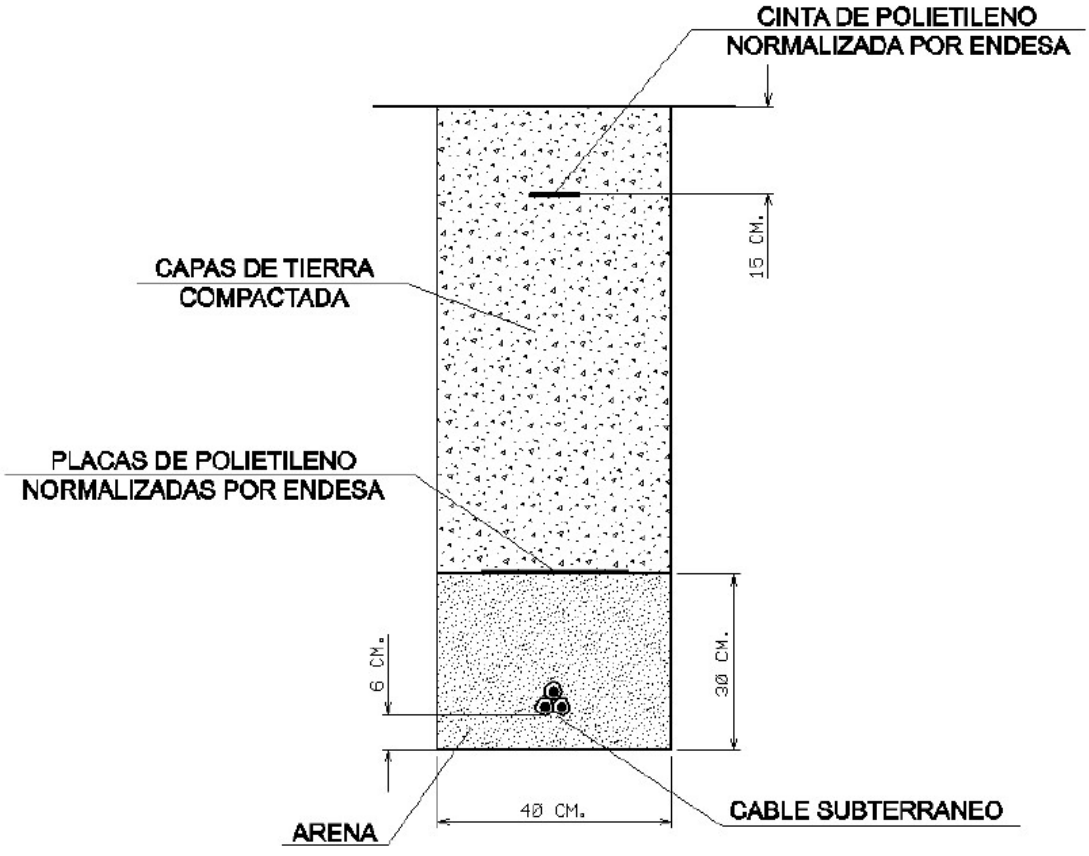
5. Mantener descubiertos los cables el menor tiempo posible.

6. Si se ha de trabajar en proximidad de cables descubiertos, taparlos con placas de neopreno y si están en el paso de personas disponer de elementos que eviten pisar los cables.

7. Sujetar los cables mediante placas de neopreno y cuerdas aislantes, si por motivos de ejecución de la obra hubiera cables descolgados, de forma que no queden forzados ni con ángulos cerrados, de forma que mantengan su posición inicial.

8. Realizar las operaciones 5 y 6 bajo supervisión de personal cualificado.

## RECOMENDACIONES PARA LA REALIZACIÓN DE CATAS



Realizar las catas manualmente, ayudándose de la paleta para hacer micro catas de 20 cm. de profundidad.

Se recomienda que la anchura de la cata sea de 60 cm. en el sentido de la canalización y de 50 cm. como mínimo en sentido transversal a cada lado de:

- La futura traza de la canalización.
- La cota del eje de la canalización.

## RESTITUCIÓN DE LAS PROTECCIONES DE LOS CABLES

Las líneas eléctricas deben quedar protegidas de posibles agresiones externas, y por ello se han de señalizar y proteger. Una vez se haya descubierto un cable o cables eléctricos se debe restituir las protecciones tal como indica la figura siguiente y atendiendo a los procedimientos de EDISTRIBUCIÓN Redes Digitales S.L.U. DMH001 (MT) y CML003 (BT).

**RECOMENDACIONES BÁSICAS EN LA REALIZACIÓN DE OBRAS CON EXISTENCIA DE RED ELÉCTRICA**

En caso de dudas o configuraciones complejas, consultar con la Zona de Distribución correspondiente de EDISTRIBUCIÓN Redes Digitales S.L.U.

Todas estas indicaciones quedan supeditadas a las instrucciones puntuales del personal técnico de EDISTRIBUCIÓN Redes Digitales S.L.U.

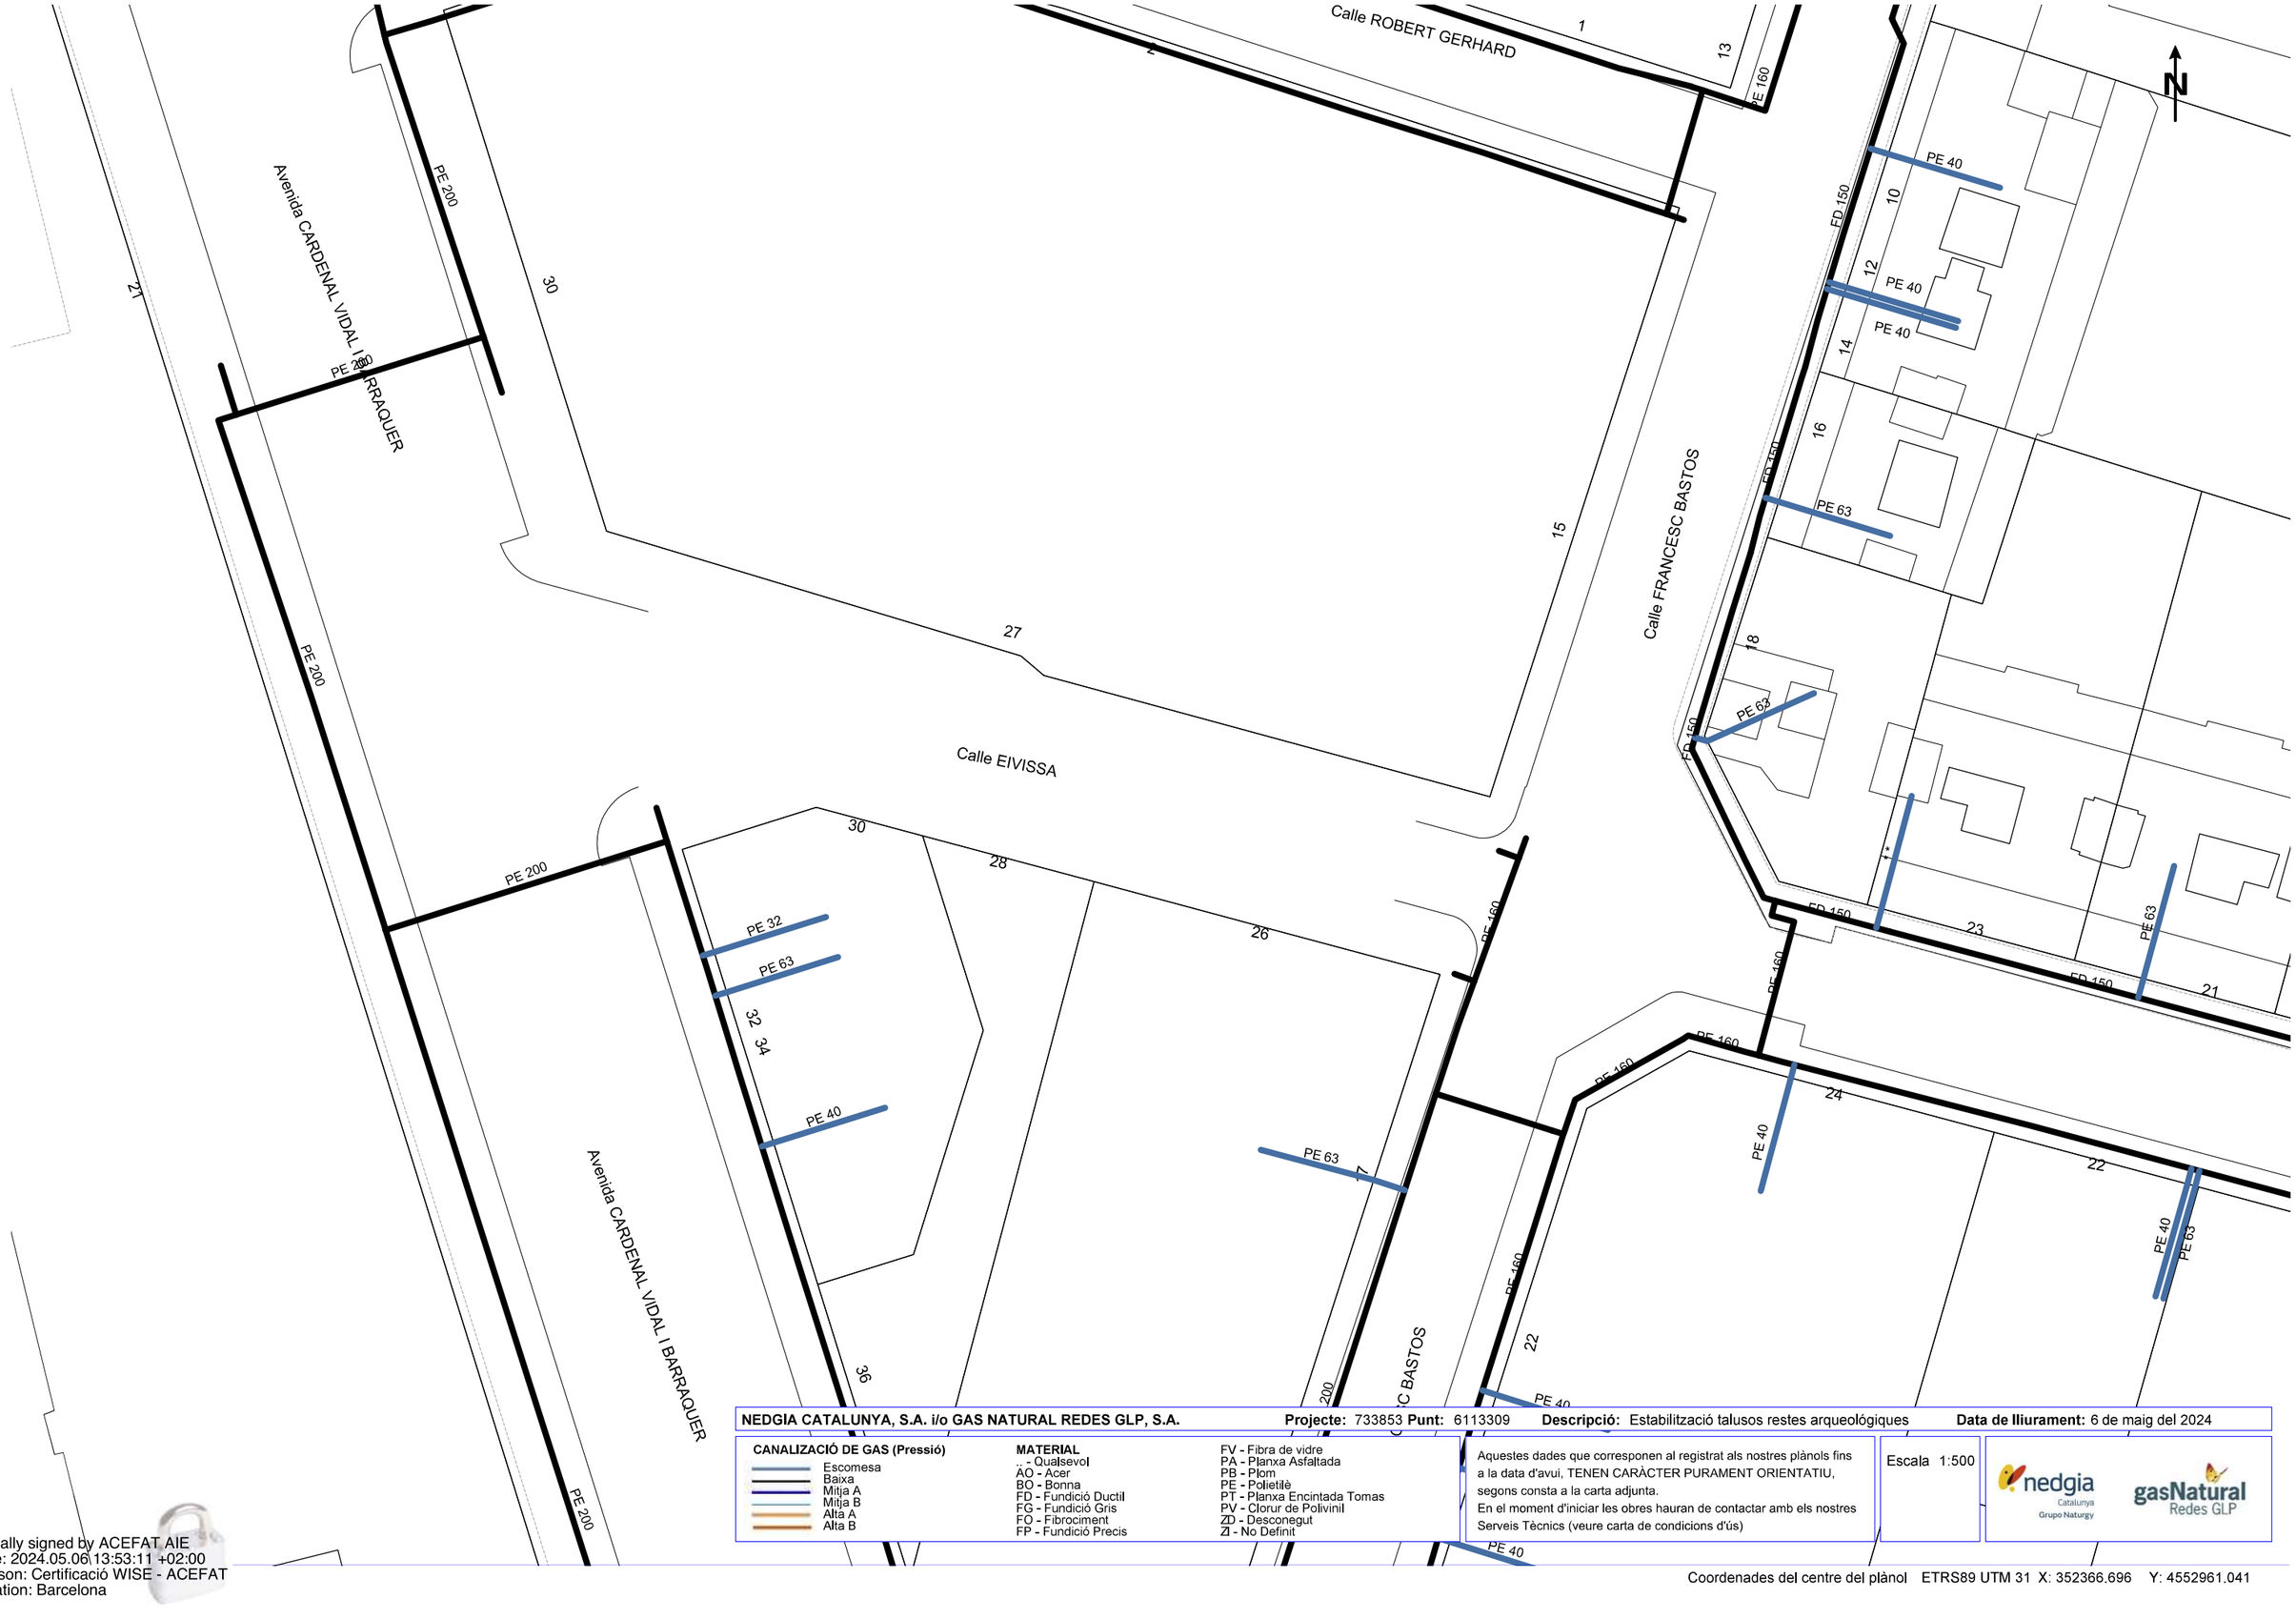
## SEPARACIÓN DE SERVICIOS

Se debe seguir lo ordenado en el Decreto 120/1992 de 28 de Abril, modificado parcialmente por el Decreto 196/1992, así como lo indicado en la Orden del 5 de julio de 1993 (DOG 1782 11-8-93).

Ref: 733853

Senyors:

En relació a la seva sol•licitud amb data 06/05/2024, Ref: 733853, els adjuntem el grafiat de plànols sol•licitat corresponent a les instal•lacions subterrànies de EDISTRIBUCIÓN Redes Digitales S.L.U.



D'altra banda, els indiquem que les dades facilitades són a títol només orientatiu, ja que poden haver resultat afectades per la topografia del terreny i/o altres treballs, i tenen validesa pel projecte.

Us recordem que d'acord amb l'Ordre TIC 341 de 22 de juliol a l'hora de l'execució d'aquest projecte, caldrà tornar a sol·licitar-nos serveis i, depenent de la zona d'afectació, realitzar el reconeixement i firma de l'Acta de Control.

Restem a la seva disposició per qualsevol dubte i aprofitem l'avintesa per saludar-vos.

Annexos:
Plànols, numerats 733853 - 18505132 - AT-MT, 733853 - 18505157 - BT

## SERVEIS EXISTENTS 3. XARXA DE GAS DE NEDGIA

**NEDGIA CATALUNYA, S.A. i/o GAS NATURAL REDES GLP, S.A.** **Projecte:** 733853 **Punt:** 6113309 **Descripció:** Estabilització talusos restes arqueológiques **Data de lliurament:** 6 de maig del 2024

**CANALIZACIÓ DE GAS (Pressió)**

- Escomesa
- Baixa
- Mitja A
- Mitja B
- Alta A
- Alta B

**MATERIAL**

- _ - Qualsevol
- AO - Acer
- BO - Bonna
- FD - Fundició Ductil
- FG - Fundició Gris
- FO - Fibrociment
- FP - Fundició Precis
- FV - Fibra de vidre
- PA - Planxa Asfaltada
- PB - Plom
- PE - Polietilè
- PT - Planxa Encintada Tomas
- PV - Clorur de Polivinil
- ZD - Desconegut
- ZI - No Definit

Aquestes dades que corresponen al registrat als nostres plànols fins a la data d'avui, TENEN CARÀCTER PURAMENT ORIENTATIU, segons consta a la carta adjunta.
En el moment d'iniciar les obres hauran de contactar amb els nostres Serveis Tècnics (veure carta de condicions d'ús)

# Condicionants Particulars Nedgia Catalunya, S.A.

És del nostre interès posar al seu coneixement els condicionants que haurà d'observar als treballs en proximitat d'instal·lacions propietat de Nedgia Catalunya, S.A. i/o Gas Natural Redes GLP, S.A. (d'ara endavant NEDGIA):

- La informació aportada és confidencial i d'ús exclusiu pel que es sol·licita, sent responsabilitat del sol·licitant l'ús indegut de la mateixa.
- El plànol que se'ls envia reflexa la situació aproximada de les instal·lacions propietat de NEDGIA
- Les dades contingudes als plànols tenen caràcter orientatiu: corresponen a allò registrat als nostres arxius fins al dia d'avui, per tant no pot ser interpretat com a garantia absoluta de respondre fidelment a la realitat de la ubicació de les instal·lacions esgrafiades.
- La informació reflexa la situació de les xarxes en el moment de la seva instal·lació. Aquesta informació pot haver variat des d'aleshores per actuacions de tercers a la zona, de manera que tant la posició de la xarxa, com les referències fixes poden haver estat alterades respecte allò reflectit als plànols. En conseqüència, per raons de seguretat es recomana realitzar els treballs d'excavació a mà a les immediacions de les xarxes de NEDGIA.
- **Si l'inici de l'execució material dels treballs objecte d'aquesta sol·licitud és posterior a tres mesos de la data actual, haurà de sol·licitar de nou els serveis existents per garantir el grau d'actualització de la informació.**
- L'enviament d'aquesta informació no suposa l'autorització ni conformitat per part de NEDGIA al projecte d'obra en curs, ni exonera a qui els executaran de les responsabilitats en què incorrin per danys i perjudicis a les nostres instal·lacions.
- A la zona sol·licitada poden existir instal·lacions de gas propietat de clients traçats dels quals no s'han inclòs en els plànols annexats.
- L'entitat sol·licitant comunicarà l' inici de les seves activitats a NEDGIA **al menys amb 72 hores d'antelació**, dirigint-se a Serveis Tècnics de la província corresponent, enviant a l'efecte l'escrit que s'annexa al final d'aquests condicionants. **És imprescindible esmentar en la mateixa la referència indicada a la sol·licitud de la informació a través de la plataforma d'Internet**. Les adreces d'enviament d'aquesta documentació és uinicio@nedgia.es
- Si fos necessari realitzar cales de recerca hauran de realitzar-se en presència de personal de NEDGIA
- **El Grupo Naturgy ha pres la decisió d'introduir gradualment la canonada de polietilè PE 100 de color negre per a la distribució de gas.**
    - El tub de PE 100 negre s'identifica amb franges longitudinals grogues distribuïdes uniformement per tota la superfície del tub. D'aquesta manera es diferencia d'altres tubs negres utilitzats en altres serveis com ara la distribució d'aigua que utilitza PE 100 negre amb franges blaves.
    - Les franges longitudinals seran quatre (4) per a tots els diàmetres fins a 200 mm i sis i vuit (6-8) per a DN 250 i 315 mm, perquè, almenys una franja, sigui visible des de qualsevol angle un cop col·locat el tub a la rasa..

- El tub de PE 100 negre amb bandes grogues té la mateixa instal·lació que el tub de PE 100 taronja:
    - La banda de senyalització se seguirà col·locant com sempre a una distància de 20-30 cm per sobre de la generatriu superior de la conducció de gas.
    - Amb el tub PE 100 negre amb bandes grogues s'instal·laran les mateixes proteccions que les utilitzades amb el tub de PE 100 taronja en instal·lacions al costat d'altres serveis (aigua, llum... etc.)

- Els tubs i instal·lacions de gas no estan dissenyades per suportar sobrecàrrega de maquinària pesada, pel què si han de situar-se grues o circular vehicles sobre les mateixos que poguessin originar danys, haurà de posar-se aquesta circumstància en coneixement de NEDGIA amb objecte d'establir els passos necessaris degudament senyalitzats i protegits amb lloses de formigó xapes d'acer o similar.
- Queda prohibit l'abassegament de materials o equips sobre les canalitzacions de gas i les seves instal·lacions com arquetes, preses de potencial, respiradors, etc., garantint en tot moment l'accés a la canalització de gas a fi d'efectuar els treballs de manteniment i conservació adequats.
- En el cas d'ús d'explosius a menys de 300 m. de les canalitzacions de gas, el seu ús estarà limitat, d'acord a les condicions específiques que es fixin a aquest efecte. En tot cas, s'ha de comptar amb una autorització especial de l'òrgan territorial competent, basada en un estudi previ de vibracions que garanteixi que la velocitat de les partícules en l'emplaçament de la canonada no superi en cap moment els 30 mm/s.
- Sempre que per l'execució dels treballs les instal·lacions de gas afectades quedin al descobert, es comunicarà al responsable indicat de NEDGIA, procedint el contractista a protegir i suportar l'entubat de gas d'acord a les indicacions d'aquest. Aquesta circumstància es mantindrà el temps mínim imprescindible i les canalitzacions es taparan en presència de tècnics de NEDGIA.
- Els trams al descobert d'entubat d'acer, es protegiran amb manta antirroca per evitar desperfectes en el recobriment i, si per qualsevol circumstància, es produís algun dany al mateix, serà reparat abans d'enterrar la canalització. En cas contrari es pot originar un punt de corrosió accelerat que desembocaria en una perforació de l'entubat.
- Els tubs d'acer al carboni estan protegides contra la corrosió mitjançant un revestiment aïllant i un sistema elèctric de protecció catòdica. Pel correcte funcionament d'aquesta protecció és de vital importància la integritat d'aquest revestiment. Es comunicarà a NEDGIA qualsevol dany que es detectés al mateix.
- En el cas de tubs d'acer s'instal·laran una o diverses caixes de presa de potencial (a facilitar per NEDGIA) d'acord a les indicacions dels tècnics de NEDGIA, a amb objecte de mesurar i calibrar la possible influència de la Protecció Catòdica als gasoductes i a l'inrevés.
- En el cas de que s'efectuïn compactacions, sempre es contactarà amb el personal de Servei Tècnic designat per NEDGIA d'aquesta zona perquè els proporcioni la normativa adequada perdur a terme aquesta actuació, assegurant que aquesta es realitzarà de forma que la transmissió de vibracions als tubs de gas no superi els 30 mm per segon.
- L'Empresa que executi treballs a les proximitats de les instal·lacions de NEDGIA haurà d'estar en possessió dels plànols de les instal·lacions existents a la zona.

- Haurà de comunicar-se a NEDGIA l'aparició de qualsevol registre o accessori complementari de la instal·lació de gas, identificat com a tal, o que presumiblement es cregui que pugui formar part d'ella, sempre que no estigui definit als plànols de serveis subministrats.
  En aquest sentit s'indica que en les proximitats de les canonades de gas poden existir altres canalitzacions complementàries destinades a la transmissió de dades, per la qual cosa hauran d'extremar les precaucions quan es realitzin treballs en els seus voltants.
- Si els treballs a realitzar afecten tapes de registres, vàlvules, respiradors o tapes d'accés a instal·lacions serà necessari restituir a la nova cota de rasant, deixant les instal·lacions afectades lliures de materials d'obra.
- En el supòsit de patir danys a les seves instal·lacions, NEDGIA es reserva el dret a emprendre les accions legals que consideri oportunes, així com reclamar les indemnitzacions corresponents.
- Tots els danys a persones i instal·lacions que poguessin produir-se com a conseqüència de les obres, seran per compte i risc del promotor o executor de les mateixes, fins i tot els derivats d'un eventual tall de subministrament de gas.
- A fi de garantir la seguretat de les persones i de les instal·lacions, quan les obres a realitzar siguin canalitzacions (elèctriques, aigua, comunicacions, etc.), es tindrà en compte l'exigència de distàncies mínimes de separació en paral·lelismes i encreuaments entre serveis d'acord a la reglamentació vigent s'ha de comprovar, mitjançant el codi de colors, la pressió de la xarxa propera a la seva actuació. S'adjunta taula resum:

| DISTANCIA | RANGO | CRUCE | PARALELISMO |
|---|---|---|---|
| MÍNIMA | MOP < 5 bar | 0,2 m | 0,2 m |
| | MOP >= 5 bar(*) | 0,2 m | 0,4 m |
| RECOMANADA | MOP < 5 bar | 0,6 m | 0,4 m |
| | MOP >= 5 bar (*) | 0,8 m | 0,6 (1) m |

(1) 2,5 m en zona semiurbana i 5 m en zona rural.

(*) Per P> 16 bar y distància <10 metres es necessari consultar condicions a Distribuidora.

En el cas que no puguin mantenir-se les distàncies mínimes indicades cal informar a NEDGIA, per adoptar les mesures de protecció que es considerin convenients d'acord amb la següent puntualització:

- Contigua a la zona de servitud permanent existeix una zona de seguritat, definida en la Norma UNE 60.305.83, que s'estén fins 2.5, 5 ó 10 metres a cada costat del'eix de la canalització, en la qual l'execució de les excavacions o obres poden representar un canvi en les condicions de seguretat de la mateixai en la qual no es donen les limitacions ni es prohibeixen les obres incloses com prohibides en la zona de servitud de pas, sempre que s'informi prèviament al titular de la instal·lació, per l'adopció de les accions oportunes que evitin els riscos potencials pera la canalització.

- Els treballs en proximitat s'efectuaran amb mitjans manuals quedant prohibit per raons de seguretat la utilització de mitjans mecànics, les precaucions s'intensificaran a 0,40 m sobre la cota estimada al tub o davant l'aparició de la malla o banda groga de senyalització, permetent-se, exclusivament l'ús de martell mecànic de mà per al trencament del paviment.
- Les obres de túnels, buidat de terrenys, perforació dirigida, etc., que poden afectar el tub per sota o lateralment requeriran especial atenció.
- Per donar compliment a la legislació vigent en matèria de prevenció de riscos laborals, els 'informem dels riscos de les instal·lacions:
    - A l'objecte de donar compliment a allò estable el RD 171/2004 sobre coordinació de activitats empresarials, i per garantir la seguretat dels seus treballadors, NEDGIA informa a l'empresa sol·licitant que les instal·lacions representades als plànols adjunts es troben en règim normal d'explotació, és a dir, AMB gas a pressió.
    - Es prohibeix fer foc o fer servir elements que produeixin espurnes en els voltants de les instal·lacions de gas.
    - En el cas que es detecti una fuita o es percebi olor de gas, s'han de suspendre immediatament tot tipus de treballs en l'entorn de la instal·lació i avisar immediatament al Centre de Control d'Atenció d'Urgències de NEDGIA, comunicant aquesta circumstància.
    - El sol·licitant queda obligat a adoptar les mesures preventives que siguin necessàries d'acord amb els condicionants d'instal·lació esmentats anteriorment i aquelles altres que poguessin ser necessàries en funció dels riscos de l'activitat a desenvolupar. Així mateix queda obligat a transmetre les mesures preventives derivades del paràgraf anterior als seus treballadors o tercers que pugui contractar.
    - A l'execució dels treballs que realitzi haurà de respectar allò disposat el RD 1627/1997 Disposicions Mínimes de Seguretat i Salut en Obres de Construcció.
    - A aquesta informació de riscos no es contemplen els riscos derivats del treball a realitzar pels treballadors de l'empresa sol·licitant o per les seves empreses de contracta, sent responsabilitat d'aquesta o de les seves empreses de contracta l'avaluació dels mateixos i l'adopció de les mesures preventives que siguin necessàries.
    - Si per això fos necessari disposar de més informació sobre les instal·lacions, preguem ens ho sol·licitin per escrit i amb anterioritat a l' inici dels treballs.
    - Posem a la seva disposició el telèfon del **CCAU** (Centre de Control d'Atenció d'Urgències) de NEDGIA perquè comuniquin immediatament qualsevol incidència que pugui suposar risc: **900.750.750 (24 hores durant tots els dies de l'any).**

**AQUESTES INSTRUCCIONS ESTARAN DISPONIBLES PERMANENTMENT EN EL LLOC DE TREBALL**

## MODIFICACIÓ DE INSTAL·LACIONS I CONDICIONANTS TÈCNICS

Si fos necessari modificar l'emplaçament de les nostres instal·lacions cal que, prèviament a l'inici de las obres, es faci per escrit la corresponent sol·licitud de desviament indicant com a referència el nº de sol·licitud de informació, a fi de procedir a la signatura del'acord corresponent i efectuar el pagament de la quantitat establerta. Les sol·licituds s'han d'adreçar a la següent direcció:

**OFICINA TÉCNICA**
Plaça del Gas, 1. Edifici C Planta 1.
08003. BARCELONA.

O bé a l'adreça de correu electrònic: SSPPgasTramitaciones@leangridsservices.com

Així mateix, ens posem a la seva disposició per estudiar els Condicionants Tècnics, específics a la seva tipologia d'obra, o les solucions possibles per minimitzar les interferències entre les obres a executar i les instal·lacions de gas existents a la zona.

Per a això, cal que es posi en contacte amb aquesta Unitat i que ens facilitin la seva documentació (plànols, detalls, memòries, etc.) de l'obra a realitzar en les proximitats de la xarxa de gas natural.

Nedgia Catalunya, S.A
Gas Natural Redes GLP, S.A..

## NOTIFICACIÓ D'INICI D'OBRA QUE AFECTA CANALITZACIÓ DE GAS

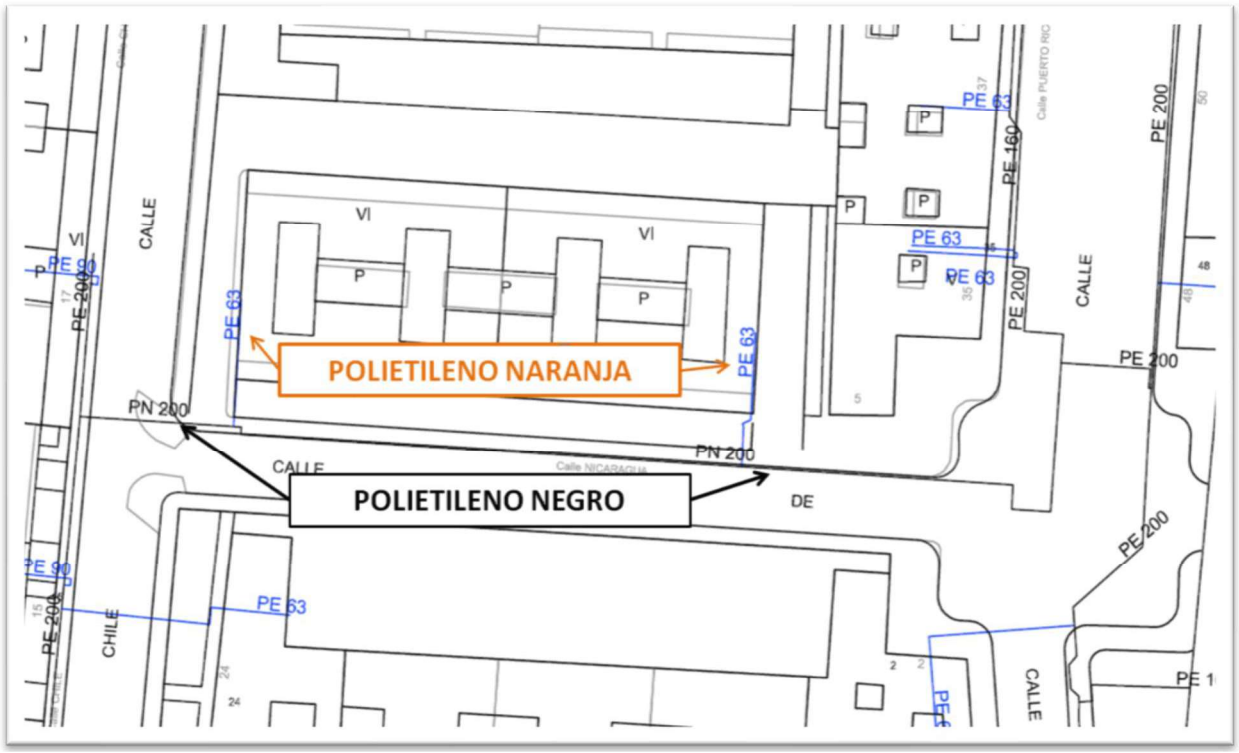
# INTRODUCCIÓ DE LA CANONADA DE POLIETILÈ DE COLOR NEGRE

A la cartografia disponible a la web d'informació de serveis existents (eWise), les xarxes de distribució de NEDGIA, s'identificarà la canonada de Polietilè de color negre amb un codi diferent a fi de facilitar la seva identificació prèvia abans de l'inici de l'obra:

**Codi PN:** Canonada de Polietilè Negre instal·lada

**Codi PE:** Canonada de Polietilè Taronja / Groc instal·lat



- **El Grupo Naturgy ha pres la decisió d'introduir gradualment la canonada de polietilè PE 100 de color negre per a la distribució de gas.**
    - El tub de PE 100 negre s'identifica amb franges longitudinals grogues distribuïdes uniformement per tota la superfície del tub. D'aquesta manera es diferencia d'altres tubs negres utilitzats en altres serveis com ara la distribució d'aigua que utilitza PE 100 negre amb franges blaves.

    - Les franges longitudinals seran quatre (4) per a tots els diàmetres fins a 200 mm i sis i vuit (6-8) per a DN 250 i 315 mm, perquè, almenys una franja, sigui visible des de qualsevol angle un cop col·locat el tub a la rasa..
    - El tub de PE 100 negre amb bandes grogues té la mateixa instal·lació que el tub de PE 100 taronja:
        - La banda de senyalització se seguirà col·locant com sempre a una distància de 20-30 cm per sobre de la generatriu superior de la conducció de gas.

Amb el tub PE 100 negre amb bandes grogues s'instal·laran les mateixes proteccions que les utilitzades amb el tub de PE 100 taronja en instal·lacions al costat d'altres serveis (aigua, llum... etc.)

Benvolguts senyors,

Ens complau remetre'ls la informació sol·licitada referent a l'obra situada a:

**P_(352366.696/4552961.041)**
**Projecte: 733853**
Coordenades: 352366.696,4552961.041

## CONDICIONANTS TÈCNICS PARTICULARS DE LA INFRAESTRUCTURA DE TELEFÓNICA DE ESPAÑA

La informació aportada és confidencial i d'ús exclusiu per al qual se sol·licita, sent responsabilitat del sol·licitant l'ús indegut d'aquesta.

L'enviament d'aquesta informació no suposa l'autorització ni conformitat per part de Telefónica de España al projecte d'obra relacionat ni exonera als qui l'executessin de les responsabilitats en què incorrin per danys i perjudicis a les nostres instal·lacions.

## INFORMACIÓ SOBRE PLÀNOLS

La situació de la infraestructura reflectida en plànols té caràcter **orientatiu**, per la qual cosa la localització real de les nostres instal·lacions pot diferir ja que els diferents elements de la xarxa estan sotmesos a constants modificacions que poden no estar recollides en la informació gràfica subministrada.

Per aquest motiu, les infraestructures subterrànies es reflecteixen sense coordenades geogràfiques ni acotacions de distància a elements del domini públic i qualsevol interpretació basada exclusivament en distàncies escalables pot resultar errònia.

Els plans contenen únicament informació d'infraestructura canalitzada. No s'aporta informació sobre els cables telefònics.

Si l'inici d'execució material dels treballs objecte d'aquesta sol·licitud és posterior a tres mesos de la data d'obtenció a través de la plataforma digital, haurà de sol·licitar de nou els serveis existents per a garantir l'actualització de la informació.

Si en alguna zona es tingués constància que poguessin existir xarxes telefòniques per la presència d'elements visibles d'aquestes xarxes (per exemple: tapes d'arquetes, tapes de Cambres de Registre, sortides de cable a façana, etc.) fins i tot si aquesta infraestructura no es trobi reflectida en plànols, el procediment adequat per a determinar la seva ubicació exacta seria la realització de cales.

Addicionalment, si fos necessari descobrir o creuar en algun punt la infraestructura telefònica existent, els treballs hauran de realitzar-se sempre amb mitjans exclusivament manuals, quedant expressament prohibit l'ús de mitjans mecànics com ara retroexcavadores o similars.

Quan sigui necessària la senyalització dels cables sobre el terreny, poden sol·licitar-lo a Telefónica de España sempre amb una antelació mínima de 48 hores telefonant al 900 111 002 i quan la locució sol·liciti el número de telèfon en avaria tornar a marcar 900 111 002 perquè la crida sigui atesa per un agent. En aquesta crida s'ha d'indicar explícitament que sol·liciten generar un butlletí de senyalització.

En cas de realitzar-se labors de reforç del ferm o pavimentació que afectés els registres existents (tapes d'arquetes) les citades tapes hauran de ser col·locades a la mateixa rasant final de la nova pavimentació, i els marcs d'aquestes tapes es consolidaran mitjançant formigó d'alta resistència en tota la seva superfície de suport, evitant en tot moment buits que permetin l'enfonsament o flexió d'aquest marc. Per motius de seguretat, els citats registres han de quedar lliures de qualsevol obstacle que impedeixi la seva obertura per personal autoritzat.

Els elements exteriors de la instal·lació telefònica que resultin afectats per les obres seran reinstal·lats pel contractista adjudicatari de l'obra i a les seves expenses.

En tot cas es respectarà la normativa vigent pel que fa a encreuaments i paral·lelismes amb altres instal·lacions respectant les distàncies reglamentàries en relació amb el prisma de formigó, així com les proteccions a col·locar en cas de necessitat.

En el cas de paral·lelisme, s'evitarà mitjançant una capa separadora el contacte directe entre el formigó de la nova canalització amb el formigó de l'existent i en el cas d'encreuament, la nova canalització haurà de discórrer per sota de l'existent.

## DESCOBERTS DE CANALITZACIONS

Sempre que per l'execució dels treballs les instal·lacions de Telefónica quedin al descobert, s'asseguraran les parets de la rasa mitjançant estrebat, i es prendran les mesures oportunes que garanteixin la no deformabilitat i defensa contra cops del prisma de formigó. Si per alguna circumstància es produïssin danys en aquest, serà reparat abans d'enterrar la canalització.

En fer el traçat de la rasa es posarà especial cura a evitar en la mesura del possible la trobada amb canalitzacions de Telefónica

La reposició de la canalització descoberta haurà de contemplar la instal·lació d'una banda senyalitzadora en tot l'ample/llarg de la canalització, situada sobre el material granular tot un, convenientment compactat, i cobert amb una placa de formigó d'almenys 30 cm de gruix, previ a l'enllosat o pavimentat. Els tubs i estructures que quedin al descobert se suportaran segons normativa tècnica.

En cas d'Avaries i Emergències relacionades amb la xarxa de Telefónica de España, s'ha de telefonar al 900 111 002 i quan la locució sol·liciti el número de telèfon en avaria tornar a marcar 900 111 002 perquè la crida sigui atesa per un agent.

## COMUNICACIÓ DE PROJECTES DE SERVEIS AFECTATS

Quan sigui necessari comunicar projectes de Serveis Afectats a Telefónica, haurà de remetre correu electrònic a VARIACIONES_PLANTA_EXTERIOR@TELEFONICA.COM adjuntant la documentació rellevant en format **.PDF** o facilitant en el propi correu electrònic l'enllaç des del qual descarregar el referit projecte, evitant l'enviament de documentació en paper i CDs/Dvds.

## SOL·LICITUD DE MODIFICACIÓ DEL TRAÇAT D'INSTAL·LACIONS TELEFÒNIQUES

És imprescindible que el sol·licitant de la modificació del traçat d'instal·lacions telefòniques sigui el promotor de

les obres o en defecte d'això, l'empresa adjudicatària de les obres, i en aquest cas haurà d'aportar el contracte signat amb el promotor que justifiqui l'adjudicació del projecte que requereix modificar el traçat de les instal·lacions telefòniques. Telefònica de España no gestionarà cap petició que provingui d'un altre sol·licitant.

Si per a la correcta execució de les obres fos necessari modificar el traçat de les instal·lacions telefòniques, s'haurà de realitzar amb caràcter previ a l'inici de les obres i preferiblement en la fase de redacció del projecte, la corresponent sol·licitud de modificació del traçat d'instal·lacions telefòniques enviant correu electrònic a VARIACIONES_PLANTA_EXTERIOR@TELEFONICA.COM adjuntant la següent documentació:

- Sol·licitud per escrit degudament emplenada i signada pel promotor de l'obra
- Plans del projecte en els quals es reflecteixi la solució proposada per a modificar el traçat de les instal·lacions telefòniques propietat de Telefónica de España
- Número de sol·licitud proporcionat per la plataforma que facilita la informació i cartografia digital dels serveis afectats.

Les obres necessàries per a modificar el traçat de les instal·lacions telefòniques hauran de consensuar-se amb Telefónica de España realitzant la interlocució a través de l'esmentat correu electrònic i es prendrà com a punt de partida la solució proposada pel promotor o empresa contractista adjudicatària.

**AVÍS SOBRE CONFIDENCIALIDAT**: La informació continguda en aquest document té caràcter confidencial i és propietat de TELEFÓNICA DE ESPAÑA, S.A.U. En conseqüència no està permesa la seva divulgació, comunicació a tercers o reproducció total o parcial per qualsevol mitjà, ja sigui mecànic o electrònic, incloent aquesta prohibició la traducció, ús d'il·lustracions o plans, microfilmació, enviament per xarxes o emmagatzematge en bases de dades o fitxers en qualsevol format, sense autorització expressa de TELEFÓNICA DE ESPAÑA, S.A.U. TELEFÓNICA DE ESPAÑA, S.A.U. es reserva l'ús d'actuacions legals en cas d'incompliment.

Barcelona, a 06/05/2024

Benvolguts senyors,

Per la present els hi adjuntem el plànol on estan representats gràficament els nostres serveis en resposta al seu escrit on demanaven l'existència dels mateixos a l'àmbit del assumpte d'aquest missatge.

També els indiquem que les dades facilitades són a títol orientatiu i no es podrà eludir cap responsabilitat al•legant que la informació aportada es defectuosa, ja que poden haver resultat afectades per la topografia del terreny i/o altres treballs, per modificacions pendents del nostre entorn gràfic o per obres que es puguin fer des de aquesta petició fins la execució del vostre projecte.

En cas d'afecció dels nostres serveis o per qualsevol consulta s'haurà de notificar a l'adreça de correu electrònic servicios.afectados.catalunya@vodafone.com fent servir el codi de servei afectat del encapçalament.

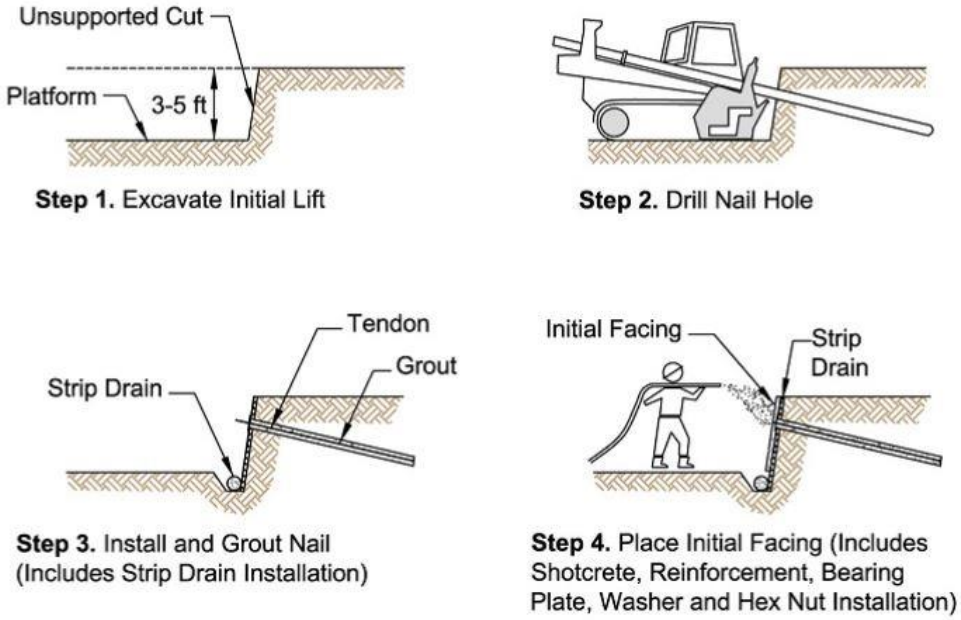
# 1. INTRODUCCIÓ

En el present Annex es defineix la solució tècnica per fixar i estabilitzar els talussos de la reserva arqueològica del carrer Eivissa, dimensionant-ne l'estructura en funció de les característiques del sòl, de la geometria dels talussos i dels condicionants de l'entorn.

# 2. ESTRUCTURES DE FIXACIÓ-ESTABILITZACIÓ

## 2.1. CONDICIONANTS DEL PROJECTE

L'estructura de fixació-estabilització dels talussos del jaciment, rere el trasdós dels quals probablement es troben restes arqueològiques en ubicacions encara per determinar, es dimensiona seguint aquests criteris:



- Que no afecti les restes vistes, estrictament situades dins el jaciment de l'àmbit.
- Que no afecti, tampoc, les restes que hipotèticament es troben (per determinar en la seva forma, en la seva ubicació, etc.), a continuació o adjacents a les restes del jaciment de l'àmbit, en particular sota l'aparcament municipal Bastos.
- Que, en el cas òptim, no afecti, tampoc, els serveis existents dels vials actuals.

## 2.2. ESTRUCTURES DE FIXACIÓ-ESTABILITZACIÓ DELS TALUSSOS DEL JACIMENT: SOIL NAILING ("MICROANCORATGES") UNIT AMB GEOMALLA

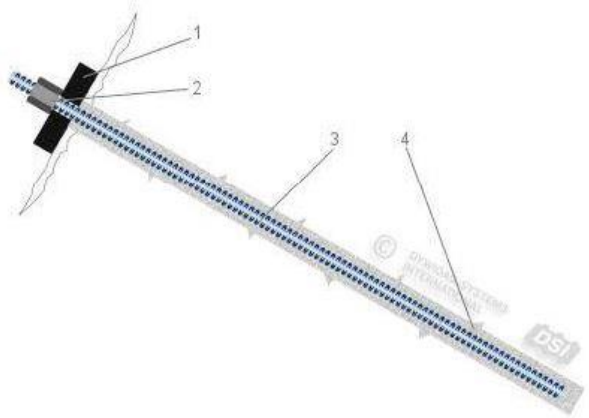
D'entre totes les solucions constructives per fixar i estabilitzar talussos, la que considerem que s'adequa més al fet de no afectar zones amb presència confirmada i possible de restes arqueològiques és el soil nailing.

El soil nailing és una tècnica de reforç del terreny amb la qual s'introdueixen al talús existent barres d'acer (ancoratges) en posició subhoritzontal (perpendicular al pla del talús), s'injecta morter fluid a les perforacions i es revesteix el talús reperfilat amb formigó projectat (gunita) o amb una mall, conferint, tot plegat, estabilitat al talús a arranjar.

En el present Projecte, es dimensionen els ancoratges perquè treballin passivament. Arribat el cas en què, per la situació d'inestabilitat del mateix talús, hi hagi un despreniment en algun tram, l'estructura executada ho impedirà, travant i estabilitzant les terres.

Imatge 1. Procediment d'execució de soil nailing per estabilitzar un talús.

Considerem que el soil nailing és la solució més adequada a les condicions del present Projecte, per davant d'altres mètodes d'estabilització de sòls, pels següents motius:



- És inviable estabilitzar els talussos amb estructures de fonamentació superficial, com ara murs, ja que, per la gran quantitat de restes arqueològiques vistes als peus dels talussos, no hi ha espai disponible per a l'execució de les sabates de les estructures.
- No és recomanable estabilitzar els talussos amb estructures de fonamentació profunda, com micropilots, ja que, com que penetrarien verticalment al llarg d'uns quants metres fins a trobar una capa de sòl amb característiques adequades per sostenir l'estructura d'estabilització, la fonamentació profunda podria topar i afectar restes arqueològiques no visibles, enterrades, encara per identificar.

La solució de Projecte, doncs, presenta els següents avantatges, que s'adeqüen a les condicions del present Projecte:

- Els ancoratges que donaran estabilitat als talussos penetren en el terreny gairebé horitzontalment, amb -10º d'inclinació. Ja que l'estructura funciona en direcció subhoritzontal, es pot dimensionar de manera que afecti els estrats superficials que no contenen restes arqueològiques, evitant alterar els estrats que sí que en contenen.
- Tot i que es dimensioni l'estructura perquè afecti els estrats que no tenen restes arqueològiques segons la documentació disponible referent al jaciment, es desconeix la disposició i la ubicació precisa de les possibles

restes que hi hagi al trasdós del talús de l'aparcament municipal Bastos. Per tant, per minimitzar el màxim la probabilitat d'afectar possibles restes, s'optimitza el dimensionament de l'estructura de manera que als talussos de l'àmbit s'executi el menor nombre possible d'ancoratges, amb el menor diàmetre possible i amb la longitud mínima possible.

- El soil nailing, en comparació amb els ancoratges tradicionals amb bulons, té diàmetres molt petits, de l'ordre de 32mm, de manera també es minimitza la probabilitat d'afectar possibles restes arqueològiques situades al trasdós dels talussos.
- Amb longituds iguals o inferiors a 3m, els ancorategs de soil-nailing es poden executar manualment, per un operari.
  Amb els càlcul s'obté que amb ancoratges de 2m els talussos aconsegueixen ser estables. Així doncs, no és necessari el desplaçament de maquinària d'obra a dins del jaciment, maquinària que, per tal no o afectar les restes, hauria de passar per sobre de les restes arqueològiques amb un sistema de plataformes o amb una cobertura amb una malla i un reblert de terres que cobrís tot el jaciment.
  Per tant, la solució proposada evita la introducció de maquinària rodada al jaciment, impedint possibles afectacions a les restes arqueològiques vistes del jaciment.
- D'entre les dues maneres principals de lligar entre si els ancoratges un cop executats, que són mitjançant el formigó projectat o gunitat del talús o mitjançant l'estesa d'una geomalla per sobre del talús que, amb cables d'acer, lliga els caps dels ancoratges entre si, s'opta per l'estesa de la geomalla.
  - Quant al gunitat:
    - Aporta una resistència addicional a l'estructura d'estabilització, innecessària, en aquest cas, des del punt de vista del dimensionament.
    - La seva execució comporta esquitxos de ciment projectat que podrien afectar les restes arqueològiques vistes, i que per tant s'haurien de cobrir amb lones, incrementant el pressupost i baixant el rendiment de l'obra.
  - Quant a la geomalla estesa:
    - Uneix entre si els ancoratges, ja dimensionats perquè el talús sigui estable.
    - Reté els despreniments superficials (no estructurals) del sòl del talús a causa de les precipitacions.
    - Es considera un acabat estèticament més adient a una reserva arqueològica que el formigó projectat o gunitat, d'acord amb l'Ajuntament de Tarragona i el Departament de Cultura de la Generalitat de Catalunya.
- Finalment, cal comentar que aquesta solució és reversible. En el cas en què es decideixi més endavant desmuntar el talús estabilitzat, la geomalla es pot enretirar i els ancoratges es poden, a mesura que s'excava, trobar i enretirar.

Imatge 2. Detall d'un ancoratge o clau de soil nailing d'acer tipus GEWI. 1,- Placa de 200x200. 2.- Rosca hexagonal. 3.- Barra d'acer. 4.- Segellat de ciment.

## 2.3. DESCRIPCIÓ DE LES OBRES

Es recull a continuació l'estructura dimensionada projectada i adequada a cada tram dels talussos de l'àmbit.

La disposició, la ubicació dels ancoratges, la quantiat d'ancoratges i la distància entre ells ve determinat per les característiques geomètriques de cada un dels talussos i els condicionants que presenten.

Finalment, s'adjunta la metodologia del càlcul que justifica el dimensionament de les estructures del Projecte.

La solució tècnica de Projecte s'ha proposat a l'Ajuntament de Tarragona i el Departament de Cultura de la Generalitat de Catalunya, i ambdós organismes l'han validat.

Amb el control arqueològic pertinent, es resumeix a continuació la solució tècnica a executar durant les obres de fixació-estabilització dels talussos.

### 2.3.1. Feines prèvies al jaciment

- Es durà a terme una neteja prèvia arqueològica. S'executaran els treballs de reblert i cobriment de terres que siguin necessaris, a considerar:
  - Revisió arqueològica superficial de tota la parcel·la per avaluar i protegir les restes.
  - S'adoptaran mesures de protecció com geotèxtils i/o taulons de fusta, de manera molt puntual mentre durin els treballs, de poc abast, atès que només es preveu l'actuació d'un sol operari.

- Supervisió arqueològica de la superfície amb el retall d'expolicació, UE 1058 segons la Memòria arqueològica, que es reomplirà amb graves.
- Excavació arqueològica de la capçalera del talús del costat casa del Mar que es reperfila on es rebaixen uns 40 cm
- Excavació-neteja de la zona de contacte del perfil i el terra en la zona de la tanca del pàrquing.

### 2.3.2. Estructura de fixació-estabilització al TRAM 1, límit amb l'aparcament Municipal Bastos fins a l'inici del descalçament del mur

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- No reperfilada del talús. És recomamable executar el soil nailing sense modificar la geometria del talús a estabilitzar. Com a cas excepcional, un cop dut a terme el desbrossament, es procedirà a sanejar localment els trams que la Direcció de les Obres consideri.

- Execució d'un filera d'ancoratges o claus de soil nailing de 2m de longitud separats en horitzontal cada 4m, en altura per sobre dels estrats que indiquen la cota arqueològica a partir de la qual els ancoratges no poden penetrar, que són el 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. La fixació de la geomalla al talús es farà amb unes piquetes d'acer galvanitzat de l'ordre de 80cm, més curtes que les piquetes habituals, i en la posició més horitzontal possible.

### 2.3.3. Estructura de fixació-estabilització al TRAM 2, des de l'inici del descalçament del mur fins al final del tram del carrer Francesc Bastos adjacent

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- No reperfilada del talús. És recomamable executar el soil nailing sense modificar la geometria del talús a estabilitzar. Com a cas excepcional, un cop dut a terme el desbrossament, es procedirà a sanejar localment els trams que la Direcció de les Obres consideri.

- Execució de dues fileres d'ancoratges o claus de soil nailing de 2m de longitud separats en horitzontal cada 3m i en vertical en 1m, en altura per sobre dels estrats que indiquen la cota arqueològica a partir de la qual els

ancoratges no poden penetrar, que són el 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. La fixació de la geomalla al talús es farà amb unes piquetes d'acer galvanitzat de l'ordre de 80cm, més curtes que les piquetes habituals, i en la posició més horitzontal possible.

### 2.3.4. Estructura de fixació-estabilització al TRAM 3, límit amb el mur de la Casa del Mar

- Reblert terres al peu del talús. Enretirada de puntals que donen suport al talús.

- Desbrossada del talús i enretirada d'elements situats al llarg del temps en la seva coronació.

- Reperfilada del talús: rebaix homogeni de 40cm de la seva coronació. En aquest cas, per estabilitzar el talús, no és necessari executar el soil nailing. El rebaix en la coronació i el reblert de terres al peu del talús són suficients per donar-li estabilitat.

- Estesa de la geomalla, des del capdament del talús fins a una línia horitzontal per sobre de les restes arqueològiques vistes. S'estén la geomalla per evitar despreniments superficials petits a causa de les pluges, no estructurals.

**Notes sobre la solució projectada**

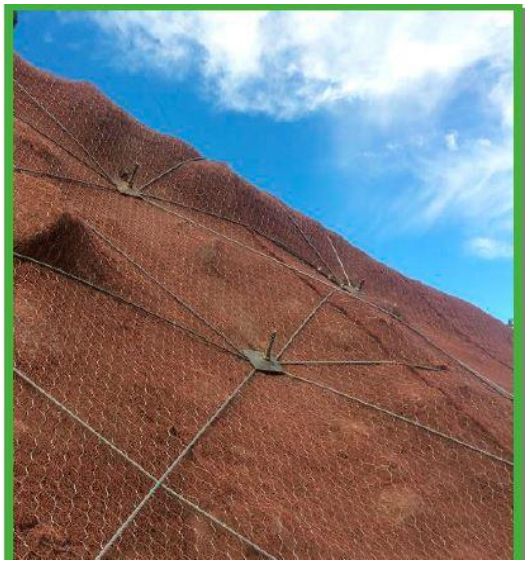
- Previ a l'inici de les obres es troba pertinent executar, a discreció de la Direcció de les Obres, un assaig per a comprovar la resistència del sòl in-situ. En funció del resultat, es poden ajustar encara més les característiques i geometria dels claus a executar.

- En relació al TRAM 3, fent un anàlisi de l'estructura, es conclou el següent:

  - El mur que delimita la Casa del Mar, abans de l'excavació del jaciment l'any 2009, tenia la funció estructural d'aguantar les terres del jaciment, que estaven a una cota similar a la coronació del mur.

  - Per tant, un cop fetes les excavacions arqueològiques de l'any 2009, el mur perdia la funció de suportar les terres del costat del jaciment, ja enretirades excepte pel talús que s'hi va deixar adossat.

  - D'aquesta manera, en el present Projecte es va valorar en primer lloc l'enretirada total del talús, ja que el talús no suporta cap estructura



elevada, com en el cas de l'Aparcament Municipal Bastos o el carrer Francesc Bastos.

- Tanmateix, amb una observació in situ del mur, es va observar que el mur és de mamposteria, i que està lleugerament abombat cap enfora, cosa que fa pensar que el talús del TRAM 3 el manté dret accidentalment.

- Ja que no s'ha calculat l'estat i l'estabilitat del mur de mamposteria, per desconèixer-ne com i quan es va construir, tenint també, possiblement, la fonametació per sobre de la cota del peu del talús del TRAM 3, s'ha optat per mantenir el talús del TRAM 3, prenent mesures per fer-lo, com els altres trams, estable.

Imatge 3. Execució de l'estesa de la geomalla, amb els cables d'acer que uneixen els caps dels ancoratges de soil nailing.

Imatge 4. Acabat de l'estructura de fixació-estabilització del talús amb soil nailing i geomalla.

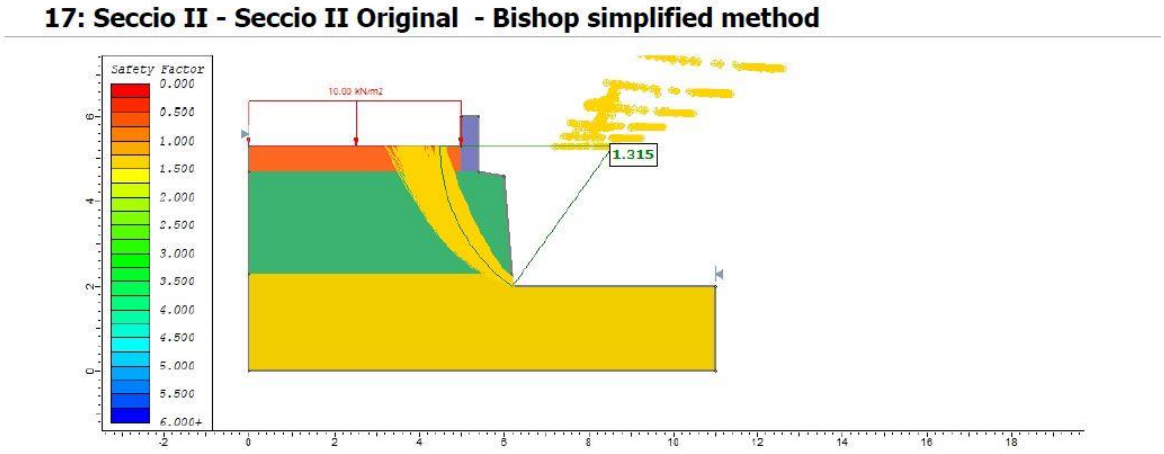
## 2.4. ANÀLISI DE L'ESTAT ACTUAL DELS TALUSSOS

Per a dur a terme el càlcul del dimensionament de l'estructura, s'utilitza el programa Slide 2, un programa de càlcul d'estabilitat de talussos en equilibri límit 2D que avalua el factor de seguretat, la probabilitat de fallada i la superfície, circular o no, de lliscament.

S'introdueixen al programa tants casos a calcular com perfils transversals tingui el Projecte, per calcular-los un a un, evitant generalitzar en un sol perfil tot un talús. D'aquesta manera, els càlculs seran més precisos i la xarxa d'ancoratges a executar es podrà adaptar als resultats calculats amb major precisió.

Els talls dels perfils transversals es recullen en planta i el perfil al Document núm. 2 Plànols.

En primer lloc, es calcula l'estabilitat de cada perfil transversal, en el seu estat existent, sabent la seva geometria i les característiques del sòl. Aquesta diagnosi indicarà l'estat dels trams dels talussos, donant informació sobre com de compromesa està la seva estabilitat en l'estat actual.



Els passos a seguir han estat, doncs, els següents:

- S'introdueixen les dades geomètriques del talús de cada perfil transversal, de l'A-A' al T-T', obtingudes de la informació topogràfica disponible.
- S'afegeixen, com a dades, les característiques geomètriques de cada capa de sòl que compondrà el talús, i dels murs i vials existents. Segons la topografia i les dades geotècniques disponibles, tota l'altura dels talussos està composta pel mateix material.
- S'afegeix per a cada perfil transversal una línia que marqui el límit a partir del qual, per sota, en color groc, es troben els estrats que indiquen la cota arqueològica a partir de la qual els ancoratges no poden penetrar, que són el 1001 i 1026, principalment, i 1516, 1523, 1524, 1528, i 1599.
- La capa de color verd té les mateixes característiques geotècniques que la de color groc. La diferència de color tan sols marca el límit superior dels estrats que indiquen la cota arqueològica.
- Sense haver introduït cap estructura d'estabilització-fixació de talussos, es fa el càlcul i s'observen els resultats. Perquè el talús sigui estable, el resultat del càlcul ha de ser igual o superior al Factor de Seguretat de la metodologia de càlcul escollida, la de Bishop simplificat, que és 1,5.
- Es comproven els resultats, i s'observa quins trams tenen valors significativament menor a 1,5 (estabilitat més compromesa) i quins en tenen propers a 1,5 (estabilitat menys compromesa).

| Material Name | Color | Weight (kN/m3) | Strength Type | Cohesion (kPa) | Phi (°) | Water Surface | Ru Value |
|---|---|---|---|---|---|---|---|
| Graves sorres llims Nivell 0 Paviment Reblert Heterogeni | | 20 | Mohr Coulomb | 6 | 29 | None | 0 |
| Reblert Contemporani Nivell 0 Paviment Reblert Heterogeni | | 20 | Mohr Coulomb | 6 | 29 | None | 0 |

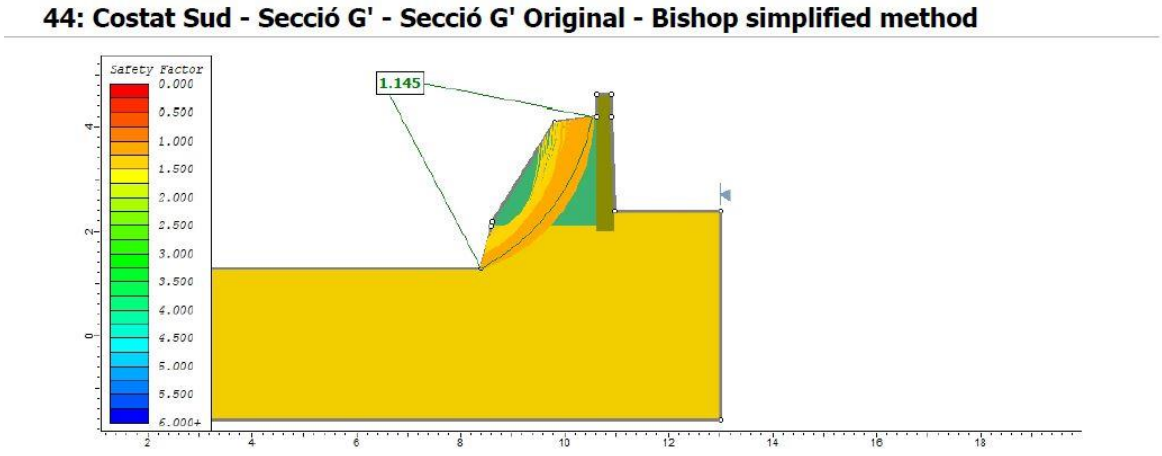
| Mur formigo | | 24 | Mohr Coulomb | 10000 | 45 | None | 0 |

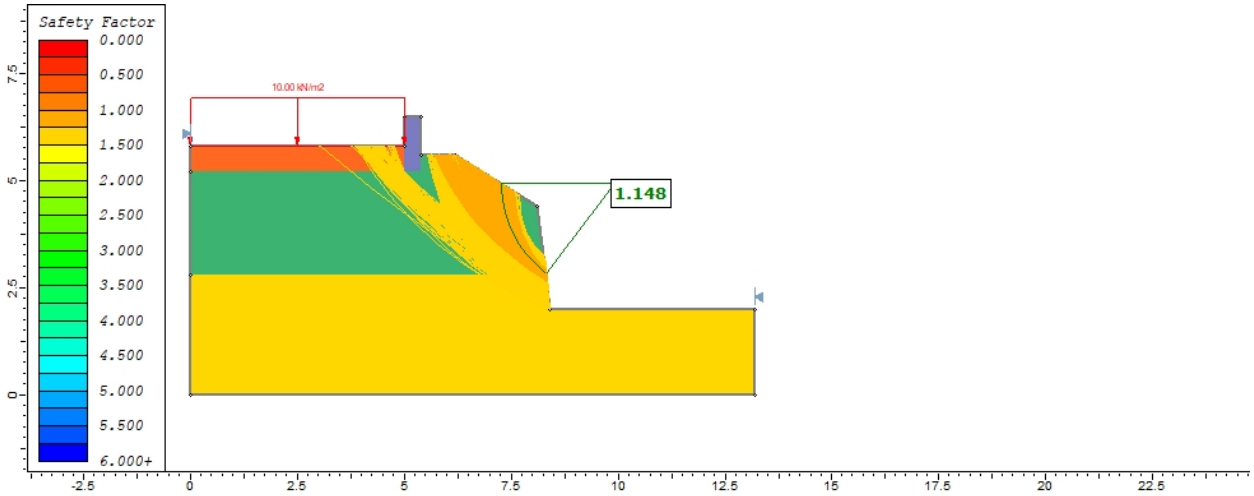


Imatge 5. Característiques estimades dels materials de cada perfil transversal.

## Exemple de resultats de la diagnosi de l'estat actual:

Imatge 6. Perfil transversal I-I' en l'estat actual.

El talús del perfil transversal I-I', al TRAM 2, es troba sobre les restes de la fonamentació d'un mausoleu alt-imperial, i sota el muret de separació amb l'Aparcament Municipal Bastos descalçat. Forma part del tram amb l'estabilitat més compromesa de tots els talussos. El resultat del càlcul d'estabilitat 1,315, lluny del Factor de Seguretat d'1,5. El programa indica gràficament els cercles de lliscament més probables en cas de despreniment, que afecten el muret i la calçada del vial d'accés a l'aparcament.



Imatge 7. Perfil transversal G-G' en l'estat actual.

El talús del perfil transversal G-G', al TRAM 3, es troba adossat al mur de la Casa del Mar. Com la sesció anterior, té l'estabilitat compromesa, amb un resultat inferior al Factor de Seguretat d'1,5.

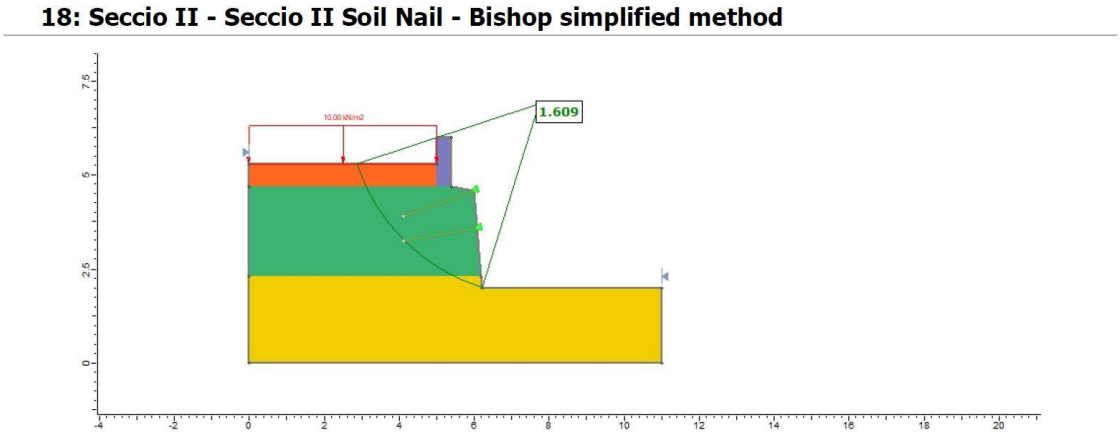
## 2.5. CÀLCUL DE L'ESTRUCTURA DE FIXACIÓ-ESTABILITZACIÓ PROJECTADA DELS TALUSSOS

A continuació, sabent els trams més afectats per la inestabilitat, es dimensiona l'estructura d'estabilització-fixació de talussos amb major precisió.

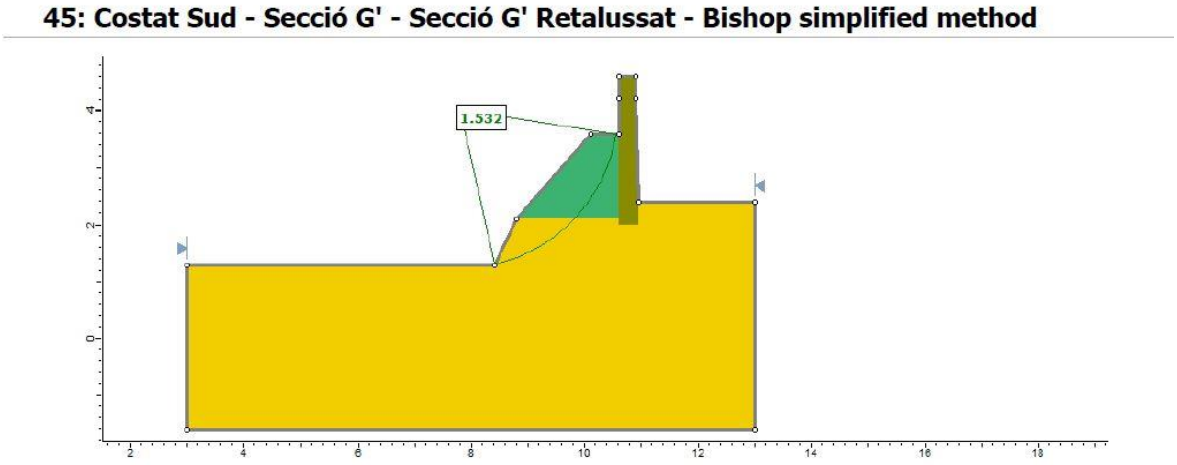
Sobre els perfils transversals anteriors introduïts al programa, doncs, se segueixen els passos següents:



- S'escull la tipologia d'estructura de fixació-estabilització de talussos a dimensionar, i s'escull la tipologia d'ancoratge adequada al Projecte: claus de soil nailing.
- S'escull la tipologia d'ancoratge o clau de soil nailing a executar, en funció del tram de talús.
- Per a cada perfil transversal, es col·loquen en l'espai els ancoratges o claus de soil nailing escollits, amb la longitud definida, tenint present els condicionants de Projecte en aquell perfil transversal: que no intersequin els serveis existents a la zona de la coronació del talús i que no penetrin en les capes amb possibles restes arqueològiques a partir dels estrats que indiquen la cota arqueològica.
- Es fa el càlcul i s'observen els resultats. El resultat del càlcul ha de ser igual o superior al Factor de Seguretat de la metodologia de càlcul escollida, la de Bishop simplificat, que és 1,5.
- Es comprova que el resultat sigui igual o superior a 1,5. En cas negatiu, s'ajusten els ancoratges, les seves característiques, nombre i disposició, fins a obtenir el resultat desitjat.

| Support Name | Color | Type | Selected Manufacturer | Force Application | Out-Of-Plane Spacing (m) | Tensile Capacity (kN) | Plate Capacity (kN) | Shear Capacity (kN) | Compression Capacity (kN) | Bond Strength (kN/m) | Material Dependent | Force Orientation |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Support 3 | | Soil Nail | Dextra ASTEC Soil Nail 25 | Passive (Method B) | 3 | 310 | 150 | 0 | 0 | 90 | No | Parallel to Reinforcement |

| Support Name | Color | Type | Selected Manufacturer | Force Application | Out-Of-Plane Spacing (m) | Tensile Capacity (kN) | Plate Capacity (kN) | Shear Capacity (kN) | Compression Capacity (kN) | Bond Strength (kN/m) | Material Dependent | Force Orientation |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Support 6 | | Soil Nail | Dextra ASTEC Soil Nail 25 | Passive (Method B) | 1.5 | 310 | 150 | 0 | 0 | 90 | No | Parallel to Reinforcement |

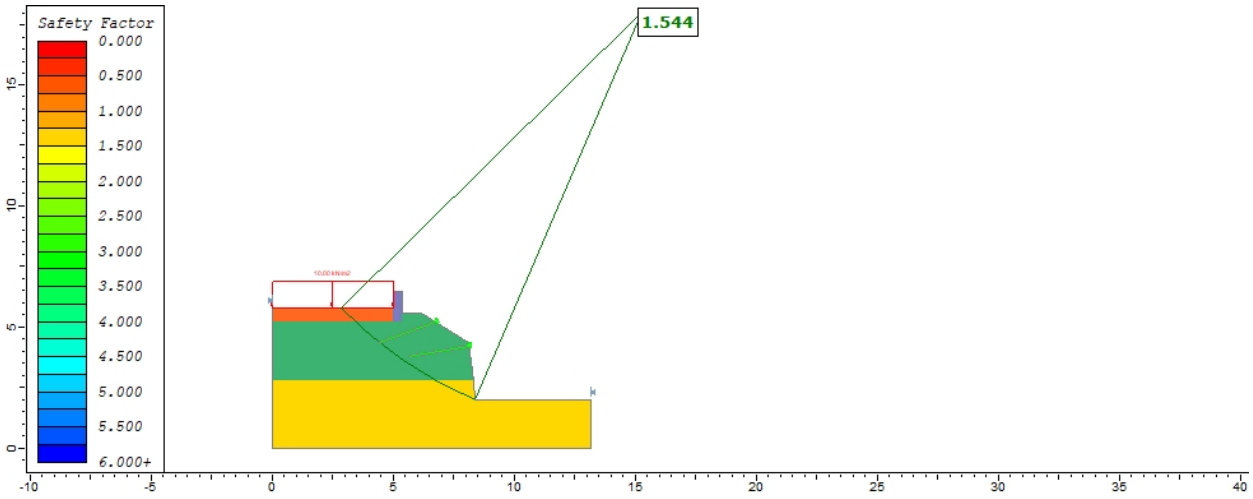


Imatge 8. Característiques dels ancoratges o claus de soil nailing de disseny escollits per al càlcul.

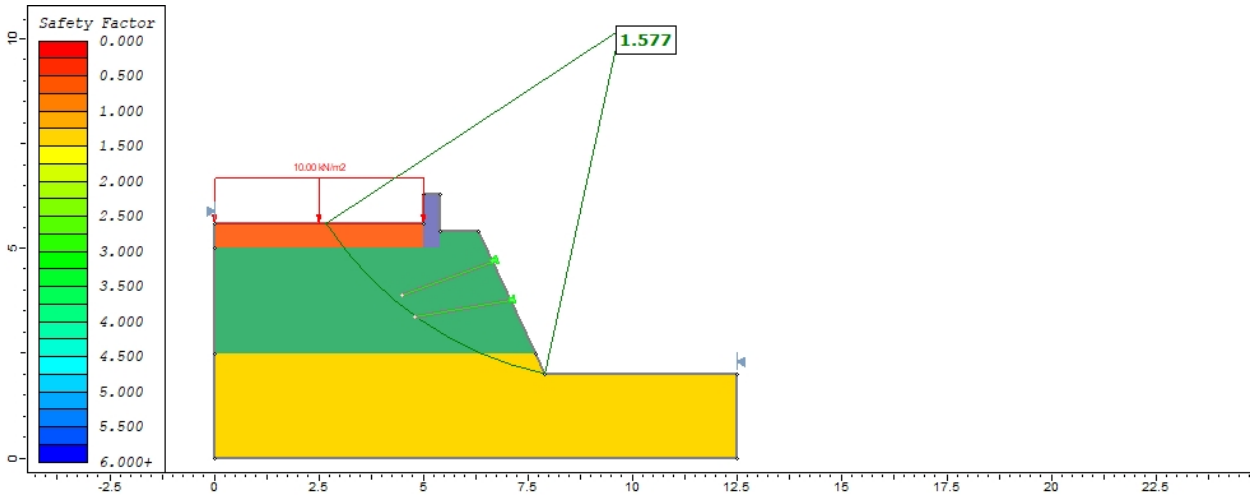
**Exemple de resultats de la solució projectada:**

Imatge 5. Perfil transversal I-I' amb l'estructura calculada.

La introducció de dos ancoratges de 2m de longitud al perfil transversal I-I', al TRAM 2, amb una inclinació de 10º, acotats les possibles restes arqueològiques a baix, i separats cada 4m, donen un resultat superior al Factor de Seguretat d'1,5. El programa ja no mostra gràficament cercles de lliscament, perquè el talús ja és estable.

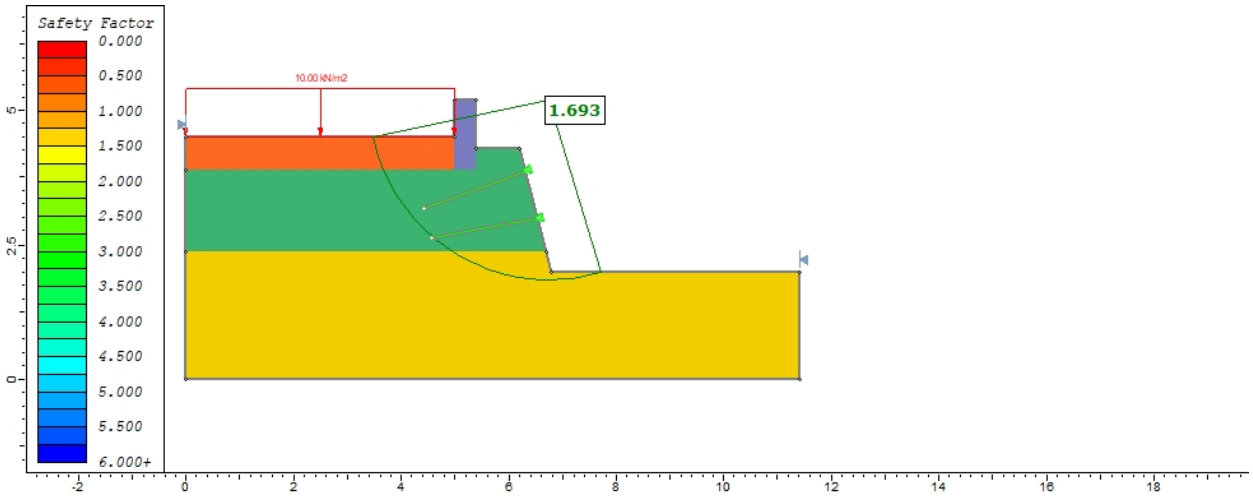


Imatge 6. Perfil transversal G-G' amb l'estructura calculada.

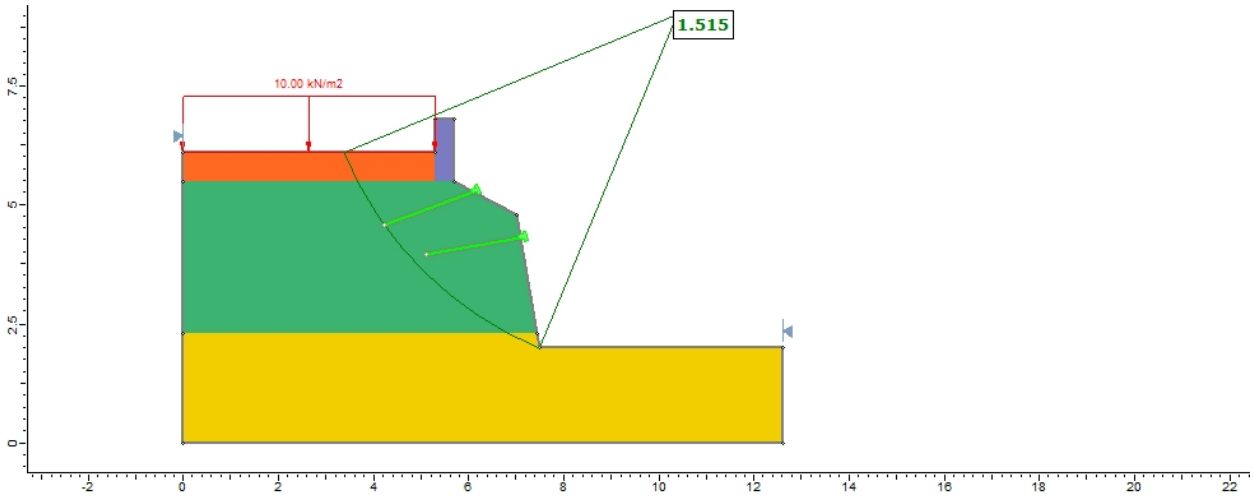


Per al talús del perfil transversal G-G', al TRAM 3, no cal afegir-li ancoratges de soil nailing per obetnir un Factor de Seguretat major a 1,5. Fent un reblert de terres al peu del talús, i rebaixant 40cm la seva coronació, és suficient per obtenir-lo.

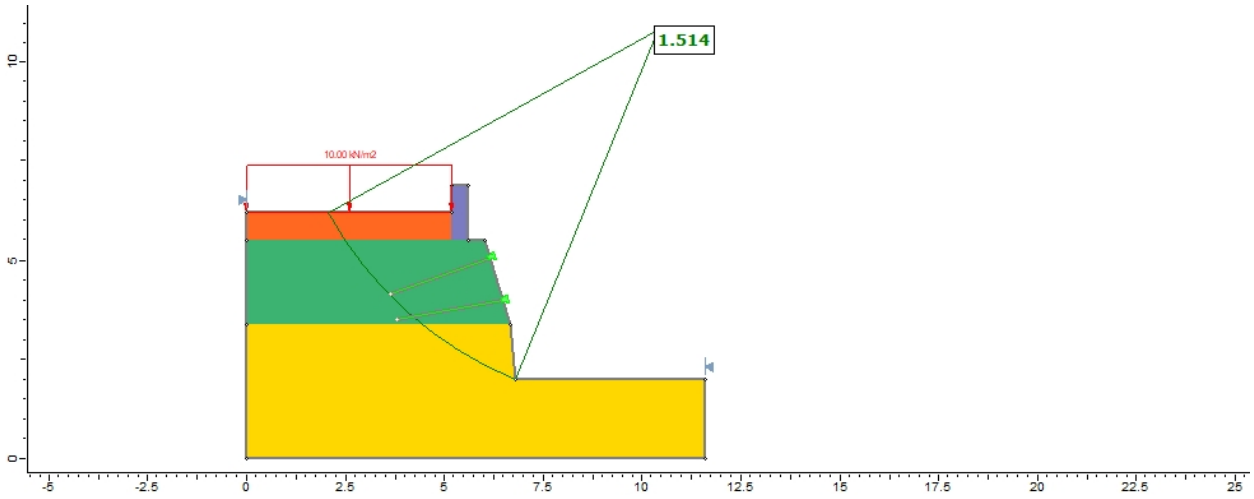
## Resultats de la solució projectada



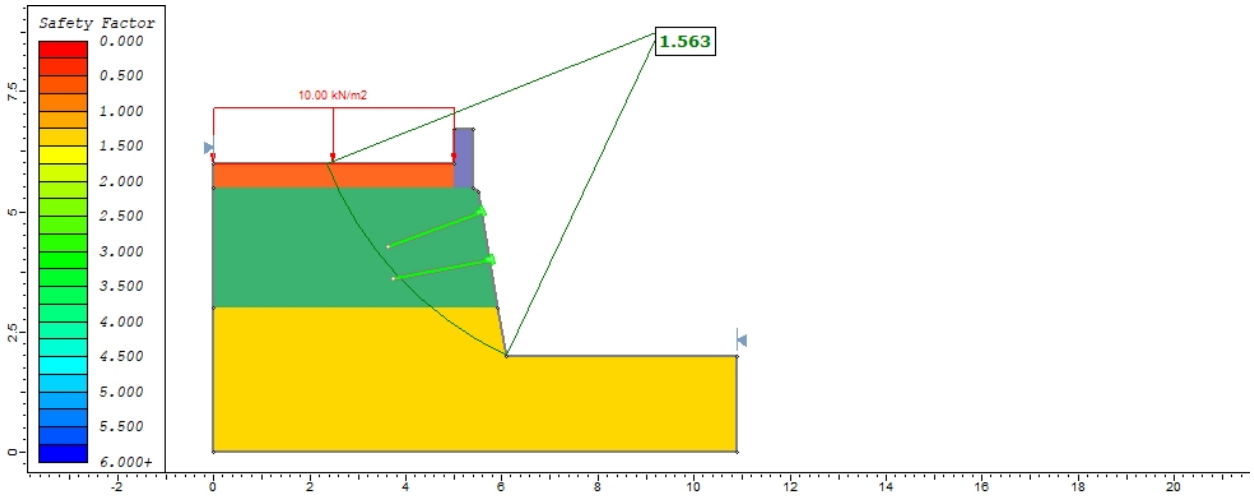
## 2: Seccio AA - Seccio AA Soil Nail - Bishop simplified method



## 4: Seccio BB - Seccio BB Soil Nail - Bishop simplified method



## 6: Seccio CC - Seccio CC Soil Nail - Bishop simplified method



## 8: Seccio DD - Seccio DD Soil Nail - Bishop simplified method

**Error Codes**

Error Code -108 reported for 360 surfaces
Error Code -111 reported for 2333 surfaces

## Error Code Descriptions

The following errors were encountered during the computation:
-106 = Average slice width is less than 0.0001 * (maximum horizontal extent of soil region). This limitation is imposed to avoid numerical errors which may result from too many slices, or too small a slip region.
-108 = Total driving moment or total driving force < 0.1. This is to limit the calculation of extremely high safety factors if the driving force is very small (0.1 is an arbitrary number).
-111 = Safety factor equation did not converge
-112 = The coefficient M-Alpha = cos(alpha)(1+tan(alpha)tan(phi)/F) < 0.2 for the final iteration of the safety factor calculation. This screens out some slip surfaces which may not be valid in the context of the analysis, in particular, deep seated slip surfaces with many high negative base angle slices in the passive zone.
-121 = Concave failure surface, only convex surfaces have been defined as being allowed.
-124 = A slice has a width less than the minimum acceptable value.
-1000 = No valid slip surface is generated

# Slice Data
