# Projecte d'execució d'una piscina descoberta al municipi de Llinars del Vallès

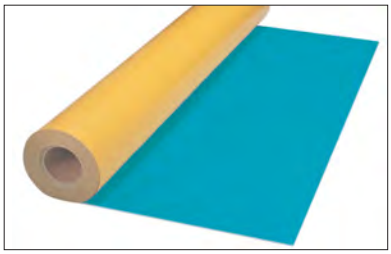
Projecte executiu

## Vol. 1/1

## 03 Especificacions Tècniques

Abril 2025

# LAMINA PROOF



## Lamina FLEXIBLE IMPERMEABLE para terrazas, vestuarios, platos de ducha,... Ideal también en piscinas de hormigón. Permite la colocación de cerámica o mosaico vitreo directamente sobre la lámina.

**ATENCIÓN**

**LAMINA PROOF** no debe usarse:

- En otras aplicaciones sin consultar previamente al Dpto. Técnico.
- Sobre superficies sucias, con partes inconexas, con restos antiadherentes,...
- Sobre superficies que no puedan resistir una tensión mínima de 0.5N/mm$^2$

### CAMPOS DE APLICACIÓN

**1º OPCIÓN: solo con LAMINA PROOF:**

- Lámina para impermeabilizar superficies de mortero, hormigón o cartón-yeso (con previa imprimación) usando cemento cola tipo C2S1.
- Aplicable en balcones, terrazas, vestuarios, baños, azoteas, plazas públicas,.... para su impermeabilización y posterior acabado cerámico.
- Gracias a su gran flexibilidad y resistencia a la tracción, es ideal para impermeabilizar superficies cementosas con grietas o fisuras.
- Ideal para asegurar la estanqueidad en piscinas de hormigón en áticos.

**2º OPCIÓN: usada conjuntamente con la LAMINA STEEL:**

- Solución ideal y muy económica para poder revestir las piscinas de acero galvanizado y inoxidables con un acabado cerámico o con mosaico vitreo.
- Esta es la mejor solución estética para las piscinas de acero galvanizado, sustituyendo el tradicional liner de PVC.

### CARACTERÍSTICAS TÉCNICAS

**LAMINA PROOF:** lámina tri-capa constituida por:

-dos capas de polipropileno +
-una capa de polietileno con un téxtil especial que permite la colocación de la cerámica con cemento cola sin ninguna capa intermedia.

Lámina certificada y homologada para las clases de cargas A1, A2 y C y para las clases de carga especificadas en las fichas ZDB.

Lámina resistente a bases, al agua salada, a los ácidos y a los microorganismos.

### MODO DE EMPLEO

- **Preparación del soporte:**
  El saneamiento correcto, exhaustivo y detallado del soporte, es la mejor garantía para asegurar un muy duradero agarre.
  **En las superficies cementosas:** eliminar cualquier resto de hormigón deteriorado, inconexo, poco sólido, disgregable, restos de polvo, pinturas, ceras, desencofrantes,...
  **Encima de cartón-yeso:** imprimar previamente con **HIDROPRIMER** y dejar secar 1-2h. antes de la colocación de la **LÁMINA PROOF**.

- **Aplicación de la LAMINA PROOF:**
  Aplicar cemento cola tipo C2S1 encima del soporte de mortero u hormigón usando una llana dentada de diente máximo 4x4 mm; inmediatamente aplicar la **LAMINA PROOF** y presionarla con la parte lisa de la llana para eliminar las bolsas de aire y para conseguir que se pegue perfectamente al cemento cola por la parte del geotéxtil.
  A continuación colocar la siguiente **LAMINA PROOF** :
  -en terrazas solapándola mínimo 5 cm. con la anterior, ó
  -en piscinas a "testa", es decir sin solaparlas.

◆ **Aplicación de la BANDA-SOLAPES:**

**-en terrazas:** no es necesario aplicar la **BANDA-SOLAPES** porque las láminas ya están solapadas unas con otras y la unión queda así bien sellada.

**-en piscinas de hormigón:** aplicar la **BANDA-SOLAPES** en todas las uniones entre la **LAMINA PROOF** y **LAMINA PROOF** y en todas las esquinas entre paredes y suelos.

**-en piscinas de acero galvanizado:** consultar al Dpto.Técnico.

◆ **Pegado de la cerámica y/o mosaico vitreo:**

Pegar los revestimientos cerámicos tanto en las paredes como en el pavimento directamente sobre las **LAMINAS** con cemento cola tipo **TECNOCOL FLEX.**

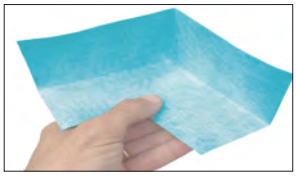
◆ **Rejuntado del revestimiento:**

**-en terrazas:** recomendamos usar el mortero coloreado hidrófugo **EUROCOLOR FLEX** disponible en 24 distintos colores ya predosificados.

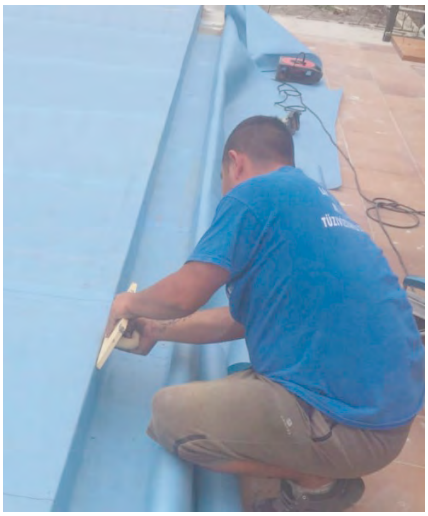
**-en piscinas de hormigón:** recomendamos rejuntar en **TODOS** los casos con el **CERPOXI** o el **PROFESSIONAL PX** disponibles ambos en 26 distintos colores ya predosificados.

**-en piscinas de acero galvanizado:** consultar al Dpto.Técnico.

| **CONSUMOS:** | |
|---|---|
| LAMINA PROOF | proporcional a los m2. a sellar más los solapes a realizar |
| EPOXICOL | aprox. 0,3-0,5 Kg/ml. de **BANDA-SOLAPES** |



| **DATOS TÉCNICOS** | |
|---|---|
| **LAMINA PROOF:** Norma: | UNE-EN 13.956:2013 |
| • Estanqueidad : | 1.5 bar (versión B) |
| • Presión de rotura: | 3.0 bar |
| • Resistencia a la tracción L/T : | L=375N/50mm y T=250N/50mm |
| • Alargamiento a la rotura L/T : | L=90% y T= 120% |
| • Resistencia al desgarro : | L=100N y T=120% |
| • Resistencia a la temperatura : | -30°C / +90°C |
| • Reacción al fuego: | Clase B2 |
| • Presentación: (L=longitudinal; T=transversal) | 1x30ml y grosor 0.62mm |
| **BANDA-SOLAPES:** Presentación: | 14cm x 50ml. |
| **BANDA-ESQUINAS:** Presentación: | 12cm x 12cm x 12cm |



**COLLAR PARA TUBOS** de 12 a 22mm de diámetro

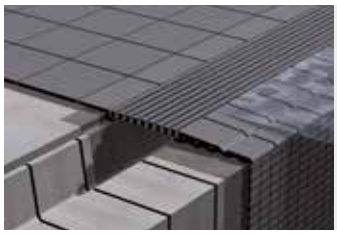
Colocar la **BANDA-SOLAPES** en todas las uniones **LAMINA-LAMINA** en el interior de las piscinas.

Colocar la **BANDA-ESQUINAS** en todos los ángulos de 90° de la piscina o terraza.

Con la **LAMINA PROOF** tenemos garantía de estanqueidad en terrazas y en piscinas y además podemos conseguir un acabado estético inmejorable.

Aplicar **EPOXICOL** entre las **LAMINAS** para pegar la **BANDA-SOLAPES**.

Presionar con fuerza la **BANDA-SOLAPES** con un paletín o con la llana lisa.



Retirar los excesos de **EPOXICOL** a ambos lados de la **BANDA-SOLAPES**.

El sistema 9 es un coronamiento prefabricado. Consiste en un conjunto de bloques de hormigón hidrófugo, diseñados para que una sola pieza funcione como canal y soporte de la cerámica.

## LAS 9 VENTAJAS DEL S9

**1.** Reduce los costes de construcción del rebosadero de hormigón.
**2.** Agiliza el proceso de instalación aportando un ahorro de tiempo y mano de obra.
**3.** Facilita la colocación de las piezas porque han sido diseñadas para optimizar su instalación.
**4.** Mejora el acabado superior del muro de hormigón gunitado.
**5.** Elimina las deficiencias presentadas habitualmente por el encofrado.
**6.** Asegura un acabado y rebose perfecto de la piscina.
**7.** Aporta máxima estética.La presentación visual del perímetro de la piscina una vez realizado el coronamiento es rectilíneo y homogéneo.
**8.** Ofrece una serie completa de piezas especiales. Una solución para cada detalle: formación de nichos de escaleras, esquinas, anclajes de las corcheras entre otros.
**9.** Está preparado para recibir la cerámica modular de Rosa Gres.

## 2. CONSTRUCCIÓN DE UNA PISCINA CON EL SISTEMA 9 PASO A PASO

**1**

Se proyecta el hormigón formando las paredes, fondo de vaso y murete perimetral, teniendo en cuenta que hay que dejar una zona de recepción del bloque S9 que se ajuste a las medidas del mismo.

**2**

Para simplificar el proceso de hormigonado, éste se puede realizar en dos tiempos. Primero se deja una zona de recepción plana con unas esperas de hierro y colocamos una junta hidroexpansiva tipo **FUGA STOP MINI** en el medio de las esperas. Posteriormente terminaremos por rellenar el talón (después del paso 5).

**3**

Empezamos colocando las piezas de las esquinas con un nivel láser. Colocamos cordeles entre ellas. A continuación colocamos los bloques S9 entre esquina y esquina.

**4**

Se colocan los bloques de hormigón con mortero aditivado con un látex tipo **PRIMFIX** a razón de 1 parte de **PRIMFIX** por 2 partes de agua.

**5**

Es imprescindible poner mortero también en la junta entre los bloques. Una vez colocados los bloques rellenamos el talón posterior con hormigón.

**6**

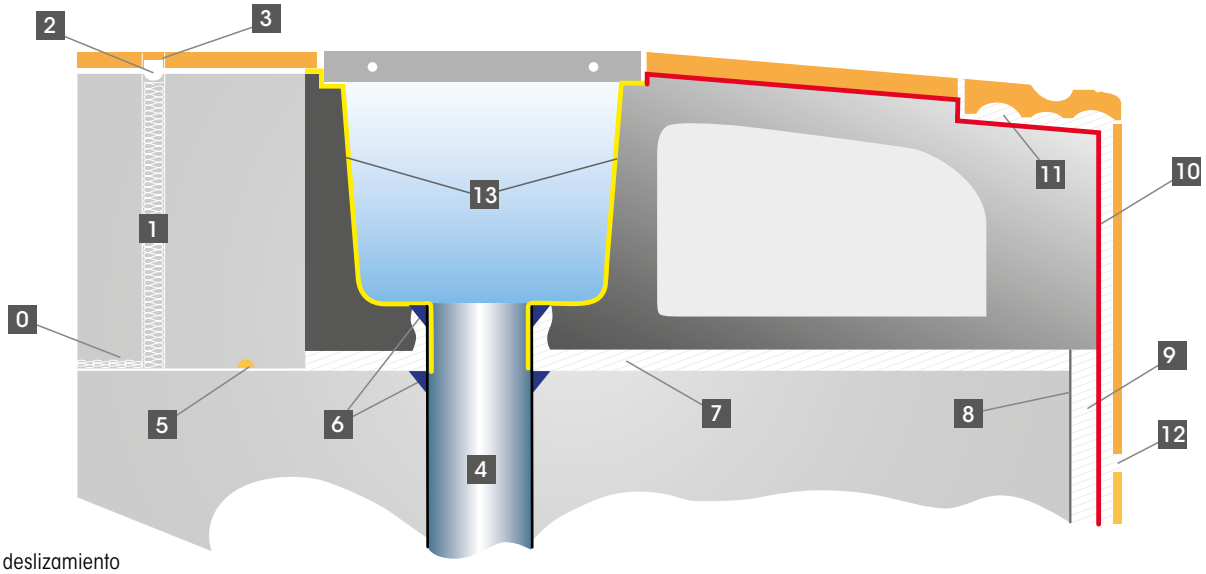
Usando los bloques como guía, realizamos el recrecido de mortero de las paredes con un mortero de calidad constante y de secado rápido tipo **FIX-REVOCO**.

**7**

Realizamos la impermeabilización del vaso con un impermeabilizante elástico tipo **HIDROELASTIC** donde vaya a ir baldosa encima. Y la impermeabilización de la canal con un impermeabilizante tipo **HIDROFIX.**

**8**

**Colocación de la cerámica:** usamos el cemento cola de clase C2 T S1 especial para pegar gres porcelánico encima de la impermeabilización tipo **TECNOCOL FLEX.**



El **Sistema 9** se puede utilizar tanto para realizar piscinas rectas como piscinas curvas.

## DETALLES DE COLOCACIÓN

**0** Lámina de deslizamiento
**1** Junta de dilatación imprescindible en todo el perímetro de la piscina
**2** Fondo de Junta. Cordón de poliuretano (**SELLALASTIC FOAM**)
**3** Masilla de poliuretano para juntas de dilatación (**SELLALASTIC**)
**4** Desagües: recomendables cada 4 m aprox.
**5** Junta hidroexpansiva (**FUGA-STOP MINI**)
**6** Sellado estanco con poliuretano (**SELLADOR S10**)
**7** Mortero de agarre + **PRIMFIX** + agua
**8** Puente de unión **PRIMFIX+ PORTLAND** (1:1)
**9** Mortero de recrecido tipo **FIX-REVOCO**
**10** Impermeabilización (**HIDROELASTIC**)
**11** Cemento-Cola especial para superficies no absorbentes **TECNOCOL FLEX**
**12** Mortero para sellado de juntas **JUNTATEC**
**13** Canal impermeabilizado con **HIDROFIX**

NOTA / Antes de aplicar el **SELLADOR S10**, frotar el tubo con disolvente para PVC; aplicar en el hormigón la imprimación SELLADOR S10; esperar entre 1h-4h y aplicar el SELLADOR S10 presionando contra el PVC y el Hormigón.

# Concept

Termo eléctrico con resistencia blindada

A veces se impone una solución sencilla pero eficaz. Por esto Thermor ha desarrollado la serie Concept, la gama más amplia del mercado. Con capacidades que van de los 15 hasta los 200 L y que garantizan la mejor relación calidad / precio. Además, el sistema O'Pro aumenta la durabilidad del ánodo de magnesio prolongando la vida del termo.

## Durabilidad

- Cuba vitrificada
- Resistencia blindada
- Sistema O'pro que alarga en un 50 % la duración del ánodo de magnesio

## Ahorro energético

- Termostato exterior que permite seleccionar la temperatura deseada en cada momento (litrajes de 15 a 100 L)
- Aislamiento de alta densidad
- Sistema BriseJet que garantiza la estratificación óptima del agua

## Garantía comercial

- 3 años de garantía total

## Confort

- La gama más amplia del mercado, completa y versátil con litrajes de 15 a 200 L en formato vertical y de 50 a 200 L en formato horizontal

## Facilidad de instalación

- Compatible con Optifix Universal que facilita la renovación (litrajes de 15 a 100 L)

GARANTÍA TOTAL 3 AÑOS

# Rejilla para rebosadero

## Desborda calidad

# Swimming pool overflow grating

## Overflowing with quality

ASTRALPOOL

# Rejilla para rebosadero de piscina
# Swimming pool overflow grating

## Dele el toque final a su piscina

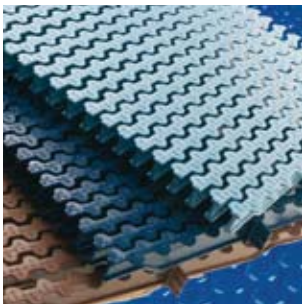
AstralPool dispone de una amplia gama de rejillas, con diferentes y diversos sistemas de ensamblaje. Desde líneas rectas a ángulos de 45º - 90º, y curvas.

Las rejillas AstralPool están fabricadas en PP, resistente a la acción de los rayos U.V., con superficie antideslizante, de alta resistencia mecánica e inalterables a los agentes químicos y atmosféricos.

Formada por placas de módulos para tramos rectos o curvos (radio exterior de 1 ó 2 m), ensambladas entre sí por la unión clicada (macho-hembra), que permite cierta elasticidad de montaje, a la vez que absorbe posibles dilataciones, efecto de las diferencias térmicas a las que la rejilla se ve expuesta.

Para todos los modelos de rejilla es necesario construir el canal 5 mm más ancho que la rejilla, para que esta pueda adaptarse con facilidad y evitar posibles dilataciones.

## Put the finishing touch to your pool.



AstralPool has a wide of range of gratings, with various assembly systems. From straight lines to 45º and 90º angles, and curves.

AstralPool gratings, manufactured in PP, are resistant to the action of UV rays, have an anti-slip surface and high mechanical resistance and cannot be altered by chemical and atmospheric agents.

Consisting of modular plates for straight or curved stretches (exterior radius of 1 or 2 m), with quickclick assembly (male-female),the assembly of the grating provides for certain elasticity as well as preventing possible expansions, an effect to which the grating is exposed.

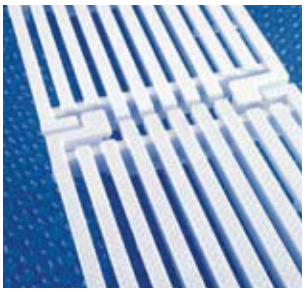
For all models it is necesary to construct a channel 5 mm wider than the grating so that it fits comfortably and prevents posible expansions.

## Seguridad

La nueva rejilla transversal para curvas 8 mm cumple con la normativa de seguridad EN-1345-1 y EN-1345-2.

## Safety

The new grating tile for curves (8 mm) complies with the safety regulations EN-1345-1 and EN-1345-2.



## Absorción

Gracias a la disposición longitudinal de las barras de la rejilla, paralelas al borde de la piscina, se evita el desbordamiento del oleaje.

## Absorption

Thanks to the longitudinal positioning of the spines of the grating, parallel to the edge of the swimming pool, waves are totally absorbed.

## Resistencia

Resistente a la acción de los rayos U.V., inalterables a los agentes químicos y atmosféricos. Absorbe posibles dilataciones, efecto de las diferencias térmicas a las que la rejilla se ve expuesta.

## Resistance

Resistant to UV rays, the grating cannot be altered by chemical or atmospheric agents and possible expansion is absorbed.

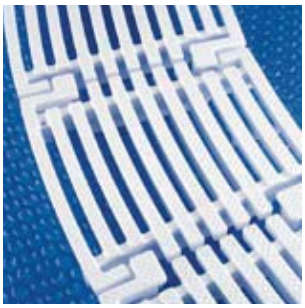
# Rejilla longitudinal
## Longitudinal grating



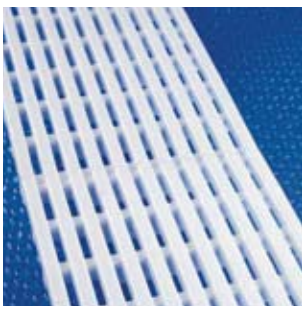
### Placa rejilla longitudinal

Unión por anclajes macho-hembra de fácil y rápido montaje (5 unidades = 1024 m).
La flexibilidad de sus unidades permite realizar radios de hasta 5 m. Certificada por la norma de seguridad EN-13451-1.

| Código / Code | h (mm) | Ancho / Width (mm) |
|---|---|---|
| **05581** | 24 | 195 |
| **05582** | 24 | 245 |
| **05583** | 24 | 295 |
| **05584** | 24 | 345 |

### Longitudinal grating tile

For clicking together same types of male-female tiles (5 units = 1.024 m).
The flexibility of these units allows for a radius of up to 5 m. Certified with EN-13451-1 safety standards.



### Placa rejilla longitudinal curva

Unión en el sentido del montaje, por anclajes macho-hembra de fácil y rápida instalación. Permite combinaciones con piezas rectas. Certificada por la norma de seguridad EN-13451-1.

### Curved longitudinal grating tile

Made in PP, stabilised against UV rays. Click together in the same direction as the tiles. Can be combined with straight tiles. Certified with EN-13451-1 safety standards.

| Cód. (1m) Code (1m) | Cód. (2m) Code (2m) | h (mm) | Ancho del canal (L) (mm) Channel width (L) (mm) | Ancho rejilla ($L_1$) (mm) Grating width ($L_1$) (mm) |

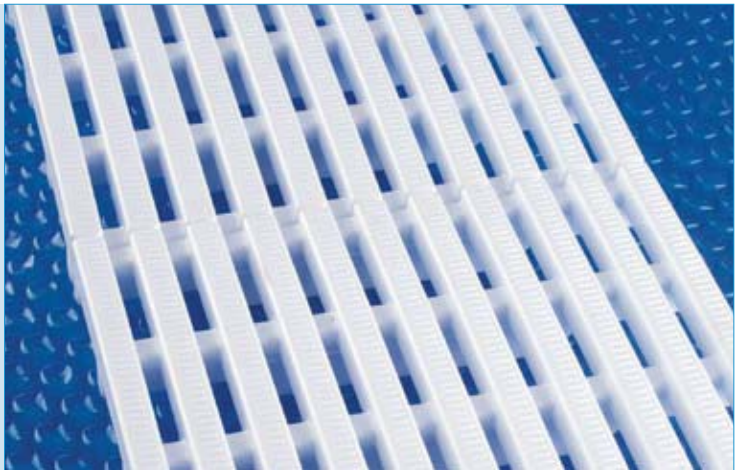
| **07566** | - | 24 | 350 | 345 |

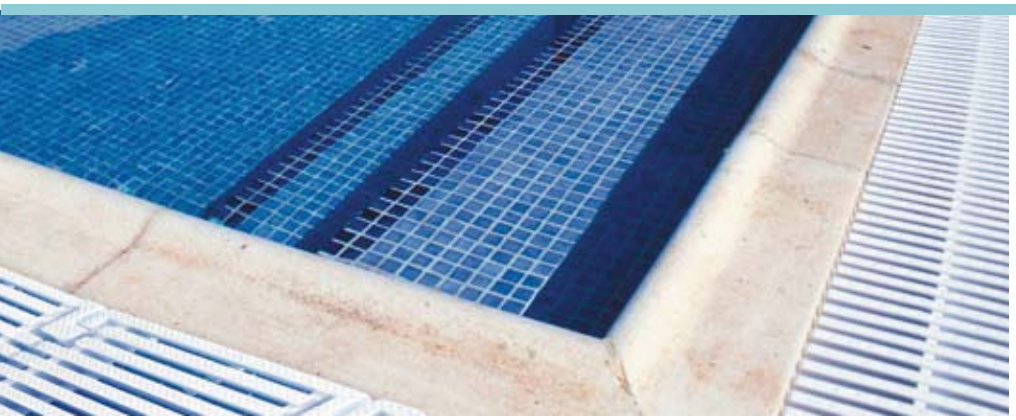
### Placa rejilla longitudinal de 0,5 m.

Disponible en módulos de 500 mm de longitud unión por anclajes macho-hembra de fácil y rápido montaje. Certificada por la norma de seguridad EN-13451-1.



### 0.5 m. Longitudinal grating tile

It is available in 500 mm long modules with male-female fitting that is easy and quick to assemble. Certified with EN-13451-1 safety standards.

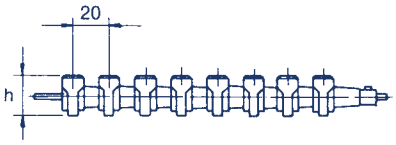


| Código Code | h (mm) | Ancho rejilla ($L_1$) (mm) Grating width ($L_1$) (mm) |
|---|---|---|
| **28664** | 22 | 195 |

**La concepción longitudinal** de este modelo asegura la asimilación completa de la lámina de agua, impidiendo que ésta pueda sortear los múltiples canales transversales que encuentra a su paso, conservando así, prácticamente seco el suelo que circunda a la piscina.

**The longitudinal design** of the tiles ensures that any excess water from the pool is not allowed to overflow onto the pool surround keeping this area dry.

# Rejilla transversal
## Transversal grating



### Rejilla transversal

Unión mediante cable. (49 unidades por m). Ver accesorios cable de acero y prisionero (ultima página).

## End piece kit for parellel grating corners

Comprising 1 finished half tile & 1 stainless steel grating profile. Used for the last piece of each length, should cutting be necessary.

**Cable de acero plastificado** (Cód.00214).

**Cable de acero inoxidable AISI-316 plastificado** (Cód. 00215) ambos de Ø 2,5 mm, para unión de módulos.

**Prisionero** para cable fabricado en latón (Cód. 00216).

**Plasticized steel cable** (Cód.00214).

**Stainless steel AISI-316 plasticized** (Cod. 00215) To link straight modular grating 2.5 mm Ø.

**Brass locking** pins for cable (Cod. 00216).

## Perfil soporte placa rejilla

Adaptable a rejillas de 22, 24 y 35 mm de alto.
En PP. Suministrado en tiras de 2m. Medidas interiores 24 mm x 37 mm. (Cód. 00224)

## Grating support profile

Suitable for 22, 24 and 35 mm high grating.
Made in plastic. Supplied in 2 m lengths. Inside measurement 24 mm x 37 mm. (Cod. 00224)

ASTRALPOOL
FLUIDRA

# PRAGA

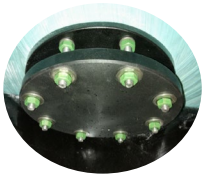
FEATURES

- ✓ Winding filters with polyester resin and fiberglass.
- ✓ Totally anticorrosive.
- ✓ Resistance to salted water.
- ✓ Maximum pressure: 2.5 bar or 4 bar.
- ✓ Filtration bed depth: 1m.
- ✓ Maximum temperature: 50ºC.
- ✓ All the connections are assembled with flanges except the Ø63 which comes with racords.
- ✓ Color: RAL 6027.
- ✓ Ø400 plastic top lid.
- ✓ Ø3/4" PVC air drain.
- ✓ Fitted with newly designed larger and more resistant ABS collector arms. Difuser made of unplasticised PVC and polypropilene.
- ✓ ¾" PVC water drain. Filters with nozzle plate comes with an additional 2 ½" water drain.
- ✓ Ø90mm sand drain in Ø1050 to Ø1400 models and Ø140mm sand drain in Ø1600 to Ø3000 models.

OPTIONAL

- ✓ Nozzle plate
- ✓ Ø225mm/Ø400mm lateral manhole.
- ✓ Ø135mm sightglass.
- ✓ Double effect air relief valve.
- ✓ Vinylester finish.
- ✓ Laminated connections.

## FILTER DETAILS



▪ Cone diffuser and internal pipe made of PN-16

▪ Ø400mm plastic top lid

▪ All the connections are assembled with flanges except the Ø63 which comes with racords.

▪ Ø90mm sand drain in Ø1050 to Ø1400 models. Ø140mm sand drain in Ø1600 to Ø3000 models.

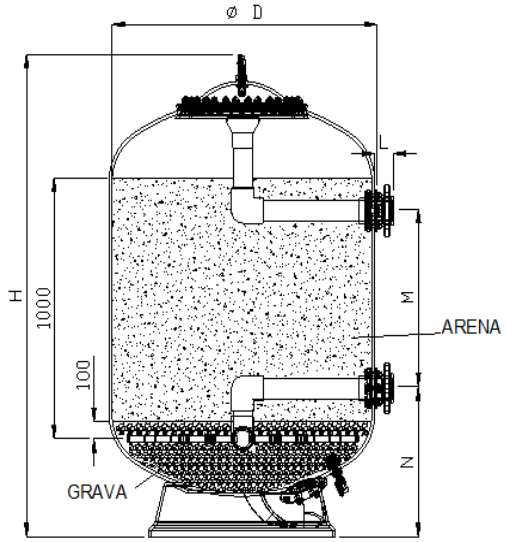
▪ 3/4" water drain

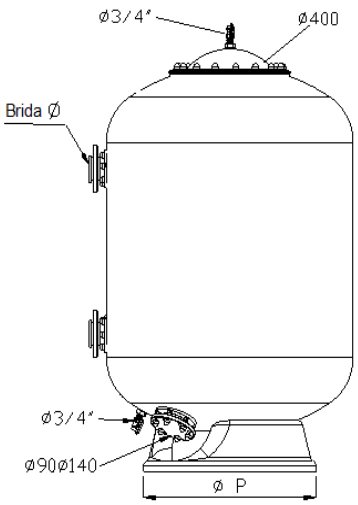
## FILTER OPTIONS

▪ Nozzle plate

▪ Ø225 or Ø400 mm lateral manhole

▪ Ø135 mm sightglass





▪ 1" or 2" air relief valve

ASTRALPOOL

# LUMIPLUS

## LA RÉFÉRENCE POUR L'ÉCLAIRAGE DE LA PISCINE

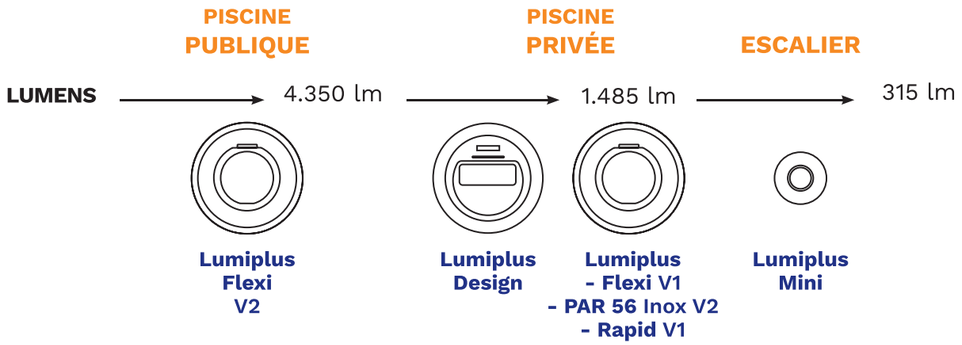
NOUVEAU

Incluse la gamme **LumiPlus Flexi**
La solution Led universelle qui s'adapte à toutes les piscines liner ou béton, en construction ou en rénovation.

GREEN FRIENDLY

## La gamme d’éclairage

# LumiPlus d’AstralPool



## est la plus étoffée du marché

### La gamme LumiPlus d’AstralPool assure

- la meilleure efficacité énergétique
- une qualité d’éclairage exceptionnelle grâce à l’intégration de la technologie TQL : Top Quality Lighting
- la fiabilité et la sécurité des composants électroniques grâce aux nouvelles sources d’alimentation en format DC
- la maitrîse des équipements grâce au contrôle FLUIDRA CONNECT.

### Une offre adaptée à chaque catégorie de piscine

NOUVEAU

## LumiPlus Flexi

# Composez votre propre projecteur

avec **LumiPlus Flexi** et ses pièces universelles

**La FLEXI-bilité avant tout :** la nouvelle gamme de projecteurs Led AstralPool LumiPlus Flexi est **LA SOLUTION UNIVERSELLE** qui s’adapte à toutes les piscines liner ou béton, en construction ou en rénovation.

**Atout considérable pour le professionnel :** une liste de pièce très restreinte pour composer lui-même le projecteur dont son client a besoin. En stockant ces quelques références, le professionnel pourra répondre à tous les besoins en rénovation ou en construction et toutes les configurations de piscine : liner, polyester ou béton.

## LumiPlus Flexi

# Les 3 étapes FLEXI

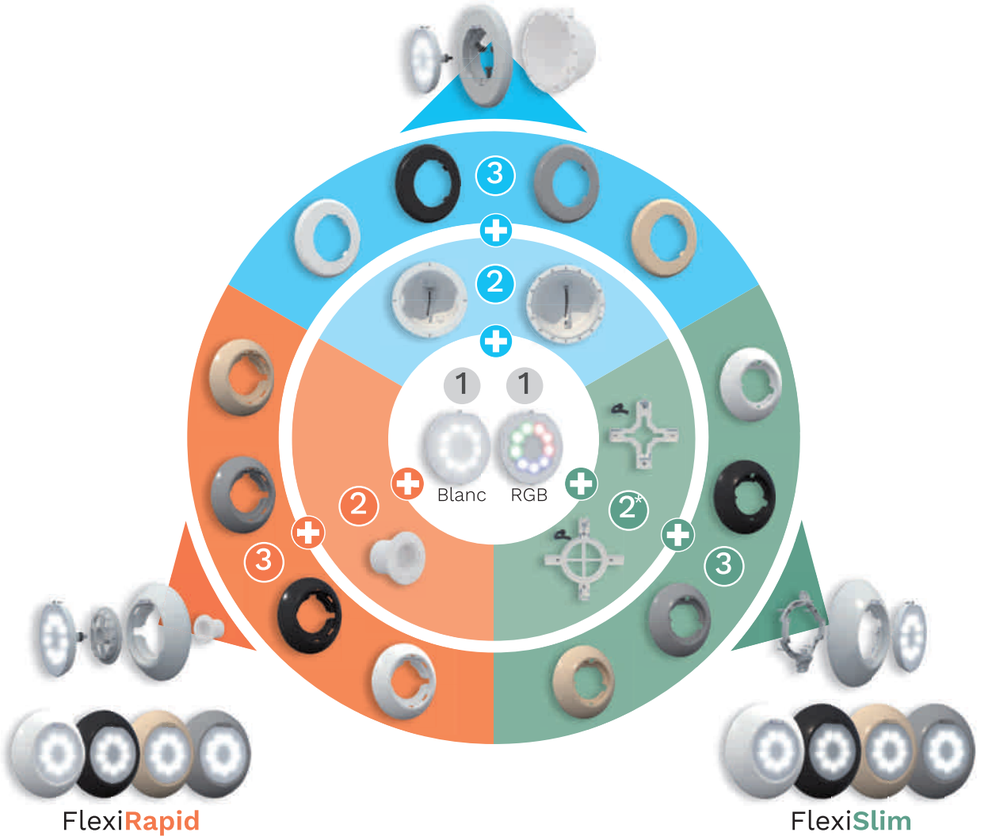
**Choisir la couleur de l'éclairage** (blanc ou RGB), la puissance du flux lumineux (V1 ou V2) mais aussi, le contrôle par télécommande WireLess.

**Choisir le support :**

FlexiNiche, pour une installation sur niche

FlexiSlim, pour une installation sur paroi compatible avec des projecteurs plats, extra plats et slim

FlexiRapid, pour une installation sur buse 1"1/2.



Choisir un coloris d'enjoliveur, disponible dans des teintes contemporaines blanc, anthracite, sable et gris.

**Au final, une piscine harmonieuse au style contemporain... :** des bassins aux finitions soignées avec des pièces accordées à la teinte du liner ou de la mosaïque.

## LumiPlus Flexi, une innovation AstralPool

FlexiNiche

FlexiRapid

FlexiSlim

## LumiPlus Flexi

**Construction :** FlexiNiche / FlexiRapid : 1+2+3 - FlexiSlim : 1+3
**Rénovation sans changement de niche :** 1+3

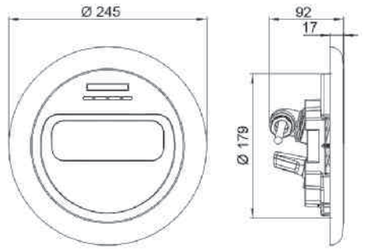
# LumiPlus Design



## Une finition parfaite

2 ANS GARANTIE

GREEN FRIENDLY

DIMENSIONS

Association de la technologie avancée LED et d'une conception au design innovant. La forme unique ainsi que les dimensions offrent au bassin un style avant-gardiste et unique. Orientation à 14° pour éclairer plus largement le fond.

2 finitions proposées : Pure White (Blanc) et Inox Effect (effet Inox). AC - 50Hz. Protection IPX8.

Niches Ø180 vendues séparément. Projecteurs livrés avec 1 câble de 2,5 m de long.

| | BLANC | | RGB | |
|---|---|---|---|---|
| Enjoliveur | Blanc | Effet inox | Blanc | Effet inox |
| Code | 59807 | 59805 | 59803 | 59801 |
| Consommation | 45 W (50 VA) | | 40 W (55 VA) | |
| Flux | 4.320 lm | | 2.544 lm | |

**CONSEIL**

*Pour éclairer correctement une piscine, il est conseillé d'installer un projecteur de la famille LumiPlus Design tous les 25 m² de surface d'eau. Les projecteurs doivent toujours être installés totalement immergés dans l'eau. Le projecteur est fourni sans niche. Compatible uniquement avec une niche de ø180 mm*

LumiPlus

OPTIQUE

**SYSTÈMES DE CONTRÔLE**

*Le modèle RGB est compatible avec les contrôles LumiPlus RGB Classic, LumiPlus LED APP et LumiPlus RGB TOP.*

PROJECTEUR

# LumiPlus Mini

Pour escalier, petits bassins et spas

2 ANS + GARANTIE +

GREEN FRIENDLY

Les projecteurs LED Mini bénéficient d'une intensité de lumière supérieure,
d'une grande qualité et d'une excellente efficacité énergétique.
Leur conception permet une meilleure intégration dans la piscine et une grande facilité d'installation.
Convient pour une installation sur buses, niche et dans les spas.

# BOMBA DOSIFICADORA ACQUA DOS

## Señal analógica manual – Bomba dosificadora con electroválvula 75088-75089-75090

### CARACTERÍSTICAS TÉCNICAS

- Caudales: de 4 a 110 l/h
- Contrapresión máx.: hasta 16 bares
- Fuente de alimentación: 100÷240 Vca - 50/60 Hz
- Índice de desplazamiento: de 160 a 300 carreras/ minuto
- Cabezal de la bomba: PVDF
- Diafragma: PTFE
- Cubierta externa: PP reforzado con fibra de vidrio
- Grado de protección IP65
- Válvula de cebado manual
- Kit de instalación: Incluido

Las bombas dosificadoras analógicas de la serie Acqua Dos con caudal constante se pueden ajustar manualmente mediante una perilla montada en el panel frontal.
El caudal posee dos rangos de frecuencia:

- 0÷20% del caudal máximo
- 0÷100% del caudal máximo

Con solo 3 tamaños, esta bomba puede cubrir una amplia gama de rendimientos, ofreciendo un rango de caudal de 4 a 110 l/h y una contrapresión de hasta 16 bares. La fuente de alimentación es de 100÷240 Vca - 50/60 Hz, por lo que la propia bomba puede funcionar con diferentes tensiones de alimentación.
El cabezal de la bomba es de PVDF, por lo que posee una alta compatibilidad química con varios líquidos.
Todas las series Acqua Dos disponen de una bomba de cebado manual para el arranque.
La bomba está equipada con un kit de instalación estándar completo, que incluye: filtro de fondo de PVDF y válvula de inyección, tubo de aspiración de PVC y tubo de suministro de PE.

Los datos técnicos se pueden modificar sin previo aviso

# CONTADORES

Predator
tecnología hidráulica

www.hidroconta.com

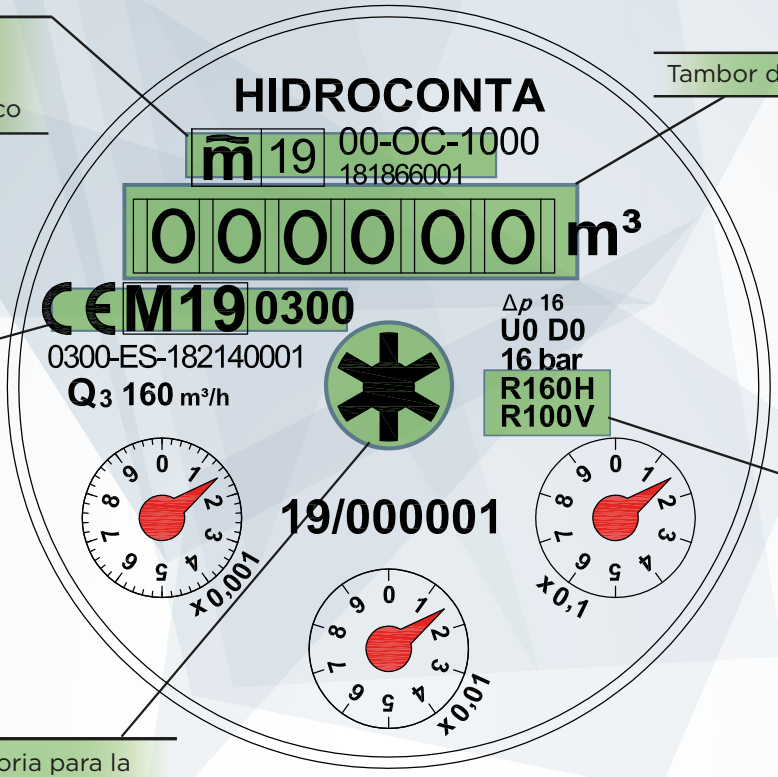
Fácil instalacion del **emisor de pulsos** sin necesidad de desmontar la relojería

Posibilidad de instalación **horizontal y vertical**

**Mayor precisión** R160H

Contador sin necesidad de tramos rectilíneos **U0 – D0**

## Alta resistencia



Para prolongar la vida útil del contador, el diseño de Predator, realiza una compensación hidrodinámica evitando empujes externos en el eje de la hélice.

## Ingeniería del Agua

Su funcionamiento se basa en una turbina o hélice cuyo eje esta situado en la línea de flujo del agua. El giro de la hélice se trasmite mediante transmisión magnética a través de un eje y engranaje hasta un cabezal que acumula en su totalizador el volumen de agua que ha circulado por el contador.

Todos los derechos están reservados. © Copyright. 2020 HIDROCONTA. S.A.U.

## Relojería

Examen de tipo nacional para su uso en agua de dominio público hidráulico

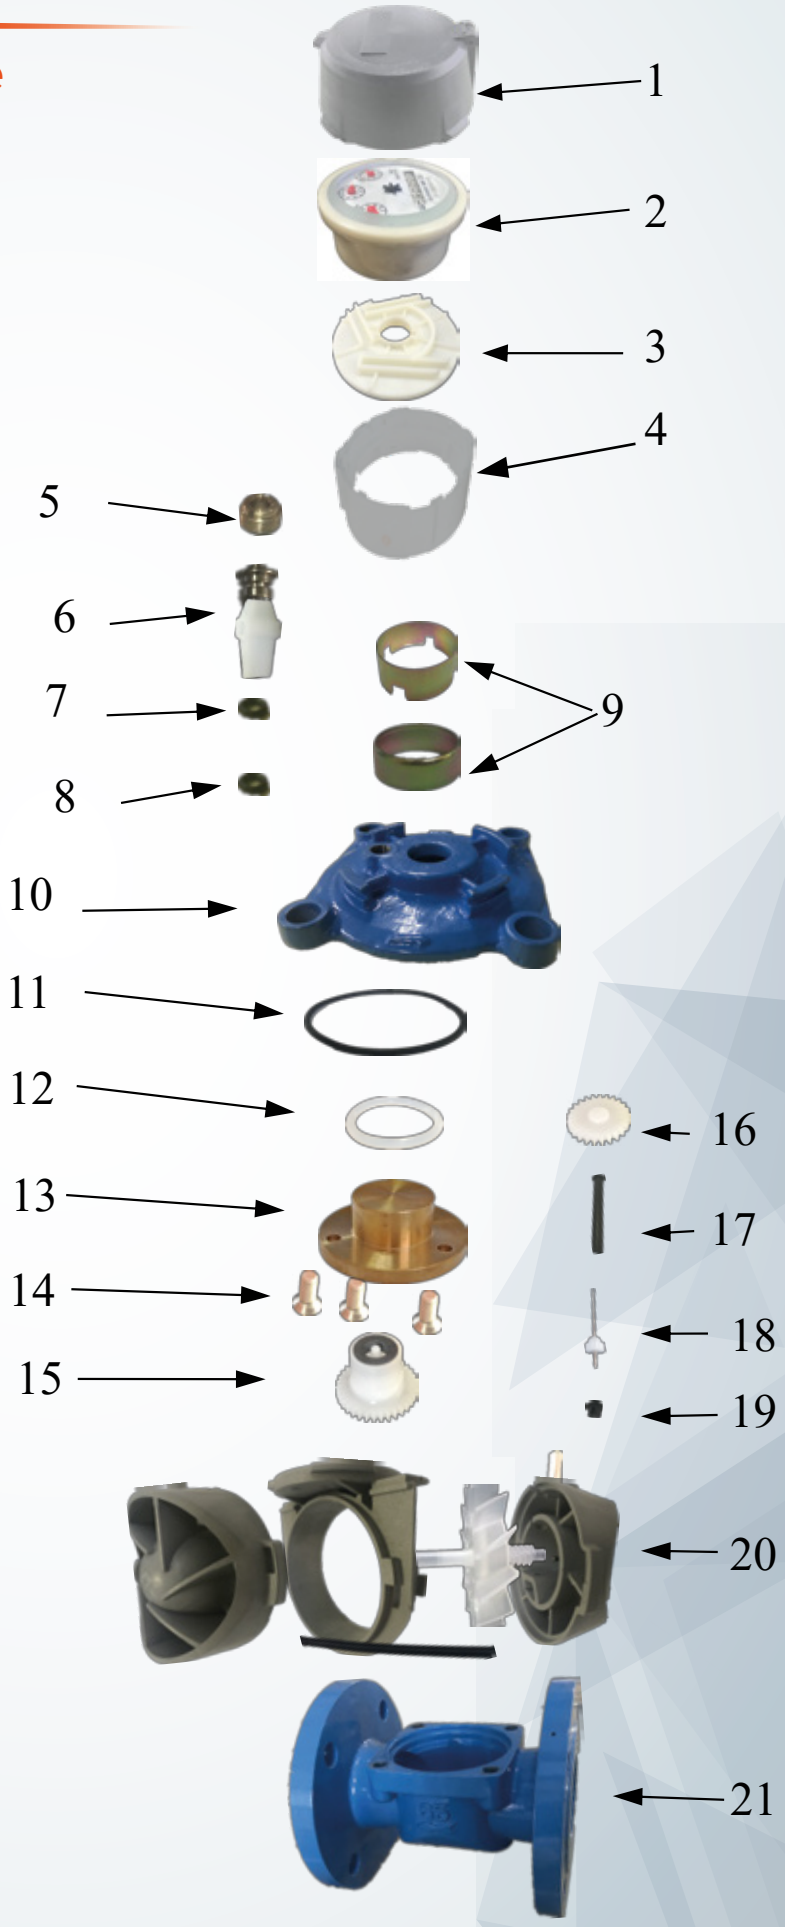
Tambor de 7 cifras alineadas

Aprobación para agua potable

Clase metrológica

Estrella giratoria para la detección de fugas

## Especificaciones técnicas



- Preinstalación para emisor de impulsos. Emisor de pulsos extraible sin necesidad de desprecintar el contador.
- Calibres desde 50 hasta 200 mm.
- Relojería con esfera estanca al vacío ( IP68).
- Metrología R160 en posición horizontal y R100 en vertical.
- Clase de pérdida de presión Δp 16 ( 0,16 bar)
- Uso para agua fria 0,1 - 30˚C.
- El contador Predator puede alcanzar hasta una presión de 16 bares.
- Certificado de tipo agua potable y riego.

# Intrucciones de instalación

- Se recomienda situar siempre el contador en un punto bajo de la instalación.

- Colocar el contador de forma que la flecha corresponda al sentido de circulación del agua.

- No forzar el Contador durante el montaje, evitar los esfuerzos de tracción y torsión.

- Los contadores han de funcionar siempre llenos de agua, con una presión mínima de 0,3 bar a la salida del contador, instalados a un nivel inferior respecto a la pendiente del resto de la conducción. De este modo, se eliminará también la formación de bolsas de aire en su interior.

- Si existe la presencia de aire en la conducción, es necesario colocar ventosas, para evitar lecturas erróneas.

- Si el agua de la conducción presenta partículas gruesas en suspensión, se recomienda instalar un filtro de desbaste previo.

- Prever una válvula de cierre aguas arriba del contador para facilitar el mantenimiento y/o reparación del mismo.
Antes de instalar un contador en una conducción nueva, se recomienda el drenaje de la misma para eliminar partículas.

- El diámetro interior de la tuberia debe de ser igual al diámetro nominal del contador.

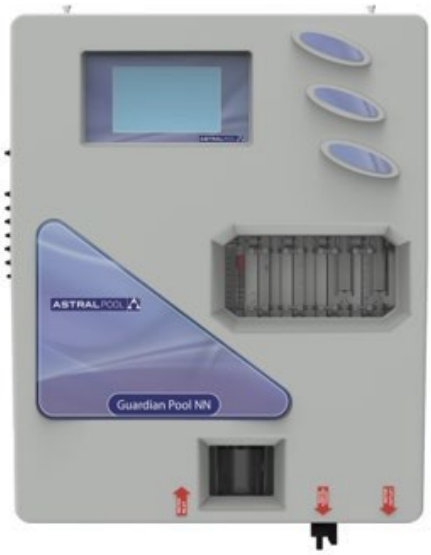
- No es necesaria la instalación de tramos rectilíneos antes de ni después del contador U0-D0.

- Apto para instalación en posición horizontal R160H y posición vertical R100V.

# FAQ

## 1- ¿Se ha roto la turbina?

La rotura de la turbina puede estar causada por la presencia de partículas sólidas de un tamaño considerable, por ejemplo, tacos y piedras que pueda haber en suspensión en el agua.
En este caso debe sustituir el mecanismo del contador y colocar un filtro ya sea en “Y” o de cesta antes del contador para que no vuelva a ocurrir.



## 2- ¿El contador no suma?

Es probable que se encuentre atascado, tenga alguna parte interna averiada o haya sufrido desgaste por envejecimiento.
Cuando ocurre un desgaste por envejecimiento, puede que el contador si sume m3, pero no sean los reales.
En este caso se deberá reponer el elemento averiado. Nuestros contadores gracias a su diseño hidrodinámico con mecanismo independiente hace que este tipo de reparaciones sean muy sencillas.

# GUARDIAN POOL 74720

## EQUIPO AUTOMÁTICO DE REGULACIÓN Y CONTROL

**Unidad de control totalmente automatizada con lecturas simultaneas, en función del modelo, de pH, cloro libre y turbidez**

COMPATIBLE NN thing
*Fluidra Connect compatible*

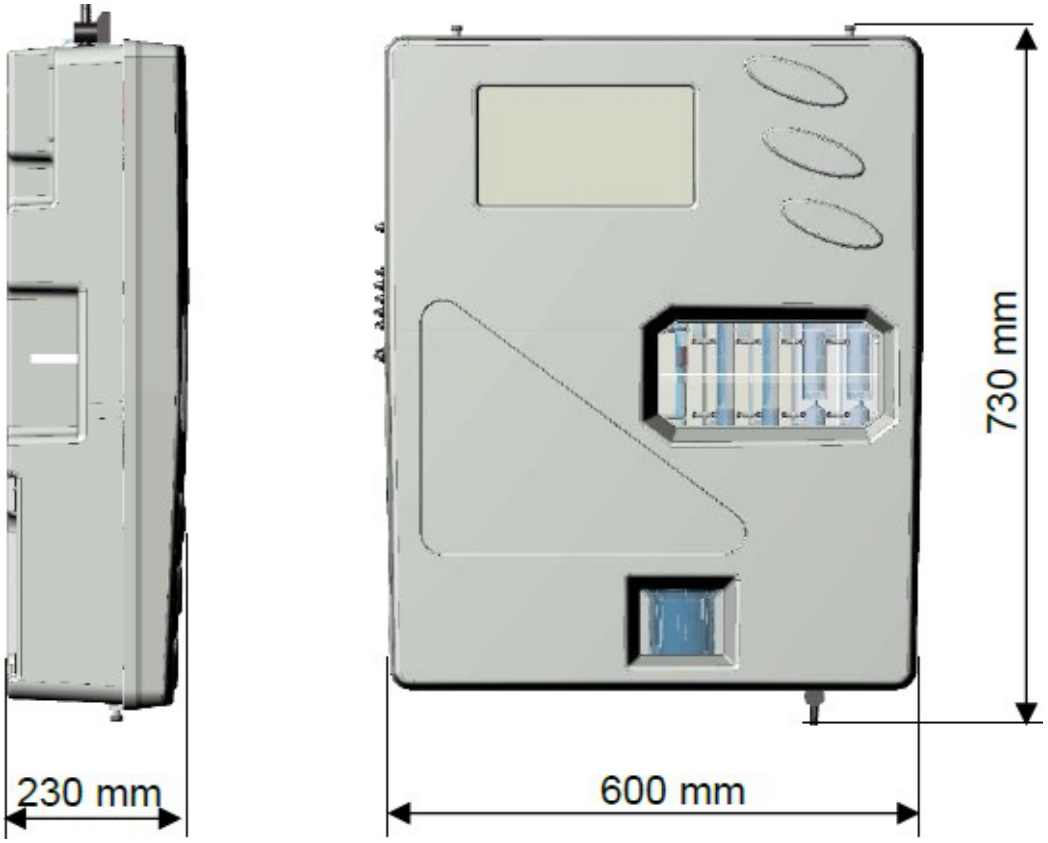
La nueva Guardian Pool combina los elementos de control y dosificación tradicionales con un control digital total de sus valores, lo que facilita la gestión de los parámetros de la piscina y su historial, para analizar o detectar posibles errores. Para gestionar los datos, Guardian Pool cuenta con una memoria interna de 4 MB que nos permite almacenar hasta 16.000 registros que se pueden consultar en forma de datos o mostrar gráficos.
La consulta de datos se puede hacer a través de la pantalla táctil retroiluminada de 7” de alta resolución, descargar a través del puerto USB que también se utiliza para la actualización del firmware, mediante WiFi para controlar el equipo desde cualquier dispositivo móvil, Tablet o PC o bien con la plataforma Fluidra Connect.
Guardian pool destaca por su alto rendimiento en el control y la regulación de los productos químicos utilizados en piscinas Públicas y privadas.

### Características destacadas

Interfaz de usuario multilingüe, intuitiva y fácil de usar que permite la calibración de las medidas y la dosificación de productos químicos.
En función del modelo, lecturas simultáneas de pH, temperatura, cloro libre y turbidez.
Muestra alarmas por parámetros
Compatible con piscinas tratadas con cloro sólido, cloro líquido, bromo, ozono o electrólisis salina.
Sensor de medición del cloro que usa hipoclorito de sodio, dicloro, tricloro o cloro salino, con lectura estable de hasta 500 ppm de ácido isocianúrico.
Es posible utilizar electrodos para leer bromo, peróxido, ácido peracético y ozono adaptando los parámetros de visualización en la pantalla.
Soporte de electrodos con iluminación LED para identificar averías: azul: correcto funcionamiento; amarillo: alarma en variable de medida (pH, ORP, Cloro libre…); rojo: alarma de falta de agua
Diseño modular

## Especificaciones técnicas

Parámetros de medida según modelo:



pH: rango de medida de 0,00 a 14,00
Cloro libre configurable: 0.00…10.00ppm (otros rangos disponibles)
Turbidez: Rango de medida: 0.00…10.00 NTU
Temperatura: Rango de medida: 0.0…50.0ºC

2 relés de control para los parámetros de pH y cloro libre con 230 V, 50/6 0Hz, 6 A.
1 relé configurable para Turbidez
1 relé de control para la temperatura, con 230 V, 50/60 Hz y la posibilidad de asociarlo al cloro total o al cloro combinado.
2 relés de alarma libres de potencial, con posibilidad de vincularlos a cualquier medición, incluido el caudal, o a una alarma del sistema general.
Salidas dobles de relé para cada parámetro, ajustables a salidas de 4-20 mA.
Módulo WiFi con configuración interna de páginas del servidor web.
Puerto de comunicaciones RS485 ModBus compatible con Fluidra Connect.
Las entradas de señal de los sensores tienen un aislamiento galvanizado.
Ajustes de la dosificación proporcional en la bomba proporcional.
Carcasa de ABS con protección IP65

ASTRALPOOL

# Control y dosificación automática

## Para piscina residencial y pública

- Control Basic Plus
- Control Basic Next
- Bombas dosificadoras Optima y Optima Next
- Controllers galvánicos y amperométricos

# Dosificación mediante control automático de cloro y pH

Hoy en día, ¿quién no busca en su entorno productos para facilitarle el trabajo? Pues en la piscina también existen numerosas opciones que permiten controlar de una forma automática el laborioso trabajo de mantenerla desinfectada y en perfectas condiciones.

La automatización de la dosificación y del control del producto químico supone un paso respecto a los tratamientos manuales y no es incompatible con otros tratamientos. Mediante un electrodo de cloro libre o Redox y un electrodo de pH se determinan los niveles de concentración en la piscina. Estas medidas son analizadas por un controlador donde el operario habrá establecido unos valores de consigna óptimos de cloro libre y pH.

## CONTROL BASIC PLUS

**Dimensiones:** 234 x 162 x 108 mm
**Peso:** 1,5 kg.
**Alimentación:** 230 Vac con enchufe

Instalación pared o deposito (con accesorio opcional)

**Display:** LCD 2 líneas 16 caracteres

**Entradas y salidas:**
- Entrada de temperatura Pt100 (sensor no incluido)
- Entrada de nivel mínimo de producto químico
- Entrada de paro/marcha remoto (230 Vac)
- Relé de alarma 250Vac 10A
- Relé de salida para Elemento externo 250 Vac 10A (por ejemplo: Electroválvula)
- Interruptor
- Comunicaciones Modbus RTU

Equipo único para pH o ORP, se solicitan los Electrodos por separado.

| Serie Control Basic Plus | |
|---|---|
| 66159 * | Serie Control Basic PLUS 1,5 l/h / 1,5 bar (electrodo no incluido) |
| 66160 * | Serie Control Basic PLUS 5,0 l/h / 1,5 bar (electrodo no incluido) |

* Códigos que sustituyen a los antiguos Control Basic 57129 y 57130 respectivamente.

| Electrodo con Soluciones de Calibración | |
|---|---|
| 36004 | Kit pH con solución patrón pH4 y pH7 |
| 36005 | Kit ORP con solución patrón 465mV |

## CONTROL BASIC NEXT

**Dimensiones:** 191 x 155 x 123 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared.

**Display:** LCD 2 líneas 8 caracteres

**Entradas y salidas:**
- Entrada de paro/marcha remoto (230 Vac)

Nueva serie NEXT, incluye electrodo de pH y ORP según la versión.

| Serie Next | |
|---|---|
| 66156 | Control Basic pH SPA NEXT 0,4 l/h / 1,5 bar con electrodo pH y solución patrón pH4 y pH7 |
| 66157 | Control Basic ORP SPA NEXT 0,4 l/h / 1,5 bar con electrodo ORP y solución patrón 465mV |
| 66162 | Control Basic pH NEXT 1,5 l/h / 1,5 bar con electrodo pH y solución patrón pH4 y pH7 |
| 66163 | Control Basic ORP NEXT 1,5 l/h / 1,5 bar con electrodo ORP y solución patrón 465mV |
| 66336 | Control Basic pH NEXT 3 l/h / 1,5 bar con electrodo pH y solución patrón pH4 y pH7 |
| 66337 | Control Basic ORP NEXT 3 l/h / 1,5 bar con electrodo ORP y solución patrón 465mV |

ASTRALPOOL

## REDOX BASIC EV PLUS

**Dimensiones:** 234 x 162 x 108 mm
**Peso:** 1,5 kg.
**Alimentación:** 230 Vac con enchufe

Instalación pared o deposito (con accesorio opcional)

**Display:** LCD 2 líneas 16 caracteres

**Entradas y salidas:**
- Entrada de temperatura Pt100 (sensor no incluido)
- Entrada de nivel mínimo de producto químico
- Entrada de paro/marcha remoto (230 Vac)
- Relé de alarma 250Vac 10A
- Relé de salida para Elemento externo 250 Vac 10A (por ejemplo: Electroválvula)
- Interruptor
- Comunicaciones Modbus RTU

Equipo único para pH o ORP, se solicitan los Electrodos por separado.

| Serie Redox Basic EV Plus | |
|---|---|
| 66161 * | Control Redox Basic EV PLUS (electrodo no incluido) |

* Código que sustituye al antiguo Redox Basic EV 57131.

| Electrodo con Soluciones de Calibración | |
|---|---|
| 36004 | Kit pH con solución patrón pH4 y pH7 |
| 36005 | Kit ORP con solución patrón 465mV |

## REDOX BASIC EV NEXT

**Dimensiones:** 191 x 155 x 123 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared.

**Display:** LCD 2 líneas 8 caracteres

**Entradas y salidas:**
- Entrada de paro/marcha remoto (230 Vac)

Nueva serie NEXT, incluye electrodo ORP.

| Serie Redox Basic EV Next | |
|---|---|
| 66174 | Redox basic EV Next con electrodo ORP con solución patrón 465mV |

**Fluidra Connect Compatible.**
Equipo compatible con la plataforma Fluidra Connect

## CONTROL BASIC DOBLE pH - EV

**Dimensiones:** 234 x 162 x 108 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared (se suministran accesorios)

**Display:** LCD 2 líneas 16 caracteres

**Entradas y salidas:**
- Entrada de temperatura Pt100 (sensor no incluido)
- Entrada de nivel mínimo de producto químico
- Entrada de paro/marcha remoto (230Vac)
- Relé de alarma 250Vac 10A para pH
- Relé de alarma 250Vac 10A para ORP
- Relé de alarma general.
- Interruptor

**Suministro con equipo Control Basic doble pH-EV:**
- Electrodo de pH con 6 m de cable
- Electrodo de ORP con 6 m de cable
- Soluciones de calibración pH4, pH7 y 465mV
- Soportes de Electrodo de pH y ORP
- 2 collarines DN5
- Manual de instrucciones multilenguaje

| Control Basic doble pH - EV | |
|---|---|
| 66158 | Control Basic Doble pH - EV SPA 0,4 l/h con electrodos de pH y ORP y soluciones patrón |
| 64983 | Control Basic Doble pH - EV 1,5 l/h con electrodos de pH y ORP y soluciones patrón |

| Serie Control Basic doble pH-EV Plus | |
|---|---|
| 66180 * | Control Basic Doble pH-EV 1,5 l/h electrodos de pH y ORP y soluciones patrón |

* Comunicaciones Modbus RTU.

**Fluidra Connect Compatible.**
Equipo compatible con la plataforma Fluidra Connect

## OPTIMA MAN

**Dimensiones:** 237,5 x 233,5 x 109 mm
**Peso:** 1,5 kg.
**Alimentación:** 230 Vac con enchufe

Instalación pared ( se suministran accesorios ), u opcionalmente con pie para montaje sobre deposito (código 36830)

**Doble regulación:** 0-100% o 0-20%

**Entradas y salidas:**
- Entrada de nivel mínimo de producto químico
- Interruptor

| Optima Man | |
|---|---|
| 57132 | Optima MAN Tipo B (5 l/h / 10 bar - 8 l/h / 2 bar) (electrodo no incluido) |
| 57133 | Optima MAN Tipo C (10 l/h / 10 bar - 18 l/h / 1 bar) (electrodo no incluido) |
| 57135 | Optima MAN Tipo D (20 l/h / 5 bar - 40 l/h / 2 bar) (electrodo no incluido) |

## OPTIMA MAN NEXT

**Dimensiones:** 191 x 155 x 131 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared ( se suministran accesorios )

Regulación 0-100%

| Optima Man Next | |
|---|---|
| 66164 | Optima MAN NEXT (3 l/h / 10 bar - 5 l/h / 8 bar) (electrodo no incluido) |

ASTRALPOOL

## OPTIMA PRO

**Dimensiones:** 237,5 x 233,5 x 109 mm
**Peso:** 1,5 kg.
**Alimentación:** 230 Vac con enchufe

Instalación pared (se suministran accesorios)
Opcionalmente con pie para montaje sobre deposito (código 36830)

**Display:** 2 líneas 16 caracteres

**Entradas y salidas:**
- Indicación en impulsos/minuto, l/h, gal/h, . . .
- Entrada de nivel mínimo de producto químico
- Entrada analógica 0/4. . . .20mA o inversa
- Entrada de pulsos para dosificación proporcional desde contador emisor de impulsos
- Paro marcha remoto
- Entrada de electrodo de dosificación (opcional)

| Optima Pro | |
|---|---|
| 57136 | Optima PRO Tipo B (5 l/h / 10 bar - 8 l/h / 2 bar) |
| 57137 | Optima PRO Tipo C (10 l/h / 10 bar - 18 l/h / 1 bar) |
| 57138 | Optima PRO Tipo D (20 l/h / 5 bar - 40 l/h / 2 bar) |

## OPTIMA PRO NEXT

**Dimensiones:** 191 x 155 x 131 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared ( se suministran accesorios )

**Display:** LCD 2 líneas 8 caracteres

**Entradas y salidas.**
- Indicación en impulsos/minuto.
- Entrada de nivel mínimo de producto químico
- Entrada analógica 0/4. . . .20mA o inversa
- Entrada de pulsos para dosificación proporcional desde contador emisor de impulsos
- Paro marcha remoto

| Optima Pro Next | |
|---|---|
| 66165 | Optima PRO NEXT (3 l/h / 10 bar - 5 l/h / 8 bar) |

## OPTIMA pH/ORP

**Dimensiones:** 237,5 x 233,5 x 109 mm
**Peso:** 1,5 kg.
**Alimentación:** 230 Vac con enchufe

Instalación pared (se suministran accesorios)
Opcionalmente con pie para montaje sobre deposito (código 36830)

**Display:** 2 líneas 16 caracteres

**Entradas y salidas:**
- Entrada de temperatura Pt100 (sensor no incluido)
- Entrada de control de nivel
- Entrada de sensor de dosificación (opcional)
- Entrada de contador emisor de pulsos
- Paro marcha remoto
- Salida relé de alarma
- Salida 4. . . 20mA repetición de medida no aislada galvánicamente
- Comunicaciones Modbus RTU

Equipo único para pH o ORP, se solicitan los Electrodos por separado

| Optima pH/ORP | |
|---|---|
| 66179 * | Optima PRO Tipo C (10 l/h / 10 bar - 18 l/h / 1 bar) (electrodo no incluido) |

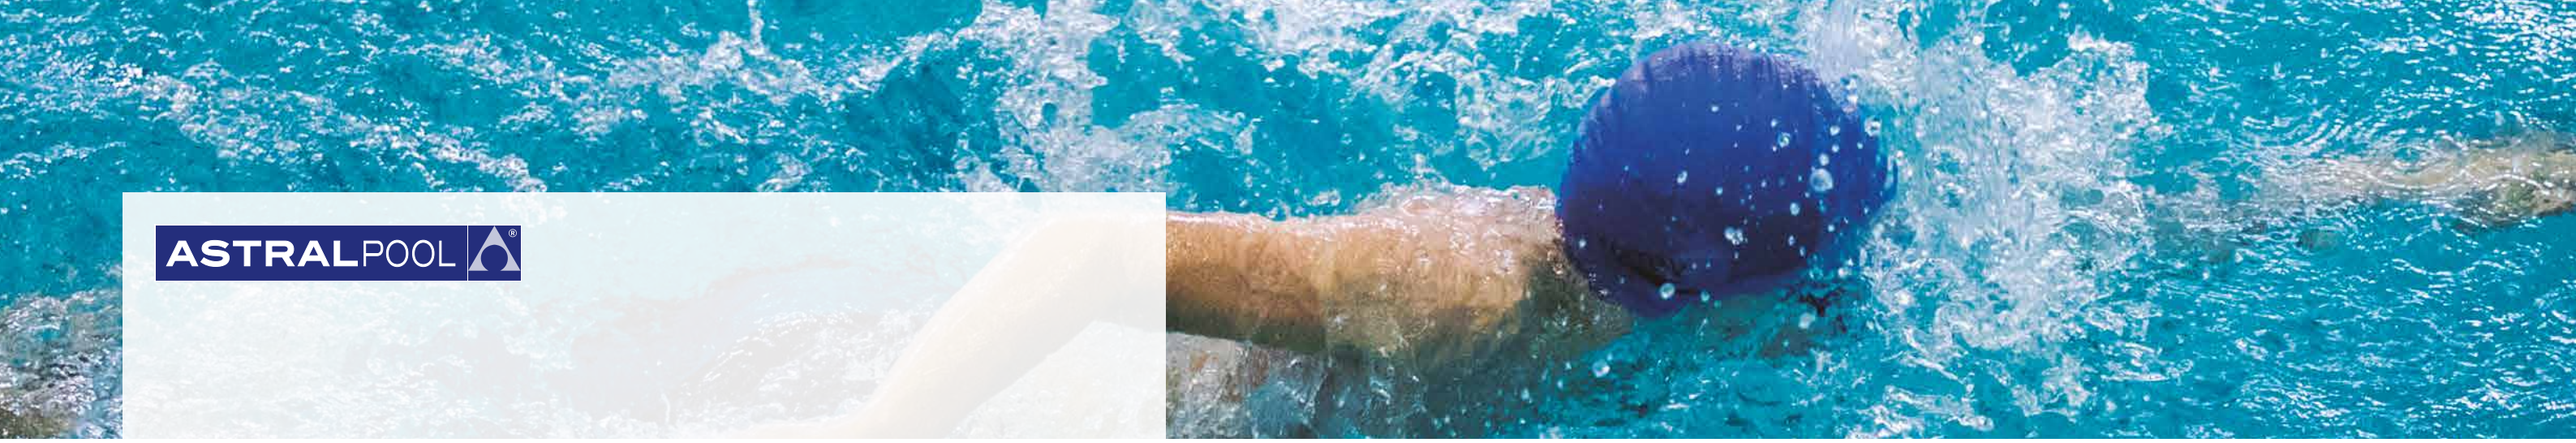
* Código que sustituye al antiguo Optima pH/ORP 57131.

| Electrodo con Soluciones de Calibración | |
|---|---|
| 36004 | Kit pH con solución patrón pH4 y pH7 |
| 36005 | Kit ORP con solución patrón 465mV |

## OPTIMA pH/ORP NEXT

**Dimensiones:** 191 x 155 x 131 mm
**Peso:** 1 kg.
**Alimentación:** 230 Vac sin enchufe

Instalación pared ( se suministran accesorios )



**Display:** LCD 2 líneas 8 caracteres

**Entradas y salidas:**
- Entrada de temperatura Pt100 (sensor no incluido)
- Entrada de control de nivel
- Paro marcha remoto

Equipo único para pH o ORP, se solicitan los Electrodos por separado

| Optima pH/ORP Next | |
|---|---|
| 66166 | Optima pH/ORP NEXT (3 l/h / 10 bar - 5 l/h / 8 bar) (electrodo no incluido) |

**Fluidra Connect Compatible.**
Equipo compatible con la plataforma Fluidra Connect

## CONTROLLER GALVÁNICO

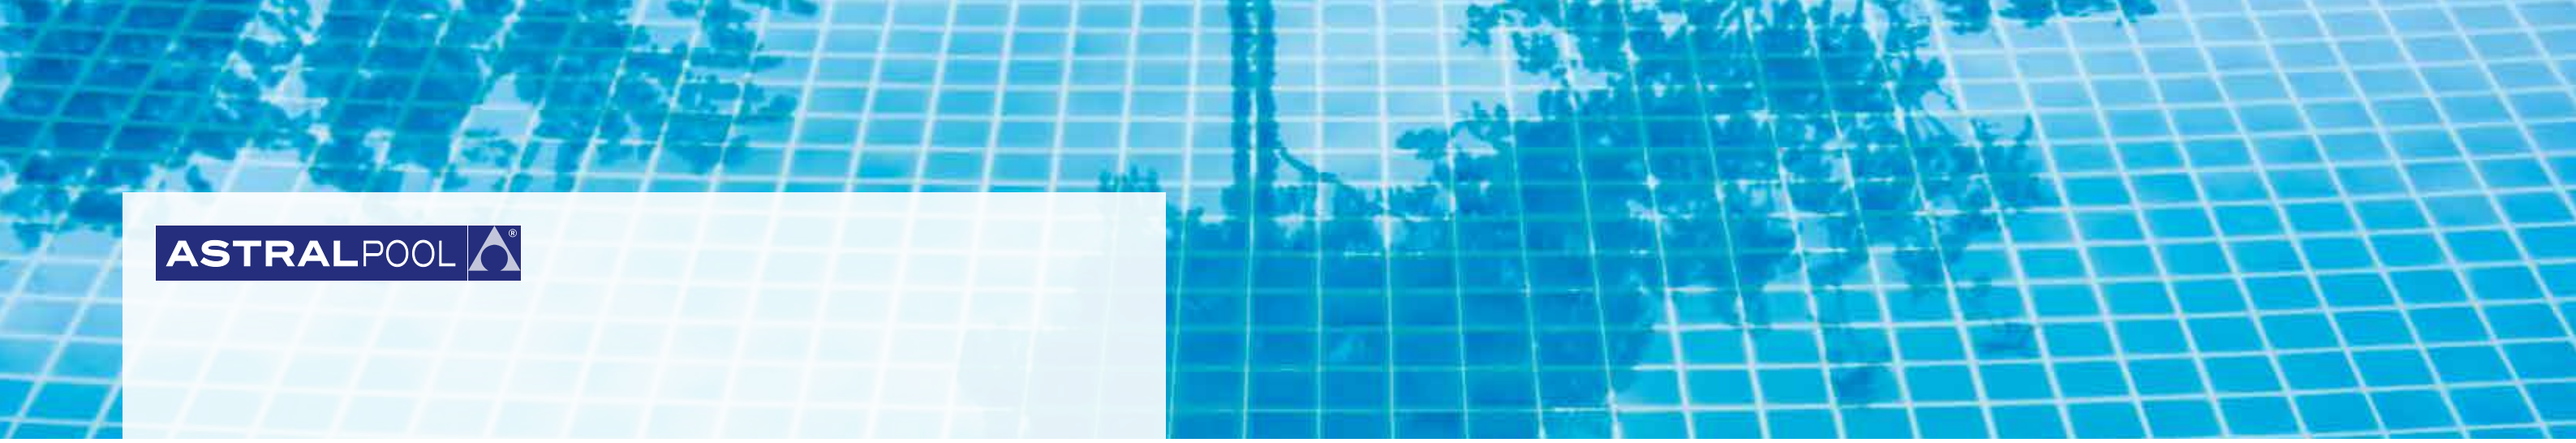
### 66178 Controller pH / ORP / Temperatura

- Rango de medida de pH 0.0 - 14.00
- Rango de medida de ORP -1500mV - +1500mV
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y ORP
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y ORP
- Salida 0/4 - 20mA de repetición de medida de pH y ORP.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y ORP
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Electrodo pH y ORP incluido
- Sensor pT100

### 66177 Controller pH / Cloro libre galvánico / Temperatura

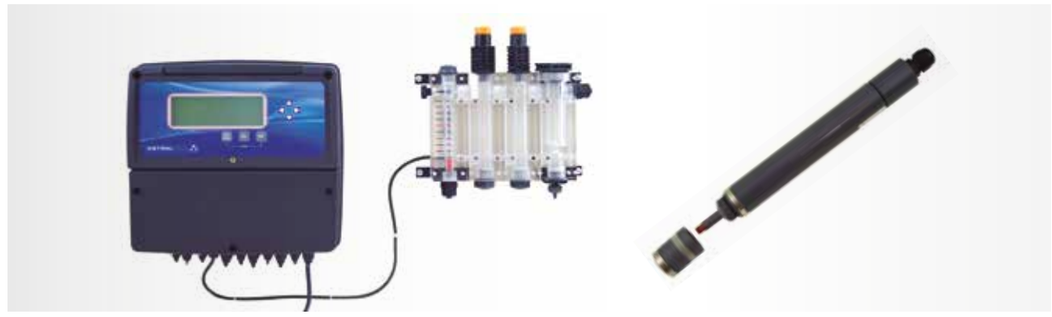
- Rango de medida de pH 0.0 - 14.00
- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y cloro
- Salida 0/4 - 20mA de repetición de medida de pH y cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Electrodo pH y Cloro libre galvánico incluido
- Sensor pT100

### 66176 Controller pH / ORP / Cloro libre / Temperatura



- Rango de medida de pH 0.0 - 14.00
- Rango de medida de ORP -1500mV - +1500mV
- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y Cloro
- Salida 0/4 - 20mA de repetición de medida de pH, ORP y Cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y Cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Sensor pT100

### 66175 Controller Cloro libre / Temperatura



- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de Cloro
- Salida 0/4 - 20mA de repetición de medida de Cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de Cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración 465mV
- Medidor portátil manual de Cloro libre
- Electrodo Cloro libre galvánico incluido
- Sensor pT100

**Fluidra Connect Compatible.**
Equipo compatible con la plataforma Fluidra Connect

## CONTROLLER AMPEROMÉTRICO

### 66168 Controller pH / Cloro libre / Temperatura

- Rango de medida de pH 0.0 - 14.00
- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y cloro
- Salida 0/4 - 20mA de repetición de medida de pH y cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Electrodo pH y Cloro libre amperométrico incluido
- Sensor pT100

### 66169 Controller pH / ORP / Cloro libre / Temperatura

- Rango de medida de pH 0.0 - 14.00
- Rango de medida de ORP -1500mV - +1500mV
- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y Cloro
- Salida 0/4 - 20mA de repetición de medida de pH, ORP y Cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y Cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Electrodo pH, ORP y Cloro libre amperométrico incluido
- Sensor pT100

### 66170 Controller pH / ORP / Cloro libre / Cloro total / Temperatura

- Rango de medida de pH 0.0 - 14.00
- Rango de medida de ORP -1500mV - +1500mV
- Rango de medida de Cloro libre 0.00 – 5.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Cloro libre
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y Cloro
- Salida 0/4 - 20mA de repetición de medida de pH y Cloro.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y Cloro
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Cloro libre
- Electrodo pH, ORP y Cloro libre amperométrico y Cloro total incluido
- Sensor pT100

### 68215 Controller pH / Bromo / Temperatura

- Rango de medida de pH 0.0 - 14.00
- Rango de medida de Bromo 0.00 – 10.00 ppm
- Rango de temperatura: -5 - 50ºC
- Relé 230V 50/60Hz para activación de bomba de pH y Bromo
- Relé 230V 50/60Hz para control de temperatura
- Relé 230V 50/60Hz temporizado
- Salida de frecuencia de 20 a 160 imp/min para activación de bomba de pH y Bromo
- Salida 0/4 - 20mA de repetición de medida de pH y Bromo.
- Entrada de paro marcha alimentado
- Entrada de nivel mínimo de producto de pH y Bromo
- Relé de alarma general
- Salida RS485 MODBUS
- Detector de falta de muestra
- Válvula de ajuste fino
- Rotámetro integrado
- Filtro de 5" con cartucho filtrante 80 micras y escuadra de sujeción
- Soluciones de calibración pH7, pH4 y 465mV
- Medidor portátil manual de pH y Bromo
- Electrodo pH y Bromo amperométrico incluido
- Sensor pT100

## WALL CONDUIT IN ABS/PVC-U ADJUSTABLE LENGTH

**1. GENERAL SAFETY INSTRUCTIONS**

• This product should be installed according to the specific instructions given. All safety regulations must be followed at all times to avoid accidents.
• The user must ensure that all assembly and maintenance work is carried out by an officially qualified person, who must have read the specific instructions for installation and servicing in this manual.
• Avoid knocking during shipment as this can damage the product.
• Store the product in its original packaging, protected from damp and direct sunlight.
• The proper installation and handling of this product, as well as respecting the maximum pressure and temperature ranges specified in this manual, are essential for prolonging the service life of the conduit.
• The liquid handled must be compatible with the materials of the wall conduit. Either see the chemical resistance tables published by Cepex or ask its Technical Department.
• Before doing any maintenance work on the piping or the conduit, ensure that the system has been depressurized by easing the pressure and bleeding the pipes, as described in the product's safety instructions.
• Check that the product is not damaged before installation.
• The product supplied is made of ABS or PVC-U, which may be damaged by chemical products. Use a specially formulated adhesive for PVC or ABS for the parts to be glued together. Under no circumstances should other products be used, such as adhesive sealants, fillers, silicone glues, etc.

**2. SPECIFICATIONS**

Wall conduit designed for installation in pool shell walls (usually for lighting or suction and return inlets).
• Ranges in length from 150 to 300 mm, which can be cut to the length required by the user depending on the thickness of the pool's walls (the white ABS conduits have markings for this purpose) (Fig. 1).
Material: ABS (white)/PVC-U (gray).
• Maximum pressure (water supply): 4 bar
• Temperature range: 15–35 ºC
For ease of installation, designed with holes in the ribs of the wall for fastening to the pool structure (Fig. 1).
• 2 different basic models:
- For concrete pools
- For liner pools (with bespoke pool cover)

**3. INSTALLATION (Fig. 2)**

1. Put the wall conduit in the right position before concreting the walls. It can be held in place using the support holes on the ribs (it is recommended that the holes be covered over before concreting to prevent the concrete from getting between the parts for installing the conduit).
2. After concreting and drying the walls, the conduit's surplus length can be trimmed off.
3. Thread the cable through the wall conduit (if lighting is to be installed).
4. Glue or thread the piping or accessory outside the pool shell (review the instructions for gluing in the Cepex Technical Catalog and observe the recommended drying times).
- External thread and smooth internal diameter: the wall conduit can be attached to the piping by fitting a threaded accessory to the external diameter or a glued one to the internal diameter.
- Smooth external and internal diameter: the wall conduit can be glued directly to the piping or glued accessory.
5. Glue or thread the fixture (projector, inlet, etc.) to the front of the wall.

In the case of liner pools, place the liner below the conduit's sleeve as shown in the diagram (Fig. 3).

## TRAVERSÉE EN ABS/PVC-U LONGUEUR ADAPTABLE

**1. CONSIGNES GÉNÉRALES DE SÉCURITÉ**

• Ce produit doit être installé conformément aux instructions spécifiques de chaque installation. Toutes les législations en matière de sécurité doivent être respectées à tout moment pour éviter les accidents.
• L'utilisateur doit s'assurer que tout le travail de montage et d'entretien est réalisé par une personne autorisée et qualifiée et que cette dernière a lu préalablement les instructions d'installation et de mise en service spécifiques énoncées dans ce manuel.
• Les coups doivent être évités lors du transport, car ils risquent d'endommager le produit.
• Le produit doit être entreposé dans son emballage d'origine, à l'abri de l'humidité et des rayons directs du soleil.
• Pour préserver la durée de vie de la traversée, il est indispensable de l'installer et de la manipuler correctement, ainsi que de respecter les conditions de pression et de température maximales indiquées dans ce manuel.
• Le liquide conduit doit être compatible avec les matériaux de la traversée. Vous pouvez consulter les tableaux de résistance chimique publiés par Cepex ou contacter le service technique.
• Avant d'effectuer toute opération d'entretien sur le tuyau ou la traversée, assurez-vous que le système est dépressurisé en libérant la pression et en vidant les tuyaux, conformément aux consignes de sécurité de chaque produit.
• Avant de procéder à l'installation, vérifiez que le produit n'est pas endommagé.
• Le produit fourni est fabriqué en ABS ou PVC-U, matériaux susceptibles d'être endommagés par certains produits chimiques. Pour les collages, utilisez une colle spécialement conçue pour le PVC ou l'ABS. N'utilisez en aucun cas d'autres produits comme des mastics-colles, des enduits de remplissage, des colles à base de silicone, etc.

**2. CARACTÉRISTIQUES**

Traversée conçue pour être installée sur les parois du bassin de la piscine (généralement pour l'éclairage ou les buses d'aspiration ou de refoulement).
• Plage de longueurs maximales 150 mm - 300 mm. Possibilité de découpe selon la longueur dont a besoin l'utilisateur, en fonction de l'épaisseur des parois de la piscine (les traversées en ABS blanc arborent des marques à cette fin) (Fig.1).
• Matériau : ABS (blanc) / PVC-U (gris).
• Pression maximale (passage de l'eau) : 4 bar.
• Plage de températures : 15 - 35 ºC.
Produit conçu avec des orifices au niveau des nervures afin de fixer le produit sur la structure de la piscine, ce qui en facilite l'installation (Fig. 1).
• 2 modèles de base différents :
- Pour piscine en béton
- Pour piscine en liner (avec cache esthétique)

**3. INSTALLATION (Fig. 2)**

1. Placer la traversée dans la position correcte avant de bétonner les parois. Il est possible de la maintenir à l'aide des orifices de fixation situés au niveau des nervures (il est recommandé de boucher les orifices avant de bétonner afin d'empêcher le béton de pénétrer dans les pièces d'installation de la traversée).
2. Après le bétonnage, une fois les parois sèches, il est possible de couper la traversée si elle est trop longue.
3. Passer le câble dans la traversée (pour l'installation d'un luminaire).
4. Coller ou visser le conduit ou l'accessoire à l'extérieur du bassin de la piscine (consulter les instructions de collage dans le catalogue technique de Cepex et respecter les temps de séchage indiqués).
- Extérieur fileté et intérieur lisse : il est possible de relier la traversée au tuyau avec un accessoire vissé sur l'extérieur ou collé sur l'intérieur de la traversée.
- Extérieur et intérieur lisses : il est possible de coller la traversée directement au tuyau ou à tout autre accessoire à coller.
5. Coller ou visser l'élément de la paroi (projecteur, buse, etc.) sur la partie avant.

Dans le cas d'une piscine en liner, placer le liner en dessous du cache de la traversée comme indiqué dans l'illustration (Fig. 3).

## PASAMUROS EN ABS / PVC-U LONGITUD ADAPTABLE

**1. INSTRUCCIONES GENERALES DE SEGURIDAD**

• Este producto debe ser instalado acorde con las instrucciones específicas para cada instalación. Todas las legislaciones de seguridad deben ser respetadas en todo momento para evitar accidentes.
• El usuario debe asegurarse que todo el trabajo de montaje y mantenimiento es llevado a cabo por personal autorizado y cualificado, y que éste ha leído previamente las instrucciones de instalación y servicio especificadas en este manual.
• Evite golpes durante el transporte, ya que éstos pueden dañar el producto.
• Almacene el producto en su embalaje original, protegido de la humedad y los rayos del sol directos.
• La correcta instalación y manejo de este producto, así como el respeto a las condiciones de máxima presión y temperatura especificados en este manual son esenciales para preservar la vida de servicio del pasamuros.
• El líquido conducido debe ser compatible con los materiales del pasamuros. Puede consultar las tablas de resistencia química publicadas por Cepex o preguntar al departamento técnico.
• Antes de llevar a cabo cualquier operación de mantenimiento en la tubería o el pasamuros, debe asegurarse de que el sistema ha sido despresurizado, aliviando la presión y vaciando las tuberías, siguiendo las instrucciones de seguridad de cada producto.
• Antes de la instalación, compruebe que el producto no está dañado.
• El producto suministrado está fabricado en ABS o PVC-U, que pueden ser dañados por productos químicos. Para las encoladuras, usar adhesivo especialmente formulado para PVC o ABS. Bajo ninguna circunstancia se recomienda el uso de otros productos como selladores adhesivos, rellenadores, colas de silicona, etc.

**2. CARACTERÍSTICAS**

Pasamuros concebidos para instalación en las paredes del vaso de la piscina (normalmente iluminación o boquillas de succión o impulsión).
• Rango de longitud máxima de 150mm/300mm que puede ser cortada hasta la extensión que necesite el usuario, dependiendo del espesor de las paredes de la piscina (en los pasamuros de ABS blanco, marcados para ésta finalidad) (Fig.1).
• Material: ABS (blanco) / PVC-U (gris).
• Presión máxima (paso de agua): 4 bar
• Rango de temperatura: 15 - 35 ºC
Diseñado con agujeros en los nervios de la pared para permitir la fijación a la estructura de la piscina, facilitando así su instalación (Fig.1).
• 2 modelos básicos distintos:
- Para piscina de hormigón
- Para piscina con liner (con cubierta estética).

**3. INSTALACIÓN (Fig.2)**

1. Situar el pasamuros en la posición correcta antes de hormigonar las paredes. Puede sujetarlo usando los agujeros de sujeción situados en los nervios (se recomienda tapar los orificios antes de hormigonar para evitar que el hormigón entre en las partes de instalación del pasamuros).
2. Después de hormigonar y secar las paredes, puede recortar la longitud extra del pasamuros.
3. Pasar el cable a través del pasamuros (en caso de instalación de iluminación).
4. Encolar o roscar la tubería o el accesorio en la parte exterior del vaso de la piscina (Revisar instrucciones de encolado en el Catálogo Técnico Cepex y respetar los tiempos de secado indicados).
- Rosca externa y diámetro interno liso: es posible unir el pasamuros a la tubería mediante un accesorio roscado al diámetro exterior o uno encolado al diámetro interno.
- Diámetros externo e interno lisos; es posible encolar el pasamuros directamente a la tubería o algún accesorio encolado.
5. Encolar o roscar el elemento de pared (proyector, boquilla, etc.) en la parte delantera.

En caso de piscinas con liner, situar el liner por debajo de la cubierta del pasamuros como se ve en la ilustración (Fig.3).

**Fig.1**

## PASSANTE A MURO IN ABS / PVC-U
## LUNGHEZZA ADATTABILE

**1. ISTRUZIONI GENERALI DI SICUREZZA**
• Questo prodotto deve essere installato in conformità alle istruzioni specifiche per ciascuna installazione. Tutte le norme di sicurezza devono essere sempre rispettate per evitare incidenti.
• L'utente deve assicurarsi che tutto il lavoro di montaggio e manutenzione sia svolto da personale autorizzato e qualificato, e che tale personale abbia letto le istruzioni di installazione e servizio specificate in questo manuale.
• Evitare colpi durante il trasporto, dato che potrebbero danneggiare il prodotto.
• Conservare il prodotto nel suo imballaggio originale, protetto dall'umidità e dai raggi del sole diretti.
• La corretta installazione e manipolazione di questo prodotto, nonché il rispetto delle condizioni di pressione e temperatura massima specificate in questo manuale sono essenziali per preservare la vita utile del passante a muro.
• Il liquido circolante deve essere compatibile con i materiali del passante a muro.
Può consultare le tabelle di resistenza chimica pubblicate da Cepex o chiedere al reparto tecnico.
• Prima di effettuare qualsiasi operazione di manutenzione sui tubi o sul passante a muro, deve assicurarsi che il sistema sia stato depressurizzato, diminuendo la pressione e svuotando i tubi, secondo le istruzioni di sicurezza di ciascun prodotto.
• Prima dell'installazione, verificare che il prodotto non sia danneggiato.
• Il prodotto fornito è realizzato in ABS o PVC-U, che possono essere danneggiati da prodotti chimici. Per l'incollaggio, utilizzare adesivi appositamente formulati per PVC o ABS. In nessun caso è consigliato l'utilizzo di altri prodotti quali sigillanti adesivi, stucchi, colle siliconiche, ecc.

**2. CARATTERISTICHE**
Passanti a muro progettati per installazione nelle pareti della vasca della piscina (normalmente illuminazione o bocchette di aspirazione o mandata).
• Range di lunghezza massima di 150mm/300mm che può essere tagliata fino alla misura che serve all'utente, a seconda dello spessore delle pareti della piscina (nei passanti a muro di ABS bianco, segnati a questo scopo) (Fig.1).
• Materiale: ABS (bianco) / PVC-U (grigio).
• Pressione massima (passaggio dell'acqua): 4 bar
• Intervallo di temperatura: 15 - 35 ºC
Progettato con fori nelle nervature della parete per consentire il fissaggio alla struttura della piscina, facilitando in questo modo la sua installazione (Fig.1).
• 2 modelli di base distinti:
- Per piscina di cemento
- Per piscina con liner (con copertura estetica).

**3. INSTALLAZIONE (Fig.2)**
1. Posizionare il passante a muro nella posizione corretta prima di cementare le pareti. È possibile fissarlo utilizzando i fori di fissaggio situati nelle nervature (si raccomanda di tappare gli orifizi prima di cementare per evitare che il cemento penetri nelle parti di installazione del passante a muro).
2. Dopo aver cementato e fatto asciugare le pareti, può tagliare la lunghezza extra del passante a muro.
3. Passare il cavo attraverso il passante a muro (in caso di installazione di illuminazione).
4. Incollare o avvitare il tubo o l'accessorio nella parte esterna della vasca della piscina (Controllare le istruzioni di incollaggio nel Catalogo Tecnico Cepex e rispettare i tempi di asciugatura indicati).
- Filettatura esterna e diametro interno liscio: è possibile unire il passante a muro al tubo mediante un accessorio avvitato al diametro esterno o uno incollato al diametro interno.
- Diametri esterno e interno lisci; è possibile incollare il passante a muro direttamente al tubo o qualche accessorio incollato.
5. Incollare o avvitare l'elemento a muro (proiettore, bocchetta, ecc.) nella parte anteriore.

Nel caso di piscine con liner, posizionare il liner sotto la copertura del passante a muro come si vede nell'illustrazione (Fig. 3).

## WANDDURCHFÜHRUNG AUS ABS / PVC-U
## LÄNGE ANPASSBAR

**1. ALLGEMEINE SICHERHEITSHINWEISE**
• Dieses Produkt muss gemäß der für jede Installation spezifischen Anweisungen installiert werden. Zur Vermeidung von Unfällen müssen stets sämtliche Sicherheitsvorschriften eingehalten werden.
• Der Benutzer muss sicherstellen, dass alle Montage- und Wartungsarbeiten von autorisierten Fachkräften ausgeführt werden, und dass diese vorher die in dieser Betriebsanleitung enthaltenen Installations- und Betriebsanweisungen gelesen haben.
• Vermeiden Sie Stöße beim Transport, da diese das Produkt beschädigen können.
• Lagern Sie das Produkt in seiner Originalverpackung, geschützt vor Feuchtigkeit und direkter Sonneneinstrahlung.
• Die korrekte Installation und Handhabung dieses Produkts sowie die Beachtung der in dieser Betriebsanleitung enthaltenen Bedingungen für Maximaldruck und -temperatur sind ausschlaggebend für die Bewahrung der Lebensdauer der Wanddurchführung.
• Die geförderte Flüssigkeit muss mit den Materialien der Wanddurchführung kompatibel sein.
Sie können die von Cepex veröffentlichten Tabellen zur chemischen Beständigkeit einsehen oder sich in der technischen Abteilung erkundigen.
• Vor der Ausführung jeglicher Wartungsarbeiten an den Rohrleitungen oder der Wanddurchführung müssen Sie sicherstellen, dass das System durch Ablassen des Drucks und Entleeren der Rohrleitungen drucklos gemacht wurde. Beachten Sie dabei die Sicherheitshinweise für jedes Produkt.
• Prüfen Sie vor der Installation das Produkt auf Beschädigungen.
• Das gelieferte Produkt besteht aus ABS oder PVC-U, die durch chemische Produkte beschädigt werden können. Für die Verklebungen sind speziell für PVC oder ABS formulierte Klebstoffe zu verwenden. Die Verwendung von anderen Produkten wie Abdichtungsklebern, Füllmassen, Silikonklebern, etc. ist keinesfalls empfehlenswert.

**2. MERKMALE**
Die Wanddurchführungen sind für die Installation in den Schwimmbeckenwänden bestimmt (normalerweise Beleuchtung bzw. Ansaug- oder Einlaufdüsen).
• Der Bereich der Maximallänge von 150mm/300mm kann auf das erforderliche Maß gekürzt werden, abhängig von der Dicke der Schwimmbadwände (an den weißen ABS-Wanddurchführungen sind hierfür Markierungen vorhanden) (Abb.1).
• Material: ABS (weiß) / PVC-U (grau).
• Maximaldruck (Wasserdurchlauf): 4 bar
• Temperaturbereich: 15 - 35 ºC
Konzipiert mit Bohrungen an der Verstärkungsrippe des Kragens, um die Befestigung an der Schwimmbadkonstruktion zu ermöglichen (Abb.1).
• 2 verschiedene Basismodelle:
- Für Betonbecken
- Für Becken mit Liner (mit dekorativer Auskleidungsfolie).

**3. INSTALLATION (Abb.2)**
1. Die Wanddurchführung in die korrekte Position setzen und anschließend die Wände betonieren. Sie können diese fixieren, indem Sie die Montagebohrungen an den Verstärkungsrippen benutzen (vor dem Betonieren sollten die Öffnungen abgedeckt werden, um zu vermeiden, dass Beton in die Installationsteile der Wanddurchführung gerät).
2. Nach dem Betonieren und Trocknen der Wände können Sie die Überlänge der Wanddurchführung kürzen.
3. Das Kabel durch die Wanddurchführung führen (bei Beleuchtungsinstallation).
4. Die Rohrleitung bzw. das Fitting außen am Schwimmbecken verkleben bzw. verschrauben (Prüfen Sie die Hinweise zur Verklebung im technischen Katalog Cepex und halten Sie die angegebenen Trocknungszeiten ein).
- Außengewinde und Innendurchmesser glatt: es ist möglich, die Wanddurchführung durch ein Gewindefitting am Außendurchmesser oder durch ein Klebefitting am Innendurchmesser mit der Rohrleitung zu verbinden.
- Außen- und Innendurchmesser glatt: es ist möglich, die Wanddurchführung direkt mit der Rohrleitung zu verkleben oder mit einem Klebefitting.
5. Das Wandelement (Projektor, Düse, etc.) auf der Vorderseite verkleben oder verschrauben.

Im Fall von Schwimmbecken mit Liner, den Liner wie in der Abbildung dargestellt (Abb.3) unter die Abdeckung der Wanddurchführung legen.

## PASSA-MUROS EM ABS / PVC-U
## COMPRIMENTO ADAPTÁVEL

**1. INTRUÇÕES GERAIS DE SEGURANÇA**
• Este produto deve ser instalado de acordo com as instruções específicas para cada instalação. Todas as legislações em matéria de segurança devem ser sempre respeitadas para evitar acidentes.
• O utilizador deve certificar-se de que todo o trabalho de montagem e manutenção é realizado por pessoal autorizado e qualificado, e que o mesmo leu previamente as instruções de instalação e funcionamento especificadas neste manual.
• Evite golpes durante o transporte, visto que estes poderão danificar o produto.
• Armazene o produto na embalagem original, protegido da humidade e da luz solar direta.
• A correta instalação e manuseamento deste produto, assim como a observância das condições de máxima pressão e temperatura especificados neste manual são essenciais para preservar a vida útil do passa-muros.
• O líquido transportado deve ser compatível com os materiais do passa-muros.
Pode consultar as tabelas de resistência química publicadas pela Cepex ou contactar o departamento técnico.
• Antes de realizar qualquer operação de manutenção na tubagem ou no passa-muros deve certificar-se de que o sistema foi despressurizado, aliviando a pressão e esvaziando as tubagens, seguindo as instruções de segurança de cada produto.
• Antes da instalação, verifique que o produto não está danificado.
• O produto fornecido é fabricado em ABS ou PVC-U, materiais que podem ser danificados por produtos químicos. Para as colagens, utilizar adesivo especialmente formulado para PVC ou ABS. Em nenhuma circunstância é aconselhável a utilização de outros produtos como selantes adesivos, massas de enchimento, colas de silicone, etc.

**2. CARACTERÍSTICAS**
Passa-muros concebidos para instalação nas paredes da bacia da piscina (normalmente, iluminação ou bocais de sucção ou impulsão).
• Intervalo de comprimento máximo de 150 mm/300 mm que permite ao utilizador cortar na dimensão necessária, dependendo da espessura das paredes da piscina (nos passa-muros de ABS branco, marcados para esta finalidade) (Fig. 1).
• Material: ABS (branco) / PVC-U (cinzento).
• Pressão máxima (passagem de água): 4 bar
• Intervalo de temperatura: 15 - 35 ºC
Concebido com orifícios nas nervuras da parede para permitir a fixação à estrutura da piscina, facilitando assim a sua instalação (Fig. 1).
• 2 modelos básicos diferentes:
- Para piscina de betão
- Para piscina com liner (com cobertura estética).

**3. INSTALAÇÃO (Fig. 2)**
1. Colocar o passa-muros na posição correta antes de betonar as paredes. Pode fixá-lo utilizando os orifícios de fixação situados nas nervuras (recomenda-se tapar os orifícios antes de betonar para evitar que o betão entre nas partes de instalação do passa-muros).
2. Depois de betonar e secar as paredes, pode cortar o comprimento extra do passa-muros.
3. Passar o cabo pelo passa-muros (no caso de instalação de iluminação).
4. Colar ou roscar a tubagem ou o acessório na parte exterior da bacia da piscina (rever as instruções de colagem no Catálogo Técnico Cepex e respeitar os tempos de secagem indicados).
- Rosca externa e diâmetro interno liso: é possível unir o passa-muros à tubagem com um acessório roscado ao diâmetro exterior ou um acessório colado ao diâmetro interno.
- Diâmetros externo e interno lisos: é possível colar o passa-muros diretamente à tubagem ou qualquer acessório colado.
5. Colar ou roscar o elemento de parede (projetor, bocal, etc.) na parte dianteira.

No caso das piscinas com liner, colocar o liner por baixo da cobertura do passa-muros como apresentado na ilustração (Fig. 3).

**Fig.1**

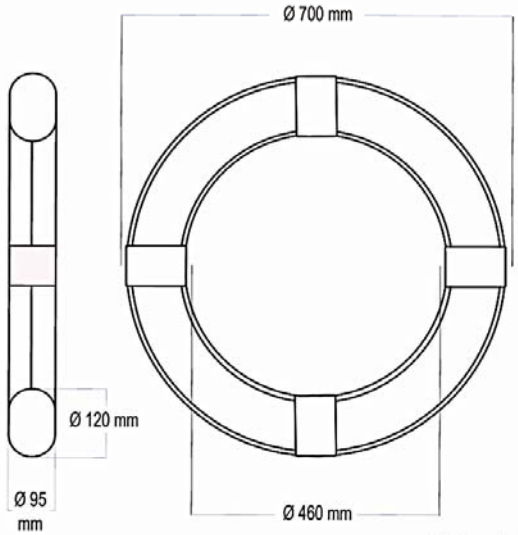
ASTRALPOOL



# ARO SALVAVIDAS DE PISCINA

Medidas aro salvavidas:
. Ø exterior 700 mm
. Ø interior 460 mm
. Alto 95 mm
. Ancho 120 mm

Tipo de material del aro salvavidas:
. Poliestireno expandido
. Listado de alérgenos (si aplica) o declaración de ausencia de alérgenos: No aplica
. Declaración de ausencia de Organismo Modificado Genéticamente (OMG's): No aplica
. Vida útil del producto (caducidad): No caduca

Medidas de la cremallera:
. Anchura de la malla 5,70 +/- 0.05 mm
. Grueso de la malla 2,95 +/- 0,05 mm
. Anchrura de la cremallera 32,5 +/- 0,5 mm
. Longitud de la cremallera NA

Características de la tella:
. Composicíon 100% Acrilico
. Color naranja

Tolerancia dimensional: ± 5 mm

Tella 100% Acrilico de color naranja

# SUMIDEROS PARA PISCINA DE HORMIGÓN
MAIN DRAIN FOR CONCRETE POOLS

- Fabricado en resina de poliéster y fibra de vidrio.
- Acabado de la pieza con gel-coat
- Reja en acero inoxidable o plástico
- Cumple con la normativa europea de no tener orificios superiores a 8 mm y no tener una velocidad superior a 0.5 m/s.
- Se suministra con salidas para encolar tubo de diámetro 75, 90, 110, 125, 140, 160 y 200 mm.
- Válvula hidrostática opcional (código 27138)

- Manufactured in polyester resin and fiber glass.
- Finished in gel-coat
- Grill made of stainless steel or plastic.
- According the European norm, it has holes inferior than 8mm and less than 0.5 m/s of speed.
- It is supplied with connections to glue tube of diameter 75, 90, 110, 125, 140, 160 and 200 mm.
- Optional hydrostatic valve (code 27138)

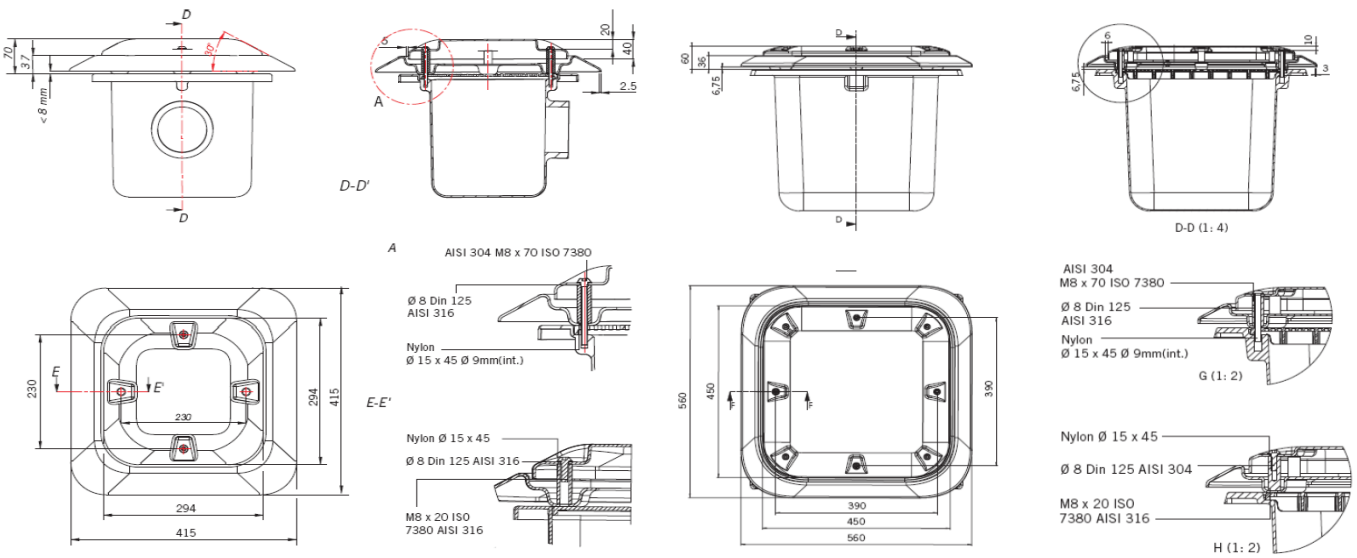
SUMIDEROS PARA PISCINA PREFABRICADA/ MAIN DRAIN FOR A PREFABRICATED SWIMMING POOL



# TAPA ANTIVORTEX
ANTIVORTEX LID

- ✓ Fabricado en resina de poliéster y fibra de vidrio.
- ✓ Acabado de la pieza con gel-coat
- ✓ Para reja en acero inoxidable o plástico
- ✓ Diseñada siguiendo la normativa europea UNE-EN 13451-1-3.
- ✓ Con soportes de nylon.

- ✓ Manufactured in polyester resin and fiber glass.
- ✓ Finished in gel-coat.
- ✓ For grill made of stainless steel or plastic.
- ✓ Designed according the European norm EN 13451-1-3.
- ✓ With nylon supports.

## FEATURES

- PVC-U fittings for the PVC pipe union.
- Material: PVC-U.
- Injection moulding.
- Density: 1,4 g/cm$^3$.
- Color: grey RAL 7024.
- Dimensions: socket fittings D16 to D400 and threaded fittings from ¼" to 4".
- Dimensions:
  Socket fittings according to EN 1452-3.
  Threaded fittings according to ISO 7/1.
- For tubes according to EN 1452-2.
- Socket fittings: we recommend solvent cement THF basis.
- Threaded fittings: in order to guarantee the watertightness, PTFE thread-wrap tape must be used. In PVC-U metal unions, use PVC-U as the male.

## CARACTERÍSTICAS

- Accesorios en PVC-U para unión de tuberías de PVC.
- Moldeo por inyección.
- Densidad: 1,4 g/cm$^3$.
- Color: gris RAL 7024.
- Dimensiones: accesorios encolar de D16 hasta D400 y accesorios roscar de ¼" a 4".
- Dimensiones:
  Accesorios encolar según la norma EN 1452-3.
  Accesorios roscados según la norma ISO 7/1.
- Para tubos según norma EN 1452-2.
- Accesorios encolar: recomendamos el uso de cola a base de THF.
- Accesorios roscados: para garantizar la estanqueidad sólo es admisible el uso de cinta de PTFE. En uniones PVC-U-metal, el macho debe ser el PVC-U.

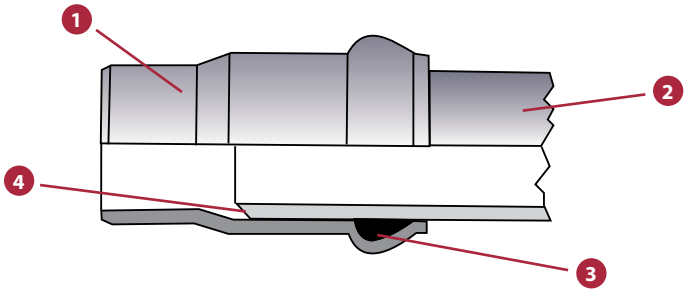
# PVC-U RUBBER-RING JOINT FITTINGS

## *ACCESORIOS EN PVC-U CON JUNTA ELÁSTICA*

### FEATURES

Easy installation fittings, without effort or tools, thanks to its gaskets.
It is compulsory the use of an inner gasket to install it.
Designed to support earth movements or misalignments, ideally suited for underground installations.

It can absorb vibrations or pipe expansions due to its elasticity and flexibility.
To make the installation easier, it is very important to lubricate the gasket correctly.



- Material: PVC-U.
- Density: 1,4 g/cm$^3$.
- Color: grey RAL 7011.
- Dimensions: from D63 to D315.
- Standards: dimensions and characteristics according to EN 1452.

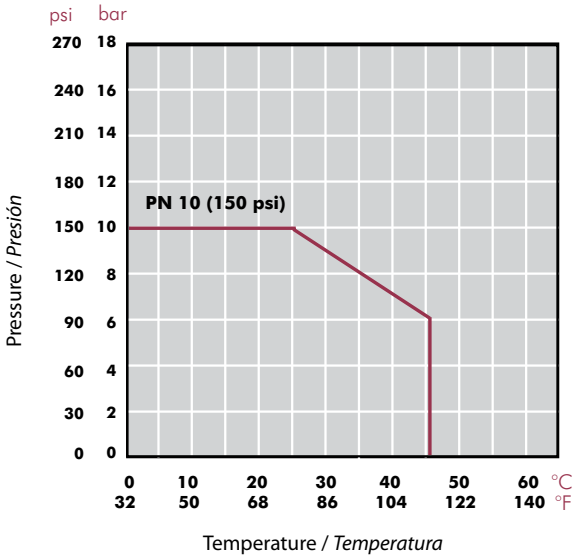
### CARACTERÍSTICAS

Accesorios fáciles de instalar, sin esfuerzo y sin herramientas gracias a las juntas.
Para su correcta instalación es necesaria la junta interior.
Está realizado para poder soportar movimientos de tierra y desalineaciones, ideal para instalaciones enterradas.

Gracias a su elasticidad y flexibilidad, absorbe mejor las vibraciones y la expansión del tubo.
Es muy importante una buena lubricación de la junta para instalar el tubo cómodamente.

- Material: PVC-U.
- Densidad: 1,4 g/cm$^3$.
- Color: gris RAL 7011.
- Dimensiones: de D63 hasta D315.
- Normas: dimensiones y características según la norma EN 1452.

| FIG. | Parts | Despiece | Material |
|---|---|---|---|
| 1 | Union socket | Manguito unión | PVC-U |
| 2 | Pipe | Tubería | - |
| 3 | Gasket | Junta | NBR |
| 4 | Chamfer to make an easier installation | Chaflán para una inserción más fácil | - |



## TECHNICAL CHARACTERISTICS

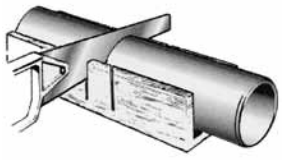
Working pressure at 20°C (73°F) water temperature:
- D63 - D315: PN 10 (150 psi)

## CARACTERÍSTICAS TÉCNICAS

Presión de servicio a 20°C (73°F) temperatura de agua:
- D63 - D315: PN 10 (150 psi)

## PRESSURE / TEMPERATURE GRAPH
## *DIAGRAMA PRESIÓN / TEMPERATURA*

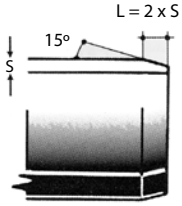
Life: 20 years
Hydrostatic maximum pressure a compnent may outstand in continous service (without overpressure)



*Vida útil: 20 años*
*Presión hidrostática máxima que un componente es capaz de soportar en servicio continuo (sin sobrepresión)*

## ASSEMBLY

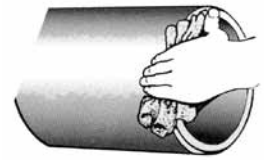
**A.** Before assembling rubber ring fittings proceed as follows. In case of pipe end damaged: cut the pipe with a proper tool to obtain a square end.



## MONTAJE

**A.** Antes de instalar los accesorios de junta elástica, proceda de la siguiente manera. En caso que el extremo del tubo está dañado: corte el tubo con una herramienta especial para obtener un corte recto perpendicular al eje.

**B.** Chamfer the pipe with a special tool as shown in the following picture and table.



**B.** Chaflane el tubo con una herramienta especial según lo mostrado en la imagen y el cuadro siguiente.

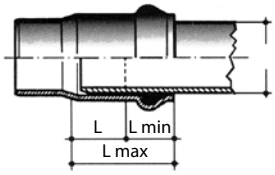
| D (mm) | 63 | 75 | 90 | 110 | 125 | 140 | 160 | 200 |
|---|---|---|---|---|---|---|---|---|
| L (mm) | 6,0 | 7,0 | 9,0 | 10,5 | 12,0 | 13,5 | 15,5 | 19,0 |

**C.** Clean carefully the external surface of the pipe and lubricate only with soapy water (do not use oil or grease).

**C.** Limpie cuidadosamente la superficie externa del tubo. Lubrique solamente con agua jabonosa (no utilice aceite o grasa).

**D.** Clean carefully the socket seat in the fitting. Check gasket conditions. Introduce the sealing ring into its specific seat.

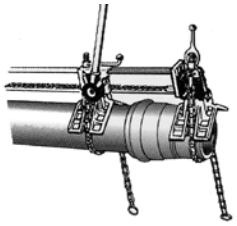
**D.** Limpie cuidadosamente el asiento de la junta del accesorio. Compruebe las condiciones de la junta. Introduzca la junta en su asiento específico.



**E.** Lubricate the internal surface of the rubber ring in the same way as the pipe.

**E.** Lubrique la superficie interna de la junta con un lubrificante adecuado de la misma manera que el tubo.

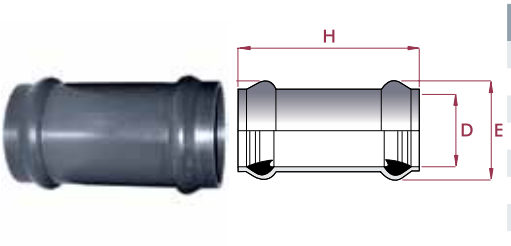
**F.** Mark on the outside of the pipe the depth to be inserted into the socket of the fitting according to the lengths in the following table.



**F.** Marque en el exterior del tubo la profundidad a ser insertada en el accesorio según los longitudes del cuadro.

| D (mm) | 63 | 75 | 90 | 110 | 125 | 140 | 160 | 200 |
|---|---|---|---|---|---|---|---|---|
| L max | 94 | 104 | 109 | 115 | 124 | 133 | 139 | 169 |
| L min | 42 | 45 | 50 | 55 | 60 | 69 | 75 | 85 |
| L | 52 | 59 | 59 | 60 | 64 | 64 | 64 | 64 |

**G.** To introduce the tube into the fitting we recommend to use the ampliance device shown in picture.
- Fix the special assembling device onto the pipe.
- Fix the fitting upon the device.
- With the lever, slide the fitting onto the pipe till you reach the reference mark.



**G.** Para introducir el tubo en el accesorio se aconseja utilizar un equipo como el mostrado en la imagen.
- Fije un dispositivo de ensamblaje especial sobre el tubo.
- Fije el accesorio sobre el dispositivo.
- Con la palanca, deslice el accesorio sobre el tubo hasta que se alcance la marca de referencia.

# VICTAULIC® COUPLING
## *ENLACE VICTAULIC®*

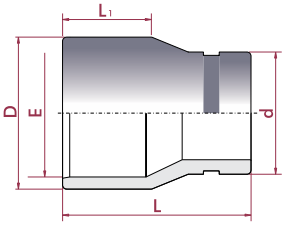
Designed with a heavy housing for high pressure service. The housing key is wider than standard and the coupling housing is designed to clamp the bottom of the groove, thus providing an essentially rigid joint. It also eliminates movement at the joint.

Reduces linear or angular movement and is useful for valve connections and other points where rigidity is required.

Diseñado con una resistente cubierta para soportar altas presiones. La llave es más ancha que las estándars y el enlace está diseñado para agarrar el fondo de la ranura, proporcionando una unión rígida. También está pensado para eliminar los movimientos en la unión.

Reduce el movimiento lineal o angular y se puede usar para conexiones con válvulas o en otros sitios dónde se requiera rigidez.

- Fast assembly.
- Allows misalignments up to 1º30'.
- EPDM joint.
- Coupling made of coated ductile iron.
- Bolts made of zinc plated carbon steel.



- Montaje rápido.
- Permite desalineaciones de hasta 1º30'.
- Junta en EPDM.
- Brida en hierro fundido pintado.
- Tornillos en acero zincado.

At the time to make the relationship between adaptor and flange, for the compatibility it prevails the D size of the corresponding pipe.
*Siempre que se deba relacionar manguito y brida, prevalece en su compatibilidad la medida D del tubo correspondiente.*

# PVC-U UNIONS
## *ENLACES 3 PIEZAS PVC-U*

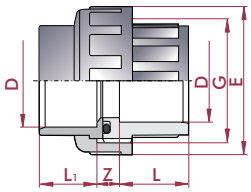
Unions are the preferred choice over flange adaptors for the connection of plastic pipes. With no metal parts, there is no corrosion and the weight is also reduced.
They are only available in small sizes (up until D110).
The union ends are manufactured in plain ends for solvent socket or thread always according the sizing standards, doing this system appropiate to adapt to other elements or systems.
Cepex unions feature an o-ring in order to ensure better unions, so it is no needed the use of PTFE tape between nut and union end (ir is only needed in the threaded ends).
They are not recommended when connected to pipe under bending stress.
The union nut should be tightened by hand. Must use a strap wrench for big sizes (D75, D90, D110).
With this type of unions, it is possible to mix several plastic materials.

Cuando hay que unir plásticos, éstos son preferidos a las bridas, ya que no contienen ninguna parte de metal y el diámetro exterior es más reducido.
En contrapartida sólo están disponibles para diámetros pequeños (hasta D110).
Los manguitos de conexión están fabricados en terminaciones lisas de encolado o roscadas, siempre bajo normativas standards, haciendo posible la apdaptación a otros componentes (incluso de materiales distintos).
Los enlaces 3 piezas Cepex incorporan junta para asegurar estanqueidad entre los dos manguitos de la unión, por lo que no debe usarse cinta de PTFE entre tuerca y manguito (usar cinta de PTFE solamente en las terminaciones de manguito roscadas).
No son recomendables cuando el tubo tenga que estar sometido a fuerza de flexión (debido a posibles desalineaciones).
No es necesario el uso de ninguna herramienta, se rosca con las manos. Usar llave de cinta en diámetros grandes (D75, D90, D110).
Mediante estos enlaces, se pueden combinar diferentes tipos de plásticos.

## CONNECTION POSSIBILITIES
## *POSIBILIDADES DE CONEXIÓN*

**Available standards**
Solvent socket: metric, BS, ASTM
Threaded: BSP, NPT

**Standards disponibles**
Encolar: métrico, BS, ASTM
Roscar: BSP, NPT



Ask for other types of unions or other materials (PP, PE100...)
*Consultar otros tipos de conexión o materiales (PP, PE100...)*

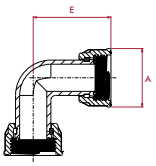
# PVC-U MANIFOLD FITTINGS
## *COLECTORES PVC-U*

- Manifold fittings specially designed for the fast connection of 1" threaded elements, like electric valves assemblies, water supply, etc.
- Allowing fast and trouble-free installations.
- Available sizes: 1"
- Material: PVC-U
- PN 10 (150 psi)

Most irrigation systems need multiple watering stations, either for small residential areas, large landscapes or agriculture areas.
At home one might have separate stations for the lawn and flower beds or there may not be enough water to irrigate the whole garden at the same time. This is when a series of valves is required.
These valves need to be connected together to the same source of water. The older ways were to create a manifold with costly galvanised metal or permanent assemblies.
Now with Cepex manifold fittings the job can be done:
- easier: no tools are required
- quicker: all parts are made to fit into each other
- more flexible: easy to change once assembled

- Accesorios colectores especialmente diseñados para la conexión rápida de elementos roscados de 1", tales como instalaciones con electroválvulas, suministro de agua, etc.
- Permiten realizar instalaciones con total facilidad y rapidez.
- Medidas disponibles: 1"
- Material: PVC-U
- PN 10 (150 psi)



La mayoría de sistemas de riego, ya sean pequeños para riego residencial o de mayores dimensiones para riego de zonas verdes o agrícola, requieren del uso de múltiples estaciones de riego.
En casa, es probable disponer de estaciones separadas para el césped y para las plantas, o puede no estar disponible la suficiente agua para regar todo el jardín a la vez. Es en estos casos que se requiere de series de válvulas.
Estas válvulas necesitan ser conectadas al mismo punto de suministro de agua. Antiguamente se instalaban colectores de metal galvanizado de alto coste o con montajes permanentes.
Ahora con los accesorios para colectores Cepex, este trabajo puede hacerse de una forma más:
- fácil: no se requieren herramientas
- rápida: todos los componentes están fabricados para encajar entre ellos
- flexible: es fácil hacer cambios una vez montados

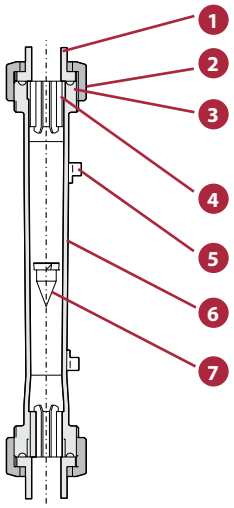
# FLOWMETERS - ROTAMETER
## *CAUDALÍMETROS - ROTÁMETROS*

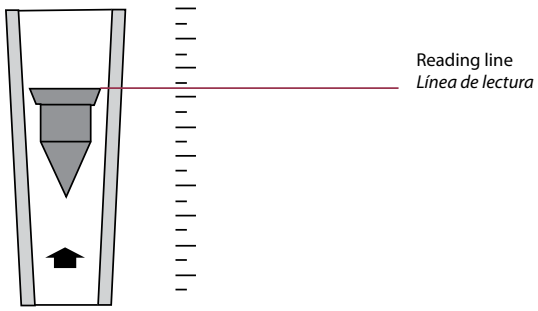
### FEATURES



Flowmeters are transparent tubes with conical shape (narrow in its lower part and wider in the upper); they are installed in a perfectly vertical position along with the pipe of which we want to know the flow.
Within the tube there is a stainless steel floater, that will move upwards reaching a specific height depending on the weight of the floater and water pressure.
Thus, the greater is the flow, the higher will the floater move, marking a flow (l/h or GPM) in the scale which is stamped on the transparent tube.

- Available models from 10 to 1000 l/h (0,04 - 4,4 GPM).
- Assembly in vertical position.
- Union bushes in PVC-U.
- Tube in Styrene Methyl Methacrylate Copolymer.
- Measuring tube available in Polysulfon, Trogamid T®, etc. upon request.
- Float stops in PVDF and floats in AISI 316.
- Maximum working temperature: 55ºC (131ºF) according to standards VDE / VDI 3531, class 6.
- Maximum pressure 15 bar.
- Two visible scales on each meter: l/h and GPM.
- Available upon request: limit switches and transmitters.
- Applications: process control in water treatment, osmosis, heating and refrigeration systems, chemical industries, pharmaceuticals, etc.

### CARACTERÍSTICAS



Los caudalímetros son tubos transparentes con forma cónica (estrecho en su zona inferior y más ancho en su zona superior); se instalan en posición perfectamente vertical en serie con la tubería de la que se quiere conocer el caudal.
Dentro del tubo se encuentra un flotador de acero inoxidable, que se desplazará hacia arriba alcanzando una altura concreta que dependerá del peso del flotador y del empuje del agua.
Así, cuanto mayor es el caudal, más arriba se posicionará el flotador, marcando un caudal (l/h o GPM) en la escala que se encuentra marcada en el tubo transparente.

- Modelos disponibles desde 10 hasta 1000 l/h (0,04 - 4,4 GPM).
- Montaje en posición vertical.
- Racordaje en PVC-U.
- Tubo en metacrilato de metilo.
- Bajo pedido tubo de medida disponible en Polisulfon, Trogamid T®, etc.
- Topes de flotador en PVDF.
- Flotador en AISI 316.
- Temperatura máxima de trabajo: 55ºC (131ºF) según normas VDE / VDI 3531, classe 6.
- Presiones hasta 15 bar.
- Doble escala visible en cada caudalímetro: l/h y GPM.
- Disponibles bajo pedido:automatismos y transmisores eléctricos.
- Aplicaciones: control de procesos en tratamiento de agua, osmosis, calefacción y refrigeración, industrias químicas, farmacéuticas, etc.

| FIG. | Parts | Despiece | Material |

# SOLVENT CEMENT / CLEANER / PTFE TAPE

## *ADHESIVOS / DISOLVENTES / CINTA DE PTFE*

### NOTES ABOUT THE SOLVENT

- Carry out an accurate turnover of the stock as the solvent cement can loose the original characteristics after 12 months of its manufacture.
- Stock in a dry and fresh place.
- Please, read the instructions of use.
- Different solvent cements for PVC-U and PVC-C (read the description).
- If you want to read the solvent socket recommendations, please refer to Pipe installation Section

### NOTAS SOBRE EL ADHESIVO

- Realizar una correcta rotación del stock ya que el adhesivo puede perder sus características originales a partir de los 12 meses de su fabricación.
- Almacenar en un lugar seco y fresco.
- Ver las normas de utilización del envase.
- Adhesivos diferenciados para PVC-U y PVC-C (ver descripción).
- Para ver las recomendaciones de instalación con adhesivo, consulte la Sección de Instalación de tubería.

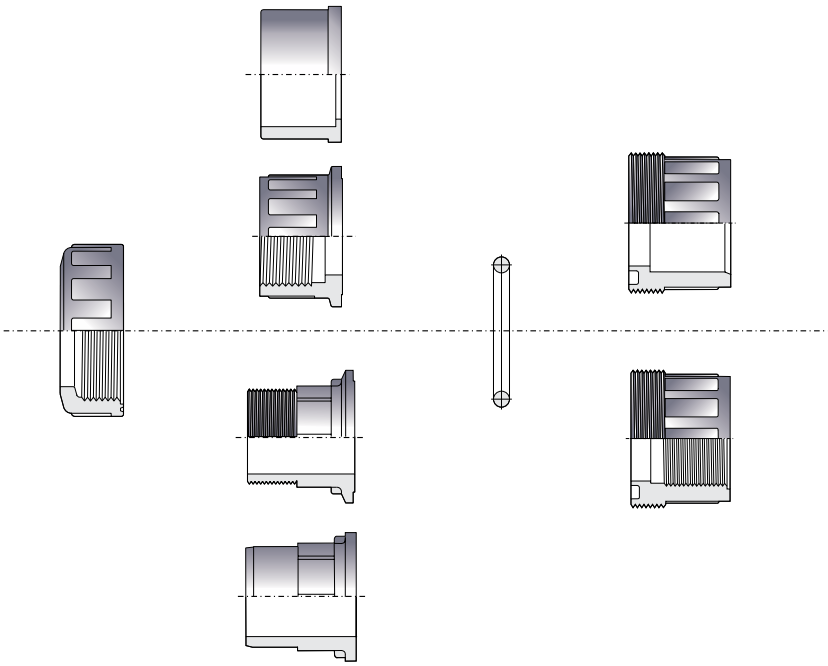
# PVC-U UNIONS

## *ENLACES 3 PIEZAS PVC-U*



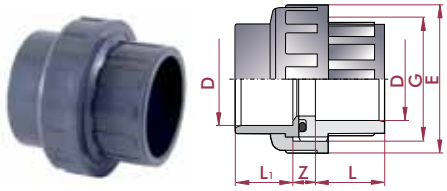
Unions are the preferred choice over flange adaptors for the connection of plastic pipes. With no metal parts, there is no corrosion and the weight is also reduced.
They are only available in small sizes (up until D110).
The union ends are manufactured in plain ends for solvent socket or thread always according the sizing standards, doing this system appropiate to adapt to other elements or systems.
Cepex unions feature an o-ring in order to ensure better unions, so it is no needed the use of PTFE tape between nut and union end (ir is only needed in the threaded ends).
They are not recommended when connected to pipe under bending stress.
The union nut should be tightened by hand. Must use a strap wrench for big sizes (D75, D90, D110).
With this type of unions, it is possible to mix several plastic materials.

Cuando hay que unir plásticos, éstos son preferidos a las bridas, ya que no contienen ninguna parte de metal y el diámetro exterior es más reducido.
En contrapartida sólo están disponibles para diámetros pequeños (hasta D110).
Los manguitos de conexión están fabricados en terminaciones lisas de encolado o roscadas, siempre bajo normativas standards, haciendo posible la apdaptación a otros componentes (incluso de materiales distintos).
Los enlaces 3 piezas Cepex incorporan junta para asegurar estanqueidad entre los dos manguitos de la unión, por lo que no debe usarse cinta de PTFE entre tuerca y manguito (usar cinta de PTFE solamente en las terminaciones de manguito roscadas).
No son recomendables cuando el tubo tenga que estar sometido a fuerza de flexión (debido a posibles desalineaciones).
No es necesario el uso de ninguna herramienta, se rosca con las manos. Usar llave de cinta en diámetros grandes (D75, D90, D110).
Mediante estos enlaces, se pueden combinar diferentes tipos de plásticos.

## CONNECTION POSSIBILITIES

## *POSIBILIDADES DE CONEXIÓN*

**Available standards**
Solvent socket: metric, BS, ASTM
Threaded: BSP, NPT



**Standards disponibles**
Encolar: métrico, BS, ASTM
Roscar: BSP, NPT

Ask for other types of unions or other materials (PP, PE100...)
*Consultar otros tipos de conexión o materiales (PP, PE100...)*

# PVC-U LOOSE FLANGES
## *BRIDAS LOCAS PVC-U*

- EN 1452 / ISO 15493 Flange System.
- We recommend to follow flange installation instructions carefully to avoid any unnecessary tensions.

- Sistema de bridas EN 1452 / ISO 15493 .
- Recomendamos seguir exactamente las normas de montaje de bridas con objeto de evitar tensiones innecesarias.

# PVC-U UNIONS
## *ENLACES 3 PIEZAS PVC-U*

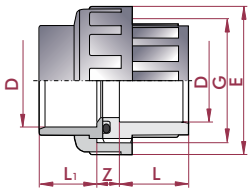
Unions are the preferred choice over flange adaptors for the connection of plastic pipes. With no metal parts, there is no corrosion and the weight is also reduced.
They are only available in small sizes (up until D110).
The union ends are manufactured in plain ends for solvent socket or thread always according the sizing standards, doing this system appropiate to adapt to other elements or systems.
Cepex unions feature an o-ring in order to ensure better unions, so it is no needed the use of PTFE tape between nut and union end (ir is only needed in the threaded ends).
They are not recommended when connected to pipe under bending stress.
The union nut should be tightened by hand. Must use a strap wrench for big sizes (D75, D90, D110).
With this type of unions, it is possible to mix several plastic materials.

Cuando hay que unir plásticos, éstos son preferidos a las bridas, ya que no contienen ninguna parte de metal y el diámetro exterior es más reducido.
En contrapartida sólo están disponibles para diámetros pequeños (hasta D110).
Los manguitos de conexión están fabricados en terminaciones lisas de encolado o roscadas, siempre bajo normativas standards, haciendo posible la apdaptación a otros componentes (incluso de materiales distintos).
Los enlaces 3 piezas Cepex incorporan junta para asegurar estanqueidad entre los dos manguitos de la unión, por lo que no debe usarse cinta de PTFE entre tuerca y manguito (usar cinta de PTFE solamente en las terminaciones de manguito roscadas).
No son recomendables cuando el tubo tenga que estar sometido a fuerza de flexión (debido a posibles desalineaciones).
No es necesario el uso de ninguna herramienta, se rosca con las manos. Usar llave de cinta en diámetros grandes (D75, D90, D110).
Mediante estos enlaces, se pueden combinar diferentes tipos de plásticos.

## CONNECTION POSSIBILITIES
## *POSIBILIDADES DE CONEXIÓN*

**Available standards**
Solvent socket: metric, BS, ASTM
Threaded: BSP, NPT

**Standards disponibles**
Encolar: métrico, BS, ASTM
Roscar: BSP, NPT



Ask for other types of unions or other materials (PP, PE100...)

# VÁLVULA DE SOLENOIDE

## CON CONTROLES INTERNOS DE 2 VÍAS Y SELECTOR MANUAL INTEGRADO TRIO OPEN-AUTO-CLOSE

## Modelo IR-21T

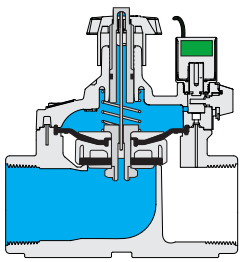
La válvula de 2 vías con control de solenoide y selector manual integrado TRIO Open-Auto-Close (abrir-auto-cerrar) de BERMAD es una válvula de control de operación hidráulica, accionada por diafragma, con circuito de control hidráulico interno F&B (alimentación y purga).

El selector integrado TRIO permite la apertura y el cierre, reemplazando manualmente a la señal eléctrica.

La válvula Modelo IR-21T de BERMAD se abre completamente o se cierra herméticamente en respuesta a una señal eléctrica, que activa al solenoide para abrir o cerrar el circuito de control hidráulico interno de la válvula.

### Características y ventajas

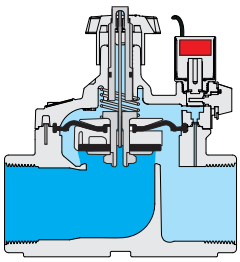
- Accionada por la presión en la línea, control eléctrico On/Off
- Suavidad en la apertura y el cierre de la válvula
  - Regulación precisa y estable
  - Baja demanda de presiones de trabajo
- Válvula plástica hidroeficiente en forma de globo
  - Flujo sin obstrucciones
  - Una sola pieza móvil
  - Alta capacidad de caudal
  - Altamente duradera y resistente a las sustancias químicas y los daños por cavitación
- Conjunto integral de tapón equilibrado y diafragma flexible
  - Previene la erosión y distorsión del diafragma
- Diafragma totalmente equilibrado con soporte periférico
  - Baja presión de accionamiento
- Cómoda para el usuario
  - Inspección y mantenimiento en línea con facilidad



### Aplicaciones típicas

- Sistemas de riego
- Sistemas de goteo
- Riego en invernaderos
- Sistemas sujetos a fluctuaciones en la presión de suministro
- Jardinería
- Sistemas de riego que ahorran energía

### Operación:



**Cerrada**

La restricción interna permite el acceso de la presión en la línea a la cámara de control. El solenoide controla la salida de la cámara de control. El solenoide cerrado hace que la presión se acumule en la cámara de control y cierre la válvula.

**Abierta**

La apertura del solenoide introduce más flujo de la cámara de control que el permitido por la restricción. Esto hace que disminuya la presión acumulada en la cámara de control, y que la presión en la línea que actúa sobre el tapón abra la válvula.

Las imágenes de este catálogo se incluyen sólo a título de ilustración

## Datos técnicos

**Presión nominal:**
10 bar; 145 psi

**Presiones de trabajo:**
0.5-10 bar; 7-145 psi

**Materiales:**

**Cuerpo, tapa y tapón:**
Poliamid 6 & 30% GF

**Diafragma:** NBR

**Juntas (selladuras):** NBR

**Resorte:** Acero inoxidable

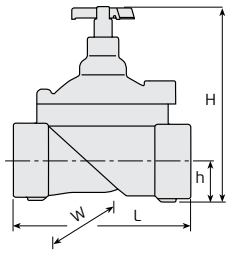
**Tornillos de la tapa:** Acero inoxidable

**Accesorios de control:**

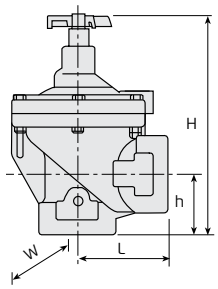
**Tubería y accesorios:**
Polietileno

**Voltajes del solenoide:**

**S-390-T:**
24 VAC, 24 VDC



**S-392-T:**
9-20VDC, tipo Latch



**Otros voltajes disponibles**

METALAST

# Lovibond® Water Testing

## Tintometer® Group

# MD 200 cloro, bromo, pH, ácido cianúrico, alcalinidad-m, dureza cálcica, tabletas de reactivo (OTZ)

Control del agua preciso con un diseño de calidad y tecnología de filtros de interferencia

- Desconexión automática
- Reloj de tiempo real y fecha
- Indicador de funcionamiento de calibración
- Pantalla iluminada

Referencia No: 2861902

### Versátil

El fotómetro MD 200 puede utilizarse prácticamente en todos los ámbitos del análisis de agua.

### Preciso y de mínimo mantenimiento

La óptica de alta precisión, que además de LED estables a largo plazo como fuente de luz, ofrece filtros de interferencia de calidad, permite unos resultados de medición precisos y reproducibles en todo momento. Adicionalmente, estos componentes hacen que el fotómetro requiera un mantenimiento mínimo.

### Intuitivo

Los instrumentos convencen por una elevada comodidad de manejo, un diseño ergonómico y unas dimensiones compactas que hacen que la manipulación del instrumento resulte sencilla y segura.

### Reactivos

Utilice las tabletas de reactivo Lovibond® estables a largo plazo (durabilidad mínima garantizada de 5 a 10 años) o los reactivos líquidos Lovibond®.

### Industria

Industria naval | Municipios | Piscina privada | Piscina pública | Servicios para piscinas

### Aplicaciones

Agua de caldera | Agua de refrigeración | Control de aguas de piscina | Control de desinfección | Tratamiento de aguas de aporte | Tratamiento de aguas de piscina | Tratamiento de aguas potables | Tratamiento de aguas residuales

### MD 200 cloro, bromo, pH, ácido cianúrico, alcalinidad-m, dureza cálcica, tabletas de reactivo (OTZ)

Versátil, compacto y: El fotómetro de sobremesa MD 200 aúna en una óptica de alta precisión filtros de interferencia de calidad con LED estables a largo plazo como fuente de luz. El resultado: resultados de medición precisos en todo momento, lo utilice donde lo utilice.

## Rango de medición

| Test Name | Rango de medición | Método químico |
|---|---|---|
| Alcalinidad-m T | 5 - 200 mg/L $CaCO_3$ | Ácido / Indicador |
| Bromo T | 0.05 - 13 mg/L $Br_2$ | DPD |
| Cloro HR T | 0.1 - 10 mg/L $Cl_2$ [a)] | DPD |
| Cloro L | 0.02 - 4.0 mg/L $Cl_2$ [a)] | DPD |
| Cloro T | 0.01 - 6.0 mg/L $Cl_2$ [a)] | DPD |
| CyA T | 10 - 160 mg/L CyA | Melamina |
| Dureza calcio 2T | 20 - 500 mg/L $CaCO_3$ | Murexid |
| Valor de pH L | 6.5 - 8.4 pH | Rojo de fenol |
| Valor de pH T | 6.5 - 8.4 pH | Rojo de fenol |

## Datos técnicos

| | |
|---|---|
| **Óptica** | Diodos luminosos – Fotosensor – Disposición por pares en compartimento de medición transparente. En función de la versión<br>se utilizan hasta 3 filtros de interferencia. Especificaciones de longitud de onda de los filtros de interferencia:<br>430 nm Δ λ = 5 nm<br>530 nm Δ λ = 5 nm<br>560 nm Δ λ = 5 nm<br>610 nm Δ λ = 6 nm |
| **Precisión de la longitud de onda** | ± 1 nm |
| **Rango fotométrico** | -2500 - 2500 mAbs |
| **Precisión fotométrica** | 3 % FS (T = 20 °C – 25 °C) |
| **Cubetas adecuadas** | Cubetas redondas 24 mm |
| **Display** | LCD con retroiluminación (al oprimir una tecla) |
| **Interfaces** | Infrarrojo |
| **Manejo** | Teclado de membrana |
| **Auto – OFF** | Sí |
| **Calibración** | Ajuste de fabricación y al usuario. Restablecimiento al ajuste de fabricación posible en todo momento |
| **Almacenamiento interno** | memoria cíclica interna para 16 registros de datos |
| **Alimentación eléctrica** | 4 batteries (AA) |
| **Vida de la batería** | aprox. 53 h |
| **Reloj** | Reloj en tiempo real |
| **Portabilidad** | Portátil |
| **Condiciones ambientales** | 5 - 40 °C con una humedad relativa del 30 - 90 % (sin condensación) |
| **Clase de protección** | IP 68 |
| **Conformidad** | CE |
| **Medidas** | 110 x 55 x 190 mm |

## Volumen de suministro

- Instrumento en un maletín de plástico con 4 pilas (AA)
- 3 cubetas redondas con tapa
- Anillos de obturación
- 1 varilla agitadora
- 1 cepillo
- 1 Jeringuilla de dosificación (5 ml)
- 100 tabletas de reactivo para DPD nº 1
- 100 tabletas de reactivo para DPD nº 3 Evo
- 100 tabletas de reactivo rojo de fenol fotómetro
- 100 tabletas de reactivo para CyA-Test
- 100 tabletas de reactivo alca-M fotómetro
- 100 tabletas de reactivo para Calcio-H nº 1
- 100 tabletas de reactivo para Calcio-H nº 2
- Instrucciones de operación
- Manual de Métodos
- Certificados (COC)
- Exención de garantías

# CONFORT Y ELEGANCIA PARA EL JARDÍN

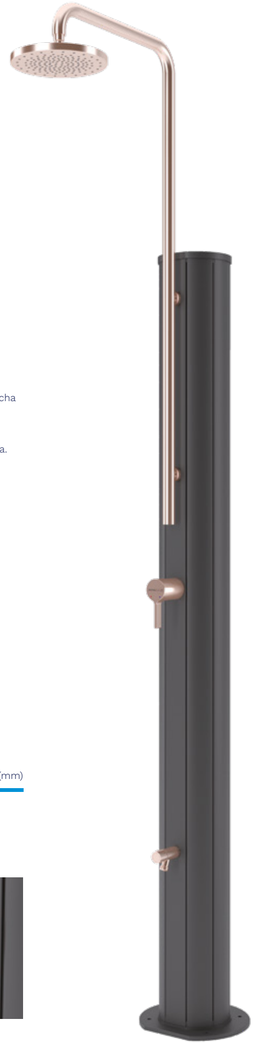
## DUCHAS CHROME SOLARES Y NO SOLARES

# DUCHAS CHROME

CONFORT Y ELEGANCIA

## RECOMENDACIONES

**Es tan importante ducharse antes de entrar en la piscina como al salir.**
No solo por consideraciones higiénicas, sino también para mantener el agua de la piscina limpia y proteger la salud personal.
Es importante ducharse al salir de la piscina para eliminar los restos de cloro de la piel y del pelo.

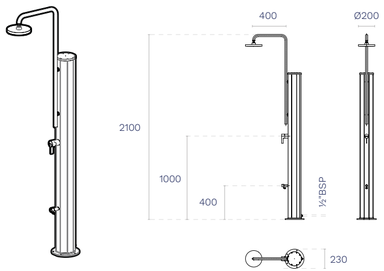


Además, el contraste entre el calor del sol y el agua fría puede provocar un shock térmico, cuyos efectos se suelen asociar con el corte de digestión. Por **eso recomendamos nuestras duchas solares, para evitar este cambio repentino de temperatura.**

Más del 70% de las piscinas están equipadas con duchas. **¡Aprovecha al máximo la gama de las duchas Chrome de AstralPool para equipar o mejorar tu piscina!**

# DUCHA CHROME SOLAR

DISEÑO EXCLUSIVO
Y ECOLÓGICO



Con un diseño elegante y estilizado, la ducha solar Chrome de AstralPool destaca por su estilo *vintage* moderno y se presenta en una amplia gama de colores y acabados para que puedas escoger el que mejor se adapte al entorno de tu piscina.

Disfruta de una experiencia relajante antes y después de cada baño gracias a su gran depósito de 30 l que te permite tener agua caliente sin consumir energía. Esta solución ecológica para el uso diario de tu piscina contribuye a cuidar del medioambiente, así como de tu salud y la de los demás.

## ESPECIFICACIONES TÉCNICAS

- **Depósito de agua caliente de 30 l** – El sistema ecológico (la luz del sol calienta el agua) líder del mercado.
- **Tubo de acero inox AISI-304-L y marco de aluminio.**
- Amplia gama de acabados metálicos y colores.
- Rociador antical y efecto lluvia.
- Monomando de agua fría y caliente.
- Grifo lavapiés.
- Fácil mantenimiento: vaciado de la ducha en invierno para evitar el deterioro.
- Fácil instalación: boquilla posterior compatible con conexión de manguera.

## WT120C LED22S/840 PSU L1200

Coreline Waterproof - - - 840 blanco neutro - Fuente de alimentación

Tanto si se trata de un nuevo edificio como de un espacio rehabilitado, los clientes prefieren soluciones de iluminación que combinen luz de calidad con un sustancial ahorro de energía y de mantenimiento. La nueva gama de productos LED CoreLine Estanca se puede usar para sustituir las luminarias estancas tradicionales con lámparas fluorescentes, con fácil instalación y mínimo mantenimiento.

### Datos del producto

| Información general | |
|---|---|
| **Número de fuentes de luz** | 1 [ 1 pieza] |
| **Código familia de lámparas** | - |
| **Temperatura de color** | 840 blanco neutro |
| **Fuente de luz sustituible** | No |
| **Número de unidades de equipo** | 1 |
| **Driver/unidad de potencia/transformador** | PSU [ Fuente de alimentación] |
| **Driver incluido** | Si |
| **Tipo de óptica** | No [ -] |
| **Tipo lente/cubierta óptica** | PC [ Policarbonato] |
| **Apertura de haz de luz de la luminaria** | 110° |
| **Iluminación de emergencia** | No [ -] |
| **Interfaz de control** | No |
| **Connection** | Conector push-in de 3 polos |
| **Cable** | No |
| **Clase de protección IEC** | Seguridad clase I |
| **Test del hilo incandescente** | Temperatura 850 °C, duración 30 s |
| **Marca de inflamabilidad** | D [ D] |

| | |
|---|---|
| **Marca CE** | Marcado CE |
| **Certificado ENEC** | Marcado ENEC |
| **Certificado UL** | No |
| **Período de garantía** | 5 años |
| **Comentarios** | *-Per Lighting Europe guidance paper "Evaluating performance of LED based luminaires - January 2018": statistically there is no relevant difference in lumen maintenance between B50 and for example B10. Therefore the median useful life (B50) value also represents the B10 value. |
| **Flujo luminoso constante** | No |
| **Número de productos en MCB** | 24 |
| **Conforme con EU RoHS** | Sí |
| **Product Family Code** | WT120C [ Coreline Waterproof] |
| **Índice de deslumbramiento unificado CEN** | 23 |

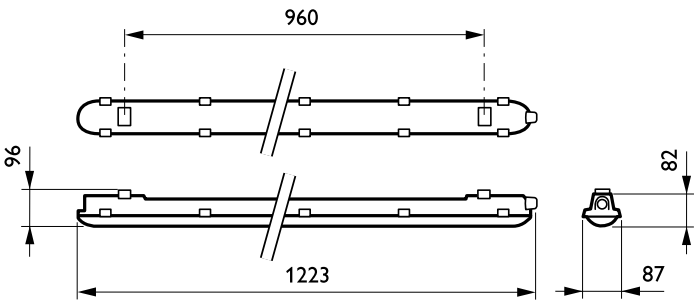
# CoreLine Estanca G2

| Operativos y eléctricos | |
|---|---|
| **Tensión de entrada** | 220-240 V |
| **Frecuencia de entrada** | 50 a 60 Hz |
| **Corriente de arranque** | 8 A |
| **Tiempo de irrupción** | 0,060 ms |
| **Factor de potencia (mín.)** | 0.9 |

| Controles y regulación | |
|---|---|
| **Regulable** | No |

| Mecánicos y de carcasa | |
|---|---|
| **Material de la carcasa** | Policarbonato |
| **Material del reflector** | Acero |
| **Material óptico** | - |
| **Material cubierta óptica/lente** | Policarbonato |
| **Material de fijación** | Acero inoxidable |
| **Acabado cubierta óptica/lente** | Con textura |
| **Longitud total** | 1250 mm |
| **Anchura total** | 87 mm |
| **Altura total** | 96 mm |
| **Color** | GR |
| **Dimensiones (altura x anchura x profundidad)** | 96 x 87 x 1250 mm (3.8 x 3.4 x 49.2 in) |

| Aprobación y aplicación | |
|---|---|
| **Código de protección de entrada** | IP65 [ Protección frente a la penetración de polvo, protección frente a chorros de agua a presión] |
| **Índice de protección frente a choque mecánico** | IK08 [ IK08] |



| Rendimiento inicial (conforme con IEC) | |
|---|---|
| **Flujo lumínico inicial** | 2900 lm |
| **Tolerancia de flujo lumínico** | +/-10% |
| **Eficacia de la luminaria LED inicial** | 123 lm/W |
| **Índice inic. de temperatura de color** | 4000 K |
| **Inic. Índice de reproducción del color** | ≥80 |
| **Cromacidad inicial** | (0.38, 0.38) SDCM <3 |
| **Potencia de entrada inicial** | 23.5 W |
| **Tolerancia de consumo de energía** | +/-10% |

| Rendimiento en el tiempo (conforme con IEC) | |
|---|---|
| **Índice de fallos del equipo de control con una vida útil mediana de 50.000 h** | 5 % |
| **Mantenimiento lumínico con una vida útil mediana* de 50.000 h** | L75 |

| Condiciones de aplicación | |
|---|---|
| **Rango de temperatura ambiente** | -20 °C a +35 °C |
| **Performance ambient temperature Tq** | 25 °C |
| **Nivel máximo de regulación** | - |
| **Apta para encendidos y apagados aleatorios** | Sí |

**Brand Name:** **GEWISS**

## Parameters:

Rated Input Voltage: See below table for details
Rated Frequency: 50/60Hz
Rated Power: See below table for details
Protection Class: I
Degree of Protection: IP66
Blue Light Risk Group: RG1
ta: 50°C

**Tested according to:**

EN 60598-2-5:2015
EN IEC 60598-1:2021/A11:2022

**Production Facility(ies):**

094381

TÜV SÜD Product Service GmbH • Certification Body • Ridlerstraße 65 • 80339 Munich • Germany

**EN:** We declare that all GEWISS products which fall within the scope of the European Directives and Regulations: **2014/35/EU ("Low Voltage Directive")**, **2014/30/EU ("Electromagnetic Compatibility Directive")**, **2014/34/EU ("ATEX Directive")**, **2014/53/EU ("Radio Equipment Directive")**, **2009/125/EC ("ErP Directive") and 2019/2020 ("Ecodesign Regulation"), 2019/2015 ("Energy Labelling Regulation")**, **2011/65/EU + 2015/863 ("RoHS Directive")** and of the European Regulation No **305/2011 ("Construction Products Regulation")** are in compliance with the essential requirements they set, in order to be put on the market and commissioned in the European Union. .....

Conformity with European Directives and Regulations is indicated by affixing the "CE" and all other required graphic symbols and markings on the product and/or its packaging and/or user manual. .....

Moreover, every GEWISS product is always designed, manufactured and tested in conformity with the relevant IEC, CENELEC and CEI Standards, when existing and applicable. .....

Products which are beyond the scope of the above mentioned Directives, are however in conformity with the European Regulation **2023/988/EU ("General Product Safety")**, while products intended to be exported to non-EU countries, whose importation and commission is therefore not allowed within the EU, are duly marked throughout all GEWISS illustrative/marketing material. .....

Design: Eduardo Souto de Moura
Luminária com corpo em perfil de alumínio com anodização de máxima resistência à corrosão de 25 microns em acabamento mate ou pintura electroestática texturada com tinta 100% poliéster.
Difusor em policarbonato fosco com fixação simples por clipagem e duplo sistema de encaixe: à face ou recuado.
Topos em alumínio anodizado com acabamento mate ou pintura electroestática texturada com tinta 100% poliéster.
Acessórios de fixação fornecidos em separado.

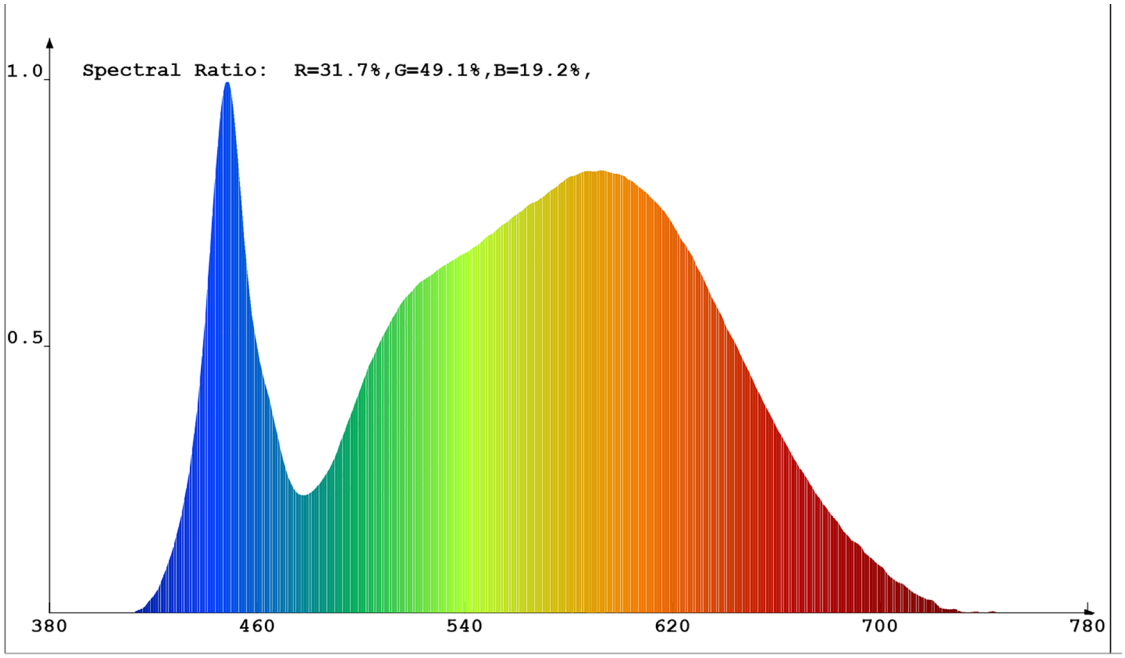
# Product Information Sheet

COMMISSION DELEGATED REGULATION (EU) 2019/2015 with regard to energy labelling of light sources

**Supplier's name or trade mark:** V-TAC

**Supplier's address:** V-TAC Europe Ltd, bul. Rozhen 41, Sofia, Bulgaria

**Model identifier:** 7548



**Type of light source:**

| | | | |
|---|---|---|---|
| Lighting technology used: | LED | Non-directional or directional: | DLS |
| Light source cap-type (or other electric interface) | L/N connect line ( accessory also have fast connnector) | | |
| Mains or non-mains: | MLS | Connected light source (CLS): | No |
| Colour-tuneable light source: | No | Envelope: | - |
| High luminance light source: | No | | |
| Anti-glare shield: | No | Dimmable: | No |
| **Product parameters** | | | |
| Parameter | Value | Parameter | Value |
| **General product parameters:** | | | |
| Energy consumption in on-mode (kWh/1000 h), rounded up to the nearest integer | 12 | Energy efficiency class | G |
| Useful luminous flux (ϕuse), indicating if it refers to the flux in a sphere (360º), in a wide cone (120º) or in a narrow cone (90º) | 720 in Narrow cone (90°) | Correlated colour temperature, rounded to the nearest 100 K, or the range of correlated colour temperatures, rounded to the nearest 100 K, that can be set | 4 000 |
| On-mode power ($P_{on}$), expressed in W | 12,0 | Standby power ($P_{sb}$), expressed in W and rounded to the second decimal | 0,00 |
| Networked standby power ($P_{net}$) for CLS, expressed in W and rounded to the second decimal | - | Colour rendering index, rounded to the nearest integer, or the range of CRI-values that can be set | 80 |

| | | | | |
|---|---|---|---|---|
| Outer dimensions without separate control gear, lighting control parts and non-lighting control parts, if any (millimetre) | Height | 255 | Spectral power distribution in the range 250 nm to 800 nm, at full-load | See image in last page |
| | Width | 73 | | |
| | Depth | 73 | | |
| Claim of equivalent power[a] | | - | If yes, equivalent power (W) | - |
| | | | Chromaticity coordinates (x and y) | 0,376<br>0,378 |
| **Parameters for directional light sources:** | | | | |
| Peak luminous intensity (cd) | | 3 363 | Beam angle in degrees, or the range of beam angles that can be set | 30 |
| **Parameters for LED and OLED light sources:** | | | | |
| R9 colour rendering index value | | 11 | Survival factor | 1,00 |
| the lumen maintenance factor | | 0,96 | | |
| **Parameters for LED and OLED mains light sources:** | | | | |
| displacement factor (cos ϕ1) | | 0,48 | Colour consistency in McAdam ellipses | 2 |
| Claims that an LED light source replaces a fluorescent light source without integrated ballast of a particular wattage. | | -[b] | If yes then replacement claim (W) | - |
| Flicker metric (Pst LM) | | 0,1 | Stroboscopic effect metric (SVM) | 0,1 |

Ventiladores helicocentrífugos de bajo perfil, extremadamente silenciosos, fabricados en material plástico, con elementos acústicos (estructura interna perforada que direcciona las ondas sonoras, y aislamiento interior fonoabsorbente que amortigua el ruido radiado), cuerpo-motor desmontable sin necesidad de tocar los conductos, juntas de goma en impulsión y descarga para reforzar la estanqueidad.
Motor brushless de corriente continua, de alto rendimiento y bajo consumo, alimentación 230V±15%/50-60Hz, IP44, rodamientos a bolas y caja de bornes externa.
Equipados con un un sensor que permite la creación de un sistema de caudal constante (CAV), tipo plug & play.
Consigna de caudal ajustable en caja de bornes.
Entrada analógica para controlar el ventilador con una señal externa de 0-10V.
Capacitados para trabajar de -20 a +40ºC.

CAUDAL CONSTANTE

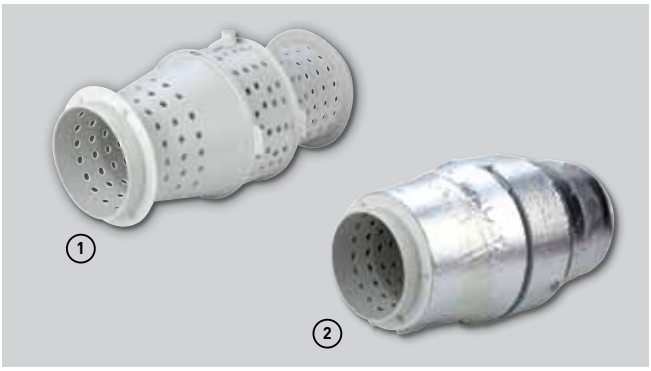
**Sistema Convencional CAV**

Sensor

Control

+

TD-SILENT



**NUEVO**
**TD-SILENT ECOWATT CAV**

**Instalación completa en un solo aparato**
Permite mantener un caudal constante de aire, mediante un sensor incorporado que controla la velocidad del ventilador, sin necesidad de accesorios adicionales.

**Bajo perfil**
El bajo perfil de los ventiladores de la gama TD-SILENT ECOWATT hace que sean el producto ideal para instalaciones donde la altura es muy reducida, como en el caso de los falsos techos.

**Elementos acústicos**

(1) Estructura interna perforada que direcciona las ondas sonoras.
(2) Aislamiento interior fonoabsorbente que amortigua el ruido radiado.

**Fácil mantenimiento**
Conjunto cuerpo-motor desmontable, para reparación o limpieza, sin necesidad de tocar los conductos.
Las bridas de sujeción de plástico simplifican la operación.

**Caja de bornes orientable 360º**
Caja de bornes con tapa orientable 360º, para facilitar la entrada del cable de alimentación.

**Juntas flexibles**
Bocas de aspiración y descarga con juntas flexibles en material plástico de alta calidad, que absorben las vibraciones.

**Pie soporte**
Pie soporte para instalación mural o cenital que incorpora las bridas de sujeción al cuerpo-motor.

## Fácil montaje

Aflojar y abrir las bridas de ambas bocas.

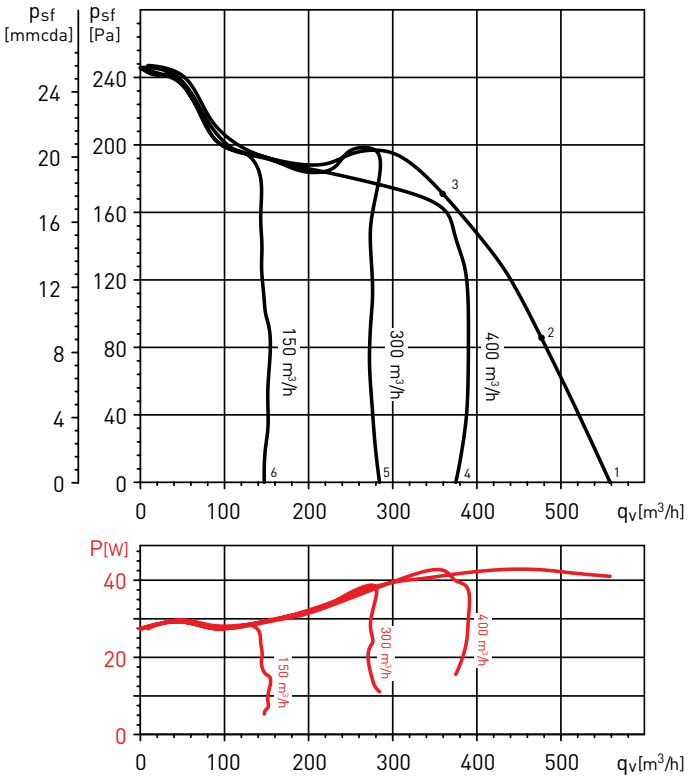
Separar el cuerpo motor.

Retirar la tapa de bornes orientable.

Realizar las conexiones y ajustar la consigna de caudal.

Montar de nuevo, apretando ambas bridas de sujeción.

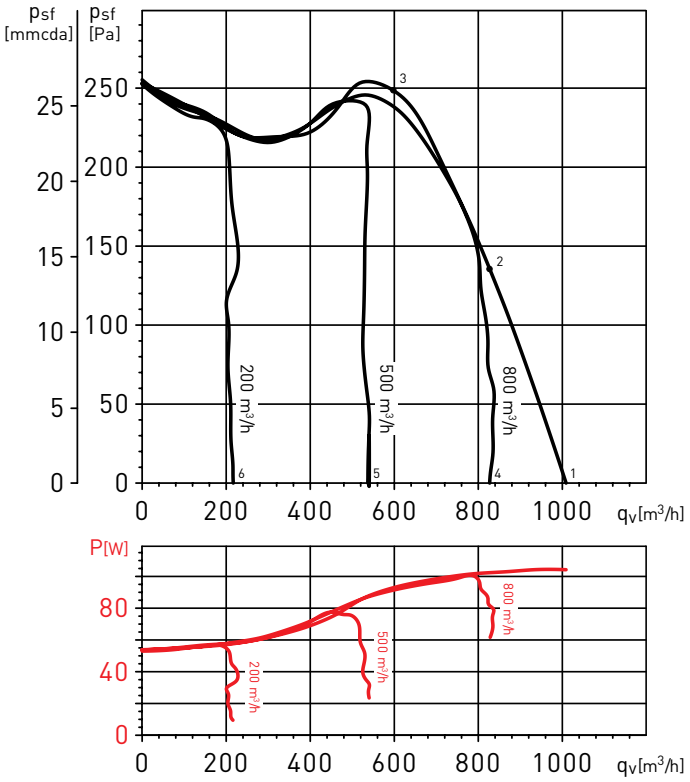
## CARACTERÍSTICAS TÉCNICAS



| Modelo | Tensión (V) | Potencia máxima absorbida (W) | | Intensidad máxima absorbida (A) | | Caudal ($m^3/h$) | | Nivel de presión sonora* LpA a 3 m (dB(A)) | | | | | | Peso (kg) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | Aspiración | | Descarga | | Radiado | | |
| | | Mín. | Máx. | Mín. | Máx. | Mín. | Máx. | Mín. | Máx. | Mín. | Máx. | Mín. | Máx. | |
| TD-500/150-160 SILENT ECOWATT CAV | 230 | 5 | 40 | 0,05 | 0,3 | 150 | 400 | 30 | 44 | 23 | 33 | 31 | 43 | 6 |
| TD-1000/200 SILENT ECOWATT CAV | 230 | 10 | 100 | 0,1 | 0,65 | 200 | 800 | 30 | 46 | 25 | 34 | 34 | 53 | 8,7 |

* Nivel de presión sonora, radiado a 3 metros en campo libre.

## CURVAS CARACTERÍSTICAS - CARACTERÍSTICAS ACÚSTICAS



- $q_v$ = Caudal en $m^3/h$.
- $p_{sf}$ = Presión estática en Pa y mmcda.
- P = Potencia absorbida en W.
- Aire seco normal a 20°C y 760 mmHg.
- Ensayos realizados de acuerdo a Norma ISO 5801 y AMCA 210-99.
- Potencia sonora en dB(A).

## DIMENSIONES (mm)

| | A | ØB | C | ØD | E | F | G | H |
|---|---|---|---|---|---|---|---|---|
| TD-500/150-160* | 484 | 147 | 274 | 221 | 116 | 250 | 96 | 134 |
| TD-1000/200 | 568 | 198 | 327 | 264 | 145 | 340 | 129 | 164 |

* Se suministra una junta de goma adicional para instalaciones en conductos de 160 mm.

## ACCESORIOS ELÉCTRICOS PARA LA SERIE TD-SILENT ECOWATT

**REB-ECOWATT**
**Regulador de velocidad** para ventiladores con motor de corriente continua.

**CONTROL ECOWATT BASIC**
**Controlador de velocidades y paro-marcha.**

**CONTROL ECOWATT AC/DC**
**Elementos de control para sistemas de modulación de los caudales** en instalaciones de ventilación de edificios públicos, comerciales o residenciales, que controlan continuamente la velocidad de los motores para adecuarse a las necesidades reales, reducir el consumo energético y mantener un ambiente bien ventilado.

**CPFL-S / CPFL-E**
**Detectores de presencia**, sensibles a las radiaciones infrarrojas debidas al calor que emiten los cuerpos en movimiento, con un ángulo de detección de 360º.

**SCO2-A / AR**
**Sensor de $CO_2$ y temperatura** para ambiente.

**SCO2-AD**
**Sensor de $CO_2$ y temperatura** para ambiente, con display.

**SCHT-AD**
**Sensor de $CO_2$, de humedad relativa y temperatura** para ambiente, con display.

# TD-SILENT ECOWATT CAV

5211006600 - TD-1000/200 SILENT ECOWATT CAV (230V 50/60) NE - VENTILADORES PARA CONDUCTO

Ventiladores helicocentrífugos de bajo perfil, extremadamente silenciosos, fabricados en material plástico, cuerpo-motor desmontable sin necesidad de tocar los conductos, juntas de goma en impulsión y descarga para reforzar la estanqueidad. Motor brushless de corriente continua, de alto rendimiento y bajo consumo, alimentación 230V±15%/50-60Hz, clase B, IP44, rodamientos a bolas y caja de bornes externa. Equipados con un un sensor que permite la creación de un sistema de caudal constante (CAV), tipo plug _play. Capacitados para trabajar de -20 a +40ºC. Indicados para sistemas de aportación de aire o recirculación donde se instalan filtros. Marca S&P modelo TD-1000/200 SILENT ECOWATT CAV (230V 50/60) NE.

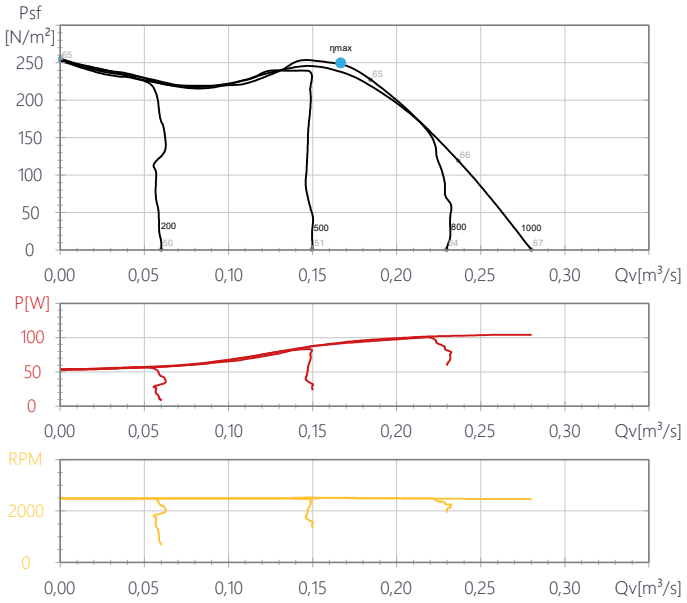
**5211006600 - TD-1000/200 SILENT ECOWATT CAV (230V 50/60) NE**

## Punto requerido

| | |
|---|---|
| Caudal | - |
| Presión Estática | 0,000 N / m² |
| Temperatura | 20 °C |
| Altitud | 0 m |
| Densidad | 1,2 Kg / m³ |
| Frecuencia | 50/60 Hz |

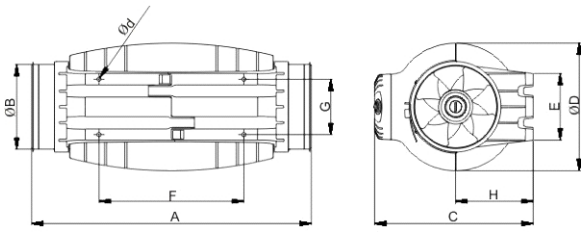
## Punto de trabajo

| | |
|---|---|
| Caudal | 0,000 m³/s |
| Presión estática | 0,000 N / m² |
| Presión dinámica | 0,000 N / m² |
| Presión total | 0,000 N / m² |
| Velocidad ventilador | 2270 rpm |



## Construcción

| | |
|---|---|
| Diámetro impulsión | 198 mm |
| Tamaño ventilador | 1000 |
| Peso | 7,20 kg |



## Características del motor

| | |
|---|---|
| Tensión | 1-230V-50Hz |
| Índice de protección | IP44 |
| Clase motor | B |

## Curva

BGD MATERIALS PER A INSTAL·LACIONS DE CONNEXIÓ A TERRA I PROTECCIÓ CATÒDICA 225
BGD5- PIQUETA DE CONNEXIÓ A TERRA 225
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 226
BGW PARTS PROPORCIONALS D'ACCESSORIS PER A INSTAL·LACIONS ELÈCTRIQUES 226
BGW2- PART PROPORCIONAL D'ACCESSORIS PER A CAIXES 226
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 226
BGW PARTS PROPORCIONALS D'ACCESSORIS PER A INSTAL·LACIONS ELÈCTRIQUES 226
BGW8- PART PROPORCIONAL D'ACCESSORIS PER A MECANISMES 226
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 227
BGW PARTS PROPORCIONALS D'ACCESSORIS PER A INSTAL·LACIONS ELÈCTRIQUES 227
BGWC- PART PROPORCIONAL D'ACCESSORIS PER A TUBS 227
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 227
BGW PARTS PROPORCIONALS D'ACCESSORIS PER A INSTAL·LACIONS ELÈCTRIQUES 228
BGWD- PART PROPORCIONAL D'ACCESSORIS PER A APARELLS DE PROTECCIÓ 228
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 228
BGW PARTS PROPORCIONALS D'ACCESSORIS PER A INSTAL·LACIONS ELÈCTRIQUES 228
BGWF- PART PROPORCIONAL D'ACCESSORIS PER A CONDUCTORS ELÈCTRICS DE TENSIÓ BAIXA228
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 229
BGY PARTS PROPORCIONALS D'ELEMENTS ESPECIALS PER A INSTAL·LACIONS ELÈCTRIQUES 229
BGY3- PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A CONDUCTORS ELÈCTRICS DE TENSIÓ BAIXA 229
BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES 229
BGY PARTS PROPORCIONALS D'ELEMENTS ESPECIALS PER A INSTAL·LACIONS ELÈCTRIQUES 229
BGYD- PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A ELEMENTS DE CONNEXIÓ A TERRA229
BH MATERIALS PER A INSTAL·LACIONS D'ENLLUMENAT 230
BHM ELEMENTS DE SUPORT PER A LLUMS EXTERIORS 230
BHM2- COLUMNA PER A SUPORT DE LLUMS 230
BHM2-1 230
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 232
BJ1 APARELLS SANITARIS 232
BJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL 232
BJ115- LAVABO 232
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 234
BJ1 APARELLS SANITARIS 234
BJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL 234
BJ11C- INODOR 234
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 235
BJ1 APARELLS SANITARIS 235
BJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL 235
BJ11O- PASTA PER A SEGELLAR L'ENLLAÇ D'INODORS 236
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 238
BJ1 APARELLS SANITARIS 238
BJ18 APARELLS SANITARIS PER LA NETEJA 238
BJ183- AIGÜERA DE PLANXA D'ACER INOXIDABLE 238
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 240
BJ1 APARELLS SANITARIS 240
BJ18 APARELLS SANITARIS PER LA NETEJA 240
BJ18A- ABOCADOR 240
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 241
BJ1 APARELLS SANITARIS 241
BJ18 APARELLS SANITARIS PER LA NETEJA 241
BJ18B- REIXA I PROTECCIÓ PER A ABOCADORS 241
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 243
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 243
BJ21 AIXETES PER A APARELLS SANITARIS 243
BJ210- AIXETA PER A AIGÜERA 243
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 245
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 245
BJ21 AIXETES PER A APARELLS SANITARIS 245
BJ211- AIXETA PER A APARELLS SANITARIS 245
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 246
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 246
BJ21 AIXETES PER A APARELLS SANITARIS 246

BJ215- AIXETA PER A INODOR 246
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 247
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 247
BJ21 AIXETES PER A APARELLS SANITARIS 247
BJ21B- AIXETA PER A SAFAREIG 247
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 249
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 249
BJ21 AIXETES PER A APARELLS SANITARIS 249
BJ21C- AIXETA SENZILLA PER A LAVABO 249
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 250
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 250
BJ21 AIXETES PER A APARELLS SANITARIS 250
BJ21D- AIXETA TEMPORITZADA PER A DUTXA 250
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 252
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 252
BJ21 AIXETES PER A APARELLS SANITARIS 252
BJ21P- RUIXADOR 252
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 254
BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS 254
BJ2Z ACCESSORIS PER A APARELLS SANITARIS 254
BJ2Z3- MANIGUET FLEXIBLE 254
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 255
BJ3 DESGUASSOS I ACCESSORIS PER A APARELLS SANITARIS 255
BJ3E- SIFÓ DE LLAUTÓ PER A LAVABO 255
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 256
BJ3 DESGUASSOS I ACCESSORIS PER A APARELLS SANITARIS 256
BJ3F- SIFÓ PER A AIGÜERA 256
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 257
BJA APARELLS DE PRODUCCIÓ I ACUMULACIÓ D'AIGUA CALENTA SANITÀRIA 257
BJAD- ESCALFADOR ACUMULADOR ELÈCTRIC 257
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 258
BJM ELEMENTS DE MESURA 259
BJM3 COMPTADOR D'AIGUA 259
BJM31- COMPTADOR D'AIGUA AMB CONNEXIÓ ROSCADA 259
BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA 260
BJM ELEMENTS DE MESURA 260
BJM3 COMPTADOR D'AIGUA 260
BJM35- COMPTADOR D'AIGUA AMB CONNEXIÓ EMBRIDADA 260
BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS 261
BM3 EXTINTORS 261
BM30- ARMARI PER A EXTINTOR 261
BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS 262
BM3 EXTINTORS 262
BM33- EXTINTOR MANUAL 262
BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS 263
BMY PARTS PROPORCIONALS D'ELEMENTS ESPECIALS PER A INSTAL·LACIONS CONTRA INCENDIS 263
BMY3- PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A EXTINTORS 264
BN VÀLVULES 264
BN3 VÀLVULES DE BOLA 264
BN37- VÀLVULA DE BOLA METÀL·LICA MANUAL AMB BRIDES 264
BN VÀLVULES 265
BN3 VÀLVULES DE BOLA 265
BN38- VÀLVULA DE BOLA METÀL·LICA MANUAL AMB ROSCA 265
BN VÀLVULES 266
BN8 VÀLVULES DE RETENCIÓ 266
BN86- VÀLVULA DE RETENCIÓ DE DISC 266
BN VÀLVULES 267
BN8 VÀLVULES DE RETENCIÓ 267
BN89- VÀLVULA DE RETENCIÓ DE DISC AMB ROSCA 267
BP MATERIALS PER A INSTAL·LACIONS AUDIOVISUALS 268
BP4 CABLES PER A TRANSMISSIÓ DE SENYAL 268
BP44- CABLE PER A TRANSMISSIÓ DE DADES AMB CONDUCTORS DE COURE 268
BQ MATERIALS PER A EQUIPAMENTS FIXOS 271

BQ2 PAPERERES 271
BQ22- PAPERERA DE PEU 271
B0 MATERIALS BÀSICS 272
B06 FORMIGONS 272
B06D- FORMIGÓ SENSE ADDITIUS DESIGNAT PER DOSIFICACIÓ DE CIMENT 272
B0 MATERIALS BÀSICS 273
B07 MORTERS DE COMPRA 273
B07F- MORTER SENSE ADDITIUS 273
B0 MATERIALS BÀSICS 274
B07 MORTERS DE COMPRA 274
B07G- MORTER AMB ADDITIUS 274
B0 MATERIALS BÀSICS 275
B07 MORTERS DE COMPRA 275
B07K- PASTA DE GUIX 275
B0 MATERIALS BÀSICS 275
B0B ACER I METALL EN PERFILS O BARRES 275
B0B6- ACER EN BARRES CORRUGADES ELABORAT A L'OBRA 275
P PARTIDES D'OBRA I CONJUNTS 278
P2 DEMOLICIONS 278
P21 ENDERROCS 278
P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ 278
P2143- ARRENCADA DE PAVIMENTS I SOLERES 278
P2 DEMOLICIONS 280
P21 ENDERROCS 280
P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ 280
P2145- ARRENCADA I ENDERROC D'ELEMENTS DE SEGURETAT I PROTECCIÓ 280
P2 DEMOLICIONS 281
P21 ENDERROCS 281
P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ 281
P214W- TALL AMB DISC EN PAVIMENT PER MARCAR LÍMIT DEMOLICIÓ 281
P2 DEMOLICIONS 282
P22 MOVIMENTS DE TERRES 282
P221 EXCAVACIONS 282
P2217- EXCAVACIÓ PER A REBAIX 282
P2 DEMOLICIONS 284
P22 MOVIMENTS DE TERRES 284
P221 EXCAVACIONS 284
P221D- EXCAVACIÓ DE RASA PER A PAS D'INSTAL·LACIONS 284
P2 DEMOLICIONS 286
P22 MOVIMENTS DE TERRES 286
P225 REBLERT 286
P2250- ESCARIFICACIÓ I COMPACTACIÓ DE SOLS 286
P2 DEMOLICIONS 287
P22 MOVIMENTS DE TERRES 287
P225 REBLERT 287
P2253- REBLERT DE RASA O POU AMB GRAVES O RECICLATS 287
P2 DEMOLICIONS 288
P22 MOVIMENTS DE TERRES 288
P225 REBLERT 288
P2254- REBLIMENT I PICONATGE DE FLONJALLS 288
P2 DEMOLICIONS 291
P2R GESTIÓ DE RESIDUS I MATERIAL D'EXCAVACIÓ 291
P2R6- CÀRREGA I TRANSPORT DE RESIDUS A INSTAL·LACIÓ AUTORITZADA 291
P2 DEMOLICIONS 292
P2R GESTIÓ DE RESIDUS I MATERIAL D'EXCAVACIÓ 292
P2RA- DISPOSICIÓ DE RESIDUS INSTAL·LACIÓ AUTORITZADA 292
P4 ESTRUCTURES 293
P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 293
P4E0- ACER PER A ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 293
P4 ESTRUCTURES 294
P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 294
P4E2- FORMIGÓ PER A ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 294
P4E2-1 294
P4 ESTRUCTURES 295

P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 295
P4E4- PARET ESTRUCTURAL D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 295
P4E4-1 295
P4 ESTRUCTURES 298
P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 298
P4E5- PARET ESTRUCTURAL D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT 298
P5 COBERTES 301
P5Z ELEMENTS ESPECIALS PER A COBERTES 301
P5Z1 FORMACIÓ DE PENDENTS 301
P5Z15- FORMACIÓ DE PENDENTS AMB FORMIGÓ DE CIMENT PÒRTLAND 301
P5 COBERTES 302
P5Z ELEMENTS ESPECIALS PER A COBERTES 302
P5ZH BONERES I REIXES DE DESGUÀS 302
P5ZH0- BONERA PER A COBERTES 302
P5ZH0-1 302
P5 COBERTES 304
P5Z ELEMENTS ESPECIALS PER A COBERTES 304
P5ZH BONERES I REIXES DE DESGUÀS 304
P5ZH3- SUBSTITUCIÓ DE BONERA DETERIORADA 304
P5ZH3-1 304
P6 TANCAMENTS I DIVISÒRIES 305
P61 PARETS I ENVANS D'OBRA DE FÀBRICA 305
P612 PARETS DE CERÀMICA 305
P6120- CALAIX CERÀMIC PER BAIXANT 305
P6 TANCAMENTS I DIVISÒRIES 307
P61 PARETS I ENVANS D'OBRA DE FÀBRICA 307
P614 PAREDONS I ENVANS DE CERÀMICA 307
P6142- ENVÀ COL·LOCAT AMB MORTER ELABORAT A L'OBRA 307
P6 TANCAMENTS I DIVISÒRIES 309
P66 DIVISÒRIES AMB MAMPARES 309
P662- MAMPARA DIVISÒRIA DE PLAQUES SINTÈTIQUES 309
P7 IMPERMEABILITZACIONS 310
P75 MEMBRANES AMB LÀMINES DE PVC AUTOPROTEGIDES 310
P751- MEMBRANA PER A IMPERMEABILITZACIÓ DE PISCINES 310
P7 IMPERMEABILITZACIONS 312
P77 MEMBRANES AMB LÀMINES DE POLIETILÈ 312
P774- MEMBRANA LÀMINA DE POLIOLEFINES 312
P7 IMPERMEABILITZACIONS 313
P78 IMPERMEABILITZACIÓ AMB PRODUCTES AMORFS 313
P782- IMPERMEABILITZACIÓ DE PARAMENT AMB MORTERS ESPECIALS 313
P7 IMPERMEABILITZACIONS 314
P7D AÏLLAMENTS CONTRA EL FOC 314
P7DC- SEGELLAT DE TUBS COMBUSTIBLES AMB ABRAÇADORA PER A L'AÏLLAMENT CONTRA EL FOC 314
P7 IMPERMEABILITZACIONS 315
P7J JUNTS 315
P7J8- REBLERT DE JUNT AMB CORDÓ CEL·LULAR 315
P8 REVESTIMENTS 316
P81 ARREBOSSATS I ENGUIXATS 316
P811- ARREBOSSAT 316
P8 REVESTIMENTS 318
P81 ARREBOSSATS I ENGUIXATS 318
P815- ENGUIXAT 318
P8 REVESTIMENTS 320
P81 ARREBOSSATS I ENGUIXATS 320
P819- FORMACIÓ DE RACÓ DE GUIX 320
P8 REVESTIMENTS 321
P81 ARREBOSSATS I ENGUIXATS 321
P81D- PROTECCIÓ D'ARESTA PER A ARREBOSSATS I ENGUIXATS 321
P8 REVESTIMENTS 322
P82 ENRAJOLATS 322
P821- CANTONERA 322
P8 REVESTIMENTS 323
P82 ENRAJOLATS 323

P822- ENRAJOLATS AMB RAJOLA CERÀMICA 323
P8 REVESTIMENTS 325
P82 ENRAJOLATS 325
P82A- REVESTIMENT INTERIOR DE VAS DE PISCINA 325
P82A-1 325
P8 REVESTIMENTS 326
P83 APLACATS 326
P83E APLACATS AMB PLANXES 326
P83E6- APLACAT AMB PLAQUES SINTÈTIQUES PER A FAÇANA VENTILADA 326
P8 REVESTIMENTS 327
P84 CELS RASOS 327
P846- CEL RAS CONTINU DE PLAQUES DE GUIX LAMINAT 328
P8 REVESTIMENTS 330
P84 CELS RASOS 330
P84N- FORMACIÓ DE CALAIX AMB PLAQUES DE GUIX LAMINAT EN CEL RAS 330
P8 REVESTIMENTS 332
P89 PINTATS 332
P894- PINTAT DE BARANES I REIXES D'ACER 332
P8 REVESTIMENTS 334
P89 PINTATS 334
P89H- PINTAT DE PARAMENT DE CIMENT 334
P8 REVESTIMENTS 335
P89 PINTATS 335
P89I- PINTAT DE PARAMENT DE GUIX 335
P8 REVESTIMENTS 336
P8B TRACTAMENTS SUPERFICIALS DE PROTECCIÓ 337
P8B2- PINTAT D'ESTRUCTURES D'ACER AMB SISTEMES DE PROTECCIÓ 337
P8 REVESTIMENTS 338
P8J CORONAMENTS 338
P8J6- CORONAMENT DE PARET AMB RAJOLA CERÀMICA 338
P8 REVESTIMENTS 339
P8Z ELEMENTS ESPECIALS PER A REVESTIMENTS 339
P8Z0- ARMADURA PER A ARREBOSATS 339
P9 FERMS I PAVIMENTS 340
P93 BASES 340
P93I- RECRESCUDA I ANIVELLAMENT DEL SUPORT AMB PASTA AUTOANIVELLANT 340
P9 FERMS I PAVIMENTS 341
P93 BASES 341
P93L- SOLERA DE FORMIGÓ NO ESTRUCTURAL 341
P9 FERMS I PAVIMENTS 342
P93 BASES 342
P93M- SOLERA DE FORMIGÓ 342
P9 FERMS I PAVIMENTS 343
P9D PAVIMENTS DE PECES CERÀMIQUES 343
P9D5- PAVIMENT DE RAJOLA DE GRES 343
P9 FERMS I PAVIMENTS 344
P9E PAVIMENTS DE PANOT I RAJOLA HIDRÀULICA 344
P9E1- PAVIMENT DE PANOT 344
P9 FERMS I PAVIMENTS 346
P9P PAVIMENTS SINTÈTICS I DE LINÒLEUM 346
P9PC- PAVIMENT AMB GESPA SINTÈTICA 346
P9 FERMS I PAVIMENTS 347
P9U SÒCOLS 347
P9U1- MITJA CANYA DE MORTER DE CIMENT 347
P9 FERMS I PAVIMENTS 348
P9U SÒCOLS 348
P9U9- SÒCOLS DE MATERIAL SINTÈTIC 348
P9 FERMS I PAVIMENTS 349
P9Z ELEMENTS ESPECIALS PER A PAVIMENTS 349
P9Z3- ARMADURA PER A PAVIMENTS 349
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 351
PAB TANCAMENTS PRACTICABLES D'ACER EN PERFILS LAMINATS 351
PAB0- PORTA DE PERFILS D'ACER LAMINAT 351
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 352

PAF TANCAMENTS PRACTICABLES D'ALUMINI 352
PAF7- FINESTRA PRACTICABLE D'ALUMINI AMB TARJA FIXA 352
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 353
PAN BASTIMENTS DE BASE PER A FINESTRES 353
PAN5- BASTIMENT DE BASE DE TUB D'ACER 353
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 354
PAP BASTIMENTS I FOLRATS DE BASTIMENTS DE BASE PER A PORTES I ARMARIS 354
PAP0- BASTIMENT DE FUSTA DE PI ROIG PER A PINTAR 354
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 355
PAQ FULLES I BLOCKS DE FUSTA PER A PORTES I ARMARIS 355
PAQ7- FULLA BATENT PER A PORTA INTERIOR AMB ACABAT DE TAULER DE MELAMINA 355
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 356
PAR PORTES PER A US COMERCIAL 356
PAR5- PORTA SECCIONAL 356
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 357
PAV PERSIANES 357
PAV9- PERSIANA ENROTLLABLE D'ALUMINI 357
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 358
PAY COL·LOCACIÓ DE TANCAMENTS I DIVISORIES PRACTICABLES 358
PAY1- COL·LOCACIÓ DE BASTIMENTS EN PROCÉS DE FORMACIÓ DE PARETS 358
PA TANCAMENTS I DIVISÒRIES PRACTICABLES 359
PAZ ELEMENTS ESPECIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES 359
PAZ1- FERRAMENTA PER A FINESTRES I PORTES (D) 359
PB PROTECCIONS I SENYALITZACIÓ 360
PB1 BARANES 360
PB12- BARANA D'ACER 360
PB PROTECCIONS I SENYALITZACIÓ 362
PB1 BARANES 362
PB13- BARANA D'ACER 362
PC ENVIDRAMENTS 364
PC1 VIDRES PLANS 364
PC16- MIRALL 364
PC ENVIDRAMENTS 365
PC1 VIDRES PLANS 365
PC1D- VIDRE AÏLLANT DE DOS VIDRES LAMINARS DE SEGURETAT 365
PD INSTAL·LACIONS D'EVACUACIÓ 367
PD1 DESGUASSOS I BAIXANTS 367
PD18- BAIXANT I CONDUCTE DE VENTILACIÓ DE PVC 367
PD INSTAL·LACIONS D'EVACUACIÓ 369
PD1 DESGUASSOS I BAIXANTS 369
PD1A- DESGUÀS D'APARELL SANITARI DE PVC 369
PD INSTAL·LACIONS D'EVACUACIÓ 370
PD3 CAIXES SIFÒNIQUES I PERICONS 370
PD31- PERICÓ 370
PD INSTAL·LACIONS D'EVACUACIÓ 371
PD5 DRENATGES 371
PD58- CANAL DE FORMIGÓ POLÍMER AMB PENDENT PER A DRENATGES 371
PD INSTAL·LACIONS D'EVACUACIÓ 372
PD7 CLAVEGUERES I COL·LECTORS 372
PD79- CLAVEGUERÓ AMB TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ 372
PD INSTAL·LACIONS D'EVACUACIÓ 375
PD7 CLAVEGUERES I COL·LECTORS 375
PD7E- CLAVEGUERÓ AMB TUB DE PVC-U 375
PD INSTAL·LACIONS D'EVACUACIÓ 376
PDK PERICONS PER A CANALITZACIONS DE SERVEIS 376
PDK1- BASTIMENT I TAPA DE FOSA PER A PERICONS DE CANALITZACIONS DE SERVEIS 376
PD INSTAL·LACIONS D'EVACUACIÓ 377
PDZ ELEMENTS PER A ELEMENTS AUXILIARS D'EVACUACIÓ 377
PDZ0- SIFÓ PER A CÀMERES DE DESCÀRREGA 378
PE INSTAL·LACIONS DE CLIMATITZACIÓ 378
PE4 XEMENEIES I CONDUCTES CIRCULARS 378
PE42 CONDUCTE CIRCULAR METÀL·LIC 378
PE421- CONDUCTE CIRCULAR METÀL·LIC 378
PE INSTAL·LACIONS DE CLIMATITZACIÓ 381

PEK REIXETES 381
PEKK- REIXETA D'IMPULSIÓ D'UNA FILERA D'ALETES ORIENTABLES HORITZONTALS 381
PE INSTAL·LACIONS DE CLIMATITZACIÓ 382
PEM VENTILACIÓ ARTIFICIAL 382
PEM6- VENTILADOR EN LÍNIA PER A CONDUCTE CIRCULAR 382
PE INSTAL·LACIONS DE CLIMATITZACIÓ 383
PEV ELEMENTS DE REGULACIÓ I CONTROL PER A INSTAL·LACIONS DE CLIMATITZACIÓ 383
PEVB- SONDA COL·LOCADA 383
PF TUBS I ACCESSORIS PER A GASOS I FLUIDS 384
PF5 TUBS I ACCESSORIS DE COURE 384
PF56- TUB DE COURE SEMIDUR 384
PF TUBS I ACCESSORIS PER A GASOS I FLUIDS 387
PFA TUBS I ACCESSORIS DE PVC 387
PFA8- TUB DE PVC-U A PRESSIÓ 387
PF TUBS I ACCESSORIS PER A GASOS I FLUIDS 389
PFB TUBS I ACCESSORIS DE POLIETILÈ 389
PFB3- TUB DE POLIETILÈ DE DENSITAT ALTA 389
PFB3-1 389
PF TUBS I ACCESSORIS PER A GASOS I FLUIDS 392
PFQ AÏLLAMENTS TÈRMICS PER A TUBS 392
PFQ0- AÏLLAMENT TÈRMIC PER A TUBS AMB ESCUMES ELASTOMÈRIQUES 392
PG INSTAL·LACIONS ELÈCTRIQUES 393
PG1 CAIXES I ARMARIS 393
PG12- CAIXA DE DERIVACIÓ QUADRADA 393
PG INSTAL·LACIONS ELÈCTRIQUES 394
PG1 CAIXES I ARMARIS 394
PG19- CAIXA GENERAL DE PROTECCIÓ 394
PG INSTAL·LACIONS ELÈCTRIQUES 395
PG1 CAIXES I ARMARIS 395
PG1D- CONJUNT DE PROTECCIÓ I MESURA 395
PG INSTAL·LACIONS ELÈCTRIQUES 396
PG2 TUBS 397
PG2N- TUB FLEXIBLE DE MATERIAL PLÀSTIC PER A LA PROTECCIÓ DE CONDUCTORS ELÈCTRICS397
PG INSTAL·LACIONS ELÈCTRIQUES 398
PG2 TUBS 398
PG2P- TUB RÍGID DE PLÀSTIC PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS 398
PG INSTAL·LACIONS ELÈCTRIQUES 400
PG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA 400
PG33- CABLE DE COURE DE 0 400
PG INSTAL·LACIONS ELÈCTRIQUES 403
PG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA 403
PG3B- CONDUCTOR DE COURE NU 403
PG INSTAL·LACIONS ELÈCTRIQUES 404
PG5 APARELLS DE MESURA 404
PG52- COMPTADOR 404
PG INSTAL·LACIONS ELÈCTRIQUES 405
PG6 MECANISMES 405
PG65- CAIXA PER A MECANISMES 405
PG INSTAL·LACIONS ELÈCTRIQUES 407

## B MATERIALS I COMPOSTOS

## B0 MATERIALS BÀSICS

## B01 LÍQUIDS

## B011- AIGUA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B011-05ME.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aigües utilitzades per algun dels usos següents:
- Confecció de formigó
- Confecció de morter
- Confecció de pasta de guix
- Reg de plantacions
- Conglomerats de grava-ciment, terra-ciment, grava-emulsió, etc.
- Humectació de bases o subbases
- Humectació de peces ceràmiques, de ciment, etc.

CARACTERÍSTIQUES GENERALS:
Poden ser utilitzades les aigües potables i les sancionades com a acceptables per la pràctica.
Es poden utilitzar aigües de mar o salines anàlogues per a la confecció o curat de formigons sense armadura. Per a la confecció de formigó armat o pretesat es prohibeix l'ús d'aquestes aigües, tret del cas que es facin estudis especials.
Es podrà utilitzar aigua reciclada provinent del rentat dels camions formigonera a la pròpia central de formigó, sempre que compleixi les especificacions anteriors i la seva densitat sigui <= 1,3 g/cm3 i la densitat total sigui <=1,1 g/cm3
L'aigua a utilitzar tant en el curat com en la pastada del formigó, no ha de contenir cap substància perjudicial en quantitats que puguin afectar a les propietats del formigó o a la protecció de l'armat.
Si ha d'utilitzar-se per a la confecció o el curat de formigó o de morters i no hi ha antecedents de la seva utilització o aquesta presenta algun dubte s'haurà de verificar que acompleix totes aquestes característiques:
- Exponent d'hidrogen pH (UNE 83952): >= 5
- Total de substàncies dissoltes (UNE 83957): <= 15 g/l (15.000 ppm)
- Sulfats, expressats en SO4- (UNE 83956)
- Ciment tipus SR,SRC: <= 5 g/l (5.000 ppm)
- Altres tipus de ciment: <= 1 g/l (1.000 ppm)
- Ió clor, expressat en Cl- (UNE 83958)
- Aigua per a formigó pretesat: <= 1 g/l (1.000 ppm)
- Aigua per a formigó armat: <= 2 g/l
- Aigua per a formigó en massa amb armadura de fissuració: <= 2 g/l
- Hidrats de carboni(UNE 83959) : 0
- Substàncies orgàniques solubles en èter (UNE 83960): <= 15 g/l (15.000 ppm)

Álcalis Na2O: >= 1,5 g/l
Ió clor total aportat per components d'un formigó no pot superar:
- Pretensat: <= 0,2% pes de ciment

- Armat:  <= 0,4% pes de ciment
- En massa amb armadura de fissuració:  <= 0,4% pes de ciment

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

OPERACIONS DE CONTROL:

Abans de l'inici de l'obra i si no es tenen antecedents de l'aigua que es vol utilitzar, o es tenen dubtes, s'ha d'analitzar l'aigua per determinar:

- Exponent d'hidrogen pH (UNE 83952)
- Contingut de substàncies dissoltes (UNE 83957)
- Contingut de sulfats, expressats en SO4 (UNE 83956)

Contingut en ió clor Cl- (UNE 83958)

- Contingut d'hidrats de carboni (UNE 83959)
- Contingut de substàncies orgàniques solubles en èter (UNE 83960)

En cas d'utilitzar aigua potable de la xarxa de subministrament, no serà obligatori realitzar els assajos anteriors.

En altres casos, la DF o el Responsable de la recepció en el cas de centrals de formigó preparat o de prefabricats, s'ha de disposar la realització dels assajos en laboratoris contemplats en l'apartat 78.2.2.1, per tal de comprovar el compliment de les especificacions de l'article 29 del CODI ESTRUCTURAL.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i el CODI ESTRUCTURAL, realitzant-se la presa de mostres segons la UNE 83951.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

No s'ha d'acceptar l'aigua que no compleixi les especificacions, ni per a l'amasat ni per al curat.

---

## B0 MATERIALS BÀSICS

## B03 GRANULATS

### B03D- SORRA DE MATERIAL RECICLAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B03D-21MC.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Sorra procedent de roques calcàries, roques granítiques, marbres blancs i durs, o sorra procedent del reciclatge de residus de la construcció i demolició en una planta legalment autoritzada per al tractament d'aquest tipus de residu.
S'han considerat els tipus següents:
- Sorra per a reblert de rases amb canonades
- Sorres procedents de reciclatge de residus de la construcció i demolicions
CARACTERÍSTIQUES GENERALS:
El contractista ha de sotmetre a l'aprovació de la DF les pedreres o dipòsits d'on s'han d'obtenir els àrids, aportant tots els elements justificatius que cregués convenients o que li fossin requerits pel Director d'Obra, entre d'altres:
- Classificació geològica.
- Estudi de morfologia.
- Aplicacions anteriors.
La DF ha de poder refusar totes aquelles procedències que, al seu criteri, obligarien a un control massa freqüent dels materials que se n'extraguessin.
Els grànuls han de tenir forma arrodonida o polièdrica.
La composició granulomètrica ha de ser l'adequada al seu ús, o si no consta, la que estableixi explícitament la DF.
No ha de tenir margues o altres materials estranys.
Contingut de pirites o d'altres sulfurs oxidables: 0%
Contingut de matèria orgànica (UNE-EN 1744-1): Color més clar que el patró
Contingut de terrossos d'argila (UNE 7133): <= 1% en pes
Els àrids no han de ser reactius amb el ciment. No s'utilitzaran àrids procedents de roques toves, friables, poroses, etc., ni els que continguin nòduls de guix, compostos ferrosos, sulfurs oxidables, etc, en quantitats superiors a les contemplades al CODI ESTRUCTURAL.
- Dimensió mínima permesa = 4 mm
- Terrossos d'argila per a un formigó amb menys del 20% d'àrid reciclat: <= 0,6%
- Terrossos d'argila per a un formigó amb 100% d'àrid reciclat: <= 0,25%
- Absorció d'aigua per a un formigó amb menys del 20% d'àrid reciclat: <= 7%
- Absorció d'aigua per a un formigó amb més del 20% d'àrid reciclat: <= 5%
- Coeficient de Los Ángeles: <= 40
- Continguts màxims d'impureses:
- Material ceràmic: <= 5% del pes
- Partícules lleugeres: <= 1% del pes
- Asfalt: <= 1% del pes
- Altres: <= 1,0 % del pes
En els valors de les especificacions no citades, es mantenen els establerts en l'article 30 del CODI ESTRUCTURAL.
GRANULATS PROCEDENTS DE RECICLATGE DE RESIDUS DE LA CONSTRUCCIÓ I DEMOLICIONS:
El material ha de procedir d'una planta autoritzada legalment per al tractament de residus de la construcció.
El material no ha de ser susceptible de cap mena de meteorització o d'alteració física o química sota les condicions més desfavorables que presumiblement es puguin donar al lloc d'utilització.
No han de donar lloc, amb l'aigua, a dissolucions que puguin causar danys a estructures, capes de ferms, o contaminar el sòl o corrents d'aigua.
S'ha considerat que l'ús serà el reblert de rases amb canonades.
Per a qualsevol utilització diferent d'aquesta, es requereix l'acceptació expressa de la direcció facultativa i la justificació mitjançant els assaigs que pertoquin que es compleixen les condicions requerides per a l'us al que es pretén destinar.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.
Cada remesa de sorra s'ha de descarregar en una zona ja preparada de sòl sec.
Les sorres de tipus diferents s'han d'emmagatzemar per separat.
Els àrids s'han d'emmagatzemar de tal manera que quedin protegits contra la contaminació, i evitant la seva possible segregació, sobretot durant el seu transport. Es recomana emmagatzemar-los sota cobert per evitar els canvis de temperatura del granulat, i en un terreny sec i net destinat a l'apilament dels àrids. Les sorres d'altres tipus s'han d'emmagatzemar per separat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
GRANULATS PROCEDENTS DE RECICLATGE DE RESIDUS DE LA CONSTRUCCIÓ I DEMOLICIONS:

Decret Legislatiu 1/2009, de 21 de juliol, pel qual s'aprova el Text refós de la Llei reguladora dels residus.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
L'entrega de granulat a l'obra ha d'anar acompanyada d'un full de subministrament proporcionat pel subministrador, en el que hi han de constar com a mínim les següents dades:
- Identificació del subministrador
- Número del certificat de marcatge CE o indicació d'autoconsum
- Número de sèrie de la fulla de subministrament
- Nom de la cantera
- Data del lliurament
- Nom del peticionari
- Designació de l'àrid segons l'article 30.2 del CODI ESTRUCTURAL
- Quantitat de granulat subministrat
- Identificació del lloc de subministrament
El fabricant ha de proporcionar la informació relativa a la granulometria i a les toleràncies de l'àrid subministrat.
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 2+: Declaració de Prestacions
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 4: Declaració de Prestacions
El símbol de marcatge de conformitat CE s'ha d'estampar d'acord amb la Directiva 93/68CE i ha d'estar visible sobre el producte o sobre etiqueta, embalatge o documentació comercial i ha d'anar acompanyat de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o marca d'identificació i direcció del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- Referència a la norma (UNE-EN 12620)
- Descripció del producte (nom genèric, material, ús previst)
- Designació del producte
- Informació de les característiques essencials aplicables
A la documentació del marcatge haurà d'indicar:
- Nom del laboratori que ha realitzat els assajos
- Data d'emissió del certificat
- Garantia de que el tractament estadístic és l'exigit en el marcatge
- Estudi de fins que justifiqui experimentalment el seu ús, en el cas que hi hagi àrids que no compleixen amb l'article 30.4.1 del CODI ESTRUCTURAL.
L'àrid reciclat ha d'incloure en la seva documentació:
- Naturalesa del material
- Planta productora de l'àrid i empresa transportista de la runa
- Presència d'impureses
- Detalls de la seva procedència
- Altre informació que resulti rellevant
En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.
OPERACIONS DE CONTROL:
Els àrids han de disposar del marcatge CE, de tal manera que la comprovació de la seva idoneïtat per al seu ús es farà mitjançant un control documental del marcatge per tal de determinar el compliment de les especificacions del projecte i de l'article 30 del CODI ESTRUCTURAL.

En el cas d'àrids d'autoconsum, el Constructor o el Subministrador ha d'aportar un certificat d'assaig, de com a màxim tres mesos d'antiguitat, realitzat en un laboratori de control dels contemplats en l'article 17.2.2.1 del CODI ESTRUCTURAL, que verifiqui el compliment de les especificacions de l'àrid subministrat respecte l'article 30 del CODI ESTRUCTURAL.
La DF ha de poder valorar el nivell de garantia del distintiu, i en cas de no disposar de suficient informació, ha de poder determinar l'execució de comprovacions mitjançant assaigs.
La DF, a més, ha de valorar si realitzar una inspecció a la planta de fabricació, a poder ser, abans del subministra de l'àrid, per comprovar la idoneïtat per a la seva fabricació. En cas necessari, la DF ha de poder realitzar els assaigs següents per a verificar la conformitat de les especificacions:
- Matèria orgànica (UNE-EN 1744-1).
- Terrossos d'argila (UNE 7133).
- Material retingut pel garbell 0.063 UNE (UNE EN 933-2) i que sura en un líquid de pes específic 2 (UNE EN 1744-1).
- Compostos de sofre (SO3)- respecte al granulat sec (UNE-EN 1744-1).
- Sulfats solubles en àcid (UNE-EN 1744-1).
- Contingut d'Ió CL- (UNE-EN 1744-1).
- Assaig petrogràfic
- Reactivitat potencial amb els àlcalis del ciment (UNE 146-507 i UNE 146-508).
- Equivalent de sorra (UNE-EN 933-8).
- Absorció d'aigua (UNE-EN 1097-6).
- Assaig d'identificació per raigs X.
- Pèrdua de pes amb sulfat magnèsic (UNE-EN 1367-2)
- Assaig granulomètric (UNE-EN 933-2)
- Coeficient de friabilitat (UNE 83115)

Un cop s'hagi realitzat l'apilament, s'ha de realitzar una inspecció visual, i si es considera necessari, s'han de prendre mostres per realitzar els assaigs corresponents.
S'ha de poder acceptar la sorra que no compleixi amb els requisits sempre i quan mitjançant rentat, cribatge o mescla, assoleixi les condicions exigides.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i el CODI ESTRUCTURAL.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'ha d'acceptar la sorra que no compleixi totes les especificacions indicades al plec de condicions. Si la granulometria no s'ajusta a la utilitzada per a l'establiment de les dosificacions aprovades, s'hauran de projectar i aprovar noves fórmules de treball.
No s'han d'utilitzar àrids fins els quals l'equivalent de sorra sigui inferior a:
- 70, en obres sotmeses a les classes X0 o XC
- 75, en la resta de casos

En cas que les sorres procedents del matxuqueig de roques calcàries o de roques dolomítiques que no compleixin l'especificació de l'equivalent de sorra, s'han de poder acceptar si l'assaig del blau de metilè (UNE-EN 933-9) compleix el següent:
- Per a obres amb classe general d'exposició classe X0 o XC: <= 0,6% en pes
- Resta de casos: <= 0,3% en pes

Si el valor del blau de metilè fos superior als valors anteriors, i es presentin dubtes de la presència d'argila en els fins, s'ha de poder realitzar un assaig de rajos X per a la seva detecció i identificació: s'ha de poder utilitzar l'àrid fi si les argiles són del tipus caolinita o illita, i si les propietats del formigó amb aquest àrid són les mateixes que les d'un que tingui els mateixos components però sense els fins.
S'han de  poder utilitzar sorres rodades, o procedents de roques matxucades, o escòries siderúrgiques adequades, en la fabricació de formigó d'ús no estructural.

---

## B0 MATERIALS BÀSICS

## B03 GRANULATS

### B03J- GRAVA DE PEDRERA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B03J-0K7V,B03J-0K88.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Granulats utilitzats per a algun dels usos següents:
- Confecció de formigons
- Confecció de barreges grava-ciment per a paviments
- Material per a drenatges
- Material per a paviments

El seu origen pot ser:
- Granulats naturals, procedents d'un jaciment natural
- Granulats naturals, obtinguts per matxucament de roques naturals
- Granulats procedents d'escòries siderúrgiques refredades per aire

Els granulats naturals poden ser:
- De pedra granítica
- De pedra calcària

CARACTERÍSTIQUES GENERALS:
El contractista ha de sotmetre a l'aprovació de la DF les pedreres o dipòsits d'on s'han d'obtenir els àrids, aportant tots els elements justificatius que cregués convenients o que li fossin requerits pel Director d'Obra, entre d'altres:
- Classificació geològica.
- Estudi de morfologia.
- Aplicacions anteriors.

La DF ha de poder refusar totes aquelles procedències que, al seu criteri, obligarien a un control massa freqüent dels materials que se n'extraguessin.
CARACTERÍSTIQUES GENERALS DELS GRANULATS RECICLATS
Els granulats procedents de reciclatge d'enderrocs no han de contenir en cap cas restes provinents de construccions amb patologies estructurals, com ara ciment aluminós, granulats amb sulfurs, sílice amorfa o corrosió de les armadures.
Els grànuls han de tenir forma arrodonida o polièdrica.
La composició granulomètrica ha de ser l'adequada al seu ús i ha de ser la que es defineix a la partida d'obra en què intervingui o, si no hi consta, la que estableixi explícitament la DF.
Han de ser nets, resistents i de granulometria uniforme.
No han de tenir pols, brutícia, argila, margues o d'altres matèries estranyes.
Diàmetre mínim: 98% retingut tamís 4 (UNE-EN 933-2)
Els àrids reciclats hauran de complir amb les especificacions de l'article 30 del CODI ESTRUCTURAL.
A més, els que provinguin de formigons estructurals sans, o de resistència elevada, han de ser adequats per a la fabricació de formigó reciclat estructural, complint una sèrie de requisits:
- Dimensió mínima permesa = 4 mm
- Terrossos d'argila per a un formigó amb menys del 20% d'àrid reciclat: <= 0,6%
- Terrossos d'argila per a un formigó amb 100% d'àrid reciclat: <= 0,25%
- Absorció d'aigua per a un formigó amb menys del 20% d'àrid reciclat: <= 7%
- Absorció d'aigua per a un formigó amb més del 20% d'àrid reciclat: <= 5%
- Coeficient de Los Ángeles: <= 40
- Continguts màxims d'impureses:
- Material ceràmic: <= 5% del pes
- Partícules lleugeres: <= 1% del pes
- Asfalt: <= 1% del pes

- Altres: <= 1,0 % del pes
En els valors de les especificacions no citades, es mantenen els establerts en l'article 30 del CODI ESTRUCTURAL.
GRANULATS PROCEDENTS D'ESCORIES SIDERÚRGIQUES
Contingut de silicats inestables: Nul
Contingut de compostos fèrrics: Nul
GRAVA PER A LA CONFECCIÓ DE FORMIGONS:
Es denomina grava a la barreja de les diferents fraccions de granulat gruixut que s'utilitzen per a la confecció del formigó
Designació: d/D - IL - N
d/D: Fracció granulomètrica, d tamany mínim i D tamany màxim
IL: Presentació, R rodat, T triturat (matxuqueig) i M barreja
N: Naturalesa de l'àrid (C, calcari; S, silici; G,granític; O, ofita; B, basalt; D, dolomític; Q, traquita; I, fonolita; V, varis; A, artificial i R, reciclat
La grandària màxima D d'un granulat gruixut (grava) utilitzat per la confecció de formigó serà menor que les següents dimensions:
- 0,8 de la distància lliure horitzontal entre beines o armadures que formin grup, o entre un parament de la peça i una beina o armadura que formi un angle >45º (amb la direcció de formigonat)
- 1,25 de la distància entre un parament de la peça i una beina o armadura que formi un angle <=45º (amb la direcció de formigonat)
- 0,25 de la dimensió mínima de la peça que es formigona amb les excepcions següents:
- Lloses superiors de sostres, amb TMA < 0,4 del gruix mínim
- Peces d'execució molt curosa i elements en els que l'efecte de la paret de l'encofrat sigui reduït (sostres encofrats a una sola cara), amb TMA < 0,33 del gruix mínim
Quan el formigó passi entre vàries armadures, l'àrid gruixut serà el mínim valor entre el primer punt i el segon del paràgraf anterior.
Tot el granulat ha de ser d'una mida inferior al doble del límit més petit aplicable a cada cas.
Contingut de matèria orgànica (UNE-EN 1744-1): Color més clar que el patró
Fins que passen pel tamís 0,063 (UNE-EN 933-2):
- Per a graves calcàries i granítiques: <= 1,5% en pes
- Granulats, reciclats de formigó o prioritariament naturals: < 3%
- Per a granulats reciclats mixtos: < 5%
L'índex de llenques per a un granulat gruixut segons UNE-EN 933-3: <= 35%
Material retingut pel tamís 0,063 (UNE_EN 933-2) i que sura en un líquid de pes específic 20 kN/m3 (UNE EN 1744-1):
- Granulats naturals <= 1% en pes
Compostos de sofre expressats en SO3 i referits a granulat sec (UNE-EN 1744-1):
- Granulats naturals: <= 1% en pes
- Granulats d'escòries siderúrgiques: <= 2% en pes
- Granulats reciclats mixtos: <= 1% en pes
- Granulats amb sulfurs de ferro oxidables en forma de pirrotina: <= 0,1% en pes
- Altres granulats: <= 0,4% en pes
Sulfats solubles en àcids, expressats en SO3 i referits a granulat sec (UNE-EN 1744-1):
- Granulats naturals: <= 0,8% en pes
- Granulats d'escòries siderúrgiques: <= 1% en pes
Clorurs expressats en Cl- i referits a granulat sec (UNE-EN 1744-1):
- Formigó armat o en massa amb armadura de fissuració: <= 0,05% en massa
- Formigó pretesat: <= 0,03% en massa
Ió clor total aportat per components d'un formigó no pot superar:
- Pretensat: <= 0,2% pes de ciment
- Armat: <= 0,4% pes de ciment
- En massa amb armadura de fissuració: <= 0,4% pes de ciment
Contingut de pirites o d'altres sulfurs: 0%
Contingut d'ió Cl-:
- Granulats reciclats mixtos: < 0,06%
El contingut de matèria orgànica que sura en un líquid de pes específic 2 segons la UNE-EN 1744-1(Apart.) 14.2 serà <= 1% per a granulats gruixuts.
Contingut de materials no petris (roba, fusta, paper...):
- Granulats reciclats provinents de formigó o mixtos: < 0,5%
- Altres granulats: Nul
Contingut de restes d'asfalt:
- Granulat reciclat mixt o provinent de formigó: < 0,5%
- Altres granulats: Nul

Reactivitat:
- Àlcali-sílici o àlcali-silicat (Mètode químic UNE 146-507-1 EX o Mètode accelerat UNE 146-508 EX): Nul·la
- Àlcali-carbonat (Mètode químic UNE 146-507-2): Nul·la
Estabilitat (UNE-EN 1367-2):
- Pèrdua de pes amb sulfat magnèsic: <= 18%
Resistència a la fragmentació segons UNE-EN 1097-2 (Assaig de los Ángeles):
- Granulats gruixuts naturals: <= 40
Absorció d'aigua:
- Granulats gruixuts naturals (UNE-EN 1097-6): < 5%
- Granulats reciclats provinents de formigó: < 10%
- Granulats reciclats mixtos: < 18%
- Granulats reciclats prioritariament naturals: < 5%
Pèrdua de pes amb cinc cicle de sulfat de magnesi segons UNE-EN 1367-2:
- Granulats gruixuts naturals: <= 18%
Els àrids no han de presentar reactivitat potencial amb els àlcalis del formigó. Per a comprovar-ho, s'ha de realitzar en primer lloc un anàlisi petrogràfic, per a obtenir el tipus de reactivitat que, en el seu cas, puguin presentar. Si d'aquest estudi es dedueix la possibilitat de reactivitat àlcali sílice o àlcali silicat, s'ha de realitzar l'assaig descrit a l'UNE 146.508 EX. Si el tipus de reactivitat potencial és àlcali carbonat, s'ha de realitzar l'assaig descrit a l'UNE 146.507 EX Part 2.
Els àrids no han de ser reactius amb el ciment. No s'utilitzaran àrids procedents de roques toves, friables, poroses, etc., ni els que continguin nòduls de guix, compostos ferrosos, sulfurs oxidables, etc, en quantitats superiors a les contemplades al CODI ESTRUCTURAL.
GRAVA PER A DRENATGES:
El granulat ha de ser procedent d'un jaciment natural, del matxuqueig de roques naturals, o del reciclatge d'enderrocs. No ha de presentar restes d'argila, margues o altres materials estranys.
La mida màxima dels grànuls ha de ser de 76 mm (tamís 80 UNE) i el garbellat ponderal acumulat pel tamís 0,08 UNE ha de ser <= 5%. La composició granulomètrica ha de ser fixada explícitament per la DF segons les característiques del terreny per drenar i del sistema de drenatge.
Plasticitat: No plàstic
Coeficient de desgast (assaig "Los Ángeles" UNE-EN 1097-2): <= 40
Equivalent de sorra (UNE-EN 933-8): > 30
Condicions generals de filtratge:
- F15/d85: < 5
- F15/d15: < 5
- F50/d50: < 5
(Fx = grandària superior de la fracció x% en pes del material filtrant, dx = grandària superior de la proporció x% del terreny a drenar)
A més, el coeficient d'uniformitat del filtre ha de ser:
- F60/F10: <20
Condicions de la granulometria en funció del sistema previst d'evacuació de l'aigua:
- Per a tubs perforats: F85/Diàmetre de l'orifici: > 1
- Per a tubs amb juntes obertes: F85/ Obertura de la junta: > 1,2
- Per a tubs de formigó porós: F85/d15 de l'àrid del tub: > 0,2
- Si es drena per metxinals: F85/ diàmetre del metxinal: > 1
Quan no sigui possible trobar un material granular d'aquestes condicions es faran filtres granulars compostos de vàries capes. La més gruixuda es col·locarà al costat del sistema d'evacuació. Aquesta complirà les condicions de filtre respecte a la següent i així successivament fins arribar al replè o al terreny natural. Es podrà recórrer a l'ús de filtres geotèxtils.
Quan el terreny natural estigui constituït per materials amb graves i boles a efectes del compliment de les condicions anteriors, s'atendrà únicament a la corba granulomètrica de la fracció del mateix inferior a 25 mm.
Si el terreny no és cohesiu i està compost per sorra fina i llims, el material drenant haurà de complir, a més de les condicions generals de filtre, la condició: F15 > 1 mm.
Si el terreny natural és cohesiu, compacte i homogeni, sense restes de sorra o llims, les condicions de filtre 1 i 2 s'han de substituir per: 0,1 mm > F15 > 0,4 mm
En els drens cecs, el material de la zona permeable central haurà de complir les següents condicions:
- Mida màxima de l'àrid: Entre 20 mm i 80 mm
- Coeficient d'uniformitat: F60/F10 < 4
Si s'utilitza granulats reciclats s'ha de comprovar que l'inflament (assaig CBR (NLT-111)) sigui inferior al 2% (UNE 103502).
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
CONDICIONS GENERALS:

Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.
Cada remesa de grava s'ha de descarregar en una zona ja preparada de sòl sec
Les graves de tipus diferents s'han d'emmagatzemar per separat
Els àrids s'emmagatzemaran de tal manera que quedin protegits contra la contaminació, i evitant la seva possible segregació, sobretot durant el seu transport. Es recomana emmagatzemar-los sota cobert per evitar els canvis de temperatura del granulat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
GRAVA PER A LA CONFECCIÓ DE FORMIGONS:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
UNE-EN 12620:2003 Áridos para hormigón.
GRAVA PER A PAVIMENTS:
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
GRAVA PER A DRENATGES:
Orden FOM/298/2016, de 15 de febrero, por la que se aprueba la norma 5.2-IC drenaje superficial de la Instrucción de Carreteras.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
L'entrega de granulat a l'obra ha d'anar acompanyada d'un full de subministrament proporcionat pel subministrador, en el que hi han de constar com a mínim les següents dades:
- Identificació del subministrador
- Número del certificat de marcatge CE o indicació d'autoconsum
- Número de sèrie de la fulla de subministrament
- Data del lliurament
- Nom del peticionari
- Designació de l'àrid segons l'article 30.2 del CODI ESTRUCTURAL
- Quantitat de granulat subministrat
- Identificació del lloc de subministrament
El fabricant ha de proporcionar la informació relativa a la granulometria i a les toleràncies de l'àrid subministrat.
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 2+: Declaració de Prestacions
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 4: Declaració de Prestacions
El símbol de marcatge de conformitat CE s'ha d'estampar d'acord amb la Directiva 93/68CE i ha d'estar visible sobre el producte o sobre etiqueta, embalatge o documentació comercial i ha d'anar acompanyat de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o marca d'identificació i direcció del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- Referència a la norma (UNE-EN 12620)
- Descripció del producte (nom genèric, material, ús previst)
- Designació del producte
- Informació de les característiques essencials aplicables
A la documentació del marcatge haurà d'indicar:
- Nom del laboratori que ha realitzat els assajos

- Data d'emissió del certificat
- Garantia de que el tractament estadístic és l'exigit en el marcatge
- Estudi de fins que justifiqui experimentalment el seu ús, en el cas que hi hagi àrids que no compleixen amb l'article 30.4.1 del CODI ESTRUCTURAL.

OPERACIONS DE CONTROL:

Els àrids han de disposar del marcatge CE, de tal manera que la comprovació de la seva idoneïtat per al seu ús es farà mitjançant un control documental del marcatge per tal de determinar el compliment de les especificacions del projecte i de l'article 30 del CODI ESTRUCTURAL.

En el cas d'àrids d'autoconsum, el Constructor o el Subministrador ha d'aportar un certificat d'assaig, de com a màxim tres mesos d'antiguitat, realitzat en un laboratori de control dels contemplats en l'article 17.2.2.1 del CODI ESTRUCTURAL, que verifiqui el compliment de les especificacions de l'àrid subministrat respecte l'article 30 del CODI ESTRUCTURAL.

La DF ha de poder valorar el nivell de garantia del distintiu, i en cas de no disposar de suficient informació, ha de poder determinar l'execució de comprovacions mitjançant assaigs.

La DF, a més, ha de valorar si realitzar una inspecció a la planta de fabricació, a poder ser, abans del subministra de l'àrid, per comprovar la idoneïtat per a la seva fabricació. En cas necessari, la DF ha de poder realitzar els assaigs següents per a verificar la conformitat de les especificacions:

- Índex de llenques (UNE-EN 933-3).
- Terrossos d'argila (UNE 7133)
- Partícules toves (UNE 7134)
- Coeficient de forma (UNE EN 933-4)
- Material retingut pel garbell 0.063 UNE (UNE EN 933-2) i que sura en un líquid de pes específic 2 (UNE EN 1744-1).
- Compostos de sofre (SO3)- respecte al granulat sec (UNE-EN 1744-1).
- Contingut en ió clor Cl- (UNE-EN 1744-1)
- Assaig petrogràfic
- Reactivitat potencial amb els àlcalis del ciment (UNE 146-507 i UNE 146-508).
- Estabilitat, resistència a l'atac del sulfat magnèsic (UNE-EN 1367-2).
- Absorció d'aigua (UNE-EN 1097-6).
- Resistència al desgast Los Angeles (UNE-EN 1097-2).
- Assaig d'identificació per raigs X.
- Assaig granulomètric (UNE-EN 933-2)

OPERACIONS DE CONTROL EN GRAVA PER A DRENATGES:

Les tasques de control a realitzar són les següents:

- Inspecció visual del material i recepció del certificat de procedència i qualitat corresponent.
- Abans de començar el reblert, quan hagi canvi de procedència del material, o cada 2000 m3 durant la seva execució, es realitzaran els següents assaigs d'identificació del material:
- Assaig granulomètric del material filtrant (UNE EN 933-1)
- Assaig granulomètric del material adjacent (UNE 103101)
- Desgast de "Los Ángeles" (UNE EN 1097-2)

S'ha de demanar un certificat de procedència del material, que en el cas d'àrids naturals ha de contenir:

- Classificació geològica
- Estudi de morfologia
- Aplicacions anteriors
- Assaigs d'identificació del material

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i el CODI ESTRUCTURAL.

CRITERIS DE PRESA DE MOSTRES EN GRAVA PER A DRENATGES:

S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

No s'acceptarà la grava que no compleixi totes les especificacions indicades al plec. Si la granulometria no s'ajusta a la utilitzada per a l'establiment de les dosificacions aprovades, s'hauran de projectar i aprovar noves fórmules de treball.

INTERPRETACIÓ DE RESULTATS I ACTUACIÓ EN CAS D'INCOMPLIMENT EN GRAVA PER A DRENATGES:

Els resultats dels assaigs d'identificació han de complir estrictament les especificacions indicades, en cas contrari, no s'ha d'autoritzar l'ús del material corresponent en l'execució del reblert.

## B0 MATERIALS BÀSICS

## B03 GRANULATS

### B03L- SORRA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B03L-05N7,B03L-05MO,B03L-05N5,B03L-05MQ,B03L-05MS.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Sorra procedent de roques calcàries, roques granítiques, marbres blancs i durs, o sorra procedent del reciclatge de residus de la construcció i demolició en una planta legalment autoritzada per al tractament d'aquest tipus de residu.
S'han considerat els tipus següents:
- Sorra de marbre blanc
- Sorra per a confecció de formigons, d'origen:
Sorra per a confecció de formigons, d'origen:
- De pedra calcària
- De pedra granítica
- Sorra per a confecció de morters
- Sorra per a reblert de rases amb canonades
- Sorres procedents de reciclatge de residus de la construcció i demolicions
CARACTERÍSTIQUES GENERALS:
El contractista ha de sotmetre a l'aprovació de la DF les pedreres o dipòsits d'on s'han d'obtenir els àrids, aportant tots els elements justificatius que cregués convenients o que li fossin requerits pel Director d'Obra, entre d'altres:
- Classificació geològica.
- Estudi de morfologia.
- Aplicacions anteriors.
La DF ha de poder refusar totes aquelles procedències que, al seu criteri, obligarien a un control massa freqüent dels materials que se n'extraguessin.
Els grànuls han de tenir forma arrodonida o polièdrica.
La composició granulomètrica ha de ser l'adequada al seu ús, o si no consta, la que estableixi explícitament la DF.
No ha de tenir margues o altres materials estranys.
Contingut de pirites o d'altres sulfurs oxidables: 0%
Contingut de matèria orgànica (UNE-EN 1744-1): Color més clar que el patró
Contingut de terrossos d'argila (UNE 7133): <= 1% en pes
Els àrids no han de ser reactius amb el ciment. No s'utilitzaran àrids procedents de roques toves, friables, poroses, etc., ni els que continguin nòduls de guix, compostos ferrosos, sulfurs oxidables, etc, en quantitats superiors a les contemplades al CODI ESTRUCTURAL.
Els àrids reciclats hauran de complir amb les especificacions de l'article 30 del CODI ESTRUCTURAL.
A més, els que provinguin de formigons estructurals sans, o de resistència elevada, han de ser

adequats per a la fabricació de formigó reciclat estructural, complint una sèrie de requisits:
- Dimensió mínima permesa = 4 mm
- Terrossos d'argila per a un formigó amb menys del 20% d'àrid reciclat: <= 0,6%
- Terrossos d'argila per a un formigó amb 100% d'àrid reciclat: <= 0,25%
- Absorció d'aigua per a un formigó amb menys del 20% d'àrid reciclat: <= 7%
- Absorció d'aigua per a un formigó amb més del 20% d'àrid reciclat: <= 5%
- Coeficient de Los Ángeles: <= 40
- Continguts màxims d'impureses:
- Material ceràmic: <= 5% del pes
- Partícules lleugeres: <= 1% del pes
- Asfalt: <= 1% del pes
- Altres: <= 1,0 % del pes

En els valors de les especificacions no citades, es mantenen els establerts en l'article 30 del CODI ESTRUCTURAL.

SORRA DE MARBRE BLANC:

Barreja amb granulats blancs diferents del marbre: 0%

SORRA PER A LA CONFECCIÓ DE FORMIGONS:

Es denomina sorra a la barreja de les diferents fraccions d'àrid fi que s'utilitzen per a la confecció del formigó

Designació: d/D - IL - N

d/D: Fracció granulomètrica, d tamany mínim i D tamany màxim

IL: Presentació, R rodat, T triturat (matxuqueig) i M barreja

N: Naturalesa de l'àrid (C, calcari; S, silici; G,granític; O, ofita; B, basalt; D, dolomític; Q, traquita; I, fonolita; V, varis; A, artificial i R, reciclat

Mida dels granuls (Tamís 4 UNE-EN 933-2): <= 4 mm

Material retingut pel tamís 0,063 (UNE_EN 933-2) i que sura en un líquid de pes específic 20 kN/m3 (UNE EN 1744-1): <= 0,5% en pes

Compostos de sofre expressats en SO3 i referits a granulat sec (UNE-EN 1744-1): <= 1% en pes

Reactivitat potencial amb els àlcalis del ciment (UNE 146507-2)

Sulfats solubles en àcid, expressats en SO3 i referits al granulat sec (UNE-EN 1744-1): <= 0,8% en pes

Clorurs expressats en Cl- i referits al granulat sec (UNE-EN 1744-1):
- Formigó armat o en massa amb armadures de fissuració: <= 0,05% en pes
- Formigó pretesat: <= 0,03% en pes

Ió clor total aportat per components d'un formigó no pot superar:
- Pretensat: <= 0,2% pes de ciment
- Armat: <= 0,4% pes de ciment
- En massa amb armadura de fissuració: <= 0,4% pes de ciment

Estabilitat (UNE-EN 1367-2):
- Pèrdua de pes amb sulfat sòdic: <= 10%
- Pèrdua de pes amb sulfat magnèsic: <= 15%

Pèrdua de pes amb sulfat magnèsic (UNE-EN 1367-2) quan el formigó estigui sotmès a una classe d'exposició XF, i l'àrid fi tingui una absorció d'aigua >1%: <= 15%

Coeficient de friabilitat (UNE 83115)
- Per formigons d'alta resistència: < 40
- Formigons en massa o armats amb Fck<=30 N/mm2: < 50

Els àrids no han de presentar reactivitat potencial amb els àlcalis del formigó. Per a comprovar-ho, s'ha de realitzar en primer lloc un anàlisi petrogràfic, per a obtenir el tipus de reactivitat que, en el seu cas, puguin presentar. Si d'aquest estudi es dedueix la possibilitat de reactivitat àlcali sílice o àlcali silicat, s'ha de realitzar l'assaig descrit a l'UNE 146.508 EX. Si el tipus de reactivitat potencial és àlcali carbonat, s'ha de realitzar l'assaig descrit a l'UNE 146.507 EX Part 2.

La corba granulomètrica de l'àrid fi, ha d'estar compresa dins del fus següent:

| | Material retingut acumulat, en % en pes,en els tamisos | | | | | | |
|---|---|---|---|---|---|---|---|
| Límits | 4 mm | 2 mm | 1 mm | 0,5 mm | 0,25 mm | 0,125 mm | 0,063 mm |
| Superior | 0 | 4 | 16 | 40 | 70 | 77 | (1) |
| Inferior | 15 | 38 | 60 | 82 | 94 | 100 | 100 |

(1) Aquest valor varia en funció del tipus i origen de l'àrid.

SORRA DE PEDRA GRANÍTICA PER A LA CONFECCIÓ DE FORMIGONS:

Contingut màxim de fins que passen pel tamís 0,063 mm (UNE-EN 933-1):
- Granulat gruixut:

- Qualsevol tipus: <= 1,5% en pes
- Granulat fí:
- Granulat arrodonit: <= 6% en pes
- Granulat de matxuqueig no calcari per a obres sotmeses a exposició XS, XD, XA,XF o XM: <= 6% en pes
- Granulat de matxuqueig no calcari per a obres sotmeses a exposició X0 o XC i no sotmeses a cap classe d'exposició XA, XF o XM: <= 10% en pes

Equivalent de sorra (EAV)(UNE_EN 933-8):
- Per a obres en ambients X0, XC: >= 70
- Resta de casos: >= 75

Absorció d'aigua (UNE-EN 1097-6): <= 5%

SORRA DE PEDRA CALCÀRIA PER A LA CONFECCIÓ DE FORMIGONS:

Contingut màxim de fins que passen pel tamís 0,063 mm (UNE-EN 933-1):
- Granulat gruixut:
- Qualsevol tipus: <= 1,5% en pes
- Granulat fí:
- Granulat arrodonit: <= 6% en pes
- Granulat de matxuqueig calcari per a obres sotmeses a exposició XS, XD, XA, XF o XM: <= 10% en pes
- Granulat de matxuqueix calcari per a obres sotmeses a exposició X0 o XC i no sotmesa a cap classe d'exposició XA,XF o XM: <= 16% en pes.

Valor blau de metilè(UNE 83130):
- Per a obres sotmeses a exposició X0 o XC: <= 0,6% en pes
- Resta de casos: <= 0,3% en pes

SORRA PER A LA CONFECCIÓ DE MORTERS:

La composició granulomètrica ha de quedar dintre dels límits següents:

| Tamís UNE 7-050 mm | Percentatge en pes que passa pel tamís | Condicions |
|---|---|---|
| 5,00 | A | A = 100 |
| 2,50 | B | 60 <= B <= 100 |
| 1,25 | C | 30 <= C <= 100 |
| 0,63 | D | 15 <= D <= 70 |
| 0,32 | E | 5 <= E <= 50 |
| 0,16 | F | 0 <= F <= 30 |
| 0,08 | G | 0 <= G <= 15 |
| Altres condi- cions | | C - D <= 50 |
| | | D - E <= 50 |
| | | C - E <= 70 |

Mida dels gränuls: <= 1/3 del gruix del junt

Contingut de matèries perjudicials: <= 2%

GRANULATS PROCEDENTS DE RECICLATGE DE RESIDUS DE LA CONSTRUCCIÓ I DEMOLICIONS:

El material ha de procedir d'una planta autoritzada legalment per al tractament de residus de la construcció.

El material no ha de ser susceptible de cap mena de meteorització o d'alteració física o química sota les condicions més desfavorables que presumiblement es puguin donar al lloc d'utilització.

No han de donar lloc, amb l'aigua, a dissolucions que puguin causar danys a estructures, capes de ferms, o contaminar el sòl o corrents d'aigua.

S'ha considerat que l'ús serà el reblert de rases amb canonades.

Per a qualsevol utilització diferent d'aquesta, es requereix l'acceptació expressa de la direcció facultativa i la justificació mitjançant els assaigs que pertoquin que es compleixen les condicions requerides per a l'us al que es pretén destinar.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.

Cada remesa de sorra s'ha de descarregar en una zona ja preparada de sòl sec.

Les sorres de tipus diferents s'han d'emmagatzemar per separat.

Els àrids s'han d'emmagatzemar de tal manera que quedin protegits contra la contaminació, i evitant la seva possible segregació, sobretot durant el seu transport. Es recomana emmagatzemar-los sota cobert per evitar els canvis de temperatura del granulat, i en un terreny sec i net destinat a l'apilament dels àrids. Les sorres d'altres tipus s'han d'emmagatzemar per separat.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
SORRA PER A LA CONFECCIÓ DE FORMIGONS:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
SORRA PER A LA CONFECCIÓ DE MORTERS:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
UNE-EN 12620:2003 Áridos para hormigón.
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
SORRES PER A ALTRES USOS:
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
L'entrega de granulat a l'obra ha d'anar acompanyada d'un full de subministrament proporcionat pel subministrador, en el que hi han de constar com a mínim les següents dades:
- Identificació del subministrador
- Número del certificat de marcatge CE o indicació d'autoconsum
- Número de sèrie de la fulla de subministrament
- Nom de la cantera
- Data del lliurament
- Nom del peticionari
- Designació de l'àrid segons l'article 30.2 del CODI ESTRUCTURAL
- Quantitat de granulat subministrat
- Identificació del lloc de subministrament
El fabricant ha de proporcionar la informació relativa a la granulometria i a les toleràncies de l'àrid subministrat.
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 2+: Declaració de Prestacions
- Productes per a edificació, fabricació de productes de formigó prefabricat, carreteres i altres treballs d'obres públiques de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre,
- Productes per a carreteres i altres treballs d'obres públiques i edificació de Funcio: Aplicacions que no exigeixen requisits de seguretat molt estrictes*. * Requisits que han de ser definits per lleis, reglaments i normes administratives nacionals de cada estat membre:
- Sistema 4: Declaració de Prestacions
El símbol de marcatge de conformitat CE s'ha d'estampar d'acord amb la Directiva 93/68CE i ha d'estar visible sobre el producte o sobre etiqueta, embalatge o documentació comercial i ha d'anar acompanyat de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o marca d'identificació i direcció del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- Referència a la norma (UNE-EN 12620)
- Descripció del producte (nom genèric, material, ús previst)
- Designació del producte
- Informació de les característiques essencials aplicables
A la documentació del marcatge haurà d'indicar:
- Nom del laboratori que ha realitzat els assajos
- Data d'emissió del certificat
- Garantia de que el tractament estadístic és l'exigit en el marcatge
- Estudi de fins que justifiqui experimentalment el seu ús, en el cas que hi hagi àrids que no compleixen amb l'article 30.4.1 del CODI ESTRUCTURAL.
L'àrid reciclat ha d'incloure en la seva documentació:

- Naturalesa del material
- Planta productora de l'àrid i empresa transportista de la runa
- Presència d'impureses
- Detalls de la seva procedència
- Altre informació que resulti rellevant

OPERACIONS DE CONTROL:

Els àrids han de disposar del marcatge CE, de tal manera que la comprovació de la seva idoneïtat per al seu ús es farà mitjançant un control documental del marcatge per tal de determinar el compliment de les especificacions del projecte i de l'article 30 del CODI ESTRUCTURAL.

En el cas d'àrids d'autoconsum, el Constructor o el Subministrador ha d'aportar un certificat d'assaig, de com a màxim tres mesos d'antiguitat, realitzat en un laboratori de control dels contemplats en l'article 17.2.2.1 del CODI ESTRUCTURAL, que verifiqui el compliment de les especificacions de l'àrid subministrat respecte l'article 30 del CODI ESTRUCTURAL.

La DF ha de poder valorar el nivell de garantia del distintiu, i en cas de no disposar de suficient informació, ha de poder determinar l'execució de comprovacions mitjançant assaigs.

La DF, a més, ha de valorar si realitzar una inspecció a la planta de fabricació, a poder ser, abans del subministra de l'àrid, per comprovar la idoneïtat per a la seva fabricació. En cas necessari, la DF ha de poder realitzar els assaigs següents per a verificar la conformitat de les especificacions:

- Matèria orgànica (UNE-EN 1744-1).
- Terrossos d'argila (UNE 7133).
- Material retingut pel garbell 0.063 UNE (UNE EN 933-2) i que sura en un líquid de pes específic 2 (UNE EN 1744-1).
- Compostos de sofre (SO3)- respecte al granulat sec (UNE-EN 1744-1).
- Sulfats solubles en àcid (UNE-EN 1744-1).
- Contingut d'ló CL- (UNE-EN 1744-1).
- Assaig petrogràfic
- Reactivitat potencial amb els àlcalis del ciment (UNE 146-507 i UNE 146-508).
- Equivalent de sorra (UNE-EN 933-8).
- Absorció d'aigua (UNE-EN 1097-6).
- Assaig d'identificació per raigs X.
- Pèrdua de pes amb sulfat magnèsic (UNE-EN 1367-2)
- Assaig granulomètric (UNE-EN 933-2)
- Coeficient de friabilitat (UNE 83115)

Un cop s'hagi realitzat l'apilament, s'ha de realitzar una inspecció visual, i si es considera necessari, s'han de prendre mostres per realitzar els assaigs corresponents.

S'ha de poder acceptar la sorra que no compleixi amb els requisits sempre i quan mitjançant rentat, cribatge o mescla, assoleixi les condicions exigides.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i el CODI ESTRUCTURAL.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

No s'ha d'acceptar la sorra que no compleixi totes les especificacions indicades al plec de condicions. Si la granulometria no s'ajusta a la utilitzada per a l'establiment de les dosificacions aprovades, s'hauran de projectar i aprovar noves fórmules de treball.

No s'han d'utilitzar àrids fins els quals l'equivalent de sorra sigui inferior a:

- 70, en obres sotmeses a les classes X0 o XC
- 75, en la resta de casos

En cas que les sorres procedents del matxuqueig de roques calcàries o de roques dolomítiques que no compleixin l'especificació de l'equivalent de sorra, s'han de poder acceptar si l'assaig del blau de metilè (UNE-EN 933-9) compleix el següent:

- Per a obres amb classe general d'exposició classe X0 o XC: <= 0,6% en pes
- Resta de casos: <= 0,3% en pes

Si el valor del blau de metilè fos superior als valors anteriors, i es presentin dubtes de la presència d'argila en els fins, s'ha de poder realitzar un assaig de rajos X per a la seva detecció i identificació: s'ha de poder utilitzar l'àrid fi si les argiles són del tipus caolinita o illita, i si les propietats del formigó amb aquest àrid són les mateixes que les d'un que tingui els mateixos components però sense els fins.

S'han de poder utilitzar sorres rodades, o procedents de roques matxucades, o escòries siderúrgiques adequades, en la fabricació de formigó d'ús no estructural.

## B0 MATERIALS BÀSICS

## B05 AGLOMERANTS I CONGLOMERANTS

### B053- MATERIAL PER A REJUNTAT DE RAJOLES CERÀMIQUES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B053-1VF8,B053-1VGB,B053-1VF9,B053-1VGA.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Material format per la mescla d'un conglomerant, càrregues minerals i additius, apte per a omplir junts entre diferents materials o protegir en front la corrosió armadures actives d'elements pretesats o postesats.
S'han considerat els tipus següents:
- Material format per la mescla d'un conglomerant, càrregues minerals i additius, apte per a omplir els junts entre les rajoles ceràmiques que formen els revestiment de parets o paviments situats en interior o exteriors.
S'han considerat els tipus següents de material per a rejuntat de rajoles ceràmiques:
- Material de rejuntat cimentós (CG): Mescla de conglomerant hidràulic, càrregues minerals i additius orgànics o inorgànics, que únicament cal incorporar aigua o addició líquida en el moment abans d'utilitzar-se.
- Material de rejuntat de resina reactiva (RG): Mescla de resines sintètiques, càrregues minerals i additius orgànics o inorgànics, que endureixen per una reacció química.
BEURADA PER A CERÀMICA:
No ha de tenir grumolls ni principis d'aglomeració.
BEURADA PER A CERÀMICA DE MATERIAL CIMENTÓS (CG):
S'han considerat les classes següents, en funció de les característiques addicionals:
- CG 1: Material de rejuntat cimentos normal
- CG 2: Material de rejuntat cimentos millorat, amb característiques addicionals (resistència alta a l'abrasió i absorció d'aigua reduïda)
Característiques fonamentals:
- Resistència a l'abrasió (EN 12808-2): <= 2000 mm3
- Resistència a la flexió (EN 12808-3): >= 2,5 N/mm2
- Resistència a la compressió (EN 12808-3): >= 15 N/mm2
- Retracció (EN 12808-4): <= 3 mm/m
- Absorció d'aigua (EN 12808-5):
- Després de 30 min: <= 5 g
- Després de 240 min: <= 10 g
Característiques addicionals:
- Alta resistència a l'abrasió (EN 12808-2): <= 1000 mm3
- Absorció d'aigua (EN 12808-5):
- Després de 30 min: <= 2 g
- Després de 240 min: <= 5 g
BEURADA PER A CERÀMICA DE RESINES REACTIVES (RG):
- Resistència a l'abrasió (EN 12808-2): <= 250 mm3

- Resistència a la flexió (EN 12808-3): >= 30 N/mm2
- Resistència a la compressió (EN 12808-3): >= 45 N/mm2
- Retracció (EN 12808-4): <= 1.5 mm/m
- Absorció d'aigua després de 240 min(EN 12808-5): <= 0,1 g

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

SUBMINISTRAMENT I EMMGATZEMATGE A LA BEURADA PER A CERÀMICA:

Subministrament: Envasada adequadament, de manera que no experimenti alteració de les seves característiques.

Emmagatzematge: En el seu envàs d'origen i en llocs secs, sense contacte directe amb el terra i protegit de la intempèrie, de manera que no se n'alterin les condicions inicials.

3.- UNITAT I CRITERI D'AMIDAMENT

BEURADA PER A CERÀMICA:

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

BEURADA PER A CERÀMICA:

* UNE-EN 13888:2009 Materiales de rejuntado para baldosas cerámicas. Requisitos, evaluación de la conformidad, clasificación y designación.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ A LA BEURADA PER A CERÀMICA:

A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:

- Nom del producte
- Marca del fabricant i lloc d'origen
- Data i codi de producció, caducitat i condicions d'emmagatzematge
- Referència a la norma UNE-EN 13888
- Tipus de material de rejuntat
- Instruccions d'us:
- Proporcions de la mescla
- Temps de maduració: interval de temps des del moment de fer la mescla i el moment en que està llest per a ser aplicat
- Vida útil: interval de temps màxim en que el material pot ser utilitzat després de fer la mescla
- Mètode d'aplicació
- Temps que cal esperar fins a fer la neteja i permetre l'ús
- Àmbit d'aplicació

---

## B0 MATERIALS BÀSICS

## B05 AGLOMERANTS I CONGLOMERANTS

### B054- CALÇ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B054-06DH.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conglomerant obtingut per calcinació de materials calcaris, format principalment per òxids o hidròxids de calci amb o sense òxids o hidròxids de magnesi i quantitats menors d'òxids de silici, ferro i alumini.
S'han considerat els tipus següents:
- Calç aèria càlcica (CL):
- Hidratada en pols: CL 90-S
- Hidratada en pasta: CL 90-S PL
- Calç hidràulica natural (NHL):
- Calç hidràulica natural 2: NHL 2
- Calç hidràulica natural 3,5: NHL 3,5
- Calç hidràulica natural 5: NHL 5
CALÇ AÈRIA HIDRATADA CL 90:
Si conté additius, aquests no han d'afectar a les propietats dels morters.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajats segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas.
Contingut de CaO + MgO, segons UNE-EN 459-2: >= 90
Contingut de MgO, segons UNE-EN 459-2: <= 5
Contingut de SO3, segons UNE-EN 459-2: <= 2
Contingut de CO2, segons UNE-EN 459-2: <= 4
Contingut de calç útil, segons UNE-EN 459-2: >= 80
Estabilitat de volum, segons UNE-EN 459-2:
- Calç en pasta: compleix l'assaig
- Calç en pols:
- Mètode de referència: <= 2 mm
- Mètode alternatiu: <= 20 mm
Mida de partícula de la calç en pols, segons UNE-EN 459-2:
- Material retingut al tamís 0,09 mm: <= 7%
- Material retingut al tamís 0,2 mm: <= 2%
Penetració de la calç en pols, segons UNE-EN 459-2: > 10 i < 50 mm
CALÇ AÈRIA HIDRATADA EN PASTA:
Estarà amarada i barrejada amb aigua, en la quantitat adient per a obtenir una pasta de consistència adequada a l'ús destinat.
No tindrà grumolls ni principis d'aglomeració.
CALÇ HIDRÀULICA NATURAL:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajats segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas.
Resistència a compressió, segons UNE-EN 459-2:
- Calç del tipus NHL 2: >= 2 a <= 7 Mpa, als 28 dies
- Calç del tipus NHL 3,5: >= 3,5 a <= 10 Mpa, als 28 dies
- Calç del tipus NHL 5:
- Als 7 dies: >= 2 MPa
- Als 28 dies: >= 5 a <= 15 MPa
Temps d'adormiment, segons UNE-EN 459-2:
- Inicial: > 1 h
- Final:
- Calç del tipus NHL 2: <= 40 h
- Calç del tipus NHL 3,5: <= 30 h
- Calç del tipus NHL 5: <= 15 h
Contingut en aire segons UNE-EN 459-2: <= 5%
Contingut de SO3, segons UNE-EN 459-2: =< 2
Contingut de calç útil, segons UNE-EN 459-2:
- Calç del tipus NHL 2: >= 35
- Calç del tipus NHL 3,5: >= 25
- Calç del tipus NHL 5: >= 15
Estabilitat de volum, segons UNE-EN 459-2:
- Mètode de referència: <= 2 mm
- Mètode alternatiu: <= 20 mm

Mida de partícula, segons UNE-EN 459-2:
- Material retingut al tamís 0,09 mm: <= 15%
- Material retingut al tamís 0,2 mm: <= 2%
Penetració, segons UNE-EN 459-2: > 10 i < 50 mm
CALÇ PER A ESTABILITZACIÓ DE TERRES EN CARRETERES:
S'utilitzaran calços aèries vives del tipus CL 90-Q i calços aèries hidratades del tipus CL 90-S.
Tindran un aspecte homogeni i no un estat grumollós o aglomerat.
Compliran les especificacions de la taula 200.1 de l'article 200 del PG3, determinades segons la norma UNE-EN 459-2.
Contingut d'aigua lliure de les calços hidratades, segons UNE-EN 459-2: < 2% en pes.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: S'ha de transportar en cisternes pressuritzades dotades de mitjans pneumàtics o mecànics que permetin el ràpid transvasament a sitges d'emmagatzematge. Aquestes han de ser estanques.
A les obres de poc volum el subministrament podrà ser en sacs, de manera que no experimenti alteració de les seves característiques.
Emmagatzematge: Es tindran en compte les normes indicades en les fitxes de seguretat per a les classes de calç. Aquestes fitxes de seguretat han de ser les recomanades oficialment o, en el seu defecte, les facilitades pel subministrador.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
UNE-EN 459-1:2016 Cales para la construcción. Parte 1: Definiciones, especificaciones y criterios de conformidad.
* UNE-EN 459-2:2011 Cales para la construcción. Parte 2: Métodos de ensayo.
CALÇ PER A ESTABILITZACIÓ DE TERRES EN CARRETERES:
Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
Orden FOM/2523/2014, de 12 de diciembre, por la que se actualizan determinados artículos del Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes, relativos a materiales básicos, a firmes y pavimentos, y a señalización, balizamiento y sistemas de contención de vehículos (PG-3).
* UNE 80502:2014 Cales vivas o hidratadas utilizadas en la mejora y/o estabilización de suelos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a preparació de conglomerant per a morters de ram de paleta, arrebossat i lliscat, per a la fabricació d'altres productes de construcció i per a aplicacions en enginyeria civil:
- Sistema 2+: Declaració de Prestacions
Per a cada remesa caldrà un albarà i la informació d'etiquetatge i marcatge CE de la norma UNE-EN 459-1.
A l'albarà hi ha de constar com a mínim la informació següent:
- Nom i adreça del fabricant i de l'empresa subministradora
- Data de subministrament i de fabricació
- Identificació del vehicle de transport
- Quantitat subministrada
- Denominació comercial, quan la tingui, i tipus de calç subministrada (UNE-EN 459-1)
- Nom i adreça del comprador i destí
- Referència de la comanda
- El marcatge CE ha d'incloure, com a mínim, la informació següent:
- Símbol del marcatge CE
- Nombre identificador de l'organisme de certificació
- Nom o marca distintiva d'identificació i adreça registrada del fabricant
- Els dos darrers dígits de la data del primer marcatge
- Nombre de referència de la Declaració de Prestacions
- Referència a l'UNE EN 459-1
- Descripció del producte: nom genèric, tipus i ús previst
- Informació sobre les característiques essencials incloses a la norma UNE-EN 459-1
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:

- Inspecció de les condicions de subministrament de la calç, i verificació documental de que els valors declarats pel fabricant en els documents que acompanyen el marcatge CE són conforme a les especificacions exigides.
- Si es detecten anomalies durant el transport, emmagatzematge o manipulació, la DF podrà disposar que es realitzin els següents assaigs de control de recepció, segons UNE-EN 459-2:
- Contingut d'òxids de calci i magnesi
- Contingut de diòxid de carboni
- Contingut de calç útil Ca (Oh) 2
- Mida de partícula
- Control addicional quan la calç ha estat emmagatzemada en condicions atmosfèriques normals durant un període superior a 2 mesos, o inferior, quan ha estat emmagatzemada en ambients humits o condicions atmosfèriques desfavorables. Sobre una mostra representativa de la calç emmagatzemada es realitzaran els següents assaigs:
- Contingut de diòxid de carboni
- Mida de partícula

Els mètodes d'assaigs es descriuen a la UNE-EN 459-2.

CRITERIS DE PRESA DE MOSTRES:

Les mostres s'han de prendre segons l'indicat a l'article 200 del PG3 i els criteris que exposi la DF.

Es considera com un lot, que s'acceptarà o rebutjarà en bloc:
- La quantitat de calç de la mateixa classe i procedència rebuda mensualment.
- Si mensualment es reben més de 200 t, el lot serà aquesta quantitat o fracció.

De cada lot es prendran dues mostres, segons el procediment indicat a la norma UNE-EN 459-2. Una per realitzar els assaigs de control de recepció i l'altra per als assaigs de contrast, que es conservarà durant almenys 100 dies en recipient adequat i estanc. Es prendrà una tercera mostra si el subministrador de calç ho sol·licita.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

La DF ha d'indicar les mesures a adoptar en el cas que no es compleixin les especificacions establertes al plec.

La remesa no s'ha d'acceptar si, en el moment d'obrir el recipient que la conté apareix en estat grumollós o aglomerat.

---

## B0 MATERIALS BÀSICS

## B05 AGLOMERANTS I CONGLOMERANTS

## B055- CIMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B055-067M,B055-0661.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS

Conglomerant hidràulic format per diferents materials inorgànics finament dividits que, amassats amb aigua, formen una pasta que, mitjançant un procés d'hidratació, endureix i un cop endurit conserva la seva resistència i estabilitat fins i tot sota l'aigua.

S'han considerat els ciments regulats per la norma RC-16 amb les característiques següents:

- Ciments comuns (CEM)
- Ciments d'aluminat de calci (CAC)
- Ciments blancs (BL)
- Ciments resistens a l'aigua de mar (MR)

CARACTERÍSTIQUES GENERALS:

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

Ha de ser un material granular molt fi i estadísticament homogeni en la seva composició.

El ciment ha de ser capaç, si es dosifica i barreja adequadament amb aigua i granulats, de produir un morter o un formigó que conservi la seva traballabilitat en un temps prou llarg i assolir, al final de períodes definits, els nivells especificats de resistència i mantenir estabilitat de volum a llarg termini.

No ha de tenir grumolls ni principis d'aglomeració.

En activitats manuals en les que hi hagi risc de contacte amb la pell i d'acord amb l'establert a l'Ordre Presidencial 1954/2004 de 22 de juny, no s'han d'utilitzar o comercialitzar ciments amb un contingut de crom (VI) superior a dos parts per milió del pes sec del ciment.

CIMENTS COMUNS (CEM):

Estaran subjectes al marcatge CE de conformitat amb el que disposen els Reials Decrets 1328/1995 de 28 de juliol i 256/2016 de 10 de juny.

Els components han de complir els requisits especificats en el capítol 5 de la norma UNE-EN 197-1.

Tipus de ciments:

- Ciment Pòrtland: CEM I
- Ciment Pòrtland amb addicions: CEM II
- Ciment Pòrtland amb escòries de forn alt: CEM III
- Ciment putzolànic: CEM IV
- Ciment compost: CEM V

Alguns d'aquests tipus es divideixen en subtipus, segons el contingut de l'addició o barreja d'addicions presents en el ciment. Segons aquest contingut creixent els subtipus poden ser A, B o C.

Addicions del clinker pòrtland (K):

- Escòria de forn alt: S
- Fum de sílice: D
- Putzolana natural: P
- Putzolana natural calcinada: Q
- Cendra volant Sicília: V
- Cendra volant calcària: W
- Esquist calcinat: T
- Filler calcari L: L
- Filler calcari LL: LL

Relació entre denominació i designació dels ciments comuns segons el tipus, subtipus i addicions:

| Denominació | Designació |
|---|---|
| Ciment pòrtland | CEM I |
| Ciment pòrtland amb escòria | CEM II/A-S |
| | CEM II/B-S |
| Ciment pòrtland amb fum de sílice | CEM II/A-D |
| Ciment pòrtland amb Putzolana | CEM II/A-P |
| | CEM II/B-P |
| | CEM II/A-Q |
| | CEM II/B-Q |

| Ciment pòrtland amb cendres volants | CEM II/A-V |
|---|---|
| | CEM II/B-V |
| | CEM II/A-W |
| | CEM II/B-W |
| Ciment pòrtland amb esquist calcinat | CEM II/A-T |
| | CEM II/B-T |
| Ciment pòrtland amb filler calcari | CEM II/A-L |
| | CEM II/B-L |
| | CEM II/A-LL |
| | CEM II/B-LL |
| Ciment pòrtland mixt | CEM II/A-M |
| | CEM II/B-M |
| Ciment amb escòries de forn alt | CEM III/A |
| | CEM III/B |
| | CEM III/C |
| Ciment putzolànic | CEM IV/A |
| | CEM IV/B |
| Ciment compost | CEM V/A |
| | CEM V/B |

En ciments pòrtland mixtos CEM II/A-M i CEM II/B-M, en ciments putzolànics CEM IV/A i CEM IV/B i en ciments compostos CEM V/A i CEM V/B els components principals a més del clinker han de ser declarats a la designació del ciment.
La composició dels diferents ciments comuns ha de ser l'especificada al capítol 6 de la norma UNE-EN 197-1.
Els ciments comuns han de complir les exigències mecàniques, físiques, químiques i de durabilitat especificades al capítol 7 de la norma UNE-EN 197-1.
CIMENTS D'ALUMINAT DE CALÇ (CAC):
Ciment obtingut per una mescla de materials aluminosos i calcàris.
Estaran subjectes al marcatge CE de conformitat amb el que disposa el Reial Decret 256/2016, de 10 de juny.
Han de complir les exigències mecàniques, físiques i químiques especificades a UNE-EN 14647.
CIMENTS BLANCS (BL):
Han d'estar subjectes al Reial Decret 1313/1988 i seran aquells definits a la norma UNE 80305 i homòlegs de les normes UNE-EN 197-1 (ciments comuns) i UNE-EN 413-1 (ciments de ram de paleta) que compleixin amb l'especificació de blancor.
Índex de blancor (UNE 80117): >= 85
D'acord amb el Real Decret 1313/1988 de 28 d'octubre i L'Ordre Ministerial de 17 de gener de 1989, han de portar el Certificat de Conformitat amb Requisits Reglamentaris (CCRR).
La composició, així com les prescripcions mecàniques, físiques, químiques i de durabilitat que han de complir els ciments comuns blancs són les mateixes que les especificades per als ciments comuns a la norma UNE-EN 197-1.
La composició, així com les prescripcions mecàniques, físiques i químiques que ha de complir el ciment blanc de ram de paleta (BL 22,5 X) són les mateixes que les especificades per al ciment homòleg a la norma UNE-EN 413-1.
CIMENTS RESISTENTS A L'AIGUA DE MAR (MR):
D'acord amb el Real Decret 1313/1988 de 28 d'octubre i L'Ordre Ministerial de 17 de gener de 1989, han de portar el Certificat de Conformitat amb Requisits Reglamentaris (CCRR).
Relació entre denominació i designació dels ciments resistents a l'aigua de mar segons el tipus, subtipus i addicions:

| Denominació | Designació |
|---|---|
| Ciment pòrtland | I |
| Ciment pòrtland amb escòria | II/A-S |
| | II/B-S |

| Ciment pòrtland amb fum de sílice | II/A-D |
|---|---|
| Ciment pòrtland amb Putzolana | II/A-P |
| | II/B-P |
| Ciment pòrtland amb cendres volants | II/A-V |
| | II/B-V |
| Ciment amb escòries de forn alt | III/A |
| | III/B |
| | III/C |
| Ciment putzolànic | IV/A |
| | IV/B |
| Ciment compost | CEM V/A |

Les especificacions generals en quan a composició i a exigències mecàniques, físiques, químiques i de durabilitat que han de complir són les corresponents als ciments comuns homòlegs de la norma UNE-EN 197-1.
Han de complir els requisits addicionals especificats al capítol 7.2 de la norma UNE 80303-2.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: de manera que no s'alterin les seves característiques.
Si el ciment es subministra a granel s'ha d'emmagatzemar en sitges.
Si el ciment es subministra en sacs, s'han d'emmagatzemar en un lloc sec, ventilat, protegit de la intempèrie i sense contacte directe amb la terra, de manera que no s'alterin les seves condicions.
Temps màxim d'emmagatzematge dels ciments:
- Classes 22,5 i 32,5: 3 mesos
- Classes 42,5 : 2 mesos
- Classes 52,5 : 1 mes
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1313/1988, de 28 de octubre, por el se declara obligatoria la homologación de los cementos para la fabricación de hormigones y morteros para todo tipo de obras y productos prefabricados.
Orden de 17 de enero de 1989 por la que se establece la certificación de conformidad a normas como alternativa de la homologación de los cementos para la fabricación de hormigones y morteros para todo tipo de obras y productos prefabricados.
Real Decreto 1328/1995, de 28 de julio, por el que se modifica, en aplicación de la Directiva 93/68/CEE, las disposiciones para la libre circulación de productos de construcción, aprobadas por el Real Decreto 1630/1992, de 29 de diciembre.
Real Decreto 256/2016, de 10 de junio, por el que se aprueba la Instrucción para la recepción de cementos (RC-16).
UNE-EN 197-1:2000 Cemento. Parte 1: Composición, especificaciones y criterios de conformidad de los cementos comunes.
UNE-EN 14647:2006 Cemento de aluminato de calcio. Composición, especificaciones y criterios de conformidad.
UNE 80305:2001 Cementos blancos.
UNE 80303-2:2001 Cementos con características adicionales. Parte 2: Cementos resistentes al agua de mar.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN CIMENTS COMUNS (CEM) I CIMENTS DE CALÇ (CAC):
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a preparació de formigó, morter, beurades i altres mescles per a construcció i per a la fabricació de productes de construcció,
- Productes per a elaboració de formigó, morter, pasta i altres mescles per a construcció i per a la fabricació de productes de construcció:
- Sistema 1+: Declaració de Prestacions
El símbol normalitzat del marcatge CE ha d'anar acompanyat de la següent informació com a

mínim:
- el número identificador del organisme certificador que ha intervingut en el control de producció
- nom o marca distintiva d'identificació i adreça enregistrada del fabricant
- número del certificat CE de conformitat
- les dues últimes xifres de l'any en que el fabricant va posar el marcatge CE
- indicacions que permetin identificar el producte així com les seves característiques i prestacions declarades atenent a les seves especificacions tècniques
- referència a la norma harmonitzada corresponent
- designació normalitzada del ciment indicant el tipus, subtipus (segons els components principals) i classe resistent
- en el seu cas, informació addicional referent al contingut de clorurs, al límit superior de pèrdua per calcinació de cendra volant i/o additiu emprat

Sobre el mateix embalatge, el marcatge CE es pot simplificar, i inclourà com a mínim:
- el símbol normalitzat del marcatge CE
- en el seu cas, el número del certificat CE de conformitat
- nom o marca distintiva d'identificació i adreça enregistrada del fabricant
- els dos últims dígits de l'any en que el fabricant va posar el marcatge
- referència al número de la norma harmonitzada corresponent

En aquest cas, la informació complerta del marcatge o etiquetat CE haurà d'apareixer també a l'albarà o documentació que acompanya al lliurament.
A l'albarà hi han de figurar les dades següents:
- número de referència de la comanda
- nom i adreça del comprador i punt de destí del ciment
- identificació del fabricant i de l'empresa de subministrament
- designació normalitzada del ciment subministrat conforme a la instrucció RC-16
- quantitat que es subministra
- en el seu cas, referència a los dades de l'etiquetat corresponent al marcatge CE
- data de subministrament
- identificació del vehicle que el transporta

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN CIMENTS BLANCS (BL) I CIMENTS RESISTENTS A L'AIGUA DE MAR (MR):
A l'albarà hi han de figurar les dades següents:
- número de referència de la comanda
- nom i adreça del comprador i punt de destí dels ciment
- identificació del fabricant i de l'adreça de subministrament
- designació normalitzada del ciment subministrat segons el Reial Decret 256/2016, de 10 de juny
- contrasenya del Certificat de Conformitat amb els Requisits Reglamentaris
- quantitat que es subministra
- identificació del vehicle que transporta el ciment
- en el seu cas, l'etiquetatge corresponent al marcatge CE
- En el cas de ciments envasats, aquests han de mostrar als seus envasos la següent informació:
- nom o marca identificativa i adreça complerta del fabricant i de la fàbrica
- designació normalitzada del ciment subministrat conforme la present instrucció
- contrasenya del Certificat de Conformitat amb els Requisits Reglamentaris
- dates de fabricació i d'envasat (indicant setmana i any)
- condicions específiques aplicables a la manipulació i utilització del producte

El fabricant ha de facilitar, si li demanen, les dades següents:
- Inici i final d'adormiment
- Si s'han incorporat additius, informació detallada de tots ells i dels seus efectes

OPERACIONS DE CONTROL:
La recepció del ciment haurà d'incloure al menys, dues fases obligatòries:
- Una primera fase de comprovació de la documentació
- Una segona fase d'inspecció visual del subministrament

Es pot donar una tercera fase, si el responsable de recepció ho considera oportú, de comprovació del tipus i classe de ciment i de les característiques físiques químiques i mecàniques mitjançant la realització d'assaigs d'identificació i, si es el cas, d'assaigs complementaris.
Per a la primera fase, al iniciar el subministrament el Responsable de recepció ha de comprovar que la documentació es la requerida. Aquesta documentació estarà compresa per:
- Albarà o full de subministrament.
- Etiquetatge
- Documents de conformitat, com pot ser el marcatge CE o bé la Certificació de Conformitat del Reial Decret 1313/1988
- Pel cas dels ciments no subjectes al marcatge CE, el certificat de garantia del fabricant signat.
- Si els ciments disposen de distintius de qualitat, caldrà també la documentació precisa de

reconeixements del distintiu.
En la segona fase, un cop superada la fase de control documental, cal sotmetre el ciment a una inspecció visual per comprovar que no ha patit alteracions o barreges indesitjades.
La tercera fase s'activarà quan es pugui preveure possibles defectes o en el cas que el Responsable així ho estableixi per haver donat resultats no conformes en les fases anteriors o per haver detectat defectes en l'ús de ciments d'anteriors remeses.
En aquest supòsit es duran terme, abans de començar l'obra i cada 200 t de ciment de la mateixa designació i procedència durant l'execució, assaigs d'acord amb l'estabIer en els Annexes 5 i 6 de la RC-16.
CRITERIS DE PRESA DE MOSTRES:
Les mostres es prendran segons l'indicat en la RC-16. Per a cada lot de control sotmès a assaig s'extrauran tres mostres, una per tal de realitzar els assaigs de comprovació de la composició, l'altra per als assaigs físics, mecànics i químics i l'altra per a ser conservada preventivament.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
A efectes de la fase primera, no s'aprovarà l'ús de ciments els quals el etiquetatge i la documentació no es correspongui amb el ciment sol·licitat, quan la documentació no estigui completa i quan no es reuneixin tots els requisits establerts.
A efectes de la segona fase, no s'aprovarà l'ús de ciments que presentin símptomes de meteorització rellevant, que contingui cossos estranys i que no resulti homogènia en el seu aspecte o color.
A efectes de la tercera fase, no s'aprovarà l'ús de ciments que no compleixin els criteris establerts en l'apartat A5.5 de la RC-16.
Quan no es compleixi alguna de les prescripcions del ciment assajat, es repetiran els assaigs per duplicat, sobre dues mostres obtingudes de l'aplec existent a obra. S'acceptarà el lot únicament si els resultats obtinguts en les dues mostres són satisfactoris.

---

## B0 MATERIALS BÀSICS

## B05 AGLOMERANTS I CONGLOMERANTS

### B059- GUIX

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B059-06FO,B059-06FN,B059-06FM.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Productes en pols preparats bàsicament amb pedra de guix, i eventualment addicions per a modificar les característiques d'adormiment, resistència, adherència, retenció d'aigua, densitat o altres.
S'han contemplat els tipus de guixos següents:

- Conglomerants a base de guix
- Guix per a la construcció en general
- Guix per a aplicacions especials de construcció
- Guix per a agafar perfils i plaques de guix laminat

CARACTERÍSTIQUES GENERALS:

Ha d'estar homologat d'acord amb el RD 1312/1986 o disposar d'una certificació de conformitat a normes segons l'ordre 14/01/1991.

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

S'ha de poder utilitzar directament, pastant-los amb aigua.

No ha de tenir grumolls ni principis d'aglomeració.

GUIXOS DE CONSTRUCCIÓ I CONGLOMERANTS A BASE DE GUIX PER A CONSTRUCCIÓ:

Resistència mecànica a flexió (UNE-EN 13279-1):
- Guix de construcció d'aplicació manual de designació B1: => 1,0 N/mm2
- Guix de construcció de projecció mecànica de designació B1: => 1,0 N/mm2
- Guix especial per a la construcció de designació C6: > 1 N/mm2

Resistència mecànica a compressió (UNE-EN 13179-1):
- Guix de construcció d'aplicació manual de designació B1: > 2,0 N/mm2
- Guix de construcció de projecció mecànica de designació B1: > 2,0 N/mm2
- Guix especial per a la construcció de designació C6: > 2 N/mm2

Temps d'inici d'adormiment:
- Guix de designació B1 d'aplicació manual: > 20 minuts
- Guix de designació B1 de projecció mecànica: > 50 minuts
- Guix de designació C6: > 20 minuts

Els guixos de construcció i els conglomerants a base de guix per a la construcció s'han de designar de la següent manera:
- El tipus de guix o de conglomerant de guix segons la designació de la norma UNE-EN 13279-1
- Referència a la norma EN 13279-1
- Identificació segons la norma UNE-EN 13279-1
- Resistència a compressió

ADHESIUS A BASE DE GUIX PER A PLAQUES DE GUIX LAMINAT I TRANSFORMATS DE PLAQUES DE GUIX LAMINAT:

Els adhesius a base de guix per a la fixació de les plaques de guix laminat o els transformats de plaques de guix laminat s'han de designar de la següent manera:
- Mitjançant l'expressió "adhesivo a base de yeso para transformados de placas de yeso laminado con aislamiento térmico/acústico o placas de yeso laminado"
- Referència a la norma EN 14496

Els adhesius a base de guix per a la fixació de les plaques de guix laminat o els transformats de plaques de guix laminat han d'anar marcats de manera clara e indeleble, ja sigui sobre la pròpia placa, o bé sobre l'embalatge, l'albarà o el certificat subministrat amb el producte amb les següents indicacions:
- Referència a la norma europea EN 14496
- Nom, marca comercial o altres mitjans d'identificació del fabricant
- Data de fabricació i/o data de caducitat
- Identificació del producte segons el sistema de designació esmentat anteriorment
- Ha de portar, en lloc visible, el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: en sacs, de manera que no s'alterin les seves característiques.

Emmagatzematge: En lloc sec, protegit de la intempèrie i sense contacte directe amb el terra, de manera que no s'alterin les seves condicions.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

GUIXOS DE CONSTRUCCIÓ I CONGLOMERANTS A BASE DE GUIX PER A CONSTRUCCIÓ:

UNE-EN 13279-1:2006 Yesos de construcción y conglomerantes a base de yeso para la construcción. Parte 1: Definiciones y especificaciones.

UNE-EN 13279-2:2006 Yesos de construcción y conglomerantes a base de yeso para la construcción. Parte 2: Métodos de ensayo.

ADHESIUS A BASE DE GUIX PER A PLAQUES DE GUIX LAMINAT I TRANSFORMATS DE PLAQUES DE GUIX LAMINAT:
UNE-EN 14496:2006 Adhesivos a base de yeso para transformados de placa de yeso laminado con aislante térmico/acústico y placas de yeso laminado. Definiciones, especificaciones y métodos de ensayo.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ DEL GUIX DE CONSTRUCCIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a parets, envans, sostres o revestiments per a la protecció contra el foc d'elements estructurals i/o per a compartimentació davant del foc en edificis,
- Productes per a parets, envans, sostres o revestiments per a qualsevol ús excepte per a la protecció contra el foc d'elements estructurals i/o per a compartimentació davant del foc en edificis de Prestacio o Caracteristica: Tots:
- Sistema 4: Declaració de Prestacions
- Productes per a parets, envans, sostres o revestiments per a la protecció contra el foc d'elements estructurals i/o per a compartimentació davant del foc en edificis de Prestacio o Caracteristica: Reacció al foc:
- Sistema 3: Declaració de Prestacions
El símbol normalitzat del marcatge CE (segons la directiva 93/68/CE) s'ha d'estampar sobre l'embalatge de manera visible (o si no és possible, sobre o la documentació comercial que acompanya al producte) i ha d'anar acompanyat de la següent informació com a mínim:
- Nom, logotip o adreça declarada del fabricant
- Les dues últimes xifres de l'any de la impressió del marcatge
- Referència a la norma europea EN 13279
- Descripció del producte: nom genèric, tipus, quantitat i ús previst
- Informació sobre les característiques essencials que han de declarar-se de la següent manera:
- Valors declarats, i quan procedeixi, nivell o classe
- Reacció al foc
- Aïllament directe al soroll aeri
- Resistència tèrmica
- Característiques a les que s'aplica l'opció "Prestació No Determinada" (PND)
- Com alternativa la designació normalitzada
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ DEL GUIX PER A AGAFAR PLAQUES DE GUIX LAMINAT:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Adherència,
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc. Productes que compleixen la Decisió de la Comissió 2003/43/CE modificada,
- Productes per a usos no subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Adherència:
- Sistema 4: Declaració de Prestacions
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc:
- Sistema 3: Declaració de Prestacions
El símbol normalitzat del marcatge CE (segons la directiva 93/68/CE) s'ha d'estampar sobre l'embalatge de manera visible (o si no és possible, sobre o la documentació comercial que acompanya al producte) i ha d'anar acompanyat de la següent informació com a mínim:
- Nom, logotip o adreça declarada del fabricant
- Les dues últimes xifres de l'any de la impressió del marcatge
- Referència a la norma europea EN 14496
- Descripció del producte: nom genèric, material, dimensions i ús previst
- Informació sobre les característiques essencials que han de declarar-se de la següent manera:
- Valors declarats, i quan procedeixi, nivell o classe
- Resistència a l'esforç tallant
- Reacció al foc
- Permeabilitat al vapor d'aigua
- Resistència a flexió
- Altres valors que depenen del sistema i que ha de declarar el fabricant en la seva documentació

sobre l'ús previst
- Prestació No determinada (PND) per a aquelles característiques en les que sigui aplicable
- Com alternativa la designació normalitzada
OPERACIONS DE CONTROL DEL GUIX DE CONSTRUCCIÓ:
Inspecció visual de les condicions de subministrament.
Abans de començar l'obra o si varia el subministrament es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- Aigua combinada: (UNE 102032)
- Sofre en % d`ions SO3: (UNE 102032)
- Contingut de sulfats de calci (UNE 102037)
- Exponent d'hidrogen pH (UNE 102032)
- Finor de molta: (UNE-EN 13279-2)
- Resistència a flexotracció: (UNE-EN 13279-2)
- Temps d'adormiment: (UNE-EN 13279-2)
- Índex de puresa: (UNE 102032)
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut.
En cas de que el material disposi de la Marca AENOR, marcatge CE o altre legalment reconeguda a un país de l'UE, es pot prescindir de la presentació dels assaigs de control de recepció.
CRITERIS DE PRESA DE MOSTRA DEL GUIX DE CONSTRUCCIÓ:
La presa de mostra i els assajos han de realitzar-se segons lo establert en el capítol 3 de la norma europea UNE-EN 13279-2.
INTERPRETACIÓ DELS RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT DEL GUIX DE CONSTRUCIÓ:
No es podran utilitzar a l'obra guixos sense el corresponent marcatge CE i el certificat de garantia del fabricant, d'acord a els assajos de tipus inicial i el control de producció realitzat a fabrica segons la norma UNE-EN 13279-1.
Quan no es compleixi alguna de les prescripcions de qualitat del guix assajat, es repetiran els assaigs per duplicat, sobre dues mostres tretes de l'aplec existent a l'obra. Si un qualsevol dels resultats no és satisfactori, es rebutjarà tot l'aplec i es faran tots els assaigs esmentats a les següents cinc partides que arribin a l'obra.

---

## B0 MATERIALS BÀSICS

## B06 FORMIGONS

## B069- FORMIGÓ D'ÚS NO ESTRUCTURAL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B069-2A9O,B069-I4H8.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Formigons que no aporten responsabilitat estructural a la construcció, però col·laboren a millorar la durabilitat del formigó estructural (formigons de neteja) o aporten el volum necessari d'un material resistent per a conformar la geometria requerida per un fi concret.
S'han considerat els materials següents:
- Formigons de neteja, destinats a evitar la contaminació de les armadures i la dessecació del formigó estructural al procés d'abocat
- Formigó no estructural destinat a conformar volums de material resistent
CARACTERÍSTIQUES GENERALS:
Els ciments que es poden utilitzar en formigó no estructural són:
- Prefabricats no estructurals: Ciments comuns excepte CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T, CEM III/C
- Formigons de neteja i replens de rases: Ciments comuns
- Altres formigons executats a l'obra: Ciment per a usos especials ESP VI-1 i ciments comuns excepte CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T, CEM III/C
Els àrids a utilitzar poden ser sorres i graves rodades o procedents de matxuqueig, o escòries siderúrgiques adequades. S'ha de poder utilitzar fins a un 100% d'àrid gros reciclat, sempre que compleixi amb les especificacions de l'article 30.8 del CODI ESTRUCTURAL amb respecte a les condicions físico-mecàniques i als requisits químics.
S'hauran d'utilitzar additius reductors d'aigua, ja que els formigons d'ús no estructural contenen poc ciment.
Els components del formigó, la seva dosificació, el procés de fabricació i el transport han d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL.
El control dels components s'ha de realitzar d'acord als àmbits 0101, 0521, 0531, 0701 i 1011.
Els formigons de neteja han de tenir una dosificació mínima de 150 kg/m3 de ciment.
La mida màxima del granulat es recomanable sigui inferior a 30 mm.
Es tipificaran de la manera següent: HL-150/C/TM, on C = consistència i TM= mida màxima del granulat.
Els formigons no estructurals han de tenir una resistència característica mínima de 15 N/mm2, i es recomanable que la mida màxima del granulat sigui inferior a 40 mm.
Es tipificaran HNE-15/C/TM, on C= consistència i TM = mida màxima del granulat.
S'ha d'utilitzar preferentment, formigó de resistència 15 N/mm2, tret que la DF indiqui el contrari.
En cap cas la proporció en pes de l'additiu no ha de superar el 5% del pes del ciment utilitzat.
Si s'utilitzen cendres volants no han de superar el 35% del pes del ciment.
Classe resistent del ciment: >= 32,5
Contingut de ciment: >= 150 kg/m3
Assentament en el con d'Abrams (UNE EN 12350-2):
Consistència seca: 0 - 2 cm
Consistència plàstica: 3-4 cm
Consistència tova: 5-9 cm
Toleràncies:
- Assentament en el con d'Abrams:
Consistència seca: ± 1 cm
Consistència plàstica o tova: ± 1 cm
Toleràncies respecte de la dosificació:
- Contingut de ciment, en pes: ± 3%
- Contingut de granulats, en pes: ± 3%
- Contingut d'aigua: ± 3%
- Contingut d'additius: ± 5%
- Contingut d'addicions: ± 3%
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En camions formigonera.
El formigó ha d'arribar a l'obra sense alteracions en les seves característiques, formant una barreja homogènia i sense haver iniciat l'adormiment.
Queda expressament prohibit l'addició al formigó de qualsevol quantitat d'aigua o altres substàncies que puguin alterar la composició original.
Emmagatzematge: No es pot emmagatzemar.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

---

## B0 MATERIALS BÀSICS

## B06 FORMIGONS

## B06F FORMIGONS ESTRUCTURALS (CE)

## B06F1- FORMIGÓ ESTRUCTURAL EN MASSA AMB CIMENT GRIS I GRANULAT NATURAL (CE)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B06F1-I4QZ.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Formigó amb o sense addicions (cendres volants o fum de sílice), elaborat en una central formigonera legalment autoritzada d'acord amb el títol 4t. de la llei 21/1992 de 16 de juliol d'indústria i el Real Decret 559/2010, de 7 de maig.
CARACTERÍSTIQUES DELS FORMIGONS D'ÚS ESTRUCTURAL:
Els components del formigó, la seva dosificació, el procés de fabricació i el transport han d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL.
La designació del formigó fabricat en central es pot fer per propietats o per dosificació i s'expressarà, com a mínim, la següent informació:
- Consistència
- Grandària màxima del granulat
- Tipus d'ambient al que s'exposarà el formigó
- Resistència característica a compressió per als formigons designats per propietats
- Contingut de ciment expressat en kg/m3, per als formigons designats per dosificació
- La indicació de l'ús estructural que ha de tenir el formigó: en massa, armat o pretesat
La designació per propietats s'ha de fer d'acord amb el format: T-R/C/TM/A
- T: Indicatiu que serà HM per al formigó en massa, HA pel formigó armat, i HP per al formigó pretesat
- R: Resistència característica a compressió, en N/mm2 (20-25-30-35-40-45-50-55-60-70-80-90-100)
- C: Lletra indicativa del tipus de consistència: L Líquida, F fluida, B tova, P plàstica i S seca
- TM: Grandària màxima del granulat en mm.
- A: Designació de l'ambient al que s'exposarà el formigó
En els formigons designats per propietats, el subministrador ha d'establir la composició de la mescla

del formigó, garantint al peticionari les característiques especificades de grandària màxima del granulat, consistència i resistència característica, així com les limitacions derivades del tipus d'ambient especificat (contingut de ciment i relació aigua/ciment).
En els formigons designats per dosificació, el peticionari es responsable de la congruència de les característiques especificades de grandària màxima del granulat, consistència i contingut en ciment per metre cúbic de formigó, i el subministrador les haurà de garantir, indicant també, la relació aigua/ciment que ha emprat.
En els formigons amb característiques especials o d'altres de les especificades a la designació, les garanties i les dades que el subministrador hagi d'aportar, s'han d'especificar abans de l'inici del subministrament.
El formigó ha de complir amb les exigències de qualitat que estableix l'article 43.2 del CODI ESTRUCTURAL.
Si el formigó està destinat a una obra amb armadures pretesades, podrà contenir cendres volants sense que aquestes excedeixin el 20% del pes del ciment, i si es tracta de fum de silici no podrà excedir el 10%
Si el formigó està destinat a obres de formigó en massa o armat, la DF pot autoritzar l'us de cendres volants o fum de silici per la seva confecció. En estructures d'edificació, si s'utilitzen cendres volants no han de superar el 35% del pes del ciment. Si s'utilitza fum de silici no ha de superar el 10% del pes del ciment. La quantitat mínima de ciment s'especifica a l'article 43.2.1 del CODI ESTRUCTURAL.
La central que subministri formigó amb cendres volants realitzarà un control sobre la producció segons l'art. 32 del CODI ESTRUCTURAL i ha de posar els resultats de l'anàlisi a l'abast de la DF, o disposarà d'un distintiu de qualitat oficialment reconegut
Les cendres volants han de complir en qualsevol cas les especificacions de la norma UNE_EN 450.
Els additius hauran de ser del tipus que estableix l'article 31.2 del CODI ESTRUCTURAL i complir l'UNE EN 934-2
En cap cas la proporció en pes de l'additiu no ha de superar el 5% del pes del ciment utilitzat.
Classificació dels formigons per la seva resistència a compressió:
- Si fck <= 50 N/mm2 , resistència standard
- Si fck > 50 N/mm2 , alta resistència
Valor mínim de la resistència:
- Formigons en massa >= 20 N/mm2
- Formigons armats o pretesats >= 25 N/mm2
Tipus de ciment:
- Formigó en massa: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T i CEM III/C (UNE-EN 197-1), Ciments per a usos especials ESP VI-1 (UNE 80307).
- Formigó armat: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T, CEM III/C i CEM V/B (UNE-EN 197-1).
- Formigó pretesat: Ciments comuns tipus CEM I, CEM II/A-D, CEM II/A-V, CEM II/A-P i CEM II/A-M(V,P) (UNE-EN 197-1).
- Es considera inclòs dins dels ciments comuns els ciments blancs (UNE 80305).
- Es consideren inclosos els ciments de característiques addicionals com els resistents als sulfats i/o a l'aigua de mar (UNE 80303-1 i UNE 80303-2), i els de baix calor d'hidratació (UNE-EN 14216).
Classe del ciment: 32,5 N
Densitats dels formigons:
- Formigons en massa (HM):
- 2.250 kg/m3 si fck <=40 N/mm2
- 2.300 kg/m3 si fck > 40 N/mm2
Formigons armats i pretensats (HA-HP): 2400 kg/m3
El contingut mínim de ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La quantitat mínima de ciment considerant el tipus d'exposició més favorable ha de ser:
- Obres de formigó en massa: >= 200 kg/m3
- Obres de formigó armat: >= 250 kg/m3
- Obres de formigó pretesat: >= 275 kg/m3
- A totes les obres: <= 500 kg/m3
La relació aigua/ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La relació aigua/ciment considerant el tipus d'exposició més favorable ha de ser:
- Formigó en massa: <= 0,65
- Formigó armat: <= 0,65
- Formigó pretesat: <= 0,60
Assentament en el con d'Abrams (UNE EN 12350-2):

- Consistència seca:  0 - 20 mm
- Consistència plàstica:  30 - 40 mm
- Consistència tova:  50 - 90 mm
- Consistència fluida:  100-150 mm
- Consistència líquida:  160-200 mm

La consistència (L) líquida només es podrà aconseguir mitjançant additiu superfluidificant
ló clor total aportat per components d'un formigó no pot superar:
- Pretensat:  <= 0,2% pes de ciment
- Armat:  <= 0,4% pes de ciment
- En massa amb armadura de fissuració:  <= 0,4% pes de ciment

Quantitat total de fins (sedàs 0,063) al formigó, corresponents als granulats i al ciment:
- Si l'aigua és standard: < 200 kg/m3
- Si l'aigua és reciclada: < 210 kg/m3
- Toleràncies:
- Assentament en el con d'Abrams:
- Consistència seca:  ± 1 cm
- Consistència plàstica:  ± 1 cm
- Consistència tova:  ± 1 cm
- Consistència fluida: ± 1 cm
- Consistència líquida: ± 1 cm

FORMIGONS PER A PILOTS FORMIGONATS "IN SITU"

Tamany màxim del granulat. El més petit dels següents valors:
- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals

Dosificacions de pastat:
- Contingut de ciment:
- Formigons abocats en sec:  >= 325 kg/m3
- Formigons submergits:  >= 375 kg/m3
- Relació aigua-ciment (A/C):  < 0,6
- Contingut de fins d <0,125 (ciment inclòs):
- Granulat gruixut d > 8 mm:  >= 400 kg/m3
- Granulat gruixut d <= 8 mm:  >= 450 kg/m3

Consistència del formigó:

| Assentament con d'Abrams(mm) | Condicions d'ús |
|---|---|
| 130 <= H <= 180 | - Formigó abocat en sec |
| H >= 160 | - Formigó bombejat, submergit o abocat sota aigua amb tub tremie |
| H >= 180 | - Formigó submergit, abocat sota fluid estabilitzador amb tub tremie |

El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.

FORMIGONS PER A PANTALLES FORMIGONADES "IN SITU"

Contingut mímin de ciment en funció de la grandària màxima del granulat:

| Grandària màxima del granulat(mm) | Contingut mínim de ciment(kg) |
|---|---|
| 32 | 350 |
| 25 | 370 |
| 20 | 385 |
| 16 | 400 |

Grandària màxima del granulat. El més petit dels següents valors:
- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals

Dosificacions de pastat:
- Contingut de ciment en pantalles contínues de formigó armat:
- Formigons abocats en sec:  >= 325 kg/m3
- Formigons submergits:  >= 375 kg/m3

- Relació aigua-ciment: 0,45 < A/C < 0,6
- Contingut de fins d <=0,125 mm (ciment inclòs):
- Granulat gruixut D <= 16 mm: <= 450 kg/m3
- Granulat gruixut D > 16 mm: = 400 kg/m3
- Assentament al con d'Abrams: 160 < A < 220 mm

El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.

FORMIGÓ PER A PAVIMENTS

La fabricació del formigó no es podrà iniciar fins que la DF no hagi aprovat la fórmula de treball i el corresponent tram de prova (apartat d'execució). Aquesta fórmula inclourà:

- La identificació de cada fracció d'àrid i la seva proporció ponderal en sec
- La granulometria de la mescla d'àrids per als tamisos 40 mm; 25 mm; 20 mm; 12,5 mm; 8 mm; 4 mm; 2 mm; 1 mm; 0,500 mm; 0,250 mm; 0,125 mm; i 0,063 mm UNE EN 933-2.
- La dosificació de ciment, aigua i, si és el cas de cada additiu, referides a amassada
- La resistència característica a flexotracció a 7 i a 28 dies.
- La consistència del formigó fresc, i el contingut d'aire ocluït.

El pes total de partícules que passen pel tamís 0,125 mm UNE EN 933-2 no serà major de 450 kg/m3, inclòs el ciment.

Contingut de ciment: >= 300 kg/m3

Relació aigua/ciment: <= 0,46

Assentament en el con d'Abrams (UNE 83313): 2 - 6 cm

Proporció d'aire ocluït (UNE 83315): <= 6%

En zones sotmeses a nevades o gelades serà obligatòria la utilització d'un inclusor d'aire, i en aquest cas, la proporció d'aire ocluit en el formigó fresc no serà inferior al 4,5 % en volum.

Toleràncies:

Assentament en el con d'Abrams: ± 1 cm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: En camions formigonera.

Queda expressament prohibit l'addició al formigó de qualsevol quantitat d'aigua o altres substàncies que puguin alterar la composició original.

Emmagatzematge: No es pot emmagatzemar.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

---

## B0 MATERIALS BÀSICS

## B06 FORMIGONS

## B06F FORMIGONS ESTRUCTURALS (CE)

## B06F2- FORMIGÓ ESTRUCTURAL PER ARMAR AMB CIMENT GRIS I GRANULAT NATURAL (CE)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B06F2-11P36,B06F2-LVFA.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Formigó amb o sense addicions (cendres volants o fum de sílice), elaborat en una central formigonera legalment autoritzada d'acord amb el títol 4t. de la llei 21/1992 de 16 de juliol d'indústria i el Real Decret 559/2010, de 7 de maig.
CARACTERÍSTIQUES DELS FORMIGONS D'ÚS ESTRUCTURAL:
Els components del formigó, la seva dosificació, el procés de fabricació i el transport han d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL.
La designació del formigó fabricat en central es pot fer per propietats o per dosificació i s'expressarà, com a mínim, la següent informació:
- Consistència
- Grandària màxima del granulat
- Tipus d'ambient al que s'exposarà el formigó
- Resistència característica a compressió per als formigons designats per propietats
- Contingut de ciment expressat en kg/m3, per als formigons designats per dosificació
- La indicació de l'ús estructural que ha de tenir el formigó: en massa, armat o pretesat
La designació per propietats s'ha de fer d'acord amb el format: T-R/C/TM/A
- T: Indicatiu que serà HM per al formigó en massa, HA pel formigó armat, i HP per al formigó pretesat
- R: Resistència característica a compressió, en N/mm2 (20-25-30-35-40-45-50-55-60-70-80-90-100)
- C: Lletra indicativa del tipus de consistència: L Líquida, F fluida, B tova, P plàstica i S seca
- TM: Grandària màxima del granulat en mm.
- A: Designació de l'ambient al que s'exposarà el formigó
En els formigons designats per propietats, el subministrador ha d'establir la composició de la mescla del formigó, garantint al peticionari les característiques especificades de grandària màxima del granulat, consistència i resistència característica, així com les limitacions derivades del tipus d'ambient especificat (contingut de ciment i relació aigua/ciment).
En els formigons designats per dosificació, el peticionari es responsable de la congruència de les característiques especificades de grandària màxima del granulat, consistència i contingut en ciment per metre cúbic de formigó, i el subministrador les haurà de garantir, indicant també, la relació aigua/ciment que ha emprat.
En els formigons amb característiques especials o d'altres de les especificades a la designació, les garanties i les dades que el subministrador hagi d'aportar, s'han d'especificar abans de l'inici del subministrament.
El formigó ha de complir amb les exigències de qualitat que estableix l'article 43.2 del CODI ESTRUCTURAL.
Si el formigó està destinat a una obra amb armadures pretesades, podrà contenir cendres volants sense que aquestes excedeixin el 20% del pes del ciment, i si es tracta de fum de silici no podrà excedir el 10%
Si el formigó està destinat a obres de formigó en massa o armat, la DF pot autoritzar l'us de cendres volants o fum de silici per la seva confecció. En estructures d'edificació, si s'utilitzen cendres volants no han de superar el 35% del pes del ciment. Si s'utilitza fum de silici no ha de superar el 10% del pes del ciment. La quantitat mínima de ciment s'especifica a l'article 43.2.1 del CODI ESTRUCTURAL.
La central que subministri formigó amb cendres volants realitzarà un control sobre la producció segons l'art. 32 del CODI ESTRUCTURAL i ha de posar els resultats de l'anàlisi a l'abast de la DF, o disposarà d'un distintiu de qualitat oficialment reconegut
Les cendres volants han de complir en qualsevol cas les especificacions de la norma UNE_EN 450.
Els additius hauran de ser del tipus que estableix l'article 31.2 del CODI ESTRUCTURAL i complir l'UNE EN 934-2
En cap cas la proporció en pes de l'additiu no ha de superar el 5% del pes del ciment utilitzat.
Classificació dels formigons per la seva resistència a compressió:
- Si fck <= 50 N/mm2 , resistència standard

- Si fck > 50 N/mm2 , alta resistència
Valor mínim de la resistència:
- Formigons en massa >= 20 N/mm2
- Formigons armats o pretesats >= 25 N/mm2
Tipus de ciment:
- Formigó en massa: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T i CEM III/C (UNE-EN 197-1), Ciments per a usos especials ESP VI-1 (UNE 80307).
- Formigó armat: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T, CEM III/C i CEM V/B (UNE-EN 197-1).
- Formigó pretesat: Ciments comuns tipus CEM I, CEM II/A-D, CEM II/A-V, CEM II/A-P i CEM II/A-M(V,P) (UNE-EN 197-1).
- Es considera inclòs dins dels ciments comuns els ciments blancs (UNE 80305).
- Es consideren inclosos els ciments de característiques addicionals com els resistents als sulfats i/o a l'aigua de mar (UNE 80303-1 i UNE 80303-2), i els de baix calor d'hidratació (UNE-EN 14216).
Classe del ciment: 32,5 N
Densitats dels formigons:
- Formigons en massa (HM):
- 2.250 kg/m3 si fck <=40 N/mm2
- 2.300 kg/m3 si fck > 40 N/mm2
Formigons armats i pretensats (HA-HP): 2400 kg/m3
El contingut mínim de ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La quantitat mínima de ciment considerant el tipus d'exposició més favorable ha de ser:
- Obres de formigó en massa: >= 200 kg/m3
- Obres de formigó armat: >= 250 kg/m3
- Obres de formigó pretesat: >= 275 kg/m3
- A totes les obres: <= 500 kg/m3
La relació aigua/ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La relació aigua/ciment considerant el tipus d'exposició més favorable ha de ser:
- Formigó en massa: <= 0,65
- Formigó armat: <= 0,65
- Formigó pretesat: <= 0,60
Assentament en el con d'Abrams (UNE EN 12350-2):
- Consistència seca: 0 - 20 mm
- Consistència plàstica: 30 - 40 mm
- Consistència tova: 50 - 90 mm
- Consistència fluida: 100-150 mm
- Consistència líquida: 160-200 mm
La consistència (L) líquida només es podrà aconseguir mitjançant additiu superfluidificant
ló clor total aportat per components d'un formigó no pot superar:
- Pretensat: <= 0,2% pes de ciment
- Armat: <= 0,4% pes de ciment
- En massa amb armadura de fissuració: <= 0,4% pes de ciment
Quantitat total de fins (sedàs 0,063) al formigó, corresponents als granulats i al ciment:
- Si l'aigua és standard: < 200 kg/m3
- Si l'aigua és reciclada: < 210 kg/m3
- Toleràncies:
- Assentament en el con d'Abrams:
- Consistència seca: ± 1 cm
- Consistència plàstica: ± 1 cm
- Consistència tova: ± 1 cm
- Consistència fluida: ± 1 cm
- Consistència líquida: ± 1 cm
FORMIGONS PER A PILOTS FORMIGONATS "IN SITU"
Tamany màxim del granulat. El més petit dels següents valors:
- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals
Dosificacions de pastat:
- Contingut de ciment:
- Formigons abocats en sec: >= 325 kg/m3
- Formigons submergits: >= 375 kg/m3
- Relació aigua-ciment (A/C): < 0,6

- Contingut de fins d <0,125 (ciment inclòs):
- Granulat gruixut d > 8 mm: >= 400 kg/m3
- Granulat gruixut d <= 8 mm: >= 450 kg/m3
Consistència del formigó:

| Assentament con d'Abrams(mm) | Condicions d'ús |
|---|---|
| 130 <= H <= 180 | - Formigó abocat en sec |
| H >= 160 | - Formigó bombejat, submergit o abocat sota aigua amb tub tremie |
| H >= 180 | - Formigó submergit, abocat sota fluid estabilitzador amb tub tremie |

El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.
FORMIGONS PER A PANTALLES FORMIGONADES "IN SITU"
Contingut mímin de ciment en funció de la grandària màxima del granulat:

| Grandària màxima del granulat(mm) | Contingut mínim de ciment(kg) |
|---|---|
| 32 | 350 |
| 25 | 370 |
| 20 | 385 |
| 16 | 400 |

Grandària màxima del granulat. El més petit dels següents valors:
- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals
Dosificacions de pastat:
- Contingut de ciment en pantalles contínues de formigó armat:
- Formigons abocats en sec: >= 325 kg/m3
- Formigons submergits: >= 375 kg/m3
- Relació aigua-ciment: 0,45 < A/C < 0,6
- Contingut de fins d <=0,125 mm (ciment inclòs):
- Granulat gruixut D <= 16 mm: <= 450 kg/m3
- Granulat gruixut D > 16 mm: = 400 kg/m3
- Assentament al con d'Abrams: 160 < A < 220 mm
El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.
FORMIGÓ PER A PAVIMENTS
La fabricació del formigó no es podrà iniciar fins que la DF no hagi aprovat la fórmula de treball i el corresponent tram de prova (apartat d'execució). Aquesta fórmula inclourà:
- La identificació de cada fracció d'àrid i la seva proporció ponderal en sec
- La granulometria de la mescla d'àrids per als tamisos 40 mm; 25 mm; 20 mm; 12,5 mm; 8 mm; 4 mm; 2 mm; 1 mm; 0,500 mm; 0,250 mm; 0,125 mm; i 0,063 mm UNE EN 933-2.
- La dosificació de ciment, aigua i, si és el cas de cada additiu, referides a amassada
- La resistència característica a flexotracció a 7 i a 28 dies.
- La consistència del formigó fresc, i el contingut d'aire ocluït.
El pes total de partícules que passen pel tamís 0,125 mm UNE EN 933-2 no serà major de 450 kg/m3, inclòs el ciment.
Contingut de ciment: >= 300 kg/m3
Relació aigua/ciment: <= 0,46
Assentament en el con d'Abrams (UNE 83313): 2 - 6 cm
Proporció d'aire ocluït (UNE 83315): <= 6%
En zones sotmeses a nevades o gelades serà obligatòria la utilització d'un inclusor d'aire, i en aquest cas, la proporció d'aire ocluit en el formigó fresc no serà inferior al 4,5 % en volum.
Toleràncies:
Assentament en el con d'Abrams: ± 1 cm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En camions formigonera.
Queda expressament prohibit l'addició al formigó de qualsevol quantitat d'aigua o altres substàncies

que puguin alterar la composició original.
Emmagatzematge: No es pot emmagatzemar.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

## B0 MATERIALS BÀSICS

## B06 FORMIGONS

## B06F FORMIGONS ESTRUCTURALS (CE)

## B06F2- FORMIGÓ ESTRUCTURAL PER ARMAR AMB CIMENT GRIS I GRANULAT NATURAL (CE)

## B06F2-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B06F2-11P36.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Formigó amb o sense addicions (cendres volants o fum de sílice), elaborat en una central formigonera legalment autoritzada d'acord amb el títol 4t. de la llei 21/1992 de 16 de juliol d'indústria i el Real Decret 559/2010, de 7 de maig.
CARACTERÍSTIQUES DELS FORMIGONS D'ÚS ESTRUCTURAL:
Els components del formigó, la seva dosificació, el procés de fabricació i el transport han d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL.
La designació del formigó fabricat en central es pot fer per propietats o per dosificació i s'expressarà, com a mínim, la següent informació:
- Consistència
- Grandària màxima del granulat
- Tipus d'ambient al que s'exposarà el formigó
- Resistència característica a compressió per als formigons designats per propietats

- Contingut de ciment expressat en kg/m3, per als formigons designats per dosificació
- La indicació de l'ús estructural que ha de tenir el formigó: en massa, armat o pretesat
La designació per propietats s'ha de fer d'acord amb el format: T-R/C/TM/A
- T: Indicatiu que serà HM per al formigó en massa, HA pel formigó armat, i HP per al formigó pretesat
- R: Resistència característica a compressió, en N/mm2 (20-25-30-35-40-45-50-55-60-70-80-90-100)
- C: Lletra indicativa del tipus de consistència: L Líquida, F fluida, B tova, P plàstica i S seca
- TM: Grandària màxima del granulat en mm.
- A: Designació de l'ambient al que s'exposarà el formigó
En els formigons designats per propietats, el subministrador ha d'establir la composició de la mescla del formigó, garantint al peticionari les característiques especificades de grandària màxima del granulat, consistència i resistència característica, així com les limitacions derivades del tipus d'ambient especificat (contingut de ciment i relació aigua/ciment).
En els formigons designats per dosificació, el peticionari es responsable de la congruència de les característiques especificades de grandària màxima del granulat, consistència i contingut en ciment per metre cúbic de formigó, i el subministrador les haurà de garantir, indicant també, la relació aigua/ciment que ha emprat.
En els formigons amb característiques especials o d'altres de les especificades a la designació, les garanties i les dades que el subministrador hagi d'aportar, s'han d'especificar abans de l'inici del subministrament.
El formigó ha de complir amb les exigències de qualitat que estableix l'article 43.2 del CODI ESTRUCTURAL.
Si el formigó està destinat a una obra amb armadures pretesades, podrà contenir cendres volants sense que aquestes excedeixin el 20% del pes del ciment, i si es tracta de fum de silici no podrà excedir el 10%
Si el formigó està destinat a obres de formigó en massa o armat, la DF pot autoritzar l'us de cendres volants o fum de silici per la seva confecció. En estructures d'edificació, si s'utilitzen cendres volants no han de superar el 35% del pes del ciment. Si s'utilitza fum de silici no ha de superar el 10% del pes del ciment. La quantitat mínima de ciment s'especifica a l'article 43.2.1 del CODI ESTRUCTURAL.
La central que subministri formigó amb cendres volants realitzarà un control sobre la producció segons l'art. 32 del CODI ESTRUCTURAL i ha de posar els resultats de l'anàlisi a l'abast de la DF, o disposarà d'un distintiu de qualitat oficialment reconegut
Les cendres volants han de complir en qualsevol cas les especificacions de la norma UNE_EN 450.
Els additius hauran de ser del tipus que estableix l'article 31.2 del CODI ESTRUCTURAL i complir l'UNE EN 934-2
En cap cas la proporció en pes de l'additiu no ha de superar el 5% del pes del ciment utilitzat.
Classificació dels formigons per la seva resistència a compressió:
- Si fck <= 50 N/mm2 , resistència standard
- Si fck > 50 N/mm2 , alta resistència
Valor mínim de la resistència:
- Formigons en massa >= 20 N/mm2
- Formigons armats o pretesats >= 25 N/mm2
Tipus de ciment:
- Formigó en massa: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T i CEM III/C (UNE-EN 197-1), Ciments per a usos especials ESP VI-1 (UNE 80307).
- Formigó armat: Ciments comuns excepte els tipus CEM II/A-Q, CEM II/B-Q, CEM II/A-W, CEM II/B-W, CEM II/A-T, CEM II/B-T, CEM III/C i CEM V/B (UNE-EN 197-1).
- Formigó pretesat: Ciments comuns tipus CEM I, CEM II/A-D, CEM II/A-V, CEM II/A-P i CEM II/A-M(V,P) (UNE-EN 197-1).
- Es considera inclòs dins dels ciments comuns els ciments blancs (UNE 80305).
- Es consideren inclosos els ciments de característiques addicionals com els resistents als sulfats i/o a l'aigua de mar (UNE 80303-1 i UNE 80303-2), i els de baix calor d'hidratació (UNE-EN 14216).
Classe del ciment: 32,5 N
Densitats dels formigons:
- Formigons en massa (HM):
- 2.250 kg/m3 si fck <=40 N/mm2
- 2.300 kg/m3 si fck > 40 N/mm2
Formigons armats i pretensats (HA-HP): 2400 kg/m3
El contingut mínim de ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La quantitat mínima de ciment considerant el tipus d'exposició més favorable ha de ser:

- Obres de formigó en massa: >= 200 kg/m3
- Obres de formigó armat: >= 250 kg/m3
- Obres de formigó pretesat: >= 275 kg/m3
- A totes les obres: <= 500 kg/m3

La relació aigua/ciment ha d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL, en funció de la classe d'exposició (taula 43.2.1.a). La relació aigua/ciment considerant el tipus d'exposició més favorable ha de ser:

- Formigó en massa: <= 0,65
- Formigó armat: <= 0,65
- Formigó pretesat: <= 0,60

Assentament en el con d'Abrams (UNE EN 12350-2):

- Consistència seca: 0 - 20 mm
- Consistència plàstica: 30 - 40 mm
- Consistència tova: 50 - 90 mm
- Consistència fluida: 100-150 mm
- Consistència líquida: 160-200 mm

La consistència (L) líquida només es podrà aconseguir mitjançant additiu superfluidificant
ló clor total aportat per components d'un formigó no pot superar:

- Pretensat: <= 0,2% pes de ciment
- Armat: <= 0,4% pes de ciment
- En massa amb armadura de fissuració: <= 0,4% pes de ciment

Quantitat total de fins (sedàs 0,063) al formigó, corresponents als granulats i al ciment:

- Si l'aigua és standard: < 200 kg/m3
- Si l'aigua és reciclada: < 210 kg/m3
- Toleràncies:
- Assentament en el con d'Abrams:
- Consistència seca: ± 1 cm
- Consistència plàstica: ± 1 cm
- Consistència tova: ± 1 cm
- Consistència fluida: ± 1 cm
- Consistència líquida: ± 1 cm

FORMIGONS PER A PILOTS FORMIGONATS "IN SITU"

Tamany màxim del granulat. El més petit dels següents valors:

- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals

Dosificacions de pastat:

- Contingut de ciment:
- Formigons abocats en sec: >= 325 kg/m3
- Formigons submergits: >= 375 kg/m3
- Relació aigua-ciment (A/C): < 0,6
- Contingut de fins d <0,125 (ciment inclòs):
- Granulat gruixut d > 8 mm: >= 400 kg/m3
- Granulat gruixut d <= 8 mm: >= 450 kg/m3

Consistència del formigó:

| Assentament con d'Abrams(mm) | Condicions d'ús |
|---|---|
| 130 <= H <= 180 | - Formigó abocat en sec |
| H >= 160 | - Formigó bombejat, submergit o abocat sota aigua amb tub tremie |
| H >= 180 | - Formigó submergit, abocat sota fluid estabilitzador amb tub tremie |

El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.

FORMIGONS PER A PANTALLES FORMIGONADES "IN SITU"

Contingut mímin de ciment en funció de la grandària màxima del granulat:

| Grandària màxima del granulat(mm) | Contingut mínim de ciment(kg) |
|---|---|
| 32 | 350 |

| | | |
|---|---|---|
| 25 | 370 | |
| 20 | 385 | |
| 16 | 400 | |

Grandària màxima del granulat. El més petit dels següents valors:
- <= 32 mm
- <= 1/4 separació entre barres d'acer longitudinals

Dosificacions de pastat:
- Contingut de ciment en pantalles contínues de formigó armat:
- Formigons abocats en sec: >= 325 kg/m3
- Formigons submergits: >= 375 kg/m3
- Relació aigua-ciment: 0,45 < A/C < 0,6
- Contingut de fins d <=0,125 mm (ciment inclòs):
- Granulat gruixut D <= 16 mm: <= 450 kg/m3
- Granulat gruixut D > 16 mm: = 400 kg/m3
- Assentament al con d'Abrams: 160 < A < 220 mm

El formigó ha de tenir la docilitat i fluïdesa adequada, i aquests valors s'han de mantenir durant tot el procés de formigonat, per tal d'evitar embussos als tubs de formigonar.

FORMIGÓ PER A PAVIMENTS

La fabricació del formigó no es podrà iniciar fins que la DF no hagi aprovat la fórmula de treball i el corresponent tram de prova (apartat d'execució). Aquesta fórmula inclourà:
- La identificació de cada fracció d'àrid i la seva proporció ponderal en sec
- La granulometria de la mescla d'àrids per als tamisos 40 mm; 25 mm; 20 mm; 12,5 mm; 8 mm; 4 mm; 2 mm; 1 mm; 0,500 mm; 0,250 mm; 0,125 mm; i 0,063 mm UNE EN 933-2.
- La dosificació de ciment, aigua i, si és el cas de cada additiu, referides a amassada
- La resistència característica a flexotracció a 7 i a 28 dies.
- La consistència del formigó fresc, i el contingut d'aire ocluït.

El pes total de partícules que passen pel tamís 0,125 mm UNE EN 933-2 no serà major de 450 kg/m3, inclòs el ciment.

Contingut de ciment: >= 300 kg/m3

Relació aigua/ciment: <= 0,46

Assentament en el con d'Abrams (UNE 83313): 2 - 6 cm

Proporció d'aire ocluït (UNE 83315): <= 6%

En zones sotmeses a nevades o gelades serà obligatòria la utilització d'un inclusor d'aire, i en aquest cas, la proporció d'aire ocluit en el formigó fresc no serà inferior al 4,5 % en volum.

Toleràncies:

Assentament en el con d'Abrams: ± 1 cm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: En camions formigonera.

Queda expressament prohibit l'addició al formigó de qualsevol quantitat d'aigua o altres substàncies que puguin alterar la composició original.

Emmagatzematge: No es pot emmagatzemar.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

---

## B0 MATERIALS BÀSICS

## B07 MORTERS DE COMPRA

### B07E- PASTA AUTOANIVELLANT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B07E-0GH2,B07E-0GH4,B07E-0GH3.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Pastes autonivellants per a ús en paviments interiors.
CONDICIONS GENERALS:
Producte en pols ja preparat format per ciment, sorra de quars, cola d'origen animal i additius, per a obtenir, amb l'addició d'aigua en la proporció especificada, pastes per a cobrir els escrostonaments i les irregularitats petites que pugui tenir una superfície.
No ha de tenir grumolls ni principis d'aglomeració.
La massa, un cop pastada, ha de ser de consistència viscosa i espessa.
Classificació en funció del tipus d'aglomerant:
- Morters anivelladors de ciment: CT
- Morters anivelladors de sulfat de calç: CA
- Morters anivelladors de magnesita: MA
- Morters anivelladors de massilla asfàltica: AS
- Morters anivelladors de resina sintètica: SR
Classificació en funció del gruix d'aplicació.
- Capa fina: 2 a 30mm
- Capa gruixuda: >=35mm
Característiques:
- Resistència mecànica a la compressió d'acord amb UNE-EN 13813. La resistència a la compressió s'indicarà amb una C seguida de la classe de resistència a compressió en N/mm2
- Resistència mecànica a la flexió: d'acord UNE-EN 13813. La resistència a la flexió s'indicarà amb una F seguida de la classe de resistència a flexió en N/mm2
- Resistència al desgast: d'acord UNE-EN 13813. Hi ha tres mètodes d'assaig per a quantificar el desgast, mètode de Böhem, mètode BCA, mètode de rodadura. Cada un es designa amb A (mètode de Böhem), AR (mètode BCA) i RWA (mètode de rodament) seguits del valors obtinguts en els assajos corresponents.
- Duresa superficial per a pastes anivelladores de magnesita i opcionalment per pastes anivelladores amb àrids fins (<4mm) d'acord amb UNE-EN 13813. La duresa s'indica amb SH seguit del valor en N/mm2
- Resistència a la penetració per a pastes anivelladores de massilla asfàltica. D'acord amb assajos indicats en UNE-EN 13813. La resistència a la penetració s'indica amb les lletres IP o ICH depenent de l'assaig utilitzat.
- Resistència a la rodament, d'acord amb assaig indicat en prEN13892-7. La resistència a la rodament s'indica amb les lletres RWFC seguit de la carga en N
- Temps d'adormiment d'acord amb UNE-EN 13813
- Retracció i inflament: d'acord amb UNE-EN 13813
- Mòdul d'elasticitat: d'acord amb UNE-EN 13813. S'indica amb lletra E seguida del valor en kN/mm2
- Resistència a la tracció: d'acord amb UNE-EN 13813. S'indica amb lletra B seguida de valor en N/mm2.
- Resistència al impacte: d'acord amb UNE-EN 13813. S'indica amb lletra IR seguida de valor en Nm
Característiques especials (UNE-EN 13813):
- Resistència elèctrica: Ha de complir
- Resistència química: Ha de complir
- Reacció al foc: Ha de complir
- Emissió de substancies corrosives: Ha de complir

- Resistència tèrmica:  Ha de complir
- Permeabilitat a l'aigua:  Ha de complir
- Aïllament acústic al soroll d'impacte:  Ha de complir
- Absorció acústica:  Ha de complir

La designació d'un morter anivellador es realitzà escrivint el nom de la norma, seguit de la nomenclatura del tipus de morter i posteriorment els diferents dígits de les característiques amb els valors corresponents.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament:

- Envasat en sacs de polietilè estancs. A l'envàs ha de constar-hi el nom del fabricant i el tipus de producte contingut, el mode i les condicions d'aplicació.
- En camions formigonera. La pasta ha d'arribar a l'obra sense alteracions en les seves característiques, formant una barreja homogènia i sense haver iniciat l'adormiment. Queda expressament prohibit l'addició de qualsevol quantitat d'aigua o altres substàncies que puguin alterar la composició original

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a usos en interiors subjectes a reglamentacions sobre reacció al foc de Nivell o Classe: (A1 a E)***, F. *** Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions),
- Productes per a usos en interiors no subjectes a reglamentacions sobre reacció al foc ni a reglamentacions sobre substàncies perilloses:
- Sistema 4: Declaració de Prestacions
- Productes per a usos en interiors subjectes a reglamentacions sobre substàncies perilloses,
- Productes per a usos en interiors subjectes a reglamentacions sobre reacció al foc de Nivell o Classe: (A1, A2, B, C)**, D, E. ** Productes o materials per als quals una etapa clarament identificable en el procés de producció no suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic):
- Sistema 3: Declaració de Prestacions
- Productes per a usos en interiors subjectes a reglamentacions sobre reacció al foc de Nivell o Classe: (A1, A2, B, C)*. * Productes o materials per als quals una etapa clarament identificable en el procés de producció suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic):
- Sistema 1: Declaració de Prestacions

En l'embalatge o/i documentació que acompanya el producte ha de portar en un lloc visible el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995 de 28 de juliol, que a més haurà d'anar acompanyat de la següent informació:

- Número d'identificació de l'organisme certificador (només per productes amb sistema 1)
- Número o marca identificativa i adreça registrada del fabricant.
- Dos últims dígits de l'any en que es va aplicar el marcatge CE
- Numero de certificat CE de conformitat (si és el cas)
- Referència a la norma UNE-EN 13813
- Identificació del producte d'acord amb la designació de diferents dígits
- Nom del producte
- Quantitat, (massa o volum)
- Data de fabricació i vida mitja
- Referència del lot
- Diàmetre màxim dels àrids
- Instruccions per la mescla i l'aplicació
- Especificacions de salubritat i seguretat
- Informació sobre les característiques essencials amb els valors necessaris:
- Reacció al foc
- Emissió de substàncies corrossives
- Permeabilitat a l'aigua
- Permeabilitat al vapor d'aigua
- Resistència a compressió
- Resistència a flexió
- Resistència al desgast
- Aïllament acústic
- Absorció acústica
- Resistència tèrmica
- Resistència química.

Emmagatzematge: En el seu envàs, en llocs protegits de la humitat i de la temperatura elevada.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 13813:2003 Pastas autonivelantes y pastas autonivelantes para suelos. Pastas autonivelantes. Características y especificaciones.

---

## B0 MATERIALS BÀSICS

## B07 MORTERS DE COMPRA

### B07L- MORTER PER A RAM DE PALETA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B07L-1PY6.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Barreja d'un o més conglomerants minerals amb granulats triats i additius especials.
- Morter de ram de paleta
CARACTERÍSTIQUES GENERALS:
No ha de tenir grumolls ni principis d'aglomeració.
MORTER DE RAM DE PALETA:
Mescla formada per un o varis conglomerants inorgànics, granulats, aigua i addicions o additius (en el seu cas), per a fàbriques d'obra ceràmica (façanes, murs, pilars, envans) com a material d'unió i rejuntat.
S'han considerat els tipus següents:
- Morter d'us corrent (G): sense característiques especials
- Morter per a juntes i capes fines (T): Morter dissenyat amb una mida màxima del granulat menor o igual al valor que figura especificat
- Morter de ram de paleta lleuger (L): Morter dissenyat que la seva densitat (endurit i sec), es inferior o igual al valor que figura especificat
La classe del morter es defineix per la lletra M seguida del valor de la resistència a compressió mínima declarada pel fabricant en N/mm2.
En els morters prescrits, el fabricant declararà la proporció de tots els components de la mescla, en volum o en pes.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent:
- Característiques dels morters frescos:

- Temps d'us (EN 1015-9)
- Contingut en ions clorur (EN-EN 1015-17): <= 0,1%
- Contingut en aire (EN 1015-7) o (EN 1015-6) si s'han utilitzat granulats porosos
- Característiques dels morters endurits:
- Resistència a compressió (EN 1015-11)
- Resistència d'unió (adhesió) (EN 1052-3)
- Absorció d'aigua (EN 1015-18)
- Permeabilitat al vapor d'aigua (EN 1745)
- Densitat (morter endurit i sec) (EN 1015-10)
- Conductivitat tèrmica (EN 1745)
- Durabilitat (resistència als cicles de gel/desgel) (comprovat segons les disposicions que li siguin aplicables)
- Característiques addicionals per als morters lleugers:
- Densitat (UNE-EN 1015-10): <= 1300 kg/m3
- Característiques addicionals per als morters per a juts i capes fines:
- Mida màxima del granulat (EN 1015-1): <= 2 mm
- Temps obert o temps de correcció (EN 1015-9)
- Reacció davant del foc:
- Material amb contingut de matèria orgànica <= 1,0%: Classe A1
- Material amb contingut de matèria orgànica > 1,0%: Classe segons UNE-EN 13501-1

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: en envasos tancats hermèticament.

Emmagatzematge: En el seu envàs d'origen i en llocs secs, sense contacte directe amb el terra i protegit de la intempèrie, de manera que no se n'alterin les condicions inicials.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

MORTER DE RAM DE PALETA:

UNE-EN 998-2:2004 Especificaciones de los morteros para albañilería. Parte 2: Morteros para albañilería.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN MORTER DE RAM DE PALETA:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a murs, pilars i particions (morters dissenyats*). * Morter amb una composició i sistema de fabricació escollits pel fabricant per tal d'obtenir les propietats especificades (concepte de prestació):
- Sistema 2+: Declaració de Prestacions
- Productes per a murs, pilars i particions (morters prescrits*). * Morter que es fabrica en unes proporcions predeterminades i que les seves propietats depenen de les proporcions dels components que s'han declarat (concepte de recepta):
- Sistema 4: Declaració de Prestacions

A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:

- Referència a la norma UNE-EN 998-2
- Nom del fabricant
- Codi o data de fabricació
- Tipus de morter
- Temps d'us
- Contingut en clorurs
- Contingut en aire
- Proporció dels components (morters prescrits)
- Resistència a compressió o classe de resistència a compressió
- Resistència d'unió (adhesió)
- Absorció d'aigua
- Permeabilitat al vapor d'aigua
- Densitat
- Conductivitat tèrmica
- Durabilitat
- Mida màxima del granulat
- Temps obert o temps de correcció
- Reacció davant el foc

- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol
OPERACIONS DE CONTROL EN MORTERS DE RAM DE PALETA:
Inspecció visual de les condicions de subministrament i recepció del certificat de qualitat del fabricant, segons les exigències del plec de condicions.
Abans de l'inici de l'obra, i amb freqüència setmanal durant la seva execució, es comprovarà la consistència del morter mitjançant el mètode establert a l'UNE EN 1015-4, i es prepararà una sèrie de 3 provetes prismàtiques de 4x4x16 cm per tal d'obtenir la resistència a compressió (UNE-EN 1015-11)
CRITERIS DE PRESA DE MOSTRES EN MORTERS DE RAM DE PALETA:
Els controls es realitzaran segons les instruccions de la DF i les indicacions de la UNE-EN 1015-11.
INTERPRETACIÓ DELS RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT, EN MORTERS DE RAM DE PALETA:
No es podran utilitzar a l'obra morters sense el corresponent certificat de garantia del fabricant, d'acord a les condicions exigides.
El valor de resistència a compressió obtingut ha de correspondre a les especificacions de projecte:
- Si resulta superior al 90% de la de projecte, s'acceptarà el lot.
- Si resulta inferior al 90% s'encarregarà un càlcul estructural que determini el coeficient de seguretat del element corresponent. S'acceptarà el lot si aquest coeficient no és inferior al 90 % del previst en el projecte.

---

## B0 MATERIALS BÀSICS

## B08 ADDITIUS, ADDICIONS I PRODUCTES DE TRACTAMENT PER A FORMIGONS, MORTERS I BEURADES

### B081- ADDITIU

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B081-06U6.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Additius són aquelles substàncies o productes que a l'incorporar-se als morters, formigons o beurades, en el moment de pastar-los o prèviament, en una proporció no superior al 5% del pes del ciment, produeixen modificacions al formigó, morter o beurada, en estat fresc i/o endurit, d'alguna de les seves característiques, propietats habituals o del seu comportament.
S'han considerat els elements següents:
- Additius per a formigó:
- Inclusor d'aire
- Reductor d'aigua/plastificant

- Reductor d'aigua d'alta activitat/superplastificant
- Retenidor d'aigua
- Accelerador d'adormiment
- Hidròfug
- Inhibidor de l'adormiment
- Additius per a morters:
- Inclusor d'aire/plastificant
- Inhibidor de l'adormiment per a morter fortament retardat

ADDITIUS:

El fabricant ha d'indicar les proporcions adequades de dosificació del producte, ha de garantir-ne l'efectivitat i que no produeixi alteracions en les característiques mecàniques o químiques del formigó o morter.

Ha de tenir un aspecte homogeni.

El color ha de ser uniforme i s'ha d'ajustar a l'especificat pel fabricant.

Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:

Característiques essencials:

- Efecte sobre la corrossió: No ha d'afavorir la corrosió de l'acer embegut en el material.
- Contingut en alcalins (Na2O, equivalent) (UNE-EN 480-12): <= valor especificat pel fabricant

Característiques complementàries:

- Component actiu (UNE-EN 480-6): Sense variacions respecte a l'espectre de referència especificat pel fabricant
- Densitat relativa, en additius líquids (D) (ISO 758):
- D >= 1,10: ± 0,03
- D <= 1,10: ± 0,02
- Contingut en extracte sec convencional (T) (EN 480-8):
- T >= 20%: >= 0,95 T, < 1,05 T
- T < 20%>= 0,90 T, < 1,10 T
- pH (ISO 4316): ± 1 o dins dels límits declarats pel fabricant

ADDITIUS I COLORANTS PER A FORMIGÓ:

Els additius que modifiquin el comportament reològic del formigó o el temps d'adormiment, hauran de complir les condicions de l'UNE EN 934-2 .

Limitacions d'ús d'additius

- Clorur càlcic i productes amb clorurs, sulfurs, sulfits: prohibits en formigó armat i pretesat
- Airejants: prohibits en pretesats ancorats per adherència
- Plastificants amb efecte airejant: Seran admesos si l'aire oclós és <=6% en volum (UNE EN 12350-7)

Ió clor total aportat per components d'un formigó no pot superar:

- Pretensat: <= 0,2% pes de ciment
- Armat: <= 0,4% pes de ciment
- En massa amb armadura de fissuració: <= 0,4% pes de ciment

ADDITIUS PER A FORMIGONS:

Característiques essencials:

- Contingut total de clorurs (ISO 1158): <= 0,10%, <= valor especificat pel fabricant

Característiques complementàries:

- Contingut clorurs solubles en aigua (UNE-EN 480-10): <= 0,10%, <= valor especificat pel fabricant

ADDITIU PER A FORMIGÓ INCLUSOR D'AIRE:

Característiques essencials:

- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): >= 2,5%
- Contingut d'aire total, en volum (UNE-EN 12350-7): 4 - 6%
- Factor d'espaiament dels buits en el formigó endurit (UNE-EN 480-11): <= 0,200 mm
- Resistència a compressió a 28 dies del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3): >= 75%

No s'han d'utilitzar agents airejants amb formigons excessivament fluids.

La proporció d'aire al formigó s'ha de controlar de forma regular a l'obra.

No es pot mesclar amb d'altres tipus d'additius sense l'autorització prèvia de la DF.

Característiques complementàries:

- Diàmetre de les bombolles (D): 10 <= D <= 1000 micres

ADDITIU PER A FORMIGÓ, REDUCTOR D'AIGUA/PLASTIFICANT:

L'additiu reductor d'aigua/plastificant és un producte per a incorporar durant el pastat del formigó que té per objecte disminuir la quantitat d'aigua per a una mateixa consistència o augmentar l'assentament en con per una mateixa quantitat d'aigua.

Característiques essencials:

- Reducció d'aigua (UNE-EN 12350-2 o EN 12350-5): >= 5%
- Resistència a compressió a 7 i 28 dies del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3): >= 110%
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
Els valors s'han pres en relació al mateix formigó sense additiu, a igual consistència.
ADDITIU PER A FORMIGÓ REDUCTOR D'AIGUA D'ALTA ACTIVITAT/SUPERPLASTIFICANT:
L'additiu reductor d'aigua d'alta activitat /superplastificant, és un producte per a incorporar durant el pastat del formigó que té per objecte disminuir fortament la quantitat d'aigua per a una mateixa consistència o augmentar considerablement l'assentament en con per una mateixa quantitat d'aigua.
Característiques essencials:
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
- Valors en relació al mateix formigó sense additiu a igual consistencia:
- Reducció d'aigua (UNE-EN 12350-2 o EN 12350-5): >= 12%
- Resistència a compressió (UNE-EN 12390-3):
- 1 dia: >= 140%
- 28 dies: >= 115%
- Valors en relació al mateix formigó sense additu, a igual relació aigua/ciment:
- Consistència:
- Assentament en con (UNE-EN 12350-2): >= 120 mm
- Escorriment (EN 12350-5): >= 160 mm
- Manteniment de la consistència (UNE-EN 12350-2 o EN 12350-5): >= 30 min després de l'addició, no ha de ser inferior a la consistència inicial
- Resistència a compressió a 28 dies >= 90%
- Contingut en aire <= 2% en volum
ADDITIU PER A FORMIGÓ, RETENIDOR D'AIGUA:
Additiu que redueix la pèrdua d'aigua, en dismunir l'exsudació.
Característiques essencials:
- Exsudació (UNE-EN 480-4): <= 50%
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
- Resistència a compressió a 28 dies del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3): >= 80%
Els valors s'han pres en relació al mateix formigó sense additiu, a igual consistència.
ADDITIU PER A FORMIGÓ, HIDRÒFUG:
L'additiu hidròfug és un producte que s'afegeix al formigó o morter en el moment de pastar-lo i que té com a funció principal incrementar la resistència al pas de l'aigua sota pressió a la pasta endurida. Actua disminuint la capilaritat.
Característiques essencials:
- Absorció capil·lar a 7 dies, en massa (UNE-EN 450-5): <= 50%
- Absorció capil·lar a 28 dies, en massa (UNE-EN 450-5): <= 60%
- Resistència a compressió a 28 dies del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3): >= 85%
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
Els valors s'han pres en relació al mateix formigó sense additiu, a igual consistència.
ADDITIU PER A FORMIGÓ, INHIBIDOR D'ADORMIMENT:
L'additiu inhibidor de l'adormiment és un líquid que s'incorpora en el moment de pastar el formigó o morter i té per objecte retardar l'inici de l'adormiment.
El retard de l'enduriment del formigó ha de ser de manera que, al cap de dos o tres dies, la resistència assolida sigui la mateixa que sense l'additiu.
Característiques essencials:
- Temps d'adormiment (UNE-EN 480-2):
- Inici d'adormiment: >= al del morter de referència + 90 min
- Final d'adormiment: <= al del morter de referència + 360 min
- Resistència a compressió del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3):
- 7 dies: >= 80%
- 28 dies: >= 90%
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
- Reducció d'aigua: >= 5%
Els valors s'han pres en relació al mateix formigó sense additiu, a igual consistència.
ADDITIU PER A FORMIGÓ, ACCELERADOR DE L'ADORMIMENT:
L'additiu per a gunitats és un producte per a incorporar durant el pastat del formigó que té per objecte accelerar el procés d'adormiment.
S'ha de dosificar amb un sistema mecànic que asseguri la regularitat i la precisió de la proporció desitjada d'additiu.

Ha de ser compatible amb el ciment, àrids, fum de sílice i fibres, en ordre a garantir en el formigó projectat les condicions requerides de resistència, tant en primera edat com en la seva evolució en el temps i també en relació a la durabilitat de l'obra.
No ha de començar a actuar fins el moment d'afegir l'aigua.
Característiques essencials:
- Temps d'adormiment (UNE-EN 480-2):
- Inici d'adormiment (a 20°C): >= 30 min
- Final d'adormiment (a 5°C): <=60%
- Resistència a compressió del formigó amb additiu, en relació al formigó testimoni sense additiu (UNE-EN 12390-3):
- 28 dies: >= 80%
- 90 dies: >= que la del formigó d'assaig a 28 dies
- Contingut d'aire en el formigó fresc, en volum (UNE-EN 12350-7): <= 2%
Final de l'adormiment segons la dosificació (assaig Vicat):
- 2%: <= 90 min
- 3%: <= 30 min
- 4%: <= 3 min
- 5%: <= 2 min
Els valors s'han pres en relació al mateix formigó sense additiu, a igual consistència.
ADDITIUS PER A MORTERS:
Característiques essencials:
- Contingut total de clorurs (ISO 1158): <= valor especificat pel fabricant
- Resistència a compressió a 28 dies (UNE-EN 1015-11): >= 70% que la del morter testimoni
Característiques complementàries:
- Contingut clorurs solubles en aigua (UNE-EN 480-10): <= valor especificat pel fabricant
ADDITIU PER A MORTER INCLUSOR D'AIRE/PLASTIFICANT:
Additiu que millora la traballabilitat o que permet una reducció del contingut d'aigua, per incorporació en el pastat, d'una quantitat de petites bombolles d'aire uniformement distribuïdes, que queden retingudes després de l'enduriment.
Característiques essencials:
- Contingut d'aire (EN 1015-7 mètode A):
- Després d'un pastat normalitzat: A= 17 ± 3% en volum
- Després d'1 h en repòs: >= A - 3%
- Després d'un pastat llarg: <= A + 5, >= A - 5%
Característiques complementàries:
- Reducció d'aigua en massa (UNE EN-480-13): >= 8%
Els valors s'han pres en relació al mateix morter sense additiu, a igual consistència.
ADDITIU PER A MORTER INHIBIDOR DE L'ADORMIMENT:
L'additiu inhibidor de l'adormiment s'incorpora en el moment del pastat i té per objecte retardar l'inici de l'adormiment.
Característiques essencials:
- Després d'un pastat normalitzat: A= 17 ± 3% en volum
- Després de 28 h en repòs: >= 0,70 A%
- Després d'un pastat llarg: <= A + 5, >= A - 5%
- Contingut d'aire (EN 1015-7 mètode A):
Característiques complementàries:
- Consistència després de 28 h en repòs (EN 1015-4): ± 15 mm del valor inicial
- Resistència a la penetració després de 52 h (EN 1015-9): >= 5 N/mm2 que la del morter d'assaig amb additiu
Els valors s'han pres en relació al mateix morter sense additiu, a igual consistència.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
SUBMINISTRAMENT I EMMAGATZEMATGE EN ADDITIUS I COLORANTS:
Subministrament: En envasos tancats hermèticament, sense alteracions i amb etiquetatge.
Emmagatzematge: En llocs protegits de la intempèrie i de manera que no s'alterin les seves característiques.
El transport i emmagatzematge s'ha de fer de forma que s'eviti la contaminació i la variació de les propietats per factors físics o químics, com ara glaçades o altes temperatures.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
ADDITIUS PER A FORMIGONS:
UNE-EN 934-2:2002 Aditivos para hormigones, morteros y pastas. Parte 2: Aditivos para hormigones. Definiciones, requisitos, conformidad, marcado y etiquetado.

UNE-EN 934-2:2002/A1:2005 Aditivos para hormigones, morteros y pastas. Parte 2: Aditivos para hormigones. Definiciones, requisitos, conformidad, marcado y etiquetado.
UNE-EN 934-2:2002/A2:2006 Aditivos para hormigones, morteros y pastas. Parte 2: Aditivos para hormigones. Definiciones, requisitos, conformidad, marcado y etiquetado.
ADDITIUS PER A MORTERS:
UNE-EN 934-3:2004 Aditivos para hormigones, morteros y pastas. Parte 3: Aditivos para morteros para albañilería. Definiciones, requisitos, conformidad, marcado y etiquetado.
UNE-EN 934-3:2004/AC:2005 Aditivos para hormigones, morteros y pastas. Parte 3: Aditivos para morteros para albañilería. Definiciones, requisitos, conformidad, marcado y etiquetado.
ÚS PER A FORMIGONS:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN ADDITIUS:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a morter per a ram de paleta,
- Productes per a formigó:
- Sistema 2+: Declaració de Prestacions
El subministrament del producte ha de venir acompanyat del certificat de qualitat corresponent i la fitxa tècnica del fabricant. A més, ha d'incloure la designació de l'additiu d'acord a la norma UNE EN 934-2.
El certificat ha d'indicar les proporcions adequades de dosificació del producte, i indicar la seva funció principal; també ha de garantir la seva efectivitat i que no produeixi alteracions en les característiques mecàniques o químiques del formigó o morter.
La documentació ha d'incloure també:
- Nom del laboratori
- Si no es un laboratori públic, ha d'exposar la declaració d'estar acreditat per a realitzar els assaigs
- Data d'emissió del certificat
- Garantia de que el tractament estadístic és equivalent
L'entrega d'additius haurà d'anar acompanyada d'una full de subministrament proporcionat pel subministrador, on hi ha de constar com a mínim les següents dades:
- Identificació del Subministrador
- Número del certificat de marcatge CE
- Número de sèrie del full de subministrament
- Identificació del Peticionari
- Data del lliurament
- Quantitat subministrada
- Designació de l'additiu  segons Art. 31.2 en el CODI ESTRUCTURAL
- Identificació del lloc de subministrament
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN ADDITIUS PER A FORMIGÓ:
A l'embalatge o bé a l'albarà de lliurament, hi ha de constar la següent informació com a mínim:
- Designació (d'acord amb l'apartat 8 de la norma UNE-EN 934-2)
- El nom del lot i fàbrica de producció
- Requisits per a l'emmagatzematge, inclòs límit de temps a partir del qual les propietats ja no estan garantides
- Instruccions d'homogeneització abans del seu ús, en el seu cas
- Instruccions d'us i precaucions relatives a la seguretat
- Interval d'ús recomanat pel fabricant
- Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o marca d'identificació del fabricant
- Les 2 últimes xifres de l'any d'impressió del marcatge
- Referència a la norma EN 934-2
- Descripció del producte (nom genèric, material, ús previst, etc.)
- Designació del producte
- Informació de les característiques essencials aplicables amb els valors declarats, en el seu cas
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN ADDITIUS PER A MORTER:
A l'embalatge o bé a l'albarà de lliurament, hi ha de constar la següent informació com a mínim:
- Designació (d'acord amb l'apartat 8 de la norma UNE-EN 934-3)
- El nom del lot i fàbrica de producció
- Requisits per a l'emmagatzematge, inclòs límit de temps a partir del qual les propietats ja no estan

garantides
- Instruccions d'us i precaucions relatives a la seguretat
- Interval d'ús recomanat pel fabricant
- Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o identificació i direcció registrada del fabricant
- Les 2 últimes xifres de l'any d'impressió del marcatge
- Número del certificat de conformitat CE del control de producció en fàbrica, en el seu cas
- Referència a la norma EN 934-3
- Descripció del producte (nom genèric, material, ús previst, etc.)
- Designació del producte
- Informació de les característiques essencials aplicables amb els valors declarats, en el seu cas

OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Control del subministrament del material, amb recepció del corresponent certificat de qualitat d'acord a les condicions exigides.

La DF ha de poder valorar el nivell de garantia del distintiu, i en cas de no disposar de suficient informació, ha de poder determinar l'execució de comprovacions mitjançant assaigs.
OPERACIONS DE CONTROL EN ADDITIUS PER A FORMIGÓ:
Cada cop que canviï el subministrador, i al menys en una ocasió al llarg de l'obra, s'han de realitzar els assaigs identificatius del producte (UNE-EN 934-2).
OPERACIONS DE CONTROL EN ADDITIU INCLUSOR D'AIRE PER A FORMIGÓ:
Cada cop que canviï el subministrador, i al menys en una ocasió al llarg de l'obra, s'ha de realitzar l'assaig de quantitat d'aire ocluït (UNE-EN 12350-7).
CRITERIS DE PRESA DE MOSTRES:
S'han de seguir les instruccions de la DF i els criteris indicats a les normes UNE corresponents i el CODI ESTRUCTURAL en addició de fums de sílice.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN ADDITIUS:
La conformitat dels additius que disposin de marcatge CE, s'ha de comprovar mitjançant la verificació documental de que els valors declarats en els documents que acompanyen al marcatge, permeten deduir el compliment de les especificacions contemplades en projecte i en l'article 31 del CODI ESTRUCTURAL.
En el cas dels additius que no disposin del marcatge CE, el Constructor, o el Subministrador del formigó o dels elements prefabricats, haurà d'aportar un certificat d'assaig, amb una antiguitat inferior a 6 mesos, realitzat per un laboratori de control autoritzat, que demostri la conformitat de l'additiu vers les especificacions de l'article 31 del CODI ESTRUCTURAL, amb un nivell de garantia estadística equivalent a l'exigit pels additius amb marcatge CE a la norma UNE EN 934-2.

## B0 MATERIALS BÀSICS

## B09 ADHESIUS

### B091- ADHESIU D'APLICACIÓ UNILATERAL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B091-06VG,B091-06VI,B091-06VL.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Adhesius que només requereixen escampar-se a una de les cares dels elements a unir.
S'han considerat els tipus següents:
- En dispersió aquosa
- Aquós en dispersió vinílica
- En solució alcohòlica
- De poliuretà bicomponent
- De poliuretà (un sol component)
- De PVC
- De resines epoxi
- Bipolímer acrílic en dispersió aquosa per a col·locació de plaques de poliestirè
EN DISPERSIÓ AQUOSA:
Adhesiu de resines sintètiques per a la col·locació de paviments de PVC i revestiments tèxtils.
Ha de ser de fàcil aplicació, tenir una gran força adhesiva inicial i no ser inflamable ni tòxic.
Densitat a 20°C: <= 1,24 g/cm3
Contingut sòlid: Aprox. 70%
Rendiment: 250 - 350 g/m2
AQUÓS EN DISPERSIÓ VINÍLICA:
Adhesiu per a la col·locació de revestiments murals i papers vinílics.
No ha de ser inflamable ni tòxic.
Densitat: 1,01 g/cm3
Rendiment: Aprox. 200 g/m2
Temperatura de treball: >= 5°C
EN SOLUCIÓ ALCOHÒLICA:
Adhesiu de resines sintètiques en solució alcohòlica, per a la col·locació de paviments tèxtils lleugers.
Ha de ser de fàcil aplicació i tenir una gran força adhesiva inicial.
Densitat a 20°C: 1,5 g/cm3
Contingut sòlid: 84 - 86
Rendiment: Aprox. 450 g/m2
DE POLIURETÀ BICOMPONENT:
Adhesiu de poliuretà bicomponent, per a la col·locació de paviments de goma.
Ha de ser de fàcil aplicació, exempt de dissolvents i no inflamable.
DE POLIURETÀ (UN SOL COMPONENT):
Adhesiu format per un aglomerant de resines hidroxilades soles o modificades, que catalitzen en ésser mesclades amb un isocianat.
Característiques de la pel·lícula líquida:
- La mescla preparada, després de tres minuts d'agitació (INTA 163.203) no ha de tenir grumolls, pallofes ni dipòsits durs
- Temperatura d'inflamació (INTA 160.232 A): >= 30°C
- Rendiment per a una capa superior a 150 micres: > 1 m2/kg
- Temperatura d'enduriment: >= 15°C
- Temps d'aplicació a 20°C: > 3 h
Resistència química de la pel·lícula seca:
- Àcid cítric, 10%: 15 dies
- Àcid làctic, 5%: 15 dies
- Àcid acètic, 5%: 15 dies
- Oli de cremar: Cap modificació
- Xilol: Cap modificació
- Clorur sòdic, 10%: 15 dies
- Aigua: 15 dies
PVC:
Adhesiu preparat per a la unió de materials de PVC.
Ha de ser de fàcil aplicació i tenir una gran força adhesiva inicial.
Ha de tenir bona estabilitat dimensional als canvis de temperatura i no ha de produir olors molestes.
Temps de pre-assecatge en condicions normals: <= 1 min

Resistència a la compressió: > 10 N/mm2
Resistència a la tracció: > 18 N/mm2
DE RESINES EPOXI:
Adhesiu de resines epoxi bicomponent, per a la col·locació de paviments de goma i revestiment de PVC.
Ha de ser resistent a la humitat, a la calor, als olis, als dissolvents, als àcids i als àlcalis diluïts.
La mescla dels dos components s'ha de fer amb la mateixa proporció.
Temps d'aplicació a 20°C: 3 - 4 h
BIPOLÍMER ACRÍLIC EN DISPERSIÓ AQUOSA:
Adhesiu de pasta aquosa, format per càrregues minerals i additius i com a lligant principal, un copolímer acrílic en dispersió.
Ha de ser apte per a barrejar-se amb el ciment.
Extracte sec a 105°C: 75 - 78
Contingut de cendres a 450°C: 65 - 68
Toleràncies:
- Densitat: ± 0,1%
- Extracte sec: ± 3%
- Contingut de cendres: ± 3%

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En envasos hermèticament tancats.
A cada envàs hi ha de figurar les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Data de caducitat
- Pes net o volum del producte
- Instruccions d'ús
- Limitacions d'ús (temperatura, materials, etc.)
- Toxicitat i inflamabilitat
- Temps d'assecat
- Rendiment

Per adhesius de dos components:
- Proporció de la mescla
- Temps d'inducció de la mescla
- Vida de la mescla

Per adhesius de PVC, el fabricant ha de facilitar les dades següents:
- Color
- Densitat
- Viscositat
- Contingut sòlid

Emmagatzematge: En el seu envàs, en locals ventilats, sense contacte amb el terreny.
Temperatura d'emmagatzematge:
- Dispersió aquosa, dispersió vinílica: >= 10°C
- Solució alcohólica, poliuretà, PVC, resines epoxi: 5°C - 30°C

Per a adhesiu aquós en dispersió vinílica el temps màxim d'emmagatzematge és 1 any a partir de la data de fabricació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## B0 MATERIALS BÀSICS

## B09 ADHESIUS

### B094- ADHESIU PER A RAJOLA CERÀMICA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B094-06TJ,B094-06VA,B094-06TL,B094-06TM.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Barreja d'un o més conglomerants minerals amb granulats triats i additius especials.
S'han considerat els tipus següents:
- Morter adhesiu
CARACTERÍSTIQUES GENERALS:
No ha de tenir grumolls ni principis d'aglomeració.
ADHESIU PER A RAJOLES CERÀMIQUES:
Mescla de conglomerants càrregues minerals i additius orgànics que donen com a resultat una pasta adequada per a fixar revestiments ceràmics en terres i parets situats en exterior o interior.
S'han considerat els tipus següents:
- Adhesiu cimentós (C): Mescla de conglomerants hidràulics, additius orgànics i càrregues minerals, que s'han de barrejar amb aigua just abans d'utilitzar-se.
- Adhesiu en dispersió (D): Mescla de conglomerant orgànic en forma de polímer en dispersió aquosa, additius orgànics i càrregues minerals, que es presenta llesta per a ser utilitzada.
- Adhesiu de resines reactives (R): Mescla de resines sintètiques, additius orgànics i càrregues minerals que el seu enduriment resulta d'una reacció química, poden presentar-se en forma d'un o més components.
S'han considerat les classes següents, en funció de les característiques addicionals:
- 1: Normal
- 2. Millorat (compleix amb els requisits per a les característiques addicionals)
- F: D'adormiment ràpid
- T: Amb lliscament reduït
- E: Amb temps obert perllongat (només per a adhesius cimentosos millorats i adhesius en dispersió millorats).
ADHESIU CIMENTÓS (C):
Característiques dels adhesius d'adormiment normal:
- Adherència inicial (UNE-EN 1348): >= 0,5 N/mm2
- Adherència després d'immersió en aigua (UNE-EN 1348): >= 0,5 N/mm2
- Adherència després d'envelliment amb calor (UNE-EN 1348): >= 0,5 N/mm2
- Adherència després de cicles gel-desgel (UNE-EN 1348): >= 0,5 N/mm2
- Temps obert: adherència (EN 1346): >= 0,5 N/mm2 (després de >= 20 min)
Els adhesius d'adormiment ràpid, han de complir a més:
- Adherència inicial (UNE-EN 1348): >= 0,5 N/mm2 (abans de les 24 h)
- Temps obert: adherència (EN 1346): >= 0,5 N/mm2 (després de >= 10 min)
Característiques especials:
- Lliscament (UNE-EN 1308): <= 0,5 mm
Característiques addicionals:
- Alta adherència inicial (UNE-EN 1348): >= 1 N/mm2
- Alta adherència després d'immersió en aigua (UNE-EN 1348): >= 1 N/mm2
- Alta adherència després d'envelliment amb calor (UNE-EN 1348): >= 1 N/mm2
- Alta adherència inicial després de cicles de gel-desgel (UNE-EN 1348): >= 1 N/mm2
- Temps obert ampliat: adherència (UNE-EN 1346): >= 0,5 N/mm2 (després de 30 min)
ADHESIUS EN DISPERSIÓ (D):

Característiques fonamentals:
- Adherència inicial (UNE-EN 1324): >= 1 N/mm2
- Adherència després d'envelliment amb calor (UNE-EN 1324): >= 1 N/mm2
- Temps obert: adherència (EN 1346): >= 0,5 N/mm2 (després de >= 20 min)
Característiques especials:
- Lliscament (UNE-EN 1308): <= 0,5 mm
Característiques addicionals:
- Adherència després d'immersió en aigua (UNE-EN 1324): >= 0,5 N/mm2
- Adherència a alta temperatura (UNE-EN 1324): >= 1 N/mm2
- Temps obert ampliat: adherència (UNE-EN 1346): >= 0,5 N/mm2 (després de 30 min)
ADHESIUS DE RESINES REACTIVES (R):
Característiques fonamentals:
- Adherència inicial (UNE-EN 12003): >= 2 N/mm2
- Adherència després d'immersió en aigua (UNE-EN 12003): >= 2 N/mm2
- Temps obert: adherència (EN 1346): >= 0,5 N/mm2 (després de >= 20 min)
Característiques especials:
- Lliscament (UNE-EN 1308): <= 0,5 mm
Característiques addicionals:
- Adherència després del xoc tèrmic (UNE-EN 12003): >= 2 N/mm2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: en envasos tancats hermèticament.
Emmagatzematge: En el seu envàs d'origen i en llocs secs, sense contacte directe amb el terra i protegit de la intempèrie, de manera que no se n'alterin les condicions inicials.
Temps màxim d'emmagatzematge:
- Morter adhesiu: 1 any
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
ADHESIU PER A RAJOLES CERÀMIQUES:
UNE-EN 12004:2001 Adhesivos para baldosas cerámicas. Definiciones y especificaciones.
UNE-EN 12004/A1:2002 Adhesivos para baldosas cerámicas. Definiciones y especificaciones.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN ADHESIU PER A RAJOLES CERÀMIQUES:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos per a la construcció:
- Sistema 3: Declaració de Prestacions
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Nom del producte
- Marca del fabricant i lloc d'origen
- Data i codi de producció, caducitat i condicions d'emmagatzematge
- Referència a la norma UNE-EN 12004
- Tipus d'adhesiu, designat segons l'apartat 6 de la norma UNE-EN 12004
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol
- Instruccions d'us:
- Proporcions de la mescla
- Temps de maduració: interval de temps des del moment de fer la mescla i el moment en que està llest per a ser aplicat
- Vida útil: interval de temps màxim en que el material pot ser utilitzat després de fer la mescla
- Mètode d'aplicació
- Temps obert
- Temps que cal esperar des del rejuntat fins que es permeti la circulació
- Àmbit d'aplicació

## B0 MATERIALS BÀSICS

## B0A FERRETERIA

## B0A1- ABRAÇADORA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0A1-07KS,B0A1-07KF,B0A1-07KN,B0A1-07KJ,B0A1-07KA,B0A1-07KQ,B0A1-07JJ,B0A1-07JG,B0A1-07JZ,B0A1-07JW,B0A1-07KH,B0A1-07KL,B0A1-07K0.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Abraçadores de materials diversos per a la subjecció de canonades.
S'han contemplat els següents tipus d'abraçadores:
- Abraçadores reforçades formades per dues peces semicirculars d'acer galvanitzat unides per un cargol a cada extrem
- Abraçadores reforçades formades per dues peces semicirculars d'acer galvanitzat unides per un cargol a cada extrem i revestides amb perfil de cautxú (abraçadores isofòniques)
- Abraçadores d'acer inoxidable formades per dues peces semicirculars, amb unió encaixada per forma
- Abraçadores de niló (poliamida resident a l'impacte) amb doble tanca superior i base amb forat roscat de M6
CARACTERÍSTIQUES GENERALS:
En les abraçadores partides d'acer galvanitzat, una de les peces semicirculars ha de tenir un pas roscat que permeti la seva unió al vis de fixació. La rosca ha de ser mètrica. L'abraçadora isofònica ha de tindre la part metàl·lica en contacte amb el tub revestida amb un perfil de cautxú.
En les abraçadores de niló amb tanca per la part superior, el sistema de tancament ha de formar part de la pròpia abraçadora. Ha d'anar fixada al parament amb un cargol roscat per ambdós extrems que subjecta a l'abraçadora per la seva base, que si és el cas es pot substituir per un cargol amb cap. També s'admet la fixació al parament encaixant l'abraçadora en una regleta de suport fixada prèviament.
Els cargols no han de tenir imperfeccions (rebaves, emprentes, etc) que impedeixin cargolar els elements.
El vis ha d'anar protegit contra la corrosió.
El disseny del tac ha de ser l'adient al suport.
Els diàmetres del tac i vis han de ser compatibles.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: S'ha de subministrar conjuntament el tac, el vis i l'abraçadora en capses, on ha de figurar les dades següents:
- Identificació del fabricant
- Diàmetres
- Unitats
Emmagatzematge: En llocs protegits de la pluja i la humitat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## B0 MATERIALS BÀSICS

## B0A FERRETERIA

### B0A7- GAFES DE PALA I PUNTA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0A7-07AO.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Elements metàl·lics per a subjectar coses introduint-los mitjançant cops o impactes.
S'han considerat els elements següents:
- Gafes de pala i punta
Gafes de pala i punta són claus grans i plans amb la cabota formada al doblegar la tija, utilitzats per a unir els bastiments amb les parets.
CARACTERÍSTIQUES GENERALS:
Han de tenir la forma, mides i resistències adequats als elements que han d'unir.
Han de ser rectes, amb la punta afilada i regular.
Els claus d'acer han de complir les determinacions de les normes UNE 17-032, UNE 17-033, UNE 17-034, UNE 17-035 i UNE 17-036.
ACABAT SUPERFICIAL GALVANITZAT:
El seu recobriment de zinc ha de ser llis, sense discontinuïtats, ni exfoliacions i no ha de tenir taques ni d'altres imperfeccions superficials.
Protecció de galvanitzat: >= 275 g/m2
Puresa del zinc, en pes: >= 98,5%
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats.
Emmagatzematge: En llocs protegits de la pluja i la humitat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa d'obligat compliment per a les gafes de pala i punta.

## B0 MATERIALS BÀSICS

## B0A FERRETERIA

## B0AM- FILFERRO

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0AM-078F.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Fil d'acer dolç, flexible i tenaç, obtingut per estiratge en fred o per trefilatge.
S'han considerat els tipus següents:
- Filferro d'acer
- Filferro d'acer galvanitzat
- Filferro d'acer plastificat
- Filferro recuit
CARACTERÍSTIQUES GENERALS:
Ha de ser de secció constant i uniforme.
Ha de complir les especificacions de la norma UNE 36722.
ACABAT SUPERFICIAL GALVANITZAT:
El seu recobriment de zinc ha de ser homogeni, llis, sense discontinuïtats, escames, grans, rugositats o esquerdes, no ha de tenir taques ni d'altres imperfeccions superficials.
La masa mínima del recobriment de zinc (UNE 37-504)ha de complir les especificacions de les taules I i II de l'UNE 37-506.
Resisténcia a la tracció (UNE 37-504):
- Qualitat G1 o G2: 1770 N/mm2
- Qualitat G3: 1570 N/mm2
Adherència del recobriment (UNE 37-504): Ha de complir
Puresa del zinc (UNE 37-504): >= 98,5%
Toleràncies:
- Diàmetre: ± 2% diàmetre nominal
FILFERRO D'ACER PLASTIFICAT:
Filferro d'acer de baix contingut de carboni, galvanitzat en calent, amb un recobriment orgànic de PVC aplicat per extrusió o sinterització.
El recobriment de PVC ha de complir les especificacions de l'apartat 6.3 de l'UNE 36-732.
La concentricitat i l'adherència del recobriment de PVC ha de complir les especificacions del article 6.5 UNE 36-732.
Característiques del galvanitzat: G-1B (UNE 37-506)
Resistència a la tracció:
- Qualitat recuit: =< 600 N/mm2
- Qualitat dur: > 600 N/mm2
Toleràncies:
- Diàmetre: taula 1 UNE 36-732
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En rotlles. A l'embalatge o albarà de lliurament hi han de constar les dades

següents:
- Identificació del fabricant o nom comercial
- Identificació del producte
- Diàmetre i llargària dels rotlles
Emmagatzematge: En llocs secs i protegits de la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
FILFERRO D'ACER:
* UNE 36722:1974 Alambre de acero de bajo contenido en carbono. Medidas y tolerancias.
FILFERRO D'ACER GALVANITZAT:
* UNE 37506:1983 Alambres de acero galvanizados en caliente para usos generales. Designación de calidades. Caracterisicas generales.
* UNE 37502:1983 Alambres de acero galvanizados en caliente. Condiciones técnicas de suministro.
FILFERRO PLASTIFICAT:
* UNE 36732:1995 Alambres de acero y productos de alambre para cerramientos. Recubrimientos orgánicos sobre el alambre. Recubrimientos de poli(cloruro de vinilo).

---

## B0 MATERIALS BÀSICS

## B0A FERRETERIA

## B0AP- TAC MECÀNIC METÀL·LIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0AP-07IX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt d'una peça per a encastar (tac) i un cargol o un vis. El sistema de subjecció del tac pot ser per adherència química o per expansió produida per la deformació de la peça en ser comprimida pel cargol.
S'han considerat els tipus següents:
- Tac d'expansió de niló i vis d'acer
- Tac d'expansió d'acer, amb vis, volandera i femella del mateix material
- Fixació mecànica formada per una base metàl·lica cargolada, vis d'acer, beina de PVC, volanderes d'estanquitat i tap de cautxú
- Tac químic format per una ampolla amb resina, cargol, volandera i femella

CARACTERÍSTIQUES GENERALS:
El disseny del tac ha de ser l'adient al suport i als esforços que ha de suportar.
Els cargols no han de tenir imperfeccions (rebaves, emprentes, etc) que impedeixin cargolar els elements.
El vis ha d'anar protegit contra la corrosió.
Els diàmetres del tac i vis han de ser compatibles.
El perfil de la femella ha de ser segons el seu diàmetre (UNE 17-008).
Cementació del vis: > 0,1 mm
VOLANDERES:
Diàmetre interior de la volandera:
- Diàmetre del cargol 10 mm: 11 mm
- Diàmetre del cargol 11 mm: 13 mm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: S'ha de subministrar conjuntament amb totes les peces necessàries per a la seva correcta col·locació en capses, on han de figurar:
- Identificació del fabricant
- Diàmetres
- Llargàries
- Unitats
- Instruccions d'ús

Emmagatzematge: En llocs protegits de la pluja i la humitat.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B0 MATERIALS BÀSICS

## B0A FERRETERIA

## B0AQ- VIS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0AQ-07GR.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tijes cilíndriques o còniques, amb filet de secció triangular que dibuixa sobre la seva superfície una hèlice contínua.

S'han considerat els tipus següents:
- Visos galvanitzats
- Visos per a fusta o tac de PVC
- Visos per a conglomerats de fusta, de llautó
- Visos per a plaques de cartró-guix, cadmiats o galvanitzats

CARACTERÍSTIQUES GENERALS:
El perfil de la rosca del vis ha d'estar en relació amb el seu diàmetre (UNE 17-008), i la llargària de la rosca, en relació amb la seva llargària (UNE 17-051).
La seva superfície ha de ser llisa, sense fissures, rebaves ni d'altres defectes superficials.
Els fils de la rosca no han de tenir defectes de material ni empremtes d'eines.
Cementació del vis: > 0,1 mm
ACABAT CADMIAT:
El seu recobriment ha de ser llis, sense discontinuïtats ni exfoliacions i no ha de tenir taques ni imperfeccions superficials.
ACABAT GALVANITZAT:
El seu recobriment ha de ser llis, sense discontinuïtats ni exfoliacions i no ha de tenir taques ni imperfeccions superficials.
Protecció de galvanitzat: >= 275 g/m2
Puresa del zinc, en pes: >= 98,5%
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats.
Emmagatzematge: En llocs protegits de la pluja i la humitat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B0 MATERIALS BÀSICS

## B0B ACER I METALL EN PERFILS O BARRES

## B0B7- ACER EN BARRES CORRUGADES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0B7-106Q,B0B7-106S.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Acer per a armadures passives d'elements de formigó:

S'han considerat els elements següents:
- Barres corrugades
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Els productes d'acer per a armadures passives no han de tenir defectes superficials ni fissures.
L'armadura ha de ser neta, sense taques de greix, d'oli, de pintura, de pols o de qualsevol altre matèria perjudicial.
Els filferros llisos només es poden utilitzar com elements de connexió d'armadures bàsiques electrosoldades en gelosia.
Les barres corrugades han de tenir al menys dues files de corrugues transversals, uniformement distribuïdes al llarg de tota la llargària. Dins de cada fila, les corrugues han d'estar uniformement espaiades.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Diàmetre nominal: s'ha d'ajustar als valors especificats a la taula 6 de la UNE-EN 10080.
- Diàmetres nominals <= 10,00 mm: Variació en intervals de mig mm
- Diàmetres nominals > 10,00 mm: Variació en unitats senceres de mm
- Dimensions i geometria de les corrugues: Ha de complir l'especificat en l'apartat 7.4.2 de la UNE-EN 10080.
- Massa per metre: El valor nominal ha de ser l'especificat en la taula 6 de la UNE-EN 10080, en relació amb el diàmetre nominal i l'àrea nominal de la secció transversal
- Secció equivalent: >= 95,5% Secció nominal
- Aptitud al doblegat:
- Assaig doblegat amb angle >= 180º (UNE-EN 10080, UNE-EN ISO 15630-1): No s'ha d'apreciar trencaments o fissures
- Assaig doblegat -desdoblegat amb angle >= 90º (UNE-EN 10080, UNE-EN ISO 15630-1): No s'ha d'apreciar trencaments o fissures
Tensió d'adherència (assaig de la biga UNE-EN 10080):
- Tensió d'adherència:
- D < 8 mm: >= 6,88 N/mm2
- 8 mm <= D <= 32 mm: >= (7,84-0,12 D) N/mm2
- D > 32 mm: >= 4,00 N/mm2
- Tensió de última d'adherència:
- D < 8 mm: >= 11,22 N/mm2
- 8 mm <= D <= 32 mm: >= (12,74-0,19 D) N/mm2
- D > 32 mm: >= 6,66 N/mm2
- Composició química (% en massa):

| | C | Ceq | S | P | Cu | N |
|---|---|---|---|---|---|---|
| | %màx. | %màx. | %màx. | %màx. | %màx. | %màx. |
| Colada | 0,22 | 0,050 | 0,050 | 0,050 | 0,800 | 0,012 |
| Producte | 0,24 | 0,052 | 0,055 | 0,055 | 0,850 | 0,014 |

Ceq = Carboni equivalent
Es pot superar el valor màxim per al Carboni en un 0,03% en massa, si el valor del Carboni equivalent disminueix en un 0,02% en massa.
Les característiques anteriors s'han de determinar segons la norma UNE-EN ISO 15630-1.
BARRES I ROTLLES D'ACER CORRUGAT SOLDABLE:
El producte s'ha de designar segons l'especificat en l'apartat 5.1 de la UNE-EN 10080:
- Descripció de la forma
- Referència a la norma EN
- Dimensions nominals
- Classe tècnica
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Característiques geomètriques del corrugat de les barres han de complir les especificacions de l'apartat 7.4.2 de la norma UNE-EN 10080.
- Característiques mecàniques de les barres:

- Acer soldable (S)
- Allargament total sota càrrega màxima:
- Acer subministrat en barres: >= 5,0%
- Acer subministrat en rotlles: >= 7,5%
- Acer soldable amb característiques especials de ductilitat (SD):
- Allargament total sota càrrega màxima:
- Acer subministrat en barres: >= 7,5%
- Acer subministrat en rotlles: >= 10,0%
- Resistència a fatiga: Ha de complir l'especificat a la taula 34.2.d del CODI ESTRUCTURAL
- Deformació alternativa: Ha de complir l'especificat a la taula 34.2.e del CODI ESTRUCTURAL

| Designació | Lím.elàstic fy N/mm2 | Càrrega unitaria trencament fs(N/mm2) | Allargament al trencament | Relació fs/fy |
|---|---|---|---|---|
| B 400 S | >= 400 | >= 440 | >= 14% | >= 1,08 |
| B 500 S | >= 500 | >= 550 | >= 12% | >= 1,08 |
| B 400 SD | >= 400 | >= 480 | >= 20% | >= 1,20 |
| | | | | <= 1,35 |
| B 500 SD | >= 500 | >= 575 | >= 16% | >= 1,15 |
| | | | | <= 1,35 |

- Diàmetre nominal: S'han d'ajustar a la sèrie següent (mm): 6 8 10 12 14 16 20 25 32 i 40 mm
- S'ha d'evitar utilitzar barres de diàmetre <= 6 mm, en el cas d'armadura muntada o elaborada amb soldadura.

Toleràncies:
- Massa:
- Diàmetre nominal > 8,0 mm: ± 4,5% massa nominal
- Diàmetre nominal <= 8,0 mm: ± 6% massa nominal

Les característiques anteriors s'han de determinar segons la norma UNE-EN ISO 15630-1.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Emmagatzematge: en llocs en els que restin protegits de la pluja, l'humitat del terra i l'eventual agressivitat de l'ambient.

Es classificaran segons el tipus, qualitat, diàmetre i procedència.

Abans de la seva utilització i en especial despres de períodes llargs d'emmagatzematge en obra, s'ha d'inspeccionar la superfície per tal de comprovar que no hi hagi alteracions superficials.

Pèrdua de pes després de l'eliminació d'òxid superficial amb raspall de filferros: < 1%

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

UNE-EN 10080:2006 Acero para el armado del hormigón. Acero soldable para armaduras de hormigón armado. Generalidades.

---

## B0 MATERIALS BÀSICS

## B0B ACER I METALL EN PERFILS O BARRES

## B0B8- MALLA ELECTROSOLDADA DE BARRES CORRUGADES D'ACER

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0B8-107V.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Acer per a armadures passives d'elements de formigó:
S'han considerat els elements següents:
- Malla electrosoldada
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Els productes d'acer per a armadures passives no han de tenir defectes superficials ni fissures.
L'armadura ha de ser neta, sense taques de greix, d'oli, de pintura, de pols o de qualsevol altre matèria perjudicial.
Els filferros llisos només es poden utilitzar com elements de connexió d'armadures bàsiques electrosoldades en gelosia.
Les barres corrugades han de tenir al menys dues files de corrugues transversals, uniformement distribuïdes al llarg de tota la llargària. Dins de cada fila, les corrugues han d'estar uniformement espaiades.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Diàmetre nominal: s'ha d'ajustar als valors especificats a la taula 6 de la UNE-EN 10080.
- Diàmetres nominals <= 10,00 mm: Variació en intervals de mig mm
- Diàmetres nominals > 10,00 mm: Variació en unitats senceres de mm
- Dimensions i geometria de les corrugues: Ha de complir l'especificat en l'apartat 7.4.2 de la UNE-EN 10080.
- Massa per metre: El valor nominal ha de ser l'especificat en la taula 6 de la UNE-EN 10080, en relació amb el diàmetre nominal i l'àrea nominal de la secció transversal
- Secció equivalent: >= 95,5% Secció nominal
- Aptitud al doblegat:
- Assaig doblegat amb angle >= 180º (UNE-EN 10080, UNE-EN ISO 15630-1): No s'ha d'apreciar trencaments o fissures
- Assaig doblegat -desdoblegat amb angle >= 90º (UNE-EN 10080, UNE-EN ISO 15630-1): No s'ha d'apreciar trencaments o fissures
Tensió d'adherència (assaig de la biga UNE-EN 10080):
- Tensió d'adherència:
- D < 8 mm: >= 6,88 N/mm2
- 8 mm <= D <= 32 mm: >= (7,84-0,12 D) N/mm2
- D > 32 mm: >= 4,00 N/mm2
- Tensió de última d'adherència:
- D < 8 mm: >= 11,22 N/mm2
- 8 mm <= D <= 32 mm: >= (12,74-0,19 D) N/mm2
- D > 32 mm: >= 6,66 N/mm2
- Composició química (% en massa):

| | C | Ceq | S | P | Cu | N |
|---|---|---|---|---|---|---|
| | %màx. | %màx. | %màx. | %màx. | %màx. | %màx. |

| | | | | | | |
|---|---|---|---|---|---|---|
| Colada | 0,22 | 0,050 | 0,050 | 0,050 | 0,800 | 0,012 |
| Producte | 0,24 | 0,052 | 0,055 | 0,055 | 0,850 | 0,014 |

Ceq = Carboni equivalent
Es pot superar el valor màxim per al Carboni en un 0,03% en massa, si el valor del Carboni equivalent disminueix en un 0,02% en massa.
Les característiques anteriors s'han de determinar segons la norma UNE-EN ISO 15630-1.
FILFERROS CORRUGATS I FILFERROS LLISOS:
Filferros corrugats son els que compleixen els requisits establerts per la UNE-EN 10080 per a la fabricació de malles electrosoldades o armadures bàsiques electrosoldades en gelosia.
Filferros llisos son els que compleixen els requisits establerts per la UNE-EN 10080 per a la fabricació d'elements de connexió en armadures bàsiques electrosoldades en gelosia.
Els diàmetres nominals dels filferros corrugats s'han d'ajustar a la sèrie (mm):
5-5,5-6-6,5-7-7,5-8-8,5-9-9,5-10-10,5-11-11,5-12-14 mm
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Característiques mecàniques:
- B 500 T
- Límit elàstic fy: >= 500 N/mm2
- Càrrega unitària de trencament fs: >= 550 N/mm2
- Allargament al trencament: >= 8%
- Relació f/fy: >= 1,03

Les característiques anteriors s'han de determinar segons la norma UNE-EN ISO 15630-1.
MALLA ELECTROSOLDADA:
Armadura formada per la disposició de barres corrugades o filferros corrugats, longitudinals i transversals, de diàmetre nominal igual o diferent, que es creuen entre sí perpendicularment i que els seus punts de contacte queden units mitjançant soldadura elèctrica, realitzada en una instal·lació industrial aliena a l'obra.
La composició de la malla pot ser barres corrugades o filferros corrugats, però no la barreja d'ambdós.
Els components d'un panell poden ser elements simples o aparellats.
El producte s'ha de designar segons l'especificat en l'apartat 5.2 de la UNE-EN 10080:
- Descripció de la forma
- Referència a la norma EN
- Dimensions nominals: Dimensions dels components, dimensions del panell, separació entre elements i sobrellargs
- Classes tècniques dels acers

Els components de la malla han de complir les especificacions que els hi son aplicables segons siguin barres o filferros.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Càrrega de desenganxament de les unions soldades (Fs): 0,25 fy x An
- (An = Secció transversal nominal del més gran dels elements de la unió en malles simples o d'un dels elements aparellats, en malles dobles)
- Diàmetres relatius dels elements:
- Malles simples: dmín <= 0,6 dmàx

(dmín: diàmetre nominal de l'armadura transversal, dmàx: diàmetre nominal de l'armadura més gruixuda)
- Malles elements aparellats: 0,7 ds <= dt <= 1,25 ds

(ds: diàmetre nominal de les armadures simples; dt: diàmetre nominal de les armadures aparellades)
- Separació entre armadures longitudinals i transversals: <= 50 mm
- Sobrellargs (prolongació de les barres transversals més enllà de l'última barra longitudinal): 25 mm

Toleràncies:
- Llargària i amplària: ± 25 mm o ± 0,5% (la més gran)
- Separació entre armadures: ± 15 mm o ± 7,5% (la més gran)

Les característiques anteriors s'han de determinar segons la norma UNE-EN ISO 15630-1.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Emmagatzematge: en llocs en els que restin protegits de la pluja, l'humitat del terra i l'eventual agressivitat de l'ambient.
Es classificaran segons el tipus, qualitat, diàmetre i procedència.
Abans de la seva utilització i en especial despres de períodes llargs d'emmagatzematge en obra,

s'ha d'inspeccionar la superfície per tal de comprovar que no hi hagi alteracions superficials.
Pèrdua de pes després de l'eliminació d'òxid superficial amb raspall de filferros: < 1%
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
UNE-EN 10080:2006 Acero para el armado del hormigón. Acero soldable para armaduras de hormigón armado. Generalidades.

---

## B0 MATERIALS BÀSICS

## B0C PLAQUES, PLANXES I TAULERS

## B0CC PLAQUES I PLANXES DE GUIX

## B0CC0- PLACA DE GUIX LAMINAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0CC0-21OS,B0CC0-21OV.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Plaques de guix amb l'acabat de la cara vista amb cartó. Eventualment amb altres plaques o làmines adherides a la cara interior, o formen un envà de dues cares vistes, amb l'interior reblert amb una retícula de cartó.
- Plaques de guix laminat:
- Plaques de guix laminat tipus A
- Plaques de guix laminat tipus H (plaques amb capacitat d'absorció d'aigua reduïda)
- Plaques de guix laminat tipus E (plaques per a exteriors)
- Plaques de guix laminat tipus F (plaques amb la cohesió de l'ànima millorada a altes temperatures)
- Plaques de guix laminat tipus P (plaques base de guix)
- Plaques de guix laminat tipus D (plaques amb densitat controlada)
- Plaques de guix laminat tipus R (plaques amb resistència millorada)
- Plaques de guix laminat tipus I (plaques amb duresa superficial millorada)
- Transformats de placa de guix laminat amb aïllament tèrmic o acústic:
- Transformats classe 1
- Transformats classe 2

- Transformats de placa de guix laminat procedents de processos secundaris:
- Transformats laminars
- Transformats especials (placa perforada)
CARACTERÍSTIQUES GENERALS:
Ha d'estar homologat d'acord amb el RD 1312/1986 o disposar d'una certificació de conformitat a normes segons l'ordre 14/01/1991.
Els angles i les arestes vistes han de ser rectes.
La superfície ha de ser plana, sense defectes com ara cops, bonys, taques, etc.
PLAQUES DE GUIX LAMINAT:
Resistència a flexió (expressada com a càrrega de trencament a flexió):
- Plaques tipus A, D, E, F, H, I:
- Gruix nominal 9,5 mm:
- Càrrega de trencament a flexió en sentit transversal: 160 N
- Càrrega de trencament a flexió en sentit longitudinal: 400N
- Gruix nominal 12,5 mm:
- Càrrega de trencament a flexió en sentit transversal: 210 N
- Càrrega de trencament a flexió en sentit longitudinal: 550 N
- Gruix nominal 15,0 mm:
- Càrrega de trencament a flexió en sentit transversal: 250 N
- Càrrega de trencament a flexió en sentit longitudinal: 650 N
- Altres gruixos (essent t el gruix en mm)
- Càrrega de trencament a flexió en sentit transversal: 16,8 x t (N)
- Càrrega de trencament a flexió en sentit longitudinal: 43 x t (N)
- Plaques tipus R o combinades amb una placa tipus R:
- Gruix nominal 12,5 mm:
- Càrrega de trencament a flexió en sentit transversal: 300 N
- Càrrega de trencament a flexió en sentit longitudinal: 725 N
- Gruix nominal 15,0 mm:
- Càrrega de trencament a flexió en sentit transversal: 360 N
- Càrrega de trencament a flexió en sentit longitudinal: 870 N
- Altres gruixos (essent t el gruix en mm)
- Càrrega de trencament a flexió en sentit transversal: 24 x t (N)
- Càrrega de trencament a flexió en sentit longitudinal: 58 x t (N)
- Plaques tipus P:
- Gruix nominal 9,5 mm:
- Càrrega de trencament a flexió en sentit transversal: 125 N
- Càrrega de trencament a flexió en sentit longitudinal: 180 N
- Gruix nominal 15,0 mm:
- Càrrega de trencament a flexió en sentit transversal: 165 N
- Càrrega de trencament a flexió en sentit longitudinal: 235 N
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials per a plaques destinades a rigiditzar estructures de fusta per a murs exteriors i estructures de fusta per a teulades apuntalades:
- Resistència a l'esforç tallant (UNE-EN 520)
Característiques essencials per a plaques en situacions d'exposició al foc:
- Classe A1 a F (UNE-EN 520 o UNE-EN 13501-1)
Característiques essencials per a plaques per a control de la difusió de la humitat:
- Per a totes les plaques excepte les tipus E (UNE-EN 12524)
- Per a plaques tipus E: =< 25 segons UNE-EN ISO 12572
Resistència a flexió (UNE-EN 520)
Resistència tèrmica (UNE-EN 520)
Altres característiques essencials que depenen de les condicions finals d'ús:
- Resistència a l'impacte
- Aïllament davant del soroll aeri
- Absorció acústica
Toleràncies:
- Amplària:
- Plaques tipus P: + 0 mm; - 8 mm
- Plaques tipus A, H, D, E, F, I, R, o combinades: + 0 mm; - 6 mm
- Llargària:
- Plaques tipus P: + 0 mm; - 6 mm
- Plaques tipus A, H, D, E, F, I, R, o combinades: + 0 mm; - 5 mm
- Gruix:

- Plaques tipus P: ± 0,6 mm
- Plaques tipus A, H, D, E, F, I, R, o combinades:
- Gruix nominal < 18 mm: ± 0,6 mm
- Gruix nominal >= 18 mm: ± 0,4 x t (t=gruix en mm; tolerància en mm arrodonida a 0,1 mm)
- Rectitud d'arestes: < 2,5 mm/m d'amplària (segons procediment de la norma UNE-EN 520)
- Cantells i perfils finals (només per al cantell afinat i el cantell semirodó afinat)
- Fondària de l'afinat del cantell: entre 0,6 i 2,5 mm
- Amplària de l'afinat del cantell: entre 40 mm i 80 mm
- Capacitat d'absorció d'aigua de les plaques tipus H1, H2 i H3:
- Capacitat d'absorció d'aigua superficial: =< 180 g/m2
- Capacitat d'absorció d'aigua total:
- Plaques tipus H1: =< 5%
- Plaques tipus H2: =< 10%
- Plaques tipus H3: =< 25%

TRANSFORMATS DE PLACA DE GUIX LAMINAT AMB AÏLLAMENT TÈRMIC-ACÚSTIC:
Tant la placa com l'aïllament han de complir les respectives normes:
- Placa de guix laminat: Ha de complir la norma EN 520
- Aïllament d'escuma de poliestirè expandit (EPS): Ha de complir la norma EN 13163
- Aïllament de poliestirè extruït (XPS): Ha de complir la norma EN 13164
- Aïllament de poliuretà rígid (poliisocianat, poliisocianurat) (PUR i PIR): Ha de complir la norma EN 13165
- Aïllament d'escumes fenòliques (PF): Ha de complir la norma EN 13166
- Aïllament de llana mineral: Ha de complir la norma EN 13162

Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Resistència a la flexió:
- Càrrega mínima de trencament en sentit transversal: 160 N
- Càrrega mínima de trencament en sentit longitudinal: 400 N

Resistència tèrmica del transformat:
- La resistència tèrmica s'obtindrà sumant les resistències tèrmiques de tots els components i s'expressarà amb m2 · K / W

Reacció al foc: Ha de complir UNE-EN 13950
Resistència al foc: Ha de complir UNE-EN 13950
Altres característiques essencials que depenen de les condicions finals d'ús:
- Resistència al impacte
- Aïllament davant del soroll aeri
- Absorció acústica

Escairat:
- En sentit transversal: -5 mm a + 5 mm
- En sentit longitudinal: -5 mm a + 8 mm

Planor (del transformat): =< 5 mm
Adherència/cohesió del material aïllant:
- Transformats de classe 1: > 0,017 MPa
- Transformats de classe 2: > 0,003 MPa

Toleràncies:
- Amplària: + 0 mm; - 4 mm
- Llargària: + 0 mm; - 5 mm
- Gruix (del transformat): ± 3 mm

TRANSFORMATS DE PLACA DE GUIX LAMINAT PROCEDENTS DE PROCESOS SECUNDARIS:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Resistència a la flexió (UNE-EN 520)
- Estabilitat dels elements per a sostres (UNE-EN 14190): Ha de complir
- Resistència a l'esforç tallant (UNE-EN 520)
- Reacció al foc (UNE-EN 14190)
- Resistència al foc (UNE-EN 14190)
- Permeabilitat al vapor d'aigua (UNE-EN 14190)
- Resistència tèrmica (UNE-EN 14190)
- Protecció davant rajos X:
- Grau de protecció (IEC 6133-1)
- Quant l'ús del transformat sigui protecció davant rajos X mitjançant incorporació de làmina de plom ha de declarar-se el gruix en mm d'aquesta làmina.

Altres característiques essencials que depenen de les condicions finals d'ús:
- Resistència al impacte (UNE-EN ISO 140-6, UNE-EN ISO 140-7)

- Aïllament davant del soroll aeri (UNE-EN ISO 140-3, UNE-EN ISO 717-1)
- Absorció acústica (UNE-EN ISO 354)
Toleràncies:
- El fabricant declararà les toleràncies i quan sigui necessari el tipus de vora.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Aparellades, amb les vores precintades, embalades en paquets paletitzats.
Emmagatzematge: En posició horitzontal, elevats del terra sobre travessers separats no més de 40 cm i en llocs protegits de cops i de la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PLAQUES DE GUIX LAMINAT:
UNE-EN 520:2005 Placas de yeso laminado. Definiciones, especificaciones y métodos de ensayo.
UNE-EN 520:2005 ERRATUM:2006 Placas de yeso laminado. Definiciones, especificaciones y métodos de ensayo.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Altres,
- Productes per a qualsevol ús excepte els usos subjectes a reglamentacions sobre reacció al foc i l'ús de rigidització d'estructures de fusta per a murs amb càrrega de vent o per a estructures de fusta per a sostres,
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc. Productes que compleixen la Decisió de la Comissió 2003/43/CE modificada,
- Productes per a rigidització d'estructures de fusta per a murs amb càrrega de vent o per a estructures de fusta per a sostres de Prestacio o Caracteristica: Altres,
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc. Productes que compleixen la Decisió de la Comissió 2003/43/CE modificada,
- Productes per a usos no subjectes a reglamentacions sobre reacció al foc:
- Sistema 4: Declaració de Prestacions
- Productes per a rigidització d'estructures de fusta per a murs amb càrrega de vent o per a estructures de fusta per a sostres de Prestacio o Caracteristica: Resistència a l'esforç tallant,
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc,
- Productes per a rigidització d'estructures de fusta per a murs amb càrrega de vent o per a estructures de fusta per a sostres de Prestacio o Caracteristica: Resistència a tallant:
- Sistema 3: Declaració de Prestacions
Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995 de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- Nom, logotip o adreça declarada del fabricant
- Les dues últimes xifres de l'any de la impressió del marcatge
- Referència a la norma europea corresponent:
- Per a les plaques de guix laminat: la norma EN 520
- Per als transformats de plaques de guix laminat: la norma EN 13950
- Descripció del producte: nom genèric, material, dimensions i ús previst
- Informació sobre les característiques essencials pertinents indicades a la taula ZA.1 de la norma UNE-EN 520 o UNE-EN 13950 o UNE-EN 14190 per a les plaques de guix laminat o per als transformats de plaques de guix laminat
Les plaques de guix laminat han de designar-se de la següent manera:
- L'expressió: "Placa de yeso laminada"
- La lletra o combinació de lletres que designa el tipus de placa
- Referència a la norma europea EN 520
- Les dimensions de la placa en mm (amplària x llargària x gruix)
- El tipus de cantell longitudinal
Les plaques han d'anar marcades de manera clara e indeleble, ja sigui sobre la pròpia placa, a l'etiqueta que l'acompanya, a l'embalatge o bé a la documentació comercial que acompanya l'enviament, amb la següent informació com a mínim:
- Nom, marca comercial o d'altres mitjans d'identificació del fabricant de la placa
- Data de fabricació
- Identificació de la placa segons el sistema de designació definit en la norma

- El símbol normalitzat del marcatge CE
Els transformats de plaques de guix laminat han de designar-se de la següent manera:
- L'expressió: "Transformado de placa de yeso laminado"
- Referència a la norma europea EN 13950
- Les dimensions de la placa en mm (amplària x llargària x gruix) i escairat ,si s'utilitza
- El tipus de placa de guix laminat, tipus de vora i gruix nominal de la placa en mm d'acord amb EN-520
Els transformats de plaques de guix laminat procedents de procesos secundaris han de designar-se de la següent manera:
- Expressió que identifiqui el producte
- Referència a la norma europea EN 14190
- Les dimensions de la placa en mm (amplària x llargària x gruix)
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
Inspecció visual del material a la seva recepció, en referència a l'aspecte i característiques geomètriques.
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
- Abans de començar l'obra, si varia el subministrament, i per cada 1000 m2 de plaques que arribin a l'obra es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- Densitat
- Pes per m2
- Conductivitat tèrmica
- Resistència tèrmica (plaques sense fibra de vidre ni làmina d'alumini)
- Resistència al foc (plaques amb fibra de vidre)
- Resistència al vapor d'aigua (plaques amb làmina d'alumini)
- Característiques geomètriques
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
OPERACIONS DE CONTROL EN APLACATS:
- Control de característiques geomètriques:
- Gruix
- Diferència de llargària entre les arestes
- Angles
- Rectitud d'arestes
- Planor
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN TANCAMENTS I DIVISÒRIES:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, s'ha de realitzar una sèrie completa d'assaigs a càrrec del Contractista.
Els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades. En cas d'incompliment, s'ha de repetir l'assaig, a càrrec del contractista, sobre el doble número de mostres del mateix lot, acceptant-se aquest, quan els resultats obtinguts sobre totes les peces resultin satisfactoris.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN APLACATS:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs sobre el material rebut a càrrec del Contractista.
En general, els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades.

En cas d'incompliment en un assaig, es repetirà, a càrrec del contractista, sobre el doble numero de mostres del mateix lot, acceptant-ne aquest, quan els resultats obtinguts siguin conformes a les especificacions exigides.

---

## B0 MATERIALS BÀSICS

## B0C PLAQUES, PLANXES I TAULERS

## B0CU TAULERS DE FUSTA

## B0CU2- TAULER CONTRAXAPAT DE FUSTA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0CU2-2GVJ.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Taulers derivats de la fusta.
S'han considerat els elements següents:
- Tauler contraxapat de fusta, amb diferents acabats
CARACTERÍSTIQUES GENERALS:
Les cares han de ser planes, escairades i han de tenir les arestes vives.
Els extrems han d'estar acabats mitjançant tall de serra, a escaire.
No ha de tenir defectes superficials.
El fabricant ha de garantir que les característiques dels taulers compleixen amb les especificacions del projecte, de la pròpia documentació tècnica del fabricant, i de la normativa tècnica que regula el producte.
Toleràncies:
- El fabricant garantirà que per a cada tipus de tauler es compleixen les toleràncies dimensionals, de forma, contingut d'humitat, contingut en formaldehid indicat a les taules 1, 2 i 3 de la UNE-EN 622-1
TAULER AMB ACABAT XAPAT:
Ha d'estar xapat amb fullola de la fusta corresponent a totes les cares vistes.
La fullola no ha de tenir punts desencolats o bufats.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: de manera que garanteixi la protecció dels taulers i amb la indicació dels tipus subministrats.
Emmagatzematge: De manera que no es deformin i en llocs secs i ventilats, sense contacte directe

amb el terra. S'ha d'evitar un emmagatzematge prolongat a l'obra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 313-1:1996 Tableros contrachapados. Clasificación y terminología. Parte 1: Clasificación.
UNE-EN 313-2:2000 Tableros contrachapados. Clasificación y terminología. Parte 2: Terminología.
UNE-EN 636:2004 Tableros contrachapados. Especificaciones.
UNE-EN 13986:2006 Tableros derivados de la madera para utilización en la construcción. Características, evaluación de la conformidad y marcado.

## B0 MATERIALS BÀSICS

## B0E MATERIALS BÀSICS D'AGLOMERATS DE CIMENT

## B0E2- BLOC DE MORTER DE CIMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0E2-0EKV,B0E2-0ELG.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Peces de formigó fetes amb granulats densos, lleugers o amb la combinació d'ambdòs, utilitzades en el ram de paleta (façanes vistes o revestides, estructures portants i no portants, murs i divisòries interiors, tant a edificació com a enginyeria civil)
S'han considerat els tipus següents:
En funció del nivell de confiança de les peces respecte a la resistència a la compressió:
- Peces de categoria I: peces amb una resistència a compressió declarada amb probabilitat de no assolir-se inferior al 5%.
- Peces de categoria II: peces que no compleixen el nivell de confiança especificat per la categoria I.
En funció del volum i disposició de forats:
- Peces massisses
- Peces calades
- Peces alleugerides
- Peces foradades
S'han considerat els acabats superficials dels blocs següents:
- Llis
- Rugós
- Amb relleu especial
- Esmaltats

CARACTERÍSTIQUES GENERALS:
La peça esta fabricada a base de ciment, granulats i aigua i pot contenir additius, addicions, pigments colorants o altres materials incorporats durant o després del procés de fabricació.
Els extrems poden ser llisos o encadellats.
No ha de tenir deformacions, balcaments, ni esvorancs a les arestes.
No ha de tenir fissures i la seva textura superficial ha de ser l'adequada per a facilitar l'adherència del possible revestiment.
El seu color ha de ser uniforme, estable i continu en tota la massa.
La disposició dels forats ha de ser de manera que no hi hagi risc de que apareguin fissures en els envanets i parets de la peça durant la seva manipulació o col·locació.
El fabricant ha de declarar la dimensions nominals de les peces en mil·límetres i en l'ordre de llarg, ample i alt.
Volum de forats:
- Massís: <= 25%
- Calat: <= 50%
- Alleugerit: <= 60%
- Foradat: <= 70%
Volum de cada forat:
- Massís: <= 12,5%
- Calat, alleugerit, foradat: <= 25%
Gruix total dels envanets (relació amb el gruix total):
- Massís: >= 37,5%
- Calat: >= 30%
- Alleugerit: >= 20%
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials:
- Durabilitat (resistència gel/desgel)
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Tolerància en les dimensions (UNE-EN 772-16): <= valor declarat pel fabricant, amb indicació de la categoria
- Gruix de la paret exterior (UNE-EN 772-16)
- Forma de la peça (UNE-EN 772-16, UNE-EN 772-2)
- Resistència a compressió (UNE-EN 772-1): >= 5 N/mm2, >= valor declarat pel fabricant, amb indicació de la categoria I o II
- Estabilitat dimensional front l'humitat (UNE-EN 772-14): <= valor declarat pel fabricant
- Adherència (UNE-EN 1052-3): >= valor declarat pel fabricant
Característiques essencials en peces per a ús en elements amb exigències davant el foc:
- Classe de reacció al foc: exigència en funció del contingut en massa o volum, de materials orgànics distribuïts de forma homogènia:
- Peces amb <= 1,0%: A1
- Peces amb > 1,0% (UNE-EN 13501-1)
Característiques essencials en peces per a ús en elements amb presència d'humitat o en cares exposades a exteriors:
- Absorció d'aigua (UNE-EN 772-11): <= valor declarat pel fabricant
Característiques essencials en peces per als usos previstos en l'apartat 4.1 del DB HE 1:
- Propietats tèrmiques (UNE-EN 1745)
- Permeabilitat al vapor d'aigua (UNE-EN 1745)
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Densitat aparent en sec (UNE-EN 772-13)
- Tolerància de la densitat (UNE-EN 772-13): ±10%
- Percentatge de forats (UNE-EN 772-16, UNE-EN 772-2)
- Formació d'encaix: <= 20% volum total
- Blocs cara vista:
- Planor cares (UNE-EN 772-20): El valor declarat pel fabricant ha d'estar dins dels límits especificats a l'UNE-EN 771-3
- Aspecte superficial (UNE-EN 771-3)
Característiques complementàries:
- Resistència a flexotracció (UNE-EN 772-6): >= valor declarat pel fabricant
- Densitat seca absoluta (UNE-EN 772-13)
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats sobre palets.
Emmagatzematge: En llocs protegits de la intempèrie i sense contacte directe amb el terra ni amb substàncies o ambients que perjudiquin física o químicament el material constitutiu de la peça. S'ha

d'evitar que es trenquin o s'escantonin.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 771-3:2004 Especificaciones de piezas para fábrica de albañilería. Parte 3: Bloques de hormigón (áridos densos y ligeros).
UNE-EN 771-3:2004/A1:2005 Especificaciones de piezas para fábrica de albañilería. Parte 3: Bloques de hormigón (áridos densos y ligeros).
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Si el material ha de ser component del full principal del tancament exterior d'un edifici, el fabricant ha de declarar els valors de les propietats hídriques següents, d'acord amb l'especificat en l'apartat 4.1 del DB HS 1:
- Absorció d'aigua per capil·laritat
- Succió o tasa d'absorció d'aigua inicial (kg/m2.min)
- Absorció d'aigua a llarg termini o per immersió total (% o g/m3)
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a murs, pilars i particions (peces Categoria I*). * Peces amb una resistència a compressió declarada amb una probabilitat d'error inferior o igual al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 2+: Declaració de Prestacions
- Productes per a murs, pilars i particions (peces Categoria II**). ** Peces amb una resistència a compressió declarada amb una probabilitat d'error superior al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 4: Declaració de Prestacions
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Classificació segons DB-SE-F (Taula 4.1)
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- Numero d'identificació del organisme notificat (només per al sistema 2+)
- Marca del fabricant i lloc d'origen
- Dos últims dígits del any en que s'ha imprès el marcat CE.
- Número del certificat de conformitat del control de producció a fàbrica, en el seu cas
- Referència a la norma UNE-EN 771-3
- Descripció de producte: nom genèric, material, dimensions, .. i ús al que va destinat.
- Informació de les característiques essencials segons annex ZA de la UNE-EN 771-3
OPERACIONS DE CONTROL:
Es comprovarà que s'han adoptat les mesures necessàries per assegurar la compatibilitat entre els diferents productes, elements i sistemes constructius.
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
Es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques.
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra de cada 5.000 unitats que arribin a l'obra s'ha de determinar la resistència a compressió d'una mostra de 10 blocs, segons la norma UNE-EN 772-1.
OPERACIONS DE CONTROL EN ELEMENTS PER A PARETS ESTRUCTURALS:
Les peces de categoria I tindran una resistència declarada. El fabricant aportarà la documentació

que acrediti que el valor declarat de la resistència a compressió s'obtingui segons estableix l'UNE-EN 771-3 i assajades segons l'UNE-EN 772-1, i l'existència d'un pla de control de producció industrial que doni garanties.
Les peces de categoria II tindran una resistència a compressió declarada igual al valor mig obtingut en assaig segons UNE-EN 772-1, tot i que el nivell de confiança pot resultar inferior al 95%.
CRITERIS DE PRESA DE MOSTRES:
S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
En peces per a elements estructurals, el número de peces necessaries per determinar la conformitat amb les especificacions declarades del fabricant seguirà les designacions de la taula A1 de la norma UNE-EN 771-3.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs a les peces aplegades a càrrec del Contractista. Els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades. En cas d'incompliment, es repetirà l'assaig, a càrrec del contractista, sobre el doble numero de mostres del mateix lot, acceptant-ne aquest, quan els resultats obtinguts sobre totes les peces resultin satisfactoris.

---

## B0 MATERIALS BÀSICS

## B0F MATERIALS BÀSICS DE CERÀMICA

## B0F1 MAONS CERÀMICS

## B0F13- MAÓ FORADAT SENZILL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0F13-0LM8.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Peces d'argila cuita utilitzades en el ram de paleta (façanes vistes o revestides, estructures portants i no portants, murs i divisòries interiors, tant a edificació com a enginyeria civil)
S'han considerat els tipus següents:
En funció de la densitat aparent:
- Peces LD, amb una densitat aparent menor o igual a 1000 kg/m3, per a parets revestides
- Peces HD, peces per a elements sense revestir o per a revestir i amb una densitat aparent més

gran de 1000 kg/m3
En funció del nivell de confiança de les peces respecte a la resistència a la compressió:
- Peces de categoria I: peces amb una resistència a compressió declarada amb probabilitat de no assolir-se inferior al 5%.
- Peces de categoria II: peces que no compleixen el nivell de confiança especificat per la categoria I.
En funció del volum i disposició de forats:
- Peces massisses
- Peces calades
- Peces alleugerides
- Peces foradades
CARACTERÍSTIQUES GENERALS:
Maó amb forats a la testa, obtingut per un procés d'extrussió mecànica i cocció d'una pasta argilosa i, eventualment, d'altres matèries.
Les peces han de presentar regularitat de dimensions i de forma.
No ha de tenir esquerdes, forats, exfoliacions, ni escrostonaments d'arestes.
Si és de cara vista no ha de tenir imperfeccions, taques, cremades, etc. i la uniformitat de color en el maó i en el conjunt de les remeses ha de complir les condicions subjectives requerides per la DF.
La disposició dels forats ha de ser de manera que no hi hagi risc de que apareguin fissures en els envanets i parets de la peça durant la seva manipulació o col·locació.
Ha de tenir una textura uniforme. Està suficientment cuit si s'aprecia un so agut en ser colpejat i un color uniforme en fracturar-se.
El fabricant ha de declarar la dimensions nominals de les peces en mil·límetres i en l'ordre de llarg, ample i alt.
Volum de forats:
- Massís: <= 25%
- Calat: <= 45%
- Alleugerit: <= 55%
- Foradat: <= 70%
Volum de cada forat: <= 12,5%
Gruix total dels envanets (relació amb el gruix total):
- Massís: >= 37,5%
- Calat: >= 30%
- Alleugerit: >= 20%
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Resistència mitja a compressió (UNE-EN 772-1): >= 5 N/mm2, >= valor declarat pel fabricant, amb indicació de categoria I o II
- Adherència (UNE-EN 1052-3): >= valor declarat pel fabricant
- Contingut en sals solubles actives (UNE-EN 772-5): <= valor declarat pel fabricant, amb indicació de la seva categoria
Característiques essencials en peces per a ús en elements amb exigències davant el foc:
- Classe de reacció al foc: exigència en funció del contingut en massa o volum, de materials orgànics distribuïts de forma homogènia:
- Peces amb <= 1,0%: A1
- Peces amb > 1,0% (UNE-EN 13501-1)
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Tolerància en les dimensions (UNE-EN 772-16): <= valor declarat pel fabricant, amb indicació de la categoria
- Forma de la peça (UNE-EN 771-1)
- Especificacions dels forats: Disposició, volum, superfície, gruix dels envanets (UNE-EN 772-3)
- Densitat absoluta (UNE-EN 772-13):
- Tolerancia de la densitat (UNE-EN 772-13): El valor declarat pel fabricant ha d'estar dins dels límits següents en funció de la categoria.
- D1: <= 10%
- D2: <= 5%
- Dm: <= desviació declarada pel fabricant en %
Característiques essencials en peces per als usos previstos en l'apartat 4.1 del DB HE 1:
- Propietats tèrmiques (UNE-EN 1745)
- Permeabilitat al vapor d'aigua (UNE-EN 1745)
Els pinyols de calç no han de reduir la resistència de la peça (després de l'assaig reiteratiu sobre aigua en ebullició i la dessecació posterior a una temperatura de 105°C) en més de 10% si el maó és per a revestir i un 5% si es de cara vista, ni han de provocar més escrostonaments dels admesos un cop s'hagi submergit en aigua un temps mínim de 24 h.

PECES LD:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials:
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Durabilitat (resistència gel/desgel)
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Per a peces perforades horitzontalment amb una dimensió >= 400 mm i envanets exteriors < a 12 mm que hagin d'anar revestides amb un lliscat:
- Expansió per humitat (UNE-EN 772-19)
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Contingut en sals solubles actives (UNE-EN 772-5): El valor declarat pel fabricant ha d'estar dins dels límits especificats a l'UNE-EN 771-1 en funció de la categoria
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Densitat aparent (UNE-EN 772-13): <= 1000 kg/m3
PECES HD:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials:
- Durabilitat (resistència gel/desgel): Indicació de la categoria en funció del grau d'exposició
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Expansió per humitat (UNE-EN 772-19)
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Contingut en sals solubles actives (UNE-EN 772-5): El valor declarat pel fabricant ha d'estar dins dels límits especificats a l'UNE-EN 771-1 en funció de la categoria
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Densitat aparent (UNE-EN 772-13): >= 1000 kg/m3
Característiques essencials en peces per a ús en cara vista o en barreres anticapil·laritat:
- Absorció d'aigua: <= valor declarat pel fabricant
- Cara vista (UNE-EN 771-1)
- Barreres anticapil.laritat (UNE-EN 772-7)
Característiques complementàries:
- Succió immersió 60 ±2 s (UNE-EN 772-11) : <= valor declarat pel fabricant
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats sobre palets, de manera no totalment hermètica.
Emmagatzematge: De manera que no es trenquin o s'escantonin. No han d'estar en contacte amb terres que continguin solucions salines, ni amb productes que puguin modificar les seves característiques (cendres, fertilitzants, greixos, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 771-1:2003 Especificaciones de piezas para fábrica de albañilería. Parte 1: Piezas de arcilla cocida.
UNE-EN 771-1:2003/A1:2006 Especificaciones de piezas para fábrica de albañilería. Parte 1: Piezas de arcilla cocida.
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Si el material ha de ser component del full principal del tancament exterior d'un edifici, el fabricant ha de declarar els valors de les propietats hídriques següents, d'acord amb l'especificat en l'apartat 4.1 del DB HS 1:
- Absorció d'aigua per capil·laritat
- Succió o tasa d'absorció d'aigua inicial (kg/m2.min)
- Absorció d'aigua a llarg termini o per immersió total (% o g/m3)
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a murs, pilars i particions (peces Categoria I*). * Peces amb una resistència a compressió declarada amb una probabilitat d'error inferior o igual al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 2+: Declaració de Prestacions
- Productes per a murs, pilars i particions (peces Categoria II**). ** Peces amb una resistència a

compressió declarada amb una probabilitat d'error superior al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 4: Declaració de Prestacions
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Classificació segons DB-SE-F (Taula 4.1)
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- Numero d'identificació del organisme notificat (només per al sistema 2+)
- Marca del fabricant i lloc d'origen
- Dos últims dígits del any en que s'ha imprès el marcat CE.
- Número del certificat de conformitat del control de producció a fàbrica, en el seu cas
- Referència a la norma EN 771-1
- Descripció de producte: nom generic, material, dimensions, .. i ús al que va destinat.
- Informació de les característiques essencials segons annex ZA de l'UNE-EN 771-1
OPERACIONS DE CONTROL:
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
Les peces de categoria I tindran una resistència declarada. El fabricant aportarà la documentació que acrediti que el valor declarat de la resistència a compressió s'obtingui segons estableix l'UNE-EN 771-3 i assajades segons l'UNE-EN 772-1, i l'existència d'un pla de control de producció industrial que doni garanties.
Les peces de categoria II tindran una resistència a compressió declarada igual al valor mig obtingut en assaig segons UNE-EN 772-1, tot i que el nivell de confiança pot resultar inferior al 95%.
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra de cada 45000 unitats que arribin a l'obra, s'ha de determinar la resistència a la compressió d'una mostra de 6 maons, segons la norma UNE-EN 772-1.
CRITERIS DE PRESA DE MOSTRES:
S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs sobre el material rebut a càrrec del Contractista.
En general, els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades.
En el cas de la resistència a compressió, el valor a comparar amb l'especificació s'obtindrà amb la fórmula: Rck = Rc - 1,64 s, essent:
- s: Desviació típica (n-1), s ^2 = (Rci  Rc) ^2/(n-1)
- Rc:  Valor mig de les resistències de les provetes
- Rci:  Valor de resistència de cada proveta
- n:  Nombre de provetes assajades
En cas d'incompliment en un assaig, es repetirà, a càrrec del contractista, sobre el doble numero de mostres del mateix lot, acceptant-ne aquest, quan els resultats obtinguts siguin conformes a les especificacions exigides.
- En element estructural incloure la verificació:
- En el cas de l'assaig de massa, es prendrà com a resultat el valor mig de les 6 determinacions realitzades.

## B0F18- SUPERMAÓ CERÀMIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0F18-0E2H.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Peces d'argila cuita utilitzades en el ram de paleta (façanes vistes o revestides, estructures portants i no portants, murs i divisòries interiors, tant a edificació com a enginyeria civil)
S'han considerat els tipus següents:
En funció de la densitat aparent:
- Peces LD, amb una densitat aparent menor o igual a 1000 kg/m3, per a parets revestides
- Peces HD, peces per a elements sense revestir o per a revestir i amb una densitat aparent més gran de 1000 kg/m3
En funció del nivell de confiança de les peces respecte a la resistència a la compressió:
- Peces de categoria I: peces amb una resistència a compressió declarada amb probabilitat de no assolir-se inferior al 5%.
- Peces de categoria II: peces que no compleixen el nivell de confiança especificat per la categoria I.
En funció del volum i disposició de forats:
- Peces massisses
- Peces calades
- Peces alleugerides
- Peces foradades
CARACTERÍSTIQUES GENERALS:
Peça ceràmica amb una llargària més gran o igual a 30 cm i un gruix inferior a 14 cm, amb forats a la testa, obtingut per un procés d'extrussió mecànica i cocció d'una pasta argilosa i, eventualment, d'altres matèries.
Les peces han de presentar regularitat de dimensions i de forma.
No ha de tenir esquerdes, forats, exfoliacions, ni escrostonaments d'arestes.
Si és de cara vista no ha de tenir imperfeccions, taques, cremades, etc. i la uniformitat de color en el maó i en el conjunt de les remeses ha de complir les condicions subjectives requerides per la DF.
La disposició dels forats ha de ser de manera que no hi hagi risc de que apareguin fissures en els envanets i parets de la peça durant la seva manipulació o col·locació.
Ha de tenir una textura uniforme. Està suficientment cuit si s'aprecia un so agut en ser colpejat i un color uniforme en fracturar-se.
El fabricant ha de declarar la dimensions nominals de les peces en mil·límetres i en l'ordre de llarg, ample i alt.
Volum de forats:

- Massís: <= 25%
- Calat: <= 45%
- Alleugerit: <= 55%
- Foradat: <= 70%
Volum de cada forat: <= 12,5%
Gruix total dels envanets (relació amb el gruix total):
- Massís: >= 37,5%
- Calat: >= 30%
- Alleugerit: >= 20%
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Resistència mitja a compressió (UNE-EN 772-1): >= 5 N/mm2, >= valor declarat pel fabricant, amb indicació de categoria I o II
- Adherència (UNE-EN 1052-3): >= valor declarat pel fabricant
- Contingut en sals solubles actives (UNE-EN 772-5): <= valor declarat pel fabricant, amb indicació de la seva categoria
Característiques essencials en peces per a ús en elements amb exigències davant el foc:
- Classe de reacció al foc: exigència en funció del contingut en massa o volum, de materials orgànics distribuïts de forma homogènia:
- Peces amb <= 1,0%: A1
- Peces amb > 1,0% (UNE-EN 13501-1)
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Tolerància en les dimensions (UNE-EN 772-16): <= valor declarat pel fabricant, amb indicació de la categoria
- Forma de la peça (UNE-EN 771-1)
- Especificacions dels forats: Disposició, volum, superfície, gruix dels envanets (UNE-EN 772-3)
- Densitat absoluta (UNE-EN 772-13):
- Tolerancia de la densitat (UNE-EN 772-13): El valor declarat pel fabricant ha d'estar dins dels límits següents en funció de la categoria.
- D1: <= 10%
- D2: <= 5%
- Dm: <= desviació declarada pel fabricant en %
Característiques essencials en peces per als usos previstos en l'apartat 4.1 del DB HE 1:
- Propietats tèrmiques (UNE-EN 1745)
- Permeabilitat al vapor d'aigua (UNE-EN 1745)
Els pinyols de calç no han de reduir la resistència de la peça (després de l'assaig reiteratiu sobre aigua en ebullició i la dessecació posterior a una temperatura de 105°C) en més de 10% si el maó és per a revestir i un 5% si es de cara vista, ni han de provocar més escrostonaments dels admesos un cop s'hagi submergit en aigua un temps mínim de 24 h.
PECES LD:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials:
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Durabilitat (resistència gel/desgel)
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Per a peces perforades horitzontalment amb una dimensió >= 400 mm i envanets exteriors < a 12 mm que hagin d'anar revestides amb un lliscat:
- Expansió per humitat (UNE-EN 772-19)
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Contingut en sals solubles actives (UNE-EN 772-5): El valor declarat pel fabricant ha d'estar dins dels límits especificats a l'UNE-EN 771-1 en funció de la categoria
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Densitat aparent (UNE-EN 772-13): <= 1000 kg/m3
PECES HD:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
Característiques essencials:
- Durabilitat (resistència gel/desgel): Indicació de la categoria en funció del grau d'exposició
Característiques essencials en peces per a ús en elements amb requisits estructurals:
- Expansió per humitat (UNE-EN 772-19)
- Per a ús de cara vista o amb protecció de morter de capa fina:
- Contingut en sals solubles actives (UNE-EN 772-5): El valor declarat pel fabricant ha d'estar dins

dels límits especificats a l'UNE-EN 771-1 en funció de la categoria
Característiques essencials en peces per a ús en elements amb exigències acústiques:
- Densitat aparent (UNE-EN 772-13): >= 1000 kg/m3
Característiques essencials en peces per a ús en cara vista o en barreres anticapil·laritat:
- Absorció d'aigua: <= valor declarat pel fabricant
- Cara vista (UNE-EN 771-1)
- Barreres anticapil.laritat (UNE-EN 772-7)
Característiques complementàries:
- Succió immersió 60 ±2 s (UNE-EN 772-11) : <= valor declarat pel fabricant
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

- Barreres anticapil.laritat (UNE-EN 772-7)
Característiques complementàries:
- Succió immersió 60 ±2 s (UNE-EN 772-11) : <= valor declarat pel fabricant
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats sobre palets, de manera no totalment hermètica.
Emmagatzematge: De manera que no es trenquin o s'escantonin. No han d'estar en contacte amb terres que continguin solucions salines, ni amb productes que puguin modificar les seves característiques (cendres, fertilitzants, greixos, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 771-1:2003 Especificaciones de piezas para fábrica de albañilería. Parte 1: Piezas de arcilla cocida.
UNE-EN 771-1:2003/A1:2006 Especificaciones de piezas para fábrica de albañilería. Parte 1: Piezas de arcilla cocida.
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Si el material ha de ser component del full principal del tancament exterior d'un edifici, el fabricant ha de declarar els valors de les propietats hídriques següents, d'acord amb l'especificat en l'apartat 4.1 del DB HS 1:
- Absorció d'aigua per capil·laritat
- Succió o tasa d'absorció d'aigua inicial (kg/m2.min)
- Absorció d'aigua a llarg termini o per immersió total (% o g/m3)
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a murs, pilars i particions (peces Categoria I*). * Peces amb una resistència a

compressió declarada amb una probabilitat d'error inferior o igual al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 2+: Declaració de Prestacions
- Productes per a murs, pilars i particions (peces Categoria II**). ** Peces amb una resistència a compressió declarada amb una probabilitat d'error superior al 5%. Es pot determinar amb el valor mitjà o amb el valor característic:
- Sistema 4: Declaració de Prestacions
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Classificació segons DB-SE-F (Taula 4.1)
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- Numero d'identificació del organisme notificat (només per al sistema 2+)
- Marca del fabricant i lloc d'origen
- Dos últims dígits del any en que s'ha imprès el marcat CE.
- Número del certificat de conformitat del control de producció a fàbrica, en el seu cas
- Referència a la norma EN 771-1
- Descripció de producte: nom generic, material, dimensions, .. i ús al que va destinat.
- Informació de les característiques essencials segons annex ZA de l'UNE-EN 771-1
OPERACIONS DE CONTROL:
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
Les peces de categoria I tindran una resistència declarada. El fabricant aportarà la documentació que acrediti que el valor declarat de la resistència a compressió s'obtingui segons estableix l'UNE-EN 771-3 i assajades segons l'UNE-EN 772-1, i l'existència d'un pla de control de producció industrial que doni garanties.
Les peces de categoria II tindran una resistència a compressió declarada igual al valor mig obtingut en assaig segons UNE-EN 772-1, tot i que el nivell de confiança pot resultar inferior al 95%.
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra de cada 45000 unitats que arribin a l'obra, s'ha de determinar la resistència a la compressió d'una mostra de 6 maons, segons la norma UNE-EN 772-1.
CRITERIS DE PRESA DE MOSTRES:
S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs sobre el material rebut a càrrec del Contractista.
En general, els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades.
En el cas de la resistència a compressió, el valor a comparar amb l'especificació s'obtindrà amb la fórmula: Rck = Rc - 1,64 s, essent:
- s: Desviació típica (n-1), s ^2 = (Rci  Rc) ^2/(n-1)
- Rc:  Valor mig de les resistències de les provetes
- Rci:  Valor de resistència de cada proveta
- n:  Nombre de provetes assajades
En cas d'incompliment en un assaig, es repetirà, a càrrec del contractista, sobre el doble numero de mostres del mateix lot, acceptant-ne aquest, quan els resultats obtinguts siguin conformes a les especificacions exigides.
- En element estructural incloure la verificació:
- En el cas de l'assaig de massa, es prendrà com a resultat el valor mig de les 6 determinacions realitzades.

## B0 MATERIALS BÀSICS

## B0F MATERIALS BÀSICS DE CERÀMICA

## B0FG RAJOLES, CAIRONS I TOVES CERÀMIQUES

## B0FG2- RAJOLA CERÀMICA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0FG2-0GNV,B0FG2-0GN3,B0FG2-0GN1,B0FG2-0GN2,B0FG2-0GN4,B0FG2-0GM7.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Rajoles ceràmiques per a revestimets, verticals o horitzontals, obtingudes d'una pasta d'argila, silici, fundents i colorants, cuita.
S'han considerat les peces següents:
- Rajola de València (premsada i esmaltada del grup BIII)
- Rajola de gres extruït (peça esmaltada o sense esmaltar del grup AI o AII-a)
- Rajola de gres porcellànic (peça premsada i normalment sense esmaltar del grup BI-a)
- Rajola de gres premsat esmaltat (peça del grup BI-b o BII-a)
CARACTERÍSTIQUES GENERALS:
Les rajoles ceràmiques es classifiquen segons el mètode de fabricació :
- Mètode A, rajoles extruïdes.
- Mètode B, rajoles premsades en sec
- Mètode C, rajoles fabricades per altres mètodes.
Les rajoles ceràmiques es classifiquen en diferents grups segons l'absorció d'aigua (E):
- Grup I (E<=3%, baixa absorció d'aigua)
- Grup II (3%<E<=10%, absorció d'aigua mitja)
- Grup III ( E>10%), absorció d'aigua alta)

| MÈTODE DE FABRICACIÓ | GRUP I E<=3% | GRUP IIa 3%<E<=6% | GRUP IIb 6%<E<=10% | GRUP III E>10% |
|---|---|---|---|---|
| A EXTRUÏDES | Grup AI E<=3% | Grup AIIa-1 | Grup AIIb-1 | Grup AIII |
| | | Grup AIIa-2 | Grup AIIb-2 | |
| B | Grup BI-a | Grup BIIa | Grup BIIb | Grup BIII |

| PREMSADES | E<=0,5% | | | |
| --- | --- | --- | --- | --- |
| EN SEC | | | | |
| | Grup BI-b | | | |
| | 0,5%<E<=3% | | | |

Com a mínim el 95% de les rajoles han d'estar lliures de defectes visibles que puguin afectar l'aspecte d'una superfície més gran de rajola.
Ha de tenir un color i una textura uniformes a tota la superfície. Els angles i les arestes han de ser rectes i la cara vista plana.
Ha de complir les condicions requerides per la DF.
Toleràncies:
Totes aquestes toleràncies s'han de verificar segons l'UNE_EN ISO 10545-2.
- Grup AI-a, AI-b, AII-a1
- Llargària i amplària respecte a les dimensions de fabricació: ± 2%
- Gruix: ± 10%
- Rectitud de costats: ± 0,6%
- Planor: ± 1,5%
- Ortogonalitat: ± 1%
- Grup AII-a2, AII-b1, AII-b2 i AIII
- Llargària i amplària respecte a les dimensions de fabricació: ± 2%
- Gruix: ± 10%
- Rectitud de costats: ± 0,6%
- Planor: ± 1,5%
- Ortogonalitat: ± 1%
- Grup BI-a, BI-b, BIIa, BIIb
- Llargària i amplària respecte a les dimensions de fabricació:
- 15 - 25 peces/m2: ± 0,6%
- 26 - 45 peces/m2: ± 0,75%
- 46 - 115 peces/m2: ± 1%
- Gruix:
- 15 - 45 peces/m2: ± 5%
- 46 - 400 peces/m2: ± 10%
- Rectitud de costats:
- 15 - 115 peces/m2: ± 5%
- 116 - 400 peces/m2: ± 0,75%
- Planor:
- 15 - 115 peces/m2: ± 0,5%
- 116 - 400 peces/m2: ± 1%
- 15 - 115 peces/m2: ± 0,6%
- 116 - 400 peces/m2: ± 1%
- Ortogonalitat:
- Grup BIII
- Llargària i amplària respecte a les dimensions de fabricació:
- Costat <= 12 cm: ± 0,75%
- Costat > 12 cm: ± 0,5%
- Gruix:
- 46 - 400 peces/m2: ± 0,5 mm
- 16 - 45 peces/m2: ± 0,6 mm
- <= 15 peces/m2: ± 0,7 mm
- Rectitud de costats: ± 0,6%
- Planor: + 0,5%, - 0,3%
- Ortogonalitat: ± 0,5%

Totes aquestes toleràncies s'han de verificar segons l'UNE_EN ISO 10545-2.
RAJOLES CERÀMIQUES PER A PAVIMENTS:
Característiques essencials:
- Càrrega de trencament (assaig UNE-EN ISO 10545-3):
- Grup AI-a:: si gruix >=7,5mm mínim 1300N, i si gruix < 7,5mm mínim 600N
- Grup AI-b:: si gruix >=7,5mm mínim 1100N, i si gruix < 7,5mm mínim 600N
- Grup AII-a1: si gruix >=7,5mm mínim 950N, i si gruix < 7,5mm mínim 600N
- Grup AII-a2: si gruix >=7,5mm mínim 800N, i si gruix < 7,5mm mínim 600N
- Grup AII-b1: >=900N
- Grup AII-b2: >=750N
- Grup AIII: >=600N
- Grup BI-a: si gruix >= 7,5 mm mínim 1300 N , i si gruix< 7,5 mm mínim 700N

- Grup BI-b: si gruix >= 7,5 mm  mínim 1100 N, i si gruix< 7,5 mm  mínim 700N
- Grup BII-a: si gruix >= 7,5 mm  mínim 1100 N, i si gruix< 7,5 mm  mínim 600N
- Grup BII-b: si gruix >= 7,5 mm  mínim 800 N, i si gruix< 7,5 mm  mínim 500N
- Grup BIII: si gruix >= 7,5 mm  mínim 600 N, i si gruix< 7,5 mm  mínim 200N

RAJOLES CERÀMIQUES PER A PAVIMENTS INTERIORS:
Característiques essencials:
- Reacció al foc: A1
- Coeficient de fricció:  El fabricant declararà el mètode d'assaig utilitzat.

RAJOLES CERÀMIQUES PER A PAVIMENTS EXTERIORS:
Característiques essencials:
- Coeficient de fricció (per a zones de vianants):  El fabricant declararà el mètode d'assaig utilitzat.
- Resistència al derrapatge (per zones on circulin vehicles): El fabricant declararà el mètode d'assaig utilitzat
- Durabilitat, resistència a les gelades: Exigida d'acord amb UNE-EN ISO 10545-12

RAJOLES CERÀMIQUES PER A PARETS I SOSTRES:
Característiques essencials:
- Reacció al foc: A1
- Resistència a la flexió (No aplicable a rajoles amb força de trencament >=3000N.UNE-EN ISO 10545-4):
- Grup AI-a: >=28 N/mm2
- Grup AI-b: >=23 N/mm2
- Grup AII-a1: >=20 N/mm2
- Grup AII-a2: >=13 N/mm2
- Grup AII-b1: >=17,5 N/mm2
- Grup AII-b2: >=9 N/mm2
- Grup AIII: >=8 N/mm2
- Grup BI-a: >=35 N/mm2
- Grup BI-b: >=30 N/mm2
- Grup BII-a: >=22 N/mm2
- Grup BII-b: >=18 N/mm2
- Grup BIII: Si gruix >=7,5 mm mínim >=12N/mm2, i si gruix <7,5mm mínim 15N/mm2
- Adhesió: Aplicable per a rajoles que puguin estar exposades a la caiguda accidental d'objectes sobre àrees de transit (UNE-EN-12004)

RAJOLES CERÀMIQUES PER A PARETS I SOSTRES EXTERIORS:
Característiques essencials:
- Resistència al xoc tèrmic: Quan correspongui (ISO 10545-9)
- Durabilitat, resistència a les gelades: Quan correspongui (ISO 10545-12)

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetades, en caixes.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 14411:2007 Baldosas cerámicas. Definiciones, clasificación, características y marcado.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a recobriment de parets o sostres, en interiors o exteriors, subjectes a reglamentació de reacció al foc de Nivell o Classe: A1***, F. *** Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 2000/605/CE),
- Productes per a paviments interiors incloent zones tancades de transport públic de Nivell o Classe: A1***, F. *** Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 2000/605/CE),
- Productes per a paviments exteriors i acabats de carretera per a cobrir àrees de circulació peatonal i vehicular,
- Productes per a recobriment de parets o sostres, en interiors o exteriors, per a usos no subjectes a reglamentació de reacció al foc ni de substàncies perilloses:
- Sistema 4: Declaració de Prestacions
- Productes per a paviments subjectes a reglamentacions sobre substàncies perilloses,
- Productes per a recobriment de parets o sostres, en interiors o exteriors, subjectes a reglamentació

de substàncies perilloses, i en sostres interiors suspesos subjectes a requisits de seguretat durant l'ús:
- Sistema 3: Declaració de Prestacions
Les rajoles ceràmiques i/o el seu embalatge han d'anar marcades amb:
- La marca comercial i/o una marca de fabricació apropiada, i el país d'origen
- Marcat corresponent a la primera qualitat.
- La referència a l'annex corresponent de la norma europea (UNE EN 14411) i la classificació, quan sigui aplicable.
- Les mides nominals i les mides de fabricació modular(M) o no mdular
- La naturalesa de la superfície (GL esmaltada o UGL no esmaltada)
L'embalatge i/o documentació comercial han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar per la següent informació:
- Referència a la norma UNE-EN 14411
- Nom o marca del fabricant
- Dos ultimes xifres de l'any d'impressió del marcat
- Classificació del producte i usos finals previstos.
- Indicacions per identificar les característiques del producte en base a les especificacions tècniques.
Si el material ha de ser component de la part cega del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats higrotèrmiques següents, d'acord amb l'especificat en l'apartat 4.1 del DB HE 1:
- Conductivitat tèrmica (W/mK)
- Factor de resistència a la difusió del vapor d'aigua
OPERACIONS DE CONTROL EN PECES PER A REVESTIMENTS:
Les tasques de control a realitzar són les següents:
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra, si varia el subministrament, i per cada 1000 m2 de plaquetes que arribin a l'obra es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- resistència a les taques (UNE-EN ISO 10545-14)
- resistència a productes (UNE-EN ISO 10545-14)
- resistència a l'abrasió (UNE-EN ISO 10545-7)
- adherència al morter de ciment (ASTM C 482)
- Sobre 10 rajoles:
- absorció d'aigua (UNE-EN ISO 10545-12)
- resistència a la flexió (UNE-EN ISO 10545-4)
- comprovació dimensional (UNE-EN ISO 10545-2)
- aspecte superficial (UNE-EN ISO 10545-2)
- Sobre 5 rajoles:
- resistència a la gelada (UNE-EN ISO 10545-12)
- resistència al clivellat del vidriat (UNE-EN ISO 10545-11)
- resistència al xoc tèrmic (UNE-EN ISO 10545-9)
- resistència a l'àcid clorhídric o al hidròxid de potassi (UNE-EN ISO 10545-14)
- Sobre 3 rajoles:
- duresa a la ratllada (escala de mohs)
- Sobre 1 rajola:
- coeficient de dilatació lineal (UNE-EN ISO 10545-8)
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
CRITERIS DE PRESA DE MOSTRA EN PECES PER A REVESTIMENTS:
S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en

cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN PECES PER A REVESTIMENTS:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, s'ha de realitzar una sèrie completa d'assaigs a càrrec del Contractista.
Es repetirà l'assaig que no compleixi les especificacions sobre un total de 10 rajoles del mateix lot. Només s'acceptarà el lot, quan els resultats obtinguts sobre les 10 rajoles resultin satisfactoris.
OPERACIONS DE CONTROL EN PECES PER A PAVIMENTS:
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra, si varia el subministrament i cada 1000 m2 de superfície (unes 10000 peces), es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- Aspecte
- Absorció d'aigua
- Resistència a la flexió
- Duresa superficial
- Dilatació tèrmica
- Resistència a les taques
- Resistència als productes domèstics de neteja
- Llargària
- Amplària
- Gruix
- Rectitud d'arestes
- Planor
- Ortogonalitat

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
Si el material disposa de la Marca AENOR, o altre legalment reconeguda a un país de l'UE, es podrà prescindir de la presentació dels assaigs de control de recepció.
CRITERIS DE PRESA DE MOSTRES EN PECES PER A PAVIMENTS:
Es seguiran les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN PECES PER PAVIMENTS:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs a les peces rebudes a càrrec del Contractista.
Es repetirà l'assaig que no compleixi les especificacions sobre un total de 10 rajoles del mateix lot. Només s'acceptarà el lot, quan els resultats obtinguts sobre les 10 rajoles resultin satisfactoris.

## B0 MATERIALS BÀSICS

## B0F MATERIALS BÀSICS DE CERÀMICA

### B0FJ PECES CERÀMIQUES ESPECIALS

## B0FJ6- PEÇA ESPECIAL DE CERÀMICA AMB DOS CANTELLS EN ESCAIRE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0FJ6-101A,B0FJ6-101B,B0FJ6-101C,B0FJ6-101D,B0FJ6-101E,B0FJ6-101F,B0FJ6-101G,B0FJ6-101H.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Rajoles amb formes especials.
S'han considerat les peces següents:
- Rajola roma o doble rom
- Rajola amb trencaaigües sencill o doble
- Rajoles amb cantells en escaire
- Peces de mitja canya, en forma d'escòcia, cantoneres, raconeres, motllures, etc.
S'han considerat els materials següents:
- Ceràmica natural
- Ceràmica esmaltada
- Ceràmica vidriada
CARACTERÍSTIQUES GENERALS:
Les rajoles ceràmiques es classifiquen segons el mètode de fabricació :
- Mètode A, rajoles extruïdes.
- Mètode B, rajoles premsades en sec
- Mètode C, rajoles fabricades per altres mètodes.
Les rajoles ceràmiques es classifiquen en diferents grups segons l'absorció d'aigua (E):
- Grup I (E<=3%, baixa absorció d'aigua)
- Grup II (3%<E<=10%, absorció d'aigua mitja)
- Grup III ( E>10%), absorció d'aigua alta)

| MÈTODE DE FABRICACIÓ | GRUP I E<=3% | GRUP IIa 3%<E<=6% | GRUP IIb 6%<E<=10% | GRUP III E>10% |
|---|---|---|---|---|
| A EXTRUÏDES | Grup AI E<=3% | Grup AIIa-1 | Grup AIIb-1 | Grup AIII |
| | | Grup AIIa-2 | Grup AIIb-2 | |
| B PREMSADES EN SEC | Grup BI-a E<=0,5% | Grup BIIa | Grup BIIb | Grup BIII |
| | Grup BI-b 0,5%<E<=3% | | | |

Com a mínim el 95% de les rajoles han d'estar lliures de defectes visibles que puguin afectar l'aspecte d'una superfície més gran de rajola.
La peça no ha de tenir ruptures, esquerdes, escantonaments d'arestes, diferències de tonalitat ni d'altres defectes superficials.
Ha de complir les condicions requerides per la DF.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetades, en caixes.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Les rajoles i/o l'embalatge han de portar de forma indeleble i ben visible les dades següents:
- Nom del fabricant o marca comercial
- Primera qualitat
- Dimensions en cm
Si el material ha de ser component de la part cega del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats higrotèrmiques següents, d'acord amb l'especificat en l'apartat 4.1 del DB HE 1:
- Conductivitat tèrmica (W/mK)
- Factor de resistència a la difusió del vapor d'aigua
OPERACIONS DE CONTROL EN PECES PER A REVESTIMENTS:
Les tasques de control a realitzar són les següents:
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra, si varia el subministrament, i per cada 1000 m2 de plaquetes que arribin a l'obra es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- resistència a les taques (UNE-EN ISO 10545-14)
- resistència a productes (UNE-EN ISO 10545-14)
- resistència a l'abrasió (UNE-EN ISO 10545-7)
- adherència al morter de ciment (ASTM C 482)
- Sobre 10 rajoles:
- absorció d'aigua (UNE-EN ISO 10545-12)
- resistència a la flexió (UNE-EN ISO 10545-4)
- comprovació dimensional (UNE-EN ISO 10545-2)
- aspecte superficial (UNE-EN ISO 10545-2)
- Sobre 5 rajoles:
- resistència a la gelada (UNE-EN ISO 10545-12)
- resistència al clivellat del vidriat (UNE-EN ISO 10545-11)
- resistència al xoc tèrmic (UNE-EN ISO 10545-9)
- resistència a l'àcid clorhídric o al hidròxid de potassi (UNE-EN ISO 10545-14)
- Sobre 3 rajoles:
- duresa a la ratllada (escala de mohs)
- Sobre 1 rajola:
- coeficient de dilatació lineal (UNE-EN ISO 10545-8)
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
CRITERIS DE PRESA DE MOSTRA EN PECES PER A REVESTIMENTS:
S'han de seguir les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN PECES PER A REVESTIMENTS:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, s'ha de realitzar una sèrie completa d'assaigs a càrrec del Contractista.
Es repetirà l'assaig que no compleixi les especificacions sobre un total de 10 rajoles del mateix lot. Només s'acceptarà el lot, quan els resultats obtinguts sobre les 10 rajoles resultin satisfactoris.
OPERACIONS DE CONTROL EN PECES PER A PAVIMENTS:
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Abans de començar l'obra, si varia el subministrament i cada 1000 m2 de superfície (unes 10000 peces), es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori

acreditat:
- Aspecte
- Absorció d'aigua
- Resistència a la flexió
- Duresa superficial
- Dilatació tèrmica
- Resistència a les taques
- Resistència als productes domèstics de neteja
- Llargària
- Amplària
- Gruix
- Rectitud d'arestes
- Planor
- Ortogonalitat

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
Si el material disposa de la Marca AENOR, o altre legalment reconeguda a un país de l'UE, es podrà prescindir de la presentació dels assaigs de control de recepció.
CRITERIS DE PRESA DE MOSTRES EN PECES PER A PAVIMENTS:
Es seguiran les instruccions de la DF i els criteris de les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN PECES PER PAVIMENTS:
Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, es realitzarà una sèrie completa d'assaigs a les peces rebudes a càrrec del Contractista.
Es repetirà l'assaig que no compleixi les especificacions sobre un total de 10 rajoles del mateix lot.
Només s'acceptarà el lot, quan els resultats obtinguts sobre les 10 rajoles resultin satisfactoris.

---

## B4 ESTRUCTURES

## B44 MATERIALS D'ACER PER A ESTRUCTURES

### B44Z- PERFIL D'ACER PER A ESTRUCTURES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B44Z-0LXY.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Perfils d'acer per a usos estructurals, formats per peça simple o composta i tallats a mida o treballats

a taller.
S'han considerat els tipus següents:
- Perfils d'acer laminat en calent, de les sèries IPN, IPE, HEA, HEB, HEM o UPN, d'acer S275JR, S275J0, S275J2, S355JR, S355J0 o S355J2, segons UNE-EN 10025-2
- Perfils d'acer laminat en calent de les sèries L, LD, T, rodó, quadrat, rectangular o planxa, d'acer S275JR, S275J0, S275J2, S355JR, S355J0 o S355J2, segons UNE-EN 10025-2
- Perfils foradats d'acer laminat en calent de les sèries rodó, quadrat o rectangular d'acer S275J0H o S355J2H, segons UNE-EN 10210-1
- Perfils foradats conformats en fred de les sèries rodó, quadrat o rectangular d'acer S275J0H o S355J2H, segons UNE-EN 10219-1
- Perfils conformats en fred, de les sèries L, LD, U, C, Z, o Omega, d'acer S235JRC, segons UNE-EN 10025-2
- Perfils d'acer laminat en calent, en planxa, d'acer amb resistència millorada a la corrosió atmosfèrica S355J0WP o S355J2WP, segons UNE-EN 10025-5
S'han considerat els tipus d'unió següents:
- Amb soldadura
- Amb cargols
S'han considerat els acabats de protecció següents (no aplicable als perfils d'acer amb resistència millorada a la corrosió atmosfèrica):
- Una capa d'emprimació antioxidant
- Galvanitzat
CARACTERÍSTIQUES GENERALS:
No ha de tenir defectes interns o externs que perjudiquin la seva correcta utilització.
PERFILS D'ACER LAMINAT EN CALENT:
El fabricant ha de garantir que la composició química i les característiques mecàniques i tecnològiques de l'acer utilitzat en la fabricació de perfils, seccions i planxes, compleix les determinacions de les normes de condicions tècniques de subministrament següents:
- Perfils d'acer laminat en calent: UNE-EN 10025-1 i UNE-EN 10025-2
- Perfils d'acer laminat en calent amb resistència millorada a la corrosió atmosfèrica: UNE-EN 10025-1 i PNE-EN 10025-5
Les dimensions i les toleràncies dimensionals i de forma han de ser les indicades a les següents normes:
- Perfil IPN: UNE-EN 10024
- Perfil IPE, HEA, HEB i HEM: UNE-EN 10034
- Perfil UPN: UNE-EN 10279
- Perfil L i LD: UNE-EN 10056-1 i UNE-EN 10056-2
- Perfil T: UNE-EN 10055
- Rodó: UNE-EN 10060
- Quadrat: UNE-EN 10059
- Rectangular: UNE-EN 10058
- Planxa: EN 10029 o UNE-EN 10051
PERFILS FORADATS:
El fabricant ha de garantir que la composició química i les característiques mecàniques i tecnològiques de l'acer utilitzat en la fabricació de perfils compleix les determinacions de les normes de condicions tècniques de subministrament següents:
- Perfils foradats d'acer laminat en calent: UNE-EN 10210-1
- Perfils foradats conformats en fred: UNE-EN 10219-1
Les toleràncies dimensionals han de complir les especificacions de les següents normes:
- Perfils foradats d'acer laminat en calent: UNE-EN 10210-2
- Perfils foradats conformats en fred: UNE-EN 10219-2
PERFILS CONFORMATS EN FRED:
El fabricant ha de garantir que la composició química i les característiques mecàniques i tecnològiques de l'acer utilitzat en la fabricació de perfils i seccions, compleix les determinacions de les normes de condicions tècniques de subministrament del producte de partida.
Les toleràncies dimensionals i de la secció transversal han de complir les especificacions de la norma UNE-EN 10162.
PERFILS TREBALLATS A TALLER AMB SOLDADURA:
El material d'aportació utilitzat ha de ser apropiat als materials a soldar i al procediment de soldadura.
Les característiques mecàniques del material d'aportació han de ser superiors a les del material base.
En acers de resistència millorada a la corrosió atmosfèrica, la resistència a la corrosió del material d'aportació ha de ser equivalent a la del material base.
Els procediments autoritzats per a realitzar unions soldades són:

- Per arc elèctric manual amb elèctrode revestit
- Per arc amb fil tubular, sense protecció gasosa
- Per arc submergit amb fil/filferro
- Per arc submergit amb elèctrode nu
- Per arc amb gas inert
- Per arc amb gas actiu
- Per arc amb fil tubular, amb protecció de gas actiu
- Per arc amb fil tubular, amb protecció de gas inert
- Per arc amb elèctrode de wolfram i gas inert
- Per arc de connectors

Les soldadures s'han de fer per soldadors certificats per un organisme acreditat i qualificats segons l'UNE-EN 287-1.
Abans de començar a soldar s'ha de verificar que les superfícies i vores a soldar són adequades al procés de soldadura i que estan lliures de fissures.
Totes les superfícies a soldar s'han de netejar de qualsevol material que pugui afectar negativament la qualitat de la soldadura o perjudicar el procés de soldatge. S'han de mantenir seques i lliures de condensacions.
S'ha d'evitar la projecció d'espurnes erràtiques de l'arc. Si es produeix s'ha de sanejar la superfície d'acer.
S'ha d'evitar la projecció de soldadura. Si es produeix s'ha d'eliminar.
Els components a soldar han d'estar correctament col·locats i fixos en la seva posició mitjançant dispositius adequats o soldadures de punteig, de manera que les unions a soldar siguin accessibles i visibles per al soldador. No s'han d'introduir soldadures addicionals.
L'armat dels components estructurals s'ha de fer de manera que les dimensions finals estiguin dintre de les toleràncies establertes.
Les soldadures provisionals s'han d'executar seguint les especificacions generals. S'han d'eliminar totes les soldadures de punteig que no s'incorporin a les soldadures finals.
Quan el tipus de material de l'acer i/o la velocitat de refredament puguin produir un enduriment de la zona tèrmicament afectada s'ha de considerar la utilització del precalentament. Aquest s'ha d'estendre 75 mm en cada component del metall base.
No s'ha d'accelerar el refredament de les soldadures amb mitjans artificials.
Els cordons de soldadura successius no han de produir osques.
Els defectes de soldadura no s'han de tapar amb soldadures posteriors. S'han d'eliminar de cada passada abans de fer la següent.
Després de fer un cordó de soldadura i abans de fer el següent, cal netejar l'escòria per mitjà d'una picola i d'un raspall.
L'execució dels diferents tipus de soldadures s'ha de fer d'acord amb els requisits establerts a l'apartat 10.3.4 del DB-SE A i l'article 94 del CODI ESTRUCTURAL per a obres d'edificació o d'acord amb l'article 640.5.2 del PG3 i l'article 94 del CODI ESTRUCTURAL per a obres d'enginyeria civil.
S'ha de reduir al mínim el nombre de soldadures a efectuar a l'obra.
Les operacions de tall s'han de fer amb serra, cisalla i oxitall automàtic. S'admet l'oxitall manual únicament quan el procediment automàtic no es pugui practicar.
S'accepten els talls fets amb oxitall si no presenten irregularitats significatives i si s'eliminin les restes d'escòria.
Es poden utilitzar procediments de conformat en calent o en fred sempre que les característiques del material no queden per sota dels valors especificats.
Per al conformat en calent s'han de seguir les recomanacions del productor siderúrgic. El doblat o conformat no s'ha de fer durant l'interval de calor blau (250°C a 380°C).
El conformat en fred s'ha de fer respectant les limitacions indicades en la norma del producte. No s'admeten les martellades.
Els angles entrants i entalles han de tenir un acabat arrodonit amb un radi mínim de 5 mm.
Toleràncies de fabricació:
- En obres d'edificació: Límits establerts a l'apartat 11.1 de DB-SE A
- En obres d'enginyeria civil: Límits establerts a l'article 640.12 del PG3

PERFILS TREBALLATS A TALLER AMB CARGOLS:
S'utilitzaran cargols normalitzats d'acord a les normes recollides a la taula 85.2.b del CODI ESTRUCTURAL
Els cargols aixamfranats, cargols calibrats, perns articulats i els cargols hexagonals d'injecció s'han d'utilitzar seguint les instruccions del seu fabricant i han de complir els requisits addicionals establerts a l'article 85.2 del CODI ESTRUCTURAL.
La situació dels cargols a la unió ha de ser tal que redueixi la possibilitat de corrosió i pandeig local de les xapes, i ha de facilitar el muntatge i les inspeccions.
El diàmetre nominal mínim dels cargols ha de ser de 12 mm.
La rosca pot estar inclosa en el pla de tall, excepte en el cas que els cargols s'utilitzin com a

calibrats.
Després del collat l'espiga del cargol ha de sobresortir de la rosca de la femella. Entre la superfície de recolzament de la femella i la part no roscada de l'espiga ha d'haver, com a mínim:
- En cargols pretesats:  4 filets complerts més la sortida de la rosca
- En cargols sense pretesar: 1 filet complert més la sortida de la rosca
Les superfícies dels caps de cargols i femelles han d'estar perfectament planes i netes.
En els cargols col·locats en posició vertical, la femella ha d'estar situada per sota del cap del cargol.
En els forats rodons normals i amb cargols sense pretesar no és necessari utilitzar volanderes. Si s'utilitzen han d'anar sota el cap dels cargols, han de ser aixamfranades i el xamfrà ha d'estar situat en direcció al cap del cargol.
En els cargols pretesats, les volanderes han de ser planes endurides i han d'anar col·locades de la forma següent:
- Cargols 10.9: sota el cap del cargol i de la femella
- Cargols 8.8: sota de l'element que gira
Els forats per als cargols s'han de fer amb perforadora mecànica. S'admet un altre procediment sempre que proporcioni un acabat equivalent.
Es permet l'execució de forats amb punxonatge sempre que es compleixin els requisits establerts a l'apartat 10.2.3 del DB-SE A en obres d'edificació o els establerts a l'apartat 640.5.1.1 del PG3 en obres d'enginyeria civil.
És recomanable que, sempre que sigui possible, es perforin d'un sol cop els forats que travessin dues o més peces.
Els forats allargats s'han de fer amb una operació de punxonatge, o amb la perforació o punxonatge de dos forats i posterior oxitall.
Després de perforar les peces i abans d'unir-les s'han d'eliminar les rebaves.
Els cargols i les femelles no s'han de soldar, a menys que així ho expliciti el plec de condicions tècniques particulars.
S'han de col·locar el nombre suficient de cargols de muntatge per assegurar la immobilitat de les peces armades i el contacte íntim de les peces d'unió.
Les femelles s'han de muntar de manera que la seva marca de designació sigui visible després del muntatge.
En els cargols sense pretesar, cada conjunt de cargol, femella i volandera(es) s'ha de collar fins arribar al "collat a tocar" sense sobretesar els cargols. En grups de cargols aquest procés s'ha de fer progressivament començant pels cargols situats al centre. Si és necessari s'han de fer cicles addicionals de collat .
Abans de començar el pretesat, els cargols pretesats d'un grup s'han de collar d'acord amb el que s'ha indicat per als cargols sense pretesar. Per a que el pretesat sigui uniforme s'han de fer cicles addicionals de collat.
S'han de retirar els conjunts de cargol pretesat, femella i volandera(es) que després de collats fins al pretesat mínim, s'afluixin.
El collat dels cargols pretesats s'ha de fer seguint un dels procediments següents:
- Mètode de la clau dinamomètrica.
- Mètode de la femella indicadora.
- Mètode convinat.
Les operacions de tall s'han de fer amb serra, cisalla i oxitall automàtic. S'admet l'oxitall manual únicament quan el procediment automàtic no es pugui practicar.
S'accepten els talls fets amb oxitall si no presenten irregularitats significatives i si s'eliminin les restes d'escòria.
Es poden utilitzar procediments de conformat en calent o en fred sempre que les característiques del material no queden per sota dels valors especificats.
Per al conformat en calent s'han de seguir les recomanacions del productor siderúrgic. El doblat o conformat no s'ha de fer durant l'interval de calor blau (250°C a 380°C).
El conformat en fred s'ha de fer respectant les limitacions indicades en la norma del producte. No s'admeten les martellades.
Els angles entrants i entalles han de tenir un acabat arrodonit amb un radi mínim de 5 mm.
Toleràncies de fabricació:
- En obres d'edificació:  Límits establerts a l'apartat 11.1 de DB-SE A
- En obres d'enginyeria civil:  Límits establerts als apartat 640.5 i 640.12 del PG3
PERFILS PROTEGITS AMB EMPRIMACIÓ ANTIOXIDANT:
La capa d'emprimació antioxidant ha de cobrir de manera uniforme totes les superfícies de la peça. No ha de tenir fissures, bosses ni altres desperfectes.
Abans d'aplicar la capa d'emprimació les superfícies a pintar han d'estar preparades adequadament d'acord amb les normes UNE-EN ISO 8504-1, UNE-EN ISO 8504-2 i UNE-EN ISO 8504-3.
Prèviament al pintat s'ha de comprovar que les superfícies compleixen els requisits donats pel fabricant per al producte a aplicar.

La pintura d'emprimació s'ha d'utilitzar seguint les instruccions del seu fabricant. No s'utilitzarà si ha superat el temps de vida útil o el temps d'enduriment després de l'obertura del recipient.
Si s'aplica més d'una capa s'ha d'utilitzar per a cadascuna un color diferent.
Després de l'aplicació de la pintura les superfícies s'han de protegir de l'acumulació d'aigua durant un cert temps.
No s'han d'utilitzar materials de protecció que perjudiquin la qualitat de la soldadura a menys de 150 mm de la zona a soldar.
Les soldadures i el metall base adjacent no s'han de pintar sense haver eliminat prèviament l'escòria.
La zona sense revestir situada al voltant del perímetre de la unió amb cargols no s'ha de tractar fins que no s'hagi inspeccionat la unió.
PERFILS GALVANITZATS:
El recobriment de zinc ha de ser homogeni i continu en tota la superfície.
No s'han d'apreciar esquerdes, exfoliacions ni despreniments del recobriment.
La galvanització s'ha de fer d'acord amb les normes UNE-EN ISO 1460 o UNE-EN ISO 1461, segons correspongui.
S'han de segellar totes les soldadures abans de fer un decapat previ a la galvanització.
Si el component prefabricat té espais tancats s'han de disposar forats de ventilació o purga.
Abans de pintar-les, les superfícies galvanitzades s'han de netejar i tractar amb pintura anticorrosiva amb diluent àcid o amb raig escombrador.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: de manera que no pateixin deformacions, ni esforços no previstos.
Emmagatzematge: Seguint les instruccions del fabricant. En llocs secs, sense contacte directe amb el terra i protegits de la intempèrie, de manera que no s'alterin les seves condicions.
No s'han d'utilitzar si s'ha superat la vida útil en magatzem especificada pel fabricant.
3.- UNITAT I CRITERI D'AMIDAMENT
kg de pes necessari subministrat a l'obra, calculat segons les especificacions de la DT, d'acord amb els criteris següents:
- El pes unitari per al seu càlcul ha de ser el teòric
- Per a poder utilitzar un altre valor diferent del teòric, cal l'acceptació expressa de la DF
Aquests criteris inclouen les pèrdues de material corresponents a retalls.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
UNE-EN 10025-1:2006 Productos laminados en caliente de aceros para estructuras. Parte 1: Condiciones técnicas generales de suministro.
UNE-EN 10025-2:2006 Productos laminados en caliente de aceros para estructuras. Parte 2: Condiciones técnicas de suministro de los aceros estructurales no aleados.
UNE-EN 10210-1:1994 Perfiles huecos para construcción, acabados en caliente, de acero no aleado de grano fino. Parte 1: condiciones técnicas de suministro.
UNE-EN 10219-1:1998 Perfiles huecos para construcción conformados en frío de acero no aleado y de grano fino. Parte 1: Condiciones técnicas de suministro.
UNE-EN 10162:2005 Perfiles de acero conformados en frío. Condiciones técnicas de suministro. Tolerancias dimensionales y de la sección transversal.
OBRES D'EDIFICACIÓ:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
* UNE-ENV 1090-1:1997 Ejecución de estructuras de acero. Parte 1: Reglas generales y reglas para edificación.
OBRES D'ENGINYERIA CIVIL:
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
* Orden FOM/475/2002 de 13 de febrero, por la que se actualizan determinados artículos del Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes relativos a Hormigones y Acero (PG-3).
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PERFILS D'ACER LAMINAT I PERFILS D'ACER BUITS:
Cada producte ha d'anar marcat de forma clara i indeleble amb la següent informació:
- El tipus, la qualitat i, si és aplicable, la condició de subministrament mitjançant la seva designació abreujada
- Un número que identifiqui la colada (aplicable únicament en el cas d'inspecció per colades) i, si és aplicable, la mostra
- El nom del fabricant o la seva marca comercial
- La marca de l'organisme de control extern (quan sigui aplicable)
- Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol
La marca ha d'estar situada en una posició propera a un dels extrems de cada producte o en la

secció transversal de tall.
Quan els productes es subministren en paquets el marcatge s'ha de fer amb una etiqueta adherida al paquet o sobre el primer producte del mateix.
PERFILS D'ACER LAMINAT EN CALENT:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a ús en estructures metàl·liques o en estructures mixtes metall i formigó:
- Sistema 2+: Declaració de Prestacions
El símbol normalitzat CE (d'acord amb la directiva 93/68/CEE) s'ha de col·locar sobre el producte acompanyat per:
- El número d'identificació de l'organisme de certificació
- El nom o marca comercial i adreça declarada del fabricant
- Les dues ultimes xifres de l'any d'impressió del marcat
- El número del certificat de conformitat CE o del certificat de producció en fàbrica (si és procedent)
- Referència a la norma EN 10025-1
- Descripció del producte: nom genèric, material, dimensions i ús previst
- Informació de les característiques essencials indicades de la següent forma:
- Designació del producte d'acord amb la norma corresponent de toleràncies dimensionals, segons el capítol 2 de la norma EN 10025-1
- Designació del producte d'acord amb l'apartat 4.2 de les normes EN 10025-2 a EN 10025-6
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PERFILS D'ACER CONFORMATS:
Han d'anar marcats individualment o sobre el paquet amb una marca clara i indeleble que contingui la següent informació:
- Dimensions del perfil o número del plànol de diseny
- Tipus i qualitat de l'acer
- Referència que indiqui que els perfils s'han fabricat i assajat segons UNE-EN 10162; si es requereix, el marcatge CE
- Nom o logotipus del fabricant
- Codi de producció
- Identificació del laboratori d'assaigs extern (quan sigui aplicable)
- Codi de barres, segons ENV 606, quan la informació mínima anterior es faciliti amb un text clar
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PERFILS FORADATS:
Cada perfil ha d'anar marcat de forma clara i indeleble amb la següent informació:
- La designació abreujada
- El nom o les sigles (marca de fàbrica) del fabricant
- En el cas d'inspecció i assaigs específics, un número d'identificació, per exemple el número de comanda, que permeti relacionar el producte o la unitat de subministrament i el document corresponent (únicament aplicable als perfils foradats conformats en fred)
Quan els productes es subministren en paquets el marcatge es pot fer amb una etiqueta adherida al paquet.
OPERACIONS DE CONTROL:
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
Inspecció visual del material a la seva recepció. Es controlaran les característiques geomètriques com a mínim sobre un 10% de les peces rebudes. El subministrament del material es realitzarà amb la inspecció requerida (UNE-EN 10204).
A efectes de control d'apilament, la unitat d'inspecció ha de complir les següents condicions:
- Correspondència en el mateix tipus i grau d'acer
- Procedència de fabricant
- Pertany a la mateixa sèrie en funció del gruix màxim de la secció:
- Sèrie lleugera: e <= 16 mm

- Sèrie mitja:  16 mm <= e <= 40 mm
- Sèrie pesada:  e > 40 mm
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Les unitats d'inspecció seran fraccions de cada grup afí, amb un pes màxim de 20 t per lot.
- Per a cada lot , es realitzaran els següents assaigs:
- Determinació quantitativa de sofre (UNE 7-019)
- Determinació quantitativa fòsfor (UNE 7-029)
- Determinació del contingut de nitrogen (UNE 36-317-1)
- Determinació quantitativa del contingut de carboni (UNE 7014)
- En una mostra d'acer laminat, per a cada lot , es realitzaran a més, els següents assaigs:
- Determinació quantitativa de manganès (UNE 7027)
- Determinació gravimètrica de silici (UNE 7028)
- Assaig a flexió pel xoc d'una proveta de planxa d'acer (UNE 7475-1)
- Determinació de la duresa brinell d'una proveta (UNE-EN-ISO 6506-1)
- En una mostra de perfils d'acer buits, per a cada lot, es realitzaran a més, els següents assaigs:
- Assaig d'aixafada (UNE-EN ISO 8492)
- En el cas de perfils galvanitzats, es comprovarà la massa i gruix del recobriment (UNE-EN ISO 1461, UNE-EN ISO 2178).
OPERACIONS DE CONTROL EN UNIONS SOLDADES:
Recepció del certificat de qualitat de les característiques dels elèctrodes.
Abans de començar l'obra, i sempre que es canviï el tipus de material d'aportació:
- Preparació d'una proveta mecanitzada, soldades amb el material d'aportació previst, i assaig a tracció (UNE-EN ISO 15792-2). Abans d'aquest assaig, es realitzarà una radiografia de la soldadura realitzada (UNE-EN 1435), per tal de constatar que el cordó està totalment ple de material d'aportació.
- Assaig de tracció del metall aportat(UNE-EN ISO 15792-2) 1 provetes
- Assaig de resiliència del metall aportat (UNE-EN ISO 15792-2) 1 provetes
CRITERIS DE PRESA DE MOSTRES:
Les mostres per als assaigs químics es prendran de la unitat d'inspecció segons els criteris establerts a la norma UNE-EN ISO 14284.
En perfils laminats i conformats les mostres per als assaigs mecànics es prendran segons els criteris establerts a les UNE EN 10025-2 a UNE 10025-6. Les localitzacions de les mostres seguiran els criteris establerts a l'annex A de l'UNE EN 10025-1.
Per la preparació de les provetes s'aplicaran els requisits establerts a la UNE-EN ISO 377.
Per la preparació de provetes per assaig de tracció s'aplicarà la UNE-EN 10002-1.
En perfils laminats, per la preparació de provetes per assaig a flexió per xoc (resiliència) s'aplicarà la UNE 10045-1. També son d'aplicació els següents requeriments:
- Gruix nominal >12 mm: mecanitzar provetes de 10x10 mm
- Gruix nominal <= 12 mm: l'ample mínim de la proveta serà de 5 mm
Les mostres i provetes tenen que estar marcades de manera que es reconeguin els productes originals, així com la seva localització i orientació del producte.
Les mostres i els criteris de conformitat per als perfils buits, queden establerts a la norma UNE-EN 10219-1 seguint els parametres de la taula D.1
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No es podrà acceptar perfils que no estiguin amb les garanties corresponents i no vagin marcats adequadament.
Si els resultats de tots els assaigs de recepció d'un lot acompleixen el prescrit, aquest és acceptable.
Si algun resultat no acompleix el prescrit, però s'ha observat en el corresponent assaig alguna anomalia no imputable al material (com defecte en la mecanització de la proveta, irregular funcionament de la maquinaria d'assaig...) l'assaig es considerarà nul i caldrà repetir-lo correctament amb una nova proveta.
Si algun resultat no acompleix el prescrit havent-ho realitzat correctament, es realitzaran 2 contrassaigs segons UNE-EN 10021, sobre provetes preses de dues peces diferents del lot que s'està assajant. Si ambdós resultats (dels contrassaigs) compleixen el prescrit, la unitat d'inspecció serà acceptable, en cas contrari es rebutjarà.
Quan es sobrepassi alguna de les toleràncies especificades en algun control geomètric, es rebutjarà la peça incorrecta. A més a més, s'augmentarà el control, en l'apartat incomplet, fins a un 20% d'unitats. Si encara es troben irregularitats, es faran les oportunes correccions i/o rebuigs i es farà el control sobre el 100 % de les unitats amb les oportunes actuacions segons el resultat.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN UNIONS SOLDADES:
El material d'aportació complirà les condicions mecàniques indicades.
En les provetes preparades amb soldadures, la línia de ruptura ha de quedar fora de la zona d'influència de la soldadura.

## B5 COBERTES

### B5Z MATERIALS ESPECIALS PER A COBERTES

### B5ZZ MATERIALS AUXILIARS PER A COBERTES

### B5ZZB- VIS D'ACER GALVANITZAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B5ZZB-131H.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials per a col·laborar i complementar l'execució de cobertes de tot tipus.
S'han considerat els elements següents:
- Clau o vis d'acer galvanitzat amb junt de plom, plàstic, plom i ferro o metall i goma
PEÇA DE PLANXA:
El forat de la peça de suport per a bonera de paret, ha d'estar centrat, en el tram de la planxa que ha d'anar recolzat sobre la paret.
No ha de tenir variacions del gruix ni d'altres defectes visibles a la seva superfície.
Les arestes han de ser rectes i escairades.
El gruix de la planxa ha de ser constant.
La planxa de zinc o coure ha de tenir una fractura brillant.
PECES D'ACER GALVANITZAT:
El recobriment de zinc ha de ser llis, sense discontinuïtats ni exfoliacions i no ha de tenir taques ni imperfeccions superficials.
No ha d'estar en contacte amb productes químics de pH < 6 i pH > 12,5.
Puresa del zinc (% en pes): >= 98,5
PECES DE PLANXA D'ACER GALVANITZAT:
Toleràncies:
- Desenvolupament: ± 3 mm
- Llargària nominal: + 3%, - 0%
- Gruix: ± 0,1 mm
TUB D'ACER GALVANITZAT:
Ha de portar una anella per a fer l'acord interior d'impermeabilització.
Gruix del tub: >= 0,6 mm
Gruix de la platina: >= 1 mm
Protecció de la galvanització (Sendzimir): >= 400 g/m2

ANCORATGE D'ACER GALVANITZAT:
L'ancoratge d'acer galvanitzat ha de tenir una forma que garanteixi la unió entre els elements.
Protecció de la galvanització (Sendzimir): >= 275 g/m2
CLAU O VIS D'ACER GALVANITZAT:
Ha de ser recte, amb la cabota plana i la punta afinada i regular.
L'expressió de les mesures sempre ha de ser: Diàmetre x llargària.
Protecció de la galvanització (Sendzimir): >= 275 g/m2
Característiques del junt:

| Material del junt | Diàmetre de la peça (mm) | Diàmetre del junt (mm) | Gruix del junt (mm) |
|---|---|---|---|
| Vis: Plom i ferro | 5,4 | 24 | |
| | 5,5 | 24 | >= 10 |
| | 6,5 | 27 | |
| Vis: Metall i goma | - | 53 metall | >= 7 metall |
| | - | 50 goma | >= 10 goma |
| Clau: Plom | - | >= 20 exterior | >= 2 |
| Clau: Pàstic | - | >= 15 exterior | >= 5 |

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
PECES D'ACER:
Subministrament: Empaquetades.
Emmagatzematge: En llocs protegits contra els impactes, de la intempèrie i sense contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PECES D'ACER GALVANITZAT:
UNE 7183:1964 Método de ensayo para determinar la uniformidad de los recubrimientos galvanizados, aplicados a materiales manufacturados de hierro y acero.
UNE 37501:1988 Galvanización en caliente. Características y métodos de ensayo.

---

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B75 PASTES I MORTERS PER A IMPERMEABILITZACIONS

## B753- MORTER IMPERMEABILITZANT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B753-1KOA,B753-1KOB.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Mescla de conglomerants càrregues minerals i additius que donen com a resultat un material adequat per a la impermeabilització del suport sobre el qual s'aplica.
S'ha considerat els tipus següents en funció del sistema d'impermeabilització:
- Membrana rígida
- Membrana elàstica
- Penetració capil·lar
- Obturació
CARACTERÍSTIQUES GENERALS:
L'aspecte ha de ser uniforme i ha de coincidir amb la descripció proporcionada pel fabricant.
No ha de tenir grumolls ni principis d'aglomeració.
MORTER AMB SISTEMA D'IMPERMEABILITZACIÓ DE MEMBRANA:
Morter que un cop aplicat forma un revestiment protector continu sobre la superfície del suport.
S'han considerat els tipus següents:
- Morter amb sistema rígid: monocomponent de base ciment que un cop mesclat amb aigua forma un revestiment rígid sobre el suport.
- Morter amb sistema elàstic: subministrat en dos components, el primer format per una mescla en pols de base ciment amb additius, el segon es un component sintètic en forma líquida, la mescla d'ambdós components dóna com a resultat un revestiment impermeable elàstic que ha de ser capaç d'absorbir els moviments del suport sense que apareguin fissures.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Densitat en pols (EN ISO 2811-1 o EN ISO 2811-2): ± 3% del valor declarat pel fabricant
- Identificació dels components: Ha de complir l'especificat a la Taula 2 de l'UNE-EN 1504-2
- Vida útil de la mescla (EN ISO 9514): ± 15% del valor declarat pel fabricant
- Evolució de l'enduriment en 1, 3 i 7 dies (duresa Shore A o D, EN ISO 868): ± 3 u del valor declarat pel fabricant als 7 dies
- Consistència de la mescla fresca (EN 1015-3): 20 mm o ± 15% del valor declarat pel fabricant
- Contingut en aire (EN 1015-7): ± 2% del valor declarat pel fabricant
- Densitat aparent de la mescla fresca (EN 12190 i EN 1015-6): ± 5% del valor declarat pel fabricant
- Traballabilitat (EN 13395-2): ± 15% del valor declarat pel fabricant
- Temps d'enduriment (EN 13294): ± 20% del valor declarat pel fabricant
- Reacció davant del foc:
- Material amb contingut de matèria orgànica <= 1,0%: Classe A1
- Material amb contingut de matèria orgànica > 1,0%: Classe segons UNE-EN 13501-1
- Retracció lineal, en sistemes rígids de gruix >= 3 mm (EN 12617-1): <= 0,3%
- Coeficient de dilatació tèrmica, en sistemes rígids de gruix >= 1 mm (EN 1770): <= 30 x 10 E-06 K-1
- Assaig de tall per enreixat en provetes de formigó (EN ISO 2409): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Permeabilitat al vapor d'aigua (EN ISO 7783-1, EN ISO 7783-2):
- Classe I: < 5 m (permeable al vapor d'aigua)
- Classe II: < 50 m i <= 5 m
- Classe III: > 50 m (impermeable al vapor d'aigua)
- Absorció capil·lar i permeabilitat a l'aigua (EN 1062-3): < 0,1 kg/m2 x vh
- Adhesió després de la compatibilitat tèrmica, en aplicacions exteriors (EN 13687-1,2,3 i EN 1062-11): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Resistència a la fissuració (EN 1062-7): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Assaig d'arrancament (EN 1542): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Resistència al lliscament/derrapatge (EN 13036-4): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Envelliment artificial, en aplicacions exteriors (EN 1062-11): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Comportament antiestàtic (EN 1081): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-2
- Adhesió al formigó humit (EN 13578): Ha de complir l'especificat a la Taula 5 de l'UNE-EN 1504-

2
PENETRACIÓ CAPIL.LAR:
Producte que s'aplica sobre el formigó fresc, els components dels qual reaccionen amb la humitat i en el procés d'enduriment, forma una xarxa de cristalls insolubles, expansius i permanents que obturen la xarxa capil·lar del material.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Densitat aparent en pols (ISO 2811)
- Resistència cicles gel-desgel (NBN 05203): sense deteriorament superficial
- Fondària de penetració de l'aigua sota pressió (UNE-EN 12390-8)
OBTURACIÓ:
Producte d'enduriment ultraràpid i elevada adherència apte per al taponament de vies d'aigua, on no es pot aplicar un sistema de membrana impermeable.
Ha de ser resistent als cicles de gel-desgel.
Ha de ser compatible amb el formigó armat.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
SUBMINISTRAMENT I EMMAGATZEMATGE:
Subministrament: en envasos tancats hermèticament.
Emmagatzematge: En el seu envàs d'origen i en llocs secs, sense contacte directe amb el terra i protegit de la intempèrie, de manera que no se n'alterin les condicions inicials.
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Nom del producte
- Número o marca identificativa i adreça registrada del fabricant.
- Quantitat, (massa o volum)
- Data de fabricació i vida mitja
- Referència del lot
- Diàmetre màxim dels àrids
- Instruccions per la mescla i l'aplicació
- Proporcions de la mescla
- Temps de maduració: interval de temps des del moment de fer la mescla i el moment en que està llest per a ser aplicat
- Vida útil: interval de temps màxim en que el material pot ser utilitzat després de fer la mescla
- Mètode d'aplicació
- Gruix de la capa o dotació, gruix del revestiment
- Temps obert
- Temps que cal esperar entre l'aplicació de les diferents capes, en el seu cas
- Temps que cal esperar des del l'aplicació fins a la posada en servei
- Àmbit d'aplicació: tipus de suports admesos, usos, pressions d'aigua admissibles
- Apte per a aigua potable, en el seu cas
- Resistència a agents químics, en el seu cas
- Condicions d'emmagatzematge
- Especificacions de salubritat i seguretat
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
MORTER AMB SISTEMA D'IMPERMEABILITZACIÓ DE MEMBRANA:
* UNE-EN 1504-2:2005 Productos y sistemas para la protección y reparación de estructuras de hormigón. Definiciones, requisitos, control de calidad y evaluación de la conformidad. Parte 2: Sistemas de protección superficial para el hormigón.
MORTER DE PENETRACIÓ CAPIL.LAR O MORTER D'OBTURACIÓ:
No hi ha normativa de compliment obligatori.

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B77 LÀMINES DE POLIETILÈ, POLIPROPILÈ I POLIOLEFINES

### B774- LÀMINA DE POLIOLEFINES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B774-1KCZ.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Làmina plàstica flexible per a impermeabilització.
S'han considerat els tipus següents:
- Làmina de poliolefina
CARACTERÍSTIQUES GENERALS:
La làmina ha de ser homogènia.
La làmina estesa ha de tenir un aspecte uniforme i sense defectes. Les vores han de ser rectes.
Ha de ser estanca a l'aigua.
LÀMINES PER A IMPERMEABILITZACIÓ DE COBERTES:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Defectes visibles (UNE-EN 1850-2)
- Estanquitat a l'aigua (UNE-EN 1928 mètode B): Ha de complir
- Resistència dels cavalcaments (UNE-EN 12316-2): >= valor declarat pel fabricant
- Factor de transmissió del vapor d'aigua (UNE-EN 1931): ± 30%
- Resistència a l'esquinçament (UNE-EN 12310-2): >= valor declarat pel fabricant per les direccions transversal i longitudinal de la làmina
- Doblegat a baixa temperatura (UNE-EN 495-5): <= temperatura de doblegat en fred declarada pel fabricant
- Resistència a la tracció (UNE-EN 12311-2): >= valor declarat pel fabricant
- Resistència a l'impacte (UNE-EN 12691): >= valor declarat pel fabricant
- Resistència a una càrrega estàtica (UNE-EN 12730): >= valor declarat pel fabricant
- Resistència a la penetració de les arrels (UNE-EN 13948): Ha de complir
- Durabilitat (UNE-EN 1297): Ha de complir
La classificació respecte a la reacció al foc (Euroclasses) s'ha de determinar d'acord amb la norma UNE-EN 13501-1.
La classificació respecte el comportament devant un foc extern s'ha de determinar d'acord amb la norma UNE-EN 13501-5.
Toleràncies:
- Gruix efectiu (làmina sense considerar el reforç) (UNE-EN 1849-2): - 5%; + 10%
- Llargària (UNE-EN 1848-2): - 0%; + 5%
- Amplària (UNE-EN 1848-2): - 0,5%; + 1%
- Rectitut (UNE-EN 1848-2): ± 50 mm
- Planor (UNE-EN 1848-2): ± 10 mm
Les característiques anteriors s'han de determinar segons la norma UNE-EN 13956.
LÀMINES PER A BARRERA DE VAPOR:
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Defectes visibles (UNE-EN 1850-2)
- Estanquitat a l'aigua ( UNE-EN 1928 mètode A): Ha de complir

- Resistència a l'impacte (UNE-EN 12691): >= valor declarat pel fabricant
- Durabilitat (UNE-EN 1296): Ha de complir
- Resistència a l'esquinçament (UNE-EN 12310-1): >= valor declarat pel fabricant
- Resistència dels cavalcaments (UNE-EN 12317-2): >= valor declarat pel fabricant
- Factor de transmissió del vapor d'aigua (UNE-EN 1931): Tolerància declarada per al valor declarat pel fabricant
- Resistència a tracció:
- Làmines sense armadura (UNE-EN 12311-2): >= valor declarat pel fabricant per a les direccions longitudinal i transversal de la làmina
- Làmines amb armadura (UNE-EN 13859-1): >= valor declarat pel fabricant per a les direccions longitudinal i transversal de la làmina

La classificació respecte a la reacció al foc (Euroclasses) s'ha de determinar d'acord amb la norma UNE-EN 13501-1.

Toleràncies:
- Llargària (UNE-EN 1848-2): Tolerància declarada pel fabricant
- Amplària (UNE-EN 1848-2): Tolerància declarada pel fabricant
- Rectitut (UNE-EN 1848-2): ± 75 mm/10 m
- Gruix (UNE-EN 1849-2): Tolerància declarada pel fabricant
- Massa per unitat de superfície (UNE-EN 1849-2): Tolerància declarada pel fabricant

Les característiques anteriors s'han de determinar segons la norma UNE-EN 13984.

LÀMINES PER A BARRERES GEOSINTÈTIQUES:

Ha de ser soldable per ambdues cares, pels procediments habituals (aire calent, altres formes de fussió, aportació del mateix material calent, etc.).

Els requisits de les làmines s'han considerat en funció dels usos següents:
- Membranes d'impermeabilització en túnels i obres subterrànies (UNE-EN 13491)
- Abocadors per a residus líquids (UNE-EN 13492)
- Recintes d'emmagatzematge i abocadors de residus sòlids (UNE-EN 13493)

Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Característiques essencials:
- Permeabilitat a l'aigua (estanquitat als líquids) (UNE-EN 14150)
- Resistència a la tracció (ISO/R 527-66)
- Punxonament estàtic (UNE-EN ISO 12236)
- Durabilitat:
- Oxidació (UNE-EN 14575)
- Fissuració sota tensió en un medi ambient actiu (ASTM D 5397-99)
- Característiques complementàries:
- Resistència a l'esquinçament (ISO 34)
- Plegabilitat a baixes temperatures (UNE-EN 495-5)
- Resistència a la penetració d'arrels (EN 14416)
- Característiques complementàries per a condicions d'ús específiques:
- Gruix (UNE-EN 1849-2)
- Massa per unitat de superfície (UNE-EN 1849-2)
- Allargament (ISO/R 527-66)
- Dilatació tèrmica (ASTM D 696-91)
- Característiques complementàries per a ús en membranes d'impermeabilització en túnels i obres subterrànies:
- Durabilitat:
- Envelliment a la intempèrie (UNE-EN 12224)
- Microorganismes (UNE-EN 12225)
- Resistència química (UNE-EN 14414)
- Característiques complementaries per a condicions d'ús específiques en làmines d'impermeabilització en túnels i obres subterrànies:
- Reacció al foc

Característiques essencials en làmines per a abocadors per a residus líquids o sòlids:
- Permeabilitat als gasos (ASTM D 1434)
- Durabilitat:
- Envelliment a la intempèrie (UNE-EN 12224)
- Característiques complementàries en làmines per a abocadors de residus líquids o sòlids:
- Fricció, cisallament directe (EN ISO 12957-1)
- Fricció pla inclinat (EN ISO 12957-2)
- Característiques complementaries per a condicions d'ús específiques en làmines per a abocadors de residus líquids o sòlids:
- Durabilitat:

- Microorganismes (UNE-EN 12225)
- Resistència química (UNE-EN 14414)
- Lixiviació (sol.lubilitat en aigua) (UNE-EN 14415)

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Embalades en rotlles, sense unions.

Emmagatzematge: Els rotlles s'han de mantenir en el seu envàs, apilats en posició horitzontal amb un màxim de 5 filades posades en la mateixa direcció, entre 5°C i 35°C, en llocs protegits del sol, la pluja i la humitat.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

LÀMINES PER A IMPERMEABILITZACIÓ DE COBERTES:

UNE-EN 13956:2006 Láminas flexibles para impermeabilización. Láminas plásticas y de caucho para impermeabilización de cubiertas. Definiciones y características.

LÀMINES PER A BARRERA DE VAPOR:

UNE-EN 13984:2005 Láminas flexibles para impermeabilización. Láminas plásticas y de caucho para el control del vapor. Definiciones y características.

LÀMINES PER A BARRERES GEOSINTÈTIQUES:

UNE-EN 13491:2005 Barreras geosintéticas. Requisitos para su utilización como membranas de impermeabilización frente a fluidos en la construcción de túneles y obras subterráneas.

UNE-EN 13492:2006 Barreras geosintéticas. Requisitos para su utilización en la construcción de vertederos para residuos líquidos, estaciones de transferencia o recintos de confinamiento secundario.

UNE-EN 13493:2006 Barreras geosintéticas. Requisitos para su utilización en la construcción de obras de almacenamiento y vertederos de residuos sólidos.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN LÀMINES PER A IMPERMEABILITZACIÓ DE COBERTES:

A cada rotlle o en la documentació que acompanya el producte, ha de figurar de forma clara i ben visible la informació següent:

- Nom del fabricant o marca comercial
- Data de fabricació
- Identificació del producte
- Llargària i amplària nominals
- Gruix o massa
- Etiquetat segons el REAL DECRETO 255/2003 que regula l'envasat i etiquetatge de preparats perillosos
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- El número d'identificació de l'organisme de certificació del Control de producció en fàbrica
- El nom o la marca comercial
- L'adreça enregistrada del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- El número de certificat de conformitat CE o del certificat de control de producció en fàbrica
- Referència a la norma europea EN
- Descripció del producte: material base, armadura, acabat superficial i ús previst
- Informació sobre les característiques essencials

Si el material ha de ser component del tancament exterior d'un edifici, el fabricant ha de declarar els valors de les propietats hídriques següents, d'acord amb l'especificat en l'apartat 4.1 del CTE/DB-HS_2006 1:

- Estanquitat
- Resistència a la penetració d'arrels
- Envelliment artificial per exposició prolongada a la combinació de radiació ultraviolada, altes temperatures i aigua
- Resistència a la fluència
- Estabilitat dimensional
- Envelliment tèrmic
- Flexibilitat a baixes temperatures
- Resistència a la càrrega estàtica
- Resistència a la càrrega dinàmica

- Allargament al trencament
- Resistència a la tracció
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a impermeabilització de cobertes:
- Sistema 2+: Declaració de Prestacions
- Productes per a impermeabilització de cobertes subjectes al comportament al foc exterior de Nivell o Classe: productes classe F roof,
- Productes per a impermeabilització de cobertes subjectes a reacció al foc de Nivell o Classe: F:
- Sistema 4: Declaració de Prestacions
- Productes per a impermeabilització de cobertes subjectes al comportament al foc exterior de Nivell o Classe: productes que requereixen assaig,
- Productes per a impermeabilització de cobertes subjectes a reacció al foc de Nivell o Classe: (A1, A2, B, C)**, D, E. ** Productes o materials per als quals una etapa clarament identificable en el procés de producció no suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic):
- Sistema 3: Declaració de Prestacions
- Productes per a impermeabilització de cobertes subjectes a reacció al foc de Nivell o Classe: (A1, A2, B, C)*. * Productes o materials per als quals una etapa clarament identificable en el procés de producció suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic):
- Sistema 1: Declaració de Prestacions
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN LÀMINES PER A BARRERES DE VAPOR:
A cada rotlle o en la documentació que acompanya el producte, ha de figurar de forma clara i ben visible la informació següent:
- Data de fabricació
- Nom del fabricant o marca comercial
- Llargària i amplària nominals
- Gruix o massa
- Etiquetat segons el REAL DECRETO 255/2003 que regula l'envasat i etiquetatge de preparats perillosos
- Tipus de producte segons la norma UNE-EN 13984
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- El número d'identificació de l'organisme de certificació del producte (només per al sistema 1)
- El nom o la marca comercial
- L'adreça enregistrada del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- El número de certificació del producte (només per al sistema 1)
- Referència a la norma europea EN
- Descripció del producte segons el capítol 8 de la UNE-EN 13984
- Sistema d'instal·lació previst
- Informació de les característiques essencials segons annex ZA de l'UNE-EN
Si el material ha de ser component del tancament exterior d'un edifici, el fabricant ha de declarar els valors de les propietats hídriques següents, d'acord amb l'especificat en l'apartat 4.1 del CTE/DB-HS_2006 1:
- Resistència al pas del vapor d'aigua (MNs/g) o (m2hPa/mg)
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
Productes per a control del vapor d'aigua subjectes a la reglamentació de reacció al foc, en els que en una etapa clarament identificable en el procés de producció, s'ha realitzat una millora de la classificació de la reacció al foc, classificats en classes A1, A2, B o C:
- Sistema 1: Declaració de prestacions
Productes per al control del vapor d'aigua subjectes a la reglamentació de reacció al foc:
- Productes que en una etapa clarament identificable en el procés de producció, no s'ha realitzat una millora de la classificació de la reacció al foc, classificats en classes A1, A2, B o C
- Productes classificats en classes D o E
Productes per a control del vapor d'aigua no subjectes a la reglamentació de reacció al foc:
Productes per a control de vapor d'aigua subjectes a la reglamentació de reacció al foc classificats en classe F:
- Sistema 3: Declaració de prestacions

- Sistema 4: Declaració de prestacions
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN LÀMINES PER A BARRERES GEOSINTÈTIQUES:
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Nom del fabricant o marca comercial
- Identificació del producte
- Dimensions
- Massa nominal per unitat de superfície (g/m2)
- Tipus de polímer principal
- Classificació del producte segons ISO 10318
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- El número d'identificació de l'organisme de certificació del Control de producció en fàbrica
- El nom o la marca comercial
- L'adreça enregistrada del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- El número de certificat de conformitat CE o del certificat de control de producció en fàbrica
- Referència a la norma europea EN
- Informació de les característiques essencials segons annex ZA de l'UNE-EN
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Sistema 2+: Declaració de prestacions

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B7D MATERIALS PER A AÏLLAMENTS CONTRA EL FOC

## B7D7- PASSAMUR I ABRAÇADORA PER AL SEGELLAT DE TUBS COMBUSTIBLES I CABLES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B7D7-19Y1,B7D7-19Y2,B7D7-19Y3.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials diversos per a complementar l'aïllament contra el foc.
S'han considerat els tipus següents:
- Abraçadora amb material intumescent
El fabricant ha de garantir la classificació respecte a la reacció al foc (Euroclasses) en funció dels paràmetres especificats.

ABRAÇADORA AMB MATERIAL INTUMESCENT:
Les abraçadores poden ser dels següents tipus:
- Dues peces metàl·liques amb folrat interior de material intumescent
- Anell metàl·lic amb folrat interior de material intumescent
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
ABRAÇADORA AMB MATERIAL INTUMESCENT:
Ha de subministrar-se amb les instruccions d'ús.
Emmagatzematge: Protegit de la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
ABRAÇADORA AMB MATERIAL INTUMESCENT, COIXINETS INTUMESCENTS, ESCUMA SEGELLANT:
Unitat d'element realment col·locat a l'obra segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B7J MATERIALS PER A JUNTS, SEGELLATS I RECONSTRUCCIÓ VOLUMS

### B7J1- CINTA PER A JUNTS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B7J1-0SL0.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials amb finalitats diverses per a col·laborar i complementar l'elaboració de juntsi segellats.
S'han considerat els tipus següents:
- Cinta de cautxú cru
- Cinta de paper resistent per a juntsde plaques de cartó-guix
- Cinta reforçada amb dues làmines metàl·liques per a cantonera de plaques de cartó-guix
- Emprimació prèvia per a segellats
CINTES PER A JUNTS EN PLAQUES DE GUIX LAMINAT:
Amplària: >= 5 cm
Estabilitat dimensional de la cinta de paper:
- Amplària: < 0,4%
- Llargària: <2,5%
Resistència al trencament: >= 4,0 N per mm d'amplària
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
CINTA:
Subministrament: En rotlles de diferents mides.

Emmagatzematge: En llocs protegits de la intempèrie i de manera que no s'alterin les seves característiques.
CINTES PER A JUNTS EN PLAQUES DE GUIX LAMINAT:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

| Producte | Ús previst | Característiques | Sistema |
|---|---|---|---|
| Material per a juntsde plaques guix laminat | Per a tots els usos que estiguin sotmesos a reglamentació de foc | Reacció al foc | 3/4 |
| | | Altres | 4 |
| | Per a situacions i usos no contemplats anteriorment | Tots | 4 |

-Sistema 3: (productes que requereixen assaig): Declaració de prestacions.
- Sistema 4: Declaració de prestacions
El símbol de marcat de conformitat CE ha d'anar estampat sobre el producte o bé en l'etiqueta, embalatge o documentació comercial.
El símbol de marcatge CE ha d'anar acompanyat de la següent informació:
- Número o marca comercial i adreça registrada del fabricant
- Els dos últims dígits de l'any en que es va fixar el marcat
- Referència a la norma UNE-EN 13963
- Descripció del producte:nom genèric, material i ús previst
- Informació sobre les característiques essencials
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
CINTES PER A JUNTS EN PLAQUES DE GUIX LAMINAT:
UNE-EN 13963:2006 Material para juntas para placas de yeso laminado. Definiciones, especificaciones y métodos de ensayo.

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B7J MATERIALS PER A JUNTS, SEGELLATS I RECONSTRUCCIÓ VOLUMS

## B7J2- CORDÓ CEL·LULAR DE POLIETILÈ EXPANDIT PER A REBLERT DE JUNTS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B7J2-0GUB,B7J2-0GUA,B7J2-0GUC.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Cordó d'escuma de polietilè de cel·la tancada, de secció circular, de 6 a 50 mm de diàmetre, obtingut per extrusió contínua.
CARACTERÍSTIQUES GENERALS:
Ha de tenir un aspecte uniforme i sense defectes.
Densitat aparent: aprox. 40 kg/m3
Resistència a la tracció longitudinal: >= 36 N/mm2
Resistència a la tracció transversal: >= 28 N/mm2
Allargament longitudinal: >= 13%
Allargament transversal: >= 7%
Absorció d'aigua: Nul·la
Toleràncies:
- Diàmetre: ± 0,5 mm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bobines protegides per a evitar deformacions. L'embalatge ha de portar la indicació del producte que conté.
Emmagatzematge: En el seu envàs, en llocs protegits del sol i les humitats.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B7 IMPERMEABILITZACIONS I AÏLLAMENTS

## B7J MATERIALS PER A JUNTS, SEGELLATS I RECONSTRUCCIÓ VOLUMS

### B7J6- MASSILLA PER A SEGELLAT DE PLAQUES DE GUIX LAMINAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B7J6-0GSL.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials plàstics de diferent composició, sense forma específica que serveixen per a tancar un junt entre materials d'obra per a que en quedi garantida l'estanquitat.

S'han considerat els tipus següents:
- Massilla de silicona: Màstic monocomponent de cautxú de silicona, d'elasticitat permanent, amb sistema reactiu acètic (àcid), amínic (bàsic) o neutre
- Massilla de polisulfurs bicomponent: Màstic elastòmer bicomponent de resines epoxi i cautxú de polisulfurs amb additius i càrregues
- Massilla de poliuretà monocomponent o bicomponent: Màstic de poliuretà amb additius i càrregues d'elasticitat permanent
- Massilla acrílica: Màstic monocomponent de consistència plàstica de polímers acrílics en dispersió aquosa, amb additius i càrregues
- Massilla de butils: Màstic monocomponent tixotròpic de cautxú butil d'elasticitat permanent
- Massilla d'oleo-resines: Màstic monocomponent d'òleo-resines amb additius i càrregues de plasticitat permanent
- Massilla de cautxú-asfalt: Massilla d'aplicació en fred, a base de betums asfàltics, resines, fibres minerals i elastómers
- Massilla asfàltica d'aplicació en calent, a base de betums modificats amb elastòmers i càrregues minerals
- Escuma de poliuretà en aerosol: Escuma monocomponent autoexpandible
- Massilla per a junt de plaques de guix laminat

CARACTERÍSTIQUES GENERALS:
No ha de tenir grumolls ni principis d'aglomeració.
Excepte la massilla de cautxú-asfalt, l'asfàltica i la utilitzada per a plaques de cartó-guix, la resta de massilles han de tenir la consistència adequada per a la seva aplicació amb pistola.
Característiques físiques:

| Tipus massilla | Densitat a 20°C (g/cm3) | Temperatura d'aplicació | Deformació màx. a 5°C | Resistència a temperatura |
|---|---|---|---|---|
| Silicona neutra | 1,07-1,15 | -10 - +35°C | 20-30% | -45 - +200°C |
| Silicona àcida ó bàsica | 1,01-1,07 | -10 - +35°C | 20-30% | - |
| Polisulfur bicomponent | >= 1,35 | -10 - +35°C | 30% | -30 - +70°C |
| Poliuretà monocomponent | 1,2 | 5 - 35°C | 15-25% | -30 - +70°C |
| Poliuretà bicomponent | 1,5-1,7 | 5 - 35°C | 25% | -50 - +80°C |
| Acrílica | 1,5-1,7 | 5 - 40°C | 10-15% | -15 - +80°C |
| De butils | 1,25-1,65 | 15 - 30°C | 10% | -20 - +70°C |
| D'óleo-resines | 1,45-1,55 | -10 - +35°C | 10% | -15 - +80°C |

Característiques mecàniques:

| Tipus massilla | Resistència a la tracció (N/mm2) | Mòdul d'elasticitat al 100% d'allargament (N/mm2) | Duresa Shore A |
|---|---|---|---|
| Silicona neutra | >= 0,7 | 0,2 | 12° - 20° |
| Silicona àcida ó bàsica | >= 1,6 | 0,5 | 25° - 30° |
| Polisulfur bicomponent | >= 2,5 | - | 60° |
| Poliuretà monocomponent | >= 1,5 | 0,3 | 30° - 35° |
| Poliuretà bicomponent | - | 1,5 | - |
| Acrílica | - | 0,1 | - |
| De butils | - | - | 15° - 20° |

MASSILLA DE SILICONA:
Es vulcanitza a temperatura ambient per acció de la humitat de l'aire, i es converteix en una massa consistent i elàstica.
Base: Cautxú-silicona

Allargament fins al trencament:
- Neutra: >= 500%
- Àcida o bàsica: >= 400%
MASSILLA DE POLISULFURS BICOMPONENT:
Un cop mesclats ambdós components a temperatura >= 10°C es transforma en un material elastomèric que vulcanitza sense retraccions, i no li afecta la humitat.
La mescla ha de tenir un color uniforme en tota la seva superfície.
Base: Polisulfurs + reactiu
Temperatura òptima de la mescla: 10°C - 20°C
MASSILLA DE POLIURETÀ MONOCOMPONENT BICOMPONENT:
Es vulcanitza a temperatura ambient per acció de la humitat de l'aire, i es converteix en una massa consistent i elàstica.
La mescla ha de tenir un color uniforme en tota la seva superfície.
Base:
- Monocomponent: Poliuretà
- Bicomponent: Poliuretà + reactiu
Temperatura òptima de la mescla: 15°C - 20°C
MASSILLA ACRÍLICA:
El procés de reticulació comença a evaporar l'aigua de la massa, la qual es converteix en una pasta tixotròpica consistent i amb una certa elasticitat.
Base: Polímers acrílics
MASSILLA DE BUTILS:
Vulcanitza en evaporar-se el dissolvent i entrar en contacte amb l'aire, i es converteix en una pasta tixotròpica elàstica.
Base: Cautxú-butil
MASSILLA D'OLEO-RESINES:
En contacte amb l'aire, forma una pel·lícula superficial protectora i resistent i manté l'interior plàstic.
Base: Oleo-resines
MASSILLA DE CAUTXÚ-ASFALT:
Mesclats els components, sense escalfar els materials a una temperatura >= 38°C, ha de donar un producte homogeni amb la consistència adequada per a la seva aplicació per abocament, pressió o extrussió , com a mínim 1 hora després de la seva preparació.
Base: Cautxú-asfalt
Resistència a la temperatura: 18°C - 100°C
MASSILLA ASFÀLTICA:
Resiliència a 25°C: 78%
ESCUMA DE POLIURETÀ EN AEROSOL:
Temps d'assecatge (23°C i 50% HR): 20-25 min
Densitat (DIN 53420): Aprox. 20 kg/m3
Temperatura d'aplicació: 5°C - 20°C
Resistència a la tracció (DIN 53571)
- a 20°C: 15 N/cm2
- a -20°C: 20 N/cm2
Comportament al foc (DIN 4102): Classe B2
Resistència a la temperatura: -40°C - +90°C
MASSILLA PER A JUNTS DE PLAQUES DE GUIX LAMINAT:
Ha de tenir la consistència adient per a la seva correcta aplicació.
El fabricant ha de subministrar les instruccions necessàries per a la seva aplicació.
Classificació dels materials:

| | Principal mecanisme d'adormiment | |
|---|---|---|
| DESCRIPCIÓ | Pasta d'assecat (en pols o llesta per l'ús) | Pasta d'adormiment (Només en pols) |
| Pasta de farcit | 1A | 1B |
| Pasta d'acabat | 2A | 2B |
| Compost mixt | 3A | 3B |
| Pasta sense cinta | 4A | 4B |

MASSILLA DE CAUTXÚ-ASFALT O ASFÀLTICA:
Característiques físiques:

| | | Penetració a | Fluència a 60°C | Adherència |
|---|---|---|---|---|

| Tipus massilla | Densitat (g/cm3) UNE 104-281(1-4) | 25°C,150g i 5s (mm) | UNE 104-281(6-3) | 5 cicles a -18°C (mm) | UNE 104-281(4-4) |
|---|---|---|---|---|---|
| Cautxú asfalt | 1,35-1,5 (a 25°C) | <= 23,5 | <= 5 | Ha de complir | |
| Asfàltica | 1,35 | <= 9 | <= 5 | Ha de complir | |

Les característiques anteriors s'han de determinar segons la norma UNE 104-233.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

CONDICIONS GENERALS:

Subministrament: En envàs hermètic.

MASSILLA DE SILICONA, DE POLISULFURS, DE POLIURETÀ, ACRÍLICA, DE BUTILS, D'OLEO-RESINES O ASFÀLTICA:

Emmagatzematge: El producte s'ha d'emmagatzemar en el seu envàs tancat hermèticament, en posició vertical, en lloc sec i a una temperatura entre 5°C i 35°C.

Temps recomanat d'emmagatzematge de sis a dotze mesos.

MASSILLA DE CAUTXÚ-ASFALT:

Emmagatzematge: En el seu envàs tancat hermèticament i protegit de la intempèrie. Temps màxim d'emmagatzematge sis mesos.

ESCUMA DE POLIURETÀ:

Emmagatzematge: el producte s'ha d'emmagatzemar en el seu envàs tancat hermèticament i a temperatura ambient al voltant dels 20°C.

Temps màxim d'emmagatzematge nou mesos.

MASSILLA PER A PLAQUES DE GUIX LAMINAT:

Ha de ser subministrat pel mateix fabricant de les plaques que s'utilitzin, a fi d'assegurar-ne la compatibilitat dels materials.

Emmagatzematge: En envàs hermètic, protegit de la intempèrie.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

MASSILLA PER A PLAQUES DE GUIX LAMINAT:

UNE-EN 13963:2006 Material para juntas para placas de yeso laminado. Definiciones, especificaciones y métodos de ensayo.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

Ha de portar impreses les dades següents:

- Nom del fabricant o marca comercial
- Identificació del producte
- Color (excepte la massilla per a plaques de cartó-guix o escuma de poliuretà)
- Instruccions d'ús
- Pes net o volum del producte
- Data de caducitat (excepte la massilla per a plaques de cartó-guix)

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN MASSILLA PER A PLAQUES DE GUIX LAMINAT:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Altres,
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc. Productes que satisfan la Decisió de la Comissió 96/603/CE modificada,
- Productes per a usos no subjectes a reglamentacions sobre reacció al foc:
- Sistema 4: Declaració de Prestacions
- Productes per a usos subjectes a reglamentacions sobre reacció al foc de Prestacio o Caracteristica: Reacció al foc:
- Sistema 3: Declaració de Prestacions

El símbol de marcat de conformitat CE ha d'anar estampat sobre el producte o bé en l'etiqueta, embalatge o documentació comercial.

El símbol de marcatge CE ha d'anar acompanyat de la següent informació:

- Número o marca comercial i adreça registrada del fabricant
- Els dos últims dígits de l'any en que es va fixar el marcat
- Referència a la norma UNE-EN 13963

- Descripció del producte:nom genèric, material i ús previst
- Informació sobre les característiques essencials

---

- Massilla acrílica: Màstic monocomponent de consistència plàstica de polímers acrílics en dispersió aquosa, amb additius i càrregues
- Massilla de butils: Màstic monocomponent tixotròpic de cautxú butil d'elasticitat permanent
- Massilla d'oleo-resines: Màstic monocomponent d'òleo-resines amb additius i càrregues de plasticitat permanent
- Massilla de cautxú-asfalt: Massilla d'aplicació en fred, a base de betums asfàltics, resines, fibres minerals i elastómers
- Massilla asfàltica d'aplicació en calent, a base de betums modificats amb elastòmers i càrregues minerals
- Escuma de poliuretà en aerosol: Escuma monocomponent autoexpandible
- Massilla per a junt de plaques de guix laminat
CARACTERÍSTIQUES GENERALS:
No ha de tenir grumolls ni principis d'aglomeració.
Excepte la massilla de cautxú-asfalt, l'asfàltica i la utilitzada per a plaques de cartó-guix, la resta de massilles han de tenir la consistència adequada per a la seva aplicació amb pistola.
Característiques físiques:
+----------+

| Tipus massilla | Densitat a 20°C (g/cm3) | Temperatura d'aplicació | Deformació màx. a 5°C | Resistència a temperatura |
|---|---|---|---|---|
| Silicona neutra | 1,07-1,15 | -10 - +35°C | 20-30% | -45 - +200°C |
| Silicona àcida ó bàsica | 1,01-1,07 | -10 - +35°C | 20-30% | - |
| Polisulfur bicomponent | >= 1,35 | -10 - +35°C | 30% | -30 - +70°C |
| Poliuretà monocomponent | 1,2 | 5 - 35°C | 15-25% | -30 - +70°C |
| Poliuretà bicomponent | 1,5-1,7 | 5 - 35°C | 25% | -50 - +80°C |
| Acrílica | 1,5-1,7 | 5 - 40°C | 10-15% | -15 - +80°C |
| De butils | 1,25-1,65 | 15 - 30°C | 10% | -20 - +70°C |
| D'óleo-resines | 1,45-1,55 | -10 - +35°C | 10% | -15 - +80°C |

Característiques mecàniques:

| Tipus massilla | Resistència a la tracció (N/mm2) | Mòdul d'elasticitat al 100% d'allargament (N/mm2) | Duresa Shore A |
|---|---|---|---|
| Silicona neutra | >= 0,7 | 0,2 | 12° - 20° |
| Silicona àcida ó bàsica | >= 1,6 | 0,5 | 25° - 30° |
| Polisulfur bicomponent | >= 2,5 | - | 60° |
| Poliuretà monocomponent | >= 1,5 | 0,3 | 30° - 35° |
| | | 0,3 - 0,37 N/mm2 (polimerització ràpida) | |
| Poliuretà bicomponent | - | 1,5 | - |
| Acrílica | - | 0,1 | - |
| De butils | - | - | 15° - 20° |

MASSILLA DE SILICONA:
Es vulcanitza a temperatura ambient per acció de la humitat de l'aire, i es converteix en una massa consistent i elàstica.
Base: Cautxú-silicona
Allargament fins al trencament:
- Neutra: >= 500%
- Àcida o bàsica: >= 400%

MASSILLA DE POLISULFURS BICOMPONENT:
Un cop mesclats ambdós components a temperatura >= 10°C es transforma en un material elastomèric que vulcanitza sense retraccions, i no li afecta la humitat.
La mescla ha de tenir un color uniforme en tota la seva superfície.
Base: Polisulfurs + reactiu
Temperatura òptima de la mescla: 10°C - 20°C

MASSILLA DE POLIURETÀ MONOCOMPONENT BICOMPONENT:
Es vulcanitza a temperatura ambient per acció de la humitat de l'aire, i es converteix en una massa consistent i elàstica.
La mescla ha de tenir un color uniforme en tota la seva superfície.
Base:
- Monocomponent: Poliuretà
- Bicomponent: Poliuretà + reactiu

Temperatura òptima de la mescla: 15°C - 20°C

MASSILLA ACRÍLICA:
El procés de reticulació comença a evaporar l'aigua de la massa, la qual es converteix en una pasta tixotròpica consistent i amb una certa elasticitat.
Base: Polímers acrílics

MASSILLA DE BUTILS:
Vulcanitza en evaporar-se el dissolvent i entrar en contacte amb l'aire, i es converteix en una pasta tixotròpica elàstica.

Base: Cautxú-butil
MASSILLA D'OLEO-RESINES:
En contacte amb l'aire, forma una pel·lícula superficial protectora i resistent i manté l'interior plàstic.
Base: Oleo-resines
MASSILLA DE CAUTXÚ-ASFALT:
Mesclats els components, sense escalfar els materials a una temperatura >= 38°C, ha de donar un producte homogeni amb la consistència adequada per a la seva aplicació per abocament, pressió o extrussió , com a mínim 1 hora després de la seva preparació.
Base: Cautxú-asfalt
Resistència a la temperatura: 18°C - 100°C
MASSILLA ASFÀLTICA:
Resiliència a 25°C: 78%
ESCUMA DE POLIURETÀ EN AEROSOL:
Temps d'assecatge (23°C i 50% HR): 20-25 min
Densitat (DIN 53420): Aprox. 20 kg/m3
Temperatura d'aplicació: 5°C - 20°C
Resistència a la tracció (DIN 53571)
- a 20°C: 15 N/cm2
- a -20°C: 20 N/cm2
Comportament al foc (DIN 4102): Classe B2
Resistència a la temperatura: -40°C - +90°C
MASSILLA PER A JUNTS DE PLAQUES DE GUIX LAMINAT:
Ha de tenir la consistència adient per a la seva correcta aplicació.
El fabricant ha de subministrar les instruccions necessàries per a la seva aplicació.
MASSILLA DE CAUTXÚ-ASFALT O ASFÀLTICA:
Característiques físiques:

| Tipus massilla | Densitat (g/cm3) | Penetració a 25°C,150g i 5s UNE 104-281(1-4) (mm) | Fluència a 60°C UNE 104-281(6-3) (mm) | Adherència 5 cicles a -18°C UNE 104-281(4-4) |
|---|---|---|---|---|
| Cautxú asfalt | 1,35-1,5 (a 25°C) | <= 23,5 | <= 5 | Ha de complir |
| Asfàltica | 1,35 | <= 9 | <= 5 | Ha de complir |

Les característiques anteriors s'han de determinar segons la norma UNE 104-233.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
CONDICIONS GENERALS:
Subministrament: En envàs hermètic.
MASSILLA DE SILICONA, DE POLISULFURS, DE POLIURETÀ, ACRÍLICA, DE BUTILS, D'OLEO-RESINES O ASFÀLTICA:
Emmagatzematge: El producte s'ha d'emmagatzemar en el seu envàs tancat hermèticament, en posició vertical, en lloc sec i a una temperatura entre 5°C i 35°C.
Temps recomanat d'emmagatzematge de sis a dotze mesos.
MASSILLA DE CAUTXÚ-ASFALT:
Emmagatzematge: En el seu envàs tancat hermèticament i protegit de la intempèrie. Temps màxim d'emmagatzematge sis mesos.
ESCUMA DE POLIURETÀ:
Emmagatzematge: el producte s'ha d'emmagatzemar en el seu envàs tancat hermèticament i a temperatura ambient al voltant dels 20°C.
Temps màxim d'emmagatzematge nou mesos.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Ha de portar impreses les dades següents:
- Nom del fabricant o marca comercial
- Identificació del producte
- Color (excepte la massilla per a plaques de cartó-guix o escuma de poliuretà)
- Instruccions d'ús

- Pes net o volum del producte
- Data de caducitat (excepte la massilla per a plaques de cartó-guix)

## B8 REVESTIMENTS

## B81 MATERIALS PER A ARREBOSSATS I ENGUIXATS

### B810- CANTONERA PER A ARREBOSSATS I ENGUIXATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B810-0P3N.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Cantoneres per a arestes.
S'han considerat els tipus següents:
- Cantonera de xapa d'acer galvanitzat amb aresta roma o recte, de xapa llisa i dues bandes laterals de la mateixa xapa perforada o desplegada
- Cantonera d'alumini per a arestes
CARACTERÍSTIQUES GENERALS:
L'aresta de la cantonera ha de ser recta i sense deformacions.
Llargària: >= 2 m
Dimensions de les bandes laterals
- Perfils d'acer galvanitzat: >= 3 cm
- Perfils d'alumini: >= 2,5 cm
Gruix de la xapa: >= 0,6 mm
Toleràncies:
- Fletxa: ± 3 mm
CANTONERA DE XAPA D'ACER GALVANITZAT:
Protecció galvanitzada: >= 275 g/m2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## B8 REVESTIMENTS

### B82 MATERIALS PER A ENRAJOLATS

#### B820- CANTONERA PER A ARESTES ENGUIXATS, ARREBOSSATS O ENRAJOLATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B820-1LNX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Cantoneres per a arestes d'enguixats, arrebossats o enrajolats.
S'han considerat els tipus següents:
- Cantonera de xapa d'acer galvanitzat
- Cantonera d'alumini
- Cantoneres de PVC, amb acabat natural, metal·litzat mate o metal·litzat brillant
CARACTERÍSTIQUES GENERALS:
Ha de tenir la forma indicada a la DT, o en el seu defecte la que determini la DF, d'acord amb la seva funció.
Ha de ser recta i sense deformacions ni defectes superficials.
Llargària: >= 2 m
Dimensions de les bandes laterals
- Perfils d'acer galvanitzat: >= 3 cm
- Perfils d'alumini: >= 2,5 cm
Gruix de la xapa: >= 0,6 mm
Toleràncies:
- Fletxa: ± 3 mm
CANTONERA DE XAPA D'ACER GALVANITZAT:
Protecció galvanitzada: >= 275 g/m2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament i emmagatzematge: De manera que no s'alterin les seves condicions.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## B8 REVESTIMENTS

## B84 MATERIALS PER A CELS RASOS

### B845- ESTRUCTURA PER A CEL RAS CONTINU DE PLAQUES DE GUIX LAMINAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B845-2L8P.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt format pels perfils horitzontals que conformaran l'entramat de suport de les peces del cel ras, els tirants o elements verticals per penjar l'entramat de l'estructura de l'edifici, les fixacions per subjectar els tirants, i els perfils perimetrals per a fixar el cel ras als elements verticals.
CARACTERÍSTIQUES GENERALS:
Les característiques dels materials que conformen l'estructura del cel ras estan regulades per la norma UNE-EN 13964.
Els element de fixació superior disposaran d'un DITE, sempre que existeixi la corresponent Guia de Document d'Idoneïtat Tècnic Europeu corresponent.
L'entramat de perfils ha de ser compatible amb el tipus de plaques o lames que suportarà. La distancia entre eixos dels perfils, el sistema de fixació d'aquests, la separació d'elements de suspensió, l'amplada de la zona de recolzament de les plaques, la capacitat portant, el tipus de protecció i acabat, el sistema d'immobilització horitzontal, etc. han de ser els indicats a la DT.
No han de tenir marques de plecs, cops ni altres defectes en el recobriment del galvanitzat.
Han de tenir els forats necessaris per a la seva suspensió del sostre.
Els elements de suspensió han de permetre de regular l'alçària del pla del cel ras.
Si l'entramat és vist, la cara vista dels perfils ha d'anar acabada amb pintura de les característiques i del color exigits per la DF.
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Reacció al foc (UNE-EN 13823)
- Capacitat portant (UNE-EN 13964)
- Durabilitat: classe d'exposició d'acord amb la taula 7 de la UNE-EN 13964
- Toleràncies i dimensions: ha de cumplir les definides a la taula 2 de la UNE-EN 13964

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Embalats de manera que s'asseguri la seva rectitud.
Emmagatzematge: En posició horitzontal, sobre superfícies planes, sense contacte amb el terra i protegits de la brutícia i d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 13964:2006 Techos suspendidos. Requisitos y métodos de ensayo.
UNE-EN 13964:2006/A1:2008 Techos suspendidos. Requisitos y métodos de ensayo.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a acabat interior de sostres subjecte a reglamentacions sobre reacció al foc de Nivell o Classe: (A1 a E)***, F. *** Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions),
- Productes per a acabat interior de sostres per a usos finals, excepte el subjecte a reglamentacions sobre resistència al foc, sobre reacció al foc i sobre substàncies perilloses i el subjecte als requisits de seguretat d'ús en vigor (fragilitat, resistència a la tracció per flexió i capacitat portant):
- Sistema 4: Declaració de Prestacions
- Productes per a acabat interior de sostres subjecte als requisits de seguretat d'ús en vigor (fragilitat, resistència a la tracció per flexió i capacitat portant),
- Productes per a acabat interior de sostres subjecte a reglamentacions sobre reacció al foc de Nivell o Classe: (A1, A2, B, C)**, D, E. ** Productes o materials per als quals una etapa clarament identificable en el procés de producció no suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic),
- Productes per a acabat interior de sostres subjecte a reglamentacions sobre substàncies perilloses,
- Productes per a acabat interior subjecte a reglamentacions sobre resistència al foc:
- Sistema 3: Declaració de Prestacions
- Productes per a acabat interior de sostres subjecte a reglamentacions sobre reacció al foc de Nivell o Classe: (A1, A2, B, C)*. * Productes o materials per als quals una etapa clarament identificable en el procés de producció suposa una millora en la classificació de reacció al foc (per exemple l'addició de retardadors d'ignició o la limitació de material orgànic):
- Sistema 1: Declaració de Prestacions
A l'embalatge o a l'albarà de lliurament han de constar-hi les dades següents:
- Nom del fabricant o marca comercial
- El número i l'any d'aquesta norma, EN 13964:2004 i quan correspongui el número/data o referència de les modificacions/revisions a aquesta norma europea
- Els símbols corresponents al tipus i a les dimensions
- Identificació del material o materials
- Any i mes de fabricació
- Les característiques i el nivell de prestacions declarat pel fabricant
OPERACIONS DE CONTROL:
- El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en el projecte i plec de condicions (CTE Parte 1. Art.7.2).
- Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'admetrà cap material amb característiques inferiors a les indicades al projecte, ni materials amb deficiències a la documentació de marcatge CE.

---

## B8 REVESTIMENTS

### B89 MATERIALS PER A PINTURES

## B896- PINTURA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B896-HYAR,B896-HYCS,B896-HYEA.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Pintures, pastes i esmalts.
S'han considerat els tipus següents:
- Pintura a la cola: Pintura a l'aigua formada per un aglomerant a base de coles cel·lulòsiques o anilàcies i pigments resistents als àlcalis
- Pintura a la calç: Dissolució en aigua, l'aglutinant i el pigment de la qual és l'hidròxid de calç o la calç apagada
- Pintura al ciment: Dissolució en aigua de ciment blanc tractat i pigments resistents a l'alcalinitat
- Pintura al làtex: Pintura a base de polímers vinílics en dispersió
- Pintura plàstica: Pintura formada per un aglomerant a base d'un polímer sintètic, en dispersió aquosa i pigments càrrega-estenedors resistents als àlcalis i a la intempèrie
- Pintura acrílica: Pintura formada per copolímers acrílics amb pigments i càrregues inorgàniques, en una dispersió aquosa. Seca a l'aire per evaporació del dissolvent
- Esmalt gras: Pintura formada per olis secants barrejats amb resines dures, naturals o sintètiques i dissolvents
- Esmalt sintètic: Pintura formada per un aglomerant de resines alquídiques, soles o modificades, pigments resistents als àlcalis i a la intempèrie i additius modificadors de la brillantor. Seca a l'aire per evaporació del dissolvent
- Esmalt de poliuretà d'un component: Pintura formada per un aglomerant de resines de poliuretà, soles o modificades, que catalitzen amb la humitat atmosfèrica i pigments resistents als àlcalis i a la intempèrie, dissolta en dissolvents adequats
- Esmalt de poliuretà de dos components: Pintura formada per copolímers de resines de poliuretà fluïdificades i pigmentades. Seca per polimerització mitjançant un catalitzador
- Esmalt de poliuretà uretanat: Pintura formada per resines uretanades
- Esmalt epoxi: Revestiment de resines epoxi, format per dos components: un enduridor i una resina, que cal barrejar abans de l'aplicació. Seca per reacció química dels dos components
- Esmalt en dispersió acrílica: Copolímers acrílics en una emulsió aquosa
- Esmalt de clorcautxú: Seca a l'aire per evaporació del dissolvent
- Pasta plàstica de picar: Pintura formada per un vehicle a base d'un polímer sintètic, en dispersió aquosa i pigments càrrega-estenedors resistents als àlcalis i la intempèrie
PINTURA A LA COLA:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Ha de tenir una consistència adequada per a la seva aplicació amb brotxa o amb corró. Ha de fer córrer la brotxa, ha de fluir, ha d'anivellar bé i ha de deixar una capa uniforme després de l'assecat
- Finor de mòlta dels pigments (INTA 16 02 55): < 50 micres
- Temperatura d'inflamació (INTA 16 02 32A): Ininflamable
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: 2 h
- Totalment sec: 4 h
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable.
- Adherència (UNE 48032): <= 2
PINTURA A LA CALÇ:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o procediments neumàtics fins a l'impregnació dels porus de la superfície a tractar.
Després d'assecar-se s'han d'aplicar dues capes d'acabat.
Un cop seca, ha de ser resistent a la intempèrie, ha d'endurir amb la humitat i el temps i ha de tenir propietats microbicides.
PINTURA AL CIMENT:

Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o pistola fins a l'impregnació de la superfície a tractar.
Un cop seca ha de ser resistent a la intempèrie.
PINTURA AL LÀTEX:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, ni dipòsits durs
- Un cop preparada ha de fer córrer la brotxa, ha de fluir, ha d'anivellar bé i ha de deixar una capa uniforme després de l'assecat
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 30
- Totalment sec: < 2 h
Característiques de la pel·lícula seca:
- Adherència (UNE 48032): <= 2
PINTURA PLÀSTICA:
Característiques de la pel·lícula líquida:
- La pintura continguda al seu envàs original recentment obert, no ha de presentar senyals de putrefacció, pells ni materies extranyes.
- Amb l'envàs ple i sotmesa a agitació (UNE_EN 21513 i UNE 48-083) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments
- Ha de tenir una consistència adequada per a la seva aplicació amb brotxa o amb corró. Ha de fer córrer la brotxa, ha de fluir, ha d'anivellar bé i ha de deixar una capa uniforme després de l'assecat
- Finor de mòlta dels pigments (INTA 16 02 55): < 50 micres
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 1 h
- Totalment sec: < 2 h
- Pes específic:
- Pintura per a interiors: < 16 kN/m3
- Pintura per a exteriors: < 15 kN/m3
- Rendiment: > 6 m2/kg
- Relació volum pigments + càrregues/volum pigments, pes càrregues, aglomerat sòlid (PVC): < 80%
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable, i per a exteriors, insaponificable.
- Adherència (UNE 48032): <= 2
- Capacitat de recobriment (UNE 48259): Relació constant >= 0,98
- Resistència al rentat (DIN 53778):
- Pintura plàstica per a interiors o pasta plàstica: >= 1000 cicles
- Pintura plàstica per a exteriors: >= 5000 cicles
- Solidesa a la llum (NF-T-30.057): Ha de complir
- Transmissió del vapor d'aigua (NF-T-30.018): Ha de complir
PINTURA PLÀSTICA PER A EXTERIORS:
Resistència a la immersió (UNE 48-144): No s'observen canvis o defectes
Resistència a la intempèrie (DIN 18363): Ha de complir
Resistència a l'abrasió (NF-T-30.015): Ha de complir
Resistència a la calor (UNE 48-033): Ha de complir
PINTURA ACRÍLICA:
Característiques de la pel·lícula líquida:
- Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o procediments pneumàtics
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 4 h
- Totalment sec: < 14 h
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable i insaponificable.
- Ha de ser resistent a la intempèrie.
ESMALT GRAS:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o pistola fins a l'impregnació de la superfície a tractar.
Temperatura d'inflamació (INTA 16 02 32A): > 30°C
Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 1 h
- Totalment sec: < 6 h
Un cop sec, ha de tenir bona resistència al fregament i al rentat.

ESMALT SINTÈTIC:
No ha de tenir resines fenòliques (INTA 16 04 23) ni de colofonia (INTA 16 04 22).
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Ha de tenir la consistència adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa, ha de fluir bé i ha de deixar una capa uniforme després de l'assecatge.
- Finor de mòlta dels pigments (INTA 16 02 55): < 25 micres
- Temperatura d'inflamació (INTA 16 02 32A): > 30°C
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 3 h
- Totalment sec: < 8 h
- Material volàtil (INTA 16 02 31): >= 70 ± 5%
- Rendiment per a una capa de 30 micres: >= 5 m2/kg
- Índex d'anivellament a 23 ± 2°C i 50 ± 5% HR (INTA 16 02 89): >= 5
- Índex de despreniments a 23 ± 2°C i 50 ± 5% HR (INTA 16 02 88): >= 4
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable i insaponificable.
- Adherència (UNE 48032): <= 2
- Ha de ser resistent a la intempèrie (INTA 16 06 02).
- Envelliment accelerat (INTA 16 06 55): < 6 unitats pèrdua de lluminositat (INTA 16 02 08)
- Resistència a l'abrasió (UNE 56818): Danys moderats
- Esgrogueïment accelerat per colors amb reflectància aparent superior al 80% (INTA 160.603): < 0,12
ESMALT DE POLIURETÀ D'UN COMPONENT:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Ha de tenir la consistència adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa, ha de fluir bé i ha de deixar una capa uniforme després de l'assecatge.
- Temperatura d'inflamació (INTA 16 02 32A): > 30°C
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 3 h
- Totalment sec: < 8 h
- Índex d'anivellament a 23 ± 2°C i 50 ± 5% HR (INTA 16 02 89): >= 5
- Índex de despreniments a 23 ± 2°C i 50 ± 5% HR (INTA 16 02 88): >= 4
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable i insaponificable.
- Adherència (UNE 48032): <= 2
- Ha de ser resistent a la intempèrie (INTA 16 06 02).
- Envelliment accelerat (INTA 16 06 05): < 6 unitats pèrdua de lluminositat (INTA 16 02 08)
- Resistència a l'abrasió (UNE 56818): Danys petits
- Adherència i resistència a l'impacte:

| | A les 24 h | Al cap de 7 dies |
|---|---|---|
| Adherència al quadriculat: | 100% | 100% |
| Impacte directe o indirecte: | | |
| Bola de 12,5 des de 50 cm (INTA 160.266) | Bé | Ha de complir |

- Resistència a la càrrega concentrada en moviment (UNE 56-814): Danys moderats
- Resistència a la càrrega rodant (UNE 56-815): Danys petits
- Resistència a la càrrega arrossegada (UNE 56-816): Danys petits
- Resistència al ratllat (UNE 48-173): Resistent
- Resistència a la calor (UNE 48-033): Ha de complir
- Resistència química:
- A l'àcid cítric al 10%: 15 dies
- A l'acid làctic al 5%: 15 dies
- A l'àcid acètic al 5%: 15 dies
- A l'oli de cremar: Cap modificació
- Al xilol: Cap modificació
- Al clorur sòdic al 20%: 15 dies
- A l'aigua: 15 dies
ESMALT DE POLIURETÀ DE DOS COMPONENTS:

Cal barrejar els dos components abans de l'aplicació.
Característiques de la pel·lícula líquida:
- Ha de tenir la consistència adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa, ha de fluir bé i ha de deixar una capa uniforme després de l'assecatge.
- Temperatura d'inflamació (INTA 16 02 32A): > 30°C
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 3 h
- Totalment sec: < 8 h
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable i insaponificable.
- Adherència (UNE 48032): <= 2
- Ha de ser resistent a la intempèrie (INTA 16 06 02).
- Envelliment accelerat (INTA 16 06 55): < 6 unitats pèrdua de lluminositat (INTA 16 02 08)
- Resistència a l'abrasió (UNE 56818): Danys petits
- Ha de tenir bona resistència química als àcids diluïts, als hidrocarburs, les sals i als detergents.
ESMALT DE POLIURETÀ URETANAT:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o pistola fins a l'impregnació de la superfície a tractar.
Temps d'assecatge a 20°C: 1 - 2 h
Ha de tenir bona resistència a l'aigua salada i al sol.
ESMALT DE DISPERSIÓ ACRÍLICA:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o pistola fins a l'impregnació de la superfície a tractar.
Temperatura d'inflamació (INTA 16 02 32A): Ininflamable
Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 20 min
- Totalment sec: < 1 h
ESMALT DE CLORCAUTXÚ:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa o corró.
Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 30 min
- Totalment sec: < 2 h
Ha de ser resistent a l'aigua dolça i salada, als àcids i als àlcalis.
ESMALT EPOXI:
Un cop preparada ha de tenir una consistència adequada per a la seva aplicació amb brotxa, corró o pistola.
Temperatura d'inflamació (INTA 16 02 29): > 30°C
Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 30 min
- Totalment sec: < 10 h
Ha de tenir bona resistència al desgast.
Ha de ser resistent a l'àcid làctic 1%, acètic 10%, clorhídric 20%, cítric 30%, sosa i solucions bàsiques, als hidrocarburs (benzina, querosè) als olis animals i vegetals, a l'aigua, als detergents i a l'alcohol etílic 10%.
Resistència mecànica (després de 7 dies de polimerització):
- Tracció: >= 16 N/mm2
- Compressió: >= 85 N/mm2
Resistència a la temperatura: 80°C
PASTA PLÀSTICA DE PICAR:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Ha de tenir una consistència adequada.
- Finor de mòlta dels pigments (INTA 16 02 55): < 50 micres
- Temps d'assecatge a 23°C ± 2°C i 50% ± 5% HR (INTA 16 02 29):
- Al tacte: < 1 h
- Totalment sec: < 2 h
- Pes específic: < 17 kN/m3
- Relació: volum del pigment/volum de la resina (PVC): < 80%
Característiques de la pel·lícula seca:
- La pintura ha de ser de color estable i insaponificable.
- Adherència (UNE 48032): <= 2
- Resistència al rentat (DIN 53778):

- Pintura plàstica per a interiors o pasta plàstica: >= 1000 cicles
- Pintura plàstica per a exteriors: >= 5000 cicles
- Solidesa a la llum (NF-T-30.057): Ha de complir
- Transmissió del vapor d'aigua (NF-T-30.018): Ha de complir
- Resistència a la immersió (UNE 48-144): No s'observen canvis o defectes
- Resistència a la intempèrie (DIN 18363): Ha de complir
- Resistència a l'abrasió (NF-T-30.015): Ha de complir
- Resistència a la calor (UNE 48-033): Ha de complir

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

PINTURA A LA COLA, AL LÀTEX, ACRÍLICA, PLÀSTICA, ESMALT GRAS, SINTÈTIC, DE POLIURETÀ, DE DISPERSIÓ ACRÍLICA, EPOXI I PASTA DE PICAR:

Subministrament: En pots o bidons.

Emmagatzematge: En llocs ventilats i no exposats al sol, dins del seu envàs tancat i sense contacte amb el terra. S'ha de preservar de les gelades.

PINTURA A LA CALÇ:

Subministrament de la calç aèria en terrossos o envasada.

La calç hidràulica ha de subministrar-se en pols.

Emmagatzematge: En llocs ventilats i no exposats al sol, dins del seu envàs tancat i sense contacte amb el terra. S'ha de preservar de les gelades.

PINTURA AL CIMENT:

Subministrament: En pols, en envasos adequats.

Emmagatzematge: En llocs ventilats i no exposats al sol, dins del seu envàs tancat i sense contacte amb el terra. S'ha de preservar de les gelades.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

No hi ha normativa de compliment obligatori.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PINTURA A LA COLA, AL LÀTEX, ACRÍLICA, PLÀSTICA, ESMALT GRAS, SINTÈTIC, DE POLIURETÀ, DE DISPERSIÓ ACRÍLICA, EPOXI I PASTA DE PICAR:

A cada envàs hi ha d'haver les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Codi d'identificació
- Pes net o volum del producte
- Data de caducitat
- Instruccions d'ús
- Dissolvents adequats
- Límits de temperatura
- Temps d'assecatge al tacte, total i de repintat
- Toxicitat i inflamabilitat
- Proporció de la barreja i temps d'utilització, en els productes de dos components
- Color i acabat, en la pintura plàstica o al làtex i en l'esmalt sintètic, de poliuretà

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PINTURA A LA CALÇ:

A cada envàs hi ha d'haver les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Codi d'identificació
- Pes net o volum del producte
- Toxicitat i inflamabilitat

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN PINTURA AL CIMENT:

A cada envàs hi ha d'haver les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Codi d'identificació
- Pes net o volum del producte
- Instruccions d'ús
- Temps d'estabilitat de la barreja
- Temperatura mínima d'aplicació

- Temps d'assecatge
- Rendiment teòric en m/l
- Color

OPERACIONS DE CONTROL:

Els punts de control més destacables són els següents:

- En cada subministrament d'esmalt, es comprovarà que l'etiquetatge dels envasos contingui les dades exigides a les especificacions.

El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.

Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.

Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.

Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.

- Comprovació de l'estat de conservació de la pintura, en un 10 % dels pots rebuts (INTA 16 02 26).

OPERACIONS DE CONTROL EN PINTURA PLÀSTICA:

- Recepció del certificat de qualitat del fabricant, on constin els resultats dels assaigs següents:
- Determinació de la finor de mòlta dels pigments INTA 16.02.55 (10.57)
- Temps d'assecatge INTA 16.02.29 (6.57)
- Pes específic UNE EN ISO 2811-1
- Capacitat de cobriment en humitat INTA 16.02.62(9.82)
- Capacitat de cobriment en sec INTA 16.02.61(2.58)
- Conservació de la pintura (cada 100 m2) INTA 16.02.26

En cas de no rebre aquests resultats abans del inici de l'activitat, o que la DF no els consideri representatius, el contractista haurà de realitzar els assaigs corresponents, al seu càrrec i fora del pressupost d'autocontrol.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

No s'acceptaran els pots de pintura que no estiguin degudament etiquetats i/o certificats, així com els que presentin mal estat de conservació i/o emmagatzematge.

En cas d'observar deficiències en l'estat de conservació d'un pot, es rebutjarà la unitat corresponent i s'incrementarà la inspecció, en primera instància, fins al 20 % dels pots subministrats. Si es continuen observant irregularitats, es passarà a controlar el 100% del subministrament.

Els assaigs d'identificació han de resultar d'acord a les especificacions del plec i a les condicions garantides en el certificat del material. En cas d'incompliment, es realitzarà l'assaig sobre dues mostres més del mateix lot, acceptant-ne el conjunt sempre que els dos resultats estiguin d'acord a dites especificacions.

---

## B8 REVESTIMENTS

## B8Z MATERIALS ESPECIALS PER A REVESTIMENTS

## B8Z6- IMPRIMACIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B8Z6-0P2P,B8Z6-0P2D.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials per a envernissats, emprimacions i tractaments superficials.
S'han considerat els tipus següents:
- Emprimació antioxidant: Emprimació sintètica de mini de plom electrolític, modificada eventualment amb oli de llinosa
- Emprimació antioxidant grassa: Emprimació de mini de plom electrolític barrejada amb olis i dissolvents
- Emprimació antioxidant al clorocautxú, a base de clorocautxú modificat
- Emprimació antioxidant al poliuretà: Emprimació de dos components a base de resines de poliuretà soles o modificades
- Emprimació de làtex: Emprimació de polímer vinílic en dispersió
- Emprimació fosfatant a base de resines viníliques o fenòliques, soles o modificades que catalitzen en ser barrejades amb un activador
IMPRIMACIÓ ANTIOXIDANT:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Pigment: >= 26% de mini de plom electrolític
- Puresa del mini de plom electrolític (INTA 16 12 11): >= 99,6%
- Finor de la mòlta (INTA 16 02 55): < 50 micres
- Temperatura d'inflamació (INTA 16 02 32): > 25°C
- Índex d'anivellament a 23 ± 2°C i 50 ± 5% HR (INTA 16 02 89): > 3
- Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: < 1 h
- Totalment seca: < 6 h
- Pes específic a 23 ± 2°C, 50 ± 5% HR (INTA 16 42 03): > 18 kN/m3
- Rendiment per a una capa de 30 - 40 micres: > 4 m2/kg
Característiques de la pel·lícula seca:
- Resistència a la boira marina (INTA 16 01 01, ASTM B.117-73, oxidació marina 8 (0,1%) ASTM D.610-68): >= 150 h
- Adherència (UNE 48032): <= 2
IMPRIMACIÓ ANTIOXIDANT GRASSA:
Ha de tenir una consistència adequada per a la seva aplicació amb brotxa.
Temperatura d'inflamació (INTA 16 02 32): > 30°C
Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: < 1 h
- Totalment seca: < 18 h
Pes específic a 20°C: > 23 kN/m3
Rendiment per una capa de 45 - 50 micres: > 4 m2/kg
IMPRIMACIÓ ANTIOXIDANT AL CLORCAUTXÚ:
Ha de tenir una consistència adequada per a la seva aplicació amb brotxa o pistola.
Temperatura d'inflamació (INTA 16 02 32): > 23°C
Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: < 45 min
- Totalment seca: < 4 h
Pes específic a 20°C: > 17,3 kN/m3
Rendiment per una capa de 40 - 45 micres: > 4 m2/kg
IMPRIMACIÓ ANTIOXIDANT AL POLIURETÀ:
Ha de tenir una consistència adequada per a la seva aplicació amb brotxa o pistola.

Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: < 15 min
- Totalment seca: < 2 h
Pes específic a 20°C: > 13,5 kN/m3
Rendiment per una capa de 40 - 45 micres: > 4 m2/kg
IMPRIMACIÓ DE LÀTEX:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16.32.03) no ha de tenir coàguls, pells ni dipòsits durs
- Ha de tenir una consistència adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa i ha de fluir bé, i ha de deixar una capa uniforme després de l'assecat
- Al tacte: < 30 min
- Totalment seca: < 2 h
- Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
Característiques de la pel·lícula seca:
- Adherència (UNE 48032): <= 2
IMPRIMACIÓ FOSFATANT:
Característiques de la pel·lícula líquida:
- La mescla preparada, al cap de 3 minuts d'agitació, no ha de tenir coàguls, pells ni dipòsits durs
- Ha de tenir una consistència adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa i ha de fluir bé, i ha de deixar una capa uniforme després de l'assecat
- Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: < 15 min
- Totalment seca: < 1 h
Característiques de la pel·lícula seca:
- Gruix de la capa: 4 - 10 micres
- Adherència (UNE 48032): <= 2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En pots o bidons.
Emmagatzematge: En llocs ventilats i no exposats al sol, dins del seu envàs tancat i sense contacte amb el terra. S'ha de preservar de les gelades.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
A cada envàs hi ha d'haver les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Codi d'identificació
- Pes net o volum del producte
- Data de caducitat
- Instruccions d'ús
- Dissolvents adequats
- Límits de temperatura
- Temps d'assecatge al tacte, total i de repintat
- Toxicitat i inflamabilitat
- Temps d'inducció de la mescla i vida de la mescla, en els productes de dos components.
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- En cada subministrament d'esmalt, es comprovarà que l'etiquetatge dels envasos contingui les dades exigides a les especificacions.
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a

un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
OPERACIONS DE CONTROL EN IMPRIMACIÓ D'ELEMENTS METÀL·LICS:
Els punts de control més destacables són els següents:
- Recepció del certificat de qualitat del fabricant, on constin els resultats dels assaigs següents:
- Assaigs sobre pintura líquida:
- Dotació de pigment
- Puresa del mini de plom electrolític INTA 16.12.11
- Finor de la mòlta dels pigments INTA 16.02.55 (10.57)
- Temperatura d'inflamació INTA 16.02.32A (7.61)
- Pes específic UNE-EN ISO 2811-1
- Índex d'anivellament INTA.16.02.89 (9.68)
- Temps d'assecatge INTA 16.02.29 (6.57)
- Assaigs sobre pel·lícula seca:
- Resistència a la boira marina UNE EN ISO 9227
- Adherència UNE EN ISO 2409
En cas de no rebre aquests resultats abans del inici de l'activitat, o que la DF no els consideri representatius, el contractista haurà de realitzar els assaigs corresponents, al seu càrrec i fora del pressupost d'autocontrol.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN IMPRIMACIÓ D'ELEMENTS METÀL·LICS:
No s'acceptaran els pots de pintura que no estiguin degudament etiquetats i/o certificats, així com els que presentin mal estat de conservació i/o emmagatzematge.
En cas d'observar deficiències en l'estat de conservació d'un pot, es rebutjarà la unitat corresponent i s'incrementarà la inspecció, en primera instància, fins al 20 % dels pots subministrats. Si es continuen observant irregularitats, es passarà a controlar el 100% del subministrament.
Els assaigs d'identificació han de resultar d'acord a les especificacions del plec i a les condicions garantides en el certificat del material. En cas d'incompliment, es realitzarà l'assaig sobre dues mostres més del mateix lot, acceptant-ne el conjunt sempre que els dos resultats estiguin d'acord a dites especificacions.

## B8 REVESTIMENTS

## B8Z MATERIALS ESPECIALS PER A REVESTIMENTS

## B8ZA- MALLA PER A ARMADURES D'ARREBOSSATS, ENGUIXATS I PINTATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B8ZA-0P1O.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Malla de fibra de vidre revestida de PVC, utilitzada per a donar resistència a un revestiment continu, principalment en punts de discontinuïtat del suport.
CARACTERÍSTIQUES GENERALS:
Ha de tenir una superfície neta i uniforme.
Ha de ser resistent als àlcalis dels morters.
Característiques físiques:

| Llum de la malla (mm) | Pes mínim (g/m2) | Gruix (mm) | Resistència mitjana a tracció (daN/5 cm) | Allargament fins trencament |
|---|---|---|---|---|
| 1 x 1 | 84,4 | <= 0,2 | >= 100 | >= 2,5% |
| 3 x 3 | 152 | <= 0,4 | >= 165 | >= 3,5% |
| 4 x 3 | 85 | <= 1 | >= 90 | >= 2,5% |
| 6 x 4 | 123 | <= 1 | >= 110 | >= 3,0% |
| 10 x 10 | 145 | <= 1 | >= 135 | >= 3,0% |
| 4 x 4 | 180 | <= 0,9 | >= 150 | >= 6,0% |
| 10 x 10 | 217 | <= 1 | >= 200 | >= 2,0% |
| 6 x 5 | 484 | <= 1 | >= 645 | >= 5,0% |
| 4 x 4 | 730 | <= 1 | >= 445 | >= 4,5% |

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En rotlles de llargària igual o superior a 30 m i d'amplària igual o superior a 1 m.
Emmagatzematge: En posició horitzontal, protegits del sol i la pluja.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.

---

## B8 REVESTIMENTS

## B8Z MATERIALS ESPECIALS PER A REVESTIMENTS

## B8ZM- SEGELLADORA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B8ZM-0P35.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials per a envernissats, emprimacions i tractaments superficials.
S'han considerat els tipus següents:
- Segelladora: Producte segellant per a fusta, guix i ciment i paviments porosos
SEGELLADORA AMB POLÍMERS ACRÍLICS:
pH sobre T.Q.:7,75
SEGELLADORA:
Característiques de la pel·lícula líquida:
- Amb l'envàs ple i al cap de 3 minuts d'agitació (INTA 16 32 03) no ha de tenir coàguls, pells, dipòsits durs ni flotació de pigments.
- Ha de tenir una dilució adequada per a la seva aplicació amb brotxa. Ha de fer córrer la brotxa, ha de fluir i anivellar bé, i ha de deixar una capa uniforme després de l'assecat
- Finor de la mòlta (INTA 16 02 55): < 60 micres
- Temperatura d'inflamació (INTA 16 02 32): > 30°C
- Temps d'assecatge a 23 ±2°C i 50 ±5% HR (INTA 16 02 29):
- Al tacte: 30 min - 4 h
- Totalment seca: < 12 h
- Rendiment per a una capa de 60 micres: > 10 m2/kg
Característiques de la pel·lícula seca:
- Adherència (UNE 48032): <= 2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En pots o bidons.
Emmagatzematge: En llocs ventilats i no exposats al sol, dins del seu envàs tancat i sense contacte amb el terra. S'ha de preservar de les gelades.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
A cada envàs hi ha d'haver les dades següents:
- Identificació del fabricant
- Nom comercial del producte
- Identificació del producte
- Codi d'identificació
- Pes net o volum del producte
- Data de caducitat
- Instruccions d'ús
- Dissolvents adequats
- Límits de temperatura
- Temps d'assecatge al tacte, total i de repintat
- Toxicitat i inflamabilitat
- Temps d'inducció de la mescla i vida de la mescla, en els productes de dos components.
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- En cada subministrament d'esmalt, es comprovarà que l'etiquetatge dels envasos contingui les dades exigides a les especificacions.
El control de recepció de material verificarà que les característiques dels materials són coincidents amb l'establert en la DT. Aquest control ha de complir l'especificat en l'apartat 7.2 del CTE.
Control de documentació: documents d'origen (full de subministrament i etiquetat), certificat de garantia del fabricant, en el seu cas, (signat per persona física) i els documents de conformitat o autoritzacions administratives exigides, inclòs la documentació corresponent al marcatge CE quan

sigui pertinent.
Control mitjançant distintius de qualitat i avaluacions d'idoneïtat: En el cas que el fabricant disposi de marques de qualitat, ha d'aportar-ne la documentació corresponent.
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.

---

## B9 MATERIAL PER A PAVIMENTS

## B9E MATERIALS PER A PAVIMENTS DE PANOTS I MOSAICS HIDRÀULICS

## B9E2- PANOT PER A VORERA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B9E2-0HOL.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Peça prefabricada feta amb ciment, granulats i eventualment amb colorants, per a pavimentació.
S'han considerat les peces següents:
- Panot gris per a voreres
- Panot de color amb tacs per a pas de vianants
CARACTERÍSTIQUES GENERALS:
La peça ha de tenir un color i una textura uniformes a tota la superfície.
La cara vista no ha de tenir esquerdes, escantonaments ni altres defectes.
Les cares horitzontals han de ser planes i paral·leles.
El cantells de la cara vista han de ser bisellats o arrodonits.
No han de ser visibles els granulats del morter en la capa vista.
La textura i el color no han de presentar diferències significatives respecte de qualsevol mostra facilitada pel fabricant i aprovada pel comprador.
Les peces poden ser monocapa, amb un sols tipus de formigó, o bicapa, amb diferents tipus en la seva estructura principal i en la seva capa superficial.
En el cas de peces bicapa, no ha d'existir separació entre les dues capes.
En les peces de color, pot estar acolorida la capa superficial o tota la peça.
La forma d'expressió de les mesures sempre ha de ser: Llargària x amplària x gruix.

Llargària: <= 1 m
Relació entre la llargària total i el gruix: > 4
Gruix de la capa vista: >= 4 mm
Les característiques dimensionals, físiques i mecàniques han de complir les especificacions de la norma UNE-EN 1339 i s'han de determinar segons aquesta norma.
Toleràncies:
- Desviació de la llargària respecte de la llargària nominal:
- Classe 1 (marcat N): ± 5 mm
- Classe 2 (marcat P):
- Dimensions nominals de la peça <= 600 mm: ± 2 mm
- Dimensions nominals de la peça > 600 mm: ± 3 mm
- Classe 3 (marcat R): ± 2 mm
- Desviació de l'amplària respecte de l'amplària nominal:
- Classe 1 (marcat N): ± 5 mm
- Classe 2 (marcat P):
- Dimensions nominals de la peça <= 600 mm: ± 2 mm
- Dimensions nominals de la peça > 600 mm: ± 3 mm
- Classe 3 (marcat R): ± 2 mm
- Desviació del gruix respecte del gruix nominal:
- Classe 1 (marcat N): ± 3 mm
- Classe 2 (marcat P):
- Dimensions nominals de la peça <= 600 mm: ± 3 mm
- Dimensions nominals de la peça > 600 mm: ± 3 mm
- Classe 3 (marcat R): ± 2 mm
- Diferència entre dues mesures de llargària, amplària i gruix d'una mateixa peça: <= 3 mm
- Diferència màxima entre la llargària de dues diagonals (peces amb diagonals superiors a 300 mm):
- Classe 1 (marcat J):
- Llargària <= 850 mm: 5 mm
- Llargària > 850 mm: 8 mm
- Classe 2 (marcat K):
- Llargària <= 850 mm: 3 mm
- Llargària > 850 mm: 6 mm
- Classe 3 (marcat L):
- Llargària <= 850 mm: 2 mm
- Llargària > 850 mm: 4 mm
- Desviació màxima sobre la planor i curvatura de la cara vista plana (peces de dimensió màxima superior a 300 mm):
- Dispositiu de mesura de 300 mm de llargària:
- Convexitat màxima: 1,5 mm
- Concavitat màxima: 1 mm
- Dispositiu de mesura de 400 mm de llargària:
- Convexitat màxima: 2 mm
- Concavitat màxima: 1,5 mm
- Dispositiu de mesura de 500 mm de llargària:
- Convexitat màxima: 2,5 mm
- Concavitat màxima: 1,5 mm
- Dispositiu de mesura de 800 mm de llargària:
- Convexitat màxima: 4 mm
- Concavitat màxima: 2,5 mm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetats sobre palets.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 1339:2004 Baldosas de hormigón. Especificaciones y métodos de ensayo.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos interns incloent les premises de transport públic de Nivell o Classe: A1*. *

Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions),
- Productes per a cobertes de Nivell o Classe: es considera que satisfan els requisits enfront del foc extern **. ** Decisió de la Comissió 2000/553/CE, modificada,
- Productes per a ús extern i acabat de carrers, cobrint àrees externes de circulació de vianants i de vehicles:
- Sistema 4: Declaració de Prestacions
A l'albarà de lliurament, hi ha de constar la següent informació com a mínim:
- Identificació del fabricant o la fàbrica
- Data en que el producte és declarat apte per a l'ús en el cas de que es lliure amb anterioritat a la mencionada data
- Identificació del producte segons la classificació de la norma UNE-EN 1339 i els valors declarats pel fabricant:
- Dimensions nominals
- Resistència climàtica
- Resistència a flexió
- Resistència al desgast per abrasió
- Resistència al lliscament/patinatge
- Càrrega de trencament
- Comportament davant el foc
- Referència a la norma UNE-EN 1339
- Identificació del producte
- Marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Nom o marca identificativa del fabricant
- Direcció registrada del fabricant
- Les 2 últimes xifres de l'any d'impressió del marcatge
- Referència a la norma EN 1339
- El tipus de producte i l'ús o usos previstos
- Informació sobre les característiques/mandats a declarar
Per als productes destinats a àrees exteriors de circulació de vianants i vehicles, incloses les zones delimitades per als transports públics, ha de constar a més:
- Resistència al trencament
- Resistència al patinat/lliscament
- Durabilitat
Per als productes destinats a paviments d'ús interior:
- Reacció al foc
- Resistència a la ruptura
- Resistència al patinat/lliscament
- Durabilitat
- Conductivitat tèrmica (si procedeix)
Els productes destinats a ús en cobertes:
- Comportament davant del foc extern:es considera satisfactori
OPERACIONS DE CONTROL:
- En cada subministrament, es realitzaran els controls següents:
- Inspecció visual del material, identificació de les marques corresponents (UNE-EN 1339) i recepció del certificat de qualitat del fabricant.
- Control dimensional sobre un 10 % de les peces rebudes (UNE-EN 1339)
- Per a cada subministrador diferent, es prendran 9 mostres (6 de 3 peces cadascuna i 3 de 6 peces) per tal de realitzar els següents assaigs (UNE-EN 1339)
- Sobre 3 mostres de 3 peces:
- Absorció d'aigua
- Gelabilitat
- Permeabilitat i absorció d'aigua per la cara vista
- Resistència al xoc
- Sobre 3 mostres de 6 peces cadascuna
- Resistència a flexió
- Estructura
- Resistència al desgast per abrasió (2 peces de cada mostra)
- Recepció del certificat de garantia de qualitat del fabricant. En cas de que el material disposi de la Marca AENOR, o altre legalment reconeguda a un país de la CEE, es podrà prescindir dels assaigs de control de recepció. La DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministra rebut, segons control de producció establert en la marca de qualitat de producte.
CRITERIS DE PRESA DE MOSTRES:

Les mostres es prendran a l'atzar segons les instruccions de la DF i els criteris de la norma UNE-EN 1339.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran les peces que no superin la inspecció visual, que no estiguin correctament identificades o que no arribin acompanyades del certificat de qualitat del fabricant.
La totalitat de les peces sobre les que es realitza el control geomètric, han de complir les especificacions del plec. En cas d'incompliment, s'incrementarà el control, en primer lloc, fins al 20% de les peces rebudes, i si continuen observant-se irregularitats, fins al 100% del subministrament.
En els assaigs de control del lot, el resultat de cada sèrie (valor mitjà dels resultats de les peces de cada mostra) ha de complir les especificacions. Si una sèrie no compleix aquest requisit, es podran realitzar contrassaigs sobre dues mostres més procedents del mateix lot, acceptant-se el conjunt si ambdues resulten conformes a l'especificat.

---

## B9 MATERIAL PER A PAVIMENTS

## B9P MATERIALS PER A PAVIMENTS SINTÈTICS I DE LINÒLEUM

## B9PH- SEGELLANT LÍQUID DE PVC PUR PER A PAVIMENTS SINTÈTICS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B9PH-0IT2,B9PH-0IT3,B9PH-0IT4.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials auxiliars per a la col·locació de paviments sintètics.
S'han considerat els materials següents:
- Cordó de PVC
- Segellant líquid de PVC
SEGELLANT LÍQUID DE PVC:
Producte líquid a base d'un aglomerant de resines de clorur de polivinil per al segellat de junts.
Per la seva naturalesa ha de ser fàcil d'aplicar i ha de permetre la unió de materials de PVC sense afectar les seves característiques.
Ha de ser aplicable en fred, per mitjà d'un broc cònic adaptat al tub o a l'envàs.
Ha de tenir una estabilitat dimensional bona als canvis de temperatura.
El fabricant ha de garantir la qualitat del producte i ha de facilitar les dades següents:
- Color
- Densitat
- Viscositat
- Contingut sòlid
- Rendiment

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
SEGELLANT LÍQUID DE PVC:
Subministrament: En envasos tancats hermèticament, amb la indicació de producte inflamable.
Emmagatzematge: A cobert, en llocs secs i ventilats, a una temperatura entre 5°C i 30°C.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B9 MATERIAL PER A PAVIMENTS

## B9R MATERIALS PER A PAVIMENTS TÈXTILS

### B9R0- CINTA ADHESIVA PER A PAVIMENTS TÈXTILS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B9R0-0J7V.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials per a la col·locació de moqueta tensada sobre suport de feltre.
S'han considerat els materials següents:
- Feltre de fibres sintètiques conglomerades
- Rastrells per a tensat de moquetes
- Cinta termoadhesiva
CINTA:
Cinta termoadhesiva amb impregnacions d'adhesiu.
La cinta no ha de tenir defectes superficials, ni falta de continuïtat d'adhesiu.
Les vores han de ser rectes i paral·leles entre elles.
La banda d'adhesiu ha de ser homogènia i cal que es fongui després d'haver-li aplicat la planxa entre 15 i 25 s.
Amplària: >= 50 cm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
FELTRE I CINTA:
Subministrament: En rotlles empaquetats.
A l'envàs hi han de constar les característiques del producte contingut.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B9 MATERIAL PER A PAVIMENTS

## B9U MATERIALS PER A SÒCOLS

### B9U4- SÒCOL DE MATERIAL SINTÈTIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B9U4-1KZ7.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Sòcol de material sintètic.
CARACTERÍSTIQUES GENERALS:
Ha de tenir un color i una textura uniformes en tota la superfície.
No ha de tenir defectes superficials visibles.
Els angles i les arestes han de ser rectes.
Ha de complir les condicions requerides per la DF.
Les dimensions del sòcol han de correspondre amb les mides nominals donades pel fabricant.
El gruix ha de ser constant.
Toleràncies:
- Llargària: ± 1 mm
- Amplària: ± 1 mm
- Gruix: ± 0,5 mm
- Rectitud d'arestes: ± 1 mm/m
- Planor: ± 1 mm/m

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Embalades en palets protegits, de manera que no s'alterin les seves característiques.
Emmagatzematge: Als seus embalatges, en llocs protegits contra els impactes.
S'han d'apilar sobre superfícies planes, de manera que no es deformin.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAB MATERIALS PER A TANCAMENTS PRACTICABLES D'ACER EN PERFILS LAMINATS

### BAB0- PORTA DE PERFILS D'ACER LAMINAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAB0-16WK,BAB0-16WN.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils d'acer galvanitzat que formen el bastiment i el bastidor de la porta, així com la ferramenta d'obertura i tancament.
Per al parament de la porta s'han considerat les següents solucions:
- Dues planxes d'acer esmaltat amb o sense espiell
- Barrots de tub d'acer
- Lamel·les horitzontals fixes d'acer
CARACTERÍSTIQUES GENERALS:
Ha de tenir un aspecte uniforme i sense defectes superficials. No ha de tenir esquerdes ni despreniments en el recobriment.
Tots els perfils que conformen el bastiment i el bastidor de la porta han de ser del material indicat a la descripció del mateix.
L'element ha de complir les condicions subjectives requerides per la DF.
La qualitat de la manyeria col·locada no ha de ser inferior a la qualitat inicial de la porta.
Les frontisses han d'estar formades per dues peces d'acer protegit contra la corrosió i connectades per mitjà de volandera. Les pales han de tenir superfície plana i paral·lela a l'eix de gir, sense rebaves ni defectes i amb forats aixamfranats per a la fixació al bastiment i a la fulla.
Fixacions entre la fulla i el bastiment: 3 punts
Els perfils s'han d'obtenir mitjançant operacions de perfilat, plegat o conformat en fred.
El seu aspecte ha de ser uniforme i no ha de tenir esquerdes, marques, ondulacions apreciables a simple vista, ni d'altres defectes superficials.
Han de presentar a tota la seva llargària una secció recta uniforme.
La unió entre els perfils s'ha de fer per soldadura (per arc o per resistència), i s'admet també la unió amb cargols autoroscants en el cas que el perfil porti plecs fets especialment per a allotjar la rosca del cargol.
Si l'element pot formar part d'un tancament exterior, ha d'estar classificat en funció de la permeabilitat a l'aire segons UNE-EN 12207 en alguna de les classes següents, assajat segons UNE-EN 1026: Classe 0, 1, 2, 3 o 4
Guix de la paret dels perfils:
- Perfils bàsics: >= 0,8 mm
- Perfils complementaris: >= 0,4 mm
Recobriment de galvanitzat (UNE-EN 10142):

- Z 275: perfils bàsics conformats a partir de banda galvanitzada
- Z 200: perfils complementaris conformats a partir de banda galvanitzada
- Z 200: perfils conformats a partir de banda prepintada
La unió entre els perfils del bastidor i les planxes, barrots o lamel·les del parament de la porta s'ha de fer mitjançant soldadura.
Totes les soldadures s'han de tractar amb pintura de pols de zinc amb resines (galvanitzat en fred).
Separació entre els perfils del bastidor: <= 600 mm
Fletxa dels perfils del bastidor ( L = llum ): <= L/100
Gruix de les potes d'ancoratge del bastiment: >= 1 mm
Distància entre potes d'ancoratge del bastiment: <= 600 mm
Distància potes d'ancoratge-extrems del bastiment: <= 200 mm
Tarja fixa de ventilació:
- Alçària de la tarja de ventilació: <= 300 mm
- Distància tarja ventilació-cantells: >= 150 mm
Espiell superior:
- Distància espiell-cantells: >= 150 mm
Els sistemes de fixació del vidre, els dispositius de drenatge, de segellat, de calçat i les mides i franquícies del galze, han de complir les indicacions de l'UNE 85222.
Dimensions:
- Porta d'una fulla
- Ample de la fulla: <= 120 cm
- Portes de dues fulles
- Ample de la fulla: >= 60 cm
Toleràncies:
- Dimensions: ± 1 mm
- Gruix de la fulla: ± 0,5 mm
- Rectitud d'arestes: ± 1 mm/m
- Planor: ± 1 mm/m
- Torsió del perfil: ± 1°/m
- Les toleràncies dels perfils han de complir les especificacions de l'UNE 36-579.
PARAMENT AMB PLANXES D'ACER:
Les planxes d'acer han de tenir el gruix indicat a la DT i han de poder resistir sense superar les deformacions màximes admisibles, els esforços al que es veuran sotmeses.
No ha de tenir defectes superficials, com és ara cops, bonys, ratlles o defectes de l'acabat superficial.
El color ha de ser uniforme, i si l'acabat és plastificat o prelacat, ha de coincidir amb l'indicat a la DT o el triat per la DF.
En les portes amb espiell, aquest ha d'incloure un element vidrat transparent, col·locat a l'alçada de la vista, que ha de complir les condicions exigides a la resta de la fulla.
Toleràncies:
- Les toleràncies de la planxa han de complir les especificacions de l'UNE-EN 10143.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.
Si el material ha de ser component del tancament exterior d'un espai habitable, el fabricant ha de declarar els valors de les propietats higrotèrmiques d'acord amb l'especificat en l'apartat 4.1 del CTE DB HE 1.
Emmagatzematge: Protegit de les pluges, els focus d'humitat i les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 8 de mayo de 1976, por la que se aprueba la Norma Tecnológica de la Edificación. NTE-PPA/1976: Particiones. Puertas. Acero.
UNE-EN 12207:2000 Ventanas y puertas. Permeabilidad al aire. Clasificación.
* UNE 36579:1986 Perfiles de acero al carbono conformados en frío para ventanas y balconeras. Características y condiciones generales de inspección y suministro.

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAF MATERIALS PER A TANCAMENTS PRACTICABLES D'ALUMINI

## BAF4- FINESTRA PRACTICABLE D'ALUMINI

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAF4-1RR0.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils que formen el bastiment i la fulla o fulles de l'element de tancament, i el bastiment de la caixa de persiana, si és el cas, llistons de vidre, perfils elastomèrics per a la subjecció del vidre, falques, i tots els elements necessaris per a la fixació i segellat del vidre, així com la ferramenta d'obertura i tancament.
CARACTERÍSTIQUES GENERALS:
Tots els perfils que conformen el bastiment i la fulla o fulles de l'element han de ser del material indicat a la descripció del mateix.
L'element ha de complir les condicions subjectives requerides per la DF.
El moment d'inèrcia dels perfils no solidaris amb l'obra ha de permetre que un cop sotmesos a les condicions previsibles més desfavorables, la seva fletxa sigui < 1/300 de la seva llargària.
La qualitat de la ferramenta no ha de rebaixar la qualitat que tingui el tancament practicable sense aquesta ferramenta.
Fixacions entre la fulla i el bastiment:
- Fulla batent i alçària de la fulla <= 120 cm: 2 punts
- Fulla batent i alçària de la fulla > 120 cm: 3 punts
Els sistemes de fixació del vidre, els dispositius de drenatge, de segellat, de calçat i les mides i franquícies del galze, han de complir les indicacions de l'UNE 85222.
Els perfils han de provenir de l'extrusió del totxo d'alumini.
El seu aspecte ha de ser uniforme, no ha de tenir esquerdes ni defectes superficials i ha de complir les especificacions de la norma UNE-EN 12020-1.
La unió entre els perfils s'ha de fer per soldadura, reblons d'aliatge d'alumini, cargols autorroscants o cargols amb rosca mètrica.
Gruix de la paret dels perfils: >= 1,5 mm
Tipus d'alumini:
- Aliatge EN AW-6060 (UNE 38350)
- Aliatge EN AW-6063 (UNE 38337)
Càrrega de trencament (per a un gruix <= 25 mm, UNE 38337): >= 130 N/mm2
Toleràncies:
- Les toleràncies dels perfils han de complir les especificacions de l'UNE-EN 12020-2.
FINESTRES O BALCONERES:
Permeabilitat a l'aire (UNE-EN 1026): fuga per superfície total i per juntsd'obertura a una sobrepressió de 100 Pa. L'element classificat segons UNE-EN 12207, ha de complir algun dels dos valors següents:
- Classe 0: Sense classificar
- Classe 1: (assaig a 150 Pa): <= 50 m3/hm2 i <= 12,50 m3/hm

- Classe 2: (assaig a 300 Pa): <= 27 m3/hm2 i <= 6,75 m3/hm
- Classe 3: (assaig a 600 Pa): <= 9 m3/hm2 i <= 2,25 m3/hm
- Classe 4: (assaig a 600 Pa): <= 3 m3/hm2 i <= 0,75 m3/hm

Estanquitat a l'aigua (UNE-EN 1027): Ha de complir els valors corresponents a la seva classe segons UNE-EN 12208

Resistència al vent (UNE-EN 12211): Ha de complir els valors corresponents a la seva classe segons UNE-EN 12210

Ha d'incorporar tots els mecanismes (pomel·les, frontisses, etc.) pel seu funcionament correcte, obertura i tancament, i els tapajunts.

Les finestres o balconeres han de ser considerades aptes en fer tots i cadascun dels assaigs de maltractament (UNE 85203) i (UNE 85215) i els assaigs del dispositiu de situació i obertura restringida de les mateixes normes.

Sistema de tancament:

- Una fulla batent i alçària de la fulla <= 120 cm: 2 punts
- Una fulla batent i alçària de la fulla > 120 cm: 3 punts
- Dues fulles batents: 3 punts
- Corredissa: 1 punt

La part inferior del bastiment i del travesser inferior de les fulles, han de tenir perforacions que permetin la sortida de l'aigua infiltrada o condensada.

ELEMENTS D'ALUMINI ANODITZAT:

Han d'estar protegits superficialment amb una capa d'òxid d'alumini, segellada posteriorment.

Anodització dels perfils (UNE-EN 12373-1): >= 15 micròmetres

Qualitat mitja total del segellat (mètode de les gotes colorants UNE-EN 12373-4): <= 2

Els perfils anoditzats han d'estar lliures de defectes en les superfícies significatives quan s'observen a una distància mínima de 5 m en aplicacions exteriors, de 3 m en aplicacions interiors o de 0,5 m en aplicacions decoratives.

ELEMENTS D'ALUMINI LACAT:

Han d'estar protegits superficialment amb una capa de lacat, obtinguda per algun dels procediments següents:

- Vernís humit: Amb vernís de poliuretà o de resines acríliques
- Recobriment amb pols: De poliuretà, de polièster o acrílica

Lacat del perfil: >= 60 micres

ELEMENTS AMB TRENCAMENT DE PONT TÈRMIC:

Han de complir les indicacions de la norma UNE-EN 14024.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.

Si el material ha de ser component de les obertures del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats següents:

- Transmitància tèrmica U (W/m2K)
- Absortivitat

Emmagatzematge: Protegit de les pluges, els focus d'humitat i les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

NORMATIVA GENERAL:

* UNE 38337:2001 Aluminio y aleaciones de aluminio para forja. Serie 6000. ALMGSI. Aleación en AW-6063/EN, AW-ALMG0,7SI.
* UNE 38350:2001 Aluminio y aleaciones de aluminio para forja. Grupo Al-Mg-Si. Aleación L-3442 Al-0,5MgSi.
* UNE-EN 12020-1:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW-6063. Parte 1: Condiciones técnicas de inspección y suministro.
* UNE-EN 12020-2:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW6063. Parte 2: Tolerancias dimensionales y de forma.
* UNE-EN 12373-1:2002 Aluminio y aleaciones de aluminio. Anodización. Parte 1: Método de especificación de las características de los recubrimientos decorativos y protectores obtenidos por oxidación anódica del aluminio.
* UNE-EN 14024:2006 Perfiles metálicos con barreras térmicas. Comportamiento mecánico. Requisitos, pruebas y métodos para la evaluación.
* UNE-EN 12207:2000 Ventanas y puertas. Permeabilidad al aire. Clasificación.
* UNE-EN 12208:2000 Puertas y ventanas. Estanqueidad al agua. Clasificación.
* UNE-EN 12210:2000 Ventanas y puertas. Resistencia al viento. Clasificación.

FINESTRES O BALCONERES:
* UNE 85201:1980 Ventanas. Terminologia y definiciones.
* UNE 85222:1985 Ventanas. Acristalamiento y métodos de montaje.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Els perfils d'alumini hauran de complir les exigències incloses en el reglament:
- Perfil lacat: reglament de la Marca Qualicoat
- Perfil anoditzat: reglament de la Marca EWWA-EURAS
En el cas de disposar de marcatge CE, aquest haurà d'incloure:
- Número d'identificació del organisme de certificació
- Nom, marca comercial i direcció registrada del fabricant
- Els dos últims dígits de l'any en que es fixa el marcatge
- Descripció del producte
- Número del certificat de conformitat CE
- Referència a la UNE-EN 14351-1
- Informació sobre les característiques essencials de la taula ZA.1 de la UNE-EN 14351-1
En el cas de productes amb el sistema 1: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, l'organisme de certificació ha d'emetre un certificat de conformitat (certificat CE de conformitat), que autoritza al fabricant la fixació del Marcatge CE. Aquest certificat haurà d'incloure:
- Nom, direcció i número d'identificació de l'organisme de certificació
- Nom i direcció del fabricant
- Descripció del producte
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Nom i càrrec de la persona que signa el certificat
- Número del certificat
- Condicions i duració del certificat
A més, el fabricant elaborarà una declaració de conformitat (declaració CE de conformitat) que inclourà:
- Nom i direcció del fabricant
- Nom i direcció de l'organisme de certificació
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Número del certificat de conformitat CE associat
- Nom i càrrec de la persona que signa el certificat
En el cas de productes amb el sistema 3: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, el fabricant ha de preparar i mantenir una declaració de conformitat (declaració CE de conformitat) que autoritza al fabricant la fixació del Marcatge CE. Haurà d'incloure:
- Nom i direcció del fabricant
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Nom i direcció de l'organisme de certificació
- Nom i càrrec de la persona que signa el certificat
- Condicions específiques aplicables a la utilització del producte
OPERACIONS DE CONTROL:
Es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat, corresponents al perfil metàl·lic:
- Aspecte (UNE-EN 12020-1)
- Tipus d'alumini (UNE-EN 573-3)
- Duresa Brinell (UNE-EN ISO 6506-1)
- Càrrega de ruptura (UNE-EN 10002-1)
- Perfil anoditzat: Anodització del perfil (UNE-EN 12373-1)
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
El contractista haurà de garantir per escrit que l'element de tancament, compleix les condicions exigides al plec, i en particular les següents:
- Permeabilitat a l'aire (UNE-EN 12207)
- Estanquitat a l'aigua (UNE-EN 12208)
- Resistència al vent (UNE-EN 12210)
- Perfil anoditzat: Qualitat del segellat (UNE-EN 12373-4)

- Característiques geomètriques (UNE-EN 12020-2):
- Amplària
- Llargària
- Escairat del tall dels extrems
- Rectitud d'arestes
- Torsió del perfil
- Secció corbada
- Planor
- Angles
- Gruix

Si el material disposa de Marca AENOR o Marcatge CE, es podrà prescindir de la presentació dels assaigs de control descrits a l'UNE-EN 14351-1.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

El sistema d'avaluació de la conformitat que s'ha d'aplicar, segons UNE-EN 14351-1, és el sistema 3, que suposa:

- Realització d'assaigs de tipus inicial (ETI) en laboratoris notificats, sobre les característiques indicades a la taula ZA.3b de l'annex ZA de l'UNE-EN 14351-1.
- Tenir implantat un sistema de Control de Producció a Fàbrica (CPF), en particular per a les característiques pertinents que declari el fabricant en el seu Marcatge CE.
- Elaboració de la Declaració CE de Conformitat, que haurà de signar el fabricant, i per la qual es responsabilitza de la veracitat del marcatge

No s'acceptarà cap element de tancament que no arribi acompanyat dels certificats de garantia indicats. Es rebutjarà el material que no sigui adequat a les especificacions del projecte, que no tingui la geometria especificada segons la DT, o que no tingui les prestacions especificades en el projecte.

No s'acceptarà el material que tingui unes toleràncies incompatibles amb l'estructura portant. Tampoc s'acceptarà si hi ha un incompliment de les especificacions tècniques detallades en el plec de condicions tècniques particulars, o quan hi hagi un incompliment dels criteris i recomanacions tècniques dels fabricants del sistema en l'ús i posada en obra dels elements.

---

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAF MATERIALS PER A TANCAMENTS PRACTICABLES D'ALUMINI

### BAF5- PORTA D'ALUMINI

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAF5-136A.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils que formen el bastiment i la fulla o fulles de l'element de tancament, i el bastiment de la caixa de persiana, si és el cas, llistons de vidre, perfils elastomèrics per a la subjecció del vidre, falques, i tots els elements necessaris per a la fixació i segellat del vidre, així com la ferramenta d'obertura i tancament.
CARACTERÍSTIQUES GENERALS:
Tots els perfils que conformen el bastiment i la fulla o fulles de l'element han de ser del material indicat a la descripció del mateix.
L'element ha de complir les condicions subjectives requerides per la DF.
El moment d'inèrcia dels perfils no solidaris amb l'obra ha de permetre que un cop sotmesos a les condicions previsibles més desfavorables, la seva fletxa sigui < 1/300 de la seva llargària.
La qualitat de la ferramenta no ha de rebaixar la qualitat que tingui el tancament practicable sense aquesta ferramenta.
Fixacions entre la fulla i el bastiment:
- Fulla batent i alçària de la fulla <= 120 cm: 2 punts
- Fulla batent i alçària de la fulla > 120 cm: 3 punts
Els sistemes de fixació del vidre, els dispositius de drenatge, de segellat, de calçat i les mides i franquícies del galze, han de complir les indicacions de l'UNE 85222.
Els perfils han de provenir de l'extrusió del totxo d'alumini.
El seu aspecte ha de ser uniforme, no ha de tenir esquerdes ni defectes superficials i ha de complir les especificacions de la norma UNE-EN 12020-1.
La unió entre els perfils s'ha de fer per soldadura, reblons d'aliatge d'alumini, cargols autorroscants o cargols amb rosca mètrica.
Gruix de la paret dels perfils: >= 1,5 mm
Tipus d'alumini:
- Aliatge EN AW-6060 (UNE 38350)
- Aliatge EN AW-6063 (UNE 38337)
Càrrega de trencament (per a un gruix <= 25 mm, UNE 38337): >= 130 N/mm2
Toleràncies:
- Les toleràncies dels perfils han de complir les especificacions de l'UNE-EN 12020-2.
PORTES:
Si l'element pot formar part d'un tancament exterior, ha d'estar classificat en funció de la permeabilitat a l'aire segons UNE-EN 12207 en alguna de les classes següents, assajat segons UNE-EN 1026: Classe 0, 1, 2, 3 o 4
ELEMENTS D'ALUMINI ANODITZAT:
Han d'estar protegits superficialment amb una capa d'òxid d'alumini, segellada posteriorment.
Anodització dels perfils (UNE-EN 12373-1): >= 15 micròmetres
Qualitat mitja total del segellat (mètode de les gotes colorants UNE-EN 12373-4): <= 2
Els perfils anoditzats han d'estar lliures de defectes en les superfícies significatives quan s'observen a una distància mínima de 5 m en aplicacions exteriors, de 3 m en aplicacions interiors o de 0,5 m en aplicacions decoratives.
ELEMENTS D'ALUMINI LACAT:
Han d'estar protegits superficialment amb una capa de lacat, obtinguda per algun dels procediments següents:
- Vernís humit: Amb vernís de poliuretà o de resines acríliques
- Recobriment amb pols: De poliuretà, de polièster o acrílica
Lacat del perfil: >= 60 micres
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.
Si el material ha de ser component de les obertures del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats següents:
- Transmitància tèrmica U (W/m2K)
- Absortivitat
Emmagatzematge: Protegit de les pluges, els focus d'humitat i les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:

* UNE 38337:2001 Aluminio y aleaciones de aluminio para forja. Serie 6000. ALMGSI. Aleación en AW-6063/EN, AW-ALMG0,7SI.
* UNE 38350:2001 Aluminio y aleaciones de aluminio para forja. Grupo Al-Mg-Si. Aleación L-3442 Al-0,5MgSi.
* UNE-EN 12020-1:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW-6063. Parte 1: Condiciones técnicas de inspección y suministro.
* UNE-EN 12020-2:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW6063. Parte 2: Tolerancias dimensionales y de forma.
* UNE-EN 12373-1:2002 Aluminio y aleaciones de aluminio. Anodización. Parte 1: Método de especificación de las características de los recubrimientos decorativos y protectores obtenidos por oxidación anódica del aluminio.
* UNE-EN 14024:2006 Perfiles metálicos con barreras térmicas. Comportamiento mecánico. Requisitos, pruebas y métodos para la evaluación.
* UNE-EN 12207:2000 Ventanas y puertas. Permeabilidad al aire. Clasificación.
* UNE-EN 12208:2000 Puertas y ventanas. Estanqueidad al agua. Clasificación.
* UNE-EN 12210:2000 Ventanas y puertas. Resistencia al viento. Clasificación.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

Els perfils d'alumini hauran de complir les exigències incloses en el reglament:
- Perfil lacat: reglament de la Marca Qualicoat
- Perfil anoditzat: reglament de la Marca EWWA-EURAS

En el cas de disposar de marcatge CE, aquest haurà d'incloure:
- Número d'identificació del organisme de certificació
- Nom, marca comercial i direcció registrada del fabricant
- Els dos últims dígits de l'any en que es fixa el marcatge
- Descripció del producte
- Número del certificat de conformitat CE
- Referència a la UNE-EN 14351-1
- Informació sobre les característiques essencials de la taula ZA.1 de la UNE-EN 14351-1

En el cas de productes amb el sistema 1: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, l'organisme de certificació ha d'emetre un certificat de conformitat (certificat CE de conformitat), que autoritza al fabricant la fixació del Marcatge CE. Aquest certificat haurà d'incloure:
- Nom, direcció i número d'identificació de l'organisme de certificació
- Nom i direcció del fabricant
- Descripció del producte
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Nom i càrrec de la persona que signa el certificat
- Número del certificat
- Condicions i duració del certificat

A més, el fabricant elaborarà una declaració de conformitat (declaració CE de conformitat) que inclourà:
- Nom i direcció del fabricant
- Nom i direcció de l'organisme de certificació
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Número del certificat de conformitat CE associat
- Nom i càrrec de la persona que signa el certificat

En el cas de productes amb el sistema 3: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, el fabricant ha de preparar i mantenir una declaració de conformitat (declaració CE de conformitat) que autoritza al fabricant la fixació del Marcatge CE. Haurà d'incloure:
- Nom i direcció del fabricant
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Nom i direcció de l'organisme de certificació
- Nom i càrrec de la persona que signa el certificat
- Condicions específiques aplicables a la utilització del producte

OPERACIONS DE CONTROL:

Es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat, corresponents al perfil metàl·lic:

- Aspecte (UNE-EN 12020-1)
- Tipus d'alumini (UNE-EN 573-3)
- Duresa Brinell (UNE-EN ISO 6506-1)
- Càrrega de ruptura (UNE-EN 10002-1)
- Perfil anoditzat: Anodització del perfil (UNE-EN 12373-1)

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
El contractista haurà de garantir per escrit que l'element de tancament, compleix les condicions exigides al plec, i en particular les següents:
- Permeabilitat a l'aire (UNE-EN 12207)
- Estanquitat a l'aigua (UNE-EN 12208)
- Resistència al vent (UNE-EN 12210)
- Perfil anoditzat: Qualitat del segellat (UNE-EN 12373-4)
- Característiques geomètriques (UNE-EN 12020-2):
- Amplària
- Llargària
- Escairat del tall dels extrems
- Rectitud d'arestes
- Torsió del perfil
- Secció corbada
- Planor
- Angles
- Gruix

Si el material disposa de Marca AENOR o Marcatge CE, es podrà prescindir de la presentació dels assaigs de control descrits a l'UNE-EN 14351-1.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
El sistema d'avaluació de la conformitat que s'ha d'aplicar, segons UNE-EN 14351-1, és el sistema 3, que suposa:
- Realització d'assaigs de tipus inicial (ETI) en laboratoris notificats, sobre les característiques indicades a la taula ZA.3b de l'annex ZA de l'UNE-EN 14351-1.
- Tenir implantat un sistema de Control de Producció a Fàbrica (CPF), en particular per a les característiques pertinents que declari el fabricant en el seu Marcatge CE.
- Elaboració de la Declaració CE de Conformitat, que haurà de signar el fabricant, i per la qual es responsabilitza de la veracitat del marcatge

No s'acceptarà cap element de tancament que no arribi acompanyat dels certificats de garantia indicats. Es rebutjarà el material que no sigui adequat a les especificacions del projecte, que no tingui la geometria especificada segons la DT, o que no tingui les prestacions especificades en el projecte.
No s'acceptarà el material que tingui unes toleràncies incompatibles amb l'estructura portant.
Tampoc s'acceptarà si hi ha un incompliment de les especificacions tècniques detallades en el plec de condicions tècniques particulars, o quan hi hagi un incompliment dels criteris i recomanacions tècniques dels fabricants del sistema en l'ús i posada en obra dels elements.

---

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAF MATERIALS PER A TANCAMENTS PRACTICABLES D'ALUMINI

### BAF6- TANCAMENT FIX D'ALUMINI

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAF6-1VDT,BAF6-1VDN.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils que formen el bastiment i la fulla o fulles de l'element de tancament, i el bastiment de la caixa de persiana, si és el cas, llistons de vidre, perfils elastomèrics per a la subjecció del vidre, falques, i tots els elements necessaris per a la fixació i segellat del vidre, així com la ferramenta d'obertura i tancament.
CARACTERÍSTIQUES GENERALS:
Tots els perfils que conformen el bastiment i la fulla o fulles de l'element han de ser del material indicat a la descripció del mateix.
L'element ha de complir les condicions subjectives requerides per la DF.
El moment d'inèrcia dels perfils no solidaris amb l'obra ha de permetre que un cop sotmesos a les condicions previsibles més desfavorables, la seva fletxa sigui < 1/300 de la seva llargària.
La qualitat de la ferramenta no ha de rebaixar la qualitat que tingui el tancament practicable sense aquesta ferramenta.
Fixacions entre la fulla i el bastiment:
- Fulla batent i alçària de la fulla <= 120 cm: 2 punts
- Fulla batent i alçària de la fulla > 120 cm: 3 punts
Els sistemes de fixació del vidre, els dispositius de drenatge, de segellat, de calçat i les mides i franquícies del galze, han de complir les indicacions de l'UNE 85222.
Els perfils han de provenir de l'extrusió del totxo d'alumini.
El seu aspecte ha de ser uniforme, no ha de tenir esquerdes ni defectes superficials i ha de complir les especificacions de la norma UNE-EN 12020-1.
La unió entre els perfils s'ha de fer per soldadura, reblons d'aliatge d'alumini, cargols autorroscants o cargols amb rosca mètrica.
Gruix de la paret dels perfils: >= 1,5 mm
Tipus d'alumini:
- Aliatge EN AW-6060 (UNE 38350)
- Aliatge EN AW-6063 (UNE 38337)
Càrrega de trencament (per a un gruix <= 25 mm, UNE 38337): >= 130 N/mm2
Toleràncies:
- Les toleràncies dels perfils han de complir les especificacions de l'UNE-EN 12020-2.
FINESTRES O BALCONERES:
Permeabilitat a l'aire (UNE-EN 1026): fuga per superfície total i per juts d'obertura a una sobrepressió de 100 Pa. L'element classificat segons UNE-EN 12207, ha de complir algun dels dos valors següents:
- Classe 0: Sense classificar
- Classe 1: (assaig a 150 Pa): <= 50 m3/hm2 i <= 12,50 m3/hm
- Classe 2: (assaig a 300 Pa): <= 27 m3/hm2 i <= 6,75 m3/hm
- Classe 3: (assaig a 600 Pa): <= 9 m3/hm2 i <= 2,25 m3/hm
- Classe 4: (assaig a 600 Pa): <= 3 m3/hm2 i <= 0,75 m3/hm
Estanquitat a l'aigua (UNE-EN 1027): Ha de complir els valors corresponents a la seva classe segons UNE-EN 12208
Resistència al vent (UNE-EN 12211): Ha de complir els valors corresponents a la seva classe segons UNE-EN 12210
Ha d'incorporar tots els mecanismes (pomel·les, frontisses, etc.) pel seu funcionament correcte, obertura i tancament, i els tapajunts.
Les finestres o balconeres han de ser considerades aptes en fer tots i cadascun dels assaigs de maltractament (UNE 85203) i (UNE 85215) i els assaigs del dispositiu de situació i obertura restringida de les mateixes normes.
Sistema de tancament:

- Una fulla batent i alçària de la fulla <= 120 cm:  2 punts
- Una fulla batent i alçària de la fulla > 120 cm:  3 punts
- Dues fulles batents:  3 punts
- Corredissa:  1 punt

La part inferior del bastiment i del travesser inferior de les fulles, han de tenir perforacions que permetin la sortida de l'aigua infiltrada o condensada.

ELEMENTS D'ALUMINI ANODITZAT:

Han d'estar protegits superficialment amb una capa d'òxid d'alumini, segellada posteriorment.

Anodització dels perfils (UNE-EN 12373-1):  >= 15 micròmetres

Qualitat mitja total del segellat (mètode de les gotes colorants UNE-EN 12373-4):  <= 2

Els perfils anoditzats han d'estar lliures de defectes en les superfícies significatives quan s'observen a una distància mínima de 5 m en aplicacions exteriors, de 3 m en aplicacions interiors o de 0,5 m en aplicacions decoratives.

ELEMENTS D'ALUMINI LACAT:

Han d'estar protegits superficialment amb una capa de lacat, obtinguda per algun dels procediments següents:

- Vernís humit: Amb vernís de poliuretà o de resines acríliques
- Recobriment amb pols: De poliuretà, de polièster o acrílica

Lacat del perfil:  >= 60 micres

ELEMENTS AMB TRENCAMENT DE PONT TÈRMIC:

Han de complir les indicacions de la norma UNE-EN 14024.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.

Si el material ha de ser component de les obertures del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats següents:

- Transmitància tèrmica U (W/m2K)
- Absortivitat

Emmagatzematge: Protegit de les pluges, els focus d'humitat i les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

NORMATIVA GENERAL:

* UNE 38337:2001 Aluminio y aleaciones de aluminio para forja. Serie 6000. ALMGSI. Aleación en AW-6063/EN, AW-ALMG0,7SI.
* UNE 38350:2001 Aluminio y aleaciones de aluminio para forja. Grupo Al-Mg-Si. Aleación L-3442 Al-0,5MgSi.
* UNE-EN 12020-1:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW-6063. Parte 1: Condiciones técnicas de inspección y suministro.
* UNE-EN 12020-2:2001 Aluminio y aleaciones de aluminio. Perfiles extruídos especiales en aleaciones en AW-6060 y en AW6063. Parte 2: Tolerancias dimensionales y de forma.
* UNE-EN 12373-1:2002 Aluminio y aleaciones de aluminio. Anodización. Parte 1: Método de especificación de las características de los recubrimientos decorativos y protectores obtenidos por oxidación anódica del aluminio.
* UNE-EN 14024:2006 Perfiles metálicos con barreras térmicas. Comportamiento mecánico. Requisitos, pruebas y métodos para la evaluación.
* UNE-EN 12207:2000 Ventanas y puertas. Permeabilidad al aire. Clasificación.
* UNE-EN 12208:2000 Puertas y ventanas. Estanqueidad al agua. Clasificación.
* UNE-EN 12210:2000 Ventanas y puertas. Resistencia al viento. Clasificación.

FINESTRES O BALCONERES:

* UNE 85201:1980 Ventanas. Terminologia y definiciones.
* UNE 85222:1985 Ventanas. Acristalamiento y métodos de montaje.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

Els perfils d'alumini hauran de complir les exigències incloses en el reglament:

- Perfil lacat: reglament de la Marca Qualicoat
- Perfil anoditzat: reglament de la Marca EWWA-EURAS

En el cas de disposar de marcatge CE, aquest haurà d'incloure:

- Número d'identificació del organisme de certificació
- Nom, marca comercial i direcció registrada del fabricant
- Els dos últims dígits de l'any en que es fixa el marcatge
- Descripció del producte

- Número del certificat de conformitat CE
- Referència a la UNE-EN 14351-1
- Informació sobre les característiques essencials de la taula ZA.1 de la UNE-EN 14351-1

En el cas de productes amb el sistema 1: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, l'organisme de certificació ha d'emetre un certificat de conformitat (certificat CE de conformitat), que autoritza al fabricant la fixació del Marcatge CE. Aquest certificat haurà d'incloure:

- Nom, direcció i número d'identificació de l'organisme de certificació
- Nom i direcció del fabricant
- Descripció del producte
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Nom i càrrec de la persona que signa el certificat
- Número del certificat
- Condicions i duració del certificat

A més, el fabricant elaborarà una declaració de conformitat (declaració CE de conformitat) que inclourà:

- Nom i direcció del fabricant
- Nom i direcció de l'organisme de certificació
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Condicions específiques aplicables a la utilització del producte
- Número del certificat de conformitat CE associat
- Nom i càrrec de la persona que signa el certificat

En el cas de productes amb el sistema 3: quan s'aconsegueix la complementació de les condicions de l'annex ZA de la UNE-EN 14351-1, el fabricant ha de preparar i mantenir una declaració de conformitat (declaració CE de conformitat) que autoritza al fabricant la fixació del Marcatge CE. Haurà d'incloure:

- Nom i direcció del fabricant
- Descripció del producte i còpia de la informació que acompanya al marcatge CE
- Disposicions amb les que el producte és conforme
- Nom i direcció de l'organisme de certificació
- Nom i càrrec de la persona que signa el certificat
- Condicions específiques aplicables a la utilització del producte

OPERACIONS DE CONTROL:

Es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat, corresponents al perfil metàl·lic:

- Aspecte (UNE-EN 12020-1)
- Tipus d'alumini (UNE-EN 573-3)
- Duresa Brinell (UNE-EN ISO 6506-1)
- Càrrega de ruptura (UNE-EN 10002-1)
- Perfil anoditzat: Anodització del perfil (UNE-EN 12373-1)

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.

El contractista haurà de garantir per escrit que l'element de tancament, compleix les condicions exigides al plec, i en particular les següents:

- Permeabilitat a l'aire (UNE-EN 12207)
- Estanquitat a l'aigua (UNE-EN 12208)
- Resistència al vent (UNE-EN 12210)
- Perfil anoditzat: Qualitat del segellat (UNE-EN 12373-4)
- Característiques geomètriques (UNE-EN 12020-2):
- Amplària
- Llargària
- Escairat del tall dels extrems
- Rectitud d'arestes
- Torsió del perfil
- Secció corbada
- Planor
- Angles
- Gruix

Si el material disposa de Marca AENOR o Marcatge CE, es podrà prescindir de la presentació dels assaigs de control descrits a l'UNE-EN 14351-1.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
El sistema d'avaluació de la conformitat que s'ha d'aplicar, segons UNE-EN 14351-1, és el sistema 3, que suposa:
- Realització d'assaigs de tipus inicial (ETI) en laboratoris notificats, sobre les característiques indicades a la taula ZA.3b de l'annex ZA de l'UNE-EN 14351-1.
- Tenir implantat un sistema de Control de Producció a Fàbrica (CPF), en particular per a les característiques pertinents que declari el fabricant en el seu Marcatge CE.
- Elaboració de la Declaració CE de Conformitat, que haurà de signar el fabricant, i per la qual es responsabilitza de la veracitat del marcatge
No s'acceptarà cap element de tancament que no arribi acompanyat dels certificats de garantia indicats. Es rebutjarà el material que no sigui adequat a les especificacions del projecte, que no tingui la geometria especificada segons la DT, o que no tingui les prestacions especificades en el projecte.
No s'acceptarà el material que tingui unes toleràncies incompatibles amb l'estructura portant.
Tampoc s'acceptarà si hi ha un incompliment de les especificacions tècniques detallades en el plec de condicions tècniques particulars, o quan hi hagi un incompliment dels criteris i recomanacions tècniques dels fabricants del sistema en l'ús i posada en obra dels elements.

---

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAN BASTIMENTS DE BASE PER A FINESTRES, BALCONERES, PORTES I ARMARIS

### BAN6- BASTIMENT DE BASE DE TUB D'ACER

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAN6-1WGS,BAN6-1WGT.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils d'acer galvanitzat que formen el bastiment de base de la finestra o balconera.
CARACTERÍSTIQUES GENERALS:
Els perfils han de provenir de la conformació progressiva d'una faixa d'acer.
Totes les soldadures han d'estar recobertes amb pintura de pols de zinc amb resines (galvanitzat en fred).
Han de tenir un aspecte uniforme, sense esquerdes, defectes supeficials, ni despreniments en el recobriment.
La unió entre perfils s'ha de fer per algun dels procediments següents:
- Soldadura: Per arc o per resistència

- Cargols autoroscants: Només en el cas que el perfil tingui plecs fets especialment per a allotjar la seva rosca
Ha de portar incorporats elements d'ancoratge d'acer galvanitzat.
La secció i la forma dels perfils han de ser les indicades a la DT.
Protecció de galvanitzat (UNE 36130):
- Tub d'acer: >= 385 g/m2
- Soldadures: >= 346 g/m2
Separació entre ancoratges: <= 60 cm
Resistència a la tracció (per a un gruix < 5 mm): >= 330 N/mm2
Duresa Brinell (UNE-EN ISO 6506-1): > 65
Toleràncies:
- Llargària dels perfils: La corresponent a la taula 4 de l'UNE-EN 10219-2
- Gruix: El corresponent al gruix segons la taula 2 de l'UNE-EN 10219-2
- Dimensions secció: Les corresponents a la dimensió del costat segons la taula 2 de l'UNE-EN 10219-2
- Torsió (UNE-EN 10219-2): 2 mm+0,5 mm/m
- Planor (UNE-EN 10219-2 ): 0,15 % de la llargària total
- Angles (UNE-EN 10219-2): 1°
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.
Emmagatzematge: protegit de les pluges, els focus d'humitat i els impactes. No ha d'estar en contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAP BASTIMENTS PER A PORTES I ARMARIS

### BAP1- BASTIMENT DE FUSTA DE PI ROIG PER A PINTAR, PER A PORTES DE FULLES BATENTS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAP1-0WQN.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS

Conjunt de perfils de fusta que formen el marc de la porta o de l'armari.
CARACTERÍSTIQUES GENERALS:
La fusta no ha de tenir d'altres defectes que els que s'esmenten com a admissibles.
Els perfils no han de tenir nusos morts.
La fusta ha d'estar preparada amb dues mans de tractament protector contra els fongs i els insectes.
La unió dels perfils ha de ser emmetxada i encolada.
El moment d'inèrcia dels perfils no solidaris amb l'obra ha de permetre que un cop sotmesos a les condicions previsibles més desfavorables, la seva fletxa sigui < 1/300 de la seva llargària.
Ha de complir les condicions requerides per la DF.
Diàmetre dels nusos sans (UNE_EN 1310): <= 2/3 de la seva cara
Superfície de fongs blaus: <= 20% de la peça
Llargària de les fissures superficials produïdes per l'assecatge (UNE_EN 1310): <= 5% de la peça
Humitat dels perfils (H)
- Portes interiors: 7% <= H <= 11%
- Portes exteriors: 10% <= H <= 15%
Diferència d'humitat entre les fustes emmetxades (UNE 56529): < 6%
Resistència a l'arrancament de cargols (UNE 56851):
- Portes interiors:
- Resistència mitjana: 550 N
- Resistència mínima: 500 N
- Portes d'entrada a vivendes i portes exteriors:
- Resistència mitjana: 1000 N
- Resistència mínima: 900 N
Duresa mitjana (UNE 56-534): >= 1,3 N
Pes específic de la fusta al 12% d'humitat (UNE 56-531):
- Coníferes: > 4,5 kN/m3
- Frondoses: > 5,3 kN/m3
Toleràncies:
- Amplària: ± 1 mm
- Alçària: ± 3 mm
- Secció del perfil:
- Amplària: ± 2 mm
- Gruix: ± 2 mm
- Rectitud d'arestes: ± 2 mm/m
- Planor: ± 1 mm/m
- Angles: ± 1°
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les traves que calgui per tal d'assegurar l'escairat dels seus angles.
Emmagatzematge: protegit de les pluges, els focus d'humitat i els impactes. No ha d'estar en contacte amb el terra.
BASTIMENT PER A PORTES DE TANCAMENT:
Si el material ha de ser component de les obertures del tancament exterior d'un espai habitable, el fabricant ha de declarar, com a mínim, els valors per les propietats següents:
- Transmitància tèrmica U (W/m2K)
- Absortivitat
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* UNE 56802:1989 Puertas de madera. Medidas y tolerancias.
* UNE 56803:1990 Puertas de madera. Especificaciones técnicas.

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAQ FULLES I BLOCKS DE FUSTA PER A PORTES I ARMARIS

## BAQ5- FULLA BATENT PER A PORTA INTERIOR AMB ACABAT DE TAULER DE MELAMINA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAQ5-2IAU.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils de fusta, plafons, motllures i material de rebliment que formen la fulla de la porta.
S'han considerat els tipus de fulla següents:
- De cares llises
- Amb motllura
- Rebaixada amb plafons
- Amb galzes per a vidre
- Amb galzes per a vidre i barretes

S'han considerat els tipus d'acabat següents:
- De roure per a envernissar
- De sapel·li per a envernissar
- De fusta per a pintar

S'han considerat els tipus d'estructures interiors següents:
- De cartró
- De fusta
- Massisa

CARACTERÍSTIQUES GENERALS:
Les fulles no han de tenir defectes superficials, com ara cops, escrostonaments d'aresta, etc.
La fusta no ha de tenir altres defectes que els citats com a admissibles.
Els perfils no han de tenir nusos morts.
La fusta ha d'estar preparada amb dues mans de tractament protector contra els fongs i els insectes.
La unió dels perfils ha de ser emmetxada i encolada.
Si el parament d'acabat és fet amb plafó de partícules o amb plafó de fibres de densitat alta, la fulla ha de ser xapada.
El llistó lateral ha de tenir un reforç que permeti la fixació del pany i dels seus accesoris.
Ha de complir les condicions requerides per la DF.
Humitat dels perfils (H) (UNE 56-529): 7% <= H <= 11%
Diferència d'humitat entre les fustes emmetxades (UNE 56529): < 6%
Pes específic de la fusta al 12% d'humitat (UNE 56-531):
- Coníferes: > 4,5 kN/m3
- Frondoses: > 5,3 kN/m3

Gruix del plafó d'acabat:
- Amb el plafó de partícules: >= 4 mm
- Amb el plafó contraplacat: >= 3 mm
- Amb plafó de fibres de densitat alta: >= 2,5 mm

Eixamplament del llistó per a la fixació del pany (UNE 56-801):
- Llargària: >= 30 cm
- Amplària: >= 7 cm

Duresa mitjana (UNE 56-534): >= 13 N
Amplària dels perfils del bastidor: >= 30 mm
Balcament de la fulla (UNE 56-824): <= 6 mm
Curvatura de la fulla (UNE 56-824):

- Bancades: <= 6 mm
- Testeres: <= 2 mm
També ha de complir les característiques físiques indicades a la norma UNE 56-803, apartats 4.2.6. a 4.2.14.
Toleràncies:
- Amplària: ± 1 mm
- Alçària: ± 2 mm
- Gruix: ± 1 mm
- Rectitud de les arestes: ± 2 mm/m
- Planor: ± 1 mm/m
- Escairat (UNE 56-821): <= 2 mm
- Gruix de les fulles: ± 1 mm
- Distància de la motllura respecte el cantell de la fulla: ± 1 mm
ESTRUCTURA INTERIOR DE CARTRÓ:
El material de rebliment de l'ànima de la fulla ha de ser paper, cartró llis o de cartró ondulat.
Gramatge del material de rebliment:
- Amb paper: >= 250 g/m2
- Amb cartró: >= 550 g/m2
Superfície de l'alvèol del material de rebliment:
- Amb paper o cartró llis: <= 6 cm2
- Amb cartró ondulat: <= 30 cm2
Gruix del material de rebliment:
- Amb paper o cartró llis i un alvèol de 6 cm2: >= 0,39 mm
- Amb cartró ondulat: >= 2 mm
ACABAT PER A PINTAR:
El parament d'acabat ha d'estar fet amb plafó de partícules, plafó contraplacat o plafó de fibres de densitat alta.
ESTRUCTURA INTERIOR DE FUSTA:
L'ànima de la fulla ha d'estar formada per una retícula de perfils de fusta.
Diàmetre dels nusos sans (UNE_EN 1310): <= 2/3 de la seva cara
Superfície de fongs blaus: <= 20% de la peça
Llargària de les fissures superficials produïdes per l'assecatge (UNE_EN 1310): <= 5% de la peça
AMB GALZE PER A VIDRE:
Amplària dels muntants laterals i dels travessers superiors: >= 7 cm
Amplària del travesser de base: >= 24 cm
ACABAT PER A ENVERNISSAR O XAPAT:
Totes les cares de la fulla han d'estar xapades amb fullola de la fusta corresponent.
La fullola no ha de tenir punts desencolats o bufats.
No ha de tenir atacs de fongs ni restes d'atacs d'insectes.
Diàmetre dels nusos sans: <= 10 mm
Suma del diàmetre dels nusos vius: <= 20 mm/m
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.
Emmagatzematge: De manera que no es deformin, en llocs protegits de la intempèrie, sense contacte directe amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
El contractista haurà de garantir per escrit que l'element de tancament, compleix les condicions exigides al plec, i en particular les següents:
- Aspecte (UNE 56520 i UNE 56521)
- Contingut d'humitat (UNE 38337)
- Duresa mitjana a la secció transversal (UNE 56534)
- Pes específic (UNE 56531)
- Defectes (UNE-EN 1310)
- Característiques geomètriques:
- Amplària
- Llargària
- Secció del perfil

- Rectitud d'arestes
- Torsió del perfil
- Planor
- Escairat: (UNE 56821)

CRITERIS DE PRESA DE MOSTRES:
En aquest àmbit no es preveu la realització d'assaigs.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran elements de tancament que no arribin garantits per escrit pel contractista, amb les condicions abans esmentades.

---

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAS MATERIALS PER A PORTES I REGISTRES TALLAFOCS I CORTINES TALLAFUMS

### BAS0- FERRAMENTA PER A FINESTRES I PORTES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAS0-0ZFB,BAS0-0ZFL,BAS0-H5FV,BAS0-0ZFR,BAS0-H5FW.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt d'elements que permeten el gir o desplaçament, el bloqueig en una posició fixa i que faciliten agafar les fulles de portes, finestres o balconeres.
Finestres o balconeres amb fulles batents:
- Frontisses, tanca, manubri i accesoris.
- El sistema de tanca ha de ser tres punts.

Portes batents:
- Frontisses, tanca, manubris i accessoris. Si la porta es d'entrada ha de portar espiera òptica i pom a la cara exterior
- El sistema de tanca ha de ser de cop o de cop i clau si la porta és d'entrada, o de clau si la porta és d'armari

Finestres o balconeres amb fulles corredisses, i portes amb fulles corredisses:
- Guies superiors amb rodaments i mecanismes de fixació de la fulla, element de guia inferior, topalls, tiradors, tanca amb mecanisme de bloqueig de la fulla i accessoris
- El sistema de tanca ha de ser d'un punt.

Finestres o balconeres amb fulles oscilobatents:
- Frontisses, ferramenta oscilobatent amb cremona i compàs oscilobatent, tanca, manubri i accessoris.
- El sistema de tanca ha de ser de dos, quatre o sis punts, en funció de les dimensions de la fulla.

CARACTERÍSTIQUES GENERALS:

Els dissenys, materials i acabats de la ferramenta han de ser els indicats a la DT o en el seu defecte els que determini la DF.
La superfície de les ferramentes no ha de tenir defectes.
El funcionament de tots els mecanismes ha de ser suau i continu.
La superfície de la pala de les frontisses ha de ser plana. Ha de tenir forats aixamfranats que permetin allotjar el cap del cargol de fixació.
Toleràncies:
- Dimensions nominals: ± 1 mm
FRONTISSES D'UN SOL EIX
Les frontisses d'un sol eix es designen o classifiquen d'acord amb uns codis de 8 dígits (UNE-EN 1935):
- Categoria de servei (primer dígit)
- Grau 1: Servei lleuger (frontisses de portes i o finestres d'ús domèstic cuidat, baixa freqüència d'ús)
- Grau 2: Servei mig (frontisses de portes amb freqüència mitja d'ús)
- Grau 3 : Servei pesat ( frontisses amb elevada freqüència d'ús pel públic o per altres persones poc incentivades per a parar atenció, és a dir, allà a on existeixi un risc d'accident o mal ús)
- Grau 4: Servei sever (frontisses de portes que poden tenir ús violent)
- Durabilitat segons la freqüència d'ús i la massa màxima de l'element amb frontisses (segon dígit)
- Frontisses destinades a ésser usades només en finestres que s'assagen fins:
- Grau 3: 10.000 cicles
- Grau 4: 25.000 cicles
- Frontisses destinades a ésser usades en portes que s'assagen fins:
- Grau 4: 25 000 cicles
- Grau 7: 200.000 cicles
- Massa de la porta d'assaig (tercer dígit)
- Grau 0 : 10 kg
- Grau 1: 20 kg
- Grau 2: 40 kg
- Grau 3: 60 kg
- Grau 4: 80 kg
- Grau 5: 100 kg
- Grau 6: 120 kg
- Grau 7: 160 kg
- Aptitud per a ús en portes de compartimentació al foc /fum (quart dígit)
- Grau 0: no apte per a utilitzar-se conjunts de portes resistents al foc/fum.
- Grau 1: apte per a utilitzar-se conjunts de portes resistents al foc/fum ( per aquestes portes veure UNE-EN 1634-1)
- Seguretat de persones (cinquè dígit):
- otes les frontisses han de ser de grau 1 complint els requisits de seguretat per a l'ús.
- Resistència a la corrosió (sisè dígit) d'acord amb UNE-EN 1670:
- Grau 0: Sense resistència definida a la corrosió
- Grau 1: resistència mitja
- Grau 2: resistència moderada
- Grau 3: resistència alta
- Grau 4: resistència molt alta
- Seguretat de bens / resistència a l'efracció (setè dígit):
- Grau 0: no apta per a utilitzar- se en conjunts de portes resistents a l'efracció.
- Grau 1: apta per a utilitzar- se en conjunts de portes resistents a l'efracció
- Grau de la frontissa (vuitè dígit):
- Hi ha catorze graus depenent de la combinatòria de les anteriors classificacions.
Les frontisses d'un sol eix fabricades d'acord amb l'UNE-EN 1935 instal·lades en portes tallafoc i/o de control de fums o portes de tancament de vies d'evacuació han d'anar marcades amb els següents elements:
- identificació, nom fabricant o marca comercial
- grau de la frontissa
- número d'aquesta norma europea
L'embalatge de les frontisses d'un sol eix ha de mostrar clarament amb etiqueta exterior la classificació de grau de la frontissa, dimensions, acabat i número de referència del fabricant.
En el cas que les frontisses tinguin sentit de gir s'indicarà:
- L: Frontisses per a portes i finestres que obren en sentit horari.
- R: Frontisses per a portes i finestres que obren en sentit antihorari
La documentació tècnica o l'embalatge pot portar recomanacions per lubrificar les frontisses en la instal·lació o en servei.
PANYS I PESTELLS:

Els panys i pestells es designen o classifiquen d'acord amb uns codis d'11 dígits (UNE-EN 12209):
- Categoria d'ús ( primer dígit):
- Grau 1: Ús per a persones amb gran incentiu per a ésser curoses.
- Grau 2: Ús per persones amb algun incentiu per ésser curoses.
- Grau 3: ús per persones amb poc incentiu per ésser curoses, alta probabilitat de mal ús.
- Durabilitat: (segon dígit)
- Grau A: 50.000 cicles d'assaig i sense càrrega sobre picaporta.
- Grau B: 100.000 cicles d'assaig i sense càrrega sobre picaporta.
- Grau C: 200.000 cicles d'assaig i sense càrrega sobre picaporta
- Grau F: 50.000 cicles d'assaig i càrrega de 10 N sobre picaporta
- Grau G: 100.000 cicles d'assaig i càrrega de 10 N sobre picaporta
- Grau H: 200.000 cicles d'assaig i càrrega de 10 N sobre picaporta
- Grau L: 100.000 cicles d'assaig i càrrega 25 N sobre picaporta
- Grau M: 200.000 cicles d'assaig i càrrega de 25 N sobre picaporta
- Grau R: 100.000 cicles d'assaig i càrrega de 50 N sobre picaporta
- Grau S: 200.000 cicles d'assaig i càrrega de 50 N sobre picaporta
- Grau W: 100.000 cicles d'assaig i càrrega de 120 N sobre picaporta
- Grau X: 200.000 cicles d'assaig i càrrega de 120 N sobre picaporta
- Massa de la porta i força de tancament (tercer dígit)
- Grau 1: < 100 kg de massa de porta i força de tancament <=50 N
- Grau 2: < 200 kg de massa de porta i força de tancament <=50 N
- Grau 3: > 200 kg de massa de porta o especificat pel fabricant i força de tancament <=50 N
- Grau 4: < 100 kg de massa de porta i força de tancament <=25 N
- Grau 5: < 200 kg de massa de porta i força de tancament <=25 N
- Grau 6: > 200 kg de massa de porta o o especificat pel fabricant i força de tancament <=25 N
- Grau 7: < 100 kg de massa de porta i força de tancament <=15 N
- Grau 8: < 200 kg de massa de porta i força de tancament <=15 N
- Grau 9: > 200 kg de massa de porta o especificat pel fabricant i força de tancament <=15 N
- Aptitud per a l'ús de portes tallafoc i/o estanques al fum (quart dígit):
- Grau 0: no apropiada per a ésser utilitzada en portes tallafoc i/o estanques al fum.
- Grau 1: apte per a ésser utilitzada en portes tallafoc i/o estanques al fum.
- Seguretat de persones (cinquè dígit):
- Grau 0: sense requisits de seguretat.
- Resistència a la corrosió i a la temperatura (sisè dígit):
- Grau 0: Sense requisits de resistència a la corrosió i sense requisit de temperatura.
- Grau A: Baixa resistència a la corrosió i sense requisit de temperatura.
- Grau B: Moderada resistència a la corrosió i sense requisit de temperatura.
- Grau C: Alta resistència a la corrosió i sense requisit de temperatura.
- Grau D: Molt alta resistència a la corrosió i sense requisit de temperatura.
- Grau E: Moderada resistència a la corrosió i requisit de temperatura de -20C a +80C
- Grau F: Alta resistència a la corrosió i requisit de temperatura de -20C a +80C
- Grau G: Molt alta resistència a la corrosió i requisit de temperatura de -20C a +80C.
- Seguretat de bens i resistència a la perforació (setè dígit):
- Grau 1: Mínima seguretat i sense resistència a la perforació
- Grau 2: Baixa seguretat i sense resistència a la perforació
- Grau 3: Mitja seguretat i sense resistència a la perforació
- Grau 4: Alta seguretat i sense resistència a la perforació
- Grau 5: Alta seguretat i amb resistència a la perforació
- Grau 6: Molt alta seguretat i sense resistència a la perforació
- Grau 7: Molt alta seguretat i amb resistència a la perforació
- Camp d'apliació de la porta (vuitè dígit):
- Grau A: Porta encastada, sense limitacions d'aplicació.
- Grau B: Porta encastada i batent
- Grau C: Porta encastada i corredissa
- Grau D: Porta sobreposada i sense limitacions d'aplicació
- Grau E: Porta sobreposada i batent
- Grau F: Porta sobreposada i corredissa
- Grau G: Porta tubular i sense limitacions d'aplicació
- Grau H: Porta encastada, batent i recolzada
- Grau J: Porta sobreposada, batent cap a l'interior.
- Grau K: Porta encastada, batent i bloquejada des del interior
- Grau L: Porta encastada, corredissa i bloquejada des del interior
- Grau M: Porta sobreposada, batent i bloquejada des del interior
- Grau N: Porta sobreposada, corredissa i bloquejada des del interior

- Grau P:  Porta encastada, batent, recolzada i bloquejada des del interior
- Grau R:  Porta sobreposada, batent cap al interior i bloquejada des del interior
- Tipus de maniobra de clau i bloqueig (novè dígit)
- Grau 0:  No aplicable
- Grau A: Pany de cilindre i bloqueig manual
- Grau B: Pany de cilindre i bloqueig automàtic
- Grau C: Pany de cilindre i bloqueig manual amb bloqueig intermedi
- Grau D: Pany de gorja i bloqueig manual
- Grau E: Pany de gorja i bloqueig automàtic
- Grau F: Pany de gorja i bloqueig manual amb bloqueig intermedi
- Grau G: Pany sense clau i bloqueig manual
- Grau H: Pany sense clau i bloqueig automàtic
- Tipus de maniobra de la nueca (desè dígit):
- Grau 0: Pany sense nueca
- Grau 1: Pany per a pom o maneta amb molla de retorn
- Grau 2: Pany per a maneta sense molla de retorn
- Grau 3:  Pany per a maneta sense molla de retorn per a ús sever
- Grau 4: Pany per a maneta sense molla de retorn i ús sever especificat pel fabricant
- Requisits d'identificació de la clau (onzè dígit):
- Grau 0: Sense requisit
- Grau A:  Mínim tres elements retenidors
- Grau B:  Mínim cinc elements retenidors
- Grau C:  Mínim cinc elements retenidors, amb nombre extens de combinacions efectives.
- Grau D:  Mínim sis elements retenidors
- Grau E:  Mínim sis elements retenidors, amb nombre extens de combinacions efectives
- Grau F:  Mínim set elements retenidors
- Grau G:  Mínim set elements retenidors, amb nombre extens de combinacions efectives
- Grau H:  Mínim vuit elements retenidors, amb nombre extens de combinacions efectives

En l'etiqueta o embalatge ha d'indicar-se el nom del fabricant o marca registrada, la identificació clara del producte, la classificació i el número de la norma europea (UNE-EN 12209).

MECANISMES DE TANCAMENT CONTROLAT

Dispositius de tancament controlat de portes batents; aquests dispositius poden anar col·locats sobre o en el marc, sobre o en la porta o en el terra. Es classifiquen seguint una codificació de sis dígits:
- Categoria d'ús (primer dígit)
- Grau 3: permet tancament de la porta amb un angle mínim d'obertura 105 graus.
- Grau 4: permet tancament des d'un angle d'obertura de 180 graus.
- Durabilitat (segon dígit)
- Grau 8: 500.000 cicles d'assaig
- Força del tancaportes (tercer dígit)
- Hi ha set nivells de força que contemplen l'amplària de la porta, massa, moments d'obertura, moment de tancament i rendiment del tancaportes. Veure taula 1 UNE-EN 1154.
- Aptitud per a la utilització sobre portes resistents al foc i/o estanques al fum (quart dígit)
- Grau 0: No apte per a l'ús de portes tallafoc/estanques al fum.
- Grau 1: Apte per a la utilització en portes tallafoc/estanques a l fum.
- Seguretat (cinquè dígit):
- Grau 1: Tots els tancaportes han de satisfer el requisit essencial de seguretat en la utilització.
- Resistència a la corrosió (sisè dígit):
- Grau 0:  Sense prescripcions de resistència
- Grau 1:  Dèbil resistència
- Grau 2:  Resistència mitja
- Grau 3:  Resistència elevada
- Grau 4: .Resistència molt elevada

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

FRONTISSES D'UN SOL EIX

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a portes tallafoc/estanques al fum:
- Sistema 1: Declaració de Prestacions

En l'embalatge o/i documentació que acompanya el producte ha de portar en un lloc visible el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol, que a més haurà d'anar acompanyat de la següent informació:
- Número d'identificació de l'organisme de certificació
- Nom o marca identificativa del fabricant.

- Direcció registrada del fabricant
- Dos últims dígits de l'any en que es va aplicar el marcatge CE
- El número del certificat de conformitat CE.
- Referència a aquesta norma UNE-EN 1935
- La designació i informació de les prestacions (8 dígits)

PANYS I PESTELLS:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a portes tallafoc/estanques al fum:
- Sistema 1: Declaració de Prestacions

En l'embalatge o/i documentació que acompanya el producte ha de portar en un lloc visible el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol, que a més haurà d'anar acompanyat de la següent informació:

- Número d'identificació de l'organisme de certificació
- Nom o marca identificativa del fabricant.
- Direcció registrada del fabricant
- Dos últims dígits de l'any en que es va aplicar el marcatge CE
- El número del certificat de conformitat CE.
- Referència a aquesta norma UNE-EN 12209
- La designació i informació de les prestacions (11 dígits)

MECANISMES DE TANCAMENT CONTROLAT

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a portes tallafoc/estanques al fum:
- Sistema 1: Declaració de Prestacions

En l'embalatge o/i documentació que acompanya el producte ha de portar en un lloc visible el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol, que a més haurà d'anar acompanyat de la següent informació:

- Número d'identificació de l'organisme de certificació
- Nom o marca identificativa del fabricant.
- Direcció registrada del fabricant
- Dos últims dígits de l'any en que es va aplicar el marcatge CE
- El número del certificat de conformitat CE.
- Referència a aquesta norma UNE-EN 1154
- La designació i informació de les prestacions (6 dígits)

Subministrament: Amb les proteccions necessàries perque arribi a l'obra en les condicions exigides.
Emmagatzematge: protegides de les pluges, focus d'humitat i d'impactes.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

FRONTISSES D'UN SOL EIX

UNE-EN 1935:2002 Herrajes para la edificación. Bisagras de un solo eje. Requisitos y métodos de ensayo.

PANYS I PESTELLS:

UNE-EN 12209:2004 Herrajes para edificación. Cerraduras y pestillos. Cerraduras, pestillos y cerraderos mecánicos. Requisitos y métodos de ensayo.

MECANISMES DE TANCAMENT CONTROLAT

UNE-EN 1154:2003 Herrajes para la edificación. Dispositivos de cierre controlado de puertas. Requisitos y métodos de ensayo.

## BA MATERIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## BAV PERSIANES, GELOSIES DE LAMES I PROTECCIONS SOLARS

## BAVC- PERSIANA ENROTLLABLE D'ALUMINI

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BAVC-0Z7V.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de lamel·les col·locades horitzontalment i enllaçades entre elles.
S'han considerat els materials següents:
- Alumini lacat
S'han considerat els tipus següents:
- Amb aïllament interior
- Sense aïllament interior
S'han considerat els tipus de persiana enrotllable següents:
- De lamel·les no orientables
- De lamel·les orientables
CARACTERÍSTIQUES GENERALS:
La lamel·la inferior ha de ser més rígida que les altres.
Els cantells de les lamel·les han de tenir la forma necessària perquè no passi la llum quan la persiana estigui tancada.
La lamel·la superior ha de tenir algun element que permeti la seva fixació al corró.
El conjunt de la persiana ha de complir les condicions subjectives requerides per la DF.
Les parts susceptibles d'entrar en contacte amb els transeünts o amb els usuaris no han de presentar vores tallants o feridors que puguin causar danys.
Les vores tallants i projectants de qualsevol part mòbil de l'estructura de la persiana, a col·locar a una alçada menor de 2,50m per sobre del sòl o per sobre de qualsevol nivell d'accés permanent, han de ser arrodonides amb un radi mínim de 0,50mm.
-Resistència al vent:

| Classe | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
|---|---|---|---|---|---|---|---|
| Pressió nominal p (N/m2) | <50 | 50 | 70 | 100 | 170 | 270 | 400 |
| Pressió d'assaig de seguretat 1,5 (N/m2) | <75 | 75 | 100 | 150 | 250 | 400 | 600 |

- Resistència a la càrrega de neu:
Per a cada dimensió el fabricant ha de precisar la pressió màxima de neu que la persiana pot soportar sola o amb associació mecànica amb la finestra tancada. D'acord amb assaig amb norma EN-12833.
- Resistència del mecanisme de tancament si n`hi ha:
La persiana en posició completament desplegada no ha de ser oberta per a permetre el pas d'un intrús des de l'exterior sense eines.
La persiana no ha de permetre que un intrús passi a trevés (0,40 m x 0,40 m d'obertura).
-Resistència mecànica (cicles de maniobra repetits)
Classes de durabilitat:

| Número de cicles | Classe 1 | Classe 2 | Classe 3 |
|---|---|---|---|

| Desplegament / replegament | 3000 | 7000 | 10000 |
| Orientació de les lames | 6000 | 14000 | 20000 |

- Maniobrabilitat en cas de gelada
- Les instruccions tècniques del fabricant han de dir si es pot o no maniobrar en condicions de gelades (amb formació de gel ) i en cas contrari , el producte ha de portar l'avís: la maniobra en condicions de gelada pot danyar la persiana.
- Resistència a l'impacte: Ha de complir les especificacions de la norma UNE-EN 13659
- Resistència tèrmica: Ha de complir les especificacions de la norma UNE-EN 13659
- Falsa maniobra
- Sota l'acció d'un ús anormal previsible (falsa maniobra), la persiana no pot patir deformacions o degradacions que perjudiquin el seu bon funcionament i que portin a defectes d'aspecte no admissibles. D'acord amb norma UNE-EN 13659.

Toleràncies:

| Amplada L (m) | Tolerancies (mm) | | Alçada H (m) | Tolerancies (mm) |
|---|---|---|---|---|
| L<=2 | +0 a -3 | | H<=1,5 | +0 a -4 |
| 2<L<=4 | +0 a -4 | | 1,5<H<=2,5 | +0 a -6 |
| L>4 | +0 a -5 | | H>2,5 | +0 a -10 |

PERSIANES D'ALUMINI O ACER:
Han de tenir un aspecte uniforme, sense esquerdes ni defectes superficials.
Resistència a la boira salina en persianes exteriors ha d'ésser com a mínim classe 2
Resistència a la corrosió:

| | Classe 1 | Classe 2 | Classe 3 | Classe 4 |
|---|---|---|---|---|
| Components d'interior | 24 h | 48 h | - | - |
| Components d'exterior | - | 48 h | 96 h | 240 h |

Toleràncies:
- Alçària de la lamel·la: <= 6 cm
- Gruix de la lamel·la: >= 1,1 cm
- - Secció de les lamel·les: ± 2,5%
- - Rectitud de les lamel·les:
- - Per a una llargària =< 1,5 m: ± 1 mm/m
- - Per a una llargària > 1,5 m i =< 4 m: ± 1,5 mm/m
- - Per a una llargària > 4 m: ± 2 mm/m
- - Torsió de les lamel·les: ± 1°/m
- Planor: ± 1 mm/m

PERSIANES D'ALUMINI LACAT:
Les lamel·les han de provenir de l'extrusió del totxo d'alumini. Han de ser d'aliatge 57-S (UNE 38337).
Les lamel·les han d'estar protegides superficialment amb pintures de poliéster amb pols, polimeritzades al forn i resistents a la intempèrie.
Gruix de la paret de la lamel·la: >= 0,5 mm
Tipus d'alumini (UNE 38337): Aleació A1-0,7 Mg Si
Lacat del perfil: >= 60 micres, <= 120 micres
Qualitat mitja total del segellat.
Duresa Brinell (UNE_EN_ISO 6506/1): >= 45
AMB AÏLLAMENT:
L'interior de les lamel·les ha d'estar ple amb material aïllant.
Conductivitat tèrmica de l'aïllament: <= 0,041 W/m K
LAMEL·LES ORIENTABLES:
L'unió de les lamel·les ha de permetre un moviment basculant coordinat de les lamel·les que restin dins del forat de la finestra, quan la persiana està baixada amb les lamel·les una mica separades.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Protegida per tal que arribi a l'obra amb les condicions exigides.
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a ús a l'exterior:
- Sistema 4: Declaració de Prestacions
Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995 de 28 de juliol. El símbol normalitzat del marcatge CE s'ha d'acompanyar de la següent informació:
- Sobre el mateix producte:
- Nom i marca identificativa del fabricant
- Direcció registrada del fabricant
- Referència d'aquesta norma europea (UNE-EN 13659 )
- Sobre la documentació comercial que acompanya el producte (instruccions de manteniment i/o d'instal·lació o albarà) :
- Nom i marca identificativa del fabricant
- Dos últims dígits de l'any en el que el marcat es va fixar
- Direcció registrada del fabricant
- Referència d'aquesta norma europea (UNE-EN 13659 )
- Tipus de producte i informació dels requisits essencials
- Resistència al vent.
Emmagatzematge: Protegida contra les pluges, els focus d'humitat i de les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície necessària subministrada a l'obra, amidada segons les especificacions del projecte i considerant les respectives dimensions d'acord amb els criteris següents:
- Amplària i alçària: Múltiples de 5 cm
- Per a unitats amb superfície inferior a 1,75 m2: S'ha d'amidar 1,75 m2 per unitat
Cal prendre el múltiple immediat superior en cas que la dimensió no ho sigui.
A la dimensió de l'alçària cal afegir-hi la part precisa per a arribar fins a l'eix de suspensió.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 13659:2004 Persianas. Requisitos de prestaciones incluida la seguridad.

---

## BB MATERIALS PER A PROTECCIONS I SENYALITZACIÓ

### BB1 BARANES I AMPITS

#### BB10- BARANA D'ACER

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BB10-0XMI.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de perfils d'acer que forman el bastidor i el pany de paret de la barana de protecció.

S'han considerat els tipus de baranes següents:
- De perfils buits d'acer
BARANES DE PERFILS BUITS D'ACER:
Han de tenir un aspecte uniforme i sense defectes superficials.
La grandària, tipus i disposició dels perfils han de complir el que s'especifica a la documentació tècnica del projecte.
La unió dels perfils s'ha de fer per soldadura (per arc o per resistència).
S'admet també la unió amb cargols autoroscants en el cas que el perfil tingui plecs fets especialment per a allotjar les femelles dels cargols.
El moment d'inèrcia dels perfils de la barana no solidaris amb l'obra ha de ser de manera que, sotmesos a les condicions de carga més desfavorables, la fletxa sigui < L/250.
La disposició dels barrots serà de tal manera que no ha de permetre el pas a cap punt, d'una esfera de diàmetre equivalent a la separació entre brèndoles, ni ha de facilitar l'escalada.
Els muntants han de portar incorporats els dispositius d'ancoratge previstos al projecte.
Toleràncies:
- LLargària del perfil: ± 1 mm
- Secció del perfil: ± 2,5%
- Rectitud d'arestes: ± 2 mm/m
- Torsió del perfil: ± 1°/m
- Planor: ± 1 mm/m
- Angles: ± 1°
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
BARANES DE PERFILS BUITS D'ACER:
Subministrament: Amb les proteccions necessàries perquè arribi a l'obra amb les condicions exigides i amb l'escairat previst.
Emmagatzematge: Protegida contra les pluges, els focus d'humitat i de les zones on pugui rebre impactes. No ha d'estar en contacte amb el terra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Control de recepció mitjançant assaigs: Si el material disposa d'una marca legalment reconeguda a un país de la CEE (Marcatge CE, AENOR, etc.) es podrà prescindir dels assaigs de control de recepció de les característiques del material garantides per la marca; i la DF sol·licitarà en aquest cas, els resultats dels assaigs corresponents al subministrament rebut. En qualsevol cas, la DF podrà sol·licitar assaigs de control de recepció si ho creu convenient.
Per a cada subministrament que arribi a l'obra, corresponent a un mateix tipus, el control serà:
- Inspecció visual del material subministrat, en especial l'aspecte del recobriment galvanitzat.
- Recepció del certificat de qualitat del fabricant, on es garanteixen les condicions exigides al plec amb els assaigs corresponents a la classificació de la barana (UNE 85238).
- Assaigs estàtics
- Assaigs dinàmics
- Assaigs de seguretat
En el cas que es realitzi el control mitjançant assaigs, s'ha de fer les comprovacions següents:
- Cada 100 m de barana, es realitzaran els següents controls (UNE-EN ISO 1461):
- Massa de recobriment (mètode magnètic)
- Assaig d'adherència del
- Comprovació geomètrica
CRITERIS DE PRESA DE MOSTRES:
Els controls es realitzaran segons les indicacions de la DF i les normes de procediment indicades en cada assaig.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran les baranes sense certificat de qualitat, o les classificades com NO APTES, segons UNE 85240.
L'aspecte visual del recobriment i el resultat dels assaigs d'adherència i massa del galvanitzat han de ser conformes a les especificacions del plec.
Les comprovacions geomètriques han de resultar conformes a les especificacions de la DT amb les toleràncies especificades. En cas contrari, es rebutjaran les peces defectuoses incrementant-ne el control sobre el doble de les mostres previstes, sense que hagin d'aparèixer incompliments per tal d'acceptar el lot corresponent.

## BC MATERIALS PER A ENVIDRAMENTS

## BC1 VIDRES PLANS

### BC14- VIDRE AÏLLANT DE DOS VIDRES LAMINARS DE SEGURETAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BC14-1MUN.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Vidre aïllant format per dues fulles que formen cambra estanca d'aire deshidratat, separades mitjançant un intercalador metàl·lic amb producte dessecant a l'interior, amb segellat perimetral de butil i cautxú de polisulfur.
S'han considerat els tipus següents:
- Vidres aïllants formats per dues fulles de vidre laminar
- Vidres aïllants formats per dues fulles de vidre laminar de seguretat
CARACTERÍSTIQUES GENERALS:
Les llunes que formen el vidre no han de tenir defectes superficials (de planimetria a les llunes no trempades, de paral·lelisme en les seves cares, d'ondulacions, d'incrustacions, ratlles, esquerdes, etc.).
Els panells de vidre individuals constituents del vidre aïllant han de complir les seves respectives normes:
- UNE-EN ISO 12543 parts 1 a 6
Màxima variació del gruix (respecte al gruix nominal declarat pel fabricant) per a les unitats de vidre aïllant al llarg de la perifèria de la unitat (vidres flotats): Ha de complir l'UNE-EN 1279 i UNE-EN ISO 12543-5.
No ha de tenir defectes en la massa detectables a simple vista (d'homogeneïtat, de vitrificació, de recuita, inclusions gasoses, etc.).
Les qualitats òptica i visual de la unitat de vidre aïllant han de complir els requisits de la norma UNE-EN 1279.
Donades les dimensions nominals per amplària i llargària, el plafó de vidre acabat no serà més llarg que el rectangle prescrit resultant de les dimensions nominals incrementades per la tolerància dimensional, o menors que un rectangle prescrit reduït per la tolerància dimensional. Els costats dels rectangles prescrits són paral·leles l'un amb l'altre i tenen un centre comú. Els límits d'escaire seran també els rectangles prescrits.
Prestacions del segellat:
- Penetració de vapor d'humitat: Ha de complir les especificacions de la norma UNE-EN 1279-2
- Adherència vidre-segellant: Ha de complir les especificacions de la norma UNE-EN 1279-4
- Adherència capa-segellant (vidres de capa): Ha de complir les especificacions de la norma UNE-

EN 1279-4 annex D
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Protegit de manera que no s'alterin les seves característiques.
Emmagatzematge: Protegit contra les accions mecàniques (cops, ratllades, sol directe, etc.) i contra les accions químiques (impressions i alteracions d'adherència entre els components del vidre de seguretat, produïdes per la humitat).
S'ha de guardar en estibes de 25 cm de gruix com a màxim i amb un pendent del 6% respecte de la vertical.
Ha de quedar separat de les altres estibes mitjançant intercaladors i recolzat sobre travessers de fusta o d'un material protector.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície necessària subministrada a l'obra, amidada segons les especificacions de la DT.
S'han de considerar les respectives dimensions d'acord amb els criteris següents:
- Llargària i amplària: Múltiples de 3 cm
- Per a unitats amb superfície < 0,25 m2: 0,25 m2/unitat
Cal prendre el múltiple immediat superior en el cas que la dimensió no ho sigui.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 1279-1:2006 Vidrio para la edificación. Unidades de vidrio aislante. Parte 1: Generalidades, tolerancias dimensionales y reglas para la descripción del sistema.
UNE-EN 1279-2:2003 Vidrio para la edificación. Unidades de vidrio aislante. Parte 2: Método de ensayo a largo plazo y requisitos en materia de penetración de humedad.
UNE-EN 1279-4:2002 Vidrio para la edificación. Unidades de vidrio aislante. Parte 4: Métodos de ensayo para las propiedades físicas de los sellados perimetrales.
UNE-EN 1279-5:2006 Vidrio para la edificación. Unidades de vidrio aislante. Parte 5: Evaluación de la conformidad.
UNE-EN 1279-6:2002 Vidrio para la edificación. Unidades de vidrio aislante. Parte 6: Control de producción en fábrica y ensayos periódicos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos sotmesos a regulació de reacció al foc de Nivell o Classe: A1*, F. * Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions),
- Productes per a usos sotmesos a regulació de prestació al foc exterior de Nivell o Classe: productes considerats conformes sense necessitat d'assaig,
- Productes per a qualsevol ús excepte en usos de resistència al foc, reacció al foc, prestació al foc exterior, antibala o antiexplosió, riscos de seguretat en ús i usos relacionats amb la conservació d'energia i/o aïllament:
- Sistema 4: Declaració de Prestacions
- Productes per a usos relacionats amb la conservació d'energia i/o atenuació acústica,
- Productes per a usos sotmesos a regulació de prestació al foc exterior de Nivell o Classe: productes que requereixen assaig,
- Productes per a usos lligats a riscos de "seguretat en ús" i sotmesos a aquestes regulacions,
- Productes per a usos sotmesos a regulació de reacció al foc de Nivell o Classe: A1, A2, B, C, D, E:
- Sistema 3: Declaració de Prestacions
- Productes per a ús en un conjunt envidrat que pretengui específicament proporcionar resistència al foc,
- Productes per a envidraments antibala o antiexplosió:
- Sistema 1: Declaració de Prestacions
Els vidres han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Número d'identificació de l'organisme de certificació (només per als productes amb sistema de certificació 1)
- Nom, marca comercial i adreça registrada del fabricant
- Els 2 últims dígits de lany en que es fixa el marcat
- Número de certificat de conformitat CE o del certificat de control en fàbrica, si procedeix
- Referència a la norma europea EN 1279-5
- Descripció del producte: nom genèric, material, i ús previst
- Informació sobre les característiques essencials pertinents mostrada com:
- Valors presentats com designació normalitzada
- Valors declarats i quan procedeixi, nivell o classe per a cada característica essencial:
- Resistència al foc

- Reacció al foc
- Comportament davant del foc exterior
- Resistència a la bala
- Resistència a l'explosió
- Resistència a l'efracció (propietats de trencament i resistència a l'atac)
- Resistència a l'impacte del cos pendular (propietats de trencament segura i resistència a l'atac)
- Resistència mecànica (canvis bruscs de temperatura)
- Resistència mecànica (resistència al vent, neu, càrrega permanent i/o càrregues imposades)
- Aïllament al soroll aeri directe
- Propietats tèrmiques
- Propietats de radiació (transmitància lluminosa i reflectància)
- Propietats de radiació (característiques de l'energia solar)
- Característiques a les que s'aplica l'opció "Prestació No Determinada" (NPD)

En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.

OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:

Inspecció visual del material a la seva recepció.

- Abans de començar l'obra, si varia el subministrament, i per cada tipus diferent que arribi a l'obra, es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- Pes
- Duresa al ratllat (Mohs)
- Factor de transmissió lluminosa
- Coeficient de transmisió tèrmica
- Característiques geomètriques: gruix de les llunes i cambra d'aire, planor, etc.
- En el cas de llunes trempades:
- Resistència a l'impacte de la lluna trempada (CTE SU)
- Fragments resultants del trencament per impacte de la lluna trempada (CTE SU)

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.

En cas de que el material disposi de la Marca AENOR, marcatge CE o altre legalment reconeguda a un país de l'UE, es pot prescindir de la presentació dels assaigs de control de recepció.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Si en els terminis establerts al començar l'obra no es fa l'entrega dels certificats de qualitat del fabricant, s'ha de realitzar una sèrie completa d'assaigs a càrrec del Contractista.

Els resultats dels assaigs sobre totes les peces de les mostres han de complir les condicions especificades. En cas d'incompliment, s'ha de repetir l'assaig, a càrrec del contractista, sobre el doble número de mostres del mateix lot, acceptant-se aquest, quan els resultats obtinguts sobre totes les peces resultin satisfactoris.

---

## BC MATERIALS PER A ENVIDRAMENTS

## BC1 VIDRES PLANS

## BC1K- MIRALL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BC1K-0WNT.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Mirall format per una lluna incolora o de color, amb aplicació, en una de les seves cares de diferents capes: plata reflectora, coure protector o pintures anticorrosives i d'acabat, superposades i unides íntimament.
CARACTERÍSTIQUES GENERALS:
No ha de tenir defectes superficials (de planimetria, de paral·lelisme en les seves cares, ondulacions, incrustacions, ratlles, esquerdes, etc.).
No ha de tenir defectes en la massa detectables a simple vista (d'homogeneïtat, de vitrificació, de recuita, inclusions gasoses, etc.).
El mirall acabat no ha de tenir bosses ni taques produïdes per l'adherència deficient de les parts components.
Els vidres de capa s'han de classificar segons la norma UNE-EN 1096-1 en funció de la posició de la capa respecte a l'interior o l'exterior de l'edifici o de la cambra dels vidres aïllants.
Els defectes admissibles que poden afectar a l'aspecte del vidre de capa són:
- Els defectes propis admissibles per al substrat vitri, que dependran en cada cas del tipus de vidre
- Els defectes propis de la capa que en funció de la seva localització es divideixen en defectes a la zona principal o defectes a la zona de la vora, essent la zona de la vora la franja delimitada pel rectangle exterior i un rectangle de costats paral·lels i centre comú amb l'anterior amb les mides dels costats reduïdes un 5% a cada banda. Els defectes admissibles per a la capa són:
- Defectes d'uniformitat o taques de la capa: S'admeten en la mesura que no restin molestos visualment
- Defectes de piquets/forats >3 mm: No s'admeten en cap zona
- Defectes de piquets/forats >2 mm i =<3 mm: S'admeten en les dues zones si el seu número és =<1/m2
- Agregats: No s'admeten en la zona principal i si en la zona de vora sempre i quan quedin fora de la zona de visió
- Rascades >75 mm: No s'admeten en la zona principal i si en la zona de vora sempre i quan la seva separació sigui >50 mm
- Rascades =<75 mm: S'admeten en les dues zones sempre i quan la seva densitat local no molesti la visió
Toleràncies:
- Gruix: ± 0,2 mm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Protegit de manera que no s'alterin les seves característiques.
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos sotmesos a regulació de reacció al foc de Nivell o Classe: A1*, F. * Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions),
- Productes per a usos sotmesos a regulació de prestació al foc exterior de Nivell o Classe: productes considerats conformes sense necessitat d'assaig,
- Productes per a qualsevol ús excepte en usos de resistència al foc, reacció al foc, prestació al foc exterior, antibala o antiexplosió, riscos de seguretat en ús i usos relacionats amb la conservació d'energia i/o aïllament:
- Sistema 4: Declaració de Prestacions
- Productes per a usos relacionats amb la conservació d'energia i/o atenuació acústica,
- Productes per a usos sotmesos a regulació de prestació al foc exterior de Nivell o Classe: productes que requereixen assaig,

- Productes per a usos lligats a riscos de "seguretat en ús" i sotmesos a aquestes regulacions,
- Productes per a usos sotmesos a regulació de reacció al foc de Nivell o Classe: A1, A2, B, C, D, E:
- Sistema 3: Declaració de Prestacions
- Productes per a ús en un conjunt envidrat que pretengui específicament proporcionar resistència al foc,
- Productes per a envidraments antibala o antiexplosió:
- Sistema 1: Declaració de Prestacions

Els vidres han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol. El símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Número d'identificació de l'organisme de certificació (només per als productes amb sistema de certificació 1)
- Nom, marca comercial i adreça registrada del fabricant
- Els 2 últims dígits de lany en que es fixa el marcat
- Número de certificat de conformitat CE o del certificat de control en fàbrica, si procedeix
- Referència a la norma europea: EN 1096-4 per als vidres amb capa
- Descripció del producte: nom genèric, material, i ús previst
- Informació sobre les característiques essencials pertinents mostrada com:
- Valors presentats com designació normalitzada
- Valors declarats i quan procedeixi, nivell o classe per a cada característica essencial:
- Resistència al foc
- Reacció al foc
- Comportament davant del foc exterior
- Resistència a la bala
- Resistència a l'explosió
- Resistència a l'efracció (propietats de trencament i resistència a l'atac)
- Resistència a l'impacte del cos pendular (propietats de trencament segura i resistència a l'atac)
- Resistència mecànica (canvis bruscs de temperatura)
- Resistència mecànica (resistència al vent, neu, càrrega permanent i/o càrregues imposades)
- Aïllament al soroll aeri directe
- Propietats tèrmiques
- Propietats de radiació (transmitància lluminosa i reflectància)
- Propietats de radiació (característiques de l'energia solar)
- Característiques a les que s'aplica l'opció "Prestació No Determinada" (NPD)

Emmagatzematge: Protegit contra les accions mecàniques (cops, ratllades, sol directe, etc.) i contra les accions químiques (impressions i alteracions d'adherència de les capes de recobriment produïdes per la humitat).

S'ha de guardar en estibes de 25 cm de gruix com a màxim i amb un pendent del 6% respecte de la vertical.

Ha de quedar separat de les altres estibes mitjançant intercaladors i recolzat sobre travessers de fusta o d'un material protector.

3.- UNITAT I CRITERI D'AMIDAMENT

m2 de superfície necessària subministrada a l'obra, amidada segons les especificacions de la DT. S'han de considerar les respectives dimensions d'acord amb els criteris següents:
- Llargària i amplària: Múltiples de 6 cm

Cal prendre el múltiple immediat superior en el cas que la dimensió no ho sigui.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

UNE-EN 1096-1:1999 Vidrio para la edificación. Vidrio de capa. Parte 1: Definiciones y clasificación.

UNE-EN 1096-2:2001 Vidrio para la edificación. Vidrio de capa. Parte 2: Requisitos y métodos de ensayo para las capas de las clases A, B y S.

UNE-EN 1096-3:2001 Vidrio para la edificación. Vidrio de capa. Parte 3: Requisitos y métodos de ensayo para las capas de las clases C y D.

UNE-EN 1096-4:2005 Vidrio para la edificación. Vidrio de capa. Parte 4: Evaluación de la conformidad/Norma de producto.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BD1 TUBS I ACCESSORIS PER A EVACUACIÓ VERTICAL D'AIGÜES RESIDUALS

### BD11- BRIDA PER A TUB

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BD11-0MDE,BD11-0MDI.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Brides per a la subjecció o suspensió dels tubs d'evacuació d'aigües pluvials o residuals en els seus paraments de suport, en forma d'abraçadora encastable de xapa d'acer, galvanitzada.
CARACTERÍSTIQUES GENERALS:
L'abraçadora ha de constar de dues parts que s'uneixin pel pla diametral, per mitjà d'una brida i un cargol o dos cargols galvanitzats.
Una de les parts de la brida ha de portar una pota d'ancoratge per a encastar a l'obra.
El recobriment de zinc ha de ser llis, sense discontinuïtats, exfoliacions o d'altres defectes.
L'abraçadora no ha de tenir rugositats ni rebaves.
Diàmetre de l'abraçadora (D): 5 <= D <= 50 cm
Amplària: >= 1,5 cm
Gruix: >= 0,05 cm
Recobriment de protecció (galvanització): >= 275 g/m2
Puresa del zinc de recobriment: >= 98,5%
Les condicions de galvanització s'han de verificar d'acord amb l'UNE 7-183 i UNE 37-501.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Empaquetades en caixes. A cada brida o albarà de lliurament hi ha d'haver les dades següents:
- Nom del fabricant o marca comercial
- Diàmetre del tub que abraça
Emmagatzematge: En llocs secs i ventilats, protegides d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BD1 TUBS I ACCESSORIS PER A EVACUACIÓ VERTICAL D'AIGÜES RESIDUALS

## BD1A- TUB DE PVC PER A EVACUACIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BD1A-1NEG,BD1A-1NDV,BD1A-1NDL,BD1A-1NDW,BD1A-1NDY,BD1A-1NE0,BD1A-1NDX,BD1A-1NDT,BD1A-1NDS,BD1A-1NE2,BD1A-1NDU,BD1A-1NE1.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tubs de materials plàstics, per a conductes d'evacuació d'aigües pluvials i residuals dins dels edificis.
S'han considerat els tipus següents:
- Tubs i accessoris de PVC-U de paret massissa, fabricat segons norma UNE-EN 1329-1
- Tubs i accessoris de PVC-U de paret estructurada, fabricat segons norma UNE-EN 1453-1
CARACTERÍSTIQUES GENERALS:
El fabricant ha de garantir que les característiques del material que composen els tubs i accessoris, així com les característiques generals, geomètriques, mecàniques i físiques dels tubs compleixen les normes UNE-EN corresponents, si és el cas.
La superfície interna i externa del tub ha de ser llisa i neta. No ha de tenir defectes superficials com ara ratlles, bombolles, impureses o porus.
El tub ha de tenir una superfície de color uniforme.
Els tubs han de tenir els seus extrems acabats en un tall perpendicular a l'eix.
El codi d'aplicació indica on es poden utilitzar els tubs:
- "B" codi per a l'àrea d'aplicació dels components utilitzats per sobre del sòl en el interior de l'edifici o per a components a l'exterior de l'edifici fixats a la paret.
- "D" codi per a l'àrea d'aplicació que es situa a menys d'1m de l'edifici i on els tubs i accessoris estan enterrats i connectats als sistemes d'evacuació d'aigües residuals de l'edifici.
- "BD" codi per a l'àrea d'aplicació B i D
TUBS DE PVC-U DE PARET MASSISSA:
Material del tub està format per PVC al que s'afegeixen additius necessaris per a facilitar la fabricació dels components d'acord amb els requisits de la norma UNE-EN 1329-1
Toleràncies:
- Diàmetre exterior:
- 32-40-50-63: 0 a 0,2mm.
- 75-80-82-90-100-110-125: 0 a 0,3mm
- 140-160-180: 0 a 0,4mm
- 200-250: 0 a 0,5mm
- 350: 0 a 0,6mm
- Gruix parets:
- àrea d'aplicació B
- 32-40-50-63-75-80-82-90-100: 3 a 3,5mm
- 110-125-140-160: 3,2 a 3,8mm
- 180: 3,6 a 4,2mm
- 200: 3,9 a 4,5mm
- 250: 4,9 a 5,6mm
- 315: 6,2 a 7,1mm
- àrea d'aplicació BD
- 75- 80-82-90-100: 3 a 3,5mm

- 110-125:  3,2 a 3,8mm
- 140:  3,5 a 4,1 mm
- 160:  4,0 a 4,6 mm
- 180:  4,4 a 5,0 mm
- 200:  4,9 a 5,6 mm
- 250:  6,2 a 7,1 mm
- 315:  7,7 a 8,7 mm

TUBS DE PVC-U DE PARET ESTRUCTURADA:
Han d'estar formats per una capa interna i altre externa, llises, de PVC-U, compacte, entre les que s'ha introduït material de PVC-U escumat o nervis de PVC-U compacte, d'acord amb els requisits indicats en la normativa UNE-EN 1453-1.
Només es poden utilitzar per a muntatge a l'interior dels edificis, àrea d'aplicació B
Toleràncies:
- Diàmetre exterior:
- 32-40-50-63:  0 a 0,2mm.
- 75-80-82-90-100-110-125:  0 a 0,3mm
- 140-160-180:  0 a 0,4mm
- 200-250:  0 a 0,5mm
- 350:  0 a 0,6mm
- Gruix total de la paret:
- 32-40-50-63-75-80-82-90-100:  3 a 3,5mm
- 110-125-140-160:  3,2 a 3,8mm
- 180:  3,6 a 4,2mm
- 200:  3,9 a 4,5mm
- 250:  4,9 a 5,6mm
- 315:  6,2 a 7,1mm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Protegit de manera que no s'alterin les seves característiques.
Emmagatzematge: Assentats horitzontalment sobre superfícies planes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
TUBS DE PVC-U DE PARET MASSISSA:
UNE-EN 1329-1:1999 Sistemas de canalización en materiales plásticos para evacuación de aguas residuales (a baja y a alta temperatura) en el interior de la estructura de los edificios. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
TUBS DE PVC-U DE PARET ESTRUCTURADA:
UNE-EN 1453-1:2000 Sistemas de canalización en materiales plásticos con tubos de pared estructurada para evacuación de aguas residuales (a baja y a alta temperatura) en el interior de la estructura de los edificios. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Requisitos para los tubos y el sistema.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Els tubs han d'anar marcats segons la normativa corresponent a interval d'1 m. El marcatge ha de ser llegible després de l'emmagatzematge, exposició a la intempèrie, instal·lació i posada a l'obra del tub.
El marcatge no ha de produir defectes al tub (fissures, disminució del gruix mínim de les parets, etc.).
El marcatge ha de contenir com a mínim la següent informació:
- Número de la norma (si en té d'obligat compliment)
- Nom del fabricant i/o marca comercial
- Diàmetre nominal
- Gruix mínim de paret
- Material
- Codi de l'àrea d'aplicació
- Rigidesa anular nominal (només per als tubs BD)
- Informació del fabricant: any i mes de fabricació i identificador del lloc de fabricació
- Prestacions en clima fred

OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats de les característiques tècniques dels materials escollits (si s'escau)
- Control de la documentació tècnica subministrada.

- Control d'identificació dels materials, verificant que les seves característiques i dimensionament s'adequa al projecte
- Control de recepció dels materials i lloc d'emplaçament.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.

---

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BD5 MATERIALS PER A DRENATGES

## BD55- BONERA

## BD55-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BD55-10M60.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Materials per a la formació d'elements que tenen com a finalitat la conducció i evacuació de l'aigua de coberta.
S'han considerat els elements següents:
- Bonera de 110 a 200 mm de diàmetre, de PVC rígid, extruït, sense plastificants, amb accessoris i peces de muntatge
- Bonera de fosa amb tapa plana de 20 x 20 cm
- Bonera de goma termoplàstica i additius especials i tots els accessoris de muntatge. La bonera de paret té una boca d'entrada formant angle
PECES D'ACER GALVANITZAT:
El recobriment de zinc ha de ser homogeni i continu en tota la superfície.
No s'han d'apreciar esquerdes, exfoliacions ni despreniments del recobriment.
Protecció de galvanització (Sendzimir): >= 360 g/m2
Puresa del zinc: >= 98,5%
BONERA I GANXO I SUPORT DE PVC RÍGID:
Ha de tenir un color uniforme en tota la seva superfície.
No ha de tenir rebaves, fissures, grans ni d'altres defectes superficials.

Densitat (UNE 53-020): 1,35 - 1,46 g/cm3
Resistència a la tracció (UNE 53-114): >= 50 N/mm2
Allargament fins al trencament (UNE 53-114): >= 80%
Temperatura de reblaniment Vicat (UNE 53-118): >= 79°C
Comportament amb la calor. Variació longitudinal (UNE 53-114): <= 5%
Resistència a la flama (UNE-EN 60707): Autoextingible
Resistència a l'impacte a 20°C (UNE 53-114): <= 10%
Resistència al xoc tèrmic (UNE 53-114): 1500 cicles
Estanquitat a l'aire i a l'aigua (UNE 53-114): Ha de complir
Resistència als productes químics (DIN 16929): Ha de complir
BONERA DE PVC RÍGID AMB TAPA:
La tapa ha d'anar fixada al cos de la bonera amb cargols protegits contra l'oxidació.
La llargària dels cargols ha de ser l'adequada per a poder-hi intercalar l'aïllament.
Resistència de la tapa a la càrrega de trencament: >= 0,25 N/mm2
Toleràncies:
- Diàmetre de la tapa:
- Diàmetre 110 125 mm: ± 1 mm
- Diàmetre 160 200 mm: ± 2 mm
ELEMENTS DE GOMA TERMOPLÀSTICA:
La bonera ha de dur una plataforma de base al voltant de la boca d'entrada, amb relleus per a evitar el retorn de l'aigua.
No ha de tenir rebaves, fissures, grans ni d'altres defectes superficials.
La tapa ha de dur els elements necessàris per a la seva fixació a la bonera.
Llargària:
- Bonera: 33 cm
- Bonera de paret: 34,5 cm
BONERA DE FOSA:
Ha de tenir una plataforma de base al voltant de la boca d'entrada, amb relleus per a evitar el retorn de l'aigua.
Ha d'estar feta amb fosa grisa ordinària, amb grafit en vetes fines repartides uniformement.
No ha de tenir zones de fosa blanca, ni gotes fredes, ni inclusions de sorra, ni bombolles o esquerdes, ni d'altres defectes.
L'acabat ha de ser pintat i assecat al forn.
El recobriment ha de ser homogeni i continu a tota la superfície.
No s'han d'apreciar esquerdes, exfoliacions ni despreniments del recobriment.
La tapa ha d'estar perforada per a poder desguasar.
Resistència a tracció de la fosa, proveta cilíndrica (UNE 36-111): >= 180 N/mm2
Duresa Brinell (UNE_EN_ISO 6506/1): >= 155 HB
Contingut de ferrita, a 100 augments: <= 10%
Contingut de fòsfor: <= 0,15%
Contingut de sofre: <= 0,14%
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
BONERA O MANIGUET:
Subministrament: Les peces han d'anar empaquetades. Han de portar gravada la marca del fabricant.
Emmagatzematge: en el seu envàs, en llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PECES D'ACER GALVANITZAT:
UNE 7183:1964 Método de ensayo para determinar la uniformidad de los recubrimientos galvanizados, aplicados a materiales manufacturados de hierro y acero.
UNE 37501:1988 Galvanización en caliente. Características y métodos de ensayo.
PECES DE FOSA:
* UNE 36111:1973 Fundición gris. Tipos, características y condiciones de suministro de piezas moldeadas.
* ISO/R 185-61 Classification of grey cast iron.
PECES DE PLANXA DE ZINC, COURE, ALUMINI, DE PVC RÍGID O GOMA TERMOPLÀSTICA:
No hi ha normativa de compliment obligatori.

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BD5 MATERIALS PER A DRENATGES

## BD5C- CANAL DE FORMIGÓ POLÍMER AMB PENDENT PER A DRENATGES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BD5C-15AU,BD5C-15CS,BD5C-15DA.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Elements prefabricats de formigó amb additius per a la formació de canals de recollida d'aigua als paviments, per a zones de circulació utilitzades per vianants o vehicles, amb la part proporcional d'accessoris extrems i de connexió a al xarxa de sanejament i la reixa o tapa superior.
S'han considerat els següents elements de cobriment de la canal:
- Reixa de fosa
- Reixa d'acer inoxidable
- Reixa d'acer galvanitzat
- Reixa de polipropilè
- Reixa de formigó polímer
- Tapa de formigó amb ranures laterals

S'han considerat els següents tipus de canal:
- Sense pendent
- Amb pendent contínua

CARACTERÍSTIQUES GENERALS:
El cos de la canal ha d'estar fet de formigó armat amb polímers o fibra de vidre, obtingut per un procés d'emmotllament i curat del formigó.
No ha de tenir esquerdes, deformacions, balcaments ni escrostonaments a les arestes.
Les canals han de tenir una amplada interior constant.
Les canals sense pendent han de tenir l'alçada interior constant, i les canals amb pendent han de tenir un increment de l'alçada interior constant.
Els extrems de les peces de la canal han d'acabar amb un tall perpendicular a l'eix, amb un encaix encadellat.
Les canals amb pendent han de disposar de peces de diferent alçada, modulades per tal que permetin fer una canal amb pendent interior uniforme, amb la cara superior horitzontal.
La superfície interior ha de ser regular i llisa. S'admeten petites irregularitats locals que no disminueixin la qualitat de la peça, ni la capacitat de desguàs.
La canal ha de tenir un sistema per encaixar les reixes o tapes, que permetin immobilitzar-les.
Les reixetes o tapes han de tenir els encaixos adients perquè una vegada col·locades no es puguin desplaçar lateralment.
S'han de fixar al cos de la canal ja sigui amb algun dispositiu d'enclavament, amb una característica de disseny específica o amb una massa suficient que n'asseguri l'estabilitat.
Han de portar una marca que identifica la classificació segons UNE-EN 1433:
- A 15: zones de vianants

- B 125: voreres, zones de vianants i zones d'estacionament de vehicles
- C 250: vorals i cunetes de carreteres o carrers
- D 400: zones de trànsit en carreteres o aparcament de tot tipus de vehicles
- E 600: zones de trànsit de vehicles pesats
- F 900: zones amb càrregues molt grans

El fabricant ha de garantir que el conjunt de canal i reixa o tapa col·locada compleixen les condicions de l'UNE-EN 1433.

Les reixetes i les tapes han d'estar marcades com a mínim amb la següent informació:
- Referència a la norma EN 1433
- La classe a la que pertanyen
- Nom i/o marca d'identificació del fabricant de la reixeta o tapa
- Nom i/o marca d'identificació del fabricant de la unitat de reixeta
- Data de fabricació
- El símbol normalitzat CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol

El cos de la canal ha d'estar estar marcat com a mínim amb la següent informació:
- Referència a la norma EN 1433
- La classe a la que pertany
- Nom i/o marca d'identificació del fabricant
- El tipus de producte (M per a les canals que necessiten suport addicional per a suportar les càrregues verticals i horitzontals, I per a les canals que no necessiten aquest suport)
- Data de fabricació
- Per a canals amb pendent incorporada, la seqüència de cada unitat
- Marcat relatiu a la resistència a la intempèrie
- El símbol normalitzat CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol

Toleràncies:
- Llargària interior (L):
- Per a L =< 1 000 mm: ± 2 mm
- Per a 1 000 < L =< 4 000 mm: ± 4 mm
- Per a L > 4 000 mm: ± 5 mm
- Amplària interior (b):
- Per a b =< 500 mm: ± 2 mm
- Per a 500 < b =< 500 mm: ± 3 mm
- Alçària interior (h):
- Per a h =< 200 mm: ± 2 mm
- Per a h > 200 mm: ± 1% amb un màxim de ± 3 mm
- Tolerància del desplaçament horitzontal de la reixeta o tapa en el seu allotjament:
- Obertura neta =< 400 mm: ± 7 mm
- Obertura neta > 400 mm: ± 9 mm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Protegit de manera que no s'alterin les seves característiques.

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a recollida i conducció d'aigües superficials en zones sotmeses a trànsit peatonal i/o de vehicles:
- Sistema 3: Declaració de Prestacions

A la documentació comercial, el símbol normalitzat CE s'ha d'acompanyar de la següent informació:
- Nom o marca d'identificació i l'adreça social del fabricant
- Els dos últims dígits de l'any en que s'ha fet el marcatge
- Referència a la norma EN 1433
- Descripció del producte: nom genèric, material, dimensions, ús previst i lloc d'instal·lació
- Característiques cobertes per la norma EN 1433
- Capacitat de suport de càrrega (classificació segons la norma EN 1433)
- Estanquitat a l'aigua
- Durabilitat

Emmagatzematge: En llocs protegits del sol, les gelades i els impactes.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

UNE-EN 1433:2003 Canales de desagüe para zonas de circulación utilizadas por peatones y vehículos. Clasificación, requisitos de diseño y de ensayo, marcado y evaluación de la conformidad.

UNE-EN 1433/AC:2004 Canales de desagüe para zonas de circulación utilizadas por peatones y vehículos. Clasificación, requisitos de diseño y de ensayo, marcado y evaluación de la conformidad.
UNE-EN 1433/AC:2004 Canales de desagüe para zonas de circulación utilizadas por peatones y vehículos. Clasificación, requisitos de diseño y de ensayo, marcado y evaluación de la conformidad.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
En el cas que el material declari contingut reciclat, el fabricant ha de mostrar, si se li demana, la documentació que acrediti aquest contingut.

---

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BD7 TUBS PER A CLAVEGUERES I COL·LECTORS

## BD7E- TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BD7E-1ZQA,BD7E-1ZQY,BD7E-1ZQW,BD7E-1ZQS.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tubs de PVC-U per a l'execució d'obres de sanejament.
S'han considerat els tipus següents:
- Tub de PVC de formació helicoïdal per a clavegueres i col·lectors
- Tub de PVC-U per a sanejament amb pressió
- Tub de PVC-U per a sanejament sense pressió
- Tub de PVC-U de paret estructurada per a sanejament sense pressió
CARACTERÍSTIQUES GENERALS:
La superfície ha de ser de color uniforme i no ha de tenir fissures.
Els extrems han d'acabar amb un tall perpendicular a l'eix i sense rebaves.
TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ
L'aspecte de la superfície interna i externa dels tubs ha d'ésser llisa, neta i exempta de fissures, cavitats, i d'altres defectes superficials. El material no pot contenir cap impuresa visible sense augment.
El color del tub ha de ser gris o marró i uniforme en tot el gruix de la paret.
La paret del tub ha de ser opac.
Característiques mecàniques:
- Resistència a l'impacte: d'acord amb UNE-EN 1452-2.
- Resistència a la pressió interna: d'acord amb UNE-EN 1452-2.
Característiques físiques:
- Temperatura de reblaniment Vicat (VST): >= 80°C d'acord amb assaig UNE-EN 727

- Retracció longitudinal:  <= 5% d'acord amb assaig UNE-EN 743.
- Grau de gelificació:  No hi pot haver cap atac en cap punt de la superfície de la proveta d'acord amb assaig UNE-EN 580.
Els juts d'estanqueïtat i adhesius han d'estar conformes a UNE-EN 1452-2.
Toleràncies:
- Diàmetre exterior:
- 25-32-40-50:  0,2 mm.
- 63-75-90:  0,3 mm.
- 110-125:  0,4 mm.
- 140-160:  0,5 mm
- 180-200:  0,6 mm
- 225:  0,7 mm
- 250:  0,8 mm
- 280:  0,9 mm
- 315: 1,0 mm
- 355: 1,1 mm
- 400: 1,2mm
- 450:  1,4mm
- 500:  1,5 mm
- 560:  1,7 mm
- 630:  1,9 mm
- 710-800-900-1000: 2,0 mm
- Gruix parets: és variable depenent del diàmetre i la pressió admissible. UNE-EN 1452-2
- Llargària i embocadures: d'acord amb UNE-EN 1456-1 i UNE-EN 1452-2

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Protegit per tal que arribi a l'obra amb les condicions exigides.
Emmagatzematge: En llocs protegits d'impactes, dels raigs solars i ben ventilats. S'han d'apilar horitzontalment i paral·lelament sobre superfícies planes, s'han de capicular les esbocadures per capes o bé situar-les en un mateix costat, i separar les capes per mitjà de separadors. L'alçària de la pila ha de ser <= 1,5 m.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ
UNE-EN 1456-1:2002 Sistemas de canalización en materiales plásticos para saneamiento enterrado o aéreo con presión. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
UNE-EN 1452-2:2000 Sistemas de canalización en materiales plásticos para conducción de agua. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 2: Tubos.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Els tubs per sanejament amb pressió, han d'anar marcats o impresos directament sobre el tub a intervals d'1 m. de forma que sigui llegible després d'emmagatzemar-los, exposició a l'intempèrie i instal·lació, i mantenir-se llegible durant la vida del producte. El marcat no pot produir fissures o defectes que influeixin desfavorablement sobre l'aptitud del tub.
El tub ha d'anar marcat amb la següent informació com a mínim:
- Número normativa (UNE-EN 1456-1)
- Nom i/o marca comercial
- Material (PVC-U)
- Diàmetre exterior nominal i gruix de la paret
- Pressió nominal
- Informació del fabricant (període de fabricació i nom o codi de la ciutat de fabricació si el fabricant produeix en diferents ciutats).
- Número de la línia d'extrusió

OPERACIONS DE CONTROL:
- Abans de començar l'obra, si varia el subministrament, i per cada tipus diferent que arribi a l'obra, es demanaran al contractista els certificats del fabricant que garanteixin el compliment del plec de condicions tècniques, incloent els resultats dels assaigs següents, realitzats per un laboratori acreditat:
- Resistència a la tracció (UNE 53112)
- Allargament fins a la ruptura (UNE 53112)
- Resistència a la pressió interna (UNE-EN 921)
- Densitat (UNE-EN ISO 11833-1)

- Resistència al diclorometà a una temperatura especificada (UNE-EN 580)
- Temperatura de reblaniment Vicat (UNE-EN 727)
- Retracció longitudinal en calent (EN 743)
- Estanquitat a l'aigua (UNE-EN 1277)
- Resistència a l'impacte (UNE-EN 744)

En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.

- Es comprovaran per cada 200 m o fracció de tub d'un mateix diàmetre que s'hagi de col·locar, i sobre una mostra de 2 tubs, les característiques geomètriques següents:
- 5 mesures del diàmetre exterior (1 tub)
- 5 mesures de longitud (1tub)
- N mesures del gruix (1 tub) depenen del diàmetre nominal (DN):
- 8 mesures per DN <= 250
- 12 mesures per 250 < DN <= 630
- 24 mesures per DN > 630

En cas de que el material disposi de la Marca AENOR, marcatge CE o altre legalment reconeguda a un país de l'UE, es pot prescindir de la presentació dels assaigs de control de recepció.

CRITERIS DE PRESA DE MOSTRES:

Els controls s'han de realitzar segons les instruccions de la DF i els criteris indicats a les normes de procediment corresponents.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Control estructural i físic:

- No s'autoritzarà la col·locació de peces que no vagin acompanyades del certificat del fabricant.
- En el cas de que un dels assaigs no resulti satisfactori, es repetirà sobre 2 mostres més del lot assajat. Només s'acceptarà el lot, amb l'excepció del tub defectuós assajat, quan ambdós resultats siguin correctes.

Control geomètric:

- En el cas de que resultat d'una mesura no resulti satisfactori, es repetirà la mesura sobre 2 altres tubs.
- Només s'acceptarà el lot, amb l'excepció del tub defectuós assajat, quan ambdós resultats siguin correctes.

---

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BDK MATERIALS PER A PERICONS DE CANALITZACIONS

## BDK5- BASTIMENT I TAPA DE FOSA DÚCTIL PER A REGISTRE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BDK5-1KJ4,BDK5-1KH2.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Dispositius de cobriment i tancament per a pous, pericons, embornals o interceptors i materials complementaris per a pous de registre.
S'han considerat els elements següents:
- Bastiment i tapa per a pous i pericons de registre de canalitzacions
S'han considerat els materials següents per a tapes i reixes
- Fosa gris
- Fosa dúctil
- Acer
BASTIMENT I TAPA O BASTIMENT I REIXA:
La peça ha de tenir la forma i els gruixos adequats per a suportar les càrregues del trànsit.
Els dispositius de cobriment i tancament utilitzats en zones de circulació de vianants i/o de vehicles, s'han de classificar segons la norma UNE-EN 124, en alguna de les classes següents:
- Classe A 15: Zones susceptibles de ser utilitzades només per vianants i ciclistes.
- Classe B 125: Voreres, zones de vianants i superfícies semblants, àrees d'estacionament i aparcaments de varis pisos per a cotxes.
- Classe C 250: Vorals i cunetes de carrers, que mesurada a partir de la vorada de la vorera s'extèn en un màxim de 0,5 m sobre la calçada i 0,2 m sobre la vorera
- Classe D 400: Calçades de carreteres (inclòs carrers de vianants), vorals estabilitzats i zones d'aparcament per a tot tipus de vehícles.
- Classe E 600: Zones per les que circul·len vehicles de gran tonelatje (paviments d'aeroports, molls, etc.).
- Classe F 900: Zones sotmeses a càrregues particularment elevades (paviments d'aeroports)
Tots els elements que formen el dispositiu han d'estar protegits contra la corrossió.
El dispositiu ha d'estar lliure de defectes que puguin perjudicar el seu bon estat per tal de ser utilitzat.
Les tapes o reixes metàl·liques, han de tenir la superfície superior antilliscant.
Quan estiguin combinat un metall amb el formigó, o qualsevol altre material, ambdós han de tenir una adherència satisfactoria.
Els dispositius han de ser compatibles amb els seus assentaments. El conjunt no ha de produir soroll al trepitjar-lo.
Les tapes o reixes han d'estar asegurades en la seva posició contra el desplaçament degut al trànsit amb una fondària d'encastament suficient o amb un dispositiu de tancament.
La tapa o reixa ha de quedar asegurada dins del bastiment per algún dels següents procediments:
- Amb un dispositiu de tanca
- Amb suficient massa superficial
- Amb una característica específica en el diseny
El disseny d'aquests procediments ha de permetre que la tapa o reixa es pugui obrir amb una eina d'us normal.
El disseny del conjunt ha de garantir la posició correcta de la tapa o reixa en relació amb el bastiment.
S'han de preveure dispositius que permetin garantir un desbloquejament de la tapa o reixa i la seva obertura.
La tapa o reixa ha de recolzar-se en el bastiment en tot el seu perímetre. La pressió del recolzament corresponent a la càrrega d'assaig no ha de superar els 7,5 N/mm2. El recolzament ha de contribuir a l'estabilitat de la reixa o tapa en condicions d'us.
L'alçària del bastiment dels dispositus de tancament de les classes D 400, E 600 i F 900, ha de ser com a mínim de 100 mm.
La superfície superior de les reixes, tapes i bastiment ha de ser plana, només les reixes de la classe D 400 poden tenir una superfície cóncava.
El pas lliure dels dispositius de tancament utilitzats com a pas d'home, s'han d'ajustar a les normes de seguretat en funció del lloc a on s'instal·lin. En general han de tenir un diàmetre mínim de 600 mm.
La franquicia total entre els diferents elements dels dispositius de cobriment i tancament, han de complir les especificacions següents:
- Un o dos elements:
- Pas lliure <= 400 mm: =< 7 mm
- Pas lliure > 400 mm: =< 9 mm
- Tres o més elements:
- Franquícia del conjunt: <= 15 mm
- Franquícia de cada element individual: <= 5 mm
Fondària d'encastament (classes D 400 a F 900): >= 50 mm
Toleràncies:

- Planor: ± 1% del pas lliure; <= 6 mm
- Dimensions: ± 1 mm
- Guerxament: ± 2 mm
Si el dispositiu de tancament te forats de ventilació, aquests han de complir les condicions següents:
Superfície de ventilació:
- Pas lliure <= 600 mm: >= 5% de la superfície d'un cercle, amb un diàmetre igual a la pas lliure
- Pas lliure > 600 mm: >= 140 cm2
Dimensions dels forats de ventilació:
- Ranures:
- Llargària: <= 170 mm
- Amplària:
- Classes A 15 a B 125: 18-25 mm
- Classes C 250 a F 900: 18-32 mm
- Forats:
- Diàmetre:
- Classes A 15 a B 125: 18-38 mm
- Classes C 250 a F 900: 30-38 mm
BASTIMENT AMB REIXA O TAPA PRACTICABLE:
El conjunt ha d'obrir i tancar correctament.
Un cop tancada, la tapa o reixa ha de quedar enrasada amb el bastiment.
L'angle respecte a la horitzontal, de la reixa oberta, ha de ser com a mínim de 100º.
ELEMENTS AMB RECOBRIMENT DE PINTURA BITUMINOSA:
El recobriment de pintura bituminosa, ha de formar una capa contínua que ha de cobrir a l'element completament.
Ha de tenir un color, una lluentor i una textura uniformes.
La pintura ha d'estar ben adherida al suport, no ha de tenir bullofes, escrostonament, ni altres defectes superficials.
DISPOSITIUS DE FORMIGÓ ARMAT:
En els dispositius de tancament de les classes A 15 a D 400 de formigó armat, les arestes i superfícies de contacte entre el bastiment i la tapa, han d'estar protegides amb una xapa de fosa o d'acer galvanitzat en calent.
- A 15: >= 2 mm
- B 125: >= 3 mm
- C 250: >= 5 mm
- D 400: >= 6 mm
- E 600 i F 900: A determinar en funció de cada disseny
Gruix mínim de fosa o d'acer:
Resistència característica a la compressió del formigó després de 28 dies:
- Classe B 15 a F 900: >= 40 N/mm2
- Classe A 15: >= 25 N/mm2
Gruix del recobriment de formigó de l'armadura d'acer: >= 20 mm
ELEMENTS DE FOSA:
La fosa ha de ser gris, de grafit laminar (fosa gris normal, conforme a la norma UNE-EN 1561) o de grafit esferoïdal (fosa nodular o dúctil, conforme a la norma UNE-EN 1563).
Les peces han de ser netes, lliures de sorra solta, d'òxid o de qualsevol altre tipus de residu.
No ha de tenir defectes superficials (esquerdes, rebaves, bufaments, inclusions de sorra, gotes fredes, etc.).
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
BASTIMENT I TAPA O REIXA:
Subministrament: Embalats en caixes. Cada caixa ha de portar escrit el nombre de peces que conté i les seves dimensions.
Emmagatzematge: En posició horitzontal sobre superfícies planes i rígides per tal d'evitar deformacions o danys que alterin les seves característiques.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
BASTIMENT I TAPA O BASTIMENT I REIXA:
UNE-EN 124:1995 Dispositivos de cubrimiento y de cierre para zonas de circulación utilizadas por peatones y vehículos. Principios de construcción, ensayos de tipo, marcado, control de calidad.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
La tapa o reixa i el bastiment han de tenir marcades de forma indeleble les indicacions següents:
- El codi de la norma UNE EN 124

- La classe segons la norma UNE EN 124
- El nom o sigles de fabricant i el lloc de fabricació
- Referència, marca o certificació si en tè

OPERACIONS DE CONTROL EN BASTIMENTS, TAPES I REIXES DE FOSA:
Les tasques de control a realitzar són les següents:
- Recepció del certificat de qualitat del fabricant, d'acord a les condicions del plec.

CRITERIS DE PRESA DE MOSTRES:
Les operacions de control s'han de realitzar segons les indicacions de la DF.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptarà l'ús de materials que no arribin acompanyats del corresponent certificat de qualitat del fabricant.
En cas de disconformitat d'un control geomètric o de pes, es rebutjarà la peça assajada i s'incrementarà el control, en primer lloc, fins al 20% de les peces, i en cas de seguir observant deficiències, fins al 100% del subministrament.

## BDW3- ACCESSORI I ELEMENTS DE MUNTATGE PER A TUB DE PVC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BDW3-FFA9,BDW3-FFA7,BDW3-FFAH,BDW3-FFAD,BDW3-FFAI,BDW3-FFAE,BDW3-FFAP,BDW3-FFAK,BDW3-FFAA,BDW3-FFA8,BDW3-FFAF,BDW3-FFAB,BDW3-FFAS,BDW3-FFAN,BDW3-FFAO,BDW3-FFAJ,BDW3-FFAG,BDW3-FFAC,BDW3-FFAR,BDW3-FFAM,BDW3-FFAQ,BDW3-FFAL.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt d'accessoris (colzes, derivacions, reduccions, etc.) i d'elements especials (materials per a la unió entre tubs o entre tubs i accessoris) per a desguassos i baixants.
S'han considerat els elements següents:
- Accessoris i elements especials per a tubs de PVC-U de paret massissa
- Accessoris i elements especials per a tubs de PVC-U de paret estructurada
- Elements especials per a baixants de fosa grisa
- Elements especials per a baixants de planxa galvanitzada amb unió plegada

CARACTERÍSTIQUES GENERALS:
El material, la seva qualitat i les característiques físiques, mecàniques i dimensionals, han de ser compatibles amb les del tub, i no han de fer disminuir les d'aquest en cap de les seves aplicacions.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'albarà de lliurament han de constar les característiques d'identificació següents:

- Material
- Tipus
- Diàmetres
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat composada pel conjunt de peces necessàries per a muntar 1 m de tub.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PVC-U PARET ESTRUCTURADA:
* UNE-EN 1453-1:2000 Sistemas de canalización en materiales plásticos con tubos de pared estructurada para evacuación de aguas residuales (a baja y a alta temperatura) en el interior de la estructura de los edificios. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Requisitos para los tubos y el sistema.
PVC-U DE PARET MASSISSA:
* UNE-EN 1329-1:1999 Sistemas de canalización en materiales plásticos para evacuación de aguas residuales (a baja y a alta temperatura) en el interior de la estructura de los edificios. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
* UNE-EN 1401-1:1998 Sistemas de canalización en materiales plásticos para saneamiento enterrado sin presión. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
* UNE-EN 1456-1:2002 Sistemas de canalización en materiales plásticos para saneamiento enterrado o aéreo con presión. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
FOSA GRISA, PLANXA GALVANITZADA I PLOM:
No hi ha normativa de compliment obligatori.

---

## BD MATERIALS PER A EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BDZ MATERIALS PER A ELEMENTS AUXILIARS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## BDZ1- SIFÓ PER A CÀMERES DE DESCÀRREGA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BDZ1-0LLW,BDZ1-0LLX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Peça de planxa d'acer amb la vora superior en forma de dent de serra, i forats colissos per a poder regular la seva posició en alçària, destinada a col·locar-se com a extrem superior d'un sobreeixidor.
CARACTERÍSTIQUES GENERALS:

Ha de constar d'un sifó principal, un secundari, una campana de pressió situada a l'entrada del sifó principal, i un tub de comunicació entre la campana i la sortida del sifó secundari.
La campana s'ha de poder desmontar per netejar el sifó.
El disseny del sifó ha de garantir un tancament hidràulic fins que l'aigua no sobrepassi una alçària prefixada per sobre del sifó, i una descàrrega ràpida de l'aigua, una vegada aquesta sobrepassi aquesta alçària, amb el cabal exigit a la DT.
La superfície de la peça no ha de tenir incrustacions, esquerdes ni rebaves.
Es poden admetre lleugers relleus, depressions o estries pròpies del procés de fabricació, amb una amplària màxima de 0,8 mm.
En una secció de ruptura, el gra ha de ser fi, regular i compacte.
La superfície exterior ha d'estar recoberta amb vernís.
Facilitat de mecanització (duresa superficial, ISO 2531): <= 230 Brinell
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: No hi ha condicions específiques de subministrament.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BE MATERIALS PER A INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## BE4 XEMENEIES, CONDUCTES CIRCULARS I OVALS

## BE42 CONDUCTE CIRCULAR METÀL·LIC

## BE421- CONDUCTE CIRCULAR METÀL·LIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BE421-0O4F,BE421-0O4C,BE421-0O48,BE421-0O46.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conductes circulars metàl·lics per a ventilació i evacuació de fums i gasos, en mòduls de 3 a 5 m de llargària.
S'han considerat els materials següents:

- Planxa d'acer galvanitzat
- Alumini flexible
- Alumini rígid
- Acer inoxidable

CARACTERÍSTIQUES GENERALS:

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

Els conductes han de suportar els esforços deguts al seu propi pes, al moviment de l'aire, als propis de la seva manipulació, així com a les vibracions que es puguin produir com a conseqüència del règim normal de funcionament.

No poden tenir peces interiors soltes.

Les superfícies internes han de ser llises.

No han de contaminar l'aire que circula pel seu interior.

El revestiment interior dels conductes, en el seu cas, ha de resistir l'acció agressiva dels productes de desinfecció, i la seva superfície interior haurà de tenir una resistència mecànica que permeti suportar els esforços als que s'hauran de sotmetre durant les operacions de neteja mecànica que estableix la norma UNE 100012 d'higiene de sistemes de climatització.

La velocitat i la pressió màxima admeses als conductes han de ser les que vinguin determinades pel tipus de construcció, segons les normes UNE-EN 12237 per a conductes metàl·lics i UNE-EN 13403 per a conductes de materials aïllants.

Per al disseny dels suports dels conductes s'han de seguir les instruccions que dicti el fabricant.

Característiques tècniques:

| | Alumini rígid | Acer inoxidable | |
|---|---|---|---|
| Gruix (mm) | 0,7 | 1 | |
| Pes xapa (kg/m2) | 1,72 | 8,1 | |
| Diàmetre (mm) | 125 160 250 | 400 | 200 250 | 400 |
| Pres. Treball (mm.c.d.a.) (UNE 100-102) | <=150 | =100 | <=100 | <=150 |

Característiques tècniques:

| | Alumini Flexible | Planxa acer galvanitzat | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Gruix (mm) | no definit | 0,5 | | | | | | 0,7 | |
| Diàm. (mm) | 125 | 160 | 250 | 100 | 125 | 160 | 200 | 250 | 400 |
| Pres. treball | <=305 | <=305 | <=203 | | | | | | |
| Pes tub kg/m | 0,32 | 0,35 | 0,58 | 1,4 | 1,7 | 2,1 | 2,7 | 4,3 | 6,9 |

CONDUCTES D'ALUMINI FLEXIBLE:

Han d'estar formats per una banda metàl·lica enrotllada helicoïdalment, de paret prima corrugada amb plegament articulat per les seves vores, les quals han de ser comprimibles.

Estiratge per metre d'origen comprimit: <= 5 m

CONDUCTES D'ALUMINI RÍGID, D'ACER INOXIDABLE I D'ACER GALVANITZAT:

Han d'estar formats per una banda metàl·lica corbada longitudinalment o helicoïdalment sobre el seu diàmetre, formant un tub estanc per mitjà d'un encaix de doblec de les seves vores.

Toleràncies per a conductes d'alumini rígid o acer inox:

| Diàmetre nominal | Tolerància |
|---|---|

| ( mm ) | |
|---|---|
| 100 | + 0,5 |
| 125 | + 0,5 |
| 160 | + 0,6 |
| 200 | + 0,7 |
| 250 | + 0,8 |
| 400 | + 1 |

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'engròs, per mòduls de 3 a 5 m, estirat i en caixes de cartró comprimit.
Emmagatzematge: En llocs protegits contra els impactes. S'han d'apilar horitzontalment i paral·lelament sobre superfícies planes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
* UNE-EN 1506:2007 Ventilación de edificios. Conductos de aire de chapa metálica y accesorios de sección circular. Dimensiones.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Verificació de la resistència al foc dels diferents tipus de conductes i accessoris de suportació i contrastar amb la documentació d'assaigs del fabricant.
- Comprovació de l'espessor de galvanitzat de les peces que formen els conductes metàl·lics, segons especificacions de projecte o UNE 100104.
- Uniformitat dels recobriments galvanitzats, segons assaig UNE 7183.
- Verificació de la construcció conductes de fibra de vidre segons Norma UNE 100105.
- Accessoris per a la distribució d'aire:
- Verificació del nivell sonor
- Verificació de les característiques aerodinàmiques de les boques d'aire.
- Verificació de les característiques aïllants tèrmiques i de resistència al foc dels materials per a l'aïllament de conductes.
- Realització d'informe amb els resultats del control efectuat en els materials rebuts.
CRITERIS DE PRESA DE MOSTRES:
S'ha de realitzar el control de materials i equips que es rebin a l'obra. El control s'ha de realitzar per mostreig i a totes les partides diferents que arribin a l'obra. La intensitat del mostreig ha d'estar definida per la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Un cop realitzat el control dels materials, totes les anomalies, incompliment de les especificacions, desviacions del projecte i variacions del què s'ha contractat amb l'empresa instal·ladora, s'ha de comunicar a DF, que haurà de decidir la substitució total o parcial del material rebut.
