Tots els materials, equips i accessoris no tindran en cap de les seves parts deformacions, fissures o senyals d'haver estat sotmesos a maltractaments abans o durant la instal·lació.
Les reixetes han de suportar els esforços deguts al seu propi pes, al moviment de l'aire, als propis de la seva manipulació, així com a les vibracions que es puguin produir com a conseqüència del règim normal de funcionament
No han de contaminar l'aire que circula a través seu
Ha d'estar formada per un bastidor metàl·lic de perfils angulars que reuneixi el conjunt d'aletes, preparat per a ser fixat al marc.
Les aletes han de tenir la possibilitat de pivotar sobre un punt de suport per a poder-les orientar.
No ha de tenir aletes despreses o deformades; les aletes han d'estar equidistants entre si.
La forma d'expressio de les mesures sempre ha de ser: Llargària x Alçària
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).

## BE MATERIALS PER A INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

### BEW ACCESSORIS PER A INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## BEW1- SUPORT PER A CONDUCTES CIRCULARS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BEW1-0OXW,BEW1-0OXM,BEW1-0OWZ,BEW1-0OWY.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt d'elements auxiliars (suports, abraçadores, etc.).
CARACTERÍSTIQUES GENERALS:
El material i les seves característiques (qualitat, dimensions, etc.) han de ser els adequats per al conducte i no han de fer disminuir les característiques pròpies del conjunt de la instal·lació en cap de les seves aplicacions.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'albarà de lliurament han de constar les característiques d'identificació següents:
- Material
- Tipus
- Dimensions en cm
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## BF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## BF5 TUBS I ACCESSORIS DE COURE

## BF53- TUB DE COURE SEMIDUR

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BF53-FGLQ,BF53-FGLP,BF53-FGLO,BF53-FGLN,BF53-FGLE,BF53-FGLD.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS

Tubs de coure semidur, sense soldadura, per a aigua i gas en aplicacions sanitàries i de calefacció.

CARACTERÍSTIQUES GENERALS:

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

El tub ha de ser recte, rodó, llis, ben net de dins i de fora, i sense defectes apreciables. Els extrems han d'acabar amb un tall perpendicular a l'eix i sense rebaves.

- Composició química: Cu + Ag: mín. 99,90%; 0,015% =< P =< 0,040%
- Estat metal·lúrgic (UNE-EN 1173): R250 (semidur). Resistència mínima a la tracció 250 MPa
- El tipus de coure es designa indistintament com: Cu-DHP o CW024A

Els tubs de diàmetre comprés entre 10 mm i 54 mm, ambdós inclosos, han d'anar marcats al llarg de la seva longitud, cada 600 mm com a màxim, amb la següent informació com a mínim:

- Marcatge permanent (llegible fins al final del cicle de vida de la instal·lació)
- Referència a la norma EN 1057
- Marca identificativa del fabricant
- La data de fabricació: any i trimestre (I a IV) o any i mes (1 a 12)
- Marcatge durador (llegible fins al moment de la posada en marxa de la instal·lació):
- Mides nominals de la secció transversal: diàmetre exterior x gruix de la paret
- Identificació de l'estat metal·lúrgic

Els tubs de diàmetre => 6 mm i < 10 mm, o de diàmetre > 54 mm, han d'incorporar un marcatge similar a l'anterior, almenys en ambdós extrems.

Tots els tubs han de portar el símbol normalitzat CE, també uniformement distribuit al llarg de la seva longitud.

Llargària: Barres de 3 m o 5 m

Toleràncies:

- Diàmetre exterior nominal:

| Diàmetre exterior nominal (mm) | | Toleràncies en el diàmetre exterior (mm) | |
|---|---|---|---|
| | | aplicable al diàmetre mig | aplicable a qualsevol diàmetre |
| > | =< | | |
| 6 | 18 | ± 0,04 | ± 0,09 |
| 18 | 28 | ± 0,05 | ± 0,10 |
| 28 | 54 | ± 0,06 | ± 0,11 |
| 54 | 76 | ± 0,07 | ± 0,15 |
| 76 | 89 | ± 0,07 | ± 0,20 |
| 89 | 108 | ± 0,07 | ± 0,30 |
| 108 | 159 | ± 0,2 | ± 0,4 |

- Gruix de paret:

| Diàmetre exterior nominal (mm) | Tolerància en el gruix de la paret | |
|---|---|---|
| | g < 1 mm (%) | g => 1 mm (%) |
| < 18 mm | ± 10 | ± 13 |
| => 18 mm | ± 10 | ± 15 (*) |

(*) ± 10% per a tubs de 35 mm, 42 mm i 54 mm amb un gruix de paret d'1,2 mm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: No hi ha condicions específiques de subministrament.
Emmagatzematge: En llocs protegits contra els impactes. S'han d'apilar horitzontalment i paral·lelament sobre superfícies planes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 1057:2007 Cobre y aleaciones de cobre. Tubos redondos de cobre, sin soldadura, para agua y gas en aplicaciones sanitarias y de calefacción.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a instal·lacions per al transport, evacuació o emmagatzematge d'aigua no destinada al consum humà,
- Productes per a instal·lacions d'àrees subjectes a reglamentacions sobre reacció al foc utilitzades per al transport, evacuació o emmagatzematge d'aigua no destinada al consum humà. * Productes o materials que no necessiten sotmetre's a assaig de reacció al foc (per exemple productes o materials de la classe A1 conformement a la Decisió 96/603/CE, i les seves modificacions):
- Sistema 4: Declaració de Prestacions
- Productes per a instal·lacions per al transport, distribució o emmagatzematge de gas o gasoil per a subministrament de sistemes de calefacción o refrigeració d'edificis, des del dipòsit d'emmagatzematge exterior o l'última unitat de reducció de pressió de la red fins a l'entrada del sistema de la caldera, calefacció o refrigeració de l'edifici:
- Sistema 3: Declaració de Prestacions
- Productes per a instal·lacions d'àrees subjectes a reglamentacions sobre reacció al foc utilitzades per al transport, distribució o emmagatzematge de gas o combustible destinat al subministrament dels sistemes de calefacció o climatització d'edificis per a reserves d'emmagatzematge externes o l'última unitat de reducció de la xarxa d'entrada dels sistemes de calefacció o refrigeració d'edificis:
- Sistema 1: Declaració de Prestacions
El símbol normalitzat CE (d'acord amb la directiva 93/68/CEE) es col·locarà sobre el producte, o en el seu defecte sobre l'etiqueta o en la documentació comercial que l'acompanya i anirà acompanyat de la següent informació:
- Nom, marca comercial i adreça enregistrada del fabricant
- Els dos últims dígits de l'any en que es va fixar el marcatge
- Referència a la norma europea EN 1057
- Descripció del producte: nom genèric, material, mides,... i ús previst
- Informació sobre aquelles característiques essencials que procedeixin recollides a la taula ZA.1 de la norma EN 1057, que han de ser com mínim les següents:
- Reacció al foc
- Resistència a l'aixafament
- Pressió interior
- Toleràncies dimensionals
- Resistència a les altes temperatures
- Soldabilitat
- Estanquitat: gasos i líquids
- Durabilitat de la resistència a l'aixafament, pressió interior i estanquitat
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Control del material de soldadura (% plata)
- Control de recepció dels materials i lloc d'emplaçament.
- Contrastar la documentació amb els materials i amb els requeriments de la instal·lació segons projecte. (Verificar el marcatge a tubs i accessoris).
- Control dimensional de tubs i accessoris (diàmetre i espessor)
- Control visual i dimensional de vàlvules i altres elements (tipus i pressió nominal)
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar per mostreig a cada recepció.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Ha de ser refusat el material que no compleixi amb els requeriments del projecte.
No s'han d'admetre tubs en bobina (recuit). Quan s'especifiqui en barres de coure dur.

---

## BF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## BFA TUBS I ACCESSORIS DE PVC

## BFA7- TUB DE PVC-U A PRESSIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BFA7-08T4,BFA7-08T5,BFA7-08SB,BFA7-08SA,BFA7-08SD,BFA7-08SW,BFA7-08S5.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Elements elaborats per emmotllament o injecció a partir de poli (clorur de vinil) no plastificat (PVC-U) per a canalitzacions a pressió.
S'han considerat els elements següents:
- Tub rígid amb un extrem llis i bisellat i l'altre esbocat.
S'han considerat els tipus d'unió següents:
- Per a encolar
- Per a unió elàstica amb anella elastomèrica d'estanquitat
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
La superfície interna i externa ha de ser llisa, ha d'estar neta i sense escletxes, cavitats o d'altres defectes superficials que impedeixin assolir els requeriments necessàris per al seu ús.
El material no ha de tenir cap element estrany visible a cop d'ull.
Els extrems han d'acabar amb un tall perpendicular a l'eix i sense rebaves.
El color ha de ser uniforme en tot el gruix de la paret.
La paret de l'element que hagi d'anar col·locat no soterrat, ha de ser opaca a la llum visible.
Ha de tenir una secció constant i uniforme, amb les toleràncies d'ovalitat definides a la taula 1 de l'UNE-EN 1452-2.
Les característiques químiques determinades segons la norma UNE 53329-1, han de complir l'especificat a l'UNE-EN 1452-2.
Ha de superar els assaigs de resistència a l'impacte (UNE-EN 744) i de pressió interna (UNE-EN 921) tal i com determina l'UNE-EN 1452-2.

Han de complir la legislació sanitària vigent.
Els juntsha de ser estancs.
Els extrems llisos per a unió amb junt elastomèric o unió encolada, han de ser aixamflanats, en cap cas l'extrem llis ha de tenir cap aresta viva.
El material del junt d'estanquitat o l'adhesiu no ha de tenir cap efecte desfavorable sobre les propietats de l'element i no ha d'afectar al conjunt, de manera que no compleixi amb els requisits funcionals especificats a l'UNE-EN 1452-5.
Si l'element és per a una conducció d'aigua potable també ha de portar les següents inscripcions:
- Número del RSI
- Inscripció "AGUA"
Gruix mínim de la paret (mm):

| DN | Pressions nominals PN (bar) | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | PN6 | PN7,5 | PN8 | PN10 | PN12.5 | PN16 | PN20 | PN25 |

| 355 | 8,7 | 10,4 | 10,9 | 13,6 | 16,9 | 21,1 | 26,1 | - |
| 400 | 9,8 | 11,7 | 12,3 | 15,6 | 19,1 | 23,7 | 29,4 | - |
| 450 | 11,0 | 13,2 | 13,8 | 17,2 | 21,5 | 26,7 | 33,1 | - |
| 500 | 12,3 | 14,6 | 15,3 | 19,1 | 23,9 | 29,7 | 36,8 | - |
| 560 | 13,7 | 16,4 | 17,2 | 21,4 | 26,7 | - | | - |
| 630 | 15,4 | 18,4 | 19,3 | 24,1 | 30,0 | - | | - |
| 710 | 17,4 | 20,7 | 21,8 | 27,2 | - | - | | - |
| 800 | 19,6 | 23,3 | 24,5 | 30,6 | - | - | | - |
| 900 | 22,0 | 26,3 | 27,6 | - | - | - | | - |
| 1000 | 24,5 | 29,2 | 30,6 | - | - | - | | - |

Pressió de treball (t: temperatura servei):
- t <= 25°C: <= pressió nominal
- 25 <= t <= - 45°C: <= ft pressió nominal, on ft (coeficient de reducció definit a l'annex A de l'UNE-EN 1452-2).
Densitat a 23°C (ISO 1183-87): >= 1350 kg/m3, <= 1460 kg/m3
Opacitat (UNE-EN 578) : <= 0,2% llum visible
Temperatura de reblaniment Vicat (UNE-EN 727): >= 80°C
Retracció longitudinal (UNE-EN 743): <= 5%
Toleràncies:
- Diàmetre exterior mig (mm):

| Diàmetre nominal dn | Tolerància Diàmetre |
|---|---|
| <= 50 | + 0,2 |
| 63 <= dn <= 90 | + 0,3 |
| 110 <= dn <= 125 | + 0,4 |

| 140 <= dn <= 160 | + 0,5 |
| --- | --- |
| 180 <= dn <= 200 | + 0,6 |
| 225 | + 0,7 |
| 250 | + 0,8 |
| 280 | + 0,9 |
| 315 | + 1,0 |
| 355 | + 1,1 |
| 400 | + 1,2 |
| 450 | + 1,4 |
| 500 | + 1,5 |
| 560 | + 1,7 |
| 630 | + 1,9 |
| 710 >= dn <=1000 | + 2,0 |

- La tolerància del gruix de la paret es 0,1(e)+0,2 mm. La tolerància es constant per a un interval de gruixos nominals mínims de paret d'1 mm. (e) es el valor superior d'aquest interval.

La verificació de les mesures s'ha de fer d'acord amb la norma EN ISO 3126.

TUBS:

El gruix de la paret ha de ser uniforme en tota la llargària del tub, amb les toleràncies definides a la taula 3 de l'UNE-EN 1452-2.

Resistència hidrostàtica mínima requerida MRS (UNE-EN 921) : >= 25 MPa

PER A UNIÓ ENCOLADA:

El diàmetre interior de l'embocadura correspondrà al diàmetre nominal de l'element.

L'angle intern màxim de la zona d'embocadura no ha de ser superior a 0° 30'.

Diàmetre interior mig de l'embocadura:

| Diàmetre nominal dn (mm) | Diàmetre interior embocadura (mm) | |
| --- | --- | --- |
| | d mín | d màx |
| dn <= 90 | dn + 0,1 | dn + 0,3 |
| 110 <= dn <= 125 | dn + 0,1 | dn + 0,4 |
| 140 <= dn <= 160 | dn + 0,2 | dn + 0,5 |
| 180 <= dn <= 200 | dn + 0,2 | dn + 0,6 |
| 225 | dn + 0,3 | dn + 0,7 |
| 250 | dn + 0,3 | dn + 0,8 |
| 280 | dn + 0,3 | dn + 0,9 |
| 315 | dn + 0,4 | dn + 1,0 |

Llargària mínima de l'embocadura:

- (0,5 dn + 6 mm) <= 12 mm: 12 mm
- resta de casos: 0,5 dn + 6 mm

UNIÓ AMB ANELLA ELASTOMÈRICA D'ESTANQUITAT:

A l'interior de l'esbocadura hi ha d'haver un junt de goma.

El material del junt d'estanquitat ha de complir les especificacions de la norma UNE-EN 681-1.

Diàmetre interior mig de l'embocadura:

- dn <= 50 mm: dn + 0,3 mm
- 63 <= dn <= 90 mm: dn + 0,4 mm
- dn >= 110 mm: 1,003dn + 0,1 mm

Llargària d'entrada de l'embocadura : (22 + 0,16 dn) mm

Fondària mínima d'embocament:

- dn <= 280 : 50 mm + 0,22dn - 2e
- dn > 280: 70 mm + 0,15 dn - 2e

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

CARACTERÍSTIQUES GENERALS:

Subministrament: Agrupats en paquets, i protegits de cops i dels raigs solars.

TUBS:

Emmagatzematge: En llocs protegits d'impactes, dels raigs solars i ben ventilats. S'han d'apilar horitzontalment i paral·lelament sobre superfícies planes, s'han de capicular les esbocadures per capes o bé situar-les en un mateix costat, i separar les capes per mitjà de separadors. L'alçària de la pila ha de ser <= 1,5 m.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 1125/1982 de 30 de Abril. Reglamentación Técnico-sanitaria para la elaboración, circulación y comercio de materiales poliméricos en relación con los productos alimenticios y alimentarios.
UNE-EN 1452-1:2000 Sistemas de canalización en materiales plásticos para conducción de agua. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Generalidades.
TUBS:
UNE-EN 1452-2:2000 Sistemas de canalización en materiales plásticos para conducción de agua. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 2: Tubos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El paquet o l'albarà ha de portar les següents dades:
- Denominació del producte
- Contingut net
- Nom del fabricant o raó social
TUBS:
Cada tub ha de portar marcades com a mínim cada 1 m, de forma indeleble i ben visible les dades següents:
- UNE EN 1452
- Nom del fabricant o marca comercial
- Sigles PVC-U
- Diàmetre nominal (dn) x gruix de paret (en) en mm
- Pressió nominal PN
- Referència de la data, lloc i àmbit de fabricació
- Número de la línia d'extrussió
CONDICIONS DE MARCATGE I CONTROL DE DOCUMENTACIÓ EN UNIÓ AMB ANELLA ELASTOMÈRICA D'ESTANQUITAT:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Sistema 4: Declaració de prestacions
Sobre el junt, o be sobre l'embalatge, hi ha d'anar marcada la següent informació:
- Tamany nominal
- Identificació del fabricant
- El número de la norma UNE-EN 681, seguit del tipus d'aplicació i la classe de duresa com a sufixes
- Marca de certificació d'una tercera part
- El trimestre i l'any de fabricació
- La resistència a les baixes temperatures (L), si procedeix
- Resistència als olis (O), si procedeix
- La abreviatura del cautxú
- Han de portar el marcat CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Control de recepció dels materials i lloc d'emplaçament.
- Verificació del sistema de rases per a la correcta implantació del material.
- Contrastar la documentació amb els materials i amb els requeriments de la instal·lació segons projecte. (Verificar el marcatge a tubs i accessoris).
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar per mostreig a cada recepció.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Ha de ser refusat el material que no compleixi amb els requeriments del projecte.

## BF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## BFB TUBS I ACCESSORIS DE POLIETILÈ

## BFB3- TUB DE POLIETILÈ DE DENSITAT ALTA, PER A XARXES DE DISTRIBUCIÓ D'AIGUA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BFB3-099N,BFB3-095R,BFB3-096B.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tubs extruïts de polietilè de densitat alta per a transport i distribució d'aigua a pressió a temperatures fins a 40°C.
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
El tub ha de tenir la superfície llisa, sense ondulacions. No ha de tenir bombolles, esquerdes ni d'altres defectes.
Els extrems han d'estar nets i tallats perpendicularment a l'eix.
Els tubs han d'anar marcats regularment al llarg de la seva longitud (amb una separació entre marques =< 1 m), de manera permanent i llegible, de tal manera que el marcat no provoqui punts d'iniciació de fissures, o altres tipus de falles i que el emmagatzematge, exposició a la intempèrie, manipulació, instal·lació i ús normals no n'afectin a la llegibilitat.
La informació mínima requerida ha de ser la següent:
- Referència a la norma EN 12201
- Identificació del fabricant
- Dimensions (diàmetre nominal x gruix nominal), expressats en mm
- Sèrie SDR a la que pertany
- Material i designació normalitzada
- Pressió nominal en bar
- Període de producció (data o codi)

Les bobines han d'anar marcades seqüencialment, amb la llargària en metres, que indicarà la llargària romanent sobre la bobina
El tub ha de ser de color blau o negre amb bandes blaves, com a indicació de la seva aptitud per a ús alimentari.
Pressió de treball en funció de la temperatura utilització (T=temperatura utilització, Pn=pressió nominal):
0°C < T <= 20°C: 1 x Pn
20°C < T <= 30°C: 0,87 x Pn
30°C < T <= 40°C: 0,74 x Pn
Índex de fluïdesa:
- PE 40 (EN ISO 1133 a 190°C i càrrega de 2,16 kg durant 10 min): 0,2 g/10 min a 1,4 g/10 min

- PE 100 (EN ISO 1133 a 190°C i càrrega de 5 kg durant 10 min): 0,2 g/10 min a 1,4 g/10 min

Pressió de la prova hidràulica a 20°C:

| Designació tub | Pressió de prova a 20°C (bar) |
|---|---|
| PE 40 | 7,0 MPa |
| PE 100 | 12,4 MPa |

Gruix de la paret i les seves tolerències:

| | SÈRIE | | | |
|---|---|---|---|---|
| | SDR 7,4 | SDR 11 | SDR 17 | SDR 26 |
| | Pressió nominal, PN (bar) | | | |
| PE 40 | PN 10 | PN 6 | - | PN 4 |
| PE 100 | - | PN 16 | PN 10 | PN 6 |
| | Gruix de paret, e (mm) | | | |

| 1000 | 1000,0 | 1009,0 | - |

La verificació de les mesures s'ha de fer d'acord amb l'UNE-EN 12201-2.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: En rotlles o en trams rectes.

El tub subministrat en rotlles ha d'enrotllar-se de tal manera que es previngui la deformació localitzada.

El diàmetre interior mínim de la bobina no ha de ser inferior a 18 vegades el diàmetre nominal.

Emmagatzematge: En llocs protegits contra els impactes.

Els trams rectes s'han d'apilar horitzontalment sobre superfícies planes i l'alçària de la pila ha de ser <= 1,5 m.

Els rotlles s'han de col·locar horitzontalment sobre superfícies planes.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

UNE-EN 12201-1:2003 Sistemas de canalización en materiales plásticos para conducción de agua. Polietileno (PE). Parte 1: Generalidades

UNE-EN 12201-1:2004 ERRATUM Sistemas de canalización en materiales plásticos para conducción de agua. Polietileno (PE). Parte 1: Generalidades.

UNE-EN 12201-2:2003 Sistemas de canalización en materiales plásticos para conducción de agua. Polietileno (PE). Parte 2: Tubos.

UNE-EN 12201-2:2003/1M:2005 Sistemas de canalización en materiales plásticos para conducción de agua. Polietileno (PE). Parte 2: Tubos.

UNE-EN 12201-2:2004 ERRATUM Sistemas de canalización en materiales plásticos para

conducción de agua. Polietileno (PE). Parte 2: Tubos.
* UNE-EN 1555-2:2003 Sistemas de canalización en materiales plásticos para el suministro de combustibles gaseosos. Polietileno (PE). Parte 2: Tubos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada tub ha de portar marcades, a distàncies < 1 m, de forma indeleble i ben visible les dades següents:
- Número de la Norma del Sistema: EN 1555
- Nom o marca del fabricant
- Per a tubs dn<=32 mm
- Diàmetre exterior nominal x gruix paret
- Per a tubs dn>32 mm
- Diàmetre exterior nominal, dn
- SDR
- Grau de tolerància
- Material i designació
- Informació del fabricant que permeti la traçabilitat del producte
- Referència al fluid intern que transporta el tub
- Color de marcat negre, groc o negre amb bandes d'identificació grogues
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Control de recepció dels materials i lloc d'emplaçament.
- Contrastar la documentació amb els materials i amb els requeriments de la instal·lació segons projecte. (Verificar el marcatge a tubs i accessoris).
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar per mostreig a cada recepció.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Ha de ser refusat el material que no compleixi amb els requeriments del projecte.

---

## BF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## BFQ AÏLLAMENTS TÈRMICS PER A TUBS

### BFQ0- AÏLLAMENT TÈRMIC PER A TUBS AMB ESCUMES ELASTOMÈRIQUES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BFQ0-0DGM,BFQ0-0DGL,BFQ0-0DGK,BFQ0-0DGI,BFQ0-0DCZ,BFQ0-0DCY.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aïllaments tèrmics amb escumes elastomèriques per a tubs d'aigua freda o calenta.
CARACTERÍSTIQUES GENERALS:
La superfície ha de ser llisa i a la secció s'han d'apreciar els alveols propis de l'escuma.
El material de l'aïllament no ha de contenir substàncies en la que es puguin desenvolupar microorganismes.
No ha de despendre olors a la temperatura a la que estarà sotmès.
No patirà deformacions com a conseqüència de la temperatura ni degut a una acumulació accidental del condensat.
Llargària: 2 m
Conductivitat tèrmica a 20°C: <= 0,041 W/m K
Temperatures d'ús d'aïllaments per a tubs freds: >= 10°C
Temperatures d'ús d'aïllaments per a tubs calents: 40°C - 65°C
Reacció contra el foc (UNE 53-127): Autoextingible
Les característiques anteriors es determinaran segons el RITE "Reglamento de Instalaciones Térmicas en los Edificios".
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Embalats en paquets.
Emmagatzematge: Apilats horitzontalment sobre superfícies planes, protegits contra les pluges, les humitats i els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
UNE 53127:2002 Plásticos celulares. Determinación de las características de combustión de probetas en posición horizontal sometidas a una llama pequeña.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de característiques tècniques i homologacions dels materials.
- Contrastar la documentació amb els materials i amb els requisits tèrmics del projecte. (temperatures màximes i mínimes, i espessors).
- Control de la documentació tècnica subministrada.
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar per mostreig de cada tipus d'aïllament i tipus d'instal·lació a aïllar.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'ha d'acceptar material que no reuneixi les condicions d'espessor i característiques tèrmiques requerides en la instal·lació a aïllar.
En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

## BF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## BFW ACCESSORIS GENÈRICS DE TUBS PER A GASOS I FLUIDS

### BFW6- ACCESSORI PER A TUB DE COURE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BFW6-04NR,BFW6-04O3,BFW6-04NY,BFW6-04O0,BFW6-04NU,BFW6-04NP.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt d'accessoris per a tubs i per a recobriments aïllants de tubs (colzes, derivacions, reduccions, etc.), utilitzats en instal·lacions d'edificació i d'urbanització per a la total execució de la conducció o xarxa a la qual pertanyin.
CARACTERÍSTIQUES GENERALS:
El material, la seva qualitat i les característiques físiques, mecàniques i dimensionals, han de ser compatibles amb les del tub, i no han de fer disminuir les d'aquest en cap de les seves aplicacions.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'albarà de lliurament han de constar les característiques d'identificació següents:
- Material
- Tipus
- Diàmetres

Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat composada pel conjunt de peces necessàries per a muntar 1 m de tub.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
La mateixa normativa que s'apliqui als tubs, en funció dels fluids que transportin.

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG1 CAIXES I ARMARIS

## BG12- CAIXA DE DERIVACIÓ QUADRADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG12-0G8U.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Caixes de derivació.
S'han considerat els materials següents:
- Plàstic
- Fosa d'alumini
- Planxa d'acer
- Plastificat
S'han considerat els graus de protecció següents:
- Normal
- Estanca
- Antihumitat
- Antideflagrant
CARACTERÍSTIQUES GENERALS:
La caixa ha d'estar formada per un cos i una tapa. Ha de tenir un aspecte uniforme i sense defectes.
Quan és per a encastar, el cos ha de portar aletes o superfícies d'ancoratge.
Quan és per a muntar supeficialment, el cos ha de portar orificis per a la seva fixació.
Grau de protecció (UNE 20-324):

| Tipus | | | | |
|---|---|---|---|---|
| Material | Normal | Estanca | Antihumitat | Antideflagrant |
| Plàstic | >= IP-405 | >= IP-535 | >= IP-545 | - |
| Plastificada | >= IP-517 | >= IP-537 | >= IP-547 | - |
| Planxa d'acer | >= IP-517 | >= IP-537 | >= IP-547 | >= IP-557 |
| Fosa d'alumini | >= IP-517 | >= IP-537 | >= IP-547 | >= IP-557 |

GRAU DE PROTECCIÓ ANTIDEFLAGRANT:
El cos ha de tenir orificis roscats per al pas de tubs.
Temperatura d'autoinflamació (T): 300 <= T <= 450°C
Grup d'explosió (UNE 20-320): IIB
GRAU DE PROTECCIÓ NORMAL, ESTANCA O ANTIHUMITAT:
El cos ha de portar empremtes de ruptura per al pas de tubs.
GRAU DE PROTECCIÓ ANTIHUMITAT:
Entre la tapa i el cos hi ha d'haver un junt d'estanquitat.
PLASTIFICADA:
El cos i la tapa han de ser d'acer embotit plastificat.
El cos i la tapa han d'estar protegits interiorment i exteriorment contra la corrosió.
La tapa ha de portar sistemes de fixació al cos mitjançant cargols, i aquests han de ser de material anticorrosiu.
PLÀSTIC:
La tapa ha de portar un sistema de fixació amb el cos.
Resistència a la flama (UNE-EN 60707): Autoextingible
PLANXA:
El cos i la tapa han d'estar protegits interiorment i exteriorment contra la corrosió.
La tapa ha de portar sistemes de fixació al cos mitjançant cargols, i aquests han de ser de material anticorrosiu.
FOSA D'ALUMINI:
La tapa ha de portar sistemes de fixació al cos mitjançant cargols, i aquests han de ser de material anticorrosiu.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG1 CAIXES I ARMARIS

## BG16- CAIXA GENERAL DE PROTECCIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG16-0BVO.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Caixes generals de protecció de polièster reforçat, segons esquemes UNESA.
CARACTERÍSTIQUES GENERALS:
Ha d'allotjar els elements de protecció de les línies repartidores.
El polièster ha d'anar reforçat amb fibra de vidre.
Ha de tenir una textura uniforme i sense defectes.
Ha de portar muntades tres bases portafusibles (UNE 21-103) i un seccionador de neutre.
Ha de portar borns d'entrada i sortida per a la connexió directa de les fases i del neutre.
La caixa ha de tenir un sistema d'entrada i sortida per als conductors.
Ha de portar un mínim de quatre orificis per a fixar-lo.
La caixa ha de tenir un sistema de ventilació.
El tancament de la caixa s'ha de fer mitjançant un cargol triangular i ha de ser precintable.
Grau de protecció (UNE 20-324):
- Instal·lacions interiors: >= IP-417
- Instal·lacions exteriors: >= IP-437
Rigidesa dielèctrica: >= 375 kV
Classe tèrmica (UNE 21-305): A
L'esquema d'instal·lació ha de seguir les normes UNESA.
Resistència a la flama (UNE-EN 60707): Autoextingible
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.

Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
La C.G.P. ha de portar una placa on s'indiqui de forma indeleble i ben visible les dades següents:
- Nom del fabricant o marca comercial
- Tipus
- Tensió nominal d'alimentació
- Intensitat nominal
- Anagrama UNESA
- Grau de protecció
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats dels equips emprats, contrastar la documentació amb els equips i verificar l'adequació als requisits del projecte i la Companyia Subministradora.
- Controlar del fabricant la generació d'esquemes de muntatge i llistats de materials emprats per a la construcció.
- Control de la documentació tècnica subministrada.
- Control final d'identificació de material i lloc d'emplaçament
- Verificar dimensions de la caixa general de protecció, classe i calibre dels fusibles, precintes i homologacions.
- Verificar les mides on s'allotgen la caixa general de protecció així com centralització de comptadors o equip de protecció i mesura.
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
- Es comprovarà la totalitat dels materials.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG1 CAIXES I ARMARIS

## BG1B- CONJUNT DE PROTECCIÓ I MESURA (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG1B-H64J,BG1B-H64K.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conjunt de protecció i mesura per a comptadors trifàsics, per a col·locar superficialment.
S'han considerat els tipus següents:
- TMF1
- TMF10
CARACTERÍSTIQUES GENERALS:
Els conjunts de protecció i mesura estan formats per als següents components:
- Caixes modulars amb doble aïllament
- Unions modulars
- Tapes laterals
- Plaques de muntatge
- Elevadors suplements de plaques
- Carrils de fixació per a l'interruptor automàtic i el diferencial
- Finestra dels automàtics
- Bases corrent contínua
- Neutre seccionable
- Borns bimetàl·lics
- Interruptor automàtic
- Interruptor diferencial
- Peça per a cobrir els borns
- Born de connexió a terra
- Cable elèctric
- Terminal de pressió, de pre-aïllament
- Dispositius de ventilació
- Conjunt de fixació mural
- Cargol de fixació
- Canal pels cables
Els tipus T-20 i T-30 han de tenir també els següents components:
- Relé d'emissió
- Relé diferencial auxiliar
- Regleta de comprovació
- Pletines de coure
- Perfils de fixació mural
- Femella de fixació perfil i caixa
Ha d'estar constituït per envolvent i tallacircuïts fusibles, amb caixa de derivació o unitat d'embarrat per a connexió amb el conjunt prefabricat per a centralització de comptadors.
L'envolvent ha de ser de material aïllant de clase A i autoextinguible.
La cara frontal ha de ser transparent i precintable.
Les parts interiors han de ser accessibles per l'esmentada cara frontal.
Per a cada fase s'ha de disposar d'un tallacircuïts fusible de la classe GT.
Ha d'estar constituïda per una base aïllant, borns de connexió de conductors i un dispositiu de fixació a la caixa de mecanismes.
Ha de tenir un aspecte uniforme i sense defectes.
Les parts metàl·liques del mecanisme no han de ser accessibles.
Els punts de situació de les caixes generals de protecció han de ser de trànsit general i de fàcil accès.
La situació ha de ser la més propera possible a la xarxa general de distribució i allunyada d'altres instal·lacions, com la d'aigua, gas, telèfon, etc.
Fins a la intensitat de 630 A, l'equip de protecció i mesura ha d'estar situat a l'interior d'envoltants de doble aillament.
Per a intensitats més grans de 630 A, ha d'haver-se disposat en armaris metàl·lics precintables, que allotgin l'Interruptor General Automàtic i els Transformadors de Mesura.
Si s'escau ha de tenir també el rellotge de canvi de tarifa.
El cablejat del conjunt ha d'estar fet amb conductors de coure V750, classe 2 rígid.
Els conductors dels circuïts secundaris han de ser de coure V750, de classe 5 flexible, de 4 mm2 de secció mínima.
Cadascun dels conductors ha d'estar identificat en tots dos extrems de manera indeleble.
Les terminacions del cablejat han de ser les adequades.
L'interruptor General Automàtic ha de ser tetrapolar.
Per a intensitats més grans de 100 A, els relès tèrmics de l'Interruptor General Automàtic han de permetre un marge de regulació de 0,8 a 1 de la intensitat nominal.

Els colors de les cobertes dels conductors han de ser: negre, marró i gris per a les fases i blau per al neutre.
En el cas de conjunts de mesura i protecció T-20 i T-30, les platines de coure han de mantenir les condicions d'aïllament indicades a la R.U. 1410A.
Les caixes han de ser de doble aïllament (material aïllant classe II-A) de polièster reforçat, autoextinguibles.
El Dispositiu Privat de Comandament i Protecció ha de constar d'un Relè Diferencial general i d'una protecció magnetotèrmica per a cadascun dels circuïts interiors.
Cap material no han de presentar perill d'incendi per a la resta de materials del seu voltant.
Els interruptors del quadre general de protecció han d'estar identificats mitjançant una etiqueta on s'indiqui a quina línia protegeix.
Resistència de l'aïllament (UNE-EN 60669): Ha de complir
Resistència mecànica (UNE-EN 60669): Ha de complir
Temperatura màxima de servei dels òrgans metàl·lics de control manual: 55ºC
Temperatura màxima de servei dels òrgans no metàl·lics de control manual: 65ºC
Característiques dels components:

| Línia trifàsica | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Pot.màx.adm. conjunt prot. i mesura (kW) 400 / 230 V | 20 | 25 | 31,5 | 40 | 50 | 63 | 80 | 100 | 125 | 160 | 200 |
| Pot.màx.adm. conjunt prot. i mesura (kW) 230 / 132 V | 12,5 | 15 | 20 | 25 | 31,5 | 40 | 50 | 63 | 80 | 100 | 125 |
| Prot.dif.- int.nom. (A) | 63 | 63 | 63 | transformador toroidal | | | | | | | |
| Prot.dif. sensib.(mA) | 300 per a força i 30 per a la resta de receptors | | | | | | | | | | |

| Tallacircuits segur.-bases | DIN 0 | | | DIN 1 | | | DIN 3 | | | | |

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 60669-1:1996 Interruptores para instalaciones eléctricas fijas, domésticas y análogas. Parte 1: Prescripciones generales.
UNE-EN 60947-3:1994 Aparamenta de baja tensión. Parte 3: Interruptores, seccionadores, interruptores-seccionadores y combinados fusibles. (Versión oficial EN 60947-3:1992+AC:1993).
UNE 20460-4-42:1990 Instalaciones eléctricas en edificios. Protección para garantizar la seguridad. Protección contra los efectos térmicos.
UNE-EN 60898-1:2004 Accesorios eléctricos. Interruptores automáticos para instalaciones domésticas y análogas para la protección contra sobreintensidades. Parte 1: Interruptores automáticos para funcionamiento en corriente alterna.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El conjunt ha de portar una placa on de forma indeleble i ben visible, s'indiquin les dades següents:
- Marca i fabricant
- Tipus
- Tensió nominal en V
- Intesitat nominal en ampers de les bases portafusibles
- Anagrama d'homologació UNESA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats dels equips emprats, contrastar la documentació amb els equips i verificar l'adequació als requisits del projecte i la Companyia Subministradora.
- Controlar del fabricant la generació d'esquemes de muntatge i llistats de materials emprats per a la construcció.
- Control de la documentació tècnica subministrada.
- Control final d'identificació de material i lloc d'emplaçament
- Verificar dimensions de la caixa general de protecció, classe i calibre dels fusibles, precintes i homologacions.
- Verificar les mides on s'allotgen la caixa general de protecció així com centralització de comptadors o equip de protecció i mesura.
- Verificar les característiques dels elements de mesura.
- Verificar dimensions de la caixa general de protecció, classe i calibre dels fusibles, precintes i homologacions.
- Verificar les dimensions, homologacions i estat dels mòduls de protecció i mesura.
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
- Es comprovarà la totalitat dels materials.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG2 TUBS, CANALS, SAFATES I COLUMNES PER A MECANISMES

## BG2P- TUB RÍGID PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS DE MATERIAL PLÀSTIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG2P-1KUW,BG2P-1KUX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tub rígid no metàl·lic de fins a 160 mm de diàmetre nominal.
CARACTERÍSTIQUES GENERALS:
S'ha de poder corbar en calent, sense reducció notable de la seva secció.
Han d'estar dissenyats i construïts de manera que les seves característiques en ús normal siguin segures i sense perill per a l'usuari i el seu entorn.
Ha de suportar bé els ambients corrossius i els contactes amb greixos i olis.
L'interior dels tubs ha d'estar exempt de rebaves i altres defectes que pugin fer malbé els conductors o ferir a instal·ladors o usuaris.
El diàmetre nominal ha de ser el de l'exterior del tub i s'ha d'expressar en milímetres.
El diàmetre interior mínim l'ha de declarar el fabricant.
Les dimensions han de cumplir la norma EN-60423.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En feixos de tubs de llargària >= 3 m.
Emmagatzematge: En llocs protegits dels impactes i dels raigs solars.
Han de situar-se en posició horitzontal. L'alçària d'emmagatzematge no ha de sobrepassar els 1,5 m.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 50086-1:1995 Sistemas de tubos para la conducción de cables. Parte 1: Requisitos generales.
UNE-EN 60423:1996 Tubos de protección de conductores. Diámetros exteriores de los tubos para instalaciones eléctricas y roscas para tubos y accesorios.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Han d'estar marcats amb:
- Nom del fabricant
- Marca d'identificació dels productes
- El marcatge ha de ser llegible
- Han d'incloure les instruccions de muntatge corresponents
OPERACIONS DE CONTROL:
Les tasques de control de qualitat de Canalitzacions i Accessoris, són les següents:
- Sol·licitar del fabricant els certificats dels materials emprats i verificar l'adequació als requisits del projecte.
- Control de la documentació tècnica subministrada
- Control d'identificació dels materials i lloc d'emplaçament (alçada, distàncies, capacitat)
- Realització i emissió d'informes amb resultats dels assaigs
- Assaigs:
- Propagació de la flama segons norma R.E.B.T / UNE-EN 50085-1 / UNE-EN 50086-1
- Instal·lació i posada a l'obra segons norma R.E.B.T / UNE 20.460
- Verificació de l'aspecte superficial segons norma projecte/ UNE-EN ISO 1461
CRITERIS DE PRESA DE MOSTRES:
Es realitzaran els assaigs a la recepció dels materials, verificant tot el traçat de la instal·lació de safates i aleatòriament un tub de cada mida instal·lat a obra ja sigui rígid, flexible o soterrat.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG2 TUBS, CANALS, SAFATES I COLUMNES PER A MECANISMES

## BG2Q- TUB FLEXIBLE PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS DE MATERIAL PLÀSTIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG2Q-1KSW,BG2Q-1KSV,BG2Q-1KTE,BG2Q-1KSU,BG2Q-1KTN.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Tub flexible no metàl·lic de fins a 250 mm de diàmetre nominal.
Es consideraran els següents tipus de tubs:
- Tubs de PVC corrugats
- Tubs de PVC folrats, de dues capes, semillisa l'exterior i corrugada la interior
- Tubs de material lliure d'halògens
- Tubs de polipropilè
- Tubs de polietilè de dues capes, corrugada l'exterior i llisa la interior

CARACTERÍSTIQUES GENERALS:
Han d'estar dissenyats i construïts de manera que les seves característiques en ús normal siguin segures i sense perill per a l'usuari i el seu entorn.
L'interior dels tubs ha d'estar exempt de rebaves i altres defectes que pugin fer malbé els conductors o ferir a instal·ladors o usuaris.
El diàmetre nominal ha de ser el de l'exterior del tub i s'ha d'expressar en milímetres.
El diàmetre interior mínim l'ha de declarar el fabricant.
Les dimensions han de cumplir la norma EN-60423.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En rotlles.
Emmagatzematge: En llocs protegits contra els impactes i contra la pluja.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 50086-1:1995 Sistemas de tubos para la conducción de cables. Parte 1: Requisitos generales.
UNE-EN 60423:1996 Tubos de protección de conductores. Diámetros exteriores de los tubos para

instalaciones eléctricas y roscas para tubos y accesorios.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Han d'estar marcats amb:
- Nom del fabricant
- Marca d'identificació dels productes
- El marcatge ha de ser llegible
- Han d'incloure les instruccions de muntatge corresponents
OPERACIONS DE CONTROL EN CANALITZACIONS I ACCESORIS:
Les tasques de control de qualitat de Canalitzacions i Accessoris, són les següents:
- Sol·licitar del fabricant els certificats dels materials emprats i verificar l'adequació als requisits del projecte.
- Control de la documentació tècnica subministrada
- Control d'identificació dels materials i lloc d'emplaçament (alçada, distàncies, capacitat)
- Realització i emissió d'informes amb resultats dels assaigs
- Assaigs:
- Propagació de la flama segons norma R.E.B.T / UNE-EN 50085-1 / UNE-EN 50086-1
- Instal·lació i posada a l'obra segons norma R.E.B.T / UNE 20.460
- Verificació de l'aspecte superficial segons norma projecte/ UNE-EN ISO 1461
CRITERIS DE PRESA DE MOSTRES EN CANALITZACIONS I ACCESSORIS:
Es realitzaran els assaigs a la recepció dels materials, verificant tot el traçat de la instal·lació de safates i aleatòriament un tub de cada mida instal·lat a obra ja sigui rígid, flexible o soterrat.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN CANALITZACIONS I ACCESSORIS:
Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.
OPERACIONS DE CONTROL EN TUBS DE PVC PER A CANALITZACIONS DE SERVEIS:
Les tasques de control a realitzar són les següents:
- En cada subministrament:
- Inspecció visual de l'aspecte general dels tubs i elements d'unió.
- Comprovació de les dades de subministrament exigides (marques, albarà o etiquetes).
- Recepció del certificat de qualitat del fabricant, d'acord a les condicions del plec.
- Comprovació dimensional (3 mostres).
- Per a cada tub de les mateixes característiques, es realitzaran els següents assaigs (UNE EN 50086-1):
- Resistència a compressió
- Impacte
- Assaig de corbat
- Resistència a la propagació de la flama
- Resistència al calor
- Grau de protecció
- Resistència a l'atac químic
En cas que el material disposi de la Marca AENOR, o una altra legalment reconeguda a un país de l'UE, s'ha de poder prescindir dels assaigs de control de recepció. La DF ha de sol·licitar, en aquest cas, els resultats dels assaigs corresponents al subministrament rebut, segons control de producció establert a la marca de qualitat del producte.
CRITERIS DE PRESA DE MOSTRES EN TUBS DE PVC PER A CANALITZACIONS DE SERVEIS:
Es seguiran les instruccions de la DF i els criteris indicats a les normes UNE EN 50086-1 i UNE EN 50086-2-4, juntament a les normes de procediment de cada assaig concret.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN TUBS DE PVC PER A CANALITZACIONS DE SERVEIS:
No s'acceptaran materials que no arribin a l'obra correctament referenciats i acompanyats del corresponent certificat de qualitat del fabricant.
Es rebutjaran els subministres que no superin les condicions de la inspecció visual o les comprovacions geomètriques.
Es compliran les condicions dels assaigs d'identificació segons la norma UNE EN 50086-1 i UNE EN 50086-2-4.

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA

### BG33- CABLE DE COURE DE 0,6/1 KV

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG33-G2WX,BG33-G2VO,BG33-G2X0,BG33-G2WY,BG33-G2VM,BG33-G2RB.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Cable elèctric destinat a sistemes de distribució en tensió baixa i instal·lacions en general, per a serveis fixes, amb conductor de coure i de tensió assignada 0,6/1kV.
S'han considerat els tipus de cables següents:
- Cables unipolars o multipolars de designació RV, aïllament amb polietilè reticulat i coberta de policlorur de vinil, sense armadura ni pantalla i amb conductor de coure, construcció segons norma UNE 21123-2, amb una classificació de resistència al foc Eca segons UNE-EN 50575
- Cables unipolars o multipolars de designació RV-K, aïllament amb polietilè reticulat i coberta de policlorur de vinil, sense armadura ni pantalla i amb conductor de coure flexible, construcció segons norma UNE 21123-2, amb una classificació de resistència al foc Eca segons UNE-EN 50575
- Cables multipolars de designació RVFV-K, aïllament amb polietilè reticulat i coberta de policlorur de vinil, armadura amb fleix d'acer i amb conductor de coure flexible, construcció segons norma UNE 21123-2, amb una classificació de resistència al foc Eca segons UNE-EN 50575
- Cables unipolars o multipolars de designació RZ1-K (AS), aïllament amb polietilè reticulat i coberta de poliolefina, sense armadura ni pantalla i amb conductor de coure flexible, construcció segons norma UNE 21123-4, amb una classificació de resistència al foc Cca-s1b,d1,a1 segons UNE-EN 50575
- Cables unipolars o multipolars de designació RZ1-K (AS+), amb resistència intrínseca al foc, aïllament amb polietilè reticulat i coberta de poliolefina, sense armadura ni pantalla i amb conductor de coure flexible, construcció segons norma UNE 211025, amb una classificació de resistència al foc Cca-s1b,d1,a1 segons UNE-EN 50575
- Cables unipolars o multipolars de designació SZ1-K (AS+), amb resistència intrínseca al foc, aïllament amb compost de silicona i coberta de poliolefina, sense armadura ni pantalla i amb conductor de coure flexible, construcció segons norma UNE 211025, amb una classificació de resistència al foc Cca-s1b,d1,a1 segons UNE-EN 50575
- Cables multipolars de designació RZ, coberta aïllant de polietilè reticulat i amb conductors de coure cablejats en feix, construcció segons norma UNE 21030-2, amb una classificació de resistència al foc Fca segons UNE-EN 50575
- Cables unipolars de designació ZZ-F, amb una classificació de resistència al foc Eca segons UNE-EN 50575
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Destinats a incorporar-se de forma permanent en obres de construcció han de complir el Reglament

de productes per a la construcció (UE) nº 305/2011 i el seu Reglament Delegat (UE) 2016/364 sobre la classificació de les propietats de reacció al foc.
La coberta no ha de tenir variacions en el gruix ni d'altres defectes visibles a la seva superfície. Ha de ser resistent a l'abrasió.
Ha de quedar ajustada i s'ha de poder separar fàcilment sense produir danys a l'aïllament.
La forma exterior dels cables multipolars (reunits sota una coberta única) ha de ser raonablement cilíndrica.
L'aïllament no ha de tenir variacions del gruix ni d'altres defectes visibles a la seva superfície.
Ha de quedar ajustat i s'ha de poder separar fàcilment sense produir danys al conductor.
La designació dels cables ha de complir les especificacions de la norma UNE 20434.
La classificació de reacció al foc s'expressarà d'acord amb el Reglament Delegat (UE) 2016/364 i la UNE-EN 13501-6 amb un codi de quatre dígits segons el següent format:
Classe de reacció al foc:
- Dígit 1, prestacions de propagació del foc i emissió de calor: Aca, B1ca, B2ca, Cca, Dca, Eca i Fca (classes enumerades de més a menys prestacions)
Classes addicionals (només per a les classes B1ca, B2ca, Cca i Dca):
- Dígit 2, prestacions d'emissió de fums: s1a, s1b, s1, s2 i s3 (de més a menys prestacions)
- Dígit 3, prestacions de caiguda de gotes/partícules inflamades: d0, d1 i d2 (de més a menys prestacions)
- Dígit 4, prestacions d'acidesa: a1, a2 i a3 (de més a menys prestacions)
Les característiques físiques i mecàniques del conductor han de complir la norma UNE-EN 60228.
Els colors utilitzats per a l'aïllament han de complir la norma UNE 21089-1:
- Cables unipolars:
- Com a conductor de fase: Marró, negre o gris
- Com a conductor neutre: Blau
- Com a conductor de terra: Llistat de groc i verd
- Cables bipolars: Blau i marró
- Cables tripolars:
- Cables amb conductor de terra: Fase: Marró, Neutre: Blau, Terra: Llistat de groc i verd
- Cables sense conductor de terra: Fase: Negre, marró i gris
- Cables tetrapolars:
- Cables amb conductor de terra: Fase: Marró, negre i gris, Terra: Llistat de groc i verd
- Cables sense conductor de terra: Fase: Marró, negre i gris, Neutre: Blau
- Cables pentapolars: Fase: Marró, negre i gris, Neutre: Blau, Terra: Llistat de groc i verd
Les característiques següents han de complir amb els valors declarats pel fabricant, assajades segons la norma corresponent, dins del límit de tolerància indicat, en el seu cas:
- Característiques essencials:
- Reacció al foc:
- Classe Aca (UNE-EN ISO 1716)
- Classe B1ca, B2ca, Cca i Dca (UNE-EN 50399, UNE-EN 60332-1-2, UNE-EN 61034-2, UNE-EN 60754-2)
- Classe Eca (UNE-EN 60332-1-2)
- Classe Fca (comportament no determinat)
- Emissió de substàncies perilloses (verificació i declaració segons disposicions nacionals en el lloc d'utilització)
Gruix de l'aïllant del conductor (UNE-HD-603-1):

| Secció (mm2) | 25 | 50 | 95 | 150 | 240 |
|---|---|---|---|---|---|
| Gruix (mm) | 0,9 | 1,0 | 1,1 | 1,4 | 1,7 |

Gruix de la coberta: Ha de complir les especificacions de la norma UNE-HD 603-1
Temperatura de l'aïllament en servei normal: <= 90°C
Temperatura de l'aïllament en curtcircuit (5 s màx): <= 250°C
Tensió màxima admissible (c.a.):
- Entre conductors aïllats: <= 1 kV
- Entre conductors aïllats i terra: <= 0,6 kV
Toleràncies:
- Gruix de l'aïllament (UNE-HD 603-1): >= valor especificat - (0,1 mm + 10% del valor especificat)
CABLES DE DESIGNACIÓ RV, RV-K i RVFV-K:
Característiques de reacció al foc:
- Propagació de la flama (UNE-EN 60332-1-2): No propagador de la flama
El conductor ha de complir les següents prescripcions segons la norma UNE-EN 60228:
- Cable RV: prescripcions de la classe 1 o 2

- Cable RV-K i RVFV-K: prescripcions de la classe 5
L'aïllament ha de ser de polietilé reticulat (XLPE) tipus DIX-3 segons UNE HD-603-1.
La coberta ha de ser de policlorur de vinil (PVC) del tipus DMV-18 segons UNE HD-603-1.
CABLES DE DESIGNACIÓ RZ1-K (AS):
Característiques de reacció al foc:
- Material lliure d'halògens segons UNE-EN 60754-1
- Propagació de la flama (UNE-EN 60332-1-2): No propagador de la flama
- Propagació de l'incendi (UNE-EN 60332-3-24): No propagador de l'incendi
- Emissió de fums opacs (UNE-EN 61034-2): Baixa emissió de fums opacs
- Emissió de fums corrosius (UNE-EN 60754-2): Baixa emissió de fums corrosius
El conductor ha de complir les prescripcions de la classe 5 segons la norma UNE-EN 60228:
L'aïllament ha de ser de polietilé reticulat (XLPE) tipus DIX-3 segons UNE HD-603-1.
La coberta ha de ser de poliolefina, del tipus DMZ-E segons la norma UNE 21123-4.
CABLES DE DESIGNACIÓ RZ1-K (AS+) i SZ1-K (AS+):
Característiques de reacció al foc:
Material lliure d'halògens segons UNE-EN 60754-1
Propagació de la flama (UNE-EN 60332-1-2): No propagador de la flama
Propagació de l'incendi (UNE-EN 60332-3-24): No propagador de l'incendi
Emissió de fums opacs (UNE-EN 61034-2): Baixa emissió de fums opacs
Emissió de fums corrosius (UNE-EN 60754-2): Baixa emissió de fums corrosius
El conductor ha de complir les prescripcions de la classe 5 segons la norma UNE-EN 60228:
L'aïllament ha de cumplir el següent
- Cable RZ1-K (AS+): ha de ser de polietilè reticulat i ha de correspondre al tipus DIX-3 segons la norma UNE HD-603-1, amb cinta addicional de mica
- Cable SZ1-K (AS+): ha de ser de compost de silicona i ha de correspondre al tipus EI2 segons la norma UNE-EN 50363-1
La coberta ha de ser de poliolefina, del tipus DMZ-E segons la norma UNE 21123-4.
CABLES DE DESIGNACIÓ RZ:
El conductor ha de complir les prescripcions de la classe 2 segons la norma UNE-EN 60228:
CABLES DE DESIGNACIÓ ZZ-F:
Característiques de reacció al foc:
- Material lliure d'halògens segons UNE-EN 60754-1
- Propagació de la flama (UNE-EN 60332-1-2): No propagador de la flama
- Propagació de l'incendi (UNE-EN 60332-3-24): No propagador de l'incendi
- Emissió de fums opacs (UNE-EN 61034-2): Baixa emissió de fums opacs
- Emissió de fums corrosius (UNE-EN 60754-2): Baixa emissió de fums corrosius
El conductor ha de complir les prescripcions de la classe 5 segons la norma UNE-EN 60228:
L'aïllament ha de ser de goma i ha de correspondre al tipus EI6 segons la norma UNE-EN 50363-1
La coberta ha de ser de material lliure d'halògens, del tipus EM5 segons la norma UNE-EN 50363-2-2 o del tipus EM8 segons UNE-EN 50363-6.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bobines.
Emmagatzematge: En llocs protegits de la pluja i la humitat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 50575:2015 Cables de energía, control y comunicación. Cables para aplicaciones generales en construcciones sujetos a requisitos de reacción al fuego.
UNE-EN 50575:2015/A1:2016 Cables de energía, control y comunicación. Cables para aplicaciones generales en construcciones sujetos a requisitos de reacción al fuego.
UNE-HD 603-1:2007 Cables de distribución de tensión asignada 0,6/1 kV. Parte 1: Requisitos generales.
Reglamento Delegado (UE) 2016/364 de la Comisión, de 1 de julio de 2015, relativo a la clasificación de las propiedades de reacción al fuego de los productos de construcción de conformidad con el Reglamento (UE) nº 305/2011 del Parlamento Europeo y del Consejo.
UNE 20434:1999 Sistema de designación de los cables.
UNE-EN 13501-6:2015 Clasificación en función del comportamiento frente al fuego de los productos de construcción y elementos para la edificación. Parte 6: Clasificación a partir de datos obtenidos en ensayos de reacción al fuego de cables eléctricos.
* UNE 21089-1:2002 Identificación de los conductores aislados de los cables.

* UNE-EN 60228:2005 Conductores de cables aislados.
CABLES DE DESIGNACIÓ RV, RV-K i RVFV-K:
UNE 21123-2:2017 Cables eléctricos de utilización industrial de tensión asignada 0,6/1 kV. Parte 2: Cables con aislamiento de polietileno reticulado y cubierta de policloruro de vinilo.
CABLES DE DESIGNACIÓ RZ1-K (AS):
UNE 21123-4:2017 Cables eléctricos de utilización industrial de tensión asignada 0,6/1 kV. Parte 4: Cables con aislamiento de polietileno reticulado y cubierta de poliolefina.
CABLES DE DESIGNACIÓ RZ1-K (AS+) i SZ1-K (AS+):
UNE 211025:2017 Cables con resistencia intrínseca al fuego destinados a circuitos de seguridad.
CABLES DE DESIGNACIÓ RZ:
UNE 21030-2:2003 Conductores aislados, cableados en haz, de tensión asignada 0,6/1 kV, para líneas de distribución, acometidas y usos análogos. Parte 2: Conductores de cobre.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a usos subjectes a reglamentacions sobre reacció al foc amb nivell o classe Aca, B1ca, B2ca, Cca:
- Sistema 1+: Declaració de Prestacions
- Productes per a usos subjectes a reglamentacions sobre reacció al foc amb nivell o classe Dca, Eca:
- Sistema 3: Declaració de prestacions
- Productes per a usos subjectes a reglamentacions sobre reacció al foc amb nivell o classe Fca:
- Sistema 4: Declaració de prestacions
- Productes per a usos subjectes a reglamentacions sobre substàncies perilloses:
- Sistema 3: Declaració de prestacions
El cable ha d'anar marcat amb les dades següents:
- Identificació consistent en la marca del nom del fabricant o marca comercial
- Descripció del producte o codi de designació
- Classe de reacció al foc
El marcatge s'ha de fer sobre el cable, l'embalatge o l'etiqueta o en una combinació dels anteriors.
El marcatge sobre la coberta o aïllament del cable ha de ser continu. La distància entre el final del marcatge i el principi del següent no ha de superar els 1100 mm.
El símbol de marcatge CE estarà fixat de manera visible, llegible i indeleble en una etiqueta fixada sobre l'embalatge dels cables.
El marcat i etiquetatge CE ha d'incloure la informació següent:
- Símbol del marcatge CE
- Els dos últims dígits de l'any en què es va fixar el marcat per primera vegada
- Nom i direcció registrada del fabricant o marca identificativa
- Codi únic d'identificació del producte tipus
- Número de referència de la declaració de prestacions
- Nivell o classe de prestacions declarat
- Data de l'especificació tècnica harmonitzada aplicable
- Número d'identificació de l'organisme notificat
- Ús previst, segons s'especifica a la norma harmonitzada aplicable
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats i homologacions dels conductors i protocols de proves.
- Control de la documentació tècnica subministrada.
- Verificar l'adequació dels conductors als requisits dels projecte
- Control final d'identificació
- Realització i emissió d'informe amb resultats dels assaigs realitzats d'acord al que s'especifica en la taula d'assaigs i de quantificació dels mateixos.
- Assaigs:
A la relació següent s'especifiquen els controls a efectuar a la recepció de conductors de coure o alumini i les normes aplicables en cada cas:
- Rigidesa dielèctrica (REBT)
- Resistència d'aïllament (REBT)
- Resistència elèctrica dels conductors (UNE 20003 / UNE 21022/1M)
- Control dimensional (Documentació del fabricant)
- Extinció de flama (UNE-EN 50266)
- Densitat de fums UNE-EN 50268 / UNE 21123)
- Despreniment d'halògens (UNE-EN 50267-2-1 / UNE 21123 / UNE 2110022)

A la següent taula s'especifica el nombre de controls a efectuar. Els assaigs especificats (*) seran exigibles segons criteri de la DF quan les exigències del lloc ho determini i les característiques dels conductors corresponguin a l'assaig especificat.
- Rigidesa dielèctrica: 100% (exigit al fabricant)
- Resistència d'aïllament: 100% (exigit al fabricant)
- Resistència elèctrica: 100% (exigit al fabricant)
- Extinció de flama: 1 assaig per tipus (*) (exigit al fabricant) i 1 assaig per tipus (*) (exigit a recepció)
- Densitat de fums: 1 assaig per tipus (*) (exigit al fabricant) i 1 assaig per tipus (*) (exigit a recepció)
- Despreniment d'halògens: 1 assaig per tipus (*) (exigit al fabricant) i 1 assaig per tipus (*) (exigit a recepció)

Per tipus s'entén aquells conductors amb característiques iguals.
Els assaigs exigits a recepció podran ésser els realitzats pel fabricant sempre que hi hagi una supervisió per part de la DF o empresa especialitzada.
CRITERIS DE PRESA DE MOSTRES:
Per a la realització dels assaigs, s'escollirà aleatòriament una bovina del lot d'entrega, a excepció dels assaigs de rutina que es realitzaran a totes les bobines.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Es realitzarà un control extensiu de la partida objecte de control, i segons criteri de la DF, podrà ésser acceptada o rebutjada tota o part del material que la composa.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA

## BG3I- CONDUCTOR DE COURE NU

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG3I-06W3,BG3I-06W4.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Conductor de coure electrolític cru i nu per a connexió de terra, unipolar de fins a 240 mm2 de secció.
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

Tots els fils de coure que formen l'ànima han de tenir el mateix diàmetre.
Ha de tenir una textura exterior uniforme i sense defectes.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bobines o tambors.
Emmagatzematge: En llocs protegits de la pluja i la humitat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE 21012:1971 Cables de cobre para líneas eléctricas aéreas. Especificación.
UNE 20460-5-54:1990 Instalaciones eléctricas en edificios. Elección e instalación de los materiales eléctricos. Puesta a tierra y conductores de protección.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada conductor ha de portar de forma indeleble i ben visible les dades següents:
- Material, secció, llargària i pes del conductor
- Nom del fabricant o marca comercial
- Data de fabricació
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de característiques tècniques i homologacions dels materials.
- Control de la documentació tècnica subministrada.
- Verificar que les característiques dels elèctrodes es corresponguin a l'especificat en Projecte.
- Verificar que la profunditat de la xarxa mai sigui inferior a 0,5 metres.
- Verificar seccions de conductors de terra segons la taula 1 del ITC-BT- 018 del REBT.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es realitzarà mesura al pont de comprovació o caixa de seccionament de terres.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'admetran seccions de conductors i elèctrodes de posada a terra inferiors als indicats al REBT.
En discrepàncies del tipus de posada a terra amb l'especificat al projecte, s'actuarà segons criteri de la DF.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG5 APARELLS DE MESURA

## BG52- COMPTADOR D'ENERGIA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG52-0H22.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aparells comptadors d'energia elèctrica.
S'han de considerar els tipus següents:
- Comptadors d'energia activa
- Comptadors d'energia reactiva
CARACTERÍSTIQUES GENERALS:
Comptador d'inducció per a corrent altern format per:
- Sòcol-caixa de borns
- Tapa transparent de policarbonat injectat autoextingible
- Tapaborns de material aïllant premsat
- Sistema de mesura format per bobina de tensió, d'intensitat i disc rotor. Ha d'anar situat a l'interior i fixat sobre un bastidor metàl·lic
- Bastidor de planxa d'acer per a fixar-lo al suport, situat a l'exterior
Han d'estar dissenyats i fabricats tal que no presentin perill per a les persones per temperatura excessiva o descàrrega elèctrica.
No han de propagar foc.
Han d'anar protegits contra la corrosió i contra la penetració de sòlids, pols i aigua.
Han de ser immunes a les pertorbacions electromagnètiques i no han de generar pertorbacions radioelèctriques.
Els tres primers elements s'han de poder precintar.
Tensions de referència: 120-230-277-400-480 V
Intensitats de base: 5-10-15-20-30-40-50 A
Freqüència: 50 Hz
Aïllament (DIN 43857): Classe II doble aïllament
Grau de protecció (UNE 20-324): IP-53X
Dimensions principals (DIN 43857): Ha de complir
COMPTADOR D'ENERGIA ACTIVA:
Precisió (UNE 21-310): classe 1 o 2
Ha de portar un mecanisme integrador de lectura a KW/h per a simple, doble o triple tarifa.
COMPTADOR D'ENERGIA REACTIVA:
Precisió (UNE 21-310): classe 3
Ha de portar un mecanisme integrador de lectura a kVA/h per a tarifa simple.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits de la intempèrie i d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE 20324:1993 Grados de protección proporcionados por las envolventes (Código IP). (CEI 529:1989).
UNE-EN 60707:2000 Inflamabilidad de materiales sólidos no metálicos expuestos a fuentes de llama. Lista de métodos de ensayo.
UNE 21310-2:1990 Contadores de inducción de energía eléctrica activa para corriente alterna de clases 0,5, 1 y 2.
UNE-EN 61036:1994 Contadores estáticos de energía activa para corriente alterna (clase 1 y 2).
UNE-EN 61036:1997 Contadores estáticos de energía activa para corriente alterna (clase 1 y 2).
REACTIVA:
UNE 21310-3:1990 Contedores de inducción de energía reactiva (varhorímetros).
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Ha de portar una placa exterior on s'indiquin les característiques següents:
- Marca i lloc de fabricació.
- Designació del tipus d'aparell.
- Nombre de fases i conductors del circuit al qual es pot connectar.
- Senyalització amb números romans de cada integrador i del que està en servei

- Indicació de la data del BOE en què es va publicar l'aprovació del tipus de comptador
Ha de portar una placa interior on figurin les dades següents:
- Constant del comptador.
- Tensió de referència.
- Número de sèrie i any de fabricació.
- Temps de referència.
- Classe de precissió.
- Intensitat nominal.
- Freqüència nominal en Hz.
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats dels equips emprats, contrastar la documentació amb els equips i verificar l'adequació als requisits del projecte i la Companyia Subministradora.
- Controlar del fabricant la generació d'esquemes de muntatge i llistats de materials emprats per a la construcció.
- Control de la documentació tècnica subministrada.
- Control final d'identificació de material i lloc d'emplaçament
- Verificar les característiques dels elements de mesura.
- Verificar les dimensions, homologacions i estat dels mòduls de mesura.
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
- Es comprovarà la totalitat dels materials.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Segons criteri de la DF, podrà ser acceptat o rebutjat tot o part del material de la partida.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG6 MECANISMES

### BG64- CAIXA PER A MECANISMES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG64-07EI.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Caixa de mecanismes, amb capacitat per a un, dos, tres o quatre elements.
CARACTERÍSTIQUES GENERALS:
Ha de servir per a la instal·lació de mecanismes elèctrics de maniobra, protecció o presa de corrent.
Ha d'estar formada per material plàstic, ha de tenir ranures assenyalades, fàcils de trencar per a

permetre la introducció de tubs per als conductors.
Han de ser de dimensions modulars, aptes per a ser encastades i preparades per a fixar amb seguretat els mecanismes i les plaques per mitjà de cargols, ganxos desplaçables o a pressió. Han de portar estries a l'interior per a facilitar l'ancoratge dels ganxos.
Dimensions de les caixes:

| Capacitat | Dimensions (mm) |
|---|---|
| 1 element | 73x88x43 |
| 2 elements | 109x88x43 |
| 3 elements | 145x88x43 |

Toleràncies:
- Dimensions: ± 1 mm

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En el mateix embalatge i protegides d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats dels mecanismes emprats, contrastar la documentació amb els materials rebuts i verificar l'adequació als requisits exigits.
- Control de la documentació tècnica subministrada.
- Verificar que la Intensitat Nominal s'adequa a l'intensitat del circuit.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:
Es comprovarà per mostreig la quantitat que determini la DF per cada tipus de mecanisme.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran els mecanismes que les seves característiques elèctriques no siguin les adequades. Quan les discrepàncies siguin d'un altre tipus, segons criteri de la DF podrà ésser acceptat o rebutjat tot o part del material.

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BG6 MECANISMES

## BG69- INTERRUPTORS I COMMUTADORS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG69-1NHN,BG69-1NKD,BG69-1NI0.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Interruptors i commutadors per a encastar o muntar superficialment.
CARACTERÍSTIQUES GENERALS:
Ha d'incorporar accessoris embellidors.
Ha d'estar constituït per una base amb borns de connexió, mecanisme d'interrupció, de commutació o de commutació de creuament, dispositius de fixació a la caixa i accessoris embellidors d'acabat.
Ha de tenir contactes d'alt poder de ruptura. Aquest ha de ser l'indicat a l'UNE 20-353.
Ha de tenir un aspecte uniforme i sense defectes.
El comandament d'accionament ha de ser manual. La base i la placa d'acabat han de ser aïllants.
La placa d'acabat ha de portar un dispositiu de fixació a la base.
Les parts subjectes a tensió no han de ser accessibles.
Ha d'estar protegit contra la penetració de cossos sòlids, pols, aigua i de l'humitat.
Han de ser resistents a la calor, al foc i a formar camins conductors.
Han de funcionar correctament a temperatura ambient.
Han d'estar dissenyats de manera que en l'ús normal han de funcionar de forma segura i no han de suposar perill per a les persones i el seu entorn.
Ha de complir les condicions requerides per la DF.
Tensió nominal: 230 V
Aïllament (UNE 20-353): Ha de complir
Resistència mecànica (UNE 20-353): Ha de complir
Resistència al foc (UNE 20-353): Ha de complir
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

UNE-EN 60669-1:1996 Interruptores para instalaciones eléctricas fijas, domésticas y análogas. Parte 1: Prescripciones generales.
UNE 20315:1994 Bases de toma de corriente y clavijas para usos domésticos y análogos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
L'interruptor ha de portar de forma indeleble i ben visible les dades següents:
- Nom del fabricant o marca comercial
- Tensió d'alimentació
- Intensitat
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant els certificats dels mecanismes emprats, contrastar la documentació amb els materials rebuts i verificar l'adequació als requisits exigits.
- Control de la documentació tècnica subministrada.
- Verificar que la Intensitat Nominal s'adequa a l'intensitat del circuit.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es comprovarà per mostreig la quantitat que determini la DF per cada tipus de mecanisme.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran els mecanismes que les seves característiques elèctriques no siguin les adequades. Quan les discrepàncies siguin d'un altre tipus, segons criteri de la DF podrà ésser acceptat o rebutjat tot o part del material.

## BG6 MECANISMES

## BG6D- MARC PER A MECANISMES ELÈCTRICS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG6D-1OB2.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Placa i marc per a 1, 2, 3 ò 4 elements, de plàstic blanc, de color o bicolor, i del tipus 2 ò 3.
CARACTERÍSTIQUES GENERALS:
Conjunt format per un bastiment i una placa que serveix per a muntar un, dos, tres o quatre mecanismes a la caixa corresponent.
El bastiment ha de tenir el sistema de fixació a la caixa per mitjà de cargols o grapes.
El mecanisme ha de quedar immobilitzat entre el bastiment i la placa, de manera que aquesta placa quedi subjecta a pressió sobre el bastiment i adossada al parament.
Tant el bastiment com la placa han de correspondre al tipus o a la sèrie de mecanismes escollits.
Ha de complir les condicions requerides per la DF.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

## BG6G- PRESA DE CORRENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BG6G-1NYI,BG6G-1NY2,BG6G-1NYU,BG6G-1NY8.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Endolls bipolars o tripolars per a encastar o muntar superficialment.
CARACTERÍSTIQUES GENERALS:
Ha d'estar constituït per una base amb borns de connexió de les fases i una placa de tancament aïllant.
El conjunt ha de tenir un aspecte uniforme i sense defectes.
Ha de tenir dos (bipolar) o tres (tripolar) pols. La connexió a terra portarà potes laterals per a contacte del conductor de protecció.
La placa de tancament ha de portar un dispositiu per a la seva fixació a la base.
Excepte els dos alvèols, no han de ser accessibles les parts que hagin de tenir tensió.
Els alvèols han de tenir una elasticitat suficient per a assegurar una pressió de contacte adequada.
Els contactes han de ser platejats o protegits contra la corrosió i l'abrasió.
Ha de complir les condicions requerides per la DF.
Tensió nominal: <= 400 V
Aïllament (UNE 20-315): Ha de complir
Resistència mecànica (UNE 20-315): Ha de complir
Resistència al foc (UNE 20-315): Ha de complir
Temperatura: <= 25°C
Quan té connexió a terra, ha d'estar construït de forma que quan s'introdueixi la clavilla, la connexió a terra s'estableixi abans que la conexió als contactes que tenen tensió.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BGD MATERIALS PER A INSTAL·LACIONS DE CONNEXIÓ A TERRA I PROTECCIÓ CATÒDICA

## BGD2- PLACA DE CONNEXIÓ A TERRA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BGD2-06US.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Placa de connexió a terra de coure en forma d'estel (calada) o d'acer en forma d'estel (massissa) o quadrada (massissa) de fins a 1 m2 de superfície i de 2 mm, 2,5 mm, 3 mm o 4 mm de gruix.
CARACTERÍSTIQUES GENERALS:
Ha de formar l'elèctrode del circuit de connexió a terra.
Ha de disposar d'un dispositiu per a fixar sòlidament el cable de la línea de terra, mitjançant una placa i un vis; aquest cable ha de tenir una secció mínima de 35 mm2.
ACER:
La placa ha d'estar protegida per galvanització en calent. Aquesta ha de complir les especificacions de l'UNE-EN ISO 1461.
El recobriment ha de ser llis, no ha de mostrar cap discontinuitat en la capa de zinc, no ha de tenir taques, inclusions de fluxe, cendres o motes, apreciables a simple vista.
La superfície especificada es considera com a superfície útil de la placa.
Toleràncies:
Gruix: - 0,1 mm
- Superfície útil: - 0,01 m2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, empaquetades en caixes.
Emmagatzematge: En el seu embalatge, protegida contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN ISO 1461:1999 Recubrimientos galvanizados en caliente sobre productos acabados de hierro y acero. Especificaciones y métodos de ensayo. (ISO 1461:1999).
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Control de la documentació tècnica subministrada.
- Verificar que les característiques dels elèctrodes es corresponguin a l'especificat en Projecte.
- Verificar que la profunditat de la xarxa mai sigui inferior a 0,5 metres.
- Verificar seccions de conductors de terra segons la taula 1 del ITC-BT- 018 del REBT.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es realitzarà mesura al pont de comprovació o caixa de seccionament de terres.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'admetran seccions de conductors i elèctrodes de posada a terra inferiors als indicats al REBT.
En discrepàncies del tipus de posada a terra amb l'especificat al projecte, s'actuarà segons criteri de la DF.

---

## BG MATERIALS PER A INSTAL·LACIONS ELÈCTRIQUES

## BGD MATERIALS PER A INSTAL·LACIONS DE CONNEXIÓ A TERRA I PROTECCIÓ CATÒDICA

## BGD4- PUNT DE CONNEXIÓ A TERRA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BGD4-16WD.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Punt de connexió a terra amb pont seccionador de platina de coure, per a col·locar superficiament.
CARACTERÍSTIQUES GENERALS:
El punt de posada a terra ha d'estar situat fora del sòl i ha de servir d'unió entre la línia d'enllaç amb terra i la línia principal de terra.
Ha d'estar format pels següents components:
- Caixa
- Entrada i sortida de caixa tipus estanc.
- Dispositiu de connexió
- Accessoris
L'envolvent o carcasa ha d'estar construït amb material doble aïllant i estanc.

El dispositiu de connexió intern ha de permetre la unió entre els conductors de les línies d'enllaç i principal de terra, de forma que es pugui , mitjançant eines apropiades, separar-les, a fi de poder mesurar la resistència de terra.
El dispositiu de connexió ha de ser de platina de coure recoberta de cadmi de 2,5x33 cm i 0,4 cm de gruix i amb suports de material aïllant.
Ha de portar borns per a l'entrada i la sortida.
Ha d'estar preparat amb un sistema de fixació segur.
Ha de tenir un aspecte uniforme i sense defectes.
Resistència de l'aïllament (UNE-EN 60669-1): Ha de complir
Resistència mecànica (UNE-EN 60669-1): Ha de complir
Capacitat dels borns:

| I nominal (A) | I nominal (A) | Secció (mm2) |
|---|---|---|
| II o IV | 125 | <=50 |

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE 20460-5-54:1990 Instalaciones eléctricas en edificios. Elección e instalación de los materiales eléctricos. Puesta a tierra y conductores de protección.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant els certificats de característiques tècniques i homologacions dels materials.
- Control de la documentació tècnica subministrada.
- Verificar que les característiques dels elèctrodes es corresponguin a l'especificat en Projecte.
- Verificar que la profunditat de la xarxa mai sigui inferior a 0,5 metres.
- Verificar seccions de conductors de terra segons la taula 1 del ITC-BT- 018 del REBT.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es realitzarà mesura al pont de comprovació o caixa de seccionament de terres.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'admetran seccions de conductors i elèctrodes de posada a terra inferiors als indicats al REBT.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Part proporcional d'accessoris per a conductors de coure, conductors d'alumini tipus VV 0,6/1 Kv, rodons de coure, platines de coure o canalitzacions conductores.
CARACTERÍSTIQUES GENERALS:
El material i les seves característiques han de ser adequats per a: conductors de coure, conductors de coure nus, conductors d'alumini, rodons de coure, platines de coure, canalitzacions o conductors de seguretat, i no han de fer disminuir, en cap cas, la seva qualitat i bon funcionament.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'albarà de lliurament han de constar les característiques d'identificació següents:
- Material
- Tipus
- Diàmetre o d'altres dimensions

Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat composada pel conjunt d'accessoris necessaris per al muntatge d'1 m de conductor de coure, d'1 m de conductor de coure nu, d'1 m de conductor d'alumini, d'1 m de rodó de coure, d'1 m de platina de coure, d'1 m de canalització o d'1 m de conductor de seguretat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BH MATERIALS PER A INSTAL·LACIONS D'ENLLUMENAT

### BHM ELEMENTS DE SUPORT PER A LLUMS EXTERIORS

### BHM2- COLUMNA PER A SUPORT DE LLUMS

### BHM2-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BHM2-13J8P.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS

Columna de planxa d'acer galvanitzat, de forma troncocònica amb base-platina i porta i coronament sense platina, de fins a 10 m d'alçària, o columna de tub d'acer galvanitzat de 2,5 m d'alçària.

CARACTERÍSTIQUES GENERALS:

Ha de tenir un compartiment per a accessoris amb porta i pany.

La columna estarà dissenyada i fabricada segons les especificacions de les normes EN 40-2 i EN 40-5.

No es pot fer servir acer efervescent. El material ha de complir amb una de les següents normes, i ser adequat per a la galvanització en calent quan es requereixi aquesta protecció:

- Columnes de planxa o xapa d'acer: material d'acord amb les normes EN 10025 (excepte el tipus S185), EN 10149-1 i EN 10149-2
- Columnes d'acer acabat en calent: material d'acord amb la norma EN 10210
- Columnes d'acer conformat en fred: material d'acord amb la norma EN 10219
- Columnes d'acer inoxidable: material d'acord amb la norma EN 10088

Ha de tenir una superfície llisa i sense defectes com és ara bonys, bombolles, esquerdes, incrustacions o exfoliacions, que siguin perjudicials per al seu ús.

El recobriment de la capa de zinc, si n'hi ha, ha de ser llis, sense discontinuïtats, taques, inclusions de flux o cendres apreciables visualment.

Ha de tenir un cargol interior per a la connexió a terra.

Dimensions de la base-platina en funció de l'alçària:

| Dimensions (mm) | 300x300x6 | | | 400x400x10 | |
|---|---|---|---|---|---|
| Alçària (m) | 2,5 | 4 | 5 | 6 | 8 | 10 |

Perns d'ancoratge: acer S 235 JR

Dimensions dels registres i de les portes: Han de coplir les especificacions de la norma UNE-EN 40-2

Dimensions de la subjecció dels llums: Han de coplir les especificacions de la norma UNE-EN 40-2

Galvanització en calent, contingut de zinc del bany: >= 98,5%

Si és de forma troncocònica:

- Conicitat (C): 1,2% <= C <= 1,3%

Toleràncies:

- Rectitud (xt, xp):
- sobre la llargària total lt: xt =< 0,003 x lt
- sobre una llargària parcial lp >= 1m: xp =< 0,003 x lp
- Llargària:
- columnes d'alçària nominal =< 10 m: ± 25 mm
- columnes d'alçària nominal > 10 m: ± 0,6%
- Apertura porta: + 10 mm; - 0 mm
- Secció transversal:
- tolerància de la circumferència: ± 1%
- desviació forma (seccions circulars): ± 3% diàmetre calculat a partir de la circumferència mesurada
- desviació forma (seccions poligonals): ± 4% valor nominal sobre les cares del polìgon
- Dimensions de l'acoblament:
- llargària: ± 2 mm
- diàmetre:
- fixació obtinguda a partir de tubs d'acer: tolerància segons EN 10210-2
- fixació obtinguda durant el procés de fabricació: ± 2%
- Torsió:
- columna encastada: >5° entre el braç de la columna i l'eix radial que passa pel centre de la porta
- columna amb placa d'ancoratge: ± 5° entre el braç de la columna i la posició prevista de la placa
- Gruix: la tolerància serà la que s'exigeix al material del que s'obté la columna
- Verticalitat (columnes amb placa d'ancoratge): <1° entre l'eix de la columna i l'eix perpendicular al pla de la placa

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, amb camió-grua i evitant impactes i arrossegaments.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 40-2:2006 Columnas y báculos de alumbrado. Parte 2: Requisitos generales y dimensiones.
UNE-EN 40-5:2003 Columnas y báculos de alumbrado. Parte 5: Requisitos para las columnas y báculos de alumbrado de acero.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Les columnes han d'anar marcades, de manera clara i duradera, amb la següent informació com a mínim:
- El nom o símbol del fabricant
- L'any de fabricació
- Referència a la norma EN 40-5
- Un codi de producte únic
- Ha de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a àrees de circulació:
- Sistema 1: Declaració de Prestacions

El símbol normalitzat del marcatge CE, ha d'anar acompanyat de la següent informació:
- El número d'identificació de l'organisme notificat
- El nom o la marca d'identificació del fabricant
- L'adreça enregistrada del fabricant
- Les dues últimes xifres de l'any d'impressió del marcatge
- El número de certificat de conformitat CE
- Referència a la norma europea EN 45-5
- Descripció del producte i usos previstos
- Les característiques dels valors del producte a declarar
- Resistència a càrregues horitzontals
- Prestacions davant de l'impacte de vehicles
- Durabilitat

---

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

### BJ1 APARELLS SANITARIS

#### BJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL

## BJ115- LAVABO

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ115-0QHO,BJ115-0QHP,BJ115-0QIM.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Lavabo amb suport mural, amb suport de peu, amb suport de mig peu, per a encastar, per a semiencastar, per a fixar sota taulell o per a recolzar sobre taulell o moble.
S'han considerat els materials següents:
- Porcellana sanitària amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Gres amb acabat superficial d'esmalt ceràmic, de color blanc, unit íntimament al suport
- Material sintètic, format per una part orgànica i dues parts minerals naturals
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Cal que sigui impermeable.
La superfície visible ha d'estar esmaltada. Es considera superfície visible la part de la peça que en posició instal·lada, és observable per una persona dreta a un metre de distància.
L'aparell no ha de tenir defectes superficials que afectin al seu funcionament o neteja, com ara faltes d'esmalt, taques, escantonaments, etc.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Les superfícies han de ser llises i continues.
Els angles i les arestes han de ser arrodonits.
La cubeta de l'aparell ha de tenir un desguàs, de tal manera que permeti el buidat complert, sense que es produeixin embasaments.
Ha de complir les condicions requerides per la DF.
Característiques físico-químiques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
- Resistència als àcids: Cap reducció de brillantor
- Resistència als àlcalis: Cap reducció de brillantor
- Resistència als diferents agents químics: Sense alteracions d'aspecte
- Resistència a les taques: Sense reducció de brillantor o taques permanents
- Resistència al xoc tèrmic: Sense signes visibles d'esquarteraments, escrostonaments o esquerdes
- Absorció d'aigua per la massa de porcellana: =< 0,75% pes mostra
Característiques mecàniques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
- Resistència a les càrregues estàtiques:
- Lavabos i rentamans murals: 1500 N
Toleràncies:
- Amplària (lavabo): - 5 mm
Els lavabos amb sobreeixidor tenen definits la classe de sobreeixidor i el cabal corresponent, d'acord amb UNE-EN 14688:
- CL 25: 0,25 l/s
- CL 20 : 0,20 l/s
- CL 15: 0,15 l/s
- CL 10: 0,10 l/s
- CL 00: sense sobreeixidor
Característiques essencials d'acord amb UNE-EN 14296, UNE-EN 14688:
- Aptitud per la neteja
- Resistència de càrrega
- Protecció contra el desbordament (UNE-EN 14688)
- Durabilitat
La designació del lavabo es realitza indicant amb diferents dígits; el nom de la Normativa (UNE-EN 14688), tipus de sobreeixidor (CL) i si és necessari s'afegeix la capacitat del sobreeixidor (OF),

l'aptitud per la neteja (CA), la resistència de càrrega (LR) i la durabilitat (DA):
EN 14688 CL
OF - CA - LR DA
La designació del lavabo per a ús col.lectiu es realitza indicant amb diferents dígits; el nom de la Normativa (EN 14296), l'aptitud per la neteja (CA), la resistència de càrrega (LR) i la durabilitat (DA):
EN 14296 CA LR DA
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les superfícies protegides.
Emmagatzematge: En llocs protegits contra els impactes i la intempèrie. S'han de col·locar en posició vertical.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* UNE 67001:2008 Aparatos sanitarios cerámicos. Especificaciones técnicas.
UNE-EN 14688:2007 Aparatos sanitarios. Lavabos. Requisitos funcionales y métodos de ensayo.
UNE-EN 14296:2006 Aparatos sanitarios. Lavabos colectivos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a higiene personal:
- Sistema 4: Declaració de Prestacions
El símbol de marcat de conformitat CE ha d'anar estampat sobre el producte o bé en l'etiqueta, embalatge o documentació comercial.
El símbol de marcatge CE ha d'anar acompanyat de la següent informació:
- Nom o marca comercial i adreça registrada del fabricant
- Les dues últimes xifres de l'any d'impressió del marcat
- El número de certificat CE o del certificat de control de producció, si és el cas.
- Fer referència a la norma UNE-EN 14688 o UNE-EN 14296
- Descripció del producte: nom genèric, material, dimensions i ús previst (UNE-EN 14296)
- Informació sobre les característiques essencials
Ha de portar les dades següents:
- Nom del fabricant o marca comercial
- Instruccions per a la seva instal·lació
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es controlarà aleatòriament sobre cada partida recepcionada.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

---

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I

## PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

### BJ1 APARELLS SANITARIS

### BJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL

### BJ11C- INODOR

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ11C-0Q64,BJ11C-0Q65.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Inodor per a suport mural o per col·locar sobre el paviment.
S'han considerat els materials següents:
- Porcellana sanitària amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
En funció de la col·locació els inodors poden ser:
- Inodors murals, instal·lats en voladís separats del terra.
- Inodors de peu ,amb peu instal·lats sobre el terra.
En funció d'on cauen els excrements els inodors poden ser:
- Inodors de fons pla, on els excrements cauen en l'aigua profunda que conté la tassa
- Inodors de descàrrega directa, on els excrements cauen directament al sifó
En funció de la composició els inodors poden ser:
- Inodor de tanc baix , és la combinació d'un inodor i una cisterna pera formar un conjunt funcional
- Inodor monobloc, és el inodor que s'ha fabricat d'una sola peça tassa i cisterna.
- Inodor independent, és el inodor que pot connectar se a una cisterna o a un fluxor.
Els inodors es classifiquen:
- Classe 1: Inodors i conjunts que poden utilitzar un volum de descàrrega de 4, 5, 6, 7 o 9 litres indistintament.
- Classe 2: Conjunts d'inodors que per a ésser utilitzats amb fluxor o altre dispositiu de descàrrega i que utilitzen un volum de descàrrega de 6 litres com a màxim, o una descàrrega de doble comandament que combina una descàrrega de 6 litres com a màxim i una descàrrega reduïda no superior a 2/3 del volum de descàrrega màxim.
Hi ha dos dispositius de descàrrega:
- Tipus A: Cisterna de tipus vàlvula
- Tipus C: Fluxor.
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Cal que sigui impermeable.
No ha de tenir taques, escantonaments, falta d'esmalt ni d'altres defectes a les superfícies llises.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els angles i les arestes han de ser arrodonits.
Ha de tenir un orifici de connexió per al tub d'alimentació i dos forats per a la fixació del seient i la tapa.
Ha de complir les condicions requerides per la DF.
Característiques físico-químiques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
- Resistència als àcids: Cap reducció de brillantor

- Resistència als àlcalis: Cap reducció de brillantor
- Resistència als diferents agents químics:  Sense alteracions d'aspecte
- Resistència a les taques: Sense reducció de brillantor o taques permanents
- Resistència al xoc tèrmic: Sense signes visibles d'esquarteraments, escrostonaments o esquerdes
- Absorció d'aigua per la massa de porcellana: =< 0,75% pes mostra

Característiques mecàniques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
- Resistència a les càrregues estàtiques:
- Inodors murals:  4000 N

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Amb les superfícies protegides.

Emmagatzematge: Apilats en llocs protegits contra els impactes i la intempèrie, en mòduls de dues unitats i un nombre màxim de tres mòduls, separats amb taulons de fusta.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

* UNE 67001:2008 Aparatos sanitarios cerámicos. Especificaciones técnicas.

UNE-EN 997:2004 Inodoros y conjuntos de inodoros con sifón incorporado.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:
- Productes per a higiene personal:
- Sistema 4: Declaració de Prestacions

El símbol de marcat de conformitat CE ha d'anar estampat sobre el producte o bé en l'etiqueta, embalatge o documentació comercial.

El símbol de marcatge CE ha d'anar acompanyat de la següent informació:
- Nom logotip i adreça del fabricant
- Les dues últimes xifres de l'any d'impressió del marcat
- Fer referència a la norma UNE-EN
- Descripció del producte: nom genèric, material, dimensions i ús previst
- Informació sobre les característiques essencials

Ha de portar les dades següents:
- Nom del fabricant o marca comercial
- Instruccions per a la seva instal·lació

Ha de subministrar-se amb els elements de fixació corresponents, seient i tapa.

OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:

Es controlarà aleatòriament sobre cada partida recepcionada.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ11O-0PMV.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Accessoris d'aparells sanitaris.
S'han considerat els tipus següents:
- Tapajunts superior o inferior central d'urinari de peu de porcellana sanitària o gres, amb acabat superficial d'esmalt ceràmic brillant de color blanc, unit íntimament al suport
- Marxapeu d'urinari de peu amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Tapatubs d'alimentació d'urinari de porcellana sanitària o gres, amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Suport regulable format per un cos amb dos forats, un per a facilitar la unió amb la banyera i l'altre per a col·locar-hi un cargol regulador
- Perfil d'acer galvanitzat en calent, en forma d'escaire per a suport d'aparells sanitaris murals
- Sifó no registrable de PVC injectat no plastificat
- Maniguet de PVC injectat no plastificat
- Reixeta inoxidable abatible i coixinet de goma per a abocador
- Pasta formada amb hidrocarburs i matèries antioxidants
- Accessoris per a inodors suspesos
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
TAPAJUNTS, MARXAPEUS I TAPATUBS:
Cal que sigui impermeable.
No ha de tenir taques, escantonaments, falta d'esmalt ni d'altres defectes a les superfícies llises.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els angles i les arestes han de ser arrodonits.
Ha de complir les condicions requerides per la DF.
Resistència a les variacions de temperatura (4 immersions a 80°C i 15°C entre 5 i 15 minuts): No han d'aparèixer esquerdes ni clivelles
Duresa de l'esmaltat (fregant 2 minuts amb paper esmerilat sota pressió de 60 g/cm2): No ha de perdre la brillantor
Continuïtat de la capa d'esmalt (impregnant un colorant, eliminant-lo després): No ha de deixar senyal de coloració
Resistència al xoc (amb bola d'acer de diàmetre 19 mm i a una alçària de 75 mm): No ha de deixar senyal
Resistència als agents químics (àcid nítric): No han d'aparèixer diferències de tonalitat
SUPORTS REGULABLES:

No ha de tenir rebaves, arestes vives, sorra de fosa o encenalls.
Alçària màxima del suport: 130 mm
Alçària mínima del suport: 75 mm
SUPORTS MURALS:
Un costat del suport ha de tenir forats per a la col·locació de cargols contra el parament; l'altre ha de permetre subjectar l'aparell sanitari amb un cargol d'ancoratge i ha de tenir a més, topalls de goma per a que l'aparell hi recolzi.
El recobriment de zinc ha de ser llis, sense discontinuïtats, ni exfoliacions ni d'altres defectes.
Protecció de galvanitzat: >= 275 g/m2
Puresa del zinc: 98,5%
Les condicions de galvanització s'han de verificar d'acord amb les normes UNE 7-183 i UNE 37-501. Han de complir les especificacions d'aquestes normes.
SIFÓ O MANIGUET:
Ha de tenir un interior regular i llis, amb els extrems tallats perpendicularment a l'eix. No hi ha d'haver rebaves, esquerdes, grans o d'altres defectes. Ha de tenir un color uniforme.
El tancament hidràulic del sifó ha de tenir una alçària mínima de 50 mm.
Diàmetre: 110 mm
Densitat (UNE 53-020): 1,35 - 1,46 g/cm3
Temperatura de reblaniment Vicat (UNE 53-114): > 79°C
Resistència a la tracció (UNE 53-114): >= 45 N/mm2
Allargament fins a la ruptura (53-114): >= 80%
Gruix en qualsevol punt (UNE 53-114): >= 2,2 mm
Toleràncies per a sifó:
- Ovalació a la longitud efectiva: + 0,9 mm
- Diàmetre exterior mitjà: + 0,3 mm
Toleràncies per a maniguet:
- Ovalació a la longitud efectiva: + 0,9 mm
- Diàmetre exterior mitjà: + 0,4 mm
REIXA:
La reixeta no ha de tenir picades ni mossegades i el revestiment ha de ser continu al llarg de tota la superfície. La goma no ha d'estar reseca i no ha de tenir esquerdes ni d'altres defectes superficials.
PASTA:
Ha de ser plàstica, impermeable, resistent a les sals, a les bactèries i a d'altres microorganismes.
Pes específic: 9,2 kN/m3
Humitat: < 0,1%
Punt d'inflamació: > 225°C
Punt de degoteig: + 60°C
Temperatura de servei: -20°C - +50°C
Temperatura d'aplicació: -10°C - +40°C
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
TAPAJUNTS I MARXAPEU:
Subministrament: Amb les superfícies protegides.
Ha de portar les dades següents:
- Nom del fabricant o marca comercial
- Instruccions per a la seva instal·lació
Emmagatzematge: Apilats, en llocs protegits d'impactes i de la intempèrie en mòduls de dues unitats i un nombre màxim de tres mòduls separats per taulons de fusta.
TAPATUBS I REIXA:
Subministrament: Amb les superfícies protegides.
Ha de portar les dades següents:
- Nom del fabricant o marca comercial
- Instruccions per a la seva instal·lació
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
SUPORTS:
Subministrament: Empaquetats de manera que no es produeixin danys.
Emmagatzematge: En llocs protegits contra els impactes.
SIFÓ I MANIGUET:
Subministrament: En l'albarà de lliurement han de constar-hi les dades següents:
- Nom del fabricant o marca comercial
- Característiques de l'element contingut
Emmagatzematge: En llocs protegits contra els impactes.
PASTA:
Subministrament: En recipients tancats, on figurin les dades següents:
- Nom del fabricant o marca comercial

- Característiques de l'element contingut
Emmagatzematge: En el seu envàs de manera que no s'alterin les seves característiques.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
SIFÓ I MANIGUET:
UNE 53114-2:1987 Plásticos. Tubos y accesorios inyectados de poli (cloruro de vinilo) no plastificado para unión con adhesivo y/o junta elástica, utilizados para evacuación de aguas pluviales y residuales. Características y métodos de ensayo.
TAPATUBS, MARXAPEU, TAPAJUNTS, REIXA, SUPORTS, PASTA I ACCESSORI PER A INODORS SUSPESOS:
No hi ha normativa de compliment obligatori.

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

## BJ1 APARELLS SANITARIS

## BJ18 APARELLS SANITARIS PER LA NETEJA

## BJ183- AIGÜERA DE PLANXA D'ACER INOXIDABLE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ183-0PGE.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aigüeres per encastar o amb suports murals.
S'han considerat els materials següents:
- Porcellana sanitària amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Gres amb acabat superficial d'esmalt ceràmic, de color blanc, unit íntimament al suport
- Planxa d'acer, amb una capa de fons d'esmalt ceràmic i un acabat superficial ceràmic, unit íntimament al suport
- Acer inoxidable de qualitat 18/8 crom-níquel, embotida i conformada mecànicament (aigüera)
En la norma UNE-EN 13310 s'anomenen les diferents possibilitats de subjecció d'aquest element:
- Aigüeres murals
- Aigüeres de sobreposar

- Aigüeres d'encastar
- Aigüeres d'enrasar
- Aigüeres sota taulell

CARACTERÍSTIQUES GENERALS:

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

Cal que sigui impermeable.

Hi ha d'haver drenatge de l'aigua en la cubeta i zona d'escorredor

Han de resistir el calor sec (180 graus) sense que es produeixin canvis superficials.

Resistir els canvis de temperatura sense que es produeixin canvis superficials.

Resistir agents químics i colorants de forma que no es mostri degradació superficial permanent.

Resistència al rallat, les ralles no han de superar 0,1mm i/o la profunditat de la capa superior

Resistència a l'abrasió: la capa superior no s'ha travessat per desgast.

Estabilitat de càrrega; les aigüeres murals no ha de trencar-se o deformar-se en aplicar-se gradualment una càrrega de 150 kg en el centre geomètric de la cubeta.

Caudal del sobreeixidor >0,20l/s

Ha de tenir durabilitat: ha de complir els requisits de drenatge, estabilitat de càrrega i de resistència anteriorment anomenats.

L'aparell no ha de tenir defectes superficials que afectin al seu funcionament o neteja, com ara faltes d'esmalt, taques, escantonaments, etc.

L'aparell d'acer inoxidable no ha de tenir taques, deformacions ni d'altres defectes a les superfícies vistes.

Ha de tenir un color uniforme i una textura llisa a tota la superfície.

Els angles i les arestes han de ser arrodonits.

La cubeta de l'aparell ha de tenir un desguàs, de tal manera que permeti el buidat complert, sense que es produeixin embasaments.

L'aparell de planxa d'acer ha de tenir connexions per a la presa de terra.

Les dimensions i la posició dels forats de desguàs i sobreixidor, si existeix, han de correspondre a les indicacions de la norma UNE-EN 695.

Ha de complir les condicions requerides per la DF.

Han de portar el marcatge CE de conformitat amb el que disposa el Reial Decret 1328/1995, de 28 de juliol

Característiques físico-químiques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:

- Resistència als àcids: Cap reducció de brillantor
- Resistència als àlcalis: Cap reducció de brillantor
- Resistència als diferents agents químics: Sense alteracions d'aspecte
- Resistència a les taques: Sense reducció de brillantor o taques permanents
- Resistència al xoc tèrmic: Sense signes visibles d'esquarteraments, escrostonaments o esquerdes
- Absorció d'aigua per la massa de porcellana: =< 0,75% pes mostra
- Resistència a les càrregues estàtiques: 1.500 N

Les característiques anteriors s'han de verificar d'acord amb l'UNE 67001.

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

Subministrament: Amb les superfícies protegides.

Emmagatzematge: En llocs protegits contra els impactes i la intempèrie. S'han de col·locar en posició vertical.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat d'amidament: la indicada a la descripció de l'element

Criteri d'amidament: quantitat necessària subministrada a l'obra

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

UNE-EN 13310:2003 Fregaderos de cocina. Requisitos funcionales y métodos de ensayo.

* UNE 67001:1988 Aparatos sanitarios cerámicos. Especificaciones técnicas.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:

El subministrador ha de posar a disposició de la DF en el cas que aquesta ho sol·liciti, la documentació següent, que acredita el marcatge CE, segons el sistema d'avaluació de conformitat aplicable, d'acord amb el que disposa l'apartat 7.2.1 del CTE:

- Productes per a preparació de productes alimentaris, neteja de la vaixella i evacuació d'aigua residual domèstica:
- Sistema 4: Declaració de Prestacions

El símbol normalitzat del marcatge CE ha d'anar acompanyat de la següent informació:

- obre el mateix producte:
- Nom i marca identificativa del fabricant
- Referència d'aquesta norma europea (UNE-EN 13310)
- n la documentació comercial que acompanya el producte:
- Nom i marca identificativa del fabricant
- Dos últims dígits de l'any en el que el marcat es va fixar
- Direcció declarada del fabricant
- Dues darreres xifres del any d'impressió del marcat
- Referència d'aquesta norma europea (UNE-EN 13310)
- Descripció del producte: nom genèric, material, dimensions,...
- Tipus de producte i informació dels requisits essencials
- Informació sobre els requisits essencials:
- Facilitat de neteja
- Resistència de càrrega (només en aigüeres murals)
- Durabilitat

L'aigüera a d'anar acompanyada d'instruccions per a la seva instal·lació, cura i manteniment i nom del fabricant o casa comercial.

OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:

- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:

Es controlarà aleatòriament sobre cada partida recepcionada.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

---

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

### BJ1 APARELLS SANITARIS

### BJ18 APARELLS SANITARIS PER LA NETEJA

### BJ18A- ABOCADOR

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ18A-17WK.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Abocador.
S'han considerat els materials següents:
- Porcellana sanitària amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Gres amb acabat superficial d'esmalt ceràmic, de color blanc, unit íntimament al suport
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
Cal que sigui impermeable.
La superfície visible ha d'estar esmaltada. Es considera superfície visible la part de la peça que en posició instal·lada, és observable per una persona dreta a un metre de distància.
L'aparell no ha de tenir defectes superficials que afectin al seu funcionament o neteja, com ara faltes d'esmalt, taques, escantonaments, etc.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Les superfícies han de ser llises i continues.
Els angles i les arestes han de ser arrodonits.
La cubeta de l'aparell ha de tenir un desguàs, de tal manera que permeti el buidat complert, sense que es produeixin embasaments.
Les dimensions i la posició dels forats de desguàs i sobreixidor, si existeix, han de correspondre a les indicacions de la norma UNE-EN 251.
Ha de complir les condicions requerides per la DF.
Característiques físico-químiques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
- Resistència als àcids: Cap reducció de brillantor
- Resistència als àlcalis: Cap reducció de brillantor
- Resistència als diferents agents químics: Sense alteracions d'aspecte
- Resistència a les taques: Sense reducció de brillantor o taques permanents
- Resistència al xoc tèrmic: Sense signes visibles d'esquarteraments, escrostonaments o esquerdes
- Absorció d'aigua per la massa de porcellana: =< 0,75% pes mostra
Característiques mecàniques d'aparells sanitaris de ceràmica d'acord amb l'UNE 67001:
Toleràncies:
- Dimensions: - 10 mm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Amb les superfícies protegides.
Emmagatzematge: En llocs protegits contra els impactes i la intempèrie. S'han de col·locar en posició vertical.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* UNE 67001:2008 Aparatos sanitarios cerámicos. Especificaciones técnicas.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Ha de portar les dades següents:
- Nom del fabricant o marca comercial
- Instruccions per a la seva instal·lació
OPERACIONS DE CONTROL:

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ18B-0PMZ.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Accessoris d'aparells sanitaris.
S'han considerat els tipus següents:
- Tapajunts superior o inferior central d'urinari de peu de porcellana sanitària o gres, amb acabat superficial d'esmalt ceràmic brillant de color blanc, unit íntimament al suport
- Marxapeu d'urinari de peu amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Tapatubs d'alimentació d'urinari de porcellana sanitària o gres, amb acabat superficial d'esmalt ceràmic, unit íntimament al suport
- Suport regulable format per un cos amb dos forats, un per a facilitar la unió amb la banyera i l'altre per a col·locar-hi un cargol regulador
- Perfil d'acer galvanitzat en calent, en forma d'escaire per a suport d'aparells sanitaris murals
- Sifó no registrable de PVC injectat no plastificat
- Maniguet de PVC injectat no plastificat
- Reixeta inoxidable abatible i coixinet de goma per a abocador
- Pasta formada amb hidrocarburs i matèries antioxidants
- Accessoris per a inodors suspesos
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
TAPAJUNTS, MARXAPEUS I TAPATUBS:
Cal que sigui impermeable.

No ha de tenir taques, escantonaments, falta d'esmalt ni d'altres defectes a les superfícies llises.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els angles i les arestes han de ser arrodonits.
Ha de complir les condicions requerides per la DF.
Resistència a les variacions de temperatura (4 immersions a 80°C i 15°C entre 5 i 15 minuts): No han d'aparèixer esquerdes ni clivelles
Duresa de l'esmaltat (fregant 2 minuts amb paper esmerilat sota pressió de 60 g/cm2): No ha de perdre la brillantor
Continuïtat de la capa d'esmalt (impregnant un colorant, eliminant-lo després): No ha de deixar senyal de coloració
Resistència al xoc (amb bola d'acer de diàmetre 19 mm i a una alçària de 75 mm): No ha de deixar senyal
Resistència als agents químics (àcid nítric): No han d'aparèixer diferències de tonalitat
SUPORTS REGULABLES:
No ha de tenir rebaves, arestes vives, sorra de fosa o encenalls.
Alçària màxima del suport: 130 mm
Alçària mínima del suport: 75 mm
SUPORTS MURALS:
Un costat del suport ha de tenir forats per a la col·locació de cargols contra el parament; l'altre ha de permetre subjectar l'aparell sanitari amb un cargol d'ancoratge i ha de tenir a més, topalls de goma per a que l'aparell hi recolzi.
El recobriment de zinc ha de ser llis, sense discontinuïtats, ni exfoliacions ni d'altres defectes.
Protecció de galvanitzat: >= 275 g/m2
Puresa del zinc: 98,5%
Les condicions de galvanització s'han de verificar d'acord amb les normes UNE 7-183 i UNE 37-501. Han de complir les especificacions d'aquestes normes.
SIFÓ O MANIGUET:
Ha de tenir un interior regular i llis, amb els extrems tallats perpendicularment a l'eix. No hi ha d'haver rebaves, esquerdes, grans o d'altres defectes. Ha de tenir un color uniforme.
El tancament hidràulic del sifó ha de tenir una alçària mínima de 50 mm.
Diàmetre: 110 mm
Densitat (UNE 53-020): 1,35 - 1,46 g/cm3
Temperatura de reblaniment Vicat (UNE 53-114): > 79°C
Resistència a la tracció (UNE 53-114): >= 45 N/mm2
Allargament fins a la ruptura (53-114): >= 80%
Gruix en qualsevol punt (UNE 53-114): >= 2,2 mm
Toleràncies per a sifó:
- Ovalació a la longitud efectiva: + 0,9 mm
- Diàmetre exterior mitjà: + 0,3 mm
Toleràncies per a maniguet:
- Ovalació a la longitud efectiva: + 0,9 mm
- Diàmetre exterior mitjà: + 0,4 mm
REIXA:
La reixeta no ha de tenir picades ni mossegades i el revestiment ha de ser continu al llarg de tota la superfície. La goma no ha d'estar reseca i no ha de tenir esquerdes ni d'altres defectes superficials.
PASTA:
Ha de ser plàstica, impermeable, resistent a les sals, a les bactèries i a d'altres microorganismes.
Pes específic: 9,2 kN/m3
Humitat: < 0,1%
Punt d'inflamació: > 225°C

## BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS

## BJ21 AIXETES PER A APARELLS SANITARIS

## BJ210- AIXETA PER A AIGÜERA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ210-0SFL.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aixetes o bateries de llautó per a aigüeres, de diferents tipus i de diferents diàmetres d'entrada i de sortida.
Tots els elements són de llautó cromat, daurat o esmaltat.
S'han considerat els tipus següents:
- Mescladora
- Monocomandament
- Senzilla
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
No ha de tenir picades ni altres desperfectes. El revestiment ha de ser continu al llarg de tota la superfície.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els elements de llautó cromat o daurat han d'estar recoberts exteriorment amb dues capes, una de níquel i una altra de crom.
Les peces interiors han de ser de materials resistents a la corrosió i a les incrustacions calcàries.
Els angles i les arestes han de ser arrodonits.
En l'aixeta senzilla, el comandament d'accionament ha de dur un distintiu blau per a l'aigua freda i un distintiu vermell per a l'aigua calenta.
El mecanisme de comandament ha de permetre un accionament d'obertura, de tancament, de regulació de cabal (i de barreja d'aigua en l'aixeta mescladora o monocomandament), suau i precís.
En l'aixeta mescladora, l'òrgan de comandament de l'aigua calenta ha d'estar col·locat a l'esquerra amb el distintiu vermell i el de l'aigua freda a la dreta amb el distintiu blau.
En l'aixeta monocomandament, l'òrgan de comandament ha d'indicar amb els distintius vermell i blau el sentit de gir per a obtenir aigua calenta o aigua freda.
Ha de complir les condicions requerides per la DF.
Cabal mínim d'aigua a 3 bar (UNE 19703): 0,2 l/s
Gruix del cos: >= 2 mm
Gruix de la primera capa de recobriment: >= 5 micres
Gruix de la segona capa de recobriment: >= 0,25 micres
Resistència a la corrosió del recobriment (UNE 37551): No han d'aparèixer bombolles, exfoliacions, picades o desaparicions de recobriment
Adherència del recobriment (UNE 37551): No s'ha de produir escames ni despreniments
Estanquitat de l'aigua amb l'obturador tancat abans i després de la col·locació, a 16 bar (UNE 19703): No s'han de produir fuites
Estanquitat de l'aigua amb l'obturador obert i la boca tapada abans i després de la col·locació, a 4 bar (UNE 19703): No s'han de produir fuites
Resistència mecànica amb l'obturador tancat amb pressió de 25 bar (UNE 19703): No s'han de produir deformacions permanents
Resistència a torsió de l'òrgan de maniobra (UNE 19703): >= 6 N m
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bossa de plàstic dins de la caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada bossa o caixa ha de portar de forma indeleble i visible les dades següents:
- Nom del fabricant o marca comercial
- Instruccions d'instal·lació i muntatge
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant la documentació dels materials escollits.

- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:

Es controlarà aleatòriament sobre cada partida recepcionada.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS

Aixetes i accessoris complementaris per a aparells sanitaris, de diferents tipus i de diferents diàmetres d'entrada i de sortida.

S'han considerat els elements següents:
- Aixeta de llautó cromat

S'han considerat els següents tipus d'aixetes:
- Senzilla
- De pas
- De regulació

CARACTERÍSTIQUES GENERALS:

En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.

No ha de tenir picades ni osques. El revestiment ha de ser continu al llarg de tota la superfície.
Les peces interiors han de ser de materials resistents a la corrosió i a les incrustacions calcàries.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els angles i les arestes han de ser arrodonits.
Ha de complir les condicions requerides per la DF.
AIXETA:
El volant ha de permetre un accionament d'obertura, tancament i regulació de cabal suau i precís.
El comandament d'accionament ha de dur un distintiu blau per a l'aigua freda i un de vermell per a l'aigua calenta.
Cabal mínim d'aigua a 3 bar (UNE 19703): 0,2 l/s
Gruix del cos: >= 2 mm
Estanquitat de l'aigua amb l'obturador tancat abans i després de la col·locació, a 16 bar (UNE 19703): No s'han de produir fuites
Estanquitat de l'aigua amb l'obturador obert i la boca tapada abans i després de la col·locació, a 4 bar (UNE 19703): No s'han de produir fuites
Resistència mecànica amb l'obturador tancat amb pressió de 25 bar (UNE 19703): No s'han de produir deformacions permanents
Resistència a torsió de l'òrgan de maniobra (UNE 19703): >= 6 N m
ELEMENTS DE LLAUTÓ:
Exteriorment ha d'estar recobert amb dues capes, una de níquel i una altra de crom.
Gruix de la primera capa de recobriment: >= 5 micres
Gruix de la segona capa de recobriment (cromat): >= 0,25 micres
Resistència a la corrosió del recobriment (UNE 37551): No han d'aparèixer bombolles, exfoliacions, picades o desaparicions de recobriment
Adherència del recobriment (UNE 37551): No s'ha de produir escames ni despreniments
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bossa de plàstic dins de la caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada bossa o caixa ha de portar de forma indeleble i visible les dades següents:
- Instruccions d'instal·lació i muntatge
- Nom del fabricant o marca comercial
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es controlarà aleatòriament sobre cada partida recepcionada.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

Exteriorment ha d'estar recobert amb dues capes, una de níquel i una altra de crom. Les peces interiors han de ser de materials resistents a la corrosió i a les incrustacions calcàries.
Els angles i les arestes han de ser arrodonits.
Ha de complir les condicions requerides per la DF.
Gruix del cos: >= 2 mm
Gruix de la primera capa de recobriment: >= 5 micres
Gruix de la segona capa de recobriment (cromat): >= 0,25 micres
Resistència a la corrosió del recobriment (UNE 37551): No han d'aparèixer bombolles, exfoliacions, picades o desaparicions de recobriment
Adherència del recobriment (UNE 37551): No s'ha de produir escames ni despreniments
Estanquitat de l'aigua amb l'obturador tancat abans i després de la col·locació, a 16 bar (UNE 19703): No s'han de produir fuites
Estanquitat de l'aigua amb l'obturador obert i la boca tapada abans i després de la col·locació, a 4 bar (UNE 19703): No s'han de produir fuites
FLUXOR:
La maneta o el polsador han de permetre un accionament suau i precís d'obertura i de tancament.
Temps de sortida d'aigua: 6 - 7 s
Cabal mínim d'aigua: 1,5 - 2 l/s
AIXETA:
L'aixeta ha de permetre un accionament suau i precís d'obertura, de tancament i de regulació del cabal.
Cabal mínim d'aigua a 3 bar (UNE 19703): 0,2 l/s
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ21C-0R8F,BJ21C-0R8P.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aixetes i accessoris per a lavabos, de diferents tipus i de diferents diàmetres d'entrada i de sortida.
Tots els elements són de llautó cromat, daurat o esmaltat.
S'han considerat els elements següents:
- Aixeta
- Bateria mescladora
- Broc

S'han considerat els següents tipus d'aixetes:
- Mescladora
- Monocomandament
- Temporitzada
- Senzilla

CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.

BJ21D-0RGX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aixetes i accessoris de llautó i d'alumini per a dutxes, de diferents tipus i de diferents diàmetres d'entrada i de sortida.
S'han considerat els elements següents:
- Aixeta de llautó cromat, daurat o esmaltat
- Braç de dutxa d'alumini anoditzat
- Ruixador fix o amb ròtula, d'aspersió fixa o regulable d'alumini anoditzat, sintètic o de llautó cromat
- Suport per a dutxa de telèfon de llautó cromat, daurat o esmaltat
- Tub flexible per a dutxa de telèfon d'alumini anoditzat o sintètic
- Dutxa de telèfon sintètica, d'aspersió fixa o regulable
- Sortida per a dutxa de telèfon de llautó cromat, daurat o esmaltat

S'han considerat els següents tipus d'aixetes:
- Mescladora
- Mescladora termostàtica
- Monocomandament
- Temporitzada

CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
No ha de tenir picades ni altres desperfectes. El revestiment ha de ser continu al llarg de tota la superfície.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Les peces interiors han de ser de materials resistents a la corrosió i a les incrustacions calcàries.
Els angles i les arestes han de ser arrodonits.
El ruixador o la dutxa de telèfon, han de proporcionar l'aspersió del cabal admès per l'aixeta.
Ha de complir les condicions requerides per la DF.
AIXETA:
El mecanisme de comandament ha de permetre un accionament d'obertura, de tancament, de regulació de cabal i de barreja d'aigua suau i precís.
En l'aixeta temporitzada, el polsador ha de permetre un accionament suau i precís de l'obertura.
En l'aixeta mescladora, l'òrgan de comandament de l'aigua calenta ha d'estar col·locat a l'esquerra amb el distintiu vermell i el de l'aigua freda a la dreta amb el distintiu blau.
En l'aixeta monocomandament, l'òrgan de comandament ha d'indicar amb els distintius vermell i blau el sentit de gir per a obtenir aigua calenta o aigua freda.

En l'aixeta termostàtica, el comandament d'accionament no ha de permetre que l'aigua superi els 45°C.
Cabal mínim d'aigua a 3 bar (UNE 19703): 0,2 l/s
Gruix del cos: >= 2 mm
Estanquitat de l'aigua amb l'obturador tancat abans i després de la col·locació, a 16 bar (UNE 19703): No s'han de produir fuites

En l'aixeta temporitzada, el polsador ha de permetre un accionament suau i precís de l'obertura.
En l'aixeta mescladora, l'òrgan de comandament de l'aigua calenta ha d'estar col·locat a l'esquerra amb el distintiu vermell i el de l'aigua freda a la dreta amb el distintiu blau.
En l'aixeta monocomandament, l'òrgan de comandament ha d'indicar amb els distintius vermell i blau el sentit de gir per a obtenir aigua calenta o aigua freda.

En l'aixeta termostàtica, el comandament d'accionament no ha de permetre que l'aigua superi els 45°C.
Cabal mínim d'aigua a 3 bar (UNE 19703): 0,2 l/s
Gruix del cos: >= 2 mm
Estanquitat de l'aigua amb l'obturador tancat abans i després de la col·locació, a 16 bar (UNE 19703): No s'han de produir fuites
Estanquitat de l'aigua amb l'obturador obert i la boca tapada abans i després de la col·locació, a 4 bar (UNE 19703): No s'han de produir fuites
Resistència mecànica amb l'obturador tancat amb pressió de 25 bar (UNE 19703): No s'han de produir deformacions permanents
Resistència a torsió de l'òrgan de maniobra (UNE 19703): >= 6 N m
ELEMENTS DE LLAUTÓ:
Els elements de llautó cromat o daurat han d'estar recoberts exteriorment amb dues capes, una de níquel i una altra de crom.
Gruix de la primera capa de recobriment: >= 5 micres
Gruix de la segona capa de recobriment: >= 0,25 micres
Resistència a la corrosió del recobriment (UNE 37551): No han d'aparèixer bombolles, exfoliacions, picades o desaparicions de recobriment
Adherència del recobriment (UNE 37551): No s'ha de produir escames ni despreniments
ELEMENTS D'ALUMINI ANODITZAT:
Exteriorment ha d'estar protegit amb una capa d'òxid d'alumini, segellada posteriorment.
Anodització del perfil (UNE 38-010): >= 15 micres
Qualitat del segellament. Métode de
la gota colorant (UNE 38-017). Mitjana total (M): 0 <= M <= 2
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bossa de plàstic dins de la caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada bossa o caixa ha de portar de forma indeleble i visible les dades següents:
- Nom del fabricant o marca comercial
- Instruccions d'instal·lació i muntatge
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.
CRITERIS DE PRESA DE MOSTRES:
Es controlarà aleatòriament sobre cada partida recepcionada.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

## BJ2 AIXETES I ACCESSORIS PER A APARELLS SANITARIS

## BJ2Z ACCESSORIS PER A APARELLS SANITARIS

## BJ2Z3- MANIGUET FLEXIBLE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ2Z3-0RKX.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aixetes i accessoris complementaris per a aparells sanitaris, de diferents tipus i de diferents diàmetres d'entrada i de sortida.
S'han considerat els elements següents:
- Maniguet flexible de malla metàl·lica amb ànima interior sintètica o de coure niquelat
CARACTERÍSTIQUES GENERALS:
En el cas de que el material s'utilitzi en obra pública, l'acord de Govern de la Generalitat de Catalunya de 9 de juny de 1998, exigeix que els materials siguin de qualitat certificada o puguin acreditar un nivell de qualitat equivalent, segons les normes aplicables als estats membres de la Unió Europea o de l'Associació Europea de Lliure Canvi.
També en aquest cas, es procurarà que els esmentats materials disposin de l'etiqueta ecològica europea, regulada en el Reglament (CE) nº 66/2010 o bé altres distintius de la Comunitat Europea.
No ha de tenir picades ni osques. El revestiment ha de ser continu al llarg de tota la superfície.
Les peces interiors han de ser de materials resistents a la corrosió i a les incrustacions calcàries.
Ha de tenir un color uniforme i una textura llisa a tota la superfície.
Els angles i les arestes han de ser arrodonits.
Ha de complir les condicions requerides per la DF.
ELEMENTS DE LLAUTÓ:
Exteriorment ha d'estar recobert amb dues capes, una de níquel i una altra de crom.
Gruix de la primera capa de recobriment: >= 5 micres
Gruix de la segona capa de recobriment (cromat): >= 0,25 micres
Resistència a la corrosió del recobriment (UNE 37551): No han d'aparèixer bombolles, exfoliacions, picades o desaparicions de recobriment
Adherència del recobriment (UNE 37551): No s'ha de produir escames ni despreniments
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En bossa de plàstic dins de la caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada bossa o caixa ha de portar de forma indeleble i visible les dades següents:
- Instruccions d'instal·lació i muntatge
- Nom del fabricant o marca comercial
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:

- Sol·licitar del fabricant la documentació dels materials escollits.
- Control de recepció dels materials, comprovant que les seves característiques es corresponen amb l'especificat al projecte.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:
Es controlarà aleatòriament sobre cada partida recepcionada.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de discrepàncies amb les exigències del projecte s'ha d'acceptar o refusar el material segons criteri de la DF.

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

## BJ3 DESGUASSOS I ACCESSORIS PER A APARELLS SANITARIS

## BJ3E- SIFÓ DE LLAUTÓ PER A LAVABO

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJ3E-0RNA.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Dispositius per a acoplar l'aparell sanitari a la xarxa d'evacuació.
S'han considerat els elements següents:
- Desguàs recte
- Desguàs sifònic
- Desguàs de pipa
- Sifò registrable
- Sifò de botella
- Sifò amb vàlvula de ventilació

CARACTERÍSTIQUES GENERALS:
Les superfícies interiors i exteriors han de ser llises, sense ranures, ampolles o qualevol altre defecte superficial que pugui alterar el funcionament del dispositiu.
Les superfícies revestides electrolíticament han de complir els requisits de la norma UNE-EN 248.
Totes les peces han de resistir l'acció de l'aigua residual domèstica en un interval de temperatures entre 20 i 95°C.
Les mides de les peces han de permetre la col·locació correcte a l'aparell sanitari i la connexió a la xarxa d'evacuació.
DESGUÀS O SIFÓ SENSE VÀLVULA DE VENTILACIÓ:
Les dimensions i formes compliran els requeriments de la norma UNE-EN 274-1.

Cabal de desguàs per a Lavabo i bidet:
- Desguàs: >= 0,6 l/s
- Desguàs amb sifó: >= 0,5 l/s
- Sifó: >= 0,6 l/s
- Sobreeixidor: >= 0,25 l/s
Estanquitat del desgüàs: No ha de tenir fuites
Fuita màxima del desgüàs amb tap o vàlvula: <= 1 l/h
Les anteriors característiques s'han de determinar segons la norma UNE-EN 274-2.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
SUBMINISTRAMENT I EMMAGATZEMATGE:
Subministrament: En bossa de plàstic dins de la caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ PER A DESGUÀS O SIFÓ SENSE VÀLVULA DE VENTILACIÓ:
Les peces o l'envoltori ha de portar de forma indeleble i visible les dades següents:
- Nom del fabricant o marca comercial
- Referència a la norma UNE-EN 274-1
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
DESGUÀS O SIFÓ SENSE VÀLVULA DE VENTILACIÓ:
* UNE-EN 274-1:2002 Accesorios de desagüe para aparatos sanitarios. Parte 1: Requisitos.

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

## BJA APARELLS DE PRODUCCIÓ I ACUMULACIÓ D'AIGUA CALENTA SANITÀRIA

## BJAD- ESCALFADOR ACUMULADOR ELÈCTRIC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJAD-0QVG,BJAD-0QXE.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Escalfadors acumuladors elèctrics de 10 a 200 l de capacitat.
S'han considerat els tipus següents:
- Amb cubeta d'acer esmaltat
- Amb cubeta d'acer galvanitzat
CARACTERÍSTIQUES GENERALS:
Ha d'estar format per un dipòsit amb la resistència en el seu interior, recobert d'una capa aillant que a la vegada ha d'estar recoberta per l'envoltant exterior de l'acumulador.
Si és amb cubeta d'acer esmaltat, el dipòsit d'acer al carboni ha de tenir l'interior esmaltat al foc i l'envoltant, també d'acer al carboni, ha de tenir l'exterior esmaltat al foc.
L'envoltant ha de tenir a la seva part inferior un forat de drenatge de 5 mm de diàmetre mínim.
Ha de tenir un termòstat de treball de rearmament automàtic, un altre de rearmament manual, un control visual de funcionament i, opcionalment, un termòmetre.
Ha de portar un born per a la connexió a terra, al costat del qual i de manera indeleble ha de portar el símbol "Terra".
Ha de poder connectar-se permanentment a la línia d'alimentació elèctrica sense anar proveït de cap base d'alimentació de connexió, malgrat que no s'exclou la utilització d'un cable flexible fixat permanentment.
Les connexions de l'aigua han de ser identificables en la seva condició de calenta o freda amb un senyal al seu costat gravat de manera indeleble i sobre una superfície fixa.
A l'entrada de l'aigua hi ha d'haver una vàlvula de retenció, i en el circuit hi ha d'haver una vàlvula de seguretat incorporada i, si no hi és, ha de ser subministrada a banda juntament amb l'aparell.
Per al desmuntatge d'elements per al manteniment normal no ha de caldre el desplaçament de l'aparell i l'operació s'ha de poder fer amb l'ajuda d'eines ordinàries.
Les parts en contacte amb l'aigua seràn de materials que no puguin contaminar-la.
La connexió, tant de l'aigua com l'elèctrica, s'ha de poder fer amb facilitat un cop situat l'acumulador en el seu lloc de treball.
En l'escalfador amb ruixador, a la sortida de l'aigua calenta hi ha d'haver un braç de dutxa.
L'entrada i la sortida d'aigua han d'estar clarament indicades.
La temperatura de sortida de l'aigua ha de mesurar-se mitjançant un termopar situat a la canonada de sortida.
Han d'estar protegits contra xocs elèctrics deguts a funcionament anormal o negligència.
Han ser capaç de resistir la pressió de l'aigua que es produeix en l'ús normal.
Han de tenir dispositius de protecció contra la sobrepressió si aquesta supera en 1 bar a la pressió nominal.
Han de permetre una connexió segura a la xarxa d'alimentació d'aigua.
Temperatura de treball: <= 98°C
Temperatura de seguretat: 130°C
Pressió de treball: <= 6 bar
Aïllament elèctric (REBT): Classe I
Connexió de l'aigua: 1/2" ó 3/4"
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Directiva 97/23/CE del parlamento europeo y del consejo, de 29 de mayo de 1997, relativa a la aproximacion de las legislaciones de los estados miembros sobre Equipos a Presion.
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 60335-2-21:1995 Seguridad de los aparatos electrodomesticos y análogos. Parte 2: Requisitos particulares para los termos eléctricos.(Versión oficial EN 60335-2-21 1992).
UNE-EN 60730-1:1994 Dispositivos de control eléctrico automático para uso doméstico y análogo.

Parte 1: requisitos generales. (Versión oficial EN 60730-1:1991 + Corrigendum 1993 + A1:1991 + A11:1991).
UNE-EN 60730-2-1:1998 Dispositivos de control eléctrico automático para uso doméstico y análogo. Parte 2: Requisitos particulares para dispositivos de control eléctrico para aparatos electrodomésticos.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
Cada aparell ha de portar en un lloc ben visible, un cop instal·lat, una placa que indiqui de manera indeleble:
- Identificació del constructor
- Model o tipus
- Símbol del grau d'aïllament
- Pressió nominal en bar
- Capacitat
- Tensió
- Tipus de corrent elèctric
- Potència
- Intensitat

Els termòstats han de tenir a la seva placa de característiques, a més de les previstes a la norma UNE 20305, la indicació "Termo".
OPERACIONS DE CONTROL:
Les tasques de control a realitzar a escalfadors, acumuladors d'aigua calenta sanitària, són les següents:
- Sol·licitar del fabricant els certificats de les característiques tècniques i homologacions dels equips.
- Control de la documentació tècnica subministrada.
- Contrastar la documentació amb els equips, verificant, tipus de gas (escalfadors a gas) potència calorífica, potència elèctrica (escalfadors elèctrics) i capacitat.
- Verificar l'adequació d'aquestes característiques amb el projecte.
- Control d'identificació dels materials i equips i lloc d'emplaçament
- Verificar l'equip de recirculació a instal·lacions amb escalfador d'aigua centralitzat.
- Realització i emissió d'informes amb resultats de controls i proves realitzats.

CRITERIS DE PRESA DE MOSTRES:
Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

---

## BJ MATERIALS PER A INSTAL·LACIONS DE LAMPISTERIA, REG, APARELLS SANITARIS I PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

## BJM ELEMENTS DE MESURA, CONTROL I REGULACIÓ

## BJM3 COMPTADOR D'AIGUA

## BJM31- COMPTADOR D'AIGUA AMB CONNEXIÓ ROSCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BJM31-0QUC.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Comptadors d'aigua, amb unions roscades o embridades, per a connectar a la bateria o al ramal i equips auxiliars per a la centralització de lectures.
S'han considerat els tipus de comptadors següents:
- Comptadors d'aigua freda de funcionament mecànic amb cos de llautó, rellotgeria estanca i transmissor magnètic
- Comptadors d'aigua freda de funcionament electrònic, amb cos de material sintètic, pantalla digital multifunció i sistema de mesura mitjançant turbina axial i transductor electrònic
CONDICIONS GENERALS:
Ha de tenir un aspecte uniforme i no ha de tenir defectes superficials, com és ara cops, bonys, ratlles o defectes de l'acabat superficial.
COMPTADORS:
No ha de tenir cap tipus de defecte mecànic que alteri el funcionament o la qualitat de l'aparell, ni fuites, exsudacions, mostres de corrosió o d'altres defectes superficials.
Ha d'anar equipat amb un sistema eficaç que impedeixi l'entrada d'humitat, tant de l'interior com de l'exterior, dins l'esfera de lectura, i també per a poder ser comprovat sense desmuntar-lo.
Ha d'anar proveït d'una tapa protectora i una fletxa gravada de forma indeleble que indiqui la direcció del fluid i, opcionalment, una vàlvula antiretorn a la sortida.
El comptador ha d'estar homologat i precintat.
El comptador ha d'estar fabricat amb materials d'una resistència i durabilitat adequades al ús a que es destina. Els materials no s'han de veure afectats de manera adversa per les variacions de temperatura de l'aigua, dintre del ventall de temperatures de treball.
Totes les parts del comptador en contacte amb l'aigua que hi circula han de fabricar-se amb materials que són convencionalment coneguts com no-tòxics, no-contaminants i biològicament inerts.
El comptador d'aigua complert ha d'estar fabricat amb materials resistents a la corrosió interna i externa o que estiguin protegits per un tractament superficial adequat.
El dispositiu indicador ha de proporcionar una indicació del volum fàcilment llegible, segura i sense ambigüitats visuals.
El volum d'aigua ha d'indicar-se en metres cúbics. El símbol m3 ha d'aparèixer en el totalitzador o immediatament al costat del número indicat.
COMPTADOR VOLUMÈTRIC:
Ha d'estar format per un cos amb un mecanisme interior de pistó o rotatiu i un totalitzador de lectura.
COMPTADOR DE VELOCITAT:
Ha d'estar format per un cos i una tapa.
Ha de tenir un mecanisme interior de turbina amb un tren reductor que transmeti el pas de fluid al totalitzador.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
COMPTADORS:
Subministrament: Embalat, amb les rosques protegides, dins de caixa protectora.
Emmagatzematge: En el seu embalatge, en llocs protegits contra els impactes i la intempèrie.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
COMPTADORS:
Orden de 28 de diciembre de 1988 por la que se regulan los contadores de agua fría.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN COMPTADORS:
El comptador ha d'anar marcat de manera visible e indeleble amb la següent informació com a

mínim:
- Nom o raó social del fabricant o la seva marca de fàbrica
- La classe metrològica i el cabal nominal expressat en m3/h
- L'any de fabricació i el número de comptador separats inequívocament
- Una o dues sagetes que indiquin el sentit del flux
- El signe d'aprovació del model o, en el seu cas, d'aprovació del model CEE
- La pressió màxima de servei en bar, en el cas de que sigui superior a 10 bar
- La lletra H o V en el cas de que el comptador només pugui treballar en posició horitzontal o vertical respectivament

OPERACIONS DE CONTROL EN COMPTADORS:
Els punts de control més destacables són els següents:
- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Control d'identificació dels materials i verificació del seu dimensionat segons projecte.
- Contrastar entre la documentació aportada i els materials emprats.
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.

CRITERIS DE PRESA DE MOSTRES EN COMPTADORS:
Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN COMPTADORS:
Ha de ser refusat el material que no compleixi amb els requeriments del projecte.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

COMPTADORS:

Orden de 28 de diciembre de 1988 por la que se regulan los contadores de agua fría.

5.- CONDICIONS DE CONTROL DE RECEPCIÓ

CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ EN COMPTADORS:

El comptador ha d'anar marcat de manera visible e indeleble amb la següent informació com a mínim:

- Nom o raó social del fabricant o la seva marca de fàbrica
- La classe metrològica i el cabal nominal expressat en m3/h
- L'any de fabricació i el número de comptador separats inequívocament
- Una o dues sagetes que indiquin el sentit del flux
- El signe d'aprovació del model o, en el seu cas, d'aprovació del model CEE
- La pressió màxima de servei en bar, en el cas de que sigui superior a 10 bar
- La lletra H o V en el cas de que el comptador només pugui treballar en posició horitzontal o vertical respectivament

OPERACIONS DE CONTROL EN COMPTADORS:

Els punts de control més destacables són els següents:

- Sol·licitar al fabricant els certificats de les característiques tècniques dels materials.
- Control de la documentació tècnica subministrada.
- Control d'identificació dels materials i verificació del seu dimensionat segons projecte.
- Contrastar entre la documentació aportada i els materials emprats.
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.

CRITERIS DE PRESA DE MOSTRES EN COMPTADORS:

Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN COMPTADORS:
Ha de ser refusat el material que no compleixi amb els requeriments del projecte.

---

## BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS, PROTECCIÓ CONTRA DESCÀRREGUES ATMOSFÈRIQUES I SEGURE TAT

### BM3 EXTINTORS

### BM30- ARMARI PER A EXTINTOR

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BM30-0T70.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Armaris metàl·lics per a extintors per a muntar superficialment amb la cara frontal de vidre.
CARACTERÍSTIQUES GENERALS:
Armari metàl·lic per a anar adossat a la paret, amb la cara frontal de vidre.
Ha d'estar pintat de color vermell.
L'accés a l'interior, per a les revisions periòdiques de l'extintor, s'ha de poder fer fàcilment sense trencar el vidre.
El vidre ha de portar la inscripció "Trenqueu-lo en cas d'incendi".
Alçària: >= 600 mm
Amplària: >= 300 mm
Fondària: >= 220 mm
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, embalats amb cartró.
Emmagatzematge: En llocs protegits de la intempèrie i d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS, PROTECCIÓ CONTRA DESCÀRREGUES ATMOSFÈRIQUES I SEGURE TAT

## BM3 EXTINTORS

### BM33- EXTINTOR MANUAL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BM33-0T4F.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Aparell autónom que conté un agent extintor que pot esser projectat i dirigit sobre un foc per l'acció d'una pressió interna. Son extintors manuals els que han estat dissenyats per a utilitzar-se a ma o transportat, i que en condicions de funcionament te una massa menor o igual a 20 kg.
CARACTERÍSTIQUES GENERALS:
El fabricant, o l'importador en el seu cas, han de garantir que l'extintor correspon a un tipus registrat davant l'Administració i que disposa d'un certificat estes per un organisme de control facultat per a l'aplicació del Reglament d'Aparells a Pressió, que acrediti que l'extintor correspon plenament al del projecte presentat per a registrar el tipus.
Ha de portar una placa oficial, fixada de forma permanent, on s'ha de gravar:
- Indicació de l'administració que fa el control
- La pressió de disseny (pressió màxima de servei)
- El nombre de registre de l'aparell
- La data de la primera prova i la marca de qui la realitzà
- Els espais lliures per a proves successives

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, en funda de plàstic.
Emmagatzematge: En llocs protegits de la intempèrie i d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.
Corrección de errores del Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.
Real Decreto 709/2015, de 24 de julio, por el que se establecen los requisitos esenciales de seguridad para la comercialización de los equipos a presión.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
CONDICIONS DE MARCATGE I CONTROL DE LA DOCUMENTACIÓ:
El cos de l'extintor ha de portar una etiqueta amb les dades següents:
- Nom o raó social del fabricant o importador que ha registrat el tipus al que correspon l'extintor
- Temperatura màxima i mínima de servei

- Productes continguts i quantitat dels mateixos
- Eficàcia per a extintors portàtils d'acord amb la norma UNE 23-110
- Tipus de focs per als que no pot utilitzar-se l'extintor
- Instruccions d'utilització
- Data i contrasenya corresponents al registre de tipus

OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:
- Sol·licitar al fabricant el certificat del compliment de les exigències establertes al Reglament d'Instal·lacions de protecció contra incendis dels equips i materials emprats.
- Sol·licitar a l'empresa instal·ladora/mantenidora, certificat final conforme la instal·lació s'ha executat segons normatives d'aplicació.
- Control de la documentació tècnica subministrada.
- Control de l'emmagatzematge d'extintors en obra fins a la seva col·locació.
- Control final d'identificació de material i lloc d'emplaçament
- Comprovar que els extintors compleixen els requisits especificats en projecte, s'ha de verificar:
- Aprovació de tipus per la Direcció General d'Indústries siderometal·lúrgiques i la placa de timbre de la Delegació o els Serveis Territorials Autònoms d'Indústria.
- Dades placa de disseny :
- Pressió màxima de servei (disseny)
- nº placa
- Data 1a Prova i successives
- Dades etiqueta de característiques:
- Nom del fabricant importador
- Temperatura màxima i mínima de servei
- Productes continguts i quantitat d'equips
- Eficàcia de l'extintor (Norma UNE 23110)
- Tipus de foc amb el que no es pot utilitzar
- Instruccions funcionament
- Realització d'informe amb els resultats del control efectuat.

CRITERIS DE PRESA DE MOSTRES:

S'ha de realitzar el control de tots els extintors que es rebin a obra.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Un cop realitzat el control dels materials, totes les anomalies, incompliment de les especificacions, desviacions del projecte i variacions del què s'ha contractat amb l'empresa instal·ladora, s'ha de comunicar a DF, que haurà de decidir la substitució total o parcial del material rebut.

---

## BM MATERIALS PER A INSTAL·LACIONS CONTRA INCENDIS, PROTECCIÓ CONTRA DESCÀRREGUES ATMOSFÈRIQUES I SEGURE TAT

## BMY PARTS PROPORCIONALS D'ELEMENTS ESPECIALS PER A INSTAL·LACIONS CONTRA INCENDIS

## BMY3- PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A EXTINTORS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BMY3-0TC7.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Accessoris per a instal·lacions de protecció contra incendis.
S'han considerat els elements següents:
- Part proporcional d'elements especials per a extintors.
CARACTERÍSTIQUES GENERALS:
El material i les seves característiques han de ser adequats per a la instal·lació i no han de fer disminuir, en cap cas, la seva qualitat i bon funcionament.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: A l'albarà de lliurament han de constar les característiques d'identificació següents:
- Material
- Tipus
- Diàmetre o d'altres dimensions
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat composada pel conjunt d'elements especials necessaris per al muntatge d'un element.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Resolució de 22 de març de 1995, de designació del laboratori general d'assaigs i investigacions com a organisme de control per la certificació de productes, d'acord amb el Reial Decret 1942/1993, que aprova el reglament CPI.
Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.
Corrección de errores del Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.

## BN VÀLVULES, FILTRES, BOMBES I GRUPS DE PRESSIÓ

### BN3 VÀLVULES DE BOLA

#### BN37- VÀLVULA DE BOLA METÀL·LICA MANUAL AMB BRIDES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BN37-0X86,BN37-0X89,BN37-0X7O,BN37-0X7Z,BN37-0X7Y.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Vàlvules de bola de 2 o 3 vies, d'accionament manual o amb actuador final elèctric o hidràulic.
S'han considerat els tipus següents:
- Vàlvules, d'accionament manual, amb mecanisme de tancament de bola, amb cos metàl·lic o de material sintètic
- Vàlvules amb accionament elèctric, amb mecanisme de tancament de bola
- Vàlvules amb accionament pneumàtic, amb mecanisme de tancament de bola
- S'han considerat els sistemes d'unió següents:
- Connexions per a roscar
- Per a muntar amb brides
- Per a encolar
- Per muntar amb accessoris a pressió
CARACTERÍSTIQUES GENERALS:
Tots els elements han de ser compatibles amb el fluid que transportarà la canonada on s'instal·laran.
Els accessoris per a xarxes de subministrament d'aigua potable no han de produir concentracions de substancies nocives que excedeixin els valors permesos pel RD 140/2003, de 7 de Febrer, i no han de modificar les característiques organolèptiques ni la salubritat del aigua que circularà.
S'ha de comprovar en les especificacions subministrades pel fabricant, que la vàlvula és apta per al tipus de fluid de la canonada on s'instal·larà, a la temperatura i pressió previstes.
El fabricant ha de garantir que la vàlvula en posició tancada no permetrà el pas del fluid, i que es podrà maniobrar sense dificultat el mecanisme d'obertura i tancament a la pressió i temperatura de treball.
El pas lliure que deixa la vàlvula en posició oberta ha de correspondre al diàmetre nominal dels tubs als quals es connecta.
En el cos ha d'haver-hi gravada la pressió de treball.
Pressió de prova segons pressió nominal:
- Pressió nominal 10 bar: >= 15 bar
- Pressió nominal 16 bar: >= 24 bar
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: En caixes, amb tots els accessoris, peces per als junts i elements de connexió.
Les rosques han de portar protectors de plàstic.
Emmagatzematge: En llocs protegits de la intempèrie i d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
VÀLVULES METÀL·LIQUES:
* UNE-EN 736-1:1996 Válvulas. Terminología. Parte 1: Definición de los tipos de válvulas.
* UNE-EN 736-2:1998 Válvulas. Terminología. Parte 2: Definición de los componentes de las válvulas.
* UNE-EN 736-3:2008 Válvulas. Terminología. Parte 3: Definición de términos.
* UNE-EN 13709:2010 Válvulas industriales. Válvulas de globo y válvulas de globo de retención y regulación de acero.
VÀLVULES DE BOLA DE MATERIAL SINTÈTIC:
UNE-EN ISO 16135:2007 Válvulas industriales. Válvulas esféricas de materiales termoplásticos (ISO 16135:2006).
VÀLVULES AMB ACTUADOR ELÈCTRIC:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

## BN VÀLVULES, FILTRES, BOMBES I GRUPS DE PRESSIÓ

## BN8 VÀLVULES DE RETENCIÓ

## BN86- VÀLVULA DE RETENCIÓ DE DISC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BN86-0X1V,BN86-0X1O,BN86-0X1R.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Vàlvules de retenció de disc i de disc partit (doble clapeta) per a muntar entre brides.
S'han considerat els tipus de vàlvules següents:
- Vàlvules de disc senzill de desplaçament axial
- Vàlvules de disc partit o doble clapeta, de desplaçament oscil·lant
CARACTERÍSTIQUES GENERALS:
La vàlvula de disc senzill i desplaçament axial ha d'estar formada per:
- Cos d'acer inoxidable amb el sistema de guiatge del disc i preparat per a muntar entre brides
- Sistema de tancament per disc d'acer inoxidable
- Molla amb força predeterminada per a actuar sobre el disc
Ha de tenir, gravades al cos, les dades següents:
- Diàmetre nominal
- Pressió nominal
- Material
- Marca comercial
- Fletxa sentit circulació fluid
Pressió de prova segons pressió nominal:
- Pressió nominal 10 bar: >= 15 bar
- Pressió nominal 16 bar: >= 24 bar
Material del tancament: Acer inoxidable ferrític
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, empaquetades en caixes.

Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## BN VÀLVULES, FILTRES, BOMBES I GRUPS DE PRESSIÓ

## BN8 VÀLVULES DE RETENCIÓ

### BN89- VÀLVULA DE RETENCIÓ DE DISC AMB ROSCA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BN89-215C.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Vàlvules de retenció de disc amb els extrems roscats.
CARACTERÍSTIQUES GENERALS:
Ha d'estar formada per:
- Cos cilíndric de llautó amb els extrems roscats
- Disc obturador de material sintètic o metàl·lic amb eix de guia i junt d'estanquitat
- Molla helicoïdal tarada a una pressió predeterminada per a mantenir el disc contra el seient
Ha de tenir un aspecte exterior uniforme i sense defectes.
L'eix que suporta l'element obturador ha de desplaçar-se lliurement per l'allotjament.
En estat de repòs, la molla ha de mantenir el disc contra el seient mecanitzat al cos.
El disc ha d'estar centrat amb el seient i ha de fer contacte en tot el perímetre.
Sobre el cos de la vàlvula hi ha d'anar gravada la següent informació com a mínim:
- Nom del fabricant o marca comercial
- Diàmetre nominal
- Pressió nominal
- Sageta que indiqui el sentit de circulació del fluid
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Embalat, amb les rosques protegides, dins de caixa protectora.
Emmagatzematge: En llocs protegits contra els impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI

La normativa ha de ser l'específica a l'ús a què es destini.

---

## BP MATERIALS PER A INSTAL·LACIONS AUDIOVISUALS, COMUNICACIÓ I SISTEMES DE GESTIÓ I INTEGRACIÓ

## BP4 CABLES PER A TRANSMISSIÓ DE SENYAL

## BP44- CABLE PER A TRANSMISSIÓ DE DADES AMB CONDUCTORS DE COURE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BP44-1A3X.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Cables metàl·lics multiconductors per a la transmissió i el control de senyals analògiques i digitals.
S'han contemplat els tipus de cables següents:
- Cables amb o sense pantalla per a treballar a freqüències de fins a 100 MHz, amb coberta de PVC, amb una classificació de resistència al foc Eca segons UNE-EN 50575
- Cables amb o sense pantalla per a treballar a freqüències de fins a 250 MHz, amb coberta de PVC, amb una classificació de resistència al foc Eca segons UNE-EN 50575
- Cables amb o sense pantalla per a treballar a freqüències de fins a 100 MHz, amb coberta de poliolefines, amb una classificació de resistència al foc Dca-s2,d2,a2 segons UNE-EN 50575
- Cables amb o sense pantalla per a treballar a freqüències de fins a 250 MHz, amb coberta de PVC, amb una classificació de resistència al foc Dca-s2,d2,a2 segons UNE-EN 50575
- Cables amb o sense pantalla per a treballar a freqüències de fins a 500 MHz, amb coberta de PVC, amb una classificació de resistència al foc Dca-s2,d2,a2 segons UNE-EN 50575
- Cables amb pantalla per a treballar a freqüències de fins a 1.000 MHz, amb coberta de PVC, amb una classificació de resistència al foc Dca-s2,d2,a2 segons UNE-EN 50575

CONDICIONS GENERALS:
Ha de tenir un aspecte exterior uniforme i sense defectes.
No ha de tenir irregularitats a la coberta exterior que puguin, durant la instal·lació, ús normal o durant les operacions de manteniment, suposar un risc per als usuaris o per a l'entorn.
Ha de tenir la resistència mecànica suficient i ha d'estar construït de manera que pugui suportar, sense precaucions especials les condicions d'emmagatzematge, ús, muntatge i manteniment.
El conductor ha de ser de coure sòlid massis o cablejat. La secció del conductor ha de ser circular i uniforme.
Els conductors cablejats han d'estar constituits per conductors de secció circular, sense aïllament entre ells, ensamblats en capes concèntriques o en grup. El nombre màxim de fils dels conductor cablejats és de 7 fils.
Els conductors aïllats s'han d'identificar mitjançant colors i/o marques addicionals en anell i/o

símbols, obtinguts mitjançant la utilització d'un aïllament colorejat o d'una superficie colorejada per extrussió, impressió o pintat. Els colors han de ser fàcilment identificables i s'han de correspondre de manera raonable amb els colors normalitzats del Document d'Armonització HD 402 S2.
El material de l'aïllament ha d'estar d'acord amb els requisits de la part o parts que li siguin aplicables de la norma UNE-EN 50290-2.
Ha de ser continu, amb un gruix tant uniforme com sigui possible. Ha d'estar aplicat ajustat al conductor i s'ha de poder retirar fàcilment sense malmetre el conductor.
No hi pot haver material de reblert entre els intersticis dels elements de cable reunits que conformen el nucli del cable.
L'apantallament, si és el cas, pot estar fet tant a nivell de l'element de cable (un parell o un quadret) com a nivell del nucli del cable (reunió d'elements de cable en capes concèntriques o formant unitats) o be una combinació de les dues solucions.
En qualsevol cas, sigui quin sigui el nivell al que està fet l'apantallament, aquest ha d'estar fet d'alguna de les maneres següents, o d'una combinació d'elles:
- una cinta metàl·lica;
- una cinta metàl·lica laminada sobre una cinta plàstica;
- una trena metàl·lica nua o recoberta;
- una envoltant helicoidal de fils paral·lels de coure;
- una capa semiconductora.
Si incorpora un fil de drenatge, aquest estarà en contacte amb l'element principal de la pantalla. El fil de drenatge ha de ser sòlid o cablejat, de coure nu o recobert d'una capa metàl·lica. Els elements que constitueixen l'apantallament compliran la norma UNE-EN 50288-1.
Mesures elèctriques a baixa freqüència en corrent continua i mesures elèctriques i de transmissió a alta freqüència:
- Cables amb pantalla i per a freqüències fins a 100 MHz: Ha de complir UNE-EN 50288-2-1
- Cables sense pantalla i per a freqüències fins a 100 MHz: Ha de complir UNE-EN 50288-3-1
- Cables amb pantalla i per a freqüències fins a 250 MHz: Ha de complir UNE-EN 50288-5-1
- Cables sense pantalla i per a freqüències fins a 250 MHz: Ha de complir UNE-EN 50288-6-1
- Cables sense pantalla i per a freqüències fins a 500 MHz: Ha de cumplir UNE-EN 50288-11-1
- Cables amb pantalla i per a freqüències fins a 600 MHz: Ha de complir UNE-EN 50288-4-1
- Cables amb pantalla i per a freqüències fins a 1.000 MHz: Ha de complir UNE-EN 50288-9-1

CABLES DE XARXA AMB CONNECTORS DE 8 VIES (RJ45) MUNTATS ALS EXTREMS DEL CABLE PER A CONNEXIONAT
Les característiques elèctriques i geomètriques dels connectors han d'estar d'acord amb les especificacions de la norma UNE-EN 60603-7.
La connexió entre els conductors que conformen el cable i els connectors ha de ser per crimpat, això és, per penetració dels contactes del connector en l'aïllament dels cables de parells trenats fins a entrar en contacte amb els conductors.
El cable ha de quedar subjectat al connector per la coberta exterior.
La llargària no trenada de cable que es destina a la connexió ha de ser inferior a 13 mm.
Hi ha d'haver una funda guardapols ajustada al cable i al connector. La funda ha de permetre prémer el clip que aguanta el connector lliure a dintre del fix.
La funda ha d'estar ajustada al cable per la coberta exterior. Cap element del cable, com ara la pantalla o bé els mateixos parells trenats pot sobresortir de la funda.
Mesures elèctriques a baixa freqüència en corrent continua i mesures elèctriques i de transmissió a alta freqüència:
- Cables de xarxa amb pantalla i per a freqüencies fins a 100 MHz: Ha de complir UNE-EN 50288-2-2
- Cables de xarxa sense pantalla i per a freqüencies fins a 100 MHz: Ha de complir UNE-EN 50288-3-2
- Cables de xarxa amb pantalla i per a freqüencies fins a 250 MHz: Ha de complir UNE-EN 50288-5-2
- Cables de xarxa sense pantalla i per a freqüencies fins a 250 MHz: Ha de complir UNE-EN 50288-6-2

2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
CABLES AMB O SENSE PANTALLA PER A INSTAL·LACIONS VERTICALS I HORITZONTALS EN EDIFICIS:
Subministrament i emmagatzematge: Bobines normalitzades i degudament protegides amb dogues, de manera que no s'alterin les seves condicions.
La bobina ha de portar marcada de forma visible i indeleble el tipus i característiques del cable.
CABLES DE XARXA AMB CONNECTORS DE 8 VIES (RJ45) MUNTATS ALS EXTREMS DEL CABLE PER A CONNEXIONAT
Subministrament: Embalats individualment o lligats individualment.
Emmagatzematge: En llocs protegits contra els impactes, la pluja, les humitats i dels raigs del sol.

L'embalatge ha de permetre la identificació del producte.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE-EN 50173-1:2009 Tecnología de la información. Sistemas de cableado genérico. Parte 1: Requisitos generales.
UNE-EN 50173-2:2009 Tecnología de la información. Sistemas de cableado genérico. Parte 2: Edificios de oficina.
UNE-EN 50290-2-1:2010 Cables de comunicación. Parte 2-1: Reglas comunes de diseño y construcción.
CABLES AMB O SENSE PANTALLA PER A INSTAL·LACIONS HORITZONTALS I VERTICALS EN EDIFICIS:
UNE-EN 50288-2-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 2-1: Especificación intermedia para cables apantallados aplicables hasta 100 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-3-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 3-1: Especificación intermedia para cables sin apantallar aplicables hasta 100 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-5-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 5-1: Especificación intermedia para cables apantallados aplicables hasta 250 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-6-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 6-1: Especificación intermedia para cables sin apantallar aplicables hasta 250 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-4-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 4-1: Especificación intermedia para cables apantallados aplicables hasta 600 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-9-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 9-1: Especificación intermedia para cables apantallados aplicables hasta 1 000 MHz. Cables para instalaciones horizontales y verticales en edificios.
UNE-EN 50288-11-1:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 11-1: Especificación intermedia para cables sin apantallar aplicables hasta 500 MHz. Cables para instalaciones horizontales y verticales en edificios.
CABLES AMB O SENSE PANTALLA PER A INSTAL·LACIONS A L'ÀREA DE TREBALL I CABLES PER A CONNEXIONAT:
UNE-EN 50288-2-2:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 2-2: Especificación intermedia para cables apantallados aplicables hasta 100 MHz. Cables para instalaciones en el área de trabajo y cables para conexionado.
UNE-EN 50288-3-2:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 3-2: Especificación intermedia para cables sin apantallar aplicables hasta 100 MHz. Cables para instalaciones en el área de trabajo y cables para conexionado.
UNE-EN 50288-5-2:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 5-2: Especificación intermedia para cables apantallados aplicables hasta 250 MHz. Cables para instalaciones en el área de trabajo y cables.
UNE-EN 50288-6-2:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 6-2: Especificación intermedia para cables sin apantallar aplicables hasta 250 MHz. Cables para instalaciones en el área de trabajo y cables para conexionado.
UNE-EN 50288-4-2:2013 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 4-2: Especificación intermedia para cables apantallados aplicables hasta 600 MHz. Cables para instalaciones en el área de trabajo y cables para conexionado.
UNE-EN 50288-9-2:2015 Cables metálicos con elementos múltiples utilizados para la transmisión y el control de señales analógicas y digitales. Parte 9-2: Especificación intermedia para cables

apantallados aplicables desde 1 MHz hasta 1 000 MHz. Cables para instalaciones en el área de trabajo, centro de datos y cables para conexionado.

## BQ MATERIALS PER A EQUIPAMENTS FIXOS

### BQ2 PAPERERES

#### BQ22- PAPERERA DE PEU

0.- ELEMENTS QUE CONTEMPLA EL PLEC

BQ22-IQET.

1.- DEFINICIÓ I CONDICIONS DELS ELEMENTS
Papereres de peu i murals.
S'han considerat els tipus següents:
- Papereres de peu:
- Papereres de planxa desplegada amb suport de tub
- Papereres de fosa
- Papereres de fosa d'alumini
- Papereres de planxa d'acer inoxidable arenat
- Papereres de polietilè
- Papereres de planxa d'acer galvanitzat

PAPERERA DE PLANXA DESPLEGADA:
El cilindre i la base de la paperera han de ser de planxa desplegada d'acer galvanitzat. Ha de dur 3 platines de reforç, una horitzontal a la part superior, una a la inferior i una de vertical per subjectar-la al suport.
El recobriment de zinc ha de ser homogeni i continu en tota la superfície.
No s'han d'apreciar esquerdes, exfoliacions ni despreniments del recobriment.
Ha de tenir un color uniforme a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.
PAPERERA DE FOSA:
El cos ha de ser de fosa amb protecció antioxidant i pintura en pols.
La protecció antioxidant ha de ser homogènia i contínua a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.
PAPERERA DE FOSA D'ALUMINI:
La cubeta i la tapa han de ser de fosa d'alumini pintada en pols.
L'estructura ha de ser de perfils d'acer inoxidable.
Ha de tenir un color uniforme a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.

PAPERERA DE PLANXA D'ACER INOXIDABLE ARENAT:
La cubeta ha de ser de planxa d'acer inoxidable arenat i pintada exteriorment amb pintura de color negre forja.
El suport estarà format per dos perfils en L, de 40x40 mm, soldats a una platina.
Ha de tenir un color uniforme a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.
PAPERERA DE POLIETILÈ:
El cos i la tapa han de ser de polietilè colorejat en massa amb colors blau, verd o groc.
Ha de tenir un color uniforme a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.
PAPERERA DE PLANXA D'ACER GALVANITZAT:
La cubeta ha de ser de planxa d'acer galvanitzat i pintada exteriorment amb pintura de color negre forja.
El suport estarà format per dos perfils en L, de 40x40 mm, soldats a una platina.
Ha de tenir un color uniforme a tota la superfície.
El conjunt no ha de tenir cops o defectes superficials.
2.- CONDICIONS DE SUBMINISTRAMENT I EMMAGATZEMATGE
Subministrament: Per unitats, empaquetades en caixes.
Emmagatzematge: En el seu embalatge fins a la seva col·locació, de manera que no es deformin i en llocs protegits d'impactes.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat d'amidament: la indicada a la descripció de l'element
Criteri d'amidament: quantitat necessària subministrada a l'obra
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL DE RECEPCIÓ
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Recepció del certificat de garantia del fabricant.
- Inspecció visual del material a la seva recepció.
- Comprovacions geomètriques i de dimensions.
- Comprovació del gruix i uniformitat dels recobriments i/o pintura.
CRITERIS DE PRESA DE MOSTRES:
Els controls indicats s'aplicaran a la totalitat dels elements subministrats.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran elements de mobiliari urbà que incompleixin alguna de les condicions indicades o que arribin a l'obra sense el certificat de garantia corresponent.

---

## B0 MATERIALS BÀSICS

## B06 FORMIGONS

### B06D- FORMIGÓ SENSE ADDITIUS DESIGNAT PER DOSIFICACIÓ DE CIMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B06D-0L90,B06D-0L92.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mescla de ciment amb possibilitat de contenir addicions, granulats, sorra, aigua i additius, en el seu cas, elaborada a l'obra amb formigonera, d'ús no estructural.
La mescla ha de ser homogènia i sense segregacions.
No s'admet cap addició que no sigui cendres volants o fum de sílice.
Els components del formigó, la seva dosificació, el procés de fabricació i el transport han d'estar d'acord amb les prescripcions del CODI ESTRUCTURAL.
Assentament en el con d'Abrams (UNE 83313):
- Consistència seca: 0 - 2 cm
- Consistència plàstica: 3 - 4 cm
- Consistència tova: 5 - 9 cm
- Consistència fluida: 10 - 15 cm
Relació aigua-ciment: <= 0,65
Contingut de ciment: <= 400 kg/m3
Per als formigons amb addicions, el contingut d'addicions en estructures d'edificació ha de complir:
- Cendres volants: <= 35% pes de ciment
- Fum de sílice: <= 10% pes de ciment
Toleràncies:
- Assentament en el con d'Abrams:
- Per qualsevol consistència: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a l'elaboració i la utilització de formigons, la temperatura ambient ha d'estar entre 5°C i 40°C.
No s'han de barrejar formigons frescos fabricats amb ciments incompatibles entre ells.
S'ha d'utilitzar abans que hagi començat l'adormiment.
El temps màxim entre l'addició de l'aigua al ciment i als granulats, i la col·locació del formigó, no pot ser superior a una hora i mitja.
Com a orientació l'inici de l'adormiment es situa aproximadament en 1,5 h.
La formigonera ha d'estar neta abans de començar l'elaboració del formigó.
L'ordre d'abocada dels materials ha de ser: aproximadament la meitat de l'aigua, el ciment i la sorra simultàniament, la grava i la resta de l'aigua.
Els additius fluidificants, superfluidificants i inhibidors de l'adormiment s'han d'afegir a l'aigua abans d'introduir-la a la formigonera.
L'additiu colorant s'ha d'afegir a la formigonera juntament amb el ciment i els granulats.
3.- UNITAT I CRITERI D'AMIDAMENT
m3 de volum necessari elaborat a l'obra.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

---

## B0 MATERIALS BÀSICS

## B07 MORTERS DE COMPRA

## B07F- MORTER SENSE ADDITIUS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B07F-0LT8,B07F-0LT6,B07F-0LSZ,B07F-0LT4.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mescla feta amb sorra, ciment, aigua i calç si és el cas.
CARACTERÍSTIQUES GENERALS:
Tipus de ciment:
- Ciments comuns excepte els tipus CEM II/A
- Ciments de ram de paleta MC
- Ciments blancs BL, quan ho requereixi l'exigència de blancor
Morters per a fàbriques:
- Resistència a compressió: <= 0,75 x Resistència a compressió de la peça
- Morter ordinari (UNE-EN 998-2) en fàbrica no armada: >= M1
- Morter ordinari (UNE-EN 998-2) en fàbrica armada: >= M5
- Morter de junt prim o morter lleuger (UNE-EN 998-2): >= M5
Ha d'estar pastat de forma que s'obtingui una mescla homogènia i sense segregacions.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a l'elaboració i la utilització del morter, la temperatura ambient ha d'estar entre 5°C i 40°C.
La formigonera ha d'estar neta abans de l'elaboració del morter.
No s'han de mesclar morters de composició diferent.
S'ha d'aplicar abans que passin 2 h des de la pastada.
3.- UNITAT I CRITERI D'AMIDAMENT
m3 de volum necessari elaborat a l'obra.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Inspecció visual de les condicions de subministrament i recepció del certificat de qualitat del fabricant, d'acord a les exigències del plec de condicions, incloent els resultats corresponents de resistència a compressió (UNE EN 1015-11).
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No es podran utilitzar a l'obra morters sense el corresponent certificat de garantia del fabricant, d'acord a les condicions exigides.
Els valors de consistència i resistència a compressió han de correspondre a les especificacions de projecte.

## B0 MATERIALS BÀSICS

## B07 MORTERS DE COMPRA

## B07G- MORTER AMB ADDITIUS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B07G-0MR9.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mescla feta amb sorra, ciment, aigua i calç si és el cas, i eventualment additius.
S'han considerat els següents additius:
- Inclusor d'aire
- Hidròfug
- Colorant
CARACTERÍSTIQUES GENERALS:
Tipus de ciment:
- Ciments comuns excepte els tipus CEM II/A
- Ciments de ram de paleta MC
- Ciments blancs BL, quan ho requereixi l'exigència de blancor
Morters per a fàbriques:
- Resistència a compressió: <= 0,75 x Resistència a compressió de la peça
- Morter ordinari (UNE-EN 998-2) en fàbrica no armada: >= M1
- Morter ordinari (UNE-EN 998-2) en fàbrica armada: >= M5
- Morter de junt prim o morter lleuger (UNE-EN 998-2): >= M5
Ha d'estar pastat de forma que s'obtingui una mescla homogènia i sense segregacions.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a l'elaboració i la utilització del morter, la temperatura ambient ha d'estar entre 5°C i 40°C.
La formigonera ha d'estar neta abans de l'elaboració del morter.
L'additiu s'ha d'afegir seguint les instruccions del fabricant, en quan a proporcions, moment d'incorporació a la barreja i temps de pastat i utilització.
No s'han de mesclar morters de composició diferent.
S'ha d'aplicar abans que passin 2 h des de la pastada.
3.- UNITAT I CRITERI D'AMIDAMENT
m3 de volum necessari elaborat a l'obra.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Inspecció visual de les condicions de subministrament i recepció del certificat de qualitat del fabricant, d'acord a les exigències del plec de condicions, incloent els resultats corresponents de resistència a compressió (UNE EN 1015-11).
En cas de no presentar aquests resultats, o que la DF tingui dubtes de la seva representativitat, es realitzaran aquests assaigs sobre el material rebut, a càrrec del contractista.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

No es podran utilitzar a l'obra morters sense el corresponent certificat de garantia del fabricant, d'acord a les condicions exigides.
Els valors de consistència i resistència a compressió han de correspondre a les especificacions de projecte.

---

## B0 MATERIALS BÀSICS

## B07 MORTERS DE COMPRA

### B07K- PASTA DE GUIX

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B07K-0LR1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mescla de guix o escaiola i aigua, pastat i llest per a ser utilitzat.
CARACTERÍSTIQUES GENERALS:
Ha d'estar pastat de forma que s'obtingui una mescla homogènia.
En qualsevol cas, la pasta de guix un cop aplicada i adormida, ha de tenir una duresa Shore C >= 50.
Quantitat d'aigua per cada 25 kg de guix (A): 17 <= A <= 18 l
Temperatura de l'aigua: >= 5°C
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a l'elaboració i la utilització de la pasta, la temperatura ambient ha d'estar entre 5°C i 40°C.
La pastera ha d'estar neta abans de l'elaboració de la pasta.
3.- UNITAT I CRITERI D'AMIDAMENT
m3 de volum necessari elaborat a l'obra.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## B0 MATERIALS BÀSICS

## B0B ACER I METALL EN PERFILS O BARRES

## B0B6- ACER EN BARRES CORRUGADES ELABORAT A L'OBRA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

B0B6-107E,B0B6-107I.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Barres o conjunts de barres muntades, tallades i conformades, per a elements de formigó armat, elaborades a l'obra.
CARACTERÍSTIQUES GENERALS:
No es pot utilitzar cap acer que tingui picadures o un nivell d'oxidació que pugui afectar a les seves condicions d'adherència. La secció afectada ha de ser <= 1% de la secció inicial.
El tallat de barres o filferros s'ha d'ajustar a l'especificat en la DT del projecte. El procés de tall no ha d'alterar les característiques geomètriques o mecàniques dels productes utilitzats.
El diàmetre interior del doblegament de les barres ha de complir:
- Ganxos, patilles i ganxos en U:
- Diàmetres < 20 mm: >= 4 D
- Diàmetres >= 20 mm: >= 7 D
El diàmetre mínim de doblegament de les barres ha de ser tal que no produeixi compressions excessives en el formigó en la zona de curvatura ni trencaments en la barra.

| Tipus acer | Barres doblegades o corbades | |
|---|---|---|
| | D <= 25 mm | D > 25 mm |
| B 400 | 10 D | 12 D |
| B 500 | 12 D | 14 D |

Els cèrcols o estreps han de seguir les mateixes prescripcions que les barres corrugades.
En els cèrcols o estreps, s'admeten diàmetres de doblegament inferiors per als diàmetres <= 12 mm, que han de complir:
- No han d'aparèixer principis de fissuració.
- Diàmetre de doblegament: >= 3 D, >= 3 cm
L'acer redreçat no ha de tenir una variació significativa en les seves propietats, s'admeten variacions dins dels límits següents:
- Deformació sota càrrega màxima: <= 2,5%
- Alçària de la corruga:
- Diàmetres <= 20 mm: <= 0,05 mm
- Diàmetres > 20 mm: <= 0,10 mm
En cap cas, després de la manipulació, ha d'aparèixer principis de fissuració en els elements.
Toleràncies:
- Llargària en barres tallades o doblegades:
- L <= 6000 mm: - 20 mm, + 50 mm
- L > 6000 mm: - 30 mm, + 50 mm

(on L es la llargària recta de les barres)
- Llargària en estreps o cèrcols:
- Diàmetres <= 25 mm: ± 16 mm
- Diàmetres > 25 mm: - 24 mm, + 20 mm
(on la llargària es la del rectangle que circumscriu l'element)
- Diferència entre llargàries dels costats paral·lels de l'element: <= 10 mm
- Angle de doblegat de ganxos, patilles, ganxos en U i altres barres corbades: ± 5º

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

La DF ha d'aprovar els plànols d'especejament de l'armadura, elaborats per la instal·lacio de ferralla.

El doblegat de les armadures s'ha de fer a temperatura ambient, mitjançant doblegadores mecàniques i a velocitat constant, amb l'ajut de mandrí, de manera que es garanteixi una curvatura constant en tota la zona.

Si es necessari fer desdoblegaments, s'han de realitzar de manera que no es produeixi fissures o trencaments en les barres. En cas de desdoblegament d'armadures en calent, s'ha de prendre les precaucions necessàries per a no malmetre el formigó amb les altes temperatures

Les barres que s'han de doblegar, han d'anar envoltades de cèrcols o estreps en la zona del colze.

El redreçat de l'acer subministrat en rotlle, s'ha de fer amb maquinària específica que compleixi l'especificat en l'article 49.2.2 del CODI ESTRUCTURAL.

El tallat de barres o filferros s'ha de realitzar per mitjans manuals (cisalla, etc.) o maquinària específica de tall automàtic.

No s'han d'adreçar els colzes excepte si es pot verificar que es realitza sense danys.

No s'han de doblegar un nombre elevat de barres en la mateixa secció d'una peça.

3.- UNITAT I CRITERI D'AMIDAMENT

kg de pes necessari elaborat a l'obra, calculat amb el pes unitari teòric o qualsevol altre expressament acceptat per la DF.

Aquest criteri inclou les pèrdues de material com a conseqüència de les operacions específiques d'aquests treballs, com ara retalls i lligaments.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

# P PARTIDES D'OBRA I CONJUNTS

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

### P21 ENDERROCS, DEMOLICIONS, ARRENCADES, REPICATS I DESMUNTATGES

#### P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ

##### P2143- ARRENCADA DE PAVIMENTS I SOLERES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2143-HYQW,P2143-4RR1,P2143-4RQT.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Demolició d'elements de vialitat, arrencada de paviments o soleres o desmuntatge de paviments. L'enderroc i l'arrencada, pressuposen que el material resultant no te cap utilitat i serà transportat a un abocador.
S'han considerat els elements següents:
- Vorada col·locada sobre terra o formigó
- Rigola de formigó o de panots col·locats sobre formigó
- Paviment de formigó, panots, llambordins o mescla bituminosa
- Paviment de rajola ceràmica, pedra natural, llambordins o còdols
- Material sintètic i capa d'anivellació
- Terratzo i capa de sorra
- Solera de formigó
- Esglaó
- Revestiment d'esglaó
- Recrescut de morter de ciment
- Sòcol de fusta, ceràmic o de pedra
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls

d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
Enderrocs o arrencades:
- Preparació de la zona de treball
- Demolició de l'element amb els mitjans adients
- Trossejament i apilada de la runa
- Càrrega de runa sobre camió
CONDICIONS GENERALS:
Els materials han de quedar suficientment trossejats i apilats per tal de facilitar-ne la càrrega, en funció dels mitjans de què es disposin i de les condicions de transport.
Els materials han de quedar apilats i emmagatzemats en funció de l'ús a que es destinin (transport a abocador, reutilització, eliminació en obra, etc.).
Un cop acabats els treballs, la base ha de quedar neta de restes de material.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
S'ha de seguir l'ordre de treballs previst a la DT.
El contractista ha d'elaborar un programa de treball que ha de ser aprovat per la DF abans d'iniciar els treballs, on s'ha d'especificar, com a mínim:
- Mètode d'enderroc i fases
- Estabilitat de les construccions en cada fase, apuntalaments necessaris
- Estabilitat i protecció de les construccions i elements de l'entorn i els que s'han de conservar
- Manteniment i substitució provisional dels serveis afectats pels treballs
- Mitjans d'evacuació i especificació de les zones d'abocament dels productes d'enderroc
- Cronograma dels treballs
- Pautes de control i mesures de seguretat i salut
La part per a enderrocar no ha de tenir instal·lacions en servei (aigua, gas, electricitat, etc.).
El paviment no ha de tenir conductes d'instal·lació en servei a la part per arrencar, s'han de desmuntar els aparells d'instal·lació i de mobiliari existents, així com qualsevol element que pugui destorbar la feina.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
La zona afectada per les obres ha de quedar convenientment senyalitzada.
L'execució dels treballs no han de produir desperfectes, molèsties o perjudicar les construccions, bens o persones de l'entorn.
S'ha d'evitar la formació de pols, pel que cal regar les parts que s'hagin de demolir i carregar.
En cas d'imprevistos (terrenys inundats, olors de gas, etc.) o quan l'enderrocament pugui afectar les construccions veïnes, s'han de suspendre les obres i avisar a la DF.
L'operació de càrrega de runa s'ha de fer amb les precaucions necessàries, per tal d'aconseguir les condicions de seguretat suficients.
S'han d'eliminar els elements que puguin entorpir els treballs de retirada i càrrega de runa.
Els materials d'aplec i posterior reaprofitament s'han de situar en una zona amplia i arrecerada.
S'ha de complir la normativa vigent en matèria mediambiental, de seguretat i salut i d'emmagatzematge i transport de productes de construcció.
ARRENCADA DE PAVIMENTS SITUATS SOBRE SOSTRES:
El paviment s'aixecarà abans de procedir a l'enderroc de l'element resistent en el qual està col·locat, sense afectar la capa de compressió del sostre ni debilitar les voltes, bigues o biguetes.
No es dipositarà runa damunt de les bastides.
No s'acumularà runa en tanques, murs i suports pròpies que hagin de mantenir-se dempeus o d'edificacions i elements aliens a l'enderroc.
No s'acumularà runa amb un pes superior a 100 kg/m2 damunt dels sostres, en cap cas.
3.- UNITAT I CRITERI D'AMIDAMENT
ENDERROC D'ESGLAÓ, ARRENCADA DE REVESTIMENT D'ESGLAÓ, DE SÒCOL, DE VORADA O RIGOLA:
m de llargària realment enderrocada, segons les especificacions de la DT.
m de llargària realment enderrocada, segons les especificacions de la DT.
ENDERROC D'ESCOCELL:
Unitat realment enderrocada, segons les especificacions de la DT.
ENDERROC DE SOLERA LLEUGERAMENT ARMADA, ARRENCADA I DESMUNTATGE DE PAVIMENT, ARRENCADA DE RECRESCUT:
m2 de superfície amidada segons les especificacions de la DT.
ENDERROC DE SOLERA DE FORMIGÓ EN MASSA:

m3 de volum amidat segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).
* Orden de 10 de febrero de 1975, por la que se aprueba la Norma Tecnológica de la Edificación. NTE-ADD/1975: Acondicionamiento del terreno. Desmontes. Demoliciones.

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P21 ENDERROCS, DEMOLICIONS, ARRENCADES, REPICATS I DESMUNTATGES

## P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ

## P2145- ARRENCADA I ENDERROC D'ELEMENTS DE SEGURETAT I PROTECCIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2145-4RS0.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Demolició o desmuntatge d'elements de seguretat, protecció i senyalització, amb mitjans mecànics i càrrega sobre camió.
S'han considerat els tipus següents:
- Desmuntatge de barrera de seguretat flexible i demolició d'ancoratges clavats a terra
- Desmuntatge de barrera de seguretat flexible i demolició d'ancoratges amb base de formigó
- Demolició de barrera de seguretat rígida de formigó
- Desmuntatge de barana metàl·lica
- Desmuntatge de reixa i ancoratges
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Arrencada o desmuntatge de l'element amb els mitjans adients
- Trossejament i apilada de l'element arrencat
- Aplec dels elements desmuntats
- Càrrega dels elements arrencats sobre el camió
CONDICIONS GENERALS:

Les restes de la demolició han de quedar suficientment trossejades i apilades per tal de facilitar-ne la càrrega, en funció dels mitjans de què es disposi i de les condicions de transport.
Els elements desmuntats han de quedar apilats per tal de facilitar-ne la càrrega.
Els materials han de quedar apilats i emmagatzemats en funció de l'ús a que es destinin (transport a abocador, reutilització, eliminació en obra, etc.).
Un cop acabats els treballs, la base ha de quedar neta de restes de material i en condicions d'ús.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
S'ha de seguir l'ordre de treballs previst a la DT.
S'han de separar les bandes i els terminals, treient primer els elements d'unió, perns i femelles, i després les peces separadores.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
La zona afectada per les obres ha de quedar convenientment senyalitzada.
L'execució dels treballs no han de produir desperfectes, molèsties o perjudicar les construccions, bens o persones de l'entorn.
S'ha d'evitar la formació de pols, pel que cal regar les parts que s'hagin de demolir i carregar.
En cas d'imprevistos (terrenys inundats, olors de gas, etc.) o quan l'enderrocament pugui afectar les construccions veïnes, s'han de suspendre les obres i avisar a la DF.
L'operació de càrrega de runa s'ha de fer amb les precaucions necessàries, per tal d'aconseguir les condicions de seguretat suficients.
S'han d'eliminar els elements que puguin entorpir els treballs de retirada i càrrega de runa.
S'ha de complir la normativa vigent en matèria mediambiental, de seguretat i salut i d'emmagatzematge i transport de productes de construcció.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària realment enderrocada, segons les especificacions de la DT.
DESMUNTATGE O DEMOLICIÓ DE BARRERA DE SEGURETAT, BARANA O BALAUSTRADA:
m de llargària realment desmuntada o enderrocada, segons les especificacions de la DT.
DESMUNTATGE DE REIXA:
m2 realment executat, amidat segons les especificacions de la DT.
DESMUNTATGE DE SENYAL DE TRÀNSIT O ARRENCADA D'ESCALA DE GAT:
Unitat de quantitat realment executada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
DESMUNTATGE O ENDERROC EN OBRA CIVIL:
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).

## P214 DESMUNTATGES O ENDERROCS D'ELEMENTS DE CONSTRUCCIÓ

## P214W- TALL AMB DISC EN PAVIMENT PER MARCAR LÍMIT DEMOLICIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P214W-FEMK,P214W-FEMN.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Tall fet amb maquina tallajunts en un paviment que s'ha de demolir, per tal de delimitar la zona afectada, i que en fer la demolició els límits del paviment que resti siguin rectes i uniformes.
Ha d'estar feta al lloc indicat a la DT, amb les modificacions introduides al replanteig previ, aprovades per la DF.
Toleràncies d'execució:
- Replanteig: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
S'ha de seguir l'ordre de treballs previst a la DT.
El contractista ha d'elaborar un programa de treball que ha de ser aprovat per la DF abans d'iniciar els treballs, on s'ha d'especificar, com a mínim:
- Mètode d'enderroc i fases
- Estabilitat de les construccions en cada fase, apuntalaments necessaris
- Estabilitat i protecció de les construccions i elements de l'entorn i els que s'han de conservar
- Manteniment i substitució provisional dels serveis afectats pels treballs
- Mitjans d'evacuació i especificació de les zones d'abocament dels productes d'enderroc
- Cronograma dels treballs
- Pautes de control i mesures de seguretat i salut
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària realment enderrocada, segons les especificacions de la DT.
TALL DE PAVIMENT:
m de llargària executada realment, amidada segons les especificacions del projecte, comprovada i acceptada expressament per la DF.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P22 MOVIMENTS DE TERRES

## P221 EXCAVACIONS

### P2217- EXCAVACIÓ PER A REBAIX

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2217-I4R7.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Excavacions amb finalitats diverses, que tenen com a resultat el rebaix del terreny.
S'han considerat els tipus següents:
- Excavació per a rebaix
- Excavació de roca a cel obert amb morter expansiu
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
Excavació per esplanació, rebaix, buidat de soterrani o caixa de paviment:
- Preparació de la zona de treball
- Situació dels punts topogràfics
- Excavació de les terres
- Càrrega de les terres sobre camió o contenidor, en el seu cas
Excavació de roca amb morter expansiu:
- Preparació de la zona de treball
- Situació de les referències topogràfiques externes
- Perforació de la roca d'acord amb un pla de treball preestablert
- Introducció del morter a les perforacions
- Trossejat de les restes amb martell trencador
- Càrrega de la runa sobre camió o contenidor
CONDICIONS GENERALS:
Es considera terreny fluix, el capaç de ser foradat amb pala, que té un assaig SPT $< 20$.
Es considera terreny compacte, el capaç de ser foradat amb pic (no amb pala), que té un assaig SPT entre 20 i 50.
Es considera terreny de trànsit, el capaç de ser foradat amb màquina o escarificadora (no amb pic), que té un assaig SPT $> 50$ sense rebot.

Es considera terreny no classificat, des del capaç de ser foradat amb pala, que té un assaig SPT < 20, fins al capaç de ser foradat amb màquina o escarificadora (no amb pic), que té un assaig SPT > 50 sense rebot.
Es considera roca de resistència baixa, la que amb dificultat es deixa ratllar amb navalla, que té un assaig de resistència a la compressió simple entre 5 i 25 MPa.
Es considera roca de resistència mitja, la que es pot trencar amb un cop de martell i que no es deixa ratllar amb navalla, que té un assaig de resistència a la compressió simple entre 25 i 50 MPa.
Es considera roca de resistència alta, la que necessita més d'un cop de martell per trencar-se, que té un assaig de resistència a la compressió simple entre 50 i 100 MPa.
Es considera que la càrrega de terres sobre camió és directa quan l'existència de rampa o d'altres condicionants de l'obra permeten que els mitjans d'excavació realitzin l'excavació i la càrrega de terres.
Es considera que la càrrega de terres sobre camió és indirecta quan la inexistència de rampa o d'altres condicionants de l'obra no permeten que els mitjans d'excavació realitzin la càrrega de terres i és necessària la utilització d'una altra màquina per a aquesta funció.
EXCAVACIÓ PER A ESPLANACIÓ, REBAIX DEL TERRENY O BUIDAT DE SOTERRANI:
L'excavació per a caixes de paviments s'aplica en superfícies petites o mitjanes i amb una profunditat exactament definida, amb lleugeres dificultats de maniobra de màquines o camions.
S'entén que el rebaix es fa en superfícies mitjanes o grans, sense problemes de maniobrabilitat de màquines o de camions.
El fons de l'excavació s'ha de deixar pla, anivellat o amb la inclinació prevista.
S'han de deixar els talussos perimetrals que fixi la DF.
L'aportació de terres per a correccions del nivell ha de ser mínima, de la mateixa terra existent i amb la mateixa compacitat.
La qualitat del terreny al fons de l'excavació requereix l'aprovació explícita de la DF.
Les terres que determini la DF s'han de conservar en una zona a part. La resta s'ha de transportar a un abocador autoritzat.
Toleràncies d'execució:
- Replanteig: ± 100 mm
- Nivells: + 10 mm, - 50 mm
- Planor: ± 40 mm/m
- Angle del talús: ± 2°

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
No s'ha de treballar quan plou, neva o fa vent superior als 60 km/h.
En cas d'imprevistos (terrenys inundats, olors de gas, restes de construccions, etc.) s'han de suspendre els treballs i avisar la DF.
Si cal fer rampes per accedir a la zona de treball, han de tenir les característiques següents:
- Amplària: >= 4,5 m
- Pendent:
- Trams rectes: <= 12%
- Corbes: <= 8%
- Trams abans de sortir a la via de llargària >= 6 m: <= 6%
- El talús ha de ser fixat per la DF.

EXCAVACIÓ PER A ESPLANACIÓ, REBAIX DEL TERRENY O BUIDAT DE SOTERRANI:
Les terres s'han d'extreure de dalt a baix, sense soscavar-les.
No s'han d'acumular terres o materials a la vora de l'excavació.
S'han d'extreure les terres o els materials amb perill de desprendiment.
S'ha d'impedir l'entrada d'aigües superficials. Cal preveure un sistema de desguàs a fi d'evitar l'acumulació d'aigua dins de l'excavació.
EXCAVACIÓ AMB MORTER EXPANSIU:
Cal fer un programa de les perforacions i del procés del reblert amb morter i extracció de la roca.
En fer les perforacions, cal verificar que no es produeixen danys a estructures properes. Si es donés aquest cas, cal evitar l'ús de barrines percussores i fer els forats exclusivament per rotació.
3.- UNITAT I CRITERI D'AMIDAMENT
EXCAVACIÓ:
m3 de volum excavat segons les especificacions de la DT, amidat com a diferència entre els perfils transversals del terreny aixecats abans de començar les obres i els perfils teòrics assenyalats als plànols, amb les modificacions aprovades per la DF.
No s'ha d'abonar l'excés d'excavació que s'hagi produït sense l'autorització de la DF, ni la càrrega i el transport del material ni els treballs que calguin per a reomplir-lo.
Inclou la càrrega, allisada de talussos, esgotaments per pluja o inundació i quantes operacions faci falta per a una correcta execució de les obres.
També estan inclosos en el preu el manteniment dels camins de comunicació entre el desmunt i les

zones on han d'anar les terres, la seva creació, i la seva eliminació, si s'escau.
Tan sols s'han d'abonar els esllavissaments no provocats, sempre que s'hagin observat totes les prescripcions relatives a excavacions, entibacions i voladures.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural de cimientos DB-SE-C, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P22 MOVIMENTS DE TERRES

## P221 EXCAVACIONS

## P221D- EXCAVACIÓ DE RASA PER A PAS D'INSTAL·LACIONS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P221D-DZ32.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conjunt d'operacions per obrir rases de pas d'instal·lacions, realitzades amb mitjans mecànics o manuals, de forma contínua o realitzades per dames.
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:

- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Situació dels punts topogràfics exteriors a l'excavació
- Replanteig de la zona a excavar i determinació de l'ordre d'execució de les dames si és el cas
- Excavació de les terres
- Càrrega de les terres sobre camió, contenidor, o formació de cavallons a la vora de la rasa, segons indiqui la partida d'obra
- Reblert i compactació de les terres en cas necessari
CONDICIONS GENERALS:
Es considera terreny fluix, el capaç de ser foradat amb pala, que té un assaig SPT < 20.
Es considera terreny compacte, el capaç de ser foradat amb pic (no amb pala), que té un assaig SPT entre 20 i 50.
Es considera terreny de trànsit, el capaç de ser foradat amb màquina o escarificadora (no amb pic), que té un assaig SPT > 50 sense rebot.
Es considera terreny no classificat, des del capaç de ser foradat amb pala, que té un assaig SPT < 20, fins al capaç de ser foradat amb màquina o escarificadora (no amb pic), que té un assaig SPT > 50 sense rebot.
Es considera roca la que pot ser foradada amb compressor (no amb màquina), que té un rebot a l'assaig SPT.
L'element excavat ha de tenir la forma i les dimensions especificades en la DT, o en el seu defecte, les que determini la DF.
El fons de l'excavació ha de quedar anivellat.
El fons de l'excavació no ha de tenir material engrunat o fluix i les esquerdes i els forats han de quedar reblerts.
Els talussos perimetrals han de ser els fixats per la DF.
Els talussos han de tenir el pendent especificat a la DT.
La qualitat de terreny del fons de l'excavació requereix l'aprovació explícita de la DF.
Toleràncies d'execució:
- Dimensions: ± 5%, ± 50 mm
- Planor: ± 40 mm/m
- Replanteig: < 0,25%, ± 100 mm
- Nivells: ± 50 mm
- Aplomat o talús de les cares laterals: ± 2°
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
S'han d'eliminar els elements que puguin entorpir els treballs d'execució de la partida.
S'ha de seguir l'ordre dels treballs previst per la DF.
Abans de començar els treballs, es farà un replanteig previ que ha de ser aprovat per la DF.
Hi ha d'haver punts fixos de referència exteriors a la zona de treball, als quals s'hi han de referir totes les lectures topogràfiques.
Si cal fer rampes per accedir a la zona de treball, han de tenir les característiques següents:
- Amplària: >= 4,5 m
- Pendent:
- Trams rectes: <= 12%
- Corbes: <= 8%
- Trams abans de sortir a la via de llargària >= 6 m: <= 6%
- El talús ha de ser fixat per la DF.
Cal extreure les roques suspeses, les terres i els materials amb perill de despreniment.
No s'han d'acumular terres o materials a la vora de l'excavació.
No s'ha de treballar simultàniament en zones superposades.
S'ha d'estrebar sempre que consti al projecte i quan ho determini la DF. L'estrebada ha de complir les especificacions fixades al seu plec de condicions.
S'han d'estrebar els terrenys engrunats i quan, en fondàries superiors a 1,30 m, es doni algun dels casos següents:
- S'hagi de treballar a dins

- Es treballi en una zona immediata que pugui resultar afectada per una possible esllavissada
- Hagi de quedar oberta en acabar la jornada de treball

També sempre que, per altres causes (càrregues veïnes, etc.) ho determini la DF.
S'ha de preveure un sistema de desguàs per tal d'evitar acumulació d'aigua dins l'excavació.
S'ha d'impedir l'entrada d'aigües superficials.
Si apareix aigua en l'excavació s'han de prendre les mesures necessàries per esgotar-la.
Els esgotaments s'han de fer sense comprometre l'estabilitat dels talussos i les obres veïnes, i s'han de mantenir mentre durin els treballs de fonamentació. Caldrà verificar en terrenys argilosos, si cal fer un sanejament del fons de l'excavació.
Els treballs s'han de fer de manera que molestin el mínim als possibles afectats.
En cas d'imprevistos (terrenys inundats, olors de gas, restes de construccions, etc.) s'han de suspendre els treballs i avisar la DF.
No s'ha de rebutjar cap material obtingut de l'excavació sense l'autorització expressa de la DF.
S'ha d'evitar la formació de pols, pel que cal regar les parts que s'hagin de carregar.
L'operació de càrrega s'ha de fer amb les precaucions necessàries per a aconseguir unes condicions de seguretat suficients.
S'ha de complir la normativa vigent en matèria mediambiental, de seguretat i salut i d'emmagatzematge i transport de productes de construcció.
Les terres s'han de treure de dalt a baix sense soscavar-les.
L'aportació de terres per a correcció de nivells ha de ser la mínima possible, de les mateixes existents i de compacitat igual.
S'ha de tenir en compte el sentit d'estratificació de les roques.
S'han de mantenir els dispositius de desguàs necessaris, per tal de captar i reconduir els corrents d'aigua interns, en els talussos.

3.- UNITAT I CRITERI D'AMIDAMENT

m3 de volum excavat segons les especificacions de la DT, amidat com a diferència entre els perfils transversals del terreny aixecats abans de començar les obres i els perfils teòrics assenyalats als plànols, amb les modificacions aprovades per la DF.
No s'ha d'abonar l'excés d'excavació que s'hagi produït sense l'autorització de la DF, ni la càrrega i el transport del material ni els treballs que calguin per a reomplir-lo.
Inclou la càrrega, allisada de talussos, esgotaments per pluja o inundació i quantes operacions faci falta per a una correcta execució de les obres.
També estan inclosos en el preu el manteniment dels camins de comunicació entre el desmunt i les zones on han d'anar les terres, la seva creació, i la seva eliminació, si s'escau.
Tan sols s'han d'abonar els esllavissaments no provocats, sempre que s'hagin observat totes les prescripcions relatives a excavacions, entibacions i voladures.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

OBRES D'EDIFICACIÓ:
Documento Básico de Seguridad estructural de cimientos DB-SE-C, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

### P22 MOVIMENTS DE TERRES

## P225 REBLERT, ESTESA I PICONATGE DE TERRES

## P2250- ESCARIFICACIÓ I COMPACTACIÓ DE SOLS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2250-FIVV.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Disgregació de la superfície del terreny i compactació posterior, amb mitjans mecànics, per tal d'aconseguir una superfície homogènia de suport.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Situació dels punts topogràfics
- Execució de l'escarificació
- Compactació de les terres

CONDICIONS GENERALS:
El grau de compactació ha de ser l'especificat per la DF.
La superfície obtinguda ha de ser homogènia i ha de tenir les característiques exigides en la DT, o en el seu defecte, les especificades per la DF.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
S'han d'eliminar els elements que puguin entorpir els treballs d'execució de la partida.
Quan s'utilitzi corró vibratori per a compactar, ha de donar-se al final unes passades sense aplicar-hi vibració.
S'ha de complir la normativa vigent en matèria mediambiental, de seguretat i salut i d'emmagatzematge i transport de productes de construcció.
S'ha d'escarificar en les zones i amb les fondàries definides en la DT, o en el seu defecte, les que determini el DF.
S'ha d'escarificar en una fondària de 15 cm com a mínim i de 30 cm com a màxim. En el cas en que s'escarifiqui en fondàries superiors, cal retirar el terreny i col·locar-lo després per tongades.
Les zones on es detecti l'existència en capes inferiors, de sistemes de drenatge o de reforç del terreny, s'han de senyalitzar convenientment i operar amb les precaucions necessàries.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P22 MOVIMENTS DE TERRES

## P225 REBLERT, ESTESA I PICONATGE DE TERRES

## P2253- REBLERT DE RASA O POU AMB GRAVES O RECICLATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2253-5478.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Operacions d'estesa de terres o granulats, i compactació si es el cas, per al reblert de rases, forats d'excavacions o esplanades que han d'augmentar la seva cota d'acabat, i operacions de correcció de la superfície del fons d'una excavació, prèviament al seu reblert.
S'han considerat els tipus següents:
- Reblert de rases amb canonades o instal·lacions amb sorra natural o sorra de reciclatge de residus de la construcció o demolicions, provenint d'una planta legalment autoritzada per al tractament d'aquests residus
- Reblert de rases i pous per a drenatges, amb graves naturals o graves de reciclatge de residus de la construcció o demolicions, provenint d'una planta legalment autoritzada per al tractament d'aquests residus
L'execució de la unitat d'obra inclou les operacions següents:
Terraplenat i piconatge de terres o reblert de rases:
- Preparació de la zona de treball
- Situació dels punts topogràfics
- Aportació del material si es tracta de graves, tot-u o granulats reciclats
- Reblert de les rases per tongades del gruix indicat
- Compactació de les terres o sorres
Reblert o estesa amb graves per a drenatges:
- Preparació de la zona de treball
- Replanteig dels nivells
- Aportació del material
- Reblert i estesa per tongades succesives
TERRAPLENAT I PICONATGE O REBLERT DE RASES:
Conjunt d'operacions d'estesa i compactació de terres adequades o sorres, per a aconseguir una plataforma amb terres superposades, o el reblert d'una rasa.
El material s'ha d'estendre per tongades successives sensiblement paral·leles a la rasant final.
El gruix de la tongada ha de ser uniforme i ha de permetre la compactació prevista d'acord amb els mitjans que s'utilitzin.
El material que s'utilitzi ha de complir les especificacions fixades en el plec de condicions corresponent.
En tota la superfície s'ha d'arribar, com a mínim, al grau de compactació previst expressat com a percentatge sobre la densitat màxima obtinguda en l'assaig Pròctor Modificat (UNE 103501).
REBLERT O ESTESA DE GRAVES PER A DRENATGE:
Estesa de graves per tongades de gruix uniforme i sensiblement paral·leles a la rasant final.
Les graves han de ser netes, sense argila, margues ni altres materials estranys.
Les tongades han de quedar compactades adequadament. El grau de compactació ha de ser superior al dels terrenys adjacents al seu mateix nivell.

La composició granulomètrica de la grava ha de complir les condicions de filtratge fixades per la DF d'acord amb el terreny adjacent i el sistema previst d'evacuació d'aigua. Com a condicions generals ha de complir:
- Mida del granulat: <= 76 mm
- Percentatge que passa pel tamís 0,080 (UNE 7-050): <= 5%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
TERRAPLENAT, REBLERT O ESTESA:
S'han de suspendre els treballs en cas de pluja o quan la temperatura ambient sigui inferior a:
- 0°C en reblert o estesa de grava
- 2°C en terraplenat amb terres adequades
S'han de mantenir els pendents i els dispositius de drenatge necessaris per a evitar entollaments.
A les vores amb estructures de contenció la compactació s'ha de fer amb piconadora manual (picadora de granota).
No s'ha de treballar simultàniament en capes superposades.
Després de pluges no s'ha d'estendre una altre tongada fins que l'última no s'hagi eixugat.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
3.- UNITAT I CRITERI D'AMIDAMENT
TERRAPLENAT, REBLERT O ESTESA:
m3 de volum amidat segons les especificacions de la DT.
La partida d'obra inclou el subministrament i aportació del material en cas de graves, tot-u o material provinent del reciclatge de residus de la construcció, i no està inclòs en cas de que es tracti de terres.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural de cimientos DB-SE-C, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P22 MOVIMENTS DE TERRES

## P225 REBLERT, ESTESA I PICONATGE DE TERRES

## P2254- REBLIMENT I PICONATGE DE FLONJALLS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2254-EL69.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Reblert, estesa i piconatge de terres o granulats en zones que per la seva extensió reduïda, per precaucions especials o per altra motiu no permeti l'ús de la maquinària amb els que normalment s'executa el terraplè.
S'han considerat els tipus següents:
- Rebliment i piconatge de flonjalls amb tot-ú
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Situació dels punts topogràfics
- Aportació del material en cas de graves, tot-u, o granulats reciclats
- Execució del rebliment
- Humectació o dessecació, en cas necessari
- Compactació de les terres
CONDICIONS GENERALS:
Les zones del reblert son les mateixes que les definides per als terraplens: Coronament, nucli, zona exterior i fonament.
Les tongades han de tenir un gruix uniforme i han de ser sensiblement paral·leles a la rasant.
El material de cada tongada ha de tenir les mateixes característiques.
El gruix de cada tongada ha de ser l'adequat per tal d'obtenir el grau de compactació exigit amb els mitjans que es disposen.
En cap cas el grau de compactació de cada tongada ha de ser inferior al més alt que tinguin els sòls adjacents, en el mateix nivell.
La composició granulomètrica de la grava ha de complir les condicions de filtratge fixades per la DF, en funció dels terrenys adjacents i del sistema previst d'evacuació d'aigua.
Les terres han de complir les especificacions fixades al seu plec de condicions.
La composició granulomètrica del tot-u ha de complir les especificacions fixades al seu plec de condicions.
En tota la superfície s'ha d'arribar, com a mínim, al grau de compactació previst expressat com a percentatge sobre la densitat màxima obtinguda en l'assaig Pròctor Modificat (UNE 103501).
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han de suspendre els treballs en cas de pluja quan la temperatura ambient sigui inferior a 0°C en el cas de graves o de tot-u, o inferior a 2°C en la resta de materials.
S'han de protegir els elements de servei públic que puguin resultar afectats per les obres.
S'han d'eliminar els elements que puguin entorpir els treballs d'execució de la partida.
Hi ha d'haver punts fixos de referència exteriors a la zona de treball, als quals s'hi han de referir totes les lectures topogràfiques.
Excepte en les rases de drenatje, en la resta de casos s'ha d'eliminar els materials inestables, turba o argila tova de la base per al rebliment.
L'ampliació o recrescuda de reblerts existents s'han de preparar de forma que es garanteixi la unió amb el nou reblert.
Les zones que per la seva forma puguin retenir aigua a la seva superfície s'han de corregir abans de l'execució.
El material s'ha d'estendre per tongades successives i uniformes, sensiblement paral·leles a la rasant final, i amb un gruix <= 25 cm.
No s'ha d'estendre cap tongada fins que la inferior compleixi les condicions exigides.
El material de cada tongada ha de tenir les característiques uniformes; en cas de no ser així, es buscaria la uniformitat mesclant-los amb els mitjans adequats.
Un cop estesa la tongada, si fos necessari, s'ha d'humitejar fins arribar al contingut òptim d'humitat, de manera uniforme.
Si el grau d'humitat de la tongada és superior a l'exigit, s'ha de dessecar mitjançant l'addició i mescla de materials secs o d'altres procediments adients.
S'han de mantenir els pendents i dispositius de desguàs necessaris per tal d'evitar entollaments, sense perill d'erosió.
Després de la pluja no s'ha d'estendre una nova tongada fins que l'última s'hagi assecat bé, o s'ha d'escarificar afegint la tongada següent més seca, de forma que l'humitat resultant sigui l'adient.
En l'execució de reblerts en contacte amb estructures de contenció, les tongades situades a ambdós costats de l'element han de quedar al mateix nivell.
Abans de la compactació cal comprovar que l'estructura amb la que estigui en contacte, ha assolit la resistència necessària.
Quan s'utilitzi corró vibratori per a compactar, ha de donar-se al final unes passades sense aplicar-hi vibració.
S'ha d'evitar el pas de vehicles per sobre de les capes en execució, fins que la compactació s'hagi completat.

S'ha de complir la normativa vigent en matèria mediambiental, de seguretat i salut i d'emmagatzematge i transport de productes de construcció.
Els treballs s'han de fer de manera que molestin el mínim als possibles afectats.
En cas d'imprevistos, s'han de suspendre les obres i avisar a la DF.
3.- UNITAT I CRITERI D'AMIDAMENT
m3 de volum amidat segons les especificacions de la DT.
La partida d'obra inclou el subministrament i aportació del material en cas de graves, tot-u o material provinent del reciclatge de residus de la construcció, i no està inclòs en cas de que es tracti de terres.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Inspecció visual de la base sobre la que s'assentarà el reblert.
- Inspecció visual del material a la descàrrega dels camions, retirant el que presenti restes de terra vegetal, matèria orgànica o pedres de grandària superior a l'admissible.
- Control de l'estesa: comprovació visual del gruix i amplada de les tongades d'execució i control de la temperatura ambient.
- Control de compactació. Es considera com a lot de control, el material compactat en un dia, corresponent a una mateixa procedència i tongada d'estesa, amb una superfície màxima de 150 m2. Es realitzaran 5 determinacions de la humitat i densitat in-situ (ASTM D 30-17).
- Assaig de placa de càrrega (DIN 18134), cada 450 m2, i al menys un cop per capa de reblert. En la zona d'aplicació de la placa es determinarà la humitat in-situ (NLT-103).
- Presa de coordenades i cotes a banda i banda i sobre l'eix de la plataforma en la coronació del reblert, i control de l'amplada de la tongada estesa, cada 20 m lineals com a màxim.
- Inspecció visual per a detectar punts baixos capaços de retenir aigua.
CRITERIS DE PRESA DE MOSTRES:
Es seguiran els criteris que en cada cas, indiqui la DF. En general, els punts de control de densitat i humitat estaran uniformement repartits en sentit longitudinal i aleatòriament distribuïts en la secció transversal de la tongada. En el cas de reblerts d'estreps o elements en els que es pugui produir una transició brusca de rigidesa, la distribució dels punts de control de compactació serà uniforme, a 50 cm dels paraments.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No es podrà iniciar l'execució del reblert sense corregir els defectes observats a la base d'assentament.
Donada la rapidesa de la cadena operativa "extracció-compactació", la inspecció visual té una importància fonamental en el control dels reblerts, tant a nivell de materials com per a l'estesa.
La densitat obtinguda després de la compactació en coronació haurà de ser superior al 100 % de la màxima obtinguda en el Próctor Modificat (UNE 103501), i del 95 % en la resta de zones. En tot cas, la densitat ha de ser >= a la de les zones contigües al replè.
El contingut d'humitat de les capes compactades no serà causa de rebuig, excepte en el cas d'utilitzar, per causes justificades, sòls amb característiques expansives amb un inflament lliure <= 5%.
El valor del mòdul d'elasticitat (segon cicle) obtingut a la placa de càrrega ha de complir les limitacions establertes al plec de condicions.
En cas d'incompliment, el contractista corregirà la capa executada, per recompactació o substitució del material. En general, es treballarà sobre tota la tongada afectada (lot), a menys que el defecte de compactació estigui clarament localitzat. Els assaigs de comprovació de la compactació s'intensificaran al doble sobre les capes corregides.
Qualsevol altre cas d'execució incorrecta serà responsabilitat del Contractista, i la seva obligació serà reparar sense cost algun els errors que hagin sorgit.

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P2R GESTIÓ DE RESIDUS I MATERIAL D'EXCAVACIÓ

### P2R6- CÀRREGA I TRANSPORT DE RESIDUS A INSTAL·LACIÓ AUTORITZADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2R6-4I5W.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Operacions destinades a la gestió dels residus generats en l'obra: residu de construcció o demolició o material d'excavació.
S'han considerat les operacions següents:
- Transport o càrrega i transport del residu: material procedent d'excavació o residu de construcció o demolició
- Subministrament i recollida del contenidor dels residus
CÀRREGA I TRANSPORT DE MATERIAL D'EXCAVACIÓ I RESIDUS:
L'operació de càrrega s'ha de fer amb les precaucions necessàries per a aconseguir unes condicions de seguretat suficients.
S'ha d'evitar que es barregin terres no contaminades procedents d'excavació no contaminats amb altres residus d'enderroc, o terres contaminades.
Els vehicles de transport han de portar els elements adequats a fi d'evitar alteracions perjudicials del material.
El contenidor ha d'estar adaptat al material que ha de transportar.
El trajecte que s'ha de recórrer ha de complir les condicions d'amplària lliure i de pendent adequades a la maquinària que s'utilitzi.
TRANSPORT DINS DE LA OBRA:
Transport de terres i material d'excavació o del rebaix, o residus de la construcció, entre dos punts de la mateixa obra.
Les àrees d'abocada han de ser les que defineixi el "Pla de Gestió de Residus de la Construcció i Enderrocs" de l'obra.
L'abocada s'ha de fer al lloc i amb el gruix de capa indicats al "Pla de Gestió de Residus de la Construcció i els Enderrocs" de l'obra.
Les terres han de complir les especificacions del seu plec de condicions en funció del seu ús, i cal que tinguin l'aprovació de la DF.
TRANSPORT A INSTAL.LACIÓ EXTERNA DE GESTIÓ DE RESIDUS:
El material de rebuig que el "Pla de Gestió de Residus de la Construcció i els Enderrocs" i el que la DF no accepti per a reutilitzar en obra, s'ha de transportar a una instal·lació externa autoritzada, per tal de rebre el tractament definitiu.
El contractista ha de lliurar al promotor un certificat on s'indiqui, com a mínim:
- Identificació del productor dels residus
- Identificació del posseïdor dels residus
- Identificació de l'obra de la qual prové el residu i en el seu cas, el número de llicència d'obra
- Identificació del gestor autoritzat que ha rebut el residu i si aquest no fa la gestió de valorització o eliminació final del residu, la identificació, cal indicar també qui farà aquesta gestió
- Quantitat en t i m3 del residu gestionat i la seva codificació segons codi LER
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CÀRREGA I TRANSPORT DE MATERIAL D'EXCAVACIÓ I RESIDUS:
El transport s'ha de realitzar en un vehicle adequat, per al material que es desitgi transportar, proveït dels elements que calen per al seu desplaçament correcte.
Durant el transport s'ha de protegir el material de manera que no es produeixin pèrdues en els trajectes utilitzats.
RESIDUS DE LA CONSTRUCCIÓ:
La manipulació dels materials s'ha de fer amb les proteccions adequades a la perillositat del mateix.
3.- UNITAT I CRITERI D'AMIDAMENT
TRANSPORT DE MATERIAL D'EXCAVACIÓ O RESIDUS:
m3 de volum amidat amb el criteri de la partida d'obra d'excavació que li correspongui, incrementat amb el coeficient d'esponjament indicat en el plec de condicions tècniques, o qualsevol altre acceptat prèviament i expressament per la DF.
La unitat d'obra no inclou les despeses d'abocament ni de manteniment de l'abocador.
RESIDUS DE LA CONSTRUCCIÓ:
Es considera un increment per esponjament d'un 35%.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 105/2008, de 1 de febrero, por el que se regula la producción y gestión de los residuos de construcción y demolición.
Decret Legislatiu 1/2009, de 21 de juliol, pel qual s'aprova el Text refós de la Llei reguladora dels residus.
Ley 7/2022, de 8 de abril, de residuos y suelos contaminados para una economía circular.
Real Decreto 108/1991, de 1 de febrero, sobre la prevención y reducción de la contaminación del medio ambiente producida por el amianto.
Decret 89/2010, de 29 de juny, pel qual s'aprova el Programa de gestió de residus de la construcció de Catalunya (PROGROC), es regula la producció i gestió dels residus de la construcció i demolició, i el cànon sobre la deposició controlada dels residus de la construcció.
Real Decreto 553/2020, de 2 de junio, por el que se regula el traslado de residuos en el interior del territorio del Estado.
Decret 152/2017, de 17 d'octubre, sobre la classificació, la codificació i les vies de gestió dels residus a Catalunya.

---

## P2 DEMOLICIONS, ENDERROCS, MOVIMENTS DE TERRES I GESTIÓ DE RESIDUS

## P2R GESTIÓ DE RESIDUS I MATERIAL D'EXCAVACIÓ

### P2RA- DISPOSICIÓ DE RESIDUS INSTAL·LACIÓ AUTORITZADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P2RA-EU5O.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Operacions destinades a la gestió dels residus generats en l'obra: residu de construcció o demolició o material d'excavació.
S'han considerat les operacions següents:
- Deposició del residu no reutilitzat en la instal·lació autoritzada de gestió on se li aplicarà el tractament de valorització, selecció i emmagatzematge o eliminació
- Deposició controlada a dipòsit autoritzat de residus d'amiant-ciment, amb codi LER 170605.
- Deposició controlada a dipòsit autoritzat de residus d'amiant friable o en pols, amb codi LER 170601
En cas d'amiant el material s'ha de transportar a una instal·lació externa autoritzada, per tal de rebre el tractament definitiu, d'acord amb l'especificat al Pla de treball i al Pla de gestió de residus.
El contractista ha de lliurar al promotor un certificat on s'indiqui, com a mínim:
- Identificació del productor dels residus
- Identificació del posseïdor dels residus
- Identificació de l'obra de la qual prové el residu i en el seu cas, el número de llicència d'obra
- Identificació del gestor autoritzat que ha rebut el residu i si aquest no fa la gestió de valorització o eliminació final del residu, la identificació, cal indicar també qui farà aquesta gestió
- Quantitat en t i m3 del residu gestionat i la seva codificació segons codi LER
DISPOSICIÓ DE RESIDUS:
Cada fracció s'ha de dipositar al lloc adequat legalment autoritzat per a que se li apliqui el tipus de tractament especificat en la DT: valorització, emmagatzematge o eliminació.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
RESIDUS DE LA CONSTRUCCIÓ:
La manipulació dels materials s'ha de fer amb les proteccions adequades a la perillositat del mateix.
3.- UNITAT I CRITERI D'AMIDAMENT
DISPOSICIÓ DE RESIDUS DE CONSTRUCCIÓ O DEMOLICIO INERTS O NO ESPECIALS I DE MATERIAL D'EXCAVACIÓ:
m3 de volum de cada tipus de residu dipositat a l'abocador o centre de recollida corresponent.
DISPOSICIÓ DE RESIDUS DE CONSTRUCCIÓ O DEMOLICIÓ ESPECIALS:
kg de pes de cada tipus de residu dipositat a l'abocador o centre de recollida corresponent.
DISPOSICIÓ DE RESIDUS:
La unitat d'obra inclou totes les despeses per la disposició de cada tipus de residu al centre corresponent.
Inclou el cànon d'abocament del residu a dipòsit controlat segons el que determina la Llei 8/2008, el pagament del qual queda suspès segons la Llei 7/2011.
La empresa receptora del residu ha de facilitar al constructor la informació necessària per complimentar el certificat de disposició de residus, d'acord amb l'article 5.3 del REAL DECRETO 105/2008.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 105/2008, de 1 de febrero, por el que se regula la producción y gestión de los residuos de construcción y demolición.
Decret Legislatiu 1/2009, de 21 de juliol, pel qual s'aprova el Text refós de la Llei reguladora dels residus.
Ley 7/2022, de 8 de abril, de residuos y suelos contaminados para una economía circular.
Real Decreto 108/1991, de 1 de febrero, sobre la prevención y reducción de la contaminación del medio ambiente producida por el amianto.
Llei 8/2008, del 10 de juliol, de finançament de les infraestructures de gestió dels residus i dels cànons sobre la disposició del rebuig dels residus.
Llei 7/2011, del 27 de juliol, de mesures fiscals i financeres.
Decret 89/2010, de 29 de juny, pel qual s'aprova el Programa de gestió de residus de la construcció de Catalunya (PROGROC), es regula la producció i gestió dels residus de la construcció i demolició, i el cànon sobre la deposició controlada dels residus de la construcció.
Decret 152/2017, de 17 d'octubre, sobre la classificació, la codificació i les vies de gestió dels residus a Catalunya.
Real Decreto 396/2006, de 31 de marzo. por el que se establecen las disposiciones mínimas de seguridad y salud aplicables a los trabajos con riesgo de exposición al amianto.

## P4 ESTRUCTURES

## P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

### P4E0- ACER PER A ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P4E0-DAVK.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Massissat d'estructures d'obra de fàbrica de blocs de morter de ciment o d'argila expandida, i armadures per al reforç d'estructura de fàbrica de blocs de morter de ciment, d'argila expandida o de blocs de ceràmica d'argila alleugerida.
S'han considerat les unitats d'obra següents:
- Muntatge i col·locació de l'armadura de reforç de parets de blocs de morter de ciment, d'argila expandida o de blocs ceràmics alleugerits, formada per barres corrugades, col·locades a l'interior dels blocs o en els junts horitzontals
L'execució de la unitat d'obra inclou les operacions següents:
En el cas d'armadures:
- Preparació de la zona de treball
- Tallat i doblegat de l'armadura
- Neteja de les armadures
- Col·locació dels separadors
- Muntatge i col·locació de l'armadura
- Subjecció dels elements que formen l'armadura
ARMADURES:
Les armadures col·locades han de ser netes, sense òxids no adherents, pintures, greixos ni altres substàncies perjudicials.
Els diàmetres, la forma, les dimensions i la disposició de les armadures han de ser les que s'especifiquen a la DT. El nombre de barres no ha de ser mai inferior a l'especificat a la DT.
Les barres no han de tenir defectes superficials ni esquerdes.
El recobriment de protecció, en el seu cas, ha de ser continu i uniforme en tota l'armadura.
No hi ha d'haver més empalmaments dels que consten a la DT o autoritzi la DF.
L'ancoratge pot ser per prolongació recta, ganxo, potes o forquilla.
No s'accepten els ancoratges per prolongació recta o potes, en barres llises de diàmetre > 8 mm.
No s'accepten els ancoratges per ganxos, potes o forquilla, en barres sotmeses a esforços de compressió.
Els ancoratges de les barres de l'armadura al formigó (forma, disposició dins la peça, llargària, etc.), han de complir l'especificat en l'article 7.5.2 del DB-SE-F.
Diàmetre nominal de les barres: >= 6 mm
Distància lliure entre dues armadures solapades: >= 2D, >= 20 mm
Distància lliure entre armadures properes paral·leles: >= mida granulat màxim + 5 mm; >= D màxim; >= 10 mm
Gruix del recobriment de l'armadura: >= 20 mm, >= D
Les toleràncies en el recobriment i la posició de les armadures han de complir l'especificat a l'UNE

36831.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
ARMADURES:
El doblegat de les armadures s'ha de fer a temperatura ambient, mitjançant doblegadores mecàniques i a velocitat constant, amb l'ajut de mandrí, de manera que es garanteixi una curvatura constant en tota la zona.
S'ha d'utilitzar separadors o estreps si és necessari per a garantir el recobriment mínim.
Les armadures s'han de subjectar entre elles, quan sigui necessari, per tal de garantir que mantinguin la seva posició durant la col·locació del morter o formigó.
Ha de tenir la docilitat necessària per tal d'omplir completament els forats en els que s'aboca i sense segregacions.
3.- UNITAT I CRITERI D'AMIDAMENT
ARMADURES:
kg de pes calculat segons les especificacions de la DT, d'acord amb els criteris següents:
- El pes unitari per al càlcul ha de ser el teòric
- Per a poder utilitzar un valor diferent del teòric cal l'acceptació expressa de la DF
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

## P4 ESTRUCTURES

## P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

## P4E2- FORMIGÓ PER A ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

### P4E2-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P4E2-11WTM.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Massissat d'estructures d'obra de fàbrica de blocs de morter de ciment o d'argila expandida, i armadures per al reforç d'estructura de fàbrica de blocs de morter de ciment, d'argila expandida o de blocs de ceràmica d'argila alleugerida.
S'han considerat les unitats d'obra següents:

- Formigonament de la fabrica de blocs, amb formigó de central o elaborat a l'obra i col·locat manualment.
L'execució de la unitat d'obra inclou les operacions següents:
En el cas de formigonament:
- Preparació de la zona de treball
- Humectació de l'encofrat
- Abocada del formigó
- Compactació del formigó mitjançant vibratge
- Cura del formigó
- Protecció de la paret de qualsevol acció mecànica no prevista en càlcul
FORMIGONAMENT:
El formigó col·locat no ha de tenir disgregacions o buits a la massa.
Després del formigonament les armadures han de mantenir la posició prevista a la DT.
En compactar el formigó han de quedar plens tots els forats.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
FORMIGONAMENT:
La temperatura per a formigonar ha d'estar entre 5°C i 40°C. El formigonament s'ha de suspendre quan es prevegi que durant les 48 h següents la temperatura pot ser inferior a 0°C. Fora d'aquests límits, el formigonament requereix precaucions explícites i l'autorització de la DF En aquest cas, s'han de fer provetes amb les mateixes condicions de l'obra, per a poder verificar la resistència realment assolida.
La temperatura dels elements on s'aboca el formigó ha de ser superior als 0°C.
El formigó s'ha de posar a l'obra abans que comenci l'adormiment, i a una temperatura >= 5°C.
La zona que s'ha de formigonar, ha d'estar neta, sense restes de morter o runa.
En el moment de l'abocada la fàbrica ha de tenir la resistència necessària per tal de suportar la pressió del formigó fresc.
La compactació s'ha de realitzar per vibratge. El gruix màxim de la tongada depèn del vibrador utilitzat. S'ha de vibrar fins que s'aconsegueixi una massa compacta i sense que es produeixin disgregacions.
S'ha d'abocar en els forats o en la canal formada per les peces.
3.- UNITAT I CRITERI D'AMIDAMENT
FORMIGONAMENT:
m3 de volum amidat segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

## P4 ESTRUCTURES

## P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

## P4E4- PARET ESTRUCTURAL D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT, ARMADA

**P4E4-1**

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P4E4-13PX8,P4E4-13PX1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Execució de parets estructurals portants o de travament, formades amb blocs de morter de ciment o d'argila expandida premoldejats, foradats o massissos, col·locats amb morter de ciment, morter mixt o morter de ciment blanc i sorra de marbre, per a quedar vist o per a revestir. Inclou la col·locació de l'armadura de reforç amb barrers corrugades d'acer i el massissat amb formigó de traves i brancals.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de les parets
- Col·locat i aplomat de les mires de referència a les cantonades
- Marcat de les filades a les mires i estesa dels fils
- Col·locació de plomades en arestes i voladissos
- Col·locació de blocs humitejant la superfície de contacte amb el morter
- Col·locació de l'armadura de reforç
- Massissat de la paret amb formigó
- Repàs dels junts i neteja del parament
- Protecció de l'estabilitat del mur en front a les accions horitzontals
- Protecció de l'obra executada de la pluja, les gelades i les temperatures elevades
- Protecció de l'obra de fàbrica dels cops, pelades i de les esquitxades de morter
CONDICIONS GENERALS:
La paret ha de ser estable, resistent i ha d'estar aplomada.
En l'execució de l'element s'han de complir les prescripcions establertes en l'article 3 de la norma DB-SE-F, en especial les que fan referència a la durabilitat dels component: peces, morters i armadures, en el seu cas, en funció de les classes d'exposició.
S'ha de dividir la paret en parts iguals de llargària màxima no més gran de 20 m, separades amb junts estructurals.
La paret ha d'estar formada per peces senceres, excepte a les singularitats, on poden haver-hi peces de mig bloc.
Les peces han d'estar col·locades a trencajunts i les filades han de ser horitzontals.
Per a la realització de totes les singularitats, els junts han de coincidir amb el modulat general.
Els junts han d'estar plens i enrasats, si la DF no fixa cap altra condició.
Les obertures han de portar una llinda resistent.
El coronament d'ampits s'ha de fer amb peces llinda plenes de formigó i armades.
Els brancals i les peces que formen els junts de control han de ser senceres, plenes de formigó i armades, formant un pilar del terra al sostre.
Si l'acord amb d'altres parets és articulat, la unió s'ha de fer per mitjà d'elements auxiliars, d'acord amb els criteris fixats per la DF.
El recolzament del sostre a la paret ha de ser suficient per a transmetre-li tots els esforços i en qualsevol cas ha de ser com a mínim 65 mm.
Ha d'haver-hi els junts de dilatació necessaris per tal de permetre els moviments de l'element sense que aquest quedi afectat en les seves prestacions. La forma, disposició i dimensions dels junts han de complir l'especificat a la DT.
Gruix dels junts:
- Morter ordinari o lleuger (UNE-EN 998-2): 8-15 mm
- Morter de junt prim (UNE-EN 998-2): 1- 3 mm
Cavalcament de la peça en una filada: >= 0,4 x gruix de la peça, >= 40 mm
Massissat del junt vertical:
- Alçària de morter: Gruix de la peça
- Fondària del morter: >= 0,4 x través de la peça
Recolzament de càrregues puntuals: >= 100 mm
Toleràncies d'execució:
L'element executat ha de complir les toleràncies definides a la DT o en el seu defecte, les següents:
- Replanteig d'eixos parcials: ± 10 mm
- Replanteig d'eixos extrems: ± 20 mm

- Distància entre obertures: ± 20 mm
- Alçària: ± 15 mm/3 m, ± 25 mm/total
- Horitzontalitat de les filades: ± 2 mm/m; ± 15 mm/total
- Gruix dels junts: ± 2 mm
- Aplomat en una planta: ± 20 mm
- Aplomat total: ± 50 mm
- Axialitat: ± 20 mm
- Planor dels paraments en 1 m: ± 5 mm
- Planor dels paraments en 10 m: ± 20 mm
- Gruix:
- Fàbrica al llarg o través: + 5%
- Altres fàbriques: ± 25 mm

ARMADURES:
Les armadures col·locades han de ser netes, sense òxids no adherents, pintures, greixos ni altres substàncies perjudicials.
La posició de les armadures ha de permetre un recobriment mínim de 2 cm.
Els diàmetres, la forma, les dimensions i la disposició de les armadures han de ser les que s'especifiquen a la DT. El nombre de barres no ha de ser mai inferior a l'especificat a la DT.
Les barres no han de tenir defectes superficials ni esquerdes.
No hi ha d'haver més empalmaments dels que consten a la DT o autoritzi la DF.
Els empalmaments es poden realitzar per solapa o per soldadura.
Per a realitzar un altre tipus d'empalmament es requerirà disposar d'assaigs que demostrin que garanteixen de forma permanent una resistència a la ruptura no inferior a la de la menor de les dues barres que s'uneixen i que el moviment relatiu entre elles no sigui superior a 0,1 mm.
Les toleràncies en el recobriment i la posició de les armadures han de complir l'especificat a l'UNE 36831.

FORMIGONAMENT:
Després del formigonament les armadures han de mantenir la posició prevista a la DT.
No hi ha d'haver disgregacions ni buits en la massa del formigó, un cop col·locat.
En compactar el formigó han de quedar plens tots els forats.
Temperatura del formigó en el moment de l'abocada: >= 5°C
Temperatura dels elements on es fa l'abocada: >= 0°C

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CONDICIONS GENERALS:
S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C i sense pluja. Fora d'aquests límits, s'ha de revisar l'obra executada les 48 h abans i s'han d'enderrocar les parts afectades.
Amb vent superior a 50 km/h s'han de suspendre els treballs i s'han d'assegurar les parts que s'han fet.
L'obra s'ha d'aixecar, si és possible, per filades senceres.
S'ha d'humitejar la zona del junt del bloc per col·locar. No s'ha d'humitejar si el bloc conté additiu hidrofugant.
Les peces que han de reblir-se de formigó han de tenir la humitat necessària abans de l'abocada, per tal de no absorbir l'aigua del formigó. Si el bloc conté additiu hidrofugant, ha d'estar sec.
El formigó de brancals, de junts de control i d'acords de parets, s'ha d'abocar cada 5 filades, com a màxim, i ha de quedar compactat i sense buits dins de les peces.
Cal protegir l'obra executada de les accions físiques o climàtiques fins que hagi assolit la resistència suficient.
Quan s'interromp l'execució, cal protegir el coronament dels murs per tal d'evitar l'acció de l'aigua de pluja sobre els materials.
Durant l'adormiment s'ha de mantenir l'humitat de l'element, principalment en condicions climàtiques desfavorables (temperatura alta, vent fort, etc.).
Cal estintolar provisionalment els elements que queden temporalment inestables, sotmesos a les accions del vent, de l'execució de l'obra o d'altres.

ARMADURES:
El doblegat de les armadures s'ha de fer a temperatura ambient, mitjançant doblegadores mecàniques i a velocitat constant, amb l'ajut de mandrí, de manera que es garanteixi una curvatura constant en tota la zona.

FORMIGONAMENT:
La compactació s'ha de realitzar per vibratge. El gruix màxim de la tongada depèn del vibrador utilitzat. S'ha de vibrar fins que s'aconsegueixi una massa compacta i sense que es produeixin disgregacions.
El formigó s'ha de col·locar a l'obra abans que comenci a adormir-se.
S'ha d'abocar en els forats o en la canal formada per les peces.

3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT, amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 2 m2: No es dedueixen
- Obertures > 2 m2 i <= 4 m2: Es dedueixen el 50%
- Obertures > 4 m2: Es dedueixen el 100%
Als forats que no es dedueixin, o que es dedueixin parcialment, l'amidament inclou la feina de fer els retorns, com brancals. En cas de deduir-se el 100% del forat cal amidar també aquests paraments.
Aquests criteris inclouen la col·locació dels elements que configuren l'obertura, com és ara bastiments, excepte en el cas de forats de més de 4,00 m2 en què aquesta col·locació es compta a part.
Inclouen l'execució de tots els treballs necessaris per a resoldre l'obertura, pel què fa a brancals i ampit, i s'utilitzaran, si cal, materials diferents dels que normalment conformen la unitat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Sense caràcter limitatiu, els punts de control més destacables són els següents:
- Comprovació del replanteig de la planta i de l'alçat dels tancaments.
- Inspecció abans, durant i després de l'execució de les parets de càrrega de blocs dels següents punts:
- Humitat dels blocs
- Col·locació
- Obertures
- Travat
- Junts de control
- Presa de coordenades i cotes de totes les parets abans d'entrar en càrrega.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual de la unitat acabada.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
En la unitat acabada han de realitzar-se, les comprovacions i probes de servei previstes en projecte i/o ordenades per DF conjuntament amb les exigides per la normativa vigent.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans d'aixecar el mur.
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.
Suspensió dels treballs i correcció de les desviacions observades a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

---

## P4 ESTRUCTURES

## P4E ESTRUCTURES D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

## P4E5- PARET ESTRUCTURAL D'OBRA DE FÀBRICA DE BLOCS DE MORTER DE CIMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P4E5-DJMP,P4E5-DJMQ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Execució de parets estructurals portants o de travament, formades amb blocs de morter de ciment o d'argila expandida premoldejats, foradats o massissos, col·locats amb morter de ciment, morter mixt o morter de ciment blanc i sorra de marbre, per a quedar vist o per a revestir.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de les parets
- Col·locat i aplomat de les mires de referència a les cantonades
- Marcat de les filades a les mires i estesa dels fils
- Col·locació de plomades en arestes i voladissos
- Col·locació de blocs humitejant la superfície de contacte amb el morter
- Repàs dels junts i neteja del parament
- Protecció de l'estabilitat del mur en front a les accions horitzontals
- Protecció de l'obra executada de la pluja, les gelades i les temperatures elevades
- Protecció de l'obra de fàbrica dels cops, pelades i de les esquitxades de morter
CONDICIONS GENERALS:
La paret ha de ser estable, resistent i ha d'estar aplomada.
En l'execució de l'element s'han de complir les prescripcions establertes en l'article 3 de la norma DB-SE-F, en especial les que fan referència a la durabilitat dels component: peces, morters i armadures, en el seu cas, en funció de les classes d'exposició.
Les filades han de ser horitzontals.
Les peces han d'estar col·locades a trencajunt.
Els junts han d'estar plens de morter.
Per a la realització de totes les singularitats, els junts han de coincidir amb el modulat general.
La paret ha d'estar travada en els acords amb altres parets.
En les cantonades i trobades amb d'altres parets, el cavalcament de les peces no ha de ser més petit que el través de la peça.
Si l'acord amb d'altres parets és articulat, la unió s'ha de fer per mitjà d'elements auxiliars, d'acord amb els criteris fixats per la DF.
Les obertures han de portar una llinda resistent.
El coronament d'ampits s'ha de fer amb peces llinda plenes de formigó i armades.
Els brancals i les peces que formen els junts de control han de ser senceres, plenes de formigó i armades, formant un pilar del terra al sostre.
El recolzament del sostre a la paret ha de ser suficient per a transmetre-li tots els esforços i en qualsevol cas ha de ser com a mínim 65 mm.
Ha d'haver-hi els junts de dilatació necessaris per tal de permetre els moviments de l'element sense que aquest quedi afectat en les seves prestacions. La forma, disposició i dimensions dels junts han de complir l'especificat a la DT.
Les regates, en el seu cas, han de complir l'especificat en el seu plec de condicions.
En murs de gruix < 200 mm, el reenfonsat dels junts, en el seu cas, ha de tenir una fondària <= 5 mm.
Gruix dels junts:
- Morter ordinari o lleuger (UNE-EN 998-2): 8-15 mm
- Morter de junt prim (UNE-EN 998-2): 1- 3 mm
Cavalcament de la peça en una filada: >= 0,4 x gruix de la peça, >= 40 mm
Massissat del junt vertical:
- Alçària de morter: Gruix de la peça
- Fondària del morter: >= 0,4 x través de la peça
Recolzament de càrregues puntuals: >= 100 mm
Toleràncies d'execució:

L'element executat ha de complir les toleràncies definides a la DT o en el seu defecte, les següents:
- Replanteig d'eixos parcials: ± 10 mm
- Replanteig d'eixos extrems: ± 20 mm
- Distància entre obertures: ± 20 mm
- Alçària: ± 15 mm/3 m, ± 25 mm/total
- Horitzontalitat de les filades: ± 2 mm/m; ± 15 mm/total
- Gruix dels junts: ± 2 mm
- Aplomat en una planta: ± 20 mm
- Aplomat total: ± 50 mm
- Axialitat: ± 20 mm
- Planor dels paraments en 1 m: ± 5 mm
- Planor dels paraments en 10 m: ± 20 mm
- Gruix:
- Fàbrica al llarg o través: + 5%
- Altres fàbriques: ± 25 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C i sense pluja. Fora d'aquests límits, s'ha de revisar l'obra executada les 48 h abans i s'han d'enderrocar les parts afectades.

Amb vent superior a 50 km/h s'han de suspendre els treballs i s'han d'assegurar les parts que s'han fet.

L'obra s'ha d'aixecar, si és possible, per filades senceres.

S'ha d'humitejar la zona del junt del bloc per col·locar. No s'ha d'humitejar si el bloc conté additiu hidrofugant.

Les peces que han de reblir-se de formigó han de tenir la humitat necessària abans de l'abocada, per tal de no absorbir l'aigua del formigó. Si el bloc conté additiu hidrofugant, ha d'estar sec.

Les peces s'han de col·locar refregant-les sobre un llit de morter, sempre que ho permeti la dimensió de la peça, fins que el morter sobresurti pels junts horitzontal i vertical.

No es poden moure les peces una vegada col·locades. Per corregir la posició s'ha de treure la peça i el morter i tornar-la a col·locar.

El formigó de brancals, de junts de control i d'acords de parets, s'ha d'abocar per tongades, i ha de quedar compactat i sense buits dins de les peces.

En el moment de l'abocada la fàbrica ha de tenir la resistència necessària per tal de suportar la pressió del formigó fresc.

Cal protegir l'obra executada de les accions físiques o climàtiques fins que hagi assolit la resistència suficient.

Quan s'interromp l'execució, cal protegir el coronament dels murs per tal d'evitar l'acció de l'aigua de pluja sobre els materials.

Durant l'adormiment s'ha de mantenir l'humitat de l'element, principalment en condicions climàtiques desfavorables (temperatura alta, vent fort, etc.).

Cal estintolar provisionalment els elements que queden temporalment inestables, sotmesos a les accions del vent, de l'execució de l'obra o d'altres.

3.- UNITAT I CRITERI D'AMIDAMENT

m2 de superfície amidada segons les especificacions de la DT, amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 2 m2: No es dedueixen
- Obertures > 2 m2 i <= 4 m2: Es dedueixen el 50%
- Obertures > 4 m2: Es dedueixen el 100%

Als forats que no es dedueixin, o que es dedueixin parcialment, l'amidament inclou la feina de fer els retorns, com brancals. En cas de deduir-se el 100% del forat cal amidar també aquests paraments.

Aquests criteris inclouen la col·locació dels elements que configuren l'obertura, com és ara bastiments, excepte en el cas de forats de més de 4,00 m2 en què aquesta col·locació es compta a part.

Inclouen l'execució de tots els treballs necessaris per a resoldre l'obertura, pel què fa a brancals i ampit, i s'utilitzaran, si cal, materials diferents dels que normalment conformen la unitat.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
- Comprovació del replanteig de la planta i de l'alçat dels tancaments.
- Inspecció abans, durant i després de l'execució de les parets de càrrega de blocs dels següents punts:
- Humitat dels blocs

- Col·locació
- Obertures
- Travat
- Junts de control
- Presa de coordenades i cotes de totes les parets abans d'entrar en càrrega.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual de la unitat acabada.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
En la unitat acabada han de realitzar-se, les comprovacions i probes de servei previstes en projecte i/o ordenades per DF conjuntament amb les exigides per la normativa vigent.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans d'aixecar el mur.
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.
Suspensió dels treballs i correcció de les desviacions observades a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

## P5 COBERTES

### P5Z ELEMENTS ESPECIALS PER A COBERTES

### P5Z1 FORMACIÓ DE PENDENTS

### P5Z15- FORMACIÓ DE PENDENTS AMB FORMIGÓ DE CIMENT PÒRTLAND

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P5Z15-4Z2W,P5Z15-4Z2Y.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de pendents per a suport d'acabat de coberta.
S'han considerat els materials següents:
- Formigó o morter de 5 a 40 cm de gruix mitjà

L'execució de la unitat d'obra inclou les operacions següents:
Massissat o formació de pendents amb formigó o morter amb granulats lleugers:
- Neteja i preparació de la superfície de suport
- Replanteig dels pendents
- Abocat del material i reglejat de la superfície
- Execució de l'acabat, en el seu cas
- Curat i protecció del material
CONDICIONS GENERALS:
Ha de tenir una cohesió i estabilitat suficients davant les sol·licitacions mecàniques i tèrmiques i la seva constitució ha de ser l'adequada per tal de rebre la resta de components de la coberta.
El pendent ha de ser l'indicat a la Documentació Tècnica, o a manca d'aquesta, l'indicat per la DF.
El pendent ha de ser l'adequat per conduir l'aigua cap els elements d'evacuació.
Toleràncies d'execució:
- Nivells: ± 10 mm
- Pendents: ± 0,5%
- Planor: ± 10 mm/2 m
MASSISSAT O FORMACIÓ DE PENDENTS AMB FORMIGÓ O MORTER DE GRANULATS LLEUGERS:
La superfície d'acabat ha de ser llisa i plana.
S'han de fer juntsde dilatació i de retracció. Aquests juntshan de quedar plens d'un material elàstic, o bé, buits.
L'acord de la capa de pendents amb els paraments i elements verticals ha de ser en mitjacanya.
Toleràncies d'execució:
- Alineació del junt de dilatació: ± 5 mm/m, <= 20 mm/total
FORMACIÓ DE PENDENTS AMB FORMIGÓ, MORTER DE GRANULATS LLEUGERS O GRANULATS LLEUGERS:
Gruix màxim: <= 50 cm
Gruix mínim: >= 5 cm
Distància entre mestres: <= 2 m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Amb vent superior a 50 km/h s'han de suspendre els treballs i s'han d'assegurar les parts que s'han fet.
FORMACIÓ DE PENDENTS AMB FORMIGÓ, MORTER O GRANULATS LLEUGERS:
Els aiguafons i les esquenes d'ase han d'estar fets amb reglades d'obra ceràmica.
L'espai entre les reglades s'ha d'omplir completament amb el material i reglejar la superfície tot recolzant els regles en les reglades; els forats que restin s'han d'omplir manualment.
MASSISSAT O FORMACIÓ DE PENDENTS AMB FORMIGÓ O MORTER DE GRANULATS LLEUGERS:
S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C i sense pluja. Fora d'aquests límits s'ha de revisar l'obra executada 48 h abans i s'han d'enderrocar i refer les parts afectades.
La pasta de ciment ha de constituir una mescla homogènia que s'ha d'utilitzar abans que comenci l'adormiment.
Si el suport és absorbent s'ha d'humitejar abans d'abocar el material.
Durant l'aplicació del formigó o morter s'han de protegir els elements de desguàs (canalons, etc.).
Durant l'adormiment s'ha de mantenir humida la superfície del morter. Aquest procés ha de durar com a mínim:
- 15 dies en temps calorós i sec
- 7 dies en temps humit
No es pot trepitjar la superfície acabada fins al cap de 48 h de l'abocament.
3.- UNITAT I CRITERI D'AMIDAMENT
MASSISSAT AMB FORMIGÓ O FORMACIÓ DE PENDENTS:
m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Neteja i preparació de la superfície de suport
- Replanteig dels pendents
- Abocat del material i reglejat de la superfície
- Execució de l'acabat, en el seu cas

- Curat i protecció del material
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual de la unitat acabada i control de les condicions geomètriques d'acabat.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF i el CODI ESTRUCTURAL.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció de les irregularitats observades a càrrec del contractista.

---

## P5 COBERTES

## P5Z ELEMENTS ESPECIALS PER A COBERTES

## P5ZH BONERES I REIXES DE DESGUÀS

## P5ZH0- BONERA PER A COBERTES, COL·LOCADA

## P5ZH0-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P5ZH0-12PH4.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Subministrament i col·locació d'elements per a la conducció i evacuació de l'aigua de la coberta.
S'han considerat els tipus següents:
- Bonera de PVC col·locada amb fixacions mecàniques
- Bonera de goma termoplàstica adherida sobre làmina bituminosa en calent.
- Bonera de fosa col·locada amb morter.
L'execució de la unitat d'obra inclou les operacions següents:
Elements col·locats amb fixacions mecàniques o adherits:
- Replanteig de l'element
- Col·locació de l'element
- Execució de les unions
Elements col·locats amb morter:

- Neteja i preparació del suport
- Replanteig de l'element
- Col·locació de l'element
- Repàs dels junts i neteja final

CONDICIONS GENERALS:

El conjunt de l'element col·locat ha de ser estanc.

El conjunt de l'element col·locat ha de ser estable.

BONERA:

El segellat estanc entre el impermeabilitzant i la bonera ha d'estar fet mitjançant pressió mecànica tipus brida de la tapa de la bonera sobre el cos de la mateixa. El impermeabilitzant ha de quedar protegit amb una brida de material plàstic.

La vora superior de la bonera ha de quedar per sota del nivell d'escorrentia de la coberta.

La tapa i els seus accessoris han de quedar correctament colocats i subjectats a la bonera, amb els procediments indicats pel fabricant.

En la bonera de goma termoplàstica, la làmina impermeable només ha de cavalcar sobre la plataforma de base de la bonera, i no ha de penetrar dins del tub d'aquesta.

La bonera de fosa col·locada amb morter, ha de quedar enrasada amb el paviment del terrat.

La base de la bonera de PVC, ha de quedar fixada al suport amb cargols i tacs d'expansió.

La bonera de PVC o goma termoplàstica s'ha de fixar al baixant amb soldadura química.

Distància a paraments verticals: >= 50 cm

Distància de la bonera al baixant: <= 5 m

Diàmetre: > 1,5 diàmetre del baixant al que desaigua

Toleràncies d'execució:

- Nivell entre la bonera de fosa i el paviment: ± 5 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CONDICIONS GENERALS:

No s'ha de treballar amb pluja intensa, neu o vent superior a 50 km/h. En aquests supòsits, s'ha d'assegurar l'estabilitat de l'equip.

Si l'alçada de caiguda es superior a 2 m s'ha de treballar amb cinturó de seguretat.

ELEMENTS DE GOMA TERMOPLÀSTICA:

S'ha de treballar a una temperatura superior a - 5°C i sense pluja.

La bonera s'ha de soldar sobre un reforç de làmina bituminosa, que ha d'estar adherida a la solera, escalfant-la prèviament en la zona corresponent al perímetre de la bonera, i fixant-la a pressió sobre la làmina.

ELEMENT COL·LOCAT AMB MORTER:

S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C.

El morter ha de formar una mescla homogènia que s'ha d'utilitzar abans d'iniciar l'adormiment.

S'ha d'aplicar sobre superfícies netes.

Si el suport és absorbent s'ha d'humitejar abans d'estendre el morter.

3.- UNITAT I CRITERI D'AMIDAMENT

BONERA O PROLONGACIÓ RECTA:

Unitat mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:

La instal·lació d'evacuació d'aigües residuals s'executarà segons prescripcions de projecte, legislació aplicable i a les instruccions de la DF.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:

Es realitzaran les proves d'estanquitat total i parcial. Aquestes proves es realitzaran amb aigua, amb aire o amb fum i es seguiran les directrius i especificacions de cada assaig segons la normativa vigent.

Es verificarà sistema de manteniment i conservació.

CRITERIS DE PRESA DE MOSTRES:

S'ha de comprovar la totalitat de la instal·lació.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.

En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

## P5 COBERTES

## P5Z ELEMENTS ESPECIALS PER A COBERTES

## P5ZH BONERES I REIXES DE DESGUÀS

## P5ZH3- SUBSTITUCIÓ DE BONERA DETERIORADA

## P5ZH3-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P5ZH3-13JIU,P5ZH3-13JIV.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Substitució de bonera deteriorada per bonera adherida sobre làmina bituminosa en calent, amb repicat del paviment de les vores, làmina de betum asfàltic de cavalcament, recrescut de solera amb capa de morter i acabat amb paviment de rajola ceràmica fina.
S'han considerat els tipus de bonera següents:
- Bonera de goma termoplàstica
- Bonera sifònica d'etilè propilè dièn (EPDM)
L'execució de la unitat d'obra inclou les operacions següents:
- Arrancada de bonera, repicat i sanejament del paviment de les vores
- Preparació de la zona de treball
- Enderroc o arrencada de l'element amb els mitjans adients
- Trossejament i apilada de runa
- Càrrega de la runa sobre el camió
- Col·locació de la bonera
- Replanteig de l'element
- Col·locació de l'element
- Execució de les unions
- Reforç puntual de membrana amb làmina bituminosa
- Neteja i preparació del suport
- Aplicació de la imprimació en el seu cas
- Fixació de la làmina
- Recrescut de solera amb capa de protecció de morter
- Neteja i preparació de la superfície del suport
- Abocat del material i reglejat de la superfície
- Execució de l'acabat, en el seu cas
- Cura i protecció del material

- Paviment de rajola ceràmica
- Replanteig de l'especejament
- Col·locació de les peces fixades amb morter sobre el suport
- Rejuntat dels junts
- Neteja del paviment

CONDICIONS GENERALS:
El paviment ha de quedar pla en els trams previstos.
El paviment ha de quedar separat dels paraments i dels elements verticals.
Les peces han de quedar col·locades deixant junts entre elles. Aquests han de quedar plens de morter.
Si es fa amb dos gruixos de rajola, aquests han d'anar col·locats a trencajunt. Els junts de la capa superior han de quedar plens de morter.
Cal preveure junts de dilatació, que s'han de segellar amb silicona.
Separació entre peces: 0,2 - 0,5 cm
Junts perimetrals: >= 1 cm
Distància entre els junts de dilatació: <= 5 m
Amplària dels junts de dilatació: >= 1 cm
Toleràncies d'execució:
- Planor: ± 5 mm/2 m
- Nivells: ± 10 mm/total
- Alineació de les filades: <= 5 mm/2 m

El conjunt de la bonera ha de ser estanc.
La tapa i els seus accessoris han de quedar correctament colocats i subjectats a la bonera, amb els procediments indicats pel fabricant.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'ha de treballar amb pluja, neu o vent superior a 50 km/h.
Els treballs s'han de realitzar a una temperatura ambient que oscil·li entre 5°C i 35°C.
La bonera s'ha de soldar sobre un reforç de làmina bituminosa, que ha d'estar adherida a la solera, escalfant-la prèviament en la zona corresponent al perímetre de la bonera, i fixant-la a pressió sobre la làmina.
L'ordre d'execució de les feines ha de ser l'indicat en el primer apartat, on s'enumeren les operacions incloses a la unitat d'obra.
Cadascuna de les operacions que configuren la unitat d'obra ha de complir el seu plec de condicions.
Després d'executar cadascuna de les operacions que configuren la unitat d'obra, i abans de fer una operació que oculti el resultat d'aquesta, s'ha de permetre que la DF verifiqui que es compleix el plec de condicions de l'operació.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* UNE 104402:1996 Sistemas para la impermeabilización de cubiertas con materiales bituminosos y bituminosos modificados.

## P6 TANCAMENTS I DIVISÒRIES

### P61 PARETS I ENVANS D'OBRA DE FÀBRICA

## P612 PARETS DE CERÀMICA

### P6120- CALAIX CERÀMIC PER BAIXANT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P6120-61R0.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Calaix vertical per a recobriment de baixant, amb envà de peces ceràmiques col·locades amb morter.
S'han considerat els acabats següents:
- Arrebossat i enrajolat amb rajola ceràmica col·locada amb morter adhesiu
- Enguixat i pintat amb pintura plàstica
L'execució de la unitat d'obra inclou les operacions següents:
Calaix arrebossat i enrajolat:
- Replanteig de l'envà per a formació de calaix
- Col·locació de les mires en les cantonades i estesa del fil entre mires
- Col·locació de les peces
- Repàs dels junts
- Estesa d'una primera capa d'arrebossat
- Preparació de la malla (retalls, cavalcaments, etc)
- Estesa de la malla sobre el revestiment
- Estesa d'una segona capa d'arrebossat
- Acabat de la superfície
- Col·locació de la protecció d'aresta amb cantonera
- Replanteig de l'especejament de l'enrajolat en el parament
- Col·locació de les peces fixades amb morter sobre el suport
- Rejuntat dels junts
- Neteja del parament
Calaix enguixat i pintat:
- Replanteig de l'envà per a formació de calaix
- Col·locació de les mires en les cantonades i estesa del fil entre mires
- Col·locació de les peces
- Repàs dels junts
- Execució de l'aresta o del racó
- Col·locació de la protecció d'aresta amb cantonera
- Estesa d'una primera capa d'enguixat
- Preparació de la malla (retalls, cavalcaments, etc)
- Estesa de la malla sobre el revestiment
- Estesa d'una segona capa d'enguixat
- Acabat de la superfície
- Aplicació de la capa segelladora
- Aplicació successiva, amb intervals d'assecatge, de les capes de pintura d'acabat
CONDICIONS GENERALS:
El calaix ha d'estar situat al lloc indicat a la DT amb les correccions acceptades expressament per la DF.
Ha de tenir la forma i les dimensions indicades a la DT, amb les correccions acceptades expressament per la DF.
Ha de ser estable i resistent.
Ha de quedar correctament aplomat i anivellat.
CALAIX ARREBOSSAT I ENRAJOLAT:
Si les plaques són de cara vista, en el revestiment acabat no hi ha d'haver peces esquerdades, trencades, escantonades ni tacades.
El color i la textura han de ser uniformes en tota la superfície i el més similar possible al de les parets

confrontants, d'acord amb les especificacions requerides per la DF.
Les peces han de quedar ben adherides al suport i han de formar una superfície amb la planor i l'aplomat previstos.
Els junts del revestiment han de ser rectes.
Els junts entre les peces han d'estar rejuntats amb beurada de ciment blanc i, eventualment, colorants, si la DF no especifica d'altres condicions.
Els junts horitzontals han de coincidir amb els de les parets confrontants, amb les correccions acceptades expressament per la DF.
L'especejament ha de complir les especificacions subjectives requerides per la DF.
Amplària dels junts: 1 mm
Toleràncies d'execució:
- Amplària dels junts: ± 0,5 mm
- Planor: ± 2 mm/2 m
- Paral·lelisme entre els eixos dels junts: ± 1 mm/m
- Horitzontalitat dels junts (amidada sobre els eixos dels junts): ± 2 mm/2 m
- Verticalitat dels junts (amidada sobre els eixos dels junts): ± 2 mm/2 m
CALAIX ENGUIXAT I PINTAT:
En el revestiment no hi ha d'haver fissures, bosses ni d'altres defectes.
Ha de tenir el color, la brillantor i la textura uniformes i el més similar possible al de les parets confrontants, d'acord amb les especificacions requerides per la DF.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
L'ordre d'execució de les feines ha de ser l'indicat en el primer apartat, on s'enumeren les operacions incloses a la unitat d'obra.
Cadascuna de les operacions que configuren la unitat d'obra ha de complir el seu plec de condicions.
Després d'executar cadascuna de les operacions que configuren la unitat d'obra, i abans de fer una operació que oculti el resultat d'aquesta, s'ha de permetre que la DF verifiqui que es compleix el plec de condicions de l'operació.
S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C. Si es sobrepassen aquests límits, s'ha de revisar l'obra executada 48 h abans i s'han d'enderrocar les parts afectades.
L'obra s'ha d'aixecar, si és possible, per filades senceres.
Les peces per col·locar han de tenir la humitat necessària per tal que no absorbeixin ni cedeixin aigua al morter.
Les peces s'han de col·locar refregant-les sobre un llit de morter, sempre que ho permeti la dimensió de la peça, fins que el morter sobresurti pels junts horitzontal i vertical.
Les peces s'han de col·locar a trencajunt i les filades han de ser horitzontals.
L'envà no ha de ser solidari amb els elements estructurals verticals.
Ha d'estar travat en els acords amb altres parets. Sempre que la modulació ho permeti, aquesta travada ha de ser per filades alternatives.
En els acords amb un sostre o amb qualsevol altre element estructural superior, cal que hi hagi un espai de 2 cm entre l'última filada i aquell element. Aquest espai s'ha d'haver reblert amb un material d'elasticitat compatible amb la deformació prevista del sostre, un cop l'estructura hagi adoptat les deformacions previstes, i mai abans de 24 h d'haver fet la paret.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## P6 TANCAMENTS I DIVISÒRIES

## P61 PARETS I ENVANS D'OBRA DE FÀBRICA

## P614 PAREDONS I ENVANS DE CERÀMICA

## P6142- ENVÀ COL·LOCAT AMB MORTER ELABORAT A L'OBRA, AMB GUIX O AMB ADHESIU COLA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P6142-56UV,P6142-57B0.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació d'envà o paredó amb peces ceràmiques per a revestir d'una o dues cares vistes, col·locades amb morter.
S'han considerat els tipus següents:
- Envà o paredó de tancament
- Envà o paredó de tancament passant
- Envà o paredó interior
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Col·locació de les mires en les cantonades i estesa del fil entre mires
- Col·locació de les peces
- Repàs dels junts i neteja del parament
CONDICIONS GENERALS:
Ha de ser estable, pla, aplomat i resistent als impactes horitzontals.
Les peces han d'estar col·locades a trencajunts i les filades han de ser horitzontals.
Les parets deixades vistes han de tenir una coloració uniforme, si la DF no fixa cap altra condició.
Els junts han de ser plens i sense rebaves.
En les parets que hagin de quedar vistes, els junts horitzontals han d'estar matats per la part superior, si la DF no fixa altres condicions.
Les obertures han de portar una llinda resistent.
L'envà o paredó de tancament i no passant, ha d'estar recolzat a sobre d'un element estructural horitzontal a cada planta.
Toleràncies d'execució:
- Replanteig d'eixos:
- Parcials: ± 10 mm
- Extrems: ± 20 mm
- Alçària: ± 15 mm/3 m, ± 25 mm/total
- Aplomat: ± 10 mm/3 m, ± 30 mm/total
- Gruix dels junts: ± 2 mm
- Distància entre l'última filada i el sostre: ± 5 mm
- Planor de les filades:
- Paret vista: ± 5 mm/2 m
- Paret per a revestir: ± 10 mm/2 m
- Horitzontalitat de les filades: ± 15 mm/total
- Paret vista: ± 2 mm/m
- Paret per a revestir: ± 3 mm/m
ENVÀ O PAREDÓ DE TANCAMENT:
No ha de ser solidari amb elements estructurals verticals.
En els acords amb un sostre o amb qualsevol altre element estructural superior, cal que hi hagi un espai de 2 cm entre l'última filada i aquell element. Aquest espai s'ha d'haver reblert amb un material d'elasticitat compatible amb la deformació prevista del sostre, un cop l'estructura hagi adoptat les deformacions previstes, i mai abans de 24 h d'haver fet la paret.

Ha d'estar travat, excepte la paret passant, amb la paret de tancament, en els brancals, les cantonades i els elements no estructurals. Sempre que la modulació ho permeti, aquesta travada ha de ser per filades alternatives.
No hi ha d'haver forats de les peces oberts a l'exterior.
ENVÀ O PAREDÓ DE TANCAMENT PASSANT:
Ha d'estar ancorada a la paret de suport amb connectors que han de complir les especificacions fixades al seu plec de condicions.
Cal que estigui recolzada sobre un element resistent cada dues plantes o a 800 cm d'alçària, com a màxim, si la DF no fixa cap altra condició.
Ha d'estar travat en els acords amb altres parets, paredons, envans i elements no estructurals. Sempre que la modulació ho permeti, aquesta travada ha de ser per filades alternatives.
ENVÀ O PAREDÓ INTERIOR:
No ha de ser solidari amb elements estructurals verticals.
En els acords amb un sostre o amb qualsevol altre element estructural superior, cal que hi hagi un espai de 2 cm entre l'última filada i aquell element. Aquest espai s'ha d'haver reblert amb un material d'elasticitat compatible amb la deformació prevista del sostre, un cop l'estructura hagi adoptat les deformacions previstes, i mai abans de 24 h d'haver fet la paret.
Fondària de les regates:

| Gruix paret (cm) | Fondària regates (cm) |
|---|---|
| 4 | <= 2 |
| 5 | <= 2,5 |
| 6 - 7 | <= 3 |
| 7,5 | <= 3,5 |
| 9 | <= 4 |
| 10 | <= 5 |

Regates :
- Pendent: >= 70°
- A dues cares. Separació (parets per revestir): >= 50 cm
- Separació dels marcs: >= 20 cm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C i sense pluges si la paret és exterior. Si es sobrepassen aquests límits, s'ha de revisar l'obra executada 48 h abans i s'han d'enderrocar les parts afectades.
Si la paret és exterior i el vent superior a 50 km/h, s'han de suspendre els treballs i assegurar les parts que s'han fet.
L'obra s'ha d'aixecar, si és possible, per filades senceres.
Les peces per col·locar han de tenir la humitat necessària per tal que no absorbeixin ni cedeixin aigua al morter.
Les peces s'han de col·locar refregant-les sobre un llit de morter, sempre que ho permeti la dimensió de la peça, fins que el morter sobresurti pels junts horitzontal i vertical.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
PAREDÓ O ENVÀ (EXCEPTE L'ENVÀ PLUVIAL):
Amb deducció del volum corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 2 m2: No es dedueixen
- Obertures > 2 m2 i <= 4 m2: Es dedueixen el 50%
- Obertures > 4 m2: Es dedueixen el 100%

Als forats que no es dedueixin, o que es dedueixin parcialment, l'amidament inclou la feina de fer els retorns, com brancals. En cas de deduir-se el 100% del forat cal amidar també aquests paraments.
Aquests criteris inclouen la col·locació dels elements que configuren l'obertura, com és ara bastiments, excepte en el cas de forats de més de 4,00 m2 en què aquesta col·locació es compta a part.
Inclouen l'execució de tots els treballs necessaris per a resoldre l'obertura, pel què fa a brancals i ampit, i s'utilitzaran, si cal, materials diferents dels que normalment conformen la unitat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad estructural Fábrica DB-SE-F, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
El control de l'execució de les obres es realitzarà d'acord amb les especificacions del projecte, els seus annexes i modificacions autoritzades per la DF i les instruccions del director de l'execució de

l'obra, conforme al indicat en l'article 7.3 de la part I del CTE i demés normativa vigent d'aplicació.
Els punts de control més destacables són els següents:
Es comprovarà que s'han adoptat les mesures necessàries per assegurar la compatibilitat entre els diferents productes, elements i sistemes constructius.
- Comprovació del replanteig de la planta i de l'alçat dels tancaments.
- Inspecció abans, durant i després de l'execució de les parets de càrrega de blocs dels següents punts:
- Col·locació de les mires en les cantonades i estesa del fil entre mires.
- Humitat dels maons.
- Col·locació de les peces.
- Obertures.
- Travat entre diferents parets en juts alternats.
- Regates.
- Presa de coordenades i cotes de totes les parets.
- Repàs dels juts i neteja del parament
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans d'aixecar el mur.
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.
Suspensió dels treballs i correcció de les desviacions observades a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
Inspecció visual de la unitat acabada.
- En el control es seguiran els criteris indicats en l'article 7.4 de la part I del CTE.
- Prova d'estanqueïtat de façana pel mètode de ruixament directe UNE-EN 13051.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.

---

## P6 TANCAMENTS I DIVISÒRIES

## P66 DIVISÒRIES AMB MAMPARES

## P662- MAMPARA DIVISÒRIA DE PLAQUES SINTÈTIQUES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P662-6YAB.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mampares per a formació de cabines sanitàries amb taulers de resines fenòliques (HPL) muntades amb accessoris d'acer inoxidable.
S'han considerat les unitats d'obra següents:
- Mòdul frontal de cabina sanitària composat per una porta i un lateral fix
- Mampara fixa per a divisòria entre cabines sanitàries
La unitat d'obra comprèn les operacions següents:
- Replanteig
- Col·locació dels elements de suport
- Col·locació dels taulers
- Muntatge de les portes i els seus accessoris
- Acabament i neteja
CONDICIONS GENERALS:
El conjunt acabat ha de ser estable.
La superfície d'acabat dels panells ha de ser plana i uniforme, sense defectes en el seu revestiment.
Les fixacions dels perfils s'han de col·locar en els forats previstos.
Toleràncies d'execució:
- Replanteig: ± 20 mm
- Aplomat: ± 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'execució.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat realment col·locada a l'obra segons les especificacions de la DT, i aprovada per la DF.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## P7 IMPERMEABILITZACIONS, AÏLLAMENTS I FORMACIÓ DE JUNTS

## P75 MEMBRANES AMB LÀMINES DE PVC AUTOPROTEGIDES

### P751- MEMBRANA PER A IMPERMEABILITZACIÓ DE PISCINES, DE LÀMINES DE PVC RESISTENTS A LA INTEMPÈRIE

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P751-AETA.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Execució de la impermeabilització amb membranes impermeables de làmines de policlorur de vinil sense armadura o amb armadura de malla de fibra de vidre o polièster.
S'han considerat els tipus de làmines següents:
- Làmina resistent a l'intempèrie
S'han considerat els tipus de col·locació següents:
- Sense adherir
L'execució de la unitat d'obra inclou les operacions següents:
Membrana en piscines:
- Neteja i preparació del suport
- Revestiment de les parets
- Revestiment del fons
- Execució de les unions en les parets i formació dels angles i dels encontres amb elements singulars
- Execució de les unions en el fons i dels encontres amb elements singulars
- Segellat dels juntsCONDICIONS GENERALS:
El conjunt de la membrana ha de cobrir tota la superfície per impermeabilitzar.
Ha de tenir un aspecte superficial pla i regular, amb un mínim d'imperfeccions (bonys, arrugues, etc.).
Ha de ser estanca.
La membrana col·locada no adherida, no ha de quedar adherida al suport, excepte en el perímetre i al voltant de tots els elements que la traspassin. Cal assegurar-se que la membrana que no porta armadura, no es separarà, per efecte de la retracció, dels paraments verticals del perímetre.
Els acords de la membrana amb els paraments verticals han de ser aixamfranats o corbats.
Els cavalcaments han d'anar soldats en tota la seva llargària.
Toleràncies d'execució:
- Cavalcaments: ± 10 mmIMPERMEABILITZACIÓ DE PISCINES:
La unió entre la làmina i els accessoris ha de ser estanca. Aquestes unions s'han de fer mitjançant brides.
Els retalls i soldadures no han de coincidir amb les unions de la làmina amb els accessoris.
La làmina ha de quedar fixada al suport en tot el perímetre.
Els juntsentre làmines han de quedar units per soldadura i segellats.
Cavalcaments entre les làmines: >= 7 cm
Cavalcaments entre les làmines dels paraments i el fons: >= 10 cm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Els treballs s'han de realitzar a una temperatura ambient que oscil·li entre 5°C i 35°C.
Els cavalcaments s'han de fer amb les làmines totalment seques i netes. No s'han d'unir més de 3 làmines en el mateix punt.
El procés d'elaboració de la membrana no ha de modificar les característiques dels seus components.
Les làmines col·locades s'han de protegir del pas de persones, equips o materials, les no protegides s'han de protegir, també, del sol.
IMPERMEABILITZACIÓ DE PISCINES:
La superfície del suport ha de ser llisa, uniforme, neta, sense parts engrunades o irregularitats que puguin produir el trencament de la làmina.
El fons de la piscina ha de tenir un pendent de l'1 al 2% cap al desgüàs, per tal d'evacuar l'aigua condensada.
Les unions es realitzaran per soldadura d'aire calent. Queda prohibit la soldadura per dissolvent, ja que pot malmetre el vernís protector de la làmina.
Les làmines s'han de desenrotllar sobre el suport, sense que es produeixin tensions.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
En aquest criteri de deducció de forats s'inclou l'acabament específic dels acords amb els paraments o elements verticals que conformen el forat, utilitzant, si cal, materials diferents d'aquells que normalment conformen la unitat

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE 104416:1992 Plásticos. Sistemas de impermeabilización de cubiertas con membranas impermeabilizantes formadas con láminas de poli (cloruro de vinilo) plastificado.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual del material abans de la seva col·locació, rebutjant les peces malmeses
- Neteja i repàs del suport.
- Control del procediment d'execució, amb especial atenció als cavalcaments entre peces i a l'execució dels elements singulars, tals com les vores, encontres, desguassos i juntS.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
Inspecció visual de la unitat acabada.
- Proves d'estanquitat segons UNE 104400
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

---

## P7 IMPERMEABILITZACIONS, AÏLLAMENTS I FORMACIÓ DE JUNTS

## P77 MEMBRANES AMB LÀMINES DE POLIETILÈ, POLIPROPILÈ I POLIOLEFINES

### P774- MEMBRANA LÀMINA DE POLIOLEFINES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P774-6Q8A.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Impermeabilització amb membrana de làmines de polietilè i poliolefines.
S'han contemplat les partides d'obra següents:
- Impermeabilització amb membrana de làmines de poliolefines.
L'execució de la unitat d'obra inclou les operacions següents:

- Neteja i preparació del suport
- Col·locació de la làmina
- Resolució dels elements singulars (angles, juntsacords, etc.)

CONDICIONS GENERALS:

El conjunt de la membrana ha de cobrir tota la superfície per impermeabilitzar.
Ha de ser estanca.
Els acords de la membrana amb els diferents paraments superficials no han de donar angles.
En la col·locació sobre el terreny, la membrana ha de quedar fixada en els punts que calguin per a evitar desplaçaments (coronació, base del talús, zones de forta pendent, etc.).
Les unions seran soldades i s'efectuaran in situ amb extrussionadors automàtics.
El material de la soldadura serà de la mateixa base de les membranes, de manera que les soldadures siguin homogènies.
Solapament de les unions: >= 15 cm
Cavalcament de la membrana sobre la paret vertical externa de la rasa: >= 15 cm
Toleràncies d'execució:
- Planor: ± 50 mm/m

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

No s'ha de treballar amb pluja, grau d'humitat elevada (boira, rosada, etc.) o amb vent fort. En aquest últim cas s'hauran de llastar les membranes ja col·locades per tal d'evitar que el vent les desplaci.
Característiques del suport:
- La superfície no ha de tenir pedres, bonys o deformacions que puguin malmetre les membranes.
- Rugositats: <= 2 mm

Les làmines s'han de desenrrotllar a una temperatura ambient <= 36°C.
Un cop estesa la làmina, per treballar s'han de pendre les precaucions necessàries per no deteriorar-la.
Abans de desenrrotllar la làmina cal comprovar que no tingui defectes que puguin perjudicar el seu funcionament correcte (forats, estries, rugositats, etc.).

3.- UNITAT I CRITERI D'AMIDAMENT

m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%

En aquest criteri de deducció de forats s'inclou l'acabament específic dels acords amb els paraments o elements verticals que conformen el forat, utilitzant, si cal, materials diferents d'aquells que normalment conformen la unitat

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

* UNE 104421:1995 Materiales sintéticos. Puesta en obra. Sistemas de impermeabilización de embalses para riego o reserva de agua con geomembranas impermeabilizantes formadas por láminas de polietileno de alta densidad (P.E.A.D.) o láminas de polietileno de alta densidad coextruido con otros grados de polietileno.

---

## P7 IMPERMEABILITZACIONS, AÏLLAMENTS I FORMACIÓ DE JUNTS

## P78 IMPERMEABILITZACIÓ AMB PRODUCTES AMORFS

## P782- IMPERMEABILITZACIÓ DE PARAMENT AMB MORTERS ESPECIALS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P782-6131.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Operacions realitzades amb la finalitat de no permetre la penetració d'aigua a través dels elements constructius, mitjançant morters especials.
S'han considerat les unitats d'obra següents:
- Revestiment de parament amb morter impermeabilitzant
L'execució de la unitat d'obra inclou les operacions següents:
Impermeabilització de parament:
- Neteja i preparació de la superfície de suport
- Aplicació del revestiment
- Acabat de la superfície
- Cura del morter
- Repassos i neteja final
CONDICIONS GENERALS:
El recobriment aplicat ha de formar una capa uniforme i contínua, que ha de cobrir tota la superfície a impermeabilitzar.
Ha de quedar ben adherit al suport.
El gruix de la capa no ha de ser inferior en cap cas al previst a la DT.
En l'element acabat no hi ha d'haver pols, fissures, forats o d'altres defectes.
IMPERMEABILITZACIÓ DE PARAMENT:
S'han de respectar els juntsestructurals.
Ha de tenir una textura uniforme i sense defectes.
Les cantonades i els racons han de quedar en forma de mitja canya de 5x5 cm.
Cavalcament de les capes en els acords: >= 25 cm
Toleràncies d'execució:
- Planor: ± 10 mm/m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la temperatura sobrepassi els límits establerts pel fabricant, la velocitat del vent sigui superior a 50 km/h o plogui. Si, un cop executat el treball, es donen aquestes condicions, s'ha de revisar la feina feta i s'han de refer les parts afectades.
Els parament d'aplicació ha d'estar endurit, ha de ser net, no ha de tenir materials estranys que dificultin l'adherència (sals, olis, pols, brutícia, restes d'un revestiment anterior, etc.).
La capa no s'estendrà fins que s'hagis comprovat que la superfícies de suport té les condicions de qualitat i forma previstes, amb les toleràncies establertes. Si la superfícies de suport presenta defectes que excedeixen dels tolerables, aquests es corregiran abans d'executar la partida d'obra.
Si el suport es massa llis o poc absorbent, s'ha de fer un tractament previ per tal de deixar-lo més porós amb la finalitat de garantir l'adherència del morter.
Si el suport és absorbent s'ha d'humitejar abans d'estendre el morter.
La base tindrà l'humitat suficient abans de començar a aplicar el producte.
El sistema d'aplicació del producte s'ha d'escollir d'acord amb les instruccions del fabricant i l'autorització de la DF.
La capa de cobertura s'executarà en tantes mans com ho requereixi el producte que s'utilitza.
Entre l'aplicació d'una capa i la següent, es respectarà el temps de curat estipulat pel fabricant.
Les aigües superficials que poden afectar els treballs s'han de desviar i conduir a fora de l'àrea a impermeabilitzar.
S'han d'evitar els treballs que desprenguin pols o partícules prop de l'àrea a tractar, abans, durant i després de l'aplicació.
Queden prohibits els treballs sobre la superfícies tractada fins el curat total del morter.
No s'admet la utilització de procediments artificials d'assecatge.
IMPERMEABILITZACIÓ DE PARAMENT:
El morter ha de formar una mescla homogènia que s'ha d'utilitzar abans d'iniciar l'adormiment.
L'abocament i aplicació del morter, es faran evitant segregacions dels components i la contaminació de la mescla.

Durant el curat del morter es controlarà la humitat del mateix per evitar una dessecació excessivament ràpida. S'admet l'ús de làmines o productes de curat sempre i quan l'ús d'aquests productes tingui la conformitat del fabricant del morter.
S'han d'evitar cops i vibracions que puguin afectar el material durant l'adormiment.
IMPERMEABILITZACIÓ AMB MORTER DE PENETRACIÓ CAPIL.LAR:
El suport no ha de contenir substàncies que impedeixin la penetració dels cristalls que es formen (resines sintètiques, hidrofugants, filmògens, etc.).
En la col·locació en pols sobre llosa de formigó, s'ha d'aplicar una primera capa sobre el formigó de neteja, amb l'armadura ja col·locada, abans de l'abocada del formigó i una segona capa sobre el formigó fresc.
3.- UNITAT I CRITERI D'AMIDAMENT
IMPERMEABILITZACIÓ DE PARAMENT:
m2 de superfície realment executada, mesurada d'acord amb les especificacions de la DT
Aquests criteris inclouen l'acabat específic de les singularitats de la construcció.
No s'inclouen en aquest criteri les reparacions de les irregularitats superiors a les tolerables.
No s'inclou dins de la unitat d'obra l'abonament dels treballs de preparació de la superfície.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
IMPERMEABILITZACIÓ DE PARAMENT:
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P7 IMPERMEABILITZACIONS, AÏLLAMENTS I FORMACIÓ DE JUNTS

## P7D AÏLLAMENTS CONTRA EL FOC

### P7DC- SEGELLAT DE TUBS COMBUSTIBLES AMB ABRAÇADORA PER A L'AÏLLAMENT CONTRA EL FOC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P7DC-FIKA,P7DC-FIKB.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i execució d'elements diversos per a complementar l'aïllament contra el foc.
S'han considerat els tipus següents:
- Col·locació d'abraçadores
L'execució de la unitat d'obra inclou les operacions següents:
Col·locació d'abraçadores:
- Neteja i preparació del suport
- Col·locació de l'abraçadora
SEGELLAT DE TUB AMB ABRAÇADORES:

L'abraçadora ha de quedar sòlidament fixada al suport i ha d'ajustar-se completament al tub.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
SEGELLAT DE TUB AMB ABRAÇADORES:
No hi han condicions específiques del procés d'execució.
3.- UNITAT I CRITERI D'AMIDAMENT
SEGELLAT DE TUB AMB ABRAÇADORES:
Unitat d'abraçadora realment col·locada a l'obra segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Seguridad en caso de incendio DB-SI, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P7 IMPERMEABILITZACIONS, AÏLLAMENTS I FORMACIÓ DE JUNTS

## P7J JUNTS, SEGELLATS I RECONSTRUCCIÓ DE VOLUMS

### P7J8- REBLERT DE JUNT AMB CORDÓ CEL·LULAR

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P7J8-DPF1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Reblert de juntS amb materials plàstics.
S'han considerat els tipus següents:
- Cordó cel·lular de polietilè expandit col·locat a pressió a l'interior del junt
- Placa de poliestirè expandit col·locada amb adhesiu o a pressió en l'interior del junt
L'execució de la unitat d'obra inclou les operacions següents:
Reblert de juntS amb material col·locat a pressió:
- Neteja i preparació de l'interior del junt
- Col·locació a pressió del material
Reblert de juntS amb placa col·locada amb adhesiu:
- Neteja i preparació de l'interior del junt
- Aplicació de l'adhesiu
- Col·locació de la placa
CONDICIONS GENERALS:
El cordó ha de quedar col·locat solt, encastat dins del junt.
La placa ha de quedar ben adherida dins del junt o encaixada a pressió.
El reblert del junt ha de quedar col·locat en tota la llargària prevista, sense interrupcions. Si hi ha d'haver talls, els extrems han de quedar a tocar.
La fondària respecte al pla del parament ha de ser la prevista o indicada per la DF. Si no hi ha cap

especificació, ha de quedar enrasat amb el parament.
Separació entre cordons: <= 4 mm
Junts entre plaques: <= 2 mm
Toleràncies d'execució:
- Fondària prevista respecte al parament: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
No s'ha d'aplicar en temps humit (pluja, rosada, etc.).
L'amplària del junt ha de ser constant.
El fons i les cares del junt han de ser nets i secs, per la col·locació de la placa de poliestirè, no han de tenir matèries estranyes (pols, greixos, oli, etc.).
REBLERT AMB PLACA DE POLIESTIRÈ:
El grau d'humitat del suport ha d'estar dins dels límits especificats pel fabricant.
REBLERT AMB CORDÓ DE POLIETILÈ:
El producte s'ha d'aplicar forçant-ne la penetració.
No s'han d'aplicar, a sobre del cordó, materials amb temperatures superiors als 70°C.
3.- UNITAT I CRITERI D'AMIDAMENT
REBLERT AMB CORDÓ:
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## P8 REVESTIMENTS

## P81 ARREBOSSATS I ENGUIXATS

### P811- ARREBOSSAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P811-3EJ8.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Arrebossats realitzats amb morter de ciment, morter de calç, morter mixt o morter porós drenant, aplicats en paraments horitzontals o verticals, interiors o exteriors i formació d'arestes amb morter de ciment mixt o pasta de ciment ràpid.
S'han considerat els tipus següents:
- Arrebossat esquerdejat
- Arrebossat a bona vista
- Arrebossat reglejat

L'execució de la unitat d'obra inclou les operacions següents:
Arrebossat esquerdejat:
- Neteja i preparació de la superfície de suport
- Aplicació del revestiment
- Cura del morter
Arrebossat a bona vista o arrebossat reglejat:
- Neteja i preparació de la superfície de suport
- Execució de les mestres
- Aplicació del revestiment
- Acabat de la superfície
- Cura del morter
- Repassos i neteja final
ARREBOSSAT:
Ha de quedar ben adherit al suport.
El revestiment exterior ha de tenir juts de dilatació. La distància entre juts ha de ser suficient per tal que no s'esquerdi.
S'han de respectar els juts estructurals.
Quan l'acabat és deixat de regle, esquitxat o remolinat sense lliscar, a l'arrebossat acabat no hi ha d'haver esquerdes i ha de tenir una textura uniforme.
Quan l'acabat és remolinat i lliscat, a l'arrebossat acabat no hi ha d'haver pols, ni fissures, forats o d'altres defectes.
Gruix de la capa:
- Arrebossat esquerdejat: <= 1,8 cm
- Arrebossat reglejat o a bona vista: 1,1 cm
- Arrebossat amb morter porós drenant: 2 a 4 cm
Arrebossat reglejat:
- Distància entre mestres: <= 150 cm
Toleràncies d'execució per a l'arrebossat:
- Planor:
- Acabat esquerdejat: ± 10 mm
- Acabat a bona vista: ± 5 mm
- Acabat reglejat: ± 3 mm
- Aplomat (parament vertical):
- Acabat a bona vista: ± 10 mm/planta
- Acabat reglejat: ± 5 mm/planta
- Nivell (parament horitzontal):
- Acabat a bona vista: ± 10 mm/planta
- Acabat reglejat: ± 5 mm/planta
Toleràncies quan l'arrebossat és a bona vista o reglejat:
- Gruix de l'arrebossat: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C, la velocitat del vent sigui superior a 50 km/h o plogui. Si, un cop executat el treball, es donen aquestes condicions, s'ha de revisar la feina feta i s'han de refer les parts afectades.
Per a iniciar-ne l'execució en els paraments interiors cal que la coberta s'hagi acabat, per als paraments situats a l'exterior cal, a més, que funcioni l'evacuació d'aigües.
S'han d'evitar cops i vibracions que puguin afectar el material durant l'adormiment.
ARREBOSSAT:
S'han de col·locar tots els elements que hagin d'anar fixats als paraments i no dificultin l'execució del revestiment.
Els paraments d'aplicació han d'estar sanejats, nets i humits. Si cal, es poden repicar abans.
Quan l'arrebossat és esquerdejat, s'ha d'aplicar llançant amb força el morter contra els paraments.
Quan l'arrebossat és a bona vista, s'han de fer mestres amb el mateix morter a les cantonades i als racons.
Quan l'arrebossat és reglejat, s'han de fer mestres amb el mateix morter, als paraments, cantonades, racons i voltants d'obertures. Les arestes i les mestres han d'estar ben aplomades.
Quan l'arrebossat és esquitxat, s'ha d'aplicar en dues capes: la primera prement amb força sobre els paraments i la segona esquitxada sobre l'anterior.
Quan l'acabat és deixat de regle o remolinat, s'ha d'aplicar prement amb força sobre els paraments.
El lliscat s'ha d'aplicar quan encara estigui humida la capa d'arrebossat.
Durant l'adormiment s'ha d'humitejar la superfície del morter.
Per a fer assecatges artificials es requereix l'autorització explícita de la DF.
No s'han de fixar elements sobre l'arrebossat fins que hagin passat set dies, com a mínim, o s'hagi

adormit.
3.- UNITAT I CRITERI D'AMIDAMENT
ARREBOSSAT:
m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures d'acord amb els criteris següents:
En paraments verticals:
- Obertures <= 2 m2: No es dedueixen
- Obertures > 2 m2 i <= 4 m2: Es dedueix el 50%
- Obertures > 4 m2: Es dedueix el 100%
En paraments horitzontals:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
Als forats que no es dedueixin, o que es dedueixin parcialment, l'amidament inclou la feina de fer els retorns, com ara brancals, llindes, etc. En cas de deduir-se el 100% del forat cal amidar també aquests paraments.
Aquests criteris inclouen la neteja dels elements que configuren les obertures, com és ara bastiments que s'hagin embrutat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció de la superfície sobre la que es realitzarà l'arrebossat.
- Neteja i preparació de la superfície de suport
- Control d'execució de les mestres
- Acabat de la superfície
- Repassos i neteja final
- Inspecció visual de la superfície acabada.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Repassos i neteja final
- Inspecció visual de la superfície acabada.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

---

## P8 REVESTIMENTS

## P81 ARREBOSSATS I ENGUIXATS

## P815- ENGUIXAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P815-3FM1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Enguixats aplicats en paraments interiors.
S'han considerat els tipus següents:
- Enguixat a bona vista, acabat lliscat o no
- Enguixat reglejat, acabat lliscat o no

L'execució de la unitat d'obra inclou les operacions següents:
Enguixat a bona vista:
- Neteja i preparació de la superfície de suport
- Aplicació del revestiment
- Acabat de la superfície
- Repassos i neteja final

Enguixat reglejat:
- Neteja i preparació de la superfície de suport
- Execució de les mestres
- Aplicació del revestiment
- Acabat de la superfície
- Repassos i neteja final

CONDICIONS GENERALS:
Ha de quedar ben adherit al suport.
S'han de respectar els juts estructurals.
A l'enguixat, un cop sec (amb humitat inferior a l'1% o al cap de quatre setmanes d'haver-ho fet), no hi ha d'haver pols, fissures, forats o d'altres defectes.
La superfície de l'enguixat ha de quedar plana i, en els paraments verticals o corbats, aplomada.
L'aresta ha de ser recta, en angle, ben aplomada, i ha d'estar al mateix pla que els paraments.
El racó en angle recte, ha de ser ortogonal i l'aresta determinada recta o corba segons els paraments.
El racó en mitja canya ha de ser una superfície cilíndrica que uneixi de forma harmònica els dos paraments.
Gruix de l'enguixat: 1,2 cm
Duresa mitjana (amb duròmetre Shore C):
- Enguixat a bona vista: >= 50
- Enguixat reglejat o reglada: >= 55

Especificacions per a l'enguixat reglejat i la reglada de sòcol:
- Distància entre les mestres o tocs: <= 120 cm

Toleràncies d'execució:
- Gruix de l'enguixat: ± 2 mm
- Toleràncies en funció del tipus de parament on s'aplica:

| | | Tipus enguixat | |
|---|---|---|---|
| Parament | | A bona vista | reglejat |
| Vertical | Planor | ± 1mm / 0,2m | - |
| | | ± 10mm / 2m | ± 5mm / 2m |
| | Aplomat /planta | ± 10mm | 5mm |
| Corbat | Curvatura prevista | ± 5mm /plantilla 1m | ± 3mm /plantilla 1m |
| Horitzontal | Planor | ± 1mm / 0,2m | - |
| | | ± 10mm / 2m | ± 5mm / 2m |
| | Nivell previst | ± 10mm | ± 5mm |
| Inclinat | Planor | ± 1mm / 0,2m | - |
| | | ± 10mm / 2m | ± 5mm / 2m |

| | | | |
|---|---|---|---|
| | Inclinació prevista | ± 10mm | ± 5mm |

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C.
Per a iniciar-ne l'execució cal que la coberta s'hagi acabat o, en els paraments interiors, hi hagi tres plantes amb sostre al damunt, com a mínim.
Els paraments d'aplicació han d'estar sanejats, nets i humits. Si cal, es poden repicar abans.
Quan l'enguixat és reglejat, s'han de fer mestres amb el mateix guix i ben aplomades o ben horitzontals, segons els casos, als paraments, a les cantonades, als racons, al voltant dels forats i als sòcols.
Per a fer assecatges artificials es requereix l'autorització explícita de la DF.
No s'han d'utilitzar additius que puguin variar el procés d'adormiment.
S'han d'evitar cops i vibracions que puguin afectar el material durant l'adormiment.
ACABAT LLISCAT:
En l'enguixat a bona vista, a la formació d'aresta o de racó, la pasta de guix s'ha d'aplicar en dues operacions: una d'estesa i la segona de lliscat.
En l'enguixat reglejat o en la formació de reglada de sòcol, la pasta de guix s'ha d'aplicar en dues operacions: una d'estesa entre les mestres, passant el regle i la segona de lliscat.
El lliscat s'ha de fer amb la part més fina del guix, o sigui amb la part superior d'una pasterada feta amb aquesta finalitat.
3.- UNITAT I CRITERI D'AMIDAMENT
ENGUIXAT:
m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures d'acord amb els criteris següents:
- Obertures <= 4 m2: No es dedueixen
- Obertures > 4 m2: Es dedueix el 100%
Aquests criteris inclouen la superfície dels paraments laterals de l'obertura en una fondària de 30 cm, com a màxim, excepte en el cas d'obertures de més de 4,00 m2 en que aquesta superfície s'ha d'amidar expressament.
Inclouen igualment la neteja dels elements que configuren l'obertura, com és ara bastiments que s'hagin embrutat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció de la superfície sobre la que es realitzarà l'enguixat
- Neteja i preparació de la superfície de suport
- Execució de les mestres, en el cas que sigui reglejat
- Aplicació del revestiment
- Acabat de la superfície
- Formació d'arestes i reglades de sòcol
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Repassos i neteja final
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
La correcció dels defectes observats ha d'anar a càrrec del contractista.

## P8 REVESTIMENTS

## P82 ENRAJOLATS

### P822- ENRAJOLATS AMB RAJOLA CERÀMICA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P822-3NUC.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Revestiments realitzats amb rajola, aplicats en paraments verticals, interiors o exteriors, en faixes exteriors, horitzontals o verticals i arrimadors.
S'han considerat els revestiments següents:
- Enrajolat amb rajola ceràmica esmaltada
- Trencadís amb trossos irregulars de rajola de diferents colors
- Enrajolat amb rajola ceràmica vidrada, rajola de València o rajola reproducció de rajola existent, en interiors
S'han considerat els morters següents:
- Morter adhesiu
- Morter pòrtland 1:4, només per a paraments d'alçària inferior o igual a 3 m
L'execució de la unitat d'obra inclou les operacions següents:
- Neteja i preparació de la superfície de suport
- Replanteig de l'especejament en el parament
- Col·locació de les peces fixades amb morter sobre el suport
- Rejuntat dels junts
- Neteja del parament
CONDICIONS GENERALS:
En el revestiment acabat no hi ha d'haver peces esquerdades, escantonades ni tacades.
Les peces han de quedar ben adherides al suport i han de formar una superfície amb la planor i l'aplomat previstos.
El color i la textura, en revestiments fets amb peces de forma regular, ha de ser uniforme en tota la superfície.
L'especejament ha de complir les especificacions subjectives requerides per la DF.
El revestiment exterior ha de tenir junts de dilatació. La distància entre junts ha de ser suficient per tal que no s'esquerdi.
S'ha d'adaptar als moviments del suport de manera que no quedin afectades les seves prestacions.
S'han de respectar els junts estructurals.
Els junts del revestiment han d'estar rejuntats amb beurada de ciment gris o blanc i, eventualment, colorants, si la DF no fixa d'altres condicions.
Si el revestiment és fet a l'exterior ha de quedar protegit contra la penetració de l'aigua entre les peces i el parament.
Entre el revestiment i qualsevol sortint del parament s'ha de deixar un junt segellat amb silicona.
Superfície de revestiment entre junts de dilatació: <= 20 m2
Distància entre junts de dilatació:
- Parament interior: <= 8 m
- Parament exterior: <= 3 m
Amplària dels junts de dilatació: >= 10 mm
Gruix del morter:
- Morter: 10-15 mm
- Morter adhesiu: 2-3 mm
ENRAJOLAT:
Els junts del revestiment han de ser rectes.
Amplària dels junts:
- Rajola comuna d'elaboració mecànica o fina, valència, esmaltada o vidriada: >= 1 mm
- Rajola comuna d'elaboració manual: >= 5 mm
Toleràncies d'execució:
- Planor:
- Rajola d'elaboració mecànica o fina, valència, refractaria o gres: ± 2 mm/2 m
- Rajola comuna d'elaboració manual: ± 4 mm/2 m
- Amplària junts:
- Rajola d'elaboració mecànica o fina, valència o vidriada:
- Parament interior ± 0,5 mm
- Parament exterior ± 1 mm
- Rajola comuna d'elaboració manual: ± 2 mm
- Rajola refractaria o gres: ± 1 mm
- Paral·lelisme entre els eixos dels junts: ± 1 mm/m
- Horitzontalitat dels junts (amidada sobre els eixos dels junts): ± 2 mm/2 m
- Verticalitat dels junts (amidada sobre els eixos dels junts): ± 2 mm/2 m
TRENCADÍS:
La composició del trencadís ha de seguir les especificacions indicades a la DT
Ha de tenir la distribució de formes i condicions de planor i aplomat previstos.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C, la velocitat del vent sigui superior a 50 km/h o plogui. Si un cop executat el treball es donen aquestes condicions, s'ha de revisar la feina feta durant les darreres 48 hores, i s'han d'enderrocar i refer les parts afectades.
La rejuntada s'ha de fer al cap de 24 h.
ENRAJOLAT:
Cal barrejar les peces de caixes diferents per tal d'evitar diferències de tonalitat.
COL·LOCACIÓ AMB MORTER ADHESIU:
L'arrebossat s'ha d'haver adormit, ha de tenir una humitat < 3% i ha d'estar lliure de sals solubles que puguin impedir l'adherència del morter adhesiu.
El morter adhesiu s'ha de preparar i aplicar segons les instruccions del fabricant. S'ha d'aplicar sobre superfícies de menys de 2 m2 i s'ha de marcar aquesta superfície amb una aplanadora dentada (les dents han de tenir entre 5 i 8 mm de fondària).
COL·LOCACIÓ AMB MORTER PÒRTLAND O REFRACTARI:
Els paraments d'aplicació han d'estar sanejats, nets i humits. Si cal, es poden repicar abans.
Les peces per col·locar han de tenir la humitat necessària per tal que no absorbeixin l'aigua del morter.
El morter s'ha d'estendre per tota la bescara de la peça.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
En revestiment de paraments, amb deducció de la superfície corresponent a obertures d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2 i <= 2 m2: Es dedueix el 50%
- Obertures > 2 m2: Es dedueix el 100%
Als forats que no es dedueixin, o que es dedueixin parcialment, l'amidament inclou la feina de fer els retorns, com brancals, llindes, etc. En cas de deduir-se el 100% del forat cal amidar també aquests paraments.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Neteja i preparació de la superfície de suport
- Replanteig de l'especejament al parament.
- Col·locació de les peces fixades amb morter sobre el suport.
- Rejuntat dels juts.
- Neteja del parament
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans de completar el revestiment.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.
Suspensió dels treballs i correcció de les desviacions observades a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
Es comprovarà que s'han adoptat les mesures necessàries per assegurar la compatibilitat entre els diferents productes, elements i sistemes constructius.
- Inspecció visual de la unitat acabada i control de les condicions geomètriques d'acabat.
- En el control es seguiran els criteris indicats en l'article 7.4 de la part I del CTE.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

## P82 ENRAJOLATS

## P82A- REVESTIMENT INTERIOR DE VAS DE PISCINA

## P82A-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P82A-14FHC,P82A-14FHA,P82A-14FHB,P82A-14FHD,P82A-14FHE,P82A-14FHF.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Revestiments realitzats amb mosaic de vidre, format per tessel·les de 25x25x6 mm, muntades sobre peces de malla.
L'execució de la unitat d'obra inclou les operacions següents:
- Neteja i preparació de la superfície de suport
- Replanteig de l'especejament en el parament
- Col·locació de les peces fixades amb morter sobre el suport
- Rejuntat dels junts
- Neteja del parament

CONDICIONS GENERALS:
En el revestiment acabat no hi ha d'haver peces esquerdades, escantonades ni tacades.
Les peces han de quedar ben adherides al suport i han de formar una superfície amb la planor i l'aplomat previstos.
El color i la textura, en revestiments fets amb peces de forma regular, ha de ser uniforme en tota la superfície.
L'especejament ha de complir les especificacions subjectives requerides per la DF.
Els junts del revestiment han d'estar rejuntats amb beurada de ciment gris o blanc i, eventualment, colorants, si la DF no fixa d'altres condicions.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C, la velocitat del vent sigui superior a 50 km/h o plogui. Si un cop executat el treball es donen aquestes condicions, s'ha de revisar la feina feta durant les darreres 48 hores, i s'han d'enderrocar i refer les parts afectades.
El morter adhesiu s'ha d'aplicar sobre la superfície de suport i sobre el revers de les peces ceràmiques seguint la tècnica del doble encolat.
No s'han de col·locar les rajoles amb insolació directa o en períodes de màxim calor. En situacions caloroses s'ha d'humitejar el suport.
Els junts de dilatació s'han d'omplir amb màstics fungicides.
El material utilitzat per al rejuntat ha de ser resistent a l'atac dels productes de manteniment i neteja i

a la formació de floridura.
Per tal d'arribar a l'enduriment complet del morter adhesiu, s'ha d'esperar al menys un mes abans d'omplir la piscina.
El parament de suport ha d'estar net, sense restes de materials adherits o de líquids desencofrants.
El morter adhesiu s'ha de preparar i aplicar segons les instruccions del fabricant. S'ha d'aplicar sobre superfícies de menys de 2 m2 i s'ha de marcar aquesta superfície amb una aplanadora dentada (les dents han de tenir entre 5 i 8 mm de fondària).
Les rajoles s'han de col·locar abans de que es formi una pel·lícula seca a la superfície del morter que perjudiqui l'adherència.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## P8 REVESTIMENTS

## P83 APLACATS

## P83E APLACATS AMB PLANXES, PLAQUES O TAULERS

## P83E6- APLACAT AMB PLAQUES SINTÈTIQUES PER A FAÇANA VENTILADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P83E6-5Z99.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Revestiments per a formació de façana ventilada realitzats amb plaques, col·locades amb fixacions mecàniques sobre subestructura de perfils.
S'han considerat els materials següents:
- Plaques a base de resines sintètiques termoenduribles reforçades amb fibres de fusta
L'execució de la unitat d'obra inclou les operacions següents:
- Comprovació de la planimetria de la façana
- Replanteig de la façana i col·locació de les esquadres a les distàncies establertes
- Aplomat i fixació dels perfils a les esquadres
- Preparació de les plaques (talls, forats, etc)
- Replanteig de l'especejament en el parament
- Fixació de les plaques als muntants

CONDICIONS GENERALS:
Els perfils han de quedar fixats sòlidament al parament.
La subestructura ha de formar una superfície plana i vertical.
Els perfils han de quedar alineats.
El conjunt de l'aplacat ha de ser estable i indeformable a les accions previstes (vent, etc). Ha de formar una superfície plana i contínua que ha de quedar al nivell previst.
S'ha d'adaptar als moviments del suport de manera que no quedin afectades les seves prestacions.
En el revestiment acabat no hi ha d'haver peces esquerdades, trencades ni defectes apreciables.
L'especejament ha de complir les especificacions subjectives requerides per la DF.
El revestiment exterior ha de tenir juts de dilatació. La distància entre juts ha de ser suficient per tal que no s'esquerdi.
Els juts han de coincidir sempre amb elements portants.
Amplària dels juts entre perfils: <= 5 mm
Distància entre els punts de fixació: <= 50 cm
Junts entre plaques: >= 1 cm
Toleràncies d'execució de l'entramat de perfils:
- Distància entre els eixos dels perfils: ± 5 mm
- Planor: ± 3 mm/2 m
- Nivell: ± 5 mm
- Verticalitat: ± 3 mm/2 m
- Alineació entre perfils consecutius: ± 10 mm
Toleràncies d'execució de l'aplacat:
- Replanteig parcial: ± 2 mm
- Replanteig total: ± 2 mm
- Planor: ± 3 mm/2 m
- Aplomat: 4 mm/3 m
- Ajust entre plaques: ± 1 mm
- Distància dels cargols a les vores de les plaques: ± 5 mm
PLAQUES DE RESINES SINTÉTIQUES:
En la part superior o inferior del sistema de tancament i dels buits de portes i finestres hi ha d'haver obertures de ventilació en contacte directe amb l'exterior.
Les obertures de ventilació superiors a 0,01 m han de quedar protegides per tal d'evitar la formació de nius d'insectes.
Les fixacions han de permetre el moviment i dilatació de les plaques.
No s'han d'utilitzar massilles de segellat, ja que poden impedir la dilatació de les plaques.
Per a evitar el gir de la placa, ha d'haver-hi dos punts de fixació fixos, un al costat de l'altre.
Magnitud de l'obertura de ventilació per metre lineal d'amplària de façana:
- Alçària de façana <= 1 m: 20 cm2/m
- Alçària de façana > 1 m: 50 cm2/m
Gruix de la cambra d'aire ventilada: >= 20 mm
Distàncies horitzontals màximes entre punts de fixació:

| | Gruix de la placa (mm) | | | |
|---|---|---|---|---|
| | 6 | 8 | 10 | 13 |
| 2 fixacions en un sentit | 450 | 600 | 750 | 950 |
| 3 o més fixacions en un sentit | 550 | 750 | 900 | 1200 |

Distancia de les fixacions a les vores de la placa:
- Mínima: 20 mm
- Màxima: 10 mm x gruix placa
Diàmetre dels orificis:
- Punt fix de fixació: 5.1 mm
- Punt mòbil de fixació: 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs quan la velocitat del vent sigui superior a 50 km/h o plogui. Si un cop realitzats els treballs es donen aquestes condicions, s'han de revisar i assegurar les parts fetes.
La manipulació de les plaques (talls, forats per a instal·lacions, etc.) s'ha de fer abans de fixar-les al suport.

Les fixacions han de ser de materials anticorrosius i han d'entrar perpendicularment al pla de la placa.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície executada realment, amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## P8 REVESTIMENTS

## P84 CELS RASOS

### P846- CEL RAS CONTINU DE PLAQUES DE GUIX LAMINAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P846-9JN9.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Cel ras realitzat amb plaques, planxes o lames, de diferents materials, suspeses del sostre o estructura de l'edifici, en espais interiors, i elements singulars integrats al cel ras, com ara registres, franges perimetrals, cortiners, etc.
S'han considerat els materials següents:
- Plaques de guix laminat i transformats
S'han considerat els tipus de cel ras següents:
- Per a revestir, sistema fix
- De cara vista, sistema fix
- De cara vista, sistema desmuntable amb entramat vist
- De cara vista, sistema desmuntable amb entramat ocult
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig: distribució de plaques, resolució de vores i punts singulars, nivells, eixos de la trama de perfils, etc.
- Col·locació dels suports fixats al sostre o estructura de l'edifici i suspensió dels perfils de la trama de suports
- Col·locació de les plaques, planxes o lames, fixades o recolzades a la trama de suports, segons el sistema utilitzat
- Segellat dels junts si es tracta d'un cel ras continu
CONDICIONS GENERALS:
El sistema de suspensió del cel ras ha de ser un sistema compatible amb les plaques o planxes.
El mecanisme de fixació a l'estructura de l'edifici ha de ser compatible amb el material d'aquesta.
El plènum considerat és d'1 m d'alçària màxima.

El sistema de suspensió ha de complir els requisits de l'apartat 4.3 de la norma UNE-EN 13964.
Si el fabricant del sistema de suspensió es diferent del de les plaques, planxes o lames, el constructor ha d'aportar la documentació necessària per verificar la compatibilitat entre els sistemes.
Si s'ha d'afegir algun element a sobre del cel ras, com ara aïllaments tèrmics o acústic, llums, difusor d'aire, etc, cal verificar que el increment de pes està dins dels límits de resistència del sistema de suports.
El conjunt acabat ha de ser estable i indeformable.
Ha de formar una superfície plana i ha d'estar al nivell previst.
Els elements de la subestructura (carreres principals i transversals) han d'estar muntades ortogonalment.
Els perfils distanciadors de seguretat de l'estructura han d'estar fixats als perfils principals.
Les peces del cel ras han d'estar alineades.
El repartiment de plaques al recinte no deixarà als perímetres peces menors a 1/2 placa. El recolzament de les plaques tallades sobre el suport perimetral ha de ser més gran de 10 mm.
Si les plaques són de cara vista, en el revestiment acabat no hi ha d'haver peces esquerdades, trencades, escantonades ni tacades.
Els elements perimetrals verticals, com ara envans o mampares, no provocaran esforços sobre el cel ras, i la seva estructura s'ha d'ancorar al sostre o a una subestructura independent de la del cel ras.
Si es pengen o s'insereixen elements aliens al cel ras, com ara llums, difusors, etc, no superaran els pesos màxims indicats pel subministrador del cel ras, i les perforacions de les plaques compliran les indicacions del fabricant respecte a la mida màxima i la posició relativa de la perforació.
Si el cel ras es realitza amb plaques o elements amb característiques especials, que han de donar unes condicions específiques a l'espai que conformen per tal d'assolir les característiques requerides, caldrà seguir les pautes constructives indicades pel fabricant i la DF.
Toleràncies d'execució:
- Planor:
- 2 mm/m
- <= 5 mm en una llargària de 5 m en qualsevol direcció
- Nivell: ± 5 mm

SUPORT MITJANÇANT ENTRAMAT DE PERFILS:
Si el sistema és desmuntable, s'ha de col·locar un perfil fixat a les parets, a tot el perímetre.
Si el sistema és fix, tots els junts, les arestes de cantonades i els racons han d'estar segellats degudament amb màstic per a junts.
S'han de col·locar els punts de fixació suficients per tal que la fletxa dels perfils de l'entramat sigui l'exigida.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El muntatge s'ha de fer seguint les instruccions de la documentació tècnica del fabricant. S'ha de seguir la seqüència de muntatge proposada pel fabricant.
Les instruccions del subministrador han d'incloure com mínim els aspectes següents:
- Enumeració i especificacions dels components necessaris per a l'execució completa del cel ras
- Els tipus de fixacions superiors en funció dels possibles materials on es fixaran (llosa de formigó, sostres amb revoltons de diferents materials, estructures de fusta, etc.)
- La forma en que els diversos components s'han d'instal·lar i fixar
- Condicions d'emmagatzemament i manipulació dels materials
- Les condicions que son necessàries al lloc on s'instal·larà el cel ras
- La carrega màxima admissible pels components de la suspensió
- El mètode de regulació de l'alçada i, si es requereix, els mitjans per a assegurar les fixacions superior i inferior
- La distancia màxima admissible entre els elements de suspensió
- La llargària màxima del vol de les carreres principals
- Les distancies entre les fixacions del sistema de recolzament perimetral
- La forma de realitzar talls dels components, i especialment, les limitacions de la mida i la posició dels talls necessaris per a introduir instal·lacions (llums, reixetes, etc.)
- El pes màxim que poden suportar les plaques individuals, i el conjunto del cel ras, corresponent als elements addicionals (llums, reixetes, aïllaments afegits, etc.)

Per començar el muntatge del cel ras, cal que el local estigui tancat i sigui estanc al vent i a l'aigua, la humitat relativa sigui inferior al 70% i la temperatura superior a 7º.
La DF ha d'aprovar el sistema de fixació superior i perimetral. Cal que aquest tingui associat un DIT, o cal fer assaigs in situ per verificar la idoneïtat del sistema.
La seva instal·lació no ha d'alterar les característiques dels elements.
No s'han de col·locar fixacions superiors en elements estructurals deteriorats (revoltons trencats, formigons esquerdats, etc.)

3.- UNITAT I CRITERI D'AMIDAMENT
CEL RAS, CALAIX O FRANJA DE CEL RAS:

m2 de superfície amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2:  No es dedueixen.
- Obertures > 1 m2:  Es dedueix el 100%.
Aquests criteris inclouen l'acabament específic dels acords a les vores, sense que comporti l'ús de materials diferents d'aquells que normalment conformen la unitat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* UNE-EN 13964:2006/A1:2008 Techos suspendidos. Requisitos y métodos de ensayo.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Es comprovarà que s'han adoptat les mesures necessàries per assegurar la compatibilitat entre els diferents productes, elements i sistemes constructius.
- Replanteig del nivell del cel ras, dels eixos de la trama de perfils i dels punts de suspensió.
- Verificació de la compatibilitat del sistema de fixació a les estructures existents. Es pot fer validant la documentació aportada pel fabricant de la fixació, o fent assaigs de càrrega.
- A les fixacions cal verificar la fondària i el diàmetre de la perforació, la neteja del forat, si el tipus de fixació es correspon amb l'aprovat, el procediment d'instal·lació de la fixació, i si està indicat, el parell d'acollament.
- Col·locació dels perfils perimetrals, si s'escau, d'entrega als paraments i suspensió de la resta de perfils de la trama. Verificació de l'ortogonalitat de la trama, i les alineacions dels perfils vistos.
- Col·locació dels elements que formen la cara vista del cel ras, com ara plaques, lames, etc.
- En el cas de cels rasos de característiques especials, caldrà controlar els punts singulars.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans de completar el cel ras.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.
La suspensió dels treballs i la correcció de les no conformitats observades aniran a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Es verificarà el nivell i la planeitat del cel ras, l'alineació i l'ortogonalitat de plaques i perfils, la situació d'elements addicionals, be estiguin penjats o inserits en perforacions del cel ras.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

---

## P8 REVESTIMENTS

## P89 PINTATS

### P894- PINTAT DE BARANES I REIXES D'ACER

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P894-4V9D.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Preparació i aplicació d'un recobriment de pintura sobre superfícies de materials diversos mitjançant diferents capes aplicades en obra.
S'han considerat els tipus de superfícies següents:
- Superfícies metàl·liques (acer, acer galvanitzat, coure)
S'han considerat els elements següents:
- Estructures
- Paraments
- Elements de tancament practicables (portes, finestres, balconeres)
- Elements de protecció (baranes o reixes)
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la superfície a pintar, fregat de l'òxid i neteja prèvia si és el cas, amb aplicació de les capes d'emprimació, de protecció o de fons, necessàries i del tipus adequat segons la composició de la pintura d'acabat
- Aplicació successiva, amb els intervals d'assecat, de les capes de pintura d'acabat
CONDICIONS GENERALS:
En el revestiment no hi ha d'haver fissures, bosses ni d'altres defectes.
Ha de tenir el color, la brillantor i la textura uniformes.
PINTAT A L'ESMALT:
Gruix de la pel·lícula seca del revestiment: >= 125 micres
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:

S'han d'aturar els treballs si es donen les condicions següents:
- Temperatures inferiors a 5°C o superiors a 30°C
- Humitat relativa de l'aire > 60%
- En exteriors: Velocitat del vent > 50 km/h, Pluja
Si un cop realitzats els treballs es donen aquestes condicions, s'ha de revisar la feina feta 24 h abans i s'han de refer les parts afectades.
Les superfícies d'aplicació han de ser netes i sense pols, taques ni greixos.
S'han de corregir i eliminar els possibles defectes del suport amb massilla, segons les instruccions del fabricant.
No es pot pintar sobre suports molt freds ni sobreescalfats.
El sistema d'aplicació del producte s'ha d'escollir d'acord amb les instruccions del fabricant i l'autorització de la DF.
Quan el revestiment estigui format per més d'una capa, la primera capa s'ha d'aplicar lleugerament diluïda, segons les instruccions del fabricant.
S'han d'evitar els treballs que desprenguin pols o partícules prop de l'àrea a tractar, abans, durant i després de l'aplicació.
No s'admet la utilització de procediments artificials d'assecatge.
SUPERFÍCIES METÀL·LIQUES (ACER, ACER GALVANITZAT, COURE):
Les superfícies d'aplicació han de ser netes i sense pols, taques, greixos ni òxid.
En superfícies d'acer, s'han d'eliminar les possibles incrustacions de ciment o de calç i s'ha de desgreixar la superfície. Tot seguit s'han d'aplicar les dues capes d'emprimació antioxidant. La segona s'ha de tenyir lleugerament amb pintura.
3.- UNITAT I CRITERI D'AMIDAMENT
PINTAT D'ELEMENTS DE PROTECCIÓ O ELEMENTS DE CALEFACCIÓ:
m2 de superfície d'una cara, definida pel perímetre de l'element a pintar.
PINTAT DE TUBS O PINTAT O ENVERNISSAT DE PASSAMÀ:
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PER A LA RESTA D'ELEMENTS:
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual de la superfície a pintar.
- Acceptació del procediment d'aplicació de la pintura per part de la DF.
- Comprovació de l'assecatge d'una capa abans de procedir a una segona aplicació.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual de la unitat acabada.
En el control es seguiran els criteris indicats en l'article 7.4 de la part I del CTE.
Determinació del gruix de pel·lícula del recobriment sobre un element metàl·lic (UNE EN ISO 2808)
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

---

S'han de corregir i eliminar els possibles defectes del suport amb massilla, segons les instruccions del fabricant.
No es pot pintar sobre suports molt freds ni sobreescalfats.
El sistema d'aplicació del producte s'ha d'escollir d'acord amb les instruccions del fabricant i l'autorització de la DF.
Quan el revestiment estigui format per més d'una capa, la primera capa s'ha d'aplicar lleugerament diluïda, segons les instruccions del fabricant.
S'han d'evitar els treballs que desprenguin pols o partícules prop de l'àrea a tractar, abans, durant i després de l'aplicació.
No s'admet la utilització de procediments artificials d'assecatge.
SUPERFÍCIES DE CIMENT, FORMIGÓ O GUIX:
La superfície no ha de tenir fissures ni parts engrunades.
El suport ha d'estar suficientment sec i endurit per tal de garantir una bona adherència. Ha de tenir una humitat inferior al 6% en pes.

S'han de neutralitzar els àlcalis, les eflorescències, les floridures i les sals.
Temps mínim d'assecatge de la superfície abans d'aplicar la pintura:
- Guix: 3 mesos (hivern); 1 mes (estiu)
- Ciment: 1 mes (hivern); 2 setmanes (estiu)
3.- UNITAT I CRITERI D'AMIDAMENT
PINTAT DE PARAMENTS DE CIMENT O GUIX:
m2 de superfície real amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures d'acord amb els criteris següents:
- Obertures <= 4 m2: No es dedueixen
- Obertures > 4 m: Es dedueix el 100%
Aquests criteris inclouen la superfície dels paraments laterals de l'obertura en una fondària de 30 cm, com a màxim, excepte en el cas d'obertures de més de 4,00 m2, en que aquesta superfície s'ha d'amidar expressament.
Inclouen igualment la neteja dels elements que configuren l'obertura, com ara bastiments que s'hagin embrutat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PER A LA RESTA D'ELEMENTS:
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual de la superfície a pintar.
- Acceptació del procediment d'aplicació de la pintura per part de la DF.
- Comprovació de l'assecatge d'una capa abans de procedir a una segona aplicació.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual de la unitat acabada.
En el control es seguiran els criteris indicats en l'article 7.4 de la part I del CTE.
Determinació del gruix de pel·lícula del recobriment sobre un element metàl·lic (UNE EN ISO 2808)
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

## P8 REVESTIMENTS

## P89 PINTATS

### P89I- PINTAT DE PARAMENT DE GUIX

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P89I-4V8W,P89I-4V8Q.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Preparació i aplicació d'un recobriment de pintura sobre superfícies de materials diversos mitjançant diferents capes aplicades en obra.
S'han considerat els tipus de superfícies següents:
- Superfícies de ciment, formigó o guix
S'han considerat els elements següents:
- Estructures
- Paraments
- Elements de tancament practicables (portes, finestres, balconeres)
- Elements de protecció (baranes o reixes)
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la superfície a pintar, fregat de l'òxid i neteja prèvia si és el cas, amb aplicació de les capes d'emprimació, de protecció o de fons, necessàries i del tipus adequat segons la composició de la pintura d'acabat
- Aplicació successiva, amb els intervals d'assecat, de les capes de pintura d'acabat
CONDICIONS GENERALS:
En el revestiment no hi ha d'haver fissures, bosses ni d'altres defectes.
Ha de tenir el color, la brillantor i la textura uniformes.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs si es donen les condicions següents:
- Temperatures inferiors a 5°C o superiors a 30°C
- Humitat relativa de l'aire > 60%
- En exteriors: Velocitat del vent > 50 km/h, Pluja
Si un cop realitzats els treballs es donen aquestes condicions, s'ha de revisar la feina feta 24 h abans i s'han de refer les parts afectades.
Les superfícies d'aplicació han de ser netes i sense pols, taques ni greixos.
S'han de corregir i eliminar els possibles defectes del suport amb massilla, segons les instruccions del fabricant.
No es pot pintar sobre suports molt freds ni sobreescalfats.
El sistema d'aplicació del producte s'ha d'escollir d'acord amb les instruccions del fabricant i l'autorització de la DF.
Quan el revestiment estigui format per més d'una capa, la primera capa s'ha d'aplicar lleugerament diluïda, segons les instruccions del fabricant.
S'han d'evitar els treballs que desprenguin pols o partícules prop de l'àrea a tractar, abans, durant i després de l'aplicació.
No s'admet la utilització de procediments artificials d'assecatge.
SUPERFÍCIES DE CIMENT, FORMIGÓ O GUIX:
La superfície no ha de tenir fissures ni parts engrunades.
El suport ha d'estar suficientment sec i endurit per tal de garantir una bona adherència. Ha de tenir una humitat inferior al 6% en pes.
S'han de neutralitzar els àlcalis, les eflorescències, les floridures i les sals.
Temps mínim d'assecatge de la superfície abans d'aplicar la pintura:
- Guix: 3 mesos (hivern); 1 mes (estiu)
- Ciment: 1 mes (hivern); 2 setmanes (estiu)
En superfícies de guix, s'ha de verificar l'adherència del lliscat de guix.
3.- UNITAT I CRITERI D'AMIDAMENT
PINTAT DE PARAMENTS DE CIMENT O GUIX:
m2 de superfície real amidada segons les especificacions de la DT.
Amb deducció de la superfície corresponent a obertures d'acord amb els criteris següents:
- Obertures <= 4 m2: No es dedueixen
- Obertures > 4 m: Es dedueix el 100%
Aquests criteris inclouen la superfície dels paraments laterals de l'obertura en una fondària de 30 cm, com a màxim, excepte en el cas d'obertures de més de 4,00 m2, en que aquesta superfície s'ha d'amidar expressament.

Inclouen igualment la neteja dels elements que configuren l'obertura, com ara bastiments que s'hagin embrutat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PER A LA RESTA D'ELEMENTS:
No hi ha normativa de compliment obligatori.

## P8 REVESTIMENTS

## P8B TRACTAMENTS SUPERFICIALS DE PROTECCIÓ

### P8B2- PINTAT D'ESTRUCTURES D'ACER AMB SISTEMES DE PROTECCIÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P8B2-G2EY.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Aplicació d'un recobriment de pintura sobre una superfície d'acer amb un grau de preparació definida, mitjançant un conjunt de capes d'imprimació, intermèdies i d'acabat, amb gruixos nominals de pel·lícula seca definits, que condueix a una determinada durabilitat del sistema de pintura protector segons l'article 86.2 del CODI ESTRUCTURAL.
S'han considerat els elements següents:
- Estructures
- Paraments
L'execució de la unitat d'obra inclou les operacions següents:
- Aplicació de les capes d'imprimació necessàries i del tipus adient, segons la composició de la pintura d'acabat
- Aplicació de capes de pintura intermèdies.
- Aplicació successiva, amb els intervals d'assecat de les capes d'acabat.
CONDICIONS GENERALS:
Els sistemes de pintura compliran les prescripcions de la taula 86.3.a del CODI ESTRUCTURAL
Es definirà el sistema de tractament, detallant com mínim:
-Tipus i gruix de la capa d'imprimació anticorrosiva
-Tipus i gruixos de les capes intermèdies
-Tipus i gruixos de les capes d'acabat i retocs
Cal eliminar de la superfície d'acer la brutícia, pellofes de laminació, restes d'escories de soldadures, greixos, humitat superficial i revestiments existents
La superfície dels elements a pintar es netejarà i prepararà d'acord al tractament de pintura a aplicar
Els mètodes de preparació de la superfície hauran d'obtenir el grau de rugositat definit

En cas de realitzar-se el pintat a obra dels elements, aquets hauran de ser imprimats a taller amb un gruix mínim, per tal d'evitar una oxidació incipient durant l'aplec
Les pintures que composen el sistema de pintat han de ser compatibles entre si
Es recomanable que les diferents capes de pintura siguin de diferents colors per tal de poder diferenciar-les.
Es respectaran de forma estricta els períodes d'assecatge i enduriment que aconselli el fabricant davant un possible contacte amb l'aigua.
Caldrà preveure la dificultat de pintat dels elements inaccessibles i pintar-los abans del seu muntatge
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Es comprovarà prèviament que l'estat de la superfície és el previst a la fase anterior
S'han d'aturar els treballs si es donen les condicions següents:
- Temperatures inferiors a 5°C o superiors a 30°C
- Humitat relativa de l'aire > 60%
- En exteriors: Velocitat del vent > 50 km/h, Pluja
Si un cop realitzats els treballs es donen aquestes condicions, s'ha de revisar la feina feta 24 h abans i s'han de refer les parts afectades.
Les superfícies d'aplicació han de ser netes i sense pols, taques ni greixos.
No es pot pintar sobre suports molt freds ni sobreescalfats.
El sistema d'aplicació del producte s'ha d'escollir d'acord amb les instruccions del fabricant i l'autorització de la DF.
Quan el revestiment estigui format per més d'una capa, la primera capa s'ha d'aplicar lleugerament diluïda, segons les instruccions del fabricant.
S'han d'evitar els treballs que desprenguin pols o partícules prop de l'àrea a tractar, abans, durant i després de l'aplicació.
No s'admet la utilització de procediments artificials d'assecatge.
Després de l'aplicació de la pintura les superfícies s'han de protegir de l'acumulació d'aigua durant un cert temps
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície realment pintada segons les especificacions de la DT.
Cal considerar el desenvolupament del perímetre.
Deducció de la superfície corresponent a obertures:
- Obertures <=1 m2: No es dedueixen
- Obertures >1 m2 i <= 2 m2: Es dedueixen el 50%
- Obertures >2 m2: Es dedueix el 100%
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
Real Decreto 314/2006, de 17 de marzo, por el que se aprueba el Código Técnico de la Edificación Parte 2. Documento Básico de Acero DB-SE-A.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual de la superfície a pintar.
- Acceptació del procediment d'aplicació de la pintura per part de la DF.
- Comprovació de l'assecatge d'una capa abans de procedir a una segona aplicació.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual de la unitat acabada.
En el control es seguiran els criteris indicats en l'article 7.4 de la part I del CTE.
Determinació del gruix de pel·lícula del recobriment sobre un element metàl·lic (UNE EN ISO 2808)
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

## P8 REVESTIMENTS

## P8J CORONAMENTS

### P8J6- CORONAMENT DE PARET AMB RAJOLA CERÀMICA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P8J6-472A,P8J6-472B,P8J6-472C,P8J6-472D.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació del remat superior d'una paret.
S'han considerat els tipus de peces següents:
- Peça ceràmica d'acabat fi o vidrada col·locada amb morter
- Peça ceràmica d'elaboració manual col·locada amb morter
S'han considerat els tipus de morter següents per a la col·locació:
- Morter mixt o de ciment
- Morter adhesiu
L'execució de la unitat d'obra inclou les operacions següents:
- Neteja i preparació de la superfície de suport
- Replanteig de l'aresta de coronament
- Col·locació de les peces
- Segellat dels junts
- Neteja del parament
CONDICIONS GENERALS:
A l'element acabat no hi ha d'haver peces esquerdades, trencades, escantonades ni tacades.
Ha de tenir el color i la textura uniformes.
Les peces han de quedar ben adherides al suport i han de formar una superfície amb la planor prevista a la DT.
Els junts entre les peces han d'estar reblerts.
Els junts han de ser estancs.
La peça de coronament ha d'impedir que l'aigua de pluja afecti a la part de la paret que es troba immediatament a sota i evacuar l'aigua cap a l'exterior.
En les peces amb trencaaigües o col·locades amb els cantells a escaire, aquests han de sobresortir respecte a l'acabat de la paret.
Ha de tenir junts de dilatació necessaris per a garantir l'estabilitat de l'element, els quals ha de complir amb les especificacions del Plec de Condicions Tècniques corresponent.
S'han de respectar els junts estructurals.
Pendent (Façanes): >= 10º
Volada del trencaaigües: >= 2 cm
Distància entre junts de dilatació:
- Pedra artificial, natural o morter de ciment: <= cada dues peces

- Ceràmica:  <= 2 m
Toleràncies d'execució:
- Horitzontalitat:  ± 2 mm/m
CORONAMENT DE PECES CERÀMIQUES:
Amplària dels junts:
- Rajola ceràmica d'acabat fi o vidriada:  3  6 mm
- Rajola ceràmica manual:  5-10 mm
- Maó:  10 mm
Toleràncies d'execució:
- Amplària dels junts:
- Rajola ceràmica:  ± 1 mm
- Maó:  ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
S'han d'aturar els treballs si es donen les condicions següents:
- Temperatures inferiors a 5°C o, en el cas de peces ceràmiques, superiors a 35°C
- En exteriors:  Velocitat del vent > 50 km/h,  Pluja
Si un cop realitzats els treballs es donen aquestes condicions, s'ha de revisar la feina feta 48 h abans i s'han de refer les parts afectades.
Si la col·locació es amb morter mixt o amb ciment, les peces per col·locar han de tenir la humitat necessària per no absorbir l'aigua del morter. Si la peça és hidrofugada no s'ha d'humitejar.
Si la col·locació es amb morter adhesiu, el morter s'ha de preparar i s'ha d'aplicar segons les instruccions del fabricant.
CORONAMENT AMB RAJOLA CERÀMICA D'ACABAT FI O VIDRIADA:
La rejuntada s'ha de fer al cap de 24 h.
Cal barrejar les peces de caixes diferents per tal d'evitar diferències de tonalitat.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## P8 REVESTIMENTS

## P8Z ELEMENTS ESPECIALS PER A REVESTIMENTS

## P8Z0- ARMADURA PER A ARREBOSATS, ENGUIXATS I PINTURES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P8Z0-47LK.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació d'una malla de fibra de vidre revestida de PVC, utilitzada per a donar cohesió a un revestiment continu, principalment en punts de discontinuïtat del suport.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig i preparació de la malla (retalls, cavalcaments, etc.)
- Estesa de la malla sobre el revestiment
CONDICIONS GENERALS:
La malla ha de quedar situada aproximadament al mig del gruix del revestiment.
Ha de cobrir tota la superfície per armar.
Ha de formar una superfície plana, sense bosses.
Ha de quedar ben adherida al revestiment.
Cavalcament entre armadures: >= 12 cm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La malla s'ha de fixar per pressió sobre el revestiment fresc.
El procés d'aplicació ha de constar d'una primera capa de revestiment, col·locació de l'armadura i a continuació la capa d'acabat.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
Aquest criteri inclou les pèrdues de material corresponents a retalls i cavalcaments.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## P9 FERMS I PAVIMENTS

## P93 BASES, SOLERES I RECRESCUDES

### P93I- RECRESCUDA I ANIVELLAMENT DEL SUPORT AMB PASTA AUTOANIVELLANT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P93I-HZ6A,P93I-HZ6B.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de recrescudes i capes de millora i anivellament de paviments.
S'han considerat els tipus següents:
- Recrescuda del suport de paviments amb terratzo
- Recrescuda del suport de paviments amb morter de ciment
- Capa de millora del suport anivellat amb pasta allisadora
- Formació de base per a paviment flotant amb llosa de formigó de 5 cm de gruix

- Capa de neteja i anivellament amb morter de ciment
L'execució de la unitat d'obra inclou les operacions següents:
En la capa de millora del suport anivellat amb pasta allisadora:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de la pasta allisadora
CAPA DE MILLORA DEL SUPORT ANIVELLAT AMB PASTA ALLISADORA:
La capa de millora ha d'estar ben adherida al suport i ha de formar una superfície plana, fina, llisa i de porositat homogènia.
Toleràncies d'execució:
- Nivell: ± 10 mm
- Gruix: ± 1 mm
- Horitzontalitat: ± 4 mm/2 m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
PASTA ALLISADORA:
L'aplicació de la pasta s'ha de fer a una temperatura ambient entre 5°C i 30°C.
El suport ha de tenir la planor, el nivell i l'horitzontalitat previstos. Ha de tenir un grau d'humitat <= 2,5%.
Ha d'estar sanejat i net de matèries que dificultin l'adherència.
La pasta s'ha de preparar amb un 20 a 25% d'aigua i s'ha de deixar reposar 5 min si és d'assecat ràpid i de 20 a 30 min si és d'assecat lent.
L'aplicació s'ha de fer d'acord amb les instruccions del fabricant.
La capa de millora no s'ha de trepitjar durant les 4 h següents a la seva aplicació si és una pasta d'assecatge ràpid i durant 24 h si és d'assecatge lent.
S'ha d'esperar de 24 a 72 h per col·locar el paviment.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT, amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
RECRESCUDA I CAPA DE MILLORA:
No hi ha normativa de compliment obligatori.

---

## P9 FERMS I PAVIMENTS

## P93 BASES, SOLERES I RECRESCUDES

## P93L- SOLERA DE FORMIGÓ NO ESTRUCTURAL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P93L-B3EB.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de solera amb formigó per a suport del paviment.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació i comprovació de la superfície d'assentament
- Muntatge d'encofrats
- Col·locació del formigó
- Execució de juntsde dilatació i formigonament
- Protecció del formigó fresc i curat
- Desmuntatge dels encofrats
CONDICIONS GENERALS:
No ha de tenir esquerdes ni discontinuïtats.
La superfície acabada ha d'estar reglejada.
Ha de tenir la textura uniforme, amb la planor i el nivell previstos.
Ha de tenir juntsde dilatació fets a distàncies no superiors a 25 m; han de ser de 2 cm d'amplària i han d'estar plens d'un material flexible.
Els juntsde formigonat han de ser de tot el gruix i s'ha de procurar de fer-los coincidir amb els juntsde retracció.
La resistència característica del formigó es comprovarà d'acord amb l'article 57 del CODI ESTRUCTURAL.
Toleràncies d'execució:
- Gruix: - 10 mm, + 15 mm
- Nivell: ± 10 mm
- Planor: ± 5 mm/3 m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El formigonament s'ha de fer a una temperatura ambient entre 5°C i 40°C.
S'ha de vibrar fins a aconseguir una massa compacta, sense que es produeixin segregacions.
Durant el temps de cura i fins a aconseguir el 70% de la resistència prevista, s'ha de mantenir la superfície del formigó humida. Aquest procés ha de durar com a mínim:
- 15 dies en temps calorós i sec
- 7 dies en temps humit
El paviment no s'ha de trepitjar durant les 24 h següents a la seva formació.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT, amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.

---

## P9 FERMS I PAVIMENTS

## P93 BASES, SOLERES I RECRESCUDES

## P93M- SOLERA DE FORMIGÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P93M-JQC1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de solera amb formigó per a suport del paviment.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació i comprovació de la superfície d'assentament
- Muntatge d'encofrats
- Col·locació del formigó
- Execució de juntsde dilatació i formigonament
- Protecció del formigó fresc i curat
- Desmuntatge dels encofrats

CONDICIONS GENERALS:
No ha de tenir esquerdes ni discontinuïtats.
La superfície acabada ha d'estar reglejada.
Ha de tenir la textura uniforme, amb la planor i el nivell previstos.
Ha de tenir juntsde dilatació fets a distàncies no superiors a 25 m; han de ser de 2 cm d'amplària i han d'estar plens d'un material flexible.
Els juntsde formigonat han de ser de tot el gruix i s'ha de procurar de fer-los coincidir amb els juntsde retracció.
La resistència característica del formigó es comprovarà d'acord amb l'article 57 del CODI ESTRUCTURAL.
Toleràncies d'execució:
- Gruix: - 10 mm, + 15 mm
- Nivell: ± 10 mm
- Planor: ± 5 mm/3 m

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El formigonament s'ha de fer a una temperatura ambient entre 5°C i 40°C.
S'ha de vibrar fins a aconseguir una massa compacta, sense que es produeixin segregacions.
Durant el temps de cura i fins a aconseguir el 70% de la resistència prevista, s'ha de mantenir la superfície del formigó humida. Aquest procés ha de durar com a mínim:
- 15 dies en temps calorós i sec
- 7 dies en temps humit

El paviment no s'ha de trepitjar durant les 24 h següents a la seva formació.

3.- UNITAT I CRITERI D'AMIDAMENT

## P9D PAVIMENTS DE PECES CERÀMIQUES

## P9D5- PAVIMENT DE RAJOLA DE GRES

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9D5-35ZE,P9D5-35ZJ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de paviment de rajola de gres premsat o extruït col·locat amb morter adhesiu.
S'han considerat les següents col·locacions:
- A truc de maceta
- A estesa
L'execució de la unitat d'obra inclou les operacions següents:
Col·locació a truc de maceta:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de les peces a truc de maceta amb morter adhesiu
- Reblert dels junts
Col·locació a l'estesa:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de la base de morter
- Humectació de les peces per col·locar
- Col·locació de les peces del paviment
- Assentament de les peces col·locades
- Reblert dels junts amb beurada de ciment
CONDICIONS GENERALS:
En el paviment no hi ha d'haver peces trencades, esquerdades, escantonades ni d'altres defectes superficials.
No hi ha d'haver ressalts entre les peces.
La superfície acabada ha de tenir una textura i color uniformes.
Les peces han d'estar ben adherides al suport i han de formar una superfície plana.
S'han de respectar els junts propis del suport.
L'especejament ha de complir les especificacions subjectives requerides per la DF.
L'amplària dels junts ha de ser constant en tota la superfície per pavimentar.
Toleràncies d'execució:
- Nivell: ± 10 mm
- Planor: ± 4 mm/2 m
- Celles: <= 1 mm
- Rectitud dels junts (amidada sobre els eixos dels junts): ± 2 mm/2 m
COL·LOCAT A TRUC DE MACETA:
Les peces han d'estar col·locades deixant junts de 4 a 10 mm entre elles, i de 3 mm en el perímetre.
Els junts s'han de reblir amb morter.
Toleràncies d'execució:
- Gruix dels junts: ± 2 mm
COL·LOCAT A ESTESA:
Les peces han d'estar col·locades deixant junts d'1 a 3 mm entre elles, i de 3 mm en el perímetre.
Els junts s'han de rejuntar amb beurada de ciment blanc i, eventualment, amb colorants.
Toleràncies d'execució:
- Gruix dels junts: ± 0,5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La col·locació s'ha de fer a temperatura ambient >= 5°C.
La superfície del suport ha de ser neta i seca.
S'han de barrejar les peces de caixes diferents per tal d'evitar possibles diferències de tonalitat.

El morter adhesiu s'ha de preparar i s'ha d'aplicar amb aplanadora dentada, segons les instruccions del fabricant.
S'han de col·locar a truc de maceta sobre una superfície contínua d'assentament i s'han de collar amb morter adhesiu. S'ha d'esperar 24 h i després s'han de reblir els junts.
El paviment no s'ha de trepitjar durant les 24 h següents a la seva col·locació o el que indiqui la DT.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT, amb deducció de la superfície corresponent a obertures, d'acord amb els criteris següents:
- Obertures <= 1 m2: No es dedueixen
- Obertures > 1 m2: Es dedueix el 100%
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Neteja i preparació de la superfície d'assentament.
- Replanteig de l'especejament.
- Col·locació de les peces a truc de maceta amb morter adhesiu.
- Reblert dels junts.
- Neteja del paviment.
- Inspecció visual de l'unitat acabada.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Quan s'observin irregularitats de replanteig, s'hauran de corregir abans de completar el paviment.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.
La suspensió dels treballs i la correcció de les no conformitats observades aniran a càrrec del Contractista.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Inspecció visual de la unitat acabada i control de les condicions geomètriques d'acabat.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de fer segons les indicacions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.
No es permetrà la continuació dels treballs fins que no estiguin solucionats els errors d'execució.

---

## P9 FERMS I PAVIMENTS

## P9E PAVIMENTS DE PANOT I RAJOLA HIDRÀULICA

## P9E1- PAVIMENT DE PANOT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9E1-V6R9.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de paviments de panot.
S'han considerat els casos següents:
- Paviments de panot col·locats a l'estesa amb sorra-ciment, amb o sense suport de 3 cm de sorra
- Paviments de panot col·locats a truc de maceta amb morter, amb o sense suport de 3 cm de sorra
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
En la col·locació a l'estesa amb sorra-ciment:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de la capa de sorra, en el seu cas
- Col·locació de la sorra-ciment
- Col·locació de les peces de panot
- Humectació de la superfície
- Confecció i col·locació de la beurada
En la col·locació a truc de maceta amb morter:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de la capa de sorra, en el seu cas
- Col·locació de la capa de morter
- Humectació de les peces per col·locar
- Col·locació de les peces
- Humectació de la superfície
- Confecció i col·locació de la beurada
CONDICIONS GENERALS:
El paviment ha de formar una superfície plana,sense resalts entre peces, uniforme i s'ha d'ajustar a les alineacions i a les rasants previstes.
En el paviment no hi ha d'haver peces escantonades, taques ni d'altres defectes superfícials.
Les peces han d'estar col·locades a tocar i alineades.
Les peces han de quedar ben assentades, amb la cara més polida o més ample a dalt.
Les peces han d'estar disposades formant alineacions rectes, segons l'especejament definit en la DT.
Excepte en les zones classificades com d'ús restringit pel CTE no s'admetran les discontinuïtats següents en el propi paviment ni en els encontres d'aquest amb altres elements:
- Imperfeccions o irregularitats que suposin una diferència de nivell de més de 6 mm
- Els desnivells que no superin els 50 mm s'han de resoldre amb una pendent que no excedeixi del

25%
- En les zones interiors de circulació de persones, no presentarà perforacions o forats pels que es pugui introduir una esfera de 15 mm de diàmetre
Els acords del paviment han de quedar fets contra les voreres o els murets.
Ha de tenir juntsl aterals de contracció cada 25 m2, de 2 cm de gruix, segellats amb sorra. Aquests juntshan d'estar el més aprop possible dels juntsde contracció de la base.
Els juntsque no siguin de contracció han de quedar plens de beurada de ciment pòrtland.
Pendent transversal: >= 2%
Toleràncies d'execució:
- Nivell: ± 10 mm
- Planor: ± 4 mm/2 m
- Rectitud dels juntsl: ± 3 mm/2 m
- Replanteig: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'han de col·locar començant per les vorades o els murets.
Una vegada col·locades les peces s'ha d'estendre la beurada.
No s'ha de trepitjar després d'haver-se abeurat, fins al cap de 24 h a l'estiu i 48 h a l'hivern.
COL·LOCACIÓ AMB MORTER I JUNTS REBLERTS AMB BEURADA:
S'han de suspendre els treballs quan la temperatura sigui < 5°C.
Les peces per col·locar han de tenir la humitat necessària per tal que no absorbeixin l'aigua del morter.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície executada d'acord amb les especificacions de la DT, amb deducció de la superfície corresponent a obertures interiors, d'acord amb els criteris següents:
- Obertures <= 1,5 m2: No es dedueixen
- Obertures > 1,5 m2: Es dedueix el 100%
Aquests criteris inclouen l'acabament específic dels acords a les vores, sense que comporti l'ús de materials diferents d'aquells que normalment conformen la unitat.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PAVIMENT COL·LOCAT SOBRE MORTER O LLIT DE SORRA
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Control d'execució i acabats de la base de formigó sobre la que es col·loquen les peces de panot.
- Control de l'aspecte de les peces abans de la seva col·locació.
- Inspecció del procés d'execució, d'acord a les indicacions del plec.
- Comprovació topogràfica de les alineacions i condicions generals d'acabat.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Inspecció visual de la unitat acabada.
- Comprovació topogràfica de les alineacions i condicions generals d'acabat.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de fer segons les indicacions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista, dels defectes de col·locació segons les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

## P9 FERMS I PAVIMENTS

## P9P PAVIMENTS SINTÈTICS I DE LINÒLEUM

## P9PC- PAVIMENT AMB GESPA SINTÈTICA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9PC-6SWL.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Paviment amb gespa sintètica, col·locat sobre cinta adhesiva amb adhesiu de poliuretà.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació i comprovació de la superfície d'assentament
- Estesa i preparació dels rotlles de gespa sintètica (ajustaments, retalls, etc )
- Pegat a testa dels junts d'unió amb cinta adhesiva i adhesiu de poliuretà
- Estesa d'una capa de sorra de sílice sobre el paviment
- Raspallat de la sorra
- Neteja del paviment amb aigua
CONDICIONS GENERALS:
El revestiment no ha d'estar esfilagarsat, no ha de tenir taques d'adhesiu ni d'altres defectes superficials.
Ha d'estar ben assentat sobre el suport i ha de formar una superfície plana i llisa de textura uniforme.
No hi ha d'haver bosses ni ressalts entre les tires.
S'han de respectar els junts propis del suport.
Els junts entre les tires s'han de col·locar a tocar.
Tot el pèl ha d'estar col·locat en la mateixa direcció.
Toleràncies d'execució:
- Nivell: ± 5 mm
- Planor: ± 5 mm/2 m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'ha de treballar amb pluja, neu o vent superior als 60 km/h.
La col·locació s'ha de realitzar a temperatura adequada per a la manipulació de l'adhesiu.
El suport ha d'estar net, sense irregularitats que puguin perforar el revestiment, i ha de complir les condicions de planor i nivell que s'exigeixin al revestiment acabat.
El paviment no ha de quedar adherit a la superfície a revestir en cap punt.
L'adhesiu s'ha d'aplicar amb espàtula dentada. El seu ús ha de respondre a les instruccions del fabricant.
Un cop col·locat el paviment s'han de netejar les taques de l'adhesiu.
El paviment no s'ha de trepitjar durant les 5 h següents a la seva col·locació.
El raspallat de la capa de sorra de sílice s'ha de fer en direcció contrària al pèl i fins que quedi una capa de gruix homogeni.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
No inclou la capa de drenatge de grava i sorra, la malla geotèxtil de protecció, i la seva col·locació.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## P9 FERMS I PAVIMENTS

## P9U SÒCOLS

### P9U1- MITJA CANYA DE MORTER DE CIMENT, PER A SÒCOL (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9U1-HCHA,P9U1-HCHB,P9U1-HCHC,P9U1-HCHD.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de mitja canya amb morter de ciment elaborat a l'obra.
L'execució de la unitat d'obra inclou les operacions següents:
- Neteja i preparació de la superfície de suport
- Execució de la mitja canya
- Curat del morter

CONDICIONS GENERALS:
En l'element acabat no hi ha d'haver pols, fissures, forats o d'altres defectes.
Ha de ser continu i ha de cobrir tota la llargària del racó.
Ha de quedar ben adherit al suport.
S'han de respectar els juntsestructurals.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C. Si, un cop executat el treball, es donen aquestes condicions, s'ha de revisar la feina feta i s'han de refer les parts afectades.
Els paraments d'aplicació han d'estar sanejats, nets i humits. Si cal, es poden repicar abans.
Durant l'adormiment s'ha d'humitejar la superfície.
S'han d'evitar cops i vibracions que puguin afectar el morter durant l'adormiment.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## P9 FERMS I PAVIMENTS

## P9U SÒCOLS

### P9U9- SÒCOLS DE MATERIAL SINTÈTIC, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9U9-6Y48.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Sòcol format amb peces col·locades amb morter adhesiu o adhesiu especial.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació i comprovació de la superfície d'assentament
- Col·locació de les peces amb morter adhesiu o adhesiu especial
- Col·locació de la beurada
- Neteja del sòcol acabat

CONDICIONS GENERALS:
En el sòcol no hi ha d'haver peces esquerdades, trencades, escantonades ni tacades.
No hi ha d'haver ressalts entre les peces.
La superfície acabada ha de tenir una textura i color uniformes.
Les peces han d'estar recolzades en el paviment, ben adherides al suport i han de formar una superfície plana i llisa.
S'han de respectar els juts estructurals.
Les peces s'han de col·locar tot deixant juts entre elles >= 1 mm.
Els juts s'han de rejuntar amb beurada de ciment blanc i, eventualment, amb colorants.
Toleràncies d'execució:
- Nivell: ± 5 mm
- Planor: ± 4 mm/2 m
- Celles: <= 1 mm
- Horitzontalitat: ± 2 mm/2 m

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'han d'aturar els treballs quan la temperatura sobrepassi els límits de 5°C i 35°C. Si un cop fets els treballs es donaven aquestes condicions, s'ha de revisar la feina feta 48 h abans i s'han de refer les parts afectades.
El morter adhesiu s'ha de preparar i s'ha d'aplicar segons les instruccions del fabricant.
El morter s'ha d'estendre per tota la bescara de la peça.
Sobre paraments enguixats i per tal de garantir una bona adherència, s'ha d'utilitzar un material adhesiu especial per a guix.
La rejuntada s'ha de fer al cap de 24 h.
Cal eliminar les restes de beurada i netejar la superfície.

3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions del projecte, amb deducció de la llargària corresponent a obertures d'acord amb els criteris següents:
- Obertures d'amplària <= 1 m: Es dedueix el 50%
- Obertures d'amplària > 1 m: Es dedueix el 100%

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## P9 FERMS I PAVIMENTS

## P9Z ELEMENTS ESPECIALS PER A PAVIMENTS

## P9Z3- ARMADURA PER A PAVIMENTS, EN MALLA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

P9Z3-DP8J.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Muntatge i col·locació de l'armadura formada per barres corrugades, malla electrosoldada o conjunt de barres i/o malles d'acer, en formació d'armadura passiva d'elements estructurals de formigó, a l'excavació, a l'encofrat o ancorades a elements de formigó existents, o soldades a perfils d'acer.
S'han considerat les armadures per als elements següents:
- Paviments de formigó
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Tallat i doblegat de l'armadura
- Neteja de les armadures
- Neteja del fons de l'encofrat
- Col·locació dels separadors
- Muntatge i col·locació de l'armadura
- Subjecció dels elements que formen l'armadura
- Subjecció de l'armadura a l'encofrat
CONDICIONS GENERALS:
Per a l'elaboració, manipulació i muntatge de les armadures s'ha de seguir les indicacions del CODI ESTRUCTURAL i l'UNE 36831.
Els diàmetres, la forma, les dimensions i la disposició de les armadures han de ser les que s'especifiquen a la DT. El nombre de barres no ha de ser mai inferior a l'especificat a la DT.
Les barres no han de tenir defectes superficials ni esquerdes.
Les armadures han de ser netes, no han de tenir òxid no adherent, pintura, greix ni d'altres substàncies que puguin perjudicar a l'acer, al formigó o a l'adherència entre ells.
La disposició de les armadures ha de permetre un formigonament correcte de la peça, de manera que totes les barres quedin recobertes de formigó.
En barres situades per capes, la separació entre elles ha de permetre el pas d'un vibrador intern.
La secció equivalent de les barres de l'armadura no ha de ser inferior al 95,5% de la secció nominal.
Els empalmaments entre barres han de garantir la transmissió de forces d'una barra a la següent, sense que es produeixin lesions en el formigó proper a la zona d'empalmament.
No hi ha d'haver més empalmaments dels que consten a la DT o autoritzi la DF.
Els empalmaments han de quedar allunyats de les zones on l'armadura treballa a la màxima càrrega.
Els empalmaments es poden realitzar per solapa o per soldadura.

Per a realitzar un altre tipus d'empalmament es requerirà disposar d'assaigs que demostrin que garanteixen de forma permanent una resistència a la ruptura no inferior a la de la menor de les dues barres que s'uneixen i que el moviment relatiu entre elles no sigui superior a 0,1 mm.
L'armat de la ferralla s'ha de realitzar mitjançant lligat amb filferro o per aplicació de soldadura no resistent. La disposició dels punts de lligat ha de complir l'especificat en l'apartat 49.4.3.1 del CODI ESTRUCTURAL.
La soldadura no resistent, ha de complir l'especificat en l'article 49.4.3.2 del CODI ESTRUCTURAL, seguint els procediments establerts en la UNE 36832.
La realització dels empalmaments pel que fa al procediment, la disposició dins la peça, la llargària dels solapaments i la posició dels diferents empalmaments en barres properes, ha de seguir les prescripcions del CODI ESTRUCTURAL a l'article 49.5.2.
A les solapes no s'han de disposar ganxos ni potes.
L'empalmament per soldadura s'ha de fer seguint les prescripcions de l'article 49.5.2.5 del CODI ESTRUCTURAL amb els procediments descrits en la UNE 36832.
No es poden disposar empalmaments per soldadura a les zones de forta curvatura de l'armadura.
Queda prohibida la soldadura d'armadures galvanitzades o amb recobriments epoxídics.
Els empalmaments mitjançant dispositius mecànics d'unió, s'han de realitzar segons les especificacions de la DT i les indicacions del fabricant, en qualsevol cas, s'ha de complir l'especificat en l'article 49.5.2.6 del CODI ESTRUCTURAL.
Les armadures han d'estar subjectades entre elles i a l'encofrat de manera que mantinguin la seva posició durant l'abocada i la compactació del formigó.
Les armadures d'espera han d'estar subjectades a l'engraellat dels fonaments.
Quan és necessari recobriments superiors a 50 mm, s'ha de col·locar una malla de repartiment en mig d'aquest gruix, en la zona de tracció, segons s'especifica a l'article 44.2.1.1 del CODI ESTRUCTURAL, excepte en el cas d'elements que hagin de quedar soterrats.
La DF ha d'aprovar la col·locació de les armadures abans de començar el formigonament.
Per a qualsevol classe d'armadures passives, inclosos els estreps, el recobriment no ha de ser inferior, en cap punt, als valors determinats en la taula de l'apartat 44 del CODI ESTRUCTURAL, en funció de la classe d'exposició ambiental a que es sotmetrà el formigó armat, segons l'article 27.1 del CODI ESTRUCTURAL.
Els sistemes auxiliars per a l'armat de la peça formats per barres o filferros, encara que no formen part de l'armadura, han de complir els recobriments mínims, a efectes de garantir la durabilitat de la peça.
Distància lliure armadura  parament: >= D màxim, >= 0,80 granulat màxim
(on: D diàmetre armadura principal o diàmetre equivalent)
Distància lliure barra doblegada - parament:  >= 2 D
La realització dels ancoratges de les barres al formigó, pel que fa a la forma, posició dins la peça i llargària de les barres ha de seguir les prescripcions del CODI ESTRUCTURAL a l'article 49.5.1.
Toleràncies d'execució:
- Llargària solapa:  - 0 mm, + 50 mm
- Llargària d'ancoratge i solapa: -0,05L (<= 50 mm, mínim 12 mm), + 0,10 L (<=50 mm)
- Posició:
- En series de barres paral·leles:  ± 50 mm
- En estreps i cèrcols:  ± b/12 mm
(on b es el costat menor de la secció de l'element)
Les toleràncies en el recobriment i la posició de les armadures han de complir l'especificat a l'UNE 36831.
MALLA ELECTROSOLDADA:
El empalmament per solapa de malles electrosoldades ha de complir l'especificat en l'article 49.5.2.4 del CODI ESTRUCTURAL.
Llargària de la solapa en malles acoblades: a x Lb neta:
(on: a es el coeficient de la taula 49.5.2.2 del CODI ESTRUCTURAL; Lb neta valor de l'apartat 49.5.1.4 del CODI ESTRUCTURAL)
- Ha de complir, com a mínim: >= 15 D, >= 20 cm
Llargària de la solapa en malles superposades:
- Separació entre elements solapats (longitudinal i transversal) > 10 D: 1,7 Lb
- Separació entre elements solapats (longitudinal i transversal) <= 10 D: 2,4 Lb
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
El doblegat de les armadures s'ha de fer a temperatura ambient, mitjançant doblegadores mecàniques i a velocitat constant, amb l'ajut de mandrí, de manera que es garanteixi una curvatura constant en tota la zona.
No s'han d'adreçar colzes excepte si es pot verificar que no es faran malbé.
S'han de col·locar separadors per a garantir el recobriment mínim i no han de produir fissures ni

filtracions al formigó. La disposició dels separadors ha de complir l'especificat en la taula 49.8.2 del CODI ESTRUCTURAL.
Els separadors han d'estar expressament dissenyats per a aquesta finalitat i han de complir l'especificat en l'article 43.4.2 del CODI ESTRUCTURAL. Es prohibeix l'ús de fusta o qualsevol material residual de construcció (maó, formigó, etc.). Si han de quedar vistos, no poden ser metàl·lics.
En cas de realitzar soldadures s'han de seguir les disposicions de la norma UNE 36832 i les han d'executar operaris qualificats d'acord amb la normativa vigent.
3.- UNITAT I CRITERI D'AMIDAMENT
MALLA ELECTROSOLDADA:
m2 de superfície amidada segons les especificacions de la DT.
Aquest criteri inclou les pèrdues i increments de material corresponents a retalls i empalmaments.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Documento Básico de Seguridad estructural DB-SE, parte II del CTE, aprobado por el Real Decreto 314/2006.
Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Recepció i aprovació del informe d'especejament per part del contractista.
- Inspecció abans del formigonat de totes les unitats d'obra estructurals amb observació dels següents punts:
- Tipus, diàmetre, longitud i disposició de les barres i malles col·locades.
- Rectitud.
- Lligams entre les barres.
- Rigidesa del conjunt.
- Netedat dels elements.
CRITERIS DE PRESA DE MOSTRES:
Bàsicament el control de l'execució està confiat a la inspecció visual de les persones que l'exerceixen, amb la qual cosa el seu bon sentit, coneixements tècnics i experiència son fonamentals per aconseguir el nivell de qualitat previst.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Desautorització del formigonat fins que no es prenguin les mesures de correcció adequades.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAB TANCAMENTS PRACTICABLES D'ACER EN PERFILS LAMINATS

### PAB0- PORTA DE PERFILS D'ACER LAMINAT, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAB0-616W,PAB0-617B.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Porta metàl·lica o de fusta o trapa metàl·lica practicable, col·locada amb tots els mecanismes per a un funcionament correcte d'obertura i tancament, amb els tapajunts col·locats.
S'han considerat els tipus següents:
- Porta de perfils metàl·lics amb bastiment, col·locades sobre obra.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Col·locació, aplomat i anivellat del bastiment, i segellat dels junts
- Muntatge de les fulles mòbils
- Eliminació dels rigiditzadors
- Col·locació dels mecanismes i els tapajunts
- Neteja de tots els elements
CONDICIONS GENERALS:
Ha d'obrir i tancar correctament.
No ha de gravitar cap tipus de càrrega sobre el bastiment.
Distància entre els ancoratges galvanitzats: <= 60 cm
Distància d'ancoratges galvanitzats als extrems: <= 30 cm
Franquícia entre la fulla i el bastiment: <= 0,2 cm
PORTA METÀL.LICA O DE FUSTA:
El bastiment ha d'estar ben aplomat, sense deformacions dels angles, al nivell i al pla previstos.
Els ribets i els junts de materials tous han de ser nets i han de quedar lliures.
D'acord amb l'envidrament que porti ha de complir els valors d'aillament tèrmic i acústic previstos.
La porta, un cop incorporada a l'obra, ha de complir els requisits de resistència mecànica, seguretat d'ús i higiene i salut establerts a la norma UNE 85103.
El bastiment ha d'estar travat a la paret per mitjà d'ancoratges galvanitzats.
Franquícia entre la fulla i el paviment: >= 0,2 cm, <= 0,4 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Nivell previst: ± 5 mm
- Horitzontalitat: ± 1 mm
- Aplomat: ± 2 mm/m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Per a la col·locació del bastiment s'han de preveure els gruixos dels acabats del parament o del suport al qual estigui subjecte.
S'ha de col·locar amb l'ajut d'elements que garanteixin la protecció del bastiment contra els impactes durant tot el procés constructiu i d'altres que mantinguin l'escairat fins que quedi ben travat a l'obra.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
PORTA METÀL.LICA O DE FUSTA:
* UNE 85103:1991 EX Puertas y cancelas pivotantes abatibles. Definiciones, clasificación y características.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAF TANCAMENTS PRACTICABLES D'ALUMINI

### PAF7- FINESTRA PRACTICABLE D'ALUMINI AMB TARJA FIXA, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAF7-7UD1,PAF7-7RXU.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Finestres, balconeres o portes d'alumini, anoditzat o lacat, amb tots els seus mecanismes per a un funcionament correcte d'obertura i tancament, col·locades sobre un bastiment de base, i amb els tapajunts col·locats.
L'execució de la unitat d'obra inclou les operacions següents:
Finestres o balconeres:
- Replanteig
- Col·locació, aplomat i anivellat de la finestra o balconera
- Subjecció definitiva a la paret o bastiment de base i segellat
- Eliminació de rigiditzadors i tapat de forats si és el cas
- Col·locació dels mecanismes
- Col·locació dels tapajunts
- Neteja de tots els elements
CONDICIONS GENERALS:
Ha d'obrir i tancar correctament.
El bastiment ha d'estar ben aplomat, sense deformacions dels angles, al nivell i al pla previstos.
No ha de gravitar cap tipus de càrrega sobre el bastiment.
Els ribets i els junts de materials tous han de ser nets i han de quedar lliures.
D'acord amb l'envidrament que porti ha de complir els valors d'aillament tèrmic i acústic previstos.
Franquícia entre la fulla i el bastiment: <= 0,2 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Nivell previst: ± 5 mm
- Horitzontalitat: ± 1 mm/m
- Aplomat: ± 2 mm/m
- Pla previst del bastiment respecte de la paret: ± 2 mm
FINESTRES O BALCONERES:
El bastiment ha d'estar subjectat al bastiment de base amb visos autorroscants o de rosca mètrica, d'acer inoxidable o cadmiat, separats 60 cm com a màxim, i a menys de 30 cm dels extrems.
Una vegada col·locada la finestra o balconera ha de mantenir els valors de permeabilitat a l'aire, estanquitat a l'aigua i resistència al vent indicats a la DT.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a la col·locació del bastiment s'han de preveure els gruixos dels acabats del parament o del suport al qual estigui subjecte.
S'ha de col·locar amb l'ajut d'elements que garanteixin la protecció del bastiment contra l'impacte durant tot el procés constructiu, i d'altres que mantinguin l'escairat fins que quedi ben travat.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Comprovació geomètrica de l'element de tancament
- Replanteig

- Col·locació, aplomat i anivellat de la finestra o balconada
- Subjecció definitiva a la paret o bastiment de base i segellat
- Eliminació de rigiditzadors i tapat de forats si és el cas
- Col·locació dels mecanismes
- Col·locació dels tapajunts
- Neteja de tots els elements

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Inspecció visual i comprovació de funcionament de la unitat acabada.

CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de fer segons les indicacions de la DF.

CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.
La suspensió dels treballs i la correcció de les no conformitats observades aniran a càrrec del Contractista.

CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No hi ha condicions especificades per a l'execució de la partida.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAN BASTIMENTS DE BASE PER A FINESTRES, BALCONERES, PORTES I ARMARIS

## PAN5- BASTIMENT DE BASE DE TUB D'ACER, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAN5-7ZKG,PAN5-7ZKP,PAN5-7Z6C,PAN5-7Z38.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Bastiments de base amb tubs d'acer pintat o galvanitzat.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Col·locació prèvia, aplomat i anivellat
- Obertura dels caixetins per a introduir les potes de fixació
- Fixació definitiva i neteja

CONDICIONS GENERALS:
Ha d'estar ben aplomat, sense deformacions dels angles, i al nivell i al pla previstos.
No ha de gravitar cap tipus de càrrega sobre el bastiment.

Si el perfil no està galvanitzat, haurà d'estar pintat amb dues mans d'emprimació antioxidant.
Ha d'estar travat a l'obra per mitjà dels elements d'ancoratge.
La unió del bastiment de base amb la paret o el suport ha d'estar segellada en tot el perímetre.
Distància entre elements travats a l'obra: <= 60 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Nivell previst: ± 10 mm
- Horitzontalitat: ± 1 mm
- Aplomat (enfora): 3 mm
- Pla previst del bastiment respecte a la paret: ± 2 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

El pla en què s'ha de col·locar el bastiment de base ha de ser segons el gruix que tingui l'acabat del parament.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat mesurada segons les especificacions de la DT.
La unitat d'obra no inclou el cost de la col·locació del bastiment, que és imputable a la unitat d'obra d'execució de la paret on va col·locat si la superfície del bastiment és igual o inferior a 4 m2, o a una unitat d'obra específica de col·locació de bastiments en altre cas.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

No hi ha normativa de compliment obligatori.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAP BASTIMENTS I FOLRATS DE BASTIMENTS DE BASE PER A PORTES I ARMARIS

### PAP0- BASTIMENT DE FUSTA DE PI ROIG PER A PINTAR, PER A PORTES DE FULLES BATENTS, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAP0-374T.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Bastiments de fusta, col·locats directament sobre fàbrica.
S'han considerat els tipus següents:
- Bastiments de base per a folrar
- Bastiments de base per a pintar

L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Col·locació prèvia , aplomat i anivellat

- Fixació definitiva
- Neteja i protecció
CONDICIONS GENERALS:
El bastiment ha d'estar ben aplomat, sense deformacions dels angles, al nivell i al pla previstos.
No ha de gravitar cap tipus de càrrega sobre el bastiment.
El bastiment ha d'estar travat a l'obra per mitjà d'ancoratges galvanitzats.
Si els muntants del bastiment no s'encasten en el paviment, s'han de fixar a aquest paviment per mitjà de fixacions mecàniques.
Distància entre ancoratges: <= 60 cm
Distància dels ancoratges als extrems: <= 30 cm
Nombre ancoratges al cabiró superior:
- Amplària 40 <= a <= 100 cm: 2
- Amplària 100 <= a <= 175 cm: 3
- Amplària > 175 cm: 4
Encastament dels muntants en el paviment: >= 5 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Nivell previst: ± 10 mm
- Horitzontalitat: ± 1 mm
- Aplomat: ± 3 mm
- Pla previst del bastiment respecte a la paret: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El pla en què s'ha de col·locar el bastiment ha de ser segons el gruix que tingui l'acabat del parament. La manera de col·locar el bastiment ha de fer possible la col·locació posterior del tapajunts.
S'ha de col·locar amb l'ajuda d'elements que garanteixin la protecció del bastiment contra els impactes durant tot el procés constructiu i d'altres que mantinguin l'escairat fins que quedi ben travat a l'obra. En treure aquestes proteccions s'han de tapar els forats amb materials adequats (massilles, tacs, etc.).
El bastiment s'ha de travar a la paret a mesura que aquesta es va aixecant.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
La unitat d'obra no inclou el cost de la col·locació del bastiment, que és imputable a la unitat d'obra d'execució de la paret on va col·locat si la superfície del bastiment és igual o inferior a 4 m2, o a una unitat d'obra específica de col·locació de bastiments en altre cas.

### PAQ7- FULLA BATENT PER A PORTA INTERIOR AMB ACABAT DE TAULER DE MELAMINA, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAQ7-AJAB.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Fulla per a porta batent, col·locada sobre el bastiment amb tota la ferramenta, frontisses, pany, etc.
S'han considerat les portes següents:
- Interiors
L'execució de la unitat d'obra inclou les operacions següents:
- Presentació de la porta
- Rectificació si cal
- Col·locació de la ferramenta
- Fixació definitiva
- Neteja i protecció
CONDICIONS GENERALS:
La porta ha d'obrir i tancar correctament.
Tota la ferramenta ha d'anar fixada al bastidor de cada fulla o bé al reforç.
La fulla que no porti tanca s'ha de fixar al bastiment per mitjà de dos passadors.
Toleràncies d'execució:
- Horitzontalitat: ± 1 mm
- Aplomat: ± 3 mm
- Pla previst de la fulla respecte al bastiment: ± 1 mm
- Posició de la ferramenta: ± 2 mm
PORTES D'ENTRADA O PORTES EXTERIORS O INTERIORS
Franquícia entre les fulles i el bastiment: <= 0,2 cm
Franquícia entre la fulla i el paviment: >= 0,2 cm, <= 0,4 cm
Fixacions entre cada fulla i el bastiment: >= 3
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi ha condicions específiques del procés constructiu.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Comprovació geomètrica de l'element de tancament
- Replanteig
- Col·locació, aplomat i anivellat de l'element
- Subjecció definitiva a la paret o bastiment de base i segellat
- Eliminació de rigiditzadors i tapat de forats si és el cas
- Col·locació dels mecanismes
- Col·locació dels tapajunts
- Neteja de tots els elements
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Inspecció visual i comprovació de funcionament de la unitat acabada.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'ha de permetre la continuació dels treballs fins que no estiguin solucionats els defectes d'execució.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAR PORTES PER A US COMERCIAL, INDUSTRIAL I DE SERVEIS COMUNS

### PAR5- PORTA SECCIONAL, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAR5-6NMM,PAR5-6NMN.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Portes de grans dimensions amb els accessoris i mecanismes necessaris per a possibilitar el seu accionament manual o automàtic, col·locades sobre fàbrica.
S'han considerat els elements següents:
- Porta seccional amb funcionament manual o amb operador electromecànic amb tots els mecanismes d'accionament i amb pany.
L'execució de la unitat d'obra inclou les operacions següents:
Portes seccionals:
- Replanteig
- Col·locació i ancoratge de guies, politges, etc.
- Muntatge de la porta
- Muntatge dels mecanismes d'accionament
- Connexionat elèctric, en el cas d'accionament amb operador electromecànic
- Equilibrat de la porta
- Neteja i protecció
CONDICIONS GENERALS:
Les portes han de quedar instal·lades en la posició que indica la DT i em el seu defecte la indicada per la DF.
PORTA BASCULANT, ENROLLABLE, EXTENSIBLE, RÀPIDA O SECCIONAL:
La porta ha de quedar al nivell i al pla previstos.
Els mecanismes de lliscament han de garantir un accionament suau i silenciós.
Les guies han de quedar fixades als paraments per mitjà d'ancoratges galvanitzats.
Distància entre ancoratges:
- Porta basculant, extensible, ràpida o seccional: <= 60 cm
- Porta enrotllable: <= 50 cm
Distància dels ancoratges als extrems: <= 30 cm
Franquícia fulla-paviment: <= 10 mm
Toleràncies d'instal·lació:
- Replanteig: ± 10 mm
- Nivell previst: ± 10 mm
- Horitzontalitat: ± 1 mm
- Aplomat de les guies: ± 2 mm

- Pla previst respecte a les parets: ± 2 mm
- Franquícia fulla-paviment: ± 2 mm
PORTA BASCULANT, ENROTLLABLE, EXTENSIBLE O SECCIONAL:
Ha de tenir topalls fixats als paraments per tal d'evitar cops en obrir-la.
PORTA RÀPIDA ,SECCIONAL:
Els accessoris i automatismes d'obertura i tancament han d'estar situats a la posició indicada a la DT o, en el seu defecte, la indicada per la DF.
Ha de tenir fetes les connexions elèctriques, d'acord amb l'esquema de la DT o les instruccions del fabricant.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de fixar definitivament les guies, s'ha de procedir a la col·locació de la fulla i a la seva anivellació i aplomat.
PORTA RÀPIDA ,SECCIONAL:
No s'han de produir danys a les portes ni als mecanismes durant el procés de muntatge.
3.- UNITAT I CRITERI D'AMIDAMENT
PORTA ENROTLLABLE, EXTENSIBLE, RÀPIDA O SECCIONAL:
m2 de superfície amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 8 de mayo de 1976, por la que se aprueba la Norma Tecnológica de la Edificación. NTE-PPA/1976: Particiones. Puertas. Acero.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAV PERSIANES, GELOSIES DE LAMES I PROTECCIONS SOLARS

### PAV9- PERSIANA ENROTLLABLE D'ALUMINI, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAV9-4VK0,PAV9-4VK1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conjunt de lamel·les enllaçades entre sí horitzontalment, col·locades entre guies i subjectades a un corró que permet aixecar-les.
S'han considerat els tipus de persianes següents:
- Persianes enrotllables d'alumini lacat
L'execució de la unitat d'obra inclou les operacions següents:
- Subministrament de les persianes en conjunts preparats per a muntar
- Introducció de les persianes a les guies

- Subjecció al corró
- Neteja
CONDICIONS GENERALS:
La persiana ha d'obrir i tancar correctament.
La persiana, el corró i els mecanismes d'elevació han de ser accessibles quan la persiana estigui desenrotllada.
Ha d'estar fixada al corró per mitjà de grapes.
A la lamel·la inferior hi ha d'haver dos tacs com a topalls.
Penetració de la persiana tancada
a l'interior de la caixa de la persiana: >= 10 cm
Franquícia entre la persiana i les guies: 5 mm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Horitzontalitat: ± 1 mm
- Aplomat: 2 mm/m (enfora)
- Verticalitat de les cadenes: ± 1 mm
- Franquícia entre la persiana i les guies: ± 1 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El procés de muntatge no ha de generar obstacles que puguin deteriorar els elements o dificultar-ne el moviment.
Previament han d'estar muntades les guies i els mecanismes d'elevació.
3.- UNITAT I CRITERI D'AMIDAMENT
PERSIANES D'ALUMINI LACAT:
m2 de superfície amidada segons les especificacions del projecte, d'acord amb els criteris següents:
- Amplària i alçària: Múltiples de 5 cm
- Unitats amb superfície < 1,75 m2: S'ha d'amidar 1,75 m2 per unitat
- Amplaria mínima: 1,5 m
Cal prendre el múltiple immediat superior en cas que la dimensió no ho sigui.
A la dimensió de l'alçària cal afegir-hi la dimensió necessària per a arribar a l'eix de suspensió.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Orden de 19 de octubre de 1974, por la que se aprueba la Norma Tecnológica de la Edificación.
NTE-FDP/1974: Fachadas. Defensas. Persianas.

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAY COL·LOCACIÓ DE TANCAMENTS I DIVISORIES PRACTICABLES

## PAY1- COL·LOCACIÓ DE BASTIMENTS EN PROCÉS DE FORMACIÓ DE PARETS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAY1-4XSW,PAY1-4XSR,PAY1-4XSU,PAY1-4XUK.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació de bastiments sense incloure el subministrament dels mateixos.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Anivellat i aplomat
- Fixació del bastiment
- Protecció i neteja
CONDICIONS GENERALS:
El bastiment ha d'estar ben aplomat, sense deformacions dels angles, al nivell i al pla previstos.
No ha de gravitar cap tipus de càrrega sobre el bastiment.
El bastiment ha d'estar travat a la paret per mitjà d'ancoratges galvanitzats.
Si el bastiment és per a porta i els muntants no s'encasten en el paviment, s'han de fixar a aquest mitjançant fixacions mecàniques.
Distància entre els ancoratges galvanitzats: <= 60 cm
Distància d'ancoratges galvanitzats als extrems: <= 30 cm
Nombre d'ancoratges en el cabiró superior: >= 2
Encastament dels muntants en el paviment: >= 5 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Nivell previst: ± 10 mm
- Horitzontalitat: ± 1 mm
- Aplomat: ± 3 mm
- Pla previst del bastiment respecte a la paret: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El pla en què s'ha de col·locar el bastiment ha de ser segons el gruix que tingui l'acabat del parament.
La col·locació del bastiment ha de possibilitar la del tapajunts.
S'ha de col·locar amb l'ajut d'elements que garanteixin la protecció del bastiment contra els impactes durant tot el procés constructiu i d'altres que mantinguin l'escairat fins que quedi ben travat a l'obra.
En treure aquestes proteccions s'han de tapar els forats amb materials adequats (massilles, tacs, etc.).
El bastiment es col·loca durant el procés de formació de la paret i s'ha de travar a ella a mesura que aquesta es puja.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
La unitat d'obra no inclou el subministrament del bastiment.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PA TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAZ ELEMENTS ESPECIALS PER A TANCAMENTS I DIVISÒRIES PRACTICABLES

## PAZ1- FERRAMENTA PER A FINESTRES I PORTES (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PAZ1-H9MO,PAZ1-HYP6.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Accessoris i material auxiliar de les ferramentes de portes i finestres.
S'han considerat els elements següents:
- Pany mestrejat de tres punts
- Tiradors d'acer inoxidable
L'execució de la unitat d'obra inclou les operacions següents:
Pany:
- Col·locació de la peça del pany a la porta o finestra i a la part fixa del tancament
- Muntatge i fixació dels elements
- Ajusts dels mecanismes
Tiradors:
- Replanteig
- Fixació dels elements
PANY DE TRES PUNTS:
Ha de funcionar correctament i ha de tenir un accionament suau.
S'ha d'encastar dins del forat oportú de la porta o finestra.
Ha de quedar fixat a la fulla amb els mecanismes previstos pel fabricant.
El passador i la caixa han de quedar alineats amb el pany.
Ha de quedar a una alçada del paviment no inferior a 95 cm ni superior a 105 cm.
TIRADORS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Han d'estar fixats sòlidament a la fulla.
Han de quedar aplomats i anivellats.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La seva col-locació no ha d'alterar les característiques de l'element.
No s'han de produïr danys en la superfície de la fulla.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PB PROTECCIONS I SENYALITZACIÓ

## PB1 BARANES

## PB12- BARANA D'ACER, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PB12-DIXF,PB12-DIXG.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Baranes constituïdes per un conjunt de perfils que formen el bastidor i l'ampit de la barana, col·locades en la seva posició definitiva i ancorada amb morter de ciment o formigó o amb fixacions mecàniques.
S'han considerat els tipus següents:
- Baranes d'acer ancorades amb morter de ciment o formigó o amb fixacions mecàniques
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
Barana metàl·lica:
- Replanteig
- Preparació de la base
- Col·locació de la barana i fixació dels ancoratges
CONDICIONS GENERALS:
La protecció instal·lada ha de reunir les mateixes condicions exigides a l'element simple.
Ha d'estar anivellada, ben aplomada i en la posició prevista en la DT.
L'alçària des del nivell del paviment fins el travesser superior, ha de ser l'especificada en el projecte o la indicada per la DF.
En els trams esglaonats, l'esglaonament de la barana s'ha d'efectuar a una distància >= 50 cm de l'element que provoqui l'esmentada variació d'alçada.
L'estructura pròpia de la barana ha de resistir una força horitzontal, uniformement distribuïda, que es considerarà aplicada a 1,2 m o sobre la vora superior de l'element, si aquest està situat a menys alçada. El valor característic de la de força ha de ser de:
- Categoria d'ús C5: 3 kN/m
- Categories d'ús C3, C4, E, F: 1,6 kN/m
- Resta de categories: 0,8 kN/m
(Les categories d'ús es defineixen en l'apartat 3.1.1 del CTE DB SE AE)
La part inferior de les baranes de les escales de les zones destinades al públic en establiments d'ús comercial o d'ús pública concurrència, en zones comunes d'edificis d'ús residencial habitatge o en escoles infantils, ha d'estar separada una distància de 50 mm com a màxim de la línea d'inclinació de l'escala.
Toleràncies d'execució:

- Replanteig: ± 10 mm
- Horitzontalitat: ± 5 mm
- Aplomat: ± 5 mm/m

BARANA METÀL.LICA:

Els muntants han de ser verticals.

Ha d'estar subjectada sòlidament al suport amb ancoratges d'acer collats amb morter de ciment pòrtland o formigó o amb fixacions mecàniques, protegits contra la corrosió.

Sempre que sigui possible s'han de fixar els travessers superiors a les parets laterals per mitjà d'ancoratges.

Els trams de la barana han d'estar units, per soldadura si són d'acer o per una peça de connexió si són d'alumini.

Toleràncies d'execució:

- Alçària: ± 10 mm
- Separació entre muntants: Nul·la

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CONDICIONS GENERALS:

No s'ha de treballar amb pluja, neu o vent superior a 50 km/h.

Els ancoratges han de garantir la protecció contra empentes i cops durant tot el procés d'instal·lació i, alhora, han de mantenir l'aplomat de l'element fins que quedi fixat definitivament al suport.

BARANA METÀL.LICA:

Han d'estar fets els forats als suports per ancorar els muntants abans de començar els treballs.

Els forats dels ancoratges estaran nets de pols o altres objectes que es puguin haver ficat des del moment de la seva execució fins al moment de la col·locació dels ancoratges.

La DF ha d'aprovar el replanteig abans de fixar cap muntant.

Els ancoratges s'han de fer per mitjà de plaques, platines o angulars. L'elecció depèn del sistema i de la distància que hi hagi entre l'eix de les pilastres i la vora dels elements resistents.

S'han de respectar els juts estructurals per mitjà de juts de dilatació de 40 mm d'amplària entre elements.

ELEMENT COL·LOCAT AMB MORTER:

El material conglomerant o adhesiu amb que es realitzi l'ancoratge s'ha d'utilitzar abans de començar l'adormiment.

Durant l'adormiment no s'han de produir moviments ni vibracions del element.

3.- UNITAT I CRITERI D'AMIDAMENT

m de llargària amidada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Documento Básico de Seguridad de utilización DB-SU, parte II del CTE, aprobado por el Real Decreto 314/2006.

* Orden de 15 de noviembre de 1976, por la que se aprueba la Norma Tecnológica de la Edificación. NTE-FDB/1976: Fachadas. Defensas. Barandillas.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:

Els punts de control més destacables són els següents:

- Comprovació topogràfica de la situació i col·locació de la barana. Presa de coordenades i cotes d'un 10% dels punts on es situaran els elements d'ancoratge.
- Inspecció visual de l'estat general de la barana, galvanitzat i ancoratges.
- Comprovació manual de la resistència d'arrencada en un 10 % dels suports. Es tracta de moure manualment el suport sense observar desplaçaments a la base de fonamentació.

CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES:

Els controls es realitzaran segons les indicacions de la DF. Els controls es fonamenten en l'inspecció visual i per tant, en l'experiència de l'inspector en aquest tipus de control.

CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Correcció per part del contractista de les irregularitats observades.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:

Inspecció visual de la unitat acabada.

CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES:

En la unitat acabada han de realitzar-se, les comprovacions i probes de servei previstes en projecte i/o ordenades per DF conjuntament amb les exigides per la normativa vigent.

CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Correcció per part del contractista de les irregularitats observades.

## PB PROTECCIONS I SENYALITZACIÓ

### PB1 BARANES

#### PB13- BARANA D'ACER, PINTADA, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PB13-61TX,PB13-61TY.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació, reforç i reparació de baranes i passamans, i posterior preparació i aplicació d'un recobriment de vernís o pintura sobre la seva superfície mitjançant diferents capes aplicades en obra.
S'han considerat les unitats d'obra següents:
- Formació de barana d'acer ancorada amb morter de ciment
- Formació de passamà subjectat amb cargols sobre travesser superior de les baranes de protecció
- Formació de passamà ancorat a l'obra amb morter de ciment
- Reparació puntual de barana de perfils d'acer
- Reparació i collat de passamà a paret
- Reforç de barana de perfils laminats d'acer
L'execució de la unitat d'obra inclou les operacions següents:
Formació de barana d'acer ancorada amb morter de ciment:
- Replanteig
- Preparació de la base
- Col·locació de la barana i fixació dels ancoratges
Formació de passamà subjectat amb cargols sobre travesser superior de les baranes de protecció:
- Replanteig
- Fixació dels suports a la base
- Fixació del passamà als suports
Formació de passamà ancorat a l'obra amb morter de ciment:
- Replanteig
- Formació dels caixetins d'ancoratge junt
- Col·locació del passamà i fixació dels ancoratges amb morter
Reparació puntual de barana de perfils d'acer:
- Preparació de la zona de treball
- Protecció dels elements propers que no siguin objecte de la reparació
- Tall amb disc de la zona afectada per a la reparació
- Reposició dels elements deteriorats
Reparació i collat de passamà a paret:
- Replanteig i marcat dels forats
- Obertura dels forats

- Col·locació del caixetí o mecanisme
- Fixació i tapat del forat que resta
Reforç de barana de perfils laminats d'acer:
- Preparació de la zona de treball
- Col·locació de la peça de reforç, practicant els orificis necessaris al parament de suport
- Aplicació del material de pont d'unió
Posteriorment s'aplicarà un recobriment d'acabat a la superfície de barana o passamà:
- Preparació de la superfície a pintar, fregat de l'òxid i neteja prèvia si és el cas, amb aplicació de les capes d'emprimació, de protecció o de fons, necessàries i del tipus adequat segons la composició de la pintura d'acabat
- Aplicació successiva, amb els intervals d'assecat, de les capes de pintura d'acabat
CONDICIONS GENERALS:
La barana reforçada ha de reunir, com a mínim, les mateixes condicions exigides a la barana original.
Ha d'estar anivellada, ben aplomada, i a la posició prevista a la DT.
L'alçària des del nivell del paviment fins el travesser superior, ha de ser l'especificada en el projecte o la indicada per la DF.
S'ha de respectar, en la mesura del possible, el sistema de muntatge de la barana original. Es a dir, les parts soldades han d'estar unides amb soldadura, i les parts reblonades han d'estar unides amb reblons.
Els elements resistents de la barana instal·lada han de resistir les solicitacions següents, sense superar una fletxa d'1/250 de la seva llum:
- Empenta vertical repartida uniformement: 1 kN/m
- Empenta horitzontal repartida uniformement:
- Lloc d'ús privat: 0,5 kN/m
- Lloc d'ús públic: 1 kN/m
Distància entre la barana i el paviment:
- Baranes de directriu horitzontal: <= 5 cm
- Baranes de directriu inclinada: <= 3 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Alçària: ± 10 mm
- Horitzontalitat: ± 5 mm
- Aplomat: ± 5 mm/m
- Separació entre muntants: Nul·la
En el revestiment no hi ha d'haver fissures, bosses ni d'altres defectes.
Ha de tenir el color, la brillantor i la textura uniformes.
REPARACIÓ PUNTUAL I REFORÇ DE BARANES:
No hi poden quedar restes de materials inestables en l'encast.
Els perfils metàl·lics que s'han d'encastar han d'estar nets, sense restes de formigó o morter adherit.
La superfície de l'encast ha de ser irregular.
El producte de pont d'unió ha de cobrir completament les superfícies, tant del perfil metàl·lic encastat com de la zona de l'encast, sense deixar bosses ni porus.
El pont d'unió ha d'estar aplicat seguint les instruccions de la DT del fabricant.
Gruix de la capa de pont d'unió: >= 0,5 mm, <= 1 mm
COL·LOCACIÓ DE PASSAMÀ AMB FIXACIONS MECÀNIQUES:
S'ha de subjectar sòlidament al travesser superior amb fixacions mecàniques.
Els visos de fixació, per la seva posició, han de quedar protegits del contacte directe amb l'usuari.
COL·LOCACIÓ DE PASSAMÀ AMB MORTER:
S'ha de subjectar sòlidament a l'obra amb ancoratges d'acer collats amb morter de ciment Pórtland, protegits contra la corrosió.
REPARACIÓ I COLLAT DE PASSAMÀ A PARET :
Ha d'estar feta al lloc indicat a la DT, amb les modificacions introduides al replanteig previ, aprovades per la DF.
L'element per encastar ha de quedar col·locat a la posició correcta en condicions de ser utilitzat, de rebre els mecanismes que li pertoquin (si és el cas), etc.
El forat al voltant de l'element ha d'estar completament reblert, i enrasat amb el parament de la paret.
Fondària: <= 1/2 gruix de la paret
Separació als brancals: >= 20 cm
Toleràncies d'execució:
- Replanteig: ± 10 mm
- Fondària: + 0 mm, - 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

L'ordre d'execució de les feines ha de ser l'indicat en el primer apartat, on s'enumeren les operacions incloses a la unitat d'obra.
Cadascuna de les operacions que configuren la unitat d'obra ha de complir el seu plec de condicions.
Després d'executar cadascuna de les operacions que configuren la unitat d'obra, i abans de fer una operació que oculti el resultat d'aquesta, s'ha de permetre que la DF verifiqui que es compleix el plec de condicions de l'operació.
3.- UNITAT I CRITERI D'AMIDAMENT
BARANA, PASSAMÀ, COLLAT D'ANCORATGE I PINTAT PASSAMÀ:
m de llargària de barana amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PC ENVIDRAMENTS

## PC1 VIDRES PLANS

## PC16- MIRALL, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PC16-5NMJ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació de mirall.
S'han considerat els tipus de col·locació següents:
- Adherit sobre tauler de fusta
- Amb fixacions mecàniques al parament
L'execució de la unitat d'obra inclou les operacions següents:
Adherit sobre tauler de fusta:
- Neteja i preparació del suport
- Aplicació de l'adhesiu i col·locació del mirall
- Neteja final
Col·locació amb fixacions mecàniques:
- Neteja del suport
- Replanteig dels punts de fixació
- Col·locació del mirall
CARACTERÍSTIQUES GENERALS:
Ha d'estar col·locat de manera que no quedi sotmès als esforços produïts per contraccions, dilatacions o deformacions del suport.

El suport ha de quedar pla i ha d'estar ben aplomat.
Ha de quedar ben fixat al suport.
Un cop col·locat no hi ha d'haver ratllades, escantonaments o d'altres defectes superficials a la cara vista ni a la posterior.
Distància entre els miralls: >= 1 mm
ADHERIT SOBRE TAULER DE FUSTA:
No s'han d'utilitzar adhesius que continguin àcids lliures que puguin alterar la pintura de protecció del mirall.
FIXAT MECÀNICAMENT SOBRE EL PARAMENT:
Els elements de subjecció han de portar una làmina elàstica per tal d'impedir el contacte directe amb el mirall.
Distància dels forats de subjecció al perímetre: >= 5 cm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
En ambients humits la col·locació s'ha de realitzar de manera que no es puguin produir condensacions sobre la cara posterior, facilitant la circulació de l'aire.
La posada a l'obra no ha d'alterar les característiques de l'element.
3.- UNITAT I CRITERI D'AMIDAMENT
m2 de superfície amidada segons les especificacions de la DT.
S'han de considerar les respectives dimensions d'acord amb els criteris següents:
- Llargària i amplària: Múltiples de 6 cm
Cal prendre el múltiple immediat superior en el cas que la dimensió no ho sigui.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PC ENVIDRAMENTS

### PC1 VIDRES PLANS

#### PC1D- VIDRE AÏLLANT DE DOS VIDRES LAMINARS DE SEGURETAT, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PC1D-9QXO.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Envidrat amb vidre, allotjat en galzes sobre fusta, acer, alumini o PVC o entregat directament sobre buit d'obra, o millora acústica de balconera substituint els vidres antics per vidre laminat.
S'han considerat els tipus següents:
- Vidre aïllant o resistent al foc
S'han considerat les formes de col·locació següents:

- Col·locació amb llistó de vidre
- Col·locació amb perfils conformats de neoprè

L'execució de la unitat d'obra inclou les operacions següents:

Col·locació amb llistó de vidre:
- Neteja dels perfils de suport
- Aplicació d'una primera capa de màstic en el perímetre
- Col·locació de les falques de recolzament
- Col·locació de la fulla de vidre en el bastiment
- Aplicació d'un cordó de màstic omplint l'espai entre el vidre i el galze
- Col·locació del llistó perimetral
- Allisat del màstic i neteja final

Col·locació amb perfils conformats de neoprè:
- Neteja dels perfils de suport
- Col·locació del perfil conformat en el perímetre de la fulla de vidre
- Col·locació de la fulla de vidre en el bastiment

CONDICIONS GENERALS:

Ha d'estar col·locat de manera que no quedi sotmès als esforços produïts per contraccions, dilatacions o deformacions del suport.

Ha de quedar ben fixat en el seu emplaçament.

No ha d'estar en contacte amb d'altres vidres, ni amb formigó o metalls.

Tots els materials utilitzats han de ser compatibles entre ells.

El conjunt ha de ser totalment estanc.

Quan el vidre és reflector, la superfície reflectora ha d'anar col·locada a l'exterior.

Si són exteriors, s'han de col·locar sobre tancaments amb orificis de drenatge.

Els vidres laminars de seguretat o antibala han d'estar col·locats de manera que la cara exposada a les agressions coincideixi amb la indicada com a tal pel fabricant.

Fletxa del tancament: <= 1/300 l

Alçària del galze i franquícia perimetral:
- Vidre amb cambra d'aire:

| Gruix vidre 2 llunes + cambra d'aire (mm) | Semiperímetre vidre (m) | Alçària galze (mm) | Franquícia perimetral (mm) ± 0,5 |
|---|---|---|---|
| <= 20 | <= 0,8 | 18 ± 1,5 | 3 |
| | 0,8 - 3 | 18 ± 1,5 | 3 |
| | 3 - 5 | 20 ± 2,0 | 4 |
| | 5 - 7 | 25 ± 2,5 | 5 |
| > 20 | <= 0,8 | 20 ± 2,0 | 4 |
| | 0,8 - 3 | 20 ± 2,0 | 4 |
| | 3 - 5 | 22 ± 2,0 | 5 |
| | 5 - 7 | 25 ± 2,5 | 5 |

Franquícia lateral i amplària del galze:

| Semiperímetre vidre (m) | Franquícia lateral (mm) | Amplària galze Gruix vidre + (2 x Franquícia lateral) (mm) |
|---|---|---|
| <= 4 | 3 | Gruix vidre + 6 |
| > 4 | 5 | Gruix vidre + 10 |

En el cas de la col·locació amb perfils conformats de neoprè, la franquícia pot reduir-se fins a 2 mm.

Toleràncies d'execució:
- Franquícia lateral i amplària del galze:
- Vidre amb cambra d'aire:

| Gruix vidre 2 llunes + cambra d'aire (mm) | Semiperímetre vidre (m) | Franquícia lateral (mm) | Amplària galze (mm) |
|---|---|---|---|
| 14 - 18 | | | ± 2,0 |

| | | | |
|---|---|---|---|
| 19 - 23 | | | ± 2,5 |
| 24 - 28 | | | ± 3,0 |
| 30 - 32 | | | ± 3,5 |
| 34 - 38 | <= 4 | ± 0,5 | ± 4,0 |
| 40 - 42 | | | ± 4,5 |
| 46 | | | ± 5,0 |
| 57 | | | ± 6,0 |
| 59 - 63 | | | ± 6,5 |
| 73 | | | ± 7,5 |
| 75 | | | ± 8,0 |
| 79 | | | ± 8,5 |
| 14 | | | ± 2,0 |
| 16 - 19 | | | ± 2,5 |
| 20 - 24 | | | ± 3,0 |
| 25 - 28 | | | ± 3,5 |
| 30 - 34 | > 4 | ± 0,5 | ± 4,0 |
| 38 | | | ± 4,5 |
| 40 - 42 | | | ± 5,0 |
| 46 | | | ± 5,5 |
| 57 - 59 | | | ± 6,5 |
| 63 | | | ± 7,0 |
| 73 | | | ± 8,0 |
| 75 - 79 | | | ± 8,5 |

VIDRE TREMPAT:
El vidre ha de portar totes les manufactures necessàries per a la seva posada a l'obra i no s'admet cap manufactura posterior.
Les peces metàl·liques de fixació han de portar una làmina de neoprè entre el vidre i el metall.
COL·LOCACIÓ AMB RIBET:
Ha de recolzar sobre falques de materials elastòmers o de fusta tractada, col·locades als extrems de la fusteria i a una distància d'1/10 de la seva llargària.
La llargària de les falques s'ha de determinar d'acord amb el tipus de material i la superfície del vidre.
El gruix de les falques ha d'estar en relació amb la franquícia lateral i perimetral.
S'ha de fer un segellat continu que garanteixi l'estanquitat a l'aigua i al pas de l'aire.
Amplària de les falques:
- Vidre aïllant: Gruix vidre (2 llunes+cambra d'aire)+ 3 mm
Toleràncies d'execució:
- Amplària de les falques (vidre aïllant):

| Gruix vidre 2 llunes + cambra d'aire (mm) | Amplària falques (mm) |
|---|---|
| 14 - 16 | ± 1,5 |
| 17 - 21 | ± 2,0 |
| 22 - 26 | ± 2,5 |
| 27 - 31 | ± 3,0 |
| 32 - 34 | ± 3,5 |
| 38 - 40 | ± 4,0 |
| 42 - 46 | ± 4,5 |
| 57 - 59 | ± 6,0 |
| 63 | ± 6,5 |
| 73 - 75 | ± 7,5 |
| 79 | ± 8,0 |

COL·LOCACIÓ AMB PERFILS CONFORMATS DE NEOPRÈ:
El perfil conformat de neoprè ha de tenir una pressió constant en tota la seva llargària.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'han de suspendre els treballs de col·locació quan la velocitat del vent superi els 50 km/h i la temperatura sigui inferior a 0°C.
La posada a l'obra no ha d'alterar les característiques de l'element.
3.- UNITAT I CRITERI D'AMIDAMENT

ENVIDRAT:
m2 de superfície amidada segons les especificacions de la DT.
S'han de considerar les respectives dimensions segons els criteris següents, cal prendre el múltiple immediat superior en cas que la dimensió no ho sigui:
VIDRE AÏLLANT, DE PROTECCIÓ AL FOC, LAMINAR DE SEGURETAT O ANTIBALA:
- Llargària i amplària: Múltiples de 3 cm
- Unitats amb superfície < 0,25 m2: 0,25 m2 per unitat
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
COL·LOCACIÓ AMB LLISTÓ DE VIDRE O AMB PERFILS CONFORMATS DE NEOPRÈ:
* UNE 85222:1985 Ventanas. Acristalamiento y métodos de montaje.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

### PD1 DESGUASSOS I BAIXANTS

### PD18- BAIXANT I CONDUCTE DE VENTILACIÓ DE PVC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD18-8D5T,PD18-8D5P.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Baixants i conductes de ventilació d'instal·lacions d'evacuació d'edificis amb tub de PVC o polipropilè.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació dels tubs
- Fixació dels tubs
- Col·locació d'accessoris
- Execució d'unions necessàries
CONDICIONS GENERALS:
El tram muntat ha de quedar aplomat i fixat sòlidament a l'obra.
Ha de ser estanc en tot el seu recorregut.
Els tubs s'han de subjectar per mitjà d'abraçadores encastables, una de fixació sota l'embocadura i la resta de guiatge a intervals regulars.
El pes d'un tub no ha de gravitar sobre el tub inferior.
Les unions entre els tubs s'han de fer seguint les instruccions del fabricant.
El baixant no ha de tenir, en el sentit del recorregut descendent, reduccions de secció en cap punt.
Els conductes de ventilació han de tenir un diàmetre uniforme al llarg de tot el seu recorregut.
El pas a través d'elements estructurals s'ha de protegir amb un contratub de secció més gran.
La franquícia entre el tub i el contratub, i entre el tub i la valona s'ha d'ataconar amb massilla.
Els conductes han de quedar suficientment separats dels paraments per a facilitar les operacions de

reparació i evitar la formació de condensacions.
Els trams vistos amb risc d'impacte han de quedar protegits adequadament.
Els baixants instal·lats mai no han de ser horitzontals o en contrapendent.
Nombre d'abraçadores per tub: >= 2
Distància entre les abraçadores:
- Baixant: <= 15 vegades el diàmetre del baixant
- Conducte de ventilació: <= 150 cm
Gruix del parament al que es subjecta el conducte:
- Baixant: >= 12 cm
- Conducte de ventilació: >= 9 cm
Pendent del conducte de ventilació terciària: >= 1 %
Toleràncies d'execució:
- Desploms verticals: <= 1%, <= 30 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.
No s'han de manipular ni corbar els tubs.
Els canvis direccionals i les connexions s'han de fer per mitjà de peces especials.
Tots els talls s'han de fer perpendicularment a l'eix del tub.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material corresponents a retalls i la repercussió de les peces especials a col·locar.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
La instal·lació d'evacuació d'aigües residuals s'executarà segons prescripcions de projecte, legislació aplicable i a les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Es realitzaran les proves d'estanquitat total i parcial. Aquestes proves es realitzaran amb aigua, amb aire o amb fum i es seguiran les directrius i especificacions de cada assaig segons la normativa vigent.
Es verificarà sistema de manteniment i conservació.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

### PD1 DESGUASSOS I BAIXANTS

## PD1A- DESGUÀS D'APARELL SANITARI DE PVC

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD1A-F11A,PD1A-F11G,PD1A-F11K,PD1A-F11I,PD1A-F11J.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Desguassos d'aparells sanitaris amb tub de PVC o polipropilè, des de l'aparell fins al baixant, caixa sifònica o clavegueró.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació dels tubs
- Fixació dels tubs
- Col·locació d'accessoris
- Execució d'unions necessàries
CARACTERÍSTIQUES GENERALS:
El ramal muntat ha de ser estanc, no ha de presentar exsudacions ni ha d'estar exposat a obstruccions.
El ramal no ha de tenir, en el sentit del recorregut descendent, reduccions de secció en cap punt.
Els trams instal·lats mai no han de ser horitzontals o en contrapendent.
Els canvis de direcció s'han de fer amb peces especials.
No han de quedar ramals enfrontats sobre una mateixa canonada col·lectiva
Quan es subjecten a paraments verticals, aquests han de tenir un gruix mínim de 9 cm.
Les subjeccions per a penjar el tub del sostre han de portar folre interior elàstic i han de ser regulables.
Els trams que vagin encastats han d'anar aïllats i no s'han de subjectar amb guix o morter.
El pas a través d'elements estructurals s'ha de fer amb contratub amb una franquícia mínima de 10 mm que s'ha d'ataconar amb massilla asfàltica o material elàstic.
Separació de les subjeccions:
- Per a tubs de diàmetre <= 50 cm: 70 cm
- Per a tubs de diàmetre > 50 cm: 50 cm
Llargària del ramal:
- Ramal connectat a caixa sifònica: <= 2,5 m
- Ramal d'aparells amb sifó individual: <= 4 m
- Ramal o maniguet de connexió del inodor: <= 1 m
Pendent del ramal:
- Ramal connectat a caixa sifònica: 2 al 4 %
- Ramal d'aparells amb sifó individual:
- Banyeres i plats de dutxa: <= 10 %
- Aigüeres, safareigs, lavabos i bidets: 2,5 al 5 %
Radi interior de les curvatures: >= 1,5 x D tub
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El procés d'instal·lació no ha d'alterar les característiques de l'element.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## PD3 CAIXES SIFÒNIQUES I PERICONS

## PD31- PERICÓ

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD31-56CK,PD31-568G,PD31-5691,PD31-56CJ,PD31-568K.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de pericó a peu de baixant, de pas o sifònic.
S'han considerat els tipus següents:
- Pericó "in situ" amb solera de formigó, parets de maó calat o de maó massís, arrebossades i lliscades interiorment i amb tapa fixa o registrable.
- Pericó prefabricat de formigó, amb fons i amb tapa de formigó prefabricat.
- Pericó prefabricat de PVC o polipropilè, amb fons i amb tapa.
L'execució de la unitat d'obra inclou les operacions següents:
Pericó fabricat "in situ":
- Comprovació de la superfície d'assentament
- Col·locació del formigó de la solera
- Formació de les parets amb peces ceràmiques, deixant preparats els forats per al pas dels tubs
- Arrebossat de les parets amb morter
- Lliscat interior de les parets amb ciment
- Col·locació de la tapa
CONDICIONS GENERALS:
Els pericons enregistrables hauran d'estar tapats amb una tapa de material compatible amb el del calaix. Si la tapa és prefabricada de formigó, el gruix d'aquesta no serà inferior a 5 cm. Entre la tapa i el calaix hi haurà un junt d'hermeticitat.
En els pericons sifònics, el conducte de sortida de les aigües ha de portar un colze de 90º.
El gruix de la capa d'aigua en els pericons sifònics no ha de ser inferior a 45 cm.
El pericó ha d'impedir la sortida de gasos a l'exterior.
PERICÓ FABRICAT "IN SITU":
El pericó ha d'estar format amb parets de peces ceràmiques, sobre solera de formigó.
Els pericons amb tapa fixa han d'estar tapats amb encadellat ceràmic collat amb morter.
La solera ha de quedar plana i al nivell previst.
En els pericons no sifònics, la solera ha de formar pendent per a afavorir l'evacuació. En el punt de connexió ha d'estar al mateix nivell que la part inferior del tub de desguàs.
Les parets han de ser planes, aplomades i han de quedar travades per filades alternatives.
Les peces ceràmiques s'han de col·locar a trencajunts i les filades han de ser horitzontals.
La superfície interior ha de quedar revestida amb un arrebossat de gruix uniforme, ben adherit a la paret i acabada amb un lliscat de pasta de pòrtland. El revestiment sec ha de ser llis, sense fissures o d'altres defectes.
Els angles interiors han de ser arrodonits.
Gruix de la solera: >= 10 cm
Gruix de l'arrebossat: >= 1 cm
Pendent interior d'evacuació en pericons no sifònics: >= 1,5%
Toleràncies d'execució:
- Aplomat de les parets: ± 10 mm
- Planor de la fàbrica: ± 10 mm/m
- Planor de l'arrebossat: ± 3 mm/m
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
PERICÓ FABRICAT "IN SITU":

S'ha de treballar a una temperatura entre 5°C i 35°C sense pluja.
Les peces ceràmiques per col·locar han de tenir la humitat necessària per tal que no absorbeixin l'aigua del morter.
L'arrebossat s'ha d'aplicar pressionant amb força sobre l'obra de ceràmica quan aquesta obra hagi aconseguit el 70% de la resistència prevista. Abans s'ha d'humitejar la superfície.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
La instal·lació d'evacuació d'aigües residuals s'executarà segons prescripcions de projecte, legislació aplicable i a les instruccions de la DF.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Es realitzaran les proves d'estanquitat total i parcial. Aquestes proves es realitzaran amb aigua, amb aire o amb fum i es seguiran les directrius i especificacions de cada assaig segons la normativa vigent.
Es verificarà sistema de manteniment i conservació.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho.  En cas contrari es procedirà a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## PD5 DRENATGES

### PD58- CANAL DE FORMIGÓ POLÍMER AMB PENDENT PER A DRENATGES, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD58-5YG8,PD58-5YQU,PD58-5YR1.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Execució de caixa per a drenatges amb canal de peces prefabricades amb bastidor o sense i reixa, sobre solera de formigó.
L'execució de la unitat d'obra inclou les operacions següents:

En caixa de formigó:
- Comprovació de la superfície d'assentament
- Col·locació del formigó de la solera
- Muntatge dels mòduls prefabricats
- Preparació de la trobada de la caixa amb el tub de desguàs
- Col·locació del formigó lateral de la caixa
- Col·locació de les reixes

CONDICIONS GENERALS:
La solera ha de quedar plana, anivellada i a la fondària prevista a la DT.
La caixa ha de quedar aplomada i ben assentada sobre la solera.
El nivell del coronament ha de permetre la col·locació del bastiment i la reixa enrasats amb el paviment o zona adjacent sense sobresortir d'ella.
El forat per al pas del tub de desguàs ha de quedar preparat.
La caixa acabada ha d'estar neta de qualsevol tipus de residu.
La resistència característica del formigó es comprovarà d'acord amb l'article 57 del CODI ESTRUCTURAL.
Toleràncies d'execució:
- Nivell de la solera: ± 20 mm
- Aplomat total: ± 5 mm
- Planor: ± 5 mm/m
- Escairat: ± 5 mm respecte el rectangle teòric

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'ha de treballar a una temperatura ambient que oscil·li entre els 5°C i els 40°C, sense pluja.
No pot transcórrer més d'1,5 hora des de la fabricació del formigó fins el formigonament, a menys que la DF ho cregui convenient per aplicar medis que retardin l'adormiment.
L'abocada s'ha de fer des d'una alçària petita i sense que es produeixin disgregacions.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## PD7 CLAVEGUERES I COL·LECTORS

## PD79- CLAVEGUERÓ AMB TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ, SOTERRAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD79-ELKA,PD79-ELKL,PD79-ELKJ,PD79-ELKH.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de clavegueró amb tub de PVC.
S'han considerat les col·locacions següents:
- Penjat del sostre
- En rasa, sobre llit d'assentament de sorra
- En rasa, sobre llit d'assentament de sorra i amb reblert de sorra
- En rasa, sobre solera de formigó i llit d'assentament de sorra
- En rasa, sobre solera de formigó, llit d'assentament de sorra i amb reblert de sorra
L'execució de la unitat d'obra inclou les operacions següents:
Penjat del sostre:
- Col·locació de les abraçadores de subjecció del tub
- Col·locació i unió dels tubs
- Col·locació de les peces necessàries en els punts singulars (per a canvis de direcció, connexions, etc.)
- Realització de proves sobre la canonada instal·lada
En rasa:
- Execució de la solera de formigó, en el seu cas
- Preparació del llit amb sorra compactada
- Col·locació dels tubs
- Segellat dels tubs
- Realització de proves sobre la canonada instal·lada
- Rebliment amb sorra fins a la cota indicada a la partida d'obra, en el seu cas
CONDICIONS GENERALS:
El tub ha de seguir les alineacions indicades a la DT. Ha de quedar a la rasant prevista i amb el pendent definit per a cada tram.
El junt entre els tubs és correcte si els diàmetres interiors queden alineats. S'accepta un ressalt <= 3 mm.
Els junts han de ser estancs a la pressió de prova, han de resistir els esforços mecànics i no han de produir alteracions apreciables en el règim hidràulic de la canonada.
El pas a través d'elements estructurals s'ha de protegir amb un contratub de secció més gran.
La franquícia entre el tub i el contratub s'ha d'ataconar amb massilla.
Les unions entre els tubs han d'estar fetes amb els procediments i materials aprovats pel fabricant.
El clavegueró no ha de tenir, en el sentit del recorregut descendent, reduccions de secció en cap punt.
Ha de ser estanc a l'aigua a una pressió >= 0,3 bar i <= 1 bar
Ha de ser estanc a l'aire a una pressió >= 0,5 bar i <= 1 bar
Ha de ser estanc al fum a una pressió de gasos de 250 Pa
COL·LOCACIÓ AL FONS DE LA RASA:
Han de quedar centrats i alineats dins de la rasa.
Els tubs han de quedar recolzats en tota la seva llargària sobre un llit de material granular o terra lliure de pedres.
El llit de sorra ha de quedar pla, anivellat i a la fondària prevista a la DT.
La canonada ha de quedar protegida dels efectes de les càrregues exteriors, del trànsit (en el seu cas), inundacions de la rasa i de les variacions tèrmiques.
En cas de coincidència de canonades d'aigua potable i de sanejament, les d'aigua potable han de passar per un pla superior a les de sanejament i han d'anar separades tangencialment 100 cm.
Un cop instal·lada la canonada, i abans del reblert de la rasa, han de quedar fetes satisfactòriament les proves de pressió interior i d'estanquitat en els trams que especifiqui la DF.
Pendent: >= 2%
Distància de la generatriu superior del tub a la superfície en zones de trànsit rodat: >= 80 cm
En el cas de tubs de PVC-U amb pressió enterrats que transportin aigua es recomana una alçària mínima de 0,90m. sempre que estiguin a l'abric de les gelades.
Per a tubs instal·lats sota zones de trànsit intens o que no sigui possible mantenir l'alçària de 0,90m. es requerirà una protecció addicional.
Amplària de la rasa: >=diàmetre exterior + 500 mm i >= 0,60 m
Gruix llit d'assentament de sorra: >= 10 + diàmetre exterior / 10 cm
La distància entre les canonades enterrades de PVC a pressió i fonaments o d'altres instal·lacions enterrades >= 0,4m. en condicions normals.
SOBRE SOLERA DE FORMIGÓ:
La solera ha de quedar plana, anivellada i a la fondària prevista a la DT.
El formigó ha de ser uniforme i continu. No ha de tenir esquerdes o defectes de formigonament com disgregacions o buits a la massa.
Gruix solera de formigó: 15 cm

REBLERT AMB SORRA:
El material s'ha d'estendre per tongades successives sensiblement paral·leles a la rasant final.
El gruix de la tongada ha de ser uniforme i ha de permetre la compactació prevista d'acord amb els mitjans que s'utilitzin.
El material que s'utilitzi ha de complir les especificacions fixades en el plec de condicions corresponent.
La sorra ha de ser neta, lliure de pedres i d'altres materials estranys.
Gruix tongades rebliment: 10 cm
Rebliment amb sorra: fins 30 cm per sobre del nivell superior del tub
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
La descàrrega i manipulació dels elements s'ha de fer de forma que no rebin cops.
Durant el procés de col·locació no s'han de produir desperfectes en la superfície del tub.
En cas d'interrompre's la col·locació dels tubs s'ha d'evitar la seva obstrucció i s'ha d'assegurar el seu desguàs. Quan es reprenguin els treballs s'ha de comprovar que no s'hagi introduït cap cos estrany a l'interior dels tubs.
Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.
La unió entre els tubs i altres elements d'obra s'ha de fer garantint la no transmissió de càrregues, la impermeabilitat i l'adherència amb les parets.
Si es produeixen fuites apreciables durant la prova d'estanquitat, el contractista ha de corregir els defectes i procedir de nou a fer la prova.
Es de bona pràctica l'estesa de tubs amb l'extrem mascle inserit en l'embocaduda en el mateix sentit de circulació que el previst per al flux de sanejament.
Els tubs de PVC-U a pressió mai haurien d'encofrar-se amb formigó.
COL·LOCACIÓ AL FONS DE LA RASA:
Abans de baixar els elements a la rasa la DF ha d'examinar-los, rebutjant els que presentin algun defecte.
Abans de la col·locació dels elements cal comprovar que la rasant, l'amplària, la fondària i el nivell freàtic de la rasa corresponen als especificats en la DT. En cas contrari cal avisar la DF.
El fons de la rasa ha d'estar net abans de baixar els elements.
Els tubs i rases s'han de mantenir lliures d'aigua, per això és de bona pràctica muntar els tubs en sentit ascendent, assegurant el desguàs dels punts baixos.
Els tubs s'han de calçar i recolzar per a impedir el seu moviment.
Col·locats els elements al fons de la rasa, s'ha de comprovar que el seu interior és lliure d'elements que puguin impedir el seu assentament o funcionament correctes (terres, pedres, eines de treball, etc.).
No s'han de muntar trams de més de 100 m de llarg sense fer un reblert parcial de la rasa deixant els juts descoberts. Aquest reblert ha de complir les especificacions tècniques del reblert de la rasa.
Un cop situada la canonada a la rasa, parcialment reblerta excepte a les unions, s'han de fer les proves de pressió interior i d'estanquitat segons la normativa vigent.
SOBRE SOLERA DE FORMIGÓ:
La temperatura ambient per a formigonar ha d'estar entre 5°C i 40°C.
El formigó s'ha de posar a l'obra abans que s'iniciï el seu adormiment. L'abocada s'ha de fer de manera que no es produeixin disgregacions. S'ha de compactar.
Sobre la solera de formigó, quan tingui la resistència adequada, s'ha de col·locar el llit de material granular.
REBLERT AMB SORRA:
S'han de suspendre els treballs en cas de pluja o quan la temperatura exterior sigui inferior a 0° C.
Després de pluges no s'ha d'estendre una altre tongada fins que l'última no s'hagi eixugat.
Els treballs s'han de fer de manera que s'eviti la contaminació de la sorra amb materials estranys.
No s'han de barrejar diferents tipus de materials.
S'ha d'evitar l'exposició prolongada del material a la intempèrie.
No es pot procedir al reblert de les rases sense l'autorització expressa de la DF.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material corresponents a retalls i la repercussió de les peces especials a col·locar.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
UNE-EN 1456-1:2002 Sistemas de canalización en materiales plásticos para saneamiento enterrado o aéreo con presión. Poli(cloruro de vinilo) no plastificado (PVC-U). Parte 1: Especificaciones para tubos, accesorios y el sistema.
SOBRE SOLERA DE FORMIGÓ:

Real Decreto 470/2021, de 29 de junio, por el que se aprueba el Código Estructural.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL EN TUBS DE PVC SOTERRATS:
Sense caràcter limitatiu, els punts de control més destacables són els següents:
- Execució de la solera de formigó, en el seu cas.
- Comprovació de la superfície d'assentament.
- Col·locació i unió dels tubs.
- Rebliment amb formigó fins cobrir tot el tub, en el seu cas.
- Comprovació del funcionament del tram de claveguera o col·lector.
CONTROL D'EXECUCIÓ. CRITERIS DE PRESA DE MOSTRES EN TUBS DE PVC SOTERRATS:
Els controls s'han de realitzar segons les instruccions de la DF.
CONTROL D'EXECUCIÓ. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN TUBS DE PVC SOTERRATS:
Correcció a càrrec del Contractista dels defectes que provoquin les fugues detectades.
Si es produeixen fuites apreciables durant la prova d'estanquitat, el contractista ha de corregir els defectes i procedir de nou a fer la prova.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL EN TUBS DE PVC SOTERRATS:
- Un cop finalitzada l'obra i abans de la recepció provisional, es comprovarà el bon funcionament de la xarxa abocant aigua en els pous de registre de capçalera o, mitjançant les cambres de descàrrega si existissin, verificant el pas correcte d'aigua en els pous de registre aigües avall.
CONTROL DE L'OBRA ACABADA. CRITERIS DE PRESA DE MOSTRES EN TUBS DE PVC SOTERRATS:
Es seguiran les instruccions de la DF en la realització dels controls previstos.
CONTROL DE L'OBRA ACABADA. INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMOPLIMENT EN TUBS DE PVC SOTERRATS:
Correcció per part del contractista de les irregularitats observades.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## PD7 CLAVEGUERES I COL·LECTORS

## PD7E- CLAVEGUERÓ AMB TUB DE PVC-U, PENJAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PD7E-49B0,PD7E-49B4,PD7E-49AT,PD7E-49BA,PD7E-49AU.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de clavegueró amb tub de PVC.
S'han considerat les col·locacions següents:
- Penjat del sostre

- En rasa, sobre llit d'assentament de sorra
- En rasa, sobre llit d'assentament de sorra i amb reblert de sorra
- En rasa, sobre solera de formigó i llit d'assentament de sorra
- En rasa, sobre solera de formigó, llit d'assentament de sorra i amb reblert de sorra

L'execució de la unitat d'obra inclou les operacions següents:

Penjat del sostre:

- Col·locació de les abraçadores de subjecció del tub
- Col·locació i unió dels tubs
- Col·locació de les peces necessàries en els punts singulars (per a canvis de direcció, connexions, etc.)
- Realització de proves sobre la canonada instal·lada

En rasa:

- Execució de la solera de formigó, en el seu cas
- Preparació del llit amb sorra compactada
- Col·locació dels tubs
- Segellat dels tubs
- Realització de proves sobre la canonada instal·lada
- Rebliment amb sorra fins a la cota indicada a la partida d'obra, en el seu cas

CONDICIONS GENERALS:

El tub ha de seguir les alineacions indicades a la DT. Ha de quedar a la rasant prevista i amb el pendent definit per a cada tram.

El junt entre els tubs és correcte si els diàmetres interiors queden alineats. S'accepta un ressalt <= 3 mm.

Els junts han de ser estancs a la pressió de prova, han de resistir els esforços mecànics i no han de produir alteracions apreciables en el règim hidràulic de la canonada.

El pas a través d'elements estructurals s'ha de protegir amb un contratub de secció més gran.

La franquícia entre el tub i el contratub s'ha d'ataconar amb massilla.

Les unions entre els tubs han d'estar fetes amb els procediments i materials aprovats pel fabricant.

El clavegueró no ha de tenir, en el sentit del recorregut descendent, reduccions de secció en cap punt.

Ha de ser estanc a l'aigua a una pressió >= 0,3 bar i <= 1 bar

Ha de ser estanc a l'aire a una pressió >= 0,5 bar i <= 1 bar

Ha de ser estanc al fum a una pressió de gasos de 250 Pa

PENJAT DEL SOSTRE:

El clavegueró muntat ha de quedar fixat sòlidament a l'obra, amb el pendent determinat per a cada tram.

Els tubs s'han de subjectar per mitjà d'abraçadores, repartides a intervals regulars.

Les abraçadores han de ser regulables, de ferro galvanitzat i amb folre interior elàstic.

Els trams instal·lats mai no han de ser horitzontals o en contrapendent.

Els trams rectes, els acoblaments i els canvis de direcció han de disposar de registres formats per peces especials.

Separació entre registres: <= 15 m

Pendent: >= 1 %

Distància entre les abraçadores: <= 150 cm

Fletxa: <= 0,3 cm

Separació amb la cara inferior del sostre: >= 5 cm

Franquícia entre tub i contratub: 10 15 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CONDICIONS GENERALS:

La descàrrega i manipulació dels elements s'ha de fer de forma que no rebin cops.

Durant el procés de col·locació no s'han de produir desperfectes en la superfície del tub.

En cas d'interrompre's la col·locació dels tubs s'ha d'evitar la seva obstrucció i s'ha d'assegurar el seu desguàs. Quan es reprenguin els treballs s'ha de comprovar que no s'hagi introduït cap cos estrany a l'interior dels tubs.

Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.

La unió entre els tubs i altres elements d'obra s'ha de fer garantint la no transmissió de càrregues, la impermeabilitat i l'adherència amb les parets.

Si es produeixen fuites apreciables durant la prova d'estanquitat, el contractista ha de corregir els defectes i procedir de nou a fer la prova.

PENJAT DEL SOSTRE:

No s'han de manipular ni corbar els tubs.

Els canvis direccionals i les connexions s'han de fer per mitjà de peces especials, seguint les indicacions de DT i d'acord amb la DF.

Tots els talls s'han de fer perpendicularment a l'eix del tub.

S'han d'instal·lar els absorbidors de dilatació necessaris.
La canonada principal s'ha de prolongar 30 cm des de la primera connexió
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material corresponents a retalls i la repercussió de les peces especials a col·locar.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

---

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

## PDK PERICONS PER A CANALITZACIONS DE SERVEIS

### PDK1- BASTIMENT I TAPA DE FOSA PER A PERICONS DE CANALITZACIONS DE SERVEIS, COL·LOCATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PDK1-W8EC,PDK1-DX9R.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Subministrament i col·locació de bastiment i tapa per a pericó.
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions

d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
- Comprovació de la superfície de recolzament
- Col·locació del morter d'anivellament
- Col·locació del conjunt de bastiment i tapa, agafat amb morter
CONDICIONS GENERALS:
El bastiment col·locat ha de quedar ben assentat sobre les parets de l'element que s'ha de tapar, anivellades prèviament amb morter.
Ha de quedar sòlidament travat per una anella perimetral de morter.
L'anella no ha de provocar el trencament del paviment perimetral i no ha de sortir lateralment de les parets del pou.
La tapa ha de quedar recolzada a sobre del bastiment a tot el seu perímetre. No ha de tenir moviments que puguin provocar el seu trencament per impacte o bé produir sorolls.
Un cop col·locada la tapa, el dispositiu de fixació ha de garantir que només podrà ser retirada per personal autoritzat i que no podrà tenir desplaçaments accidentals.
Les tapes practicables, han d'obrir i tancar correctament.
La part superior del bastiment i la tapa ha de quedar al mateix pla que el paviment perimetral i mantenir el seu pendent.
Toleràncies d'execució:
- Nivell entre la tapa i el paviment: ± 2 mm
- Ajust lateral entre bastiment i tapa: ± 4 mm
- Nivell entre tapa i paviment: ± 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
El procés de col·locació no ha de produir desperfectes, ni ha de modificar les condicions exigides per al material.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
* Orden de 6 de febrero de 1976 por la que se aprueba el Pliego de Prescripciones Técnicas Generales para Obras de Carreteras y Puentes (PG-3).
* Orden FOM/1382/2002 de 16 de mayo, por la que se actualizan determinados artículos del pliego de prescripciones técnicas generales para obras de carreteras y puentes relativos a la construcción de explanaciones, drenajes y cimentaciones (PG-3).
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL EN BASTIMENTS I TAPES DE FOSA:
Les tasques de control a realitzar són les següents:
- Seguiment del procés de col·locació.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL EN BASTIMENTS I TAPES DE FOSA:
Les tasques de control a realitzar són les següents:
- Inspecció de les condicions d'assentament del bastiment
- Comprovació de les toleràncies d'ajust i de nivell respecte al paviment
CRITERIS DE PRESA DE MOSTRES:
El control es realitzarà sobre totes les unitats existents a l'obra.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

## PD INSTAL·LACIONS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

### PDZ ELEMENTS PER A ELEMENTS AUXILIARS D'EVACUACIÓ, CANALITZACIÓ I VENTILACIÓ ESTÀTICA

#### PDZ0- SIFÓ PER A CÀMERES DE DESCÀRREGA, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PDZ0-428B,PDZ0-428C.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Sifó de descàrrega automàtica, instal·lat a una càmara de descàrrega situada a la capçalera de la xarxa de sanejament.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig del sifó
- Col·locació del sifó
- Connexió del sifó a la xarxa de sanejament
- Reblert del pou del sifó amb sorra

CONDICIONS GENERALS:
Ha d'estar fixat al fons de la cambra de descàrrega, dins d'un pou ple de sorra, i connectat al tub que comunica amb la xarxa de sanejament.
L'entrada d'aigua al sifó per sota de la campana ha d'estar separada del fons de la cambra una distància superior a 8 cm.
Ha d'estar col·locat de manera que siguin accessibles els cargols, i sigui possible desmuntar-lo i netejar-lo.
Toleràncies:
- Replanteig: ± 5 mm
- Nivell: ± 5 mm
- Aplomat: ± 2 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a col·locar el sifó cal que la cambra de descàrrega estigui completament acabada, amb el recobriment superficial, les connexions d'aigua, el sobreeixidor i la sortida del sifó fets.
No s'ha d'omplir el pou de sorra fins que s'hagi comprovat el funcionament correcte del sifó.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat col·locada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PE INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## PE4 XEMENEIES I CONDUCTES CIRCULARS

## PE42 CONDUCTE CIRCULAR METÀL·LIC

## PE421- CONDUCTE CIRCULAR METÀL·LIC, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PE421-48RG,PE421-48RD,PE421-48R9,PE421-48R7.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conductes muntats superficialment.
S'han considerat els materials següents:
- Alumini rígid
- Acer inoxidable
- Alumini flexible
- Planxa d'acer galvanitzat
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació dels suports per al muntatge superficial
- Col·locació dels conductes connectant-los amb juts i abraçadores
CONDICIONS GENERALS:
La situació del conducte ha de ser la reflectida a la DT o la indicada per la DF. Els conductes horitzontals han de passar a prop del sostre i amb una inclinació ascendent >= 3%.
Els conductes per al transport d'aire no poden allotjar conduccions d'altres instal·lacions mecàniques o elèctriques, ni ser travessats per aquestes.
El sistema de suport d'un conducte ha de tenir les dimensions dels elements que el constitueixen i ha d'estar espaiat de tal manera que sigui capaç de suportar, sense cedir, el pes del conducte i del seu aïllament tèrmic, si es el cas, així com el seu propi pes.
El sistema de suport no ha de debilitar l'estructura de l'edifici i la relació entre la càrrega que grava sobre l'element d'ancoratge i la càrrega que determina l'arrencament del mateix no ha de ser mai inferior a 1:4.
Si els conductes estan penjats del sostre, el tirant vertical ha de tenir una desviació <= 10° respecte a la vertical. Els suports s'han de col·locar a prop de les unions entre els trams.
Les unions entre els conductes s'han de fer mitjançant maniguets d'unió i s'han de segellar. Les unions entre els accessoris i els conductes s'han de fer directament. Els accessoris han d'estar normalitzats.
A les unions amb conductes d'obra el tub s'ha d'introduir dins el conducte 1 o 2 cm. Si el tub ha d'anar revestit amb un conducte d'obra, cal que hi hagi una distància >= 5 cm entre el conducte i el tub, per a facilitar la circulació de l'aire.
El pas a través d'elements estructurals i de tancament s'ha de fer amb passamurs d'un diàmetre, com a mínim, 4 cm més gran que el diàmetre del conducte si l'element és de material incombustible i si l'element és combustible el diàmetre del passamurs ha de ser 10 cm més gran, com a mínim. L'espai entre els conductes s'ha d'omplir amb material incombustible.
Els conductes verticals es suportaran per mitjà de perfils a un sostre o a una paret vertical.
La fixació dels conductes als maniguets d'unió s'ha de realitzar mitjançant cargols autoroscants o reblons.
Distància màxima entre suports horitzontals (UNE-EN 12236). Ha de complir
Distància màxima permesa entre suports verticals:
- Per a conductes de fins a 800mm de diàmetre: =< 8 m
- Per a conductes de diàmetres superiors a 800 mm: =< 4 m
Toleràncies d'instal·lació:
- Aplomat: 2/1000, <= 15 mm
Per a conductes d'alumini rígid, acer inoxidable o planxa d'acer galvanitzada la distància entre

suports en els trams horitzontals ha de ser <=3,5m i en trams verticals <=8m.
Per conductes d'alumini flexible la distància entre suports en els trams horitzontals ha de ser <=1,5m i en los trams verticals <= 3m
Les xarxes de conductes han d'estar equipades amb obertures de servei d'acord al que indica la norma UNE-ENV 12097 per a permetre les operacions de neteja i desinfecció.
Els elements instal·lats han de ser desmuntables i tenir una obertura d'accés o una secció desmuntable de conducte per a permetre les operacions de manteniment.
Els falsos sostres han de tenir registres d'inspecció en correspondència amb els registres de conductes i els aparells situats als mateixos.
Els conductes flexibles s'han d'instal·lar totalment desplegats i amb corbes de radi igual o major que el diàmetre nominal. La longitud màxima permesa és d'1,2 m.
CONDUCTES PER A VENTILACIÓ MECÀNICA
El conducte ha de tenir traçat vertical, excepte en els trams de connexió de les obertures d'extracció o ramals corresponents.
Ha de tenir un acabat que dificulti l'acumulació de brutícia i ha de ser practicable per al registre i neteja en la coronació i en l'arrencada.
Quan en la paret dels conductes es pugui arribar a la temperatura de rosada, hauran d'estar aïllats tèrmicament per tal d'evitar condensacions.
El conducte que travessi elements separadors de sectors d'incendi ha de complir les condicions de resistència al foc de l'apartat 3 de la secció SI1 del CTE.
Ha de ser estanc a l'aire per a la seva pressió de dimensionat.
La boca d'expulsió, o extrem exterior del conducte d'extracció, ha de disposar de malla anti-ocells o element similar.
Ha d'estar separada:
- De qualsevol element d'entrada de ventilació: d >= 3 m
- De zones ocupades habitualment: d >= 3 m

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Si el tub flexible d'alumini es subministra comprimit cal estirar-lo aproximadament fins a cinc vegades per a instal·lar-lo. Els radis de curvatura mínims han de ser iguals al diàmetre exterior.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
Els conductes s'han d'inspeccionar i netejar abans de la seva col·locació.
CONDUCTES PER A VENTILACIÓ MECÀNICA
S'ha de preveure el pas de conductes a través del sostres i altres elements de partició horitzontal de tal forma que s'executin els necessaris jous o cèrcols. Els forats de pas del sostre han de proporcionar una franquícia perimetral de 20 mm que s'ha d'omplir amb aïllant tèrmic.
S'han cuidar les unions previstes per tal d'assegurar l'estanqueïtat dels junts.
Les obertures d'extracció connectades als conductes s'han de tapar adequadament per a evitar l'entrada de runa o d'altres objectes fins que es col·loquin els elements de protecció corresponents.

3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions del projecte, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material corresponents a retalls.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.
UNE-EN 1506:2007 Ventilación de edificios. Conductos de aire de chapa metálica y accesorios de sección circular. Dimensiones.
UNE-EN 12236:2003 Ventilación de edificios. Soportes y apoyos de la red de conductos. Requisitos de resistencia.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de la instal·lació a l'obra.
- Control de procés de muntatge i verificació de la correcta execució de la instal·lació:
- Verificació radis cobertura, peces d'unió entre trams de forma geomètrica diferent
- Verificació de l'accessibilitat als conductes i comportes
- Verificació de la suportació de conductes segons UNE 100103
- Control de l'aïllament tèrmic de conductes segons especificacions

- Comprovació de l'estanquitat en conductes
- Comprovació del nivell sonor, velocitat i cabals en reixes i difusors.
- Comprovació de l'equilibrat dels difusors
- Ajust i equilibrat segons la IT 2.3 del RITE.
- Proves de recepció de xarxes de conductes:
- Neteja interior de la xarxa de conductes d'aire: s'ha d'efectuar un cop s'hagi completat el muntatge de la xarxa i de la unitat de tractament d'aire, però abans de connectar les unitats terminals.
- Abans que la xarxa es torni inaccessible per la instal·lació d'aïllament tèrmic o el tancament d'obres de manyeria i de falsos sostres, s'han de realitzar proves de resistència mecànica i d'estanquitat per a establir si s'ajusten al servei requerit, d'acord amb el projecte.
- Per a la realització de proves, les obertures dels conductes han de tancar-se rígidament i quedar segellades.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització d'informe amb els resultats del control efectuat.

CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar l'execució de conductes en diferents zones segons determini en cada cas la DF. El nivell sonor dels difusors i l'equilibrat s'ha de comprovar per mostreig intentant englobar les diferents zones.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de resultats negatius i anomalies, s'han de corregir els defectes sempre que sigui possible, en cas contrari s'ha de substituir el material afectat.

---

## PE INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## PEK REIXETES, DIFUSORS, COMPORTES, SILENCIADORS I ACCESSORIS

### PEKK- REIXETA D'IMPULSIÓ D'UNA FILERA D'ALETES ORIENTABLES HORITZONTALS, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PEKK-38H3,PEKK-38GS.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Reixetes d'impulsió o retorn d'alumini.
S'han considerat els tipus de col·locació següents:
- Fixades al bastiment
- Recolzades sobre el bastidor

L'execució de la unitat d'obra inclou les operacions següents:

Reixetes fixades al bastiment:
- Col·locació del bastiment de muntatge
- Fixació de la reixeta al bastiment
Reixetes recolzades sobre bastiment:
- Col·locació de la reixeta a pressió en el seu allotjament
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha de quedar plana sobre l'allotjament.
La reixeta fixada al bastiment, ha de quedar sòlidament unida al bastiment de muntatge per mitjà del marc collat amb visos o a pressió.
La reixeta recolzada sobre el bastiment, ha de quedar situada en el seu allotjament i exercir una certa pressió. Ha de ser manipulable manualment.
Les toleràncies de posició han de ser les fixades a la partida d'obra del conducte.
Si la unitat terminal de retorn no incorpora cap dispositiu de recollida de brutícia, la seva part inferior ha de quedar a una distancia mínima de 10 cm del terra.
Si la unitat terminal d'impulsió permet l'entrada d'un cos estrany de grandària superior o igual a 10 mm, aleshores aquesta ha d'anar col·locada a una distancia mínima de 2 m del terra, mesurada respecte a la seva part inferior.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La seva instal·lació no ha d'alterar les característiques de l'element.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
La reixeta s'ha d'inspeccionar abans de la seva col·locació.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.

## PE INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## PEM VENTILACIÓ ARTIFICIAL

## PEM6- VENTILADOR EN LÍNIA PER A CONDUCTE CIRCULAR, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PEM6-B66E.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Ventiladors en línia per a conductes circulars o rectangulars fixats i connectats al conducte.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació i fixació del ventilador als elements de suport.
- Connexió a la xarxa elèctrica
- Prova de servei
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
S'ha de comprovar, que el sentit de gir és el que li correspon, així com el sentit de circulació de l'aire resultant.
S'ha de connectar a la xarxa d'alimentació elèctrica i comprovar que la tensió disponible sigui adient.
S'ha de fixar mitjançant visos al suport, utilitzant els forats existents a la carcassa de l'aparell.
S'ha de suportar amb independència dels conductes, que no han d'exercir cap mena d'esforç. Les conexions han de ser flexibles per evitar la propagació d'ones sonores.
Ha d'estar col·locat de manera que les comportes de registre siguin accessibles i practicables per al seu manteniment.
En el cas de ventiladors amb el cos extraïble, s'ha de col·locar de manera que es pugui realitzar l'extracció del cos fàcilment per a les tasques de manteniment.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
S'ha de comprovar que el sentit de gir del ventilador es el que li correspongui, així com el sentit de circulació de l'aire resultant.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació dels equips a l'obra.
- Control del procés del muntatge, verificar la correcta execució de la instal·lació.
- Verificació que les vibracions no es transmeten al conducte.
- Verificació que els elements de subjecció tenen la mateixa resistència que l'exigida al ventilador.
- Control específic dels ventiladors:
- Control de la situació dels ventiladors
- Verificació de la no existència de sorolls anormals
- Actuació elements de control (si n'hi ha)
- Certificat de garantia de fabricant, d'acord amb la llei vigent de defensa de consumidors i usuaris.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Control específic dels ventiladors:
- Comprovació del funcionament del motor, consum (A) sentit de gir, velocitat (m/s), cabal (m3 /s), soroll (dBA)
- Manteniment de la instal·lació.
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'han de comprovar totes les unitats de ventilació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de resultats negatius i anomalies, s'han de corregir els defectes sempre que sigui possible, en cas contrari s'ha de substituir el material afectat.

## PE INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## PEV ELEMENTS DE REGULACIÓ I CONTROL PER A INSTAL·LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA

## PEVB- SONDA COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PEVB-6PHS.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Elements de mesura per a la presa de dades en instal·lacions de climatització.
S'han contemplat els següents tipus d'elements:
- Sondes de temperatura, pressió, humitat relativa, pressió diferencial de l'aire i de qualitat de l'aire
- Termòstats
- Presòstats
- Humidòstats
- Interruptors de cabal

L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Replanteig de la unitat d'obra
- Connexió a l'equip de regulació
- Fixació del termòstat al parament
- Prova de servei
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
La part sensible de l'equip de mesura ha de quedar exposada al fluid o element del que es volen pendre les lectures, de la manera especificada pel fabricant.
Les connexions elèctriques i de dades han d'estar fetes. Les connexions s'han de fer d'acord amb el sistema de connexió de l'equip.
Les parts dels equips que s'hagin de manipular, han de ser accessibles.
La distància entre els equips i els elements que l'envolten ha de ser suficient per permetre'n el desmuntatge i manteniment i no ha d'afectar la presa de dades. S'han de respectar les distàncies d'instal·lació i les recomanacions d'ubicació especificades a la DT del fabricant.
S'ha de deixar connectada a la xarxa corresponent, en condicions de funcionament.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels equips han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
Ha d'estar feta la prova de servei.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
El muntatge s'ha de fer seguint les instruccions de la documentació tècnica del fabricant. S'ha de seguir la seqüència de muntatge proposada pel fabricant.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
S'ha de comprovar que les característiques tècniques de l'aparell corresponguin a les especificades al projecte.
S'ha de comprovar la idoneïtat de la tensió disponible amb la dels aparells.
La seva instal·lació no ha d'alterar les característiques dels elements.
Les connexions a la xarxa de servei s'han de fer un cop tallat el subministrament.
Les proves i ajustos sobre els equips han de ser fetes per personal especialitzat.
Un cop instal·lat l'equip, es procedirà a la retirada de l'obra de tots els materials sobrant com ara embalatges, retalls de tubs, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat realment instal·lada, amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació dels equips a l'obra.
- Verificació de la instal·lació de tots els aparells previstos en projecte.
- Control de la col·locació adequada de Sondes i termòstats: alçada, zona aïllada d'influències pertorbadores de la lectura de temperatura.
- Verificació del cablejat, aïllament de la coberta, aïllament de pertorbacions elèctriques, apantallament, distàncies respecte senyals forts.
- Verificació de l'ajust de sondes amb aparells de mesura calibrats.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Proves finals globals a tota la instal·lació:
- Prova de funcionament. S'ha de realitzar al fer les proves de funcionament dels equips als que estan instal·lats els elements de regulació, calderes, climatitzadors, fan-coils, etc.
- Verificació de l'actuació dels elements de regulació sobre el dispositiu al que estan associats.
- En instal·lacions amb control centralitzat (PLC o PC) es comprovarà:
- Lectures
- Actuacions dels elements
- Actuació del sistema de control que realitza la regulació (funcionament per paràmetres de funcionament).
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar el funcionament i l'execució de la instal·lació de forma global. En qualsevol altre cas la DF ha de determinar la intensitat de la presa de mostres.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de resultats negatius i anomalies, s'han de corregir els defectes sempre que sigui possible, en cas contrari s'ha de substituir el material afectat.

## PF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## PF5 TUBS I ACCESSORIS DE COURE

## PF56- TUB DE COURE SEMIDUR, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PF56-FJGV,PF56-FJGU,PF56-FJGT,PF56-FJGS,PF56-FJGN,PF56-FJGL.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conduccions amb tub de coure semidur o recuit, col·locades i els seus elements auxiliars de connexió.
S'han considerat els tipus d'unitat d'obra següents:
- Instal·lació dels tubs
S'han considerat els tipus d'unió següents:
- Connectat a pressió
- Soldat per capil·laritat
S'han considerat els tipus de col·locació següents:
- Col·locació superficial
- Encastat
S'han considerat els graus de dificultat de muntatge següents:
- Grau baix, que correspon a una xarxa de trams llargs, amb pocs accessoris i situada un llocs fàcilment accessibles (muntants, etc.)
- Grau mitjà, que correspon a una xarxa equilibrada en trams lineals i amb accessoris (distribucions d'aigua, gas, calefacció, etc.)
- Grau alt, que correspon a una xarxa amb predomini d'accessoris sobre trams rectes (sala de calderes, escalfadors, etc.)
L'execució de la unitat d'obra inclou les operacions següents:
Tubs:
- Replanteig del traçat
- Muntatge en la seva posició definitiva
- Execució de totes les unions necessàries
- Retirada de l'obra de retalls de tubs, materials per a juts, etc.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Les unions han de ser estanques.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si.
TUBS:
En les instal·lacions amb tubs connectats a pressió, totes les unions, canvis de direcció i sortides de ramals s'han de fer únicament per mitjà dels accessoris de compressió.
En les instal·lacions de tub soldat per capil·laritat, totes les unions, canvis de direcció i sortides de ramals s'han de fer únicament per mitjà d'accessoris soldats per capil·laritat.
El tub no ha de quedar aixafat en les corbes. La secció del tub s'ha de mantenir aproximadament constant al llarg de tot el recorregut.
Les tuberies per les que circulen gasos amb presència eventual de condensats, han de tenir un pendent mínim del 0,5% per a possibilitar l'evacuació d'aquests condensats.
La superfície del tub o del calorifugant, si n'hi ha d'haver, ha d'estar a >= 300 mm de qualsevol conductor elèctric i s'ha de procurar que passi per sota.
La canonada que, en règim de treball, s'escalfi, s'ha de separar de les veïnes >= 250 mm.
Les conduccions que portin aigua freda han d'anar isolades amb una barrera de vapor, igual o superior a 200 MPa m s/g
El pas a través d'elements estructurals s'ha de fer amb passamurs i l'espai que quedi s'ha d'omplir amb material elàstic. Els passamurs han de sobresortir >= 3 mm del parament. Dins del passamurs no hi pot quedar cap accessori.

La canonada no pot travessar xemeneies ni conductes.
TUBS COL·LOCATS SUPERFICIALMENT:
Els tubs han de ser accessibles. Les canonades s'han d'estendre perpendicularment o paral·lelament respecte a l'estructura de l'edifici. Les horitzontals han de passar preferentment a prop del paviment o del sostre.
La separació entre els tubs o entre aquests i els paraments ha de ser >= 30 mm. Aquesta separació ha d'augmentar convenientment si han d'anar aïllats.
Els dispositius de suport han d'estar situats de tal manera que garanteixin l'estabilitat i l'alineació del tub.
Els suports s'han de fixar amb tacs i visos. Entre el suport i el tub s'ha d'interposar una anella elàstica. El suport no s'ha de soldar al tub.
No es poden transmetre esforços entre la canonada i els elements que la suporten.
Separació màxima entre suports (en metres):

| | Diàmetre del tub (mm) | | | |
|---|---|---|---|---|
| | 6 - 8 | 12 - 22 | 28 - 54 | 64 - 108 |
| Trams verticals | <= 1,8 | <= 2,4 | <= 3 | <= 3,7 |
| Trams horitzontals | <= 1,2 | <= 1,8 | <= 2,4 | <= 3 |

Toleràncies d'instal·lació:
- Nivell o aplomat: <= 2 mm/m, <= 15 mm/total
TUBS ENCASTATS:
Cal assegurar-se que el medi que l'envolta no sigui agressiu.
Han de disposar d'un tractament anticorrosiu adequat i anar dins de beines de protecció adequada, que permeti la lliure dilatació.
S'han de preveure registres i el traçat amb pendent per al seu buidatge o purga.
Toleràncies d'instal·lació:
- Nivell o aplomat: <= 2 mm/m, <= 15 mm/total
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
Les connexions a la xarxa de servei s'han de fer un cop tallat el subministrament.
TUBS:
Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.
Cada cop que s'interromp el muntatge, cal tapar els extrems oberts.
Un cop acabada la instal·lació s'ha de netejar interiorment i fer-hi passar un dissolvent d'olis i greixos.
3.- UNITAT I CRITERI D'AMIDAMENT
TUBS:
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material com a conseqüència dels retalls.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
La normativa ha de ser l'específica a l'ús a què es destini.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de les conduccions a l'obra segons el traçat previst.
- Verificació de l'ús de passamurs quan els tubs travessin sostres o parets.
- Verificació que l'execució es fa amb els pendents previstos al projecte segons l'ús de la instal·lació.
- S'han de realitzar les proves d'estanquitat, neteja i resistència mecànica establertes al RITE. Les proves d'estanquitat s'han de realitzar d'acord a la norma UNE 100151 o a UNE-ENV 12108, en funció del tipus de fluid transportat.
- Verificació de l'ús dels elements d'unió adequats, la correcta execució de soldadures si és el cas , i l'ús dels elements d'interconnexió adequats amb els equips de la instal·lació.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Manteniment de la instal·lació.
- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats i de quantificació

dels mateixos.
CRITERIS DE PRESA DE MOSTRES:
S'ha de verificar per mostreig diferents punts de la instal·lació, en cas de deficiències, s'ha de realitzar un mostreig extensiu.
La prova d'estanquitat s'ha de realitzar globalment o per sectors, verificant tota la instal·lació. Als trams d'instal·lació ocults o encastats, s'ha de realitzar un assaig previ, abans de l'ocultació dels tubs.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

---

## PF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## PFA TUBS I ACCESSORIS DE PVC

## PFA8- TUB DE PVC-U A PRESSIÓ, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PFA8-DVE1,PFA8-DVDY,PFA8-DVDP,PFA8-DVDJ,PFA8-DVDA,PFA8-DVC7,PFA8-DVDM.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Canalitzacions amb tub de poli (clorur de vinil) no plastificat PVC o C-PVC, per a transport i distribució de fluids a pressió i col·locació d'accessoris en canalitzacions per a soterrar, col·locats superficialment o al fons de la rasa.
S'han considerat els graus de dificultat de muntatge per als tubs, següents:
- Grau mitjà, que correspon a una xarxa equilibrada en trams lineals i amb accessoris (distribucions d'aigua, gas, calefacció, etc.)
- Sense especificació del grau de dificultat que correspon a una xarxa on es poden donar trams lineals, equilibrats i amb predomini d'accessoris indistintament al llarg del seu recorregut (instal·lacions d'obres d'enginyeria civil, etc.)
S'han considerat els tipus d'unió següents:
- Unió encolada
- Unió elàstica amb anella elastomèrica d'estanquitat
L'execució de la unitat d'obra inclou les operacions següents:
- Comprovació i preparació del pla de suport (en canalitzacions per soterrar)
- Replanteig de la conducció
- Col·locació de l'element en la seva posició definitiva
- Execució de totes les unions necessàries

- Neteja de la canonada
- Retirada de l'obra de retalls de tubs, materials per a juntes, etc.

No s'inclou, en les instal·lacions sense especificació del grau de dificultat, la col·locació d'accessoris. La variació del grau de dificultat en els diferents trams de la xarxa no permet fixar la repercussió d'accessoris; per això, la seva col·locació es considera una unitat d'obra diferent.

CONDICIONS GENERALS:

La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.

Els juntes han de ser estancs a la pressió de prova, han de resistir els esforços mecànics i no han de produir alteracions apreciables en el règim hidràulic de la canonada.

Totes les unions, canvis de direcció i sortides de ramals s'han de fer per mitjà d'accessoris del material del tub, emmotllats per injecció i normalitzats. Les unions s'han de fer encolades amb adhesiu normalitzat, o bé, amb junt elàstic; segons correspongui al tipus d'unió definit per a la instal·lació.

El pas a través d'elements estructurals s'ha de fer amb passamurs i l'espai que quedi s'ha d'omplir amb material elàstic. Els passamurs han de sobresortir >= 3 mm del parament. Dins del passamurs no hi pot quedar cap accessori.

La superfície del tub o del calorifugant, si n'hi ha d'haver, ha d'estar a >= 300 mm de qualsevol conductor elèctric i s'ha de procurar que passi per sota.

COL·LOCACIÓ SUPERFICIAL:

Els tubs han de ser accessibles. Les canonades s'han d'estendre perpendicularment o paral·lelament respecte a l'estructura de l'edifici. Les horitzontals han de passar preferentment a prop del paviment o del sostre.

Sobre envans, els suports s'han de fixar amb tacs i visos, i a les parets, s'han d'encastar. Si l'abraçadora del suport és metàl·lica, entre ella i el tub s'ha d'interposar una anella elàstica.

La canonada no pot travessar xemeneies ni conductes.

Distància entre suports:

- Tubs PVC:

| Diàmetre nominal (mm) | Distància entre suports (m): trams verticals | Distància entre suports (m): trams horitzontals |
|---|---|---|
| 16 - 20 | 1,1 | 0,7 |
| 25 - 75 | 1,3 | 0,8 |
| 90 - 110 | 2 | 0,8 |
| 125 - 200 | 2 | 1 |
| 250 - 500 | 2,5 | 1,2 |

COL·LOCACIÓ SOTERRADA:

Han de quedar centrats i alineats dins de la rasa.

La fondària de la rasa ha de permetre que el tub descansi sobre un llit de sorra de riu. Pel seu damunt hi ha d'haver un reblert de terra ben piconada per tongades de 20 cm. Les primeres capes que envolten el tub cal piconar-les amb cura.

Gruix del llit de sorra: >= 10 cm

Gruix del reblert: (sense trànsit rodat): >= 50 cm

Gruix del reblert: (amb trànsit rodat): >= 80 cm

El tub s'ha de col·locar dins la rasa serpentejant lleugerament per a permetre les contraccions i dilatacions degudes a canvis de temperatura.

Per tal de contrarestar les reaccions axials que es produeixen en circular el fluid, els punts singulars (corbes, reduccions, etc.), han d'estar ancorades a daus massissos de formigó.

En cas de coincidència de canonades d'aigua potable i de sanejament, les d'aigua potable han de passar per un pla superior a les de sanejament i han d'anar separades tangencialment 100 cm.

Per damunt del tub s'ha de fer un reblert de terres compactades, que han de complir l'especificat en el seu plec de condicions.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

CONDICIONS GENERALS:

La descàrrega i manipulació dels elements s'ha de fer de forma que no rebin cops.

Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.

La unió entre els tubs i altres elements d'obra s'ha de fer garantint la no transmissió de càrregues, la impermeabilitat i l'adherència amb les parets.

Cada cop que s'interromp el muntatge, cal tapar els extrems oberts.

En les unions elàstiques l'extrem llis del tub s'ha de netejar i lubrificar amb un lubrificant autoritzat pel fabricant del tub, abans de fer la connexió.

En les unions encolades l'adhesiu s'ha d'aplicar amb pinzell als dos extrems per a unir.
L'extrem recte del tub ha de tenir l'aresta exterior aixamfranada.
Si s'ha de tallar un tub, cal fer-ho perpendicularment a l'eix i eliminar les rebaves.
El tub s'ha d'encaixar sense moviments de torsió.
No és permès conformar els tubs a l'obra, s'han d'utilitzar els accessoris adequats.
Un cop acabada la instal·lació, s'ha de netejar interiorment fent-hi passar aigua perquè arrossegui les brosses i els gasos destil·lats produïts pel lubricant, l'adhesiu i el netejador que s'hagi utilitzat atenent al tipus d'unió. No s'ha de fer servir en aquesta operació cap tipus de dissolvent.
En el cas que la canonada sigui per abastament d'aigua, cal fer un tractament de depuració bacteriològic després de rentar-la.
COL·LOCACIÓ SOTERRADA:
Abans de baixar els elements a la rasa la DF ha d'examinar-los, rebutjant els que presentin algun defecte.
Abans de la col·locació dels elements cal comprovar que la rasant, l'amplària, la fondària i el nivell freàtic de la rasa corresponen als especificats en la DT. En cas contrari cal avisar la DF.
El fons de la rasa ha d'estar net abans de baixar els elements.
Si la canonada té un pendent > 10% s'ha de muntar en sentit ascendent. Si no es pot fer d'aquesta manera, cal fixar-la provisionalment per evitar el lliscament dels tubs.
Els tubs s'han de calçar i colzar per a impedir el seu moviment.
Col·locats els elements al fons de la rasa, s'ha de comprovar que el seu interior és lliure d'elements que puguin impedir el seu assentament o funcionament correctes (terres, pedres, eines de treball, etc.).
Les canonades i les rases s'han de mantenir lliures d'aigua, esgotant amb bomba o deixant desguassos a l'excavació.
No s'han de muntar trams de més de 100 m de llarg sense fer un reblert parcial de la rasa deixant el juntsdescoberts. Aquest reblert ha de complir les especificacions tècniques del reblert de la rasa.
Un cop situada la canonada a la rasa, parcialment reblerta excepte a les unions, s'han de fer les proves de pressió interior i d'estanquitat segons la normativa vigent.
No es pot procedir al reblert de les rases sense l'autorització expressa de la DF.
Els daus d'ancoratge s'han de fer una vegada enllestida la instal·lació. S'han de col·locar de forma que els juntsde les canonades i dels accessoris siguin accessibles per a la seva reparació.
3.- UNITAT I CRITERI D'AMIDAMENT
TUBS:
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material per retalls i els empalmaments que s'hagin efectuat.
En les instal·lacions amb grau de dificultat especificat, inclou, a més, la repercussió de les peces especials per col·locar.
COL·LOCACIÓ SOTERRADA:
No s'inclouen en aquest criteri els daus de formigó per a l'ancoratge dels tubs ni les brides metàl·liques per a la subjecció dels mateixos.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
La normativa ha de ser l'específica a l'ús a què es destini.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de les conduccions a l'obra segons el traçat previst.
- Control visual de l'execució de la instal·lació, comprovant:
- Suportació
- Verticalitat i pendents a trams horitzontals d'evacuació
- Diàmetres
- Utilització dels accessoris adequats a empalmaments i entroncaments
- Distància a altres elements i conduccions.
- Resistència al foc del material.
- Sectorització
- Elements, sifons i pericons.
- Existència de proteccions a trams baixos susceptibles de cops
- Realització de proves d'estanquitat i evacuació a instal·lacions de sanejament i evacuació d'aigües pluvials segons document HS-5 del Codi Tècnic de l'edificació.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Manteniment de la instal·lació.
- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats i de quantificació dels mateixos.

CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

---

## PF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## PFB TUBS I ACCESSORIS DE POLIETILÈ

## PFB3- TUB DE POLIETILÈ DE DENSITAT ALTA, PER A XARXES DE DISTRIBUCIÓ D'AIGUA, COL·LOCAT

## PFB3-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PFB3-140MQ,PFB3-140MT,PFB3-140MS.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Canalitzacions amb tub de polietilè per a transport i distribució de fluids a pressió i la col·locació d'accessoris en canalitzacions soterrades amb unions soldades, col·locats superficialment o al fons de la rasa.
S'han considerat els tipus de material següents:
- Polietilè extruït de densitat alta per al transport d'aigua a pressió amb una temperatura de servei fins a 40°C
S'han considerat els graus de dificultat de muntatge per als tubs, següents:
- Grau baix, que correspon a una xarxa de trams llargs, amb pocs accessoris i situada en llocs fàcilment accessibles (muntants, instal·lacions d'hidrants, etc.).
- Grau mitjà, que correspon a una xarxa equilibrada en trams lineals i amb accessoris (distribucions d'aigua, gas, calefacció, etc.)
- Grau alt, que correspon a una xarxa amb predomini d'accessoris (sala de calderes, instal·lació de bombeig, etc.)
- Sense especificació del grau de dificultat que correspon a una xarxa on es poden donar trams lineals, equilibrats i amb predomini d'accessoris indistintament al llarg del seu recorregut (instal·lacions d'obres d'enginyeria civil, etc.)

S'han considerat els tipus d'unió següents:
- Soldada (per a tubs de polietilè de densitat alta i mitjana)
- Connectada a pressió (per a tubs de polietilè de densitat alta i baixa)
L'execució de la unitat d'obra inclou les operacions següents:
- Comprovació i preparació del pla de suport (en canalitzacions per soterrar)
- Replanteig de la conducció
- Col·locació de l'element en la seva posició definitiva
- Execució de totes les unions necessàries
- Neteja de la canonada
- Retirada de l'obra de retalls de tubs, materials per a juts, etc.
No s'inclou, en les instal·lacions sense especificació del grau de dificultat, la col·locació d'accessoris. La variació del grau de dificultat en els diferents trams de la xarxa no permet fixar la repercussió d'accessoris; per això, la seva col·locació es considera una unitat d'obra diferent.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Els juts han de ser estancs a la pressió de prova, han de resistir els esforços mecànics i no han de produir alteracions apreciables en el règim hidràulic de la canonada.
Ha d'estar feta la prova de pressió.
Totes les unions, canvis de direcció i sortides de ramals s'han de fer únicament per mitjà dels accessoris normalitzats. Les unions s'han de fer amb accessoris que pressionin la cara exterior del tub o bé soldats per testa, segons sigui el tipus d'unió definit per a la canalització.
El pas a través d'elements estructurals s'ha de fer amb passamurs i l'espai que quedi s'ha d'omplir amb material elàstic. Els passamurs han de sobresortir >= 3 mm del parament. Dins del passamurs no hi pot quedar cap accessori.
El tub de polietilè extruït es pot corbar en fred amb els següents radis de curvatura:

| | Polietilè densitat alta | Polietilè densitat baixa i mitjana |
|---|---|---|
| A 0°C | <= 50 x Dn | <= 40 x Dn |
| A 20°C | <= 20 x Dn | <= 15 x Dn |

Entre 0°C i 20°C el radi de curvatura pot determinar-se per interpolació lineal.
COL·LOCACIÓ SUPERFICIAL:
Els tubs han de ser accessibles. Les canonades s'han d'estendre perpendicularment o paral·lelament respecte a l'estructura de l'edifici. Les horitzontals han de passar preferentment a prop del paviment o del sostre.
Els dispositius de suport han d'estar situats de tal manera que garanteixin l'estabilitat i l'alineació del tub.
Sobre envans, els suports s'han de fixar amb tacs i visos, i a les parets, s'han d'encastar. Si l'abraçadora del suport és metàl·lica, entre ella i el tub s'ha d'interposar una anella elàstica.
Donat l'elevat coeficient de dilatació lineal, cal que els punts singulars (suports, canvis de direcció, ramals, trams llargs, etc.), permetin al tub efectuar els moviments axials de dilatació.
La canonada no pot travessar xemeneies ni conductes.
Distància entre suports:
- Tub polietilè densitat alta:
- Trams verticals: DN x 20 mm
- Trams horitzontals: DN x 15 mm
COL·LOCACIÓ SOTERRADA:
La fondària de la rasa ha de permetre que el tub descansi sobre un llit de sorra de riu. Pel seu damunt hi ha d'haver un reblert de terra ben piconada per tongades de 20 cm. Les primeres capes que envolten el tub cal piconar-les amb cura.
Gruix del llit de sorra:
- Polietilè extruït: >= 5 cm
- Polietilè reticulat: >= 10 cm
Gruix del reblert: (sense trànsit rodat):
- Polietilè extruït: >= 60 cm
- Polietilè reticulat: >= 50 cm
Gruix del reblert: (amb trànsit rodat): >= 80 cm
El tub s'ha de col·locar dins la rasa serpentejant lleugerament per a permetre les contraccions i dilatacions degudes a canvis de temperatura.
Per tal de contrarestar les reaccions axials que es produeixen en circular el fluid, els punts singulars (corbes, reduccions, etc.), han d'estar ancorades a daus massissos de formigó.
En cas de coincidència de canonades d'aigua potable i de sanejament, les d'aigua potable han de

passar per un pla superior a les de sanejament i han d'anar separades tangencialment 100 cm.
Per damunt del tub s'ha de fer un reblert de terres compactades, que han de complir l'especificat en el seu plec de condicions.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
La descàrrega i manipulació dels elements s'ha de fer de forma que no rebin cops.
Per a fer la unió dels tubs no s'han de forçar ni deformar els extrems.
La unió entre els tubs i altres elements d'obra s'ha de fer garantint la no transmissió de càrregues, la impermeabilitat i l'adherència amb les parets.
Cada cop que s'interromp el muntatge, cal tapar els extrems oberts.
L'estesa del tub s'ha de fer desenrotllant tangencialment el rotlle, fent-lo rodar verticalment sobre el terreny.
En les unions elàstiques l'extrem llis del tub s'ha de netejar i lubrificar amb un lubrificant autoritzat pel fabricant del tub, abans de fer la connexió.
L'extrem del tub s'ha d'aixamfranar.
Si s'ha de tallar un tub, cal fer-ho perpendicularment a l'eix i eliminar les rebaves.
Si s'ha d'aplicar un accessori de compressió cal aixamfranar l'aresta exterior.
El tub s'ha d'encaixar sense moviments de torsió.
S'ha d'utilitzar un equip de soldadura que garanteixi l'alineació dels tubs i l'aplicació de la pressió adequada per a fer la unió.
Un cop acabada la instal·lació s'ha de netejar interiorment i fer-hi passar aigua per arrossegar les brosses.
En el cas que la canonada sigui per abastament d'aigua, cal fer un tractament de depuració bacteriològic després de rentar-la.
COL·LOCACIÓ SOTERRADA:
Abans de baixar els elements a la rasa la DF ha d'examinar-los, rebutjant els que presentin algun defecte.
Abans de la col·locació dels elements cal comprovar que la rasant, l'amplària, la fondària i el nivell freàtic de la rasa corresponen als especificats en la DT. En cas contrari cal avisar la DF.
El fons de la rasa ha d'estar net abans de baixar els elements.
Si la canonada té un pendent > 10% s'ha de muntar en sentit ascendent. Si no es pot fer d'aquesta manera, cal fixar-la provisionalment per evitar el lliscament dels tubs.
Els tubs s'han de calçar i colzar per a impedir el seu moviment.
Col·locats els elements al fons de la rasa, s'ha de comprovar que el seu interior és lliure d'elements que puguin impedir el seu assentament o funcionament correctes (terres, pedres, eines de treball, etc.).
Les canonades i les rases s'han de mantenir lliures d'aigua, esgotant amb bomba o deixant desguassos a l'excavació.
No s'han de muntar trams de més de 100 m de llarg sense fer un reblert parcial de la rasa deixant el junts descoberts. Aquest reblert ha de complir les especificacions tècniques del reblert de la rasa.
Un cop situada la canonada a la rasa, parcialment reblerta excepte a les unions, s'han de fer les proves de pressió interior i d'estanquitat segons la normativa vigent.
No es pot procedir al reblert de les rases sense l'autorització expressa de la DF.
Els daus d'ancoratge s'han de fer una vegada enllestida la instal·lació. S'han de col·locar de forma que els junts de les canonades i dels accessoris siguin accessibles per a la seva reparació.
3.- UNITAT I CRITERI D'AMIDAMENT
TUBS:
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material per retalls i els empalmaments que s'hagin efectuat.
En les instal·lacions amb grau de dificultat especificat, inclou, a més, la repercussió de les peces especials per col·locar.
COL·LOCACIÓ SOTERRADA:
No s'inclouen en aquest criteri els daus de formigó per a l'ancoratge dels tubs ni les brides metàl·liques per a la subjecció dels mateixos.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
La normativa ha de ser l'específica a l'ús a què es destini.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de les conduccions a l'obra segons el traçat previst.
- Control visual de l'execució de la instal·lació, comprovant:
- Suportació
- Verticalitat i pendents a trams horitzontals segons destí de la instal·lació

- Utilització dels accessoris adequats a empalmaments i entroncaments
- Distància a altres elements i conduccions.
- Realització de proves d'estanquitat i resistència mecànica
- Realització de proves d'estanquitat i evacuació a instal·lacions de sanejament.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Manteniment de la instal·lació.
- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats i de quantificació dels mateixos.

CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

---

## PF TUBS I ACCESSORIS PER A GASOS I FLUIDS

## PFQ AÏLLAMENTS TÈRMICS PER A TUBS

### PFQ0- AÏLLAMENT TÈRMIC PER A TUBS AMB ESCUMES ELASTOMÈRIQUES, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PFQ0-3KLU,PFQ0-3KLT,PFQ0-3KLS,PFQ0-3KLR,PFQ0-3KLQ,PFQ0-3KIQ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació d'aïllament tèrmic de conduccions.
S'han considerat els materials següents:
- Tubs amb escumes elastomèriques

S'han considerat els graus de dificultat de muntatge següents:
- Grau baix, que correspon a una xarxa de trams llargs, amb pocs accessoris i situada un llocs fàcilment accessibles (muntants, etc.)
- Grau mitjà, que correspon a una xarxa equilibrada en trams lineals i amb accessoris (distribucions d'aigua, gas, calefacció, etc.)
- Grau alt, que correspon a una xarxa amb predomini d'accessoris sobre trams rectes (sala de calderes, escalfadors, etc.)

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.

S'ha de col·locar en contacte continuat amb tota la superfície del tub, sense cap compressió que en redueixi el gruix.
L'aïllament ha d'estar col·locat de manera que no interfereixi amb els òrgans de comandament de les vàlvules i d'altres accessoris de la instal·lació.
En aïllaments amb escumes elastomèriques, en la unió, les camises veïnes s'han d'enganxar entre elles i han de quedar a pressió.
La temperatura de la superfície exterior, en funcionament, ha de ser <= 15°C per sobre de la temperatura ambient.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de col·locar la camisa, s'ha de netejar la superfície del tub de brosses, d'òxids o d'altres elements i s'hi ha d'aplicar una pintura antioxidant si no té cap protecció.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material com a conseqüència dels retalls.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).
Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació dels aïllaments a l'obra.
- Control visual de l'execució de la instal·lació, comprovant:
- Correcta col·locació dels aïllaments utilitzant els accessoris adequats de fixació o enganxament de forma que no quedin càmeres d'aire entre aïllament i tub.
- Inexistència de trams de la instal·lació sense aïllar que hagin d'anar aïllats
- Conductivitat tèrmica de referència
- Variacions del traçat de la instal·lació i comprovació de les pèrdues tèrmiques globals per al conjunt de conduccions per no superar el 4 % de la potècia màxima que transporta segons justificació de projecte i RITE.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització d'informe amb els resultats del control efectuat.
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

### PG1 CAIXES I ARMARIS

## PG12- CAIXA DE DERIVACIÓ QUADRADA, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG12-DHBA.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Caixes de plàstic o metàl·liques, amb grau de protecció normal, estanca, antihumitat o antideflagrant, encastades o muntades superficialment.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació i anivellament
CONDICIONS GENERALS:
La caixa ha de quedar fixada sòlidament al parament per un mínim de quatre punts.
La posició ha de ser la fixada a la DT.
Si la caixa és metàl·lica, ha de quedar connectada a la connexió a terra.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

---

# PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG1 CAIXES I ARMARIS

## PG19- CAIXA GENERAL DE PROTECCIÓ, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG19-DGGW.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Caixa general de protecció de polièster reforçat, amb o sense borns bimetàl·lics segons esquemes UNESA i muntada superficialment o encastades.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació i anivellació
- Connexionat
- Retirada de l'obra dels embalatges, retalls de cables, etc.
CONDICIONS GENERALS:
La caixa ha de quedar fixada sòlidament al parament per un mínim de quatre punts.
La part inferior de la caixa ha d'estar situada a una alçària de 400 mm, com a mínim.
La caixa ha de quedar col·locada en un lloc de fàcil i lliure accés.
La posició ha de ser la fixada a la DT.
No s'han de transmetre esforços entre els conductors i la caixa.
Si es col·loca encastada, les dimensions del nínxol han de superar les de la caixa en un mínim de 15 mm i un màxim de 30 mm. La seva fondària ha de ser >= 30 cm.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Per a la instal·lació s'han de seguir les instruccions de la DT del fabricant.
La seva instal·lació no ha d'alterar les característiques de l'element.
S'ha de treballar sense tensió a la xarxa.
Un cop instal·lada la caixa, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de cables, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Verificar la correcta ubicació i instal·lació de l'escomesa segons prescripcions de la companyia subministradora.
- Verificar la correcta ubicació i fixació de la CGP
- Verificar els següents elements de la línia general d'alimentació :
- Secció dels conductors
- Tipus de conductors (coure amb aïllament 0,6/1 kV)
- Calibre i naturalesa dels conductes
- Resistència al foc dels conductes o safates emprats en la canalització
- Verificar (si existeix) la correcta instal·lació de la línia repartidora
- Verificar la correcta ubicació, fixació i acoblament dels mòduls de protecció i mesura.
- Verificar les seccions dels conductors i embarrats.
- Verificar les seccions dels conductors i embarrats.
- Verificar la correcta execució de les connexions dels circuits.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats d'acord amb el que s'especifica a continuació i de quantificació dels mateixos.
- Assaigs:
- Resistència d'aïllament (REBT)
- Rigidesa dielèctrica (REBT)
- Funcionament interruptor automàtic (REBT-COMPANYIA)
- Funcionament interruptor diferencial (si existeix en aquest quadre) (REBT, UNE-EN 61008-1)
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG1 CAIXES I ARMARIS

## PG1D- CONJUNT DE PROTECCIÓ I MESURA, COL·LOCAT (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG1D-H9W7,PG1D-H9WA.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conjunt de protecció i mesura per a comptadors trifàsics, col·locats superficialment.
L'execució de la unitat d'obra inclou les operacions següents:
- Muntatge, fixació i nivellació
- Connexionat
CONDICIONS GENERALS:
S'ha d'instal·lar a l'interior del local o a la façana, en lloc accessible fàcilment, a prop de l'entrada i a una alçada entre 0,50 i 1,80 m.
Segons el grau d'electrificació s'ha d'instal·lar la protecció contra contactes indirectes (interruptors diferencials) i PIA (Interruptors magnetotèrmics) necessaris.
Els comptadors han d'estar fixats sobre una paret, mai sobre un envà.
Sobre les bases s'han de col·locar els fusibles de seguretat.
S'han de complir les especificacions de la ITC-MIE-BT-019.
Un cop instal·lat i connectat a la xarxa, no han de ser accessibles les parts que hagin d'estar en tensió.
Les fases (o fase i neutre) i el conductor de protecció, si n'hi ha, han d'estar connectades als borns de la fase per pressió del cargol.
Ha de quedar amb els costats aplomats i en el mateix pla que el parament.
La posició ha de ser la fixada a la DT.
Quan es col·loca muntat superficialment, l'element ha de quedar fixat sòlidament al suport.
Quan es col·loca encastat, l'element ha de quedar fixat sòlidament a la caixa de mecanismes, la qual ha de complir les especificacions fixades en el seu plec de condicions.
Resistència de les connexions a la tracció: >= 3 kg
Toleràncies d'instal·lació:
- Posició: ± 20 mm
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG2 TUBS, CANALS, SAFATES I COLUMNES PER A MECANISMES

### PG2N- TUB FLEXIBLE DE MATERIAL PLÀSTIC PER A LA PROTECCIÓ DE CONDUCTORS ELÈCTRICS, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG2N-EUH9,PG2N-EUH8,PG2N-EUJJ,PG2N-EUH7,PG2N-EUIB.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Tub flexible no metàl·lic, de fins a 250 mm de diàmetre nominal, col·locat.
S'han considerat els tipus de tubs següents:
- Tubs de PVC corrugats
- Tubs de PVC folrats, de dues capes, semillisa l'exterior i corrugada la interior
- Tubs de material lliure d'halògens
- Tubs de polipropilè
- Tubs de polietilè de dues capes, corrugada l'exterior i llisa la interior
S'han considerat els tipus de col·locació següents:
- Tubs col·locats encastats
- Tubs col·locats sota paviment
- Tubs col·locats sobre sostremort
- Tubs col·locats al fons de la rasa
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig del traçat del tub
- L'estesa, fixació o col·locació del tub
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, etc.
CONDICIONS GENERALS:
El tub no pot tenir empalmaments entre els registres (caixes de derivació, pericons, etc.), ni entre aquests i les caixes de mecanismes.
S'ha de comprovar la regularitat superficial i l'estat de la superfície sobre la què s'ha d'efectuar el tractament superficial.
Toleràncies d'instal·lació:
- Penetració dels tubs dintre les caixes: ± 2 mm
ENCASTAT:
El tub s'ha de fixar al fons d'una regata oberta al parament, coberta amb guix.
Recobriment de guix: >= 1 cm
SOBRE SOSTREMORT:
El tub ha de quedar fixat al sostre o recolzat en el cel ras.
MUNTAT A SOTA D'UN PAVIMENT
El tub ha de quedar recolzat sobre el paviment base.
Ha de quedar fixat al paviment base amb tocs de morter cada metre, com a mínim.
CANALITZACIÓ SOTERRADA:
El tub ha de quedar instal·lat al fons de rases reblertes posteriorment.
El tub no pot tenir empalmaments entre els registres (caixes de derivació, pericons, etc.), ni entre aquests i les caixes de mecanismes.
Nombre de corbes de 90° entre dos registres consecutius: <= 3
Distància entre el tub i la capa de protecció: >= 10 cm
Fondària de les rases: >= 40 cm
Penetració del tub dins dels pericons: 10 cm
Toleràncies d'execució:
- Penetració del tub dins dels pericons: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge es farà un replanteig previ que serà aprovat per la DF
Les unions s'han de fer amb els accessoris subministrats pel fabricant o expressament aprovats per aquest. Els accessoris d'unió i en general tots els accessoris que intervenen en la canalització han de ser els adequats al tipus i característiques del tub a col·locar.
S'ha de comprovar que les característiques del producte a col·locar corresponen a les especificades a la DT del projecte.
Els tubs s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no n'ha d'alterar les característiques.
Un cop acabades les tasques de muntatge, es procedirà a la retirada de l'obra de les restes d'embalatges, retalls de tubs, etc.
CANALITZACIÓ SOTERRADA:
El tub ha de quedar alineat en el fons de la rasa nivellant-lo amb una capa de sorra garbejada i netejant-la de possibles obstacles (pedra, runa, etc.)
Sobre la canalització s'ha de col·locar una capa o coberta d'avís i protecció mecànica (maons,

plaques de formigó, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions del projecte, entre els eixos dels elements o dels punts per connectar.
La instal·lació inclou les fixacions, provisionals quan el muntatge és encastat i definitives en la resta de muntatges.
Aquest criteri inclou les pèrdues de material corresponents a retalls.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 50086-1:1995 Sistemas de tubos para la conducción de cables. Parte 1: Requisitos generales.
UNE-EN 50086-2-2:1997 Sistemas de tubos para instalaciones eléctricas. Parte 2-2: Requisitos particulares para sistemas de tubos curvables.
UNE-EN 50086-2-3:1997 Sistemas de tubos para instalaciones eléctricas. Parte 2-1: Requisitos particulares para sistemas de tubos flexibles.
CANALITZACIÓ SOTERRADA:
UNE-EN 50086-2-4:1995 Sistemas de tubos para la conducción de cables. Parte 2-4: requisitos particulares para sistemas de tubos enterrados.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de les canalitzacions segons el traçat previst.
- Verificar que les dimensions de les canalitzacions s'adeqüen a l'especificat i al que li correspon segons el R.E.B.T., en funció dels conductors instal·lats.
- Verificar la correcta suportació i l'ús dels accessoris adequats.
- Verificar el grau de protecció IP
- Verificar els radis de curvatura, comprovant que no es provoquen reduccions de secció.
- Verificar la continuïtat elèctrica a canalitzacions metàl·liques i la seva posada a terra.
- Verificar la no existència d'encreuaments i paral·lelismes amb d'altres canalitzacions a distàncies inferiors a l'indicat al R.E.B.T.
- Verificar el correcte dimensionament de les caixes de connexió i l'ús dels accessoris adequats.
- Verificar la correcta implantació de registres per a un manteniment correcte.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Informe amb els resultats dels controls efectuats.
CRITERIS DE PRESA DE MOSTRES:
Es verificarà per mostreig diferents punts de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG2 TUBS, CANALS, SAFATES I COLUMNES PER A MECANISMES

## PG2P- TUB RÍGID DE PLÀSTIC PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG2P-6T08,PG2P-6T09.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Tub rígid no metàl·lic de fins a 160 mm de diàmetre nominal, connectat roscat o endollat.
S'han considerat els tipus de col·locació següents:
- Muntat com a canalització soterrada
- Muntat superficialment
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig del traçat del tub
- Estesa, fixació i curvat
- Preparació dels extrems dels tubs i execució de les unions entre trams i amb els accessoris
- Comprovació de la unitat d'obra
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, etc.
CONDICIONS GENERALS:
Els canvis de direcció s'han de fer mitjançant corbes d'acoblament, escalfant-les lleugerament, sense que es produeixin canvis sensibles a la secció.
Quan les unions són roscades, han d'estar fetes amb maniguets amb rosca.
Quan les unions són endollades s'han de fer amb maniguets llisos.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
- Alineació: ± 2%, <= 20 mm/total
CANALITZACIÓ SOTERRADA:
El tub ha de quedar instal·lat al fons de rases obertes que després s'han de reblir.
Les unions s'han de fer mitjançant connexió a pressió.
Les unions que no puguin anar directament connectades s'han de fer amb maniguets aïllants.
L'estanqueïtat dels junts s'ha d'aconseguir amb cinta aïllant i resistent a la humitat.
Cada tub ha de protegir un sol cable o un conjunt de cables unipolars que constitueixin un mateix sistema.
El tub ha de quedar envoltat de sorra o terra garbellada. Aquestes han de complir les especificacions fixades al seu plec de condicions.
Sobre la canalització s'ha de col·locar una capa o una coberta d'avís, de protecció mecànica (maons, plaques de formigó, etc.).
El radi curvatura ha d'estar dintre dels límits marcats pel fabricant.
Fondària de les rases: >= 40 cm
Distància a línies telefòniques, tubs de sanejament, aigua i gasos: >= 20 cm
Distància entre el tub i la capa de protecció: >= 10 cm
COL·LOCAT SUPERFICIALMENT:
Han de quedar fixades al suport per mitjà de brides o abraçadores protegides contra la corrosió i sòlidament subjectes.
Distància entre les fixacions:
- Trams horitzontals: <= 60 cm
- Trams verticals: <= 80 cm
Distància a línies telefòniques, tubs de sanejament, aigua i gasos: >= 25 cm
Distància entre registres: <= 1500 cm
Nombre de corbes de 90° entre dos registres consecutius: <= 3
Penetració del tub dins les caixes: 1 cm
Toleràncies d'instal·lació:
- Distància de la grapa al vèrtex de l'angle en els canvis de direcció: ± 5 mm
- Penetració del tub dins les caixes: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge es farà un replanteig previ que serà aprovat per la DF
Les unions s'han de fer amb els accessoris subministrats pel fabricant o expressament aprovats per aquest. Els accessoris d'unió i en general tots els accessoris que intervenen en la canalització han de ser els adequats al tipus i característiques del tub a col·locar.
S'ha de comprovar que les característiques del producte a col·locar corresponen a les especificades

a la DT del projecte.
Els tubs s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no n'ha d'alterar les característiques.
Un cop acabades les tasques de muntatge, es procedirà a la retirada de l'obra de les restes d'embalatges, retalls de tubs, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material com a conseqüència dels retalls.
La instal·lació inclou els accessoris i les fixacions.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 50086-1:1995 Sistemas de tubos para la conducción de cables. Parte 1: Requisitos generales.
UNE-EN 50086-2-1:1997 Sistemas de tubos para instalaciones eléctricas. Parte 2-1: Requisitos particulares para sistemas de tubos rígidos.
UNE-EN 50086-2-2:1997 Sistemas de tubos para instalaciones eléctricas. Parte 2-2: Requisitos particulares para sistemas de tubos curvables.
UNE-EN 50086-2-4:1995 Sistemas de tubos para la conducción de cables. Parte 2-4: requisitos particulares para sistemas de tubos enterrados.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta implantació de les canalitzacions segons el traçat previst.
- Verificar que les dimensions de les canalitzacions s'adeqüen a l'especificat i al que li correspon segons el R.E.B.T., en funció dels conductors instal·lats.
- Verificar la correcta suportació i l'ús dels accessoris adequats.
- Verificar el grau de protecció IP
- Verificar els radis de curvatura, comprovant que no es provoquen reduccions de secció.
- Verificar la continuïtat elèctrica a canalitzacions metàl·liques i la seva posada a terra.
- Verificar la no existència d'encreuaments i paral·lelismes amb d'altres canalitzacions a distàncies inferiors a l'indicat al R.E.B.T.
- Verificar el correcte dimensionament de les caixes de connexió i l'ús dels accessoris adequats.
- Verificar la correcta implantació de registres per a un manteniment correcte.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Informe amb els resultats dels controls efectuats.
CRITERIS DE PRESA DE MOSTRES:
Es verificarà per mostreig diferents punts de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA

## PG33- CABLE DE COURE DE 0,6/1 KV, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG33-E6E2,PG33-E6CT,PG33-E6E4,PG33-E6E3,PG33-E6CV.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Estesa i col·locació de cable elèctric destinat a sistemes de distribució en tensió baixa i instal·lacions en general, per a serveis fixes, amb conductor de coure, de tensió assignada 0,6/1kV.
S'han considerat els tipus següents:
- Cable flexible de designació RZ1-K (AS), amb aïllament de barreja de polietilè reticulat (XLPE) i coberta de poliolefines termoplàstiques , UNE 21123-4
- Cable flexible de designació RV-K amb aïllament de barreja de polietilè reticulat (XLPE) i coberta de barreja de policlorur de vinil (PVC), UNE 21123-2
- Cable flexible de designació RZ1-K (AS+), amb aïllament de barreja de polietilè reticulat (XLPE) + mica i coberta de poliolefines termoplàstiques , UNE 21123-4
- Cable flexible de designació SZ1-K (AS+), amb aïllament d'elastòmers vulcanitzats i coberta de poliolefines termoplàstiques , UNE 21123-4
- Cable rígid de designació RV, amb aïllament de barreja de polietilè reticulat (XLPE) i coberta de barreja de policlorur de vinil (PVC), UNE 21123-2
- Cable rígid de designació RZ, amb aïllament de barreja de polietilè reticulat (XLPE), UNE 21030
- Cable rígid de designació RVFV, amb armadura de fleix d'acer, aïllament de barreja de polietilè reticulat (XLPE) i coberta de barreja de policlorur de vinil (PVC), UNE 21123-2
- Cable flexible de designació ZZ-F (AS), amb aïllament i coberta d'elastòmers termoestables.
S'han considerat els tipus de col·locació següents:
- Col·locat superficialment
- Col·locat en tub
- Col·locat en canal o safata
- Col·locat aeri
L'execució de la unitat d'obra inclou les operacions següents:
- Estesa, col·locació i tibat del cable si es el cas
CONDICIONS GENERALS:
Els empalmaments i derivacions s'han de fer amb borns o regletes de connexió, prohibint-se expressament el fer-ho per simple recargolament o enrrotllament dels fils, de forma que es garanteixi tant la continuïtat elèctrica com la de l'aïllament.
El recorregut ha de ser l'indicat a la DT.
Els conductors han de quedar estesos de manera que les seves propietats no quedin danyades.
Els conductors han d'estar protegits contra els danys mecànics que puguin venir després de la seva instal·lació.
El conductor ha de penetrar dins les caixes de derivació, de connexió dels equips i dels mecanismos elèctrics.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
El cable ha de portar una identificació mitjançant anelles o brides del circuit al qual pertany, a la sortida del quadre de protecció.
No ha d'haver-hi empalmaments entre les caixes de derivació, ni entre aquestes i els mecanismes.
No s'han de transmetre esforços entre els cables i les connexions elèctriques.
Penetració del conductor dins les caixes: >= 10 cm
Toleràncies d'instal·lació:
- Penetració del conductor dins les caixes: ± 10 mm
Distància mínima al terra en creuaments de vials públics:
- Sense transit rodat: >= 4 m
- Amb transit rodat: >= 6 m
COL·LOCAT SUPERFICIALMENT:
El cable ha de quedar fixat als paraments o al sostre mitjançant brides, collarins o abraçadores de forma que no en surti perjudicada la coberta.

Quan es col·loca muntat superficialment, la seva fixació al parament ha de quedar alineada paral·lelament al sostre o al paviment i la seva posició ha de ser la fixada al projecte.
Distància horitzontal entre fixacions: <= 80cm
Distància vertical entre fixacions: <= 150cm
En cables col·locats amb grapes sobre façanes s'aprofitarà, en la mesura del possible, les possibilitats d'ocultació que ofereixi aquesta.
El cable es subjectarà a la paret o sostre amb les grapes adequades. Les grapes han de ser resistents a la intempèrie i en cap cas han de malmetre el cable. Han d'estar fermament subjectes al suport amb tacs i cargols.
Quan el cable ha de recórrer un tram sense suports, com per exemple passar d'un edifici a un altre, es penjarà d'un cable fiador d'acer galvanitzat sòlidament subjectat pels extrems.
En els creuaments amb altres canalitzacions, elèctriques o no, es deixarà una distància mínima de 3 cm entre els cables i aquestes canalitzacions o be es disposarà un aïllament suplementari. Si l'encreuament es fa practicant un pont amb el mateix cable, els punts de fixació immediats han d'estar el suficientment propers per tal d'evitar que la distància indicada pugui deixar d'existir.
COL·LOCACIÓ AÈRIA:
El cable quedarà unit als suports pel neutre fiador que es el que aguantarà tot l'esforç de tracció. En cap cas està permes fer servir un conductor de fase per a subjectar el cable.
La unió del cable amb el suport es durà a terme amb una peça adient que empresoni el neutre fiador per la seva coberta aïllant sense malmètrela. Aquesta peça ha d'incorporar un sistema de tesat per tal de donar-li al cable la seva tensió de treball un cop estesa la línia. Ha de ser d'acer galvanitzat hi no ha de provocar cap retorciment al conductor neutre fiador en les operacions de tesat.
Tant les derivacions com els empalmaments es faran coincidir sempre amb un punt de fixació, ja sigui en xarxes sobre suports o en xarxes sobre façanes o be en combinacions d'aquestes.
COL·LOCAT EN TUBS:
Quan el cable passi de subterrani a aèri, es protegirà el cable soterrat des de 0,5 m per sota del paviment fins a 2,5 m per sobre amb un tub d'acer galvanitzat.
La connexió entre el cable soterrat i el que transcorre per la façana o suport es farà dintre d'una caixa de doble aïllament, situada a l'extrem del tub d'acer, resistent a la intempèrie i amb premsaestopes per a l'entrada i sortida de cables.
Els empalmaments i connexions es faran a l'interior de pericons o be en les caixes dels mecanismes. Es duran a terme de manera que quedi garantida la continuitat tant elèctrica com de l'aïllament.
A la vegada ha de quedar assegurada la seva estanquitat i resistència a la corrossió.
El diàmetre interior dels tubs serà superior a dues vegades el diàmetre del conductor.
Si en un mateix tub hi ha més d'un cable, aleshores el diàmetre del tub ha de ser suficientment gran per evitar embussaments dels cables.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
L'instal·lador prendrà cura que no pateixi torsions ni danys a la seva coberta en treure'l de la bobina. Es tindrà cura al treure el cable de la bobina per tal de no causar-li retorçaments ni coques.
Temperatura del conductor durant la seva instal·lació: >= 0°C
No ha de tenir contacte amb superfícies calentes, ni que desprenguin irradiacions.
Si l'estesa del cable es amb tensió, es a dir estirant per un extrem del cable mentre es va desentrrotllant de la bobina, es disposaran politges als suports i en els canvis de direcció per tal de no sobrepassar la tensió màxima admissible pel cable. El cable s'ha d'extreure de la bobina estirant per la part superior. Durant l'operació es vigilarà permanentment la tensió del cable.
Un cop el cable a dalt dels suports es procedirà a la fixació i tibat amb els tensors que incorporen les peces de suport.
Durant l'estesa del cable i sempre que es prevegin interrupcions de l'obra, els extrems es protegiran per tal de que no hi entri aigua.
La força màxima de tracció durant el procés d'instal·lació serà tal que no provoqui allargaments superiors al 0,2%. Per a cables amb conductor de coure, la tensió màxima admissible durant l'estesa serà de 50 N/mm2.
En el traçat de l'estesa del cable es disposaran rodets en els canvis de direcció i en general allí on es consideri necessari per tal de no provocar tensions massa grans al conductor.
Radi de curvatura mínim admissible durant l'estesa:
- Cables unipolars: Radi mínim de quinze vegades el diàmetre del cable.
- Cables multiconductors: Radi mínim de dotze vegades el diàmetre del cable.
CABLE COL.LOCAT EN TUB:
El tub de protecció ha d'estar instal·lat abans d'introduir els conductors.
El conductor s'ha d'introduir dins el tub de protecció mitjançant un cable guia prenent cura que no pateixi torsions ni danys a la seva coberta.
3.- UNITAT I CRITERI D'AMIDAMENT

m de llargària instal·lada, amidada segons les especificacions del projecte, entre els eixos dels elements per connectar.
Aquest criteri inclou les pèrdues de material corresponents a retalls, així com l'excés previst per a les connexions.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació dels conductors
- Verificar que els tipus i seccions dels conductors s'adeqüen a l'especificat al projecte
- Verificar la no existència d'empalmaments fora de les caixes
- Verificar a caixes la correcta execució dels empalmaments i l'ús de borns de connexió adequats
- Verificar l'ús adequat dels codis de colors
- Verificar les distàncies de seguretat respecte altres conduccions (aigua, gas, gasos cremats i senyals febles) segons cadascun dels reglaments d'aplicació.
- Assaigs segons REBT.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i assaigs realitzats, d'acord amb el que s'especifica a la taula d'assaigs i de quantificació dels mateixos.
CRITERIS DE PRESA DE MOSTRES:
Resistència d'aïllament: Es realitzarà a tots els circuits
Rigidesa dielèctrica: Es realitzarà a les línies principals
Caiguda de tensió: Es mesuraran els circuits més desfavorables i les línies que hagin sigut modificades el seu recorregut respecte projecte.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva substitució.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG3 CABLES ELÈCTRICS PER A TENSIÓ BAIXA I SISTEMES DE DISTRIBUCIÓ ELÈCTRICA

## PG3B- CONDUCTOR DE COURE NU, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG3B-E7DP,PG3B-E7CS.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Conductor de coure nu, unipolar de fins a 240 mm2 de secció, muntat.
S'han considerat els tipus de col·locació següents:
- Muntat superficialment
- En malla de connexió a terra
L'execució de la unitat d'obra inclou les operacions següents:
- L'estesa i empalmament
- Connexionat a presa de terra
CONDICIONS GENERALS:
Les connexions del conductor s'han de fer per soldadura sense la utilització d'àcids, o amb peces de connexió de material inoxidable, per pressió de cargol, aquest últim mètode sempre en llocs visitables.
El cargol ha de portar un dispositiu per tal d'evitar que s'afluixi.
Les connexions entre metalls diferents no han de produir deteriorament per causes electroquímiques.
El circuit de terra no serà interromput per la col·locació de seccionadors, interruptors o fusibles.
El pas del conductor pel paviment, murs o d'altres elements constructius s'ha de fer dins d'un tub rígid d'acer galvanitzat.
El conductor no ha d'estar en contacte amb elements combustibles.
El recorregut ha de ser l'indicat a la DT.
COL·LOCAT SUPERFICIALMENT:
El conductor ha de quedar fixat mitjançant grapes al parament o sostre, o bé mitjançant brides en el cas de canals i safates.
Distància entre fixacions: <= 75 cm
EN MALLA DE CONNEXIÓ A TERRA:
El conductor ha de quedar instal·lat al fons de rases reblertes posteriorment amb terra garbellada i compactada.
El radi de curvatura mínim admès ha de ser 10 vegades el diàmetre exterior del cable en mm.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
L'instal·lador prendrà cura que el conductor no pateixi torsions ni danys en treure'l de la bobina.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària instal·lada, amidada segons les especificacions de la DT, entre els eixos dels elements o dels punts per connectar.
Aquest criteri inclou les pèrdues de material com a conseqüència dels retalls.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Verificar la correcta ubicació dels punts de posada a terra.
- Verificar l'execució de pous de terra, col·locació d'elèctrodes, tubs de manteniment (si existeix), ús dels connectors adequats i acabat de l'arqueta.
- Verificar la continuïtat d'entre els conductors de protecció i dels elèctrodes de posada a terra.
- Verificar la posada a terra de les conduccions metàl·liques de l'edifici.
- Mesures de resistència de terra.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de valors de resistència de terra superiors a l'especificat a REBT, es procedirà a la construcció de nous pous de terra o tractament del terreny, fins que s'arribi a obtenir la resistència adequada.
Els defectes d'instal·lació hauran de ser corregits.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG5 APARELLS DE MESURA

### PG52- COMPTADOR, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG52-DY01.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Aparells de mesura col·locats superficialment o instal·lats en un armari.
S'han considerat les unitats d'obra següents:
- Comptadors monofàsics o trifàsics muntats superficialment.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellació
- Connexionat
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.
CONDICIONS GENERALS:
Ha de quedar connectat als borns de manera que s'asseguri un contacte eficaç i durable.
La seva situació dins del circuit elèctric ha de ser la indicada a DT tant pel que fa referència a l'esquema com al lay-out.
Toleràncies d'execució:
- Verticalitat: ± 2 mm
COMPTADOR:
S'han considerat els tipus de col·locació següents:
- Individual
- Concentrada
Ha de quedar fixat sòlidament per tres punts a la placa base de la caixa o armari mitjançant visos.
Els comptadors han d'estar protegits mitjançant dispositius (tapes, etc.) que impedeixin la seva manipulació.
En cas de col·locació de forma individual el comptador ha de quedar muntat a una alçària mínima de 150 cm i una màxima de 180 cm.
En cas de col·locació de forma concentrada el comptador ha de quedar muntat a una alçària mínima de 50 cm i una màxima de 180 cm.
Davant del comptador ha de quedar un espai lliure de 110 cm com a mínim.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

La instal·lació inclou la part proporcional de connexionats i accessoris dins dels quadres elèctrics.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL EN COMPTADORS:
Les tasques de control a realitzar són les següents:
- Verificar la correcta ubicació i instal·lació de l'escomesa segons prescripcions de la companyia subministradora.
- Verificar la correcta ubicació i fixació de la CGP
- Verificar els següents elements de la línia general d'alimentació :
- Secció dels conductors
- Tipus de conductors (coure amb aïllament 0,6/1 kV)
- Calibre i naturalesa dels conductes
- Resistència al foc dels conductes o safates emprats en la canalització
- Verificar (si existeix) la correcta instal·lació de la línia repartidora
- Verificar la correcta ubicació, fixació i acoblament dels mòduls de protecció i mesura.
- Verificar les seccions dels conductors i embarrats.
- Verificar la correcta execució de les connexions dels circuits.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL EN COMPTADORS:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats d'acord amb el que s'especifica a continuació i de quantificació dels mateixos.
- Assaigs:
- Resistència d'aïllament (REBT)
- Rigidesa dielèctrica (REBT)
- Funcionament interruptor automàtic (REBT-COMPANYIA)
- Funcionament interruptor diferencial (si existeix en aquest quadre) (REBT, UNE-EN 61008-1)
CRITERIS DE PRESA DE MOSTRES EN COMPTADORS:
S'ha de comprovar la totalitat de la instal·lació.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN COMPTADORS:
Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG6 MECANISMES

### PG65- CAIXA PER A MECANISMES, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG65-483R.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mecanismes per a instal·lacions elèctriques, encastats o muntats superficialment i els elements necessaris per a la seva col·locació encastada, caixes, plaques i marcs.
S'han considerat les unitats d'obra següents:
- Caixes per a 1,2 o 3 mecanismes encastades en paraments
- Caixes per a mecanismes, amb tapa, encastades a terra
- Caixes per a mecanismes amb tapa, col·locades en terra tècnic
L'execució de la unitat d'obra inclou les operacions següents:
Caixes per a mecanismes, interruptors, commutadors, endolls, polsadors, portafusibles o reguladors d'intensitat:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellació
- Connexionat
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
CAIXES PER A MECANISMES:
S'han de complir les especificacions de la ITC-MIE-BT-019
Els tubs han d'entrar a dintre de les caixes per les finestres previstes pel fabricant.
No s'han de transmetre esforços entre les caixes i les altres parts de la instal·lació elèctrica.
Els tubs han d'entrar perpendicularment a les parets de les caixes.
En les caixes amb tapa, la tapa s'ha de poder obrir i tancar correctament.
CAIXES PER A MECANISMES ENCASTADES EN PARAMENTS:
La caixa ha de quedar encastada al parament. Ha d'anar collada amb guix i ha de quedar al mateix pla que el parament acabat.
Ha de quedar amb els costats aplomats.
Toleràncies d'instal·lació:
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
La col·locació de l'element s'ha de fer seguint les indicacions del fabricant.
En les caixes encastades, s'ha de tenir cura de que no entri material de reblert a l'interior de la caixa. Per aquest motiu, s'han d'ajustar els tubs a les finestres de les caixes.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Verificació de que els mecanismes instal·lats a cada lloc són el que es corresponen als especificats a la DT.
- Verificar que el sistema de fixació es correcte
- Verificar el funcionament de la instal·lació que comanden
- Verificar la connexió dels conductors i l'absència de derivacions no permeses en contactes dels mecanismes.
- Verificar en preses de corrent l'existència de la línia de terra i mesura de la tensió de contacte.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
Es comprovarà per mostreig diferents punts de la instal·lació segons criteri de la DF.
Es mesurarà la tensió de contacte a un punt com a mínim de cada circuit.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG6 MECANISMES

## PG6E- INTERRUPTORS I COMMUTADORS, COL·LOCATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG6E-76TI,PG6E-76W8,PG6E-76TV.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mecanismes per a instal·lacions elèctriques, encastats o muntats superficialment i els elements necessaris per a la seva col·locació encastada, caixes, plaques i marcs.
S'han considerat les unitats d'obra següents:
- Interruptors i commutadors encastats o muntats superficialment.
L'execució de la unitat d'obra inclou les operacions següents:
Caixes per a mecanismes, interruptors, commutadors, endolls, polsadors, portafusibles o reguladors d'intensitat:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellació
- Connexionat
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
INTERRUPTORS, COMMUTADORS, ENDOLLS, POLSADORS, PORTAFUSIBLES O REGULADORS D'INTENSITAT:
Un cop instal·lat i connectat a la xarxa no han de ser accessibles les parts que hagin d'estar en tensió.

Les fases (o fase i neutre) i el conductor de protecció, si n'hi ha, han d'estar connectats als borns de la base per pressió de cargols.
Ha de quedar amb els costats aplomats i en el mateix pla que el parament.
Quan es col·loca muntat superficialment, l'element ha de quedar fixat sòlidament al suport.
Quan es col·loca encastat, l'element ha de quedar fixat sòlidament a la caixa de mecanismes, la qual ha de complir les especificacions fixades en el seu plec de condicions.
Resistència a la tracció de les connexions: >= 30 N
Toleràncies d'instal·lació:
- Aplomat: ± 2%

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
La col·locació de l'element s'ha de fer seguint les indicacions del fabricant.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
INTERRUPTORS, COMMUTADORS, ENDOLLS, POLSADORS, PORTAFUSIBLES O REGULADORS D'INTENSITAT:
UNE-EN 60669-1:1996 Interruptores para instalaciones eléctricas fijas, domésticas y análogas. Parte 1: Prescripciones generales.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Verificació de que els mecanismes instal·lats a cada lloc són el que es corresponen als especificats a la DT.
- Verificar que el sistema de fixació es correcte
- Verificar el funcionament de la instal·lació que comanden
- Verificar la connexió dels conductors i l'absència de derivacions no permeses en contactes dels mecanismes.
- Verificar en preses de corrent l'existència de la línia de terra i mesura de la tensió de contacte.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.

CRITERIS DE PRESA DE MOSTRES:
Es comprovarà per mostreig diferents punts de la instal·lació segons criteri de la DF.
Es mesurarà la tensió de contacte a un punt com a mínim de cada circuit.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG6 MECANISMES

### PG6I- MARC PER A MECANISME ELÈCTRIC, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG6I-78FJ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mecanismes per a instal·lacions elèctriques, encastats o muntats superficialment i els elements necessaris per a la seva col·locació encastada, caixes, plaques i marcs.
S'han considerat les unitats d'obra següents:
- Placa i marc per a un o varis elements, col·locada a mecanismes encastats
L'execució de la unitat d'obra inclou les operacions següents:
Placa, marc o tapa cega:
- Replanteig de la unitat d'obra
- Fixació i nivellació
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
PLACA, MARC O TAPA CEGA:
El mecanisme ha de quedar immobilitzat fins i tot quan s'accioni, acció que cal fer sense cap dificultat.
La placa o tapa, ha de quedar ben adossada al parament.
El marc ha de quedar sòlidament fixat sobre la caixa per mitjà dels cargols o de les grapes que porta.
La placa ha de quedar subjectada a pressió sobre el marc i el mecanisme ha de quedar entre tots dos.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
La col·locació de l'element s'ha de fer seguint les indicacions del fabricant.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PG6 MECANISMES

## PG6S- SORTIDA DE FILS, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PG6S-486N,PG6S-486A.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Mecanismes per a instal·lacions elèctriques, encastats o muntats superficialment i els elements necessaris per a la seva col·locació encastada, caixes, plaques i marcs.
S'han considerat les unitats d'obra següents:
- Sortida de fils, encastada
L'execució de la unitat d'obra inclou les operacions següents:
Sortides de fils:
- Muntatge, fixació i nivellació
- Acondicionament dels fils
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
SORTIDES DE FILS:
La sortida de fils ha de quedar fixada sòlidament a la caixa de mecanismes, la qual ha de complir les especificacions fixades en el seu plec de condicions.
Ha de quedar amb els costats aplomats i en el mateix pla que el parament.
Ha de disposar d'un sistema de fixació dels fils per pressió. Aquest sistema no ha de produir danys als fils.
Resistència del sistema de fixació: >= 3 kg
Toleràncies d'instal·lació:
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
La col·locació de l'element s'ha de fer seguint les indicacions del fabricant.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PGC GRUPS ELECTRÒGENS, SAI I SISTEMES PER AL CONTROL DE LA QUALITAT DEL SUBMINISTRAMENT ELÈCTRIC

## PGC3- SAI LINE INTERACTIU, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PGC3-B5XV.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Sistema d'alimentació ininterrompuda, col·locat.

S'han contemplat els elements següents:

- Sistemes d'alimentació ininterrompuda tipus line interactive
- Sistemes d'alimentació ininterrompuda tipus on-line de doble conversió

L'execució de la unitat d'obra inclou les operacions següents:

- Preparació de la zona de treball
- Desembalatge i inspecció del material subministrat
- Replanteig de la unitat d'obra d'acord amb la DT del projecte i la DT i esquemes del fabricant
- Col·locació de l'equip en la seva posició definitiva
- Connexió a la xarxa elèctrica
- Connexió al circuit de control, si és el cas
- Posada en marxa de l'equip
- Prova de servei
- Retirada de l'obra dels embalatges, retalls de cables, restes de materials, etc i disposició d'aquests per a la correcta gestió de residus.

CONDICIONS GENERALS:

La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.

Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels equips han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.

Ha de quedar instal·lat al lloc on la temperatura i condicions ambientals estiguin dintre dels límits indicats pel fabricant i en funció del grau de protecció IP/IK.

Han d'estar fetes totes les connexions elèctriques, tant les dels circuits de potència com les dels circuits de control en el seu cas. Es faran servir els cables de les seccions i tipus indicats a la DT del fabricant o del projecte i, que compleixin les especificacions fixades a les seves partides d'obra. Es farà servir el sistema de connexió adequat en cada cas a les característiques de l'equip.

Els dispositius d'entrada i de subjecció dels cables han d'estar degudament arrodonits i aïllats. En cap cas els cables han de transmetre esforços a les regletes de connexió.

Cap part accessible de l'element instal·lat no ha d'estar en tensió, fora dels punts de connexió.

Els comandaments de l'equip i les pantalles i dispositius de comunicació local han de ser accessibles i visibles.

Al voltant de l'equip cal deixar l'espai lliure suficient per a facilitar els futurs treballs de manteniment i neteja. Per aquest motiu es respectaran les separacions mínimes a altres equips o a la pròpia construcció i, en general, les condicions d'instal·lació indicades a la DT del fabricant.

No poden quedar obstruïdes les ranures de ventilació.

Si l'equip te portes o registres, aquests han de ser accessibles i s'han de poder obrir i tancar correctament.

Els equips han de quedar instal·lats i en condicions de funcionament.

Ha d'estar feta la posada en funcionament de l'aparell i la prova de servei prevista en la DT del projecte, protocol de proves del projecte o DT del fabricant i els resultats obtinguts han de coincidir amb el previstos o, en el seu defecte, els indicats per la DF.

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.

S'ha de comprovar que les característiques tècniques de l'aparell corresponguin a les especificades al projecte.

Tots els elements s'han d'inspeccionar abans de la seva col·locació.

El muntatge s'ha de fer seguint les instruccions de la documentació tècnica del fabricant.

La seva instal·lació no ha d'alterar les característiques de l'aparell.

Queda expressament prohibit fer modificacions sobre l'equip subministrat pel fabricant.

Les connexions a les diferents xarxes de servei es faran un cop tallats els corresponents subministraments.

Un cop instal·lat l'equip, s'ha de procedir a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, etc.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat realment instal·lada, amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PGD ELEMENTS DE CONNEXIÓ A TERRA I PROTECCIÓ CATÒDICA

## PGD1- PIQUETA DE CONNEXIÓ A TERRA, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PGD1-E3BT.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Elements per a formar una connexió a terra, col·locats soterrats en el terreny.
S'han considerat els elements següents:
- Piqueta de connexió a terra, d'acer i recobriment de coure, clavada a terra.
L'execució de la unitat d'obra inclou les operacions següents:
- Col·locació i connexionat
CONDICIONS GENERALS:
Ha d'estar col·locat en posició vertical, enterrat dins del terreny.
La situació en el terreny ha de quedar fàcilment localitzable per a la realització periòdica de proves d'inspecció i control.
Han de quedar unides rígidament, assegurant un bon contacte elèctric amb els conductors dels circuits de terra mitjançant cargols, elements de compressió, soldadura d'alt punt de fusió, etc.
El contacte amb el conductor del circuit de terra ha d'estar net, sense humitat i fet de tal forma que s'evitin els efectes electroquímics.
Han d'estar clavades de tal forma que el punt superior quedi a 50 cm de profunditat.
En el cas d'enterrar dues piquetes en paral·lel, la distància entre ambdues ha de ser, com a mínim, igual a la seva longitud.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Verificar la correcta ubicació dels punts de posada a terra.
- Verificar l'execució de pous de terra, col·locació d'elèctrodes, tubs de manteniment (si existeix), ús dels connectors adequats i acabat de l'arqueta.
- Verificar la continuïtat d'entre els conductors de protecció i dels elèctrodes de posada a terra.
- Verificar la posada a terra de les conduccions metàl·liques de l'edifici.
- Mesures de resistència de terra.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de valors de resistència de terra superiors a l'especificat a REBT, es procedirà a la construcció de nous pous de terra o tractament del terreny, fins que s'arribi a obtenir la resistència adequada.
Els defectes d'instal·lació hauran de ser corregits.

---

## PG INSTAL·LACIONS ELÈCTRIQUES, DOMÓTICA, FOTOVOLTAICA I MINIEÒLICA

## PGD ELEMENTS DE CONNEXIÓ A TERRA I PROTECCIÓ CATÒDICA

### PGD4- PUNT DE CONNEXIÓ A TERRA, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PGD4-614M.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Punt de connexió a terra, amb pont seccionador de platina de coure, muntat en caixa estanca, col·locat superficialment i connectat.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Col·locació, instal·lació i anivellament

- Connexionat
CONDICIONS GENERALS:
La platina ha de portar un dispositiu de fixació a la base.
Han d'estar dissenyats de manera que en l'ús normal han de funcionar de forma segura i no han de suposar perill per a les persones i el seu entorn.
Un cop instal·lat i connectat a la xarxa no han de ser accessibles les parts que hagin d'estar en tensió.
Ha de quedar amb els costats aplomats i en el mateix pla que el parament.
La posició i quantitat han de ser les fixades per la DF i han de constar a la DT.
Quan es col·loca muntat superficialment, l'element ha de quedar fixat sòlidament al suport.
Ha d'estar connectat sobre els conductors de terra.
Ha d'estar situat en un lloc accessible. Ha de permetre mesurar la resistència de la presa de terra corresponent.
Ha de ser combinat amb el born principal de terra.
Ha de ser mecànicament segur.
Ha d'assegurar la continuïtat elèctrica.
Ha d'estar situat a prop de la presa de terra.
Les instal·lacions que ho necessitin han de disposar d'un nombre suficient de punt de posada a terra, convenientment distribuïts, que estiguin connectats al mateix elèctrode o conjunt d'elèctrodes.
Resistència a la tracció de les connexions: >= 30 N
Toleràncies d'execució:
- Posició: ± 20 mm
- Aplomat: ± 2%
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de valors de resistència de terra superiors a l'especificat a REBT, es procedirà a la construcció de nous pous de terra o tractament del terreny, fins que s'arribi a obtenir la resistència adequada.
Els defectes d'instal·lació hauran de ser corregits.

---

## PH INSTAL·LACIONS D'ENLLUMENAT

## PH1 LLUMS DECORATIUS MUNTATS SUPERFICIALMENT

## PH11- LLUM DECORATIU TIPUS DOWNLIGHT AMB LEDS, MUNTAT SUPERFICIALMENT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PH11-AZWO.

Plec de condicions

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES

Llums decoratius muntats superficialment al sostre o encastats en el cel ras.
S'han considerat lluminàries amb els tipus d'equips següents:
- Llum decoratiu del tipus downlight, per a làmpades d'incandescència, fluorescents o led amb equip o sense

L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellament
- Connexionat i col·locació de les làmpades
- Comprovació del funcionament
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha de quedar fixat sòlidament al suport, amb el sistema de fixació disposat pel fabricant.
Ha d'estar connectada a la xarxa d'alimentació elèctrica i a la línia de terra.
No s'han de transmetre esforços entre els elements de la instal·lació elèctrica (tubs i cables) i la lluminària.
La làmpada ha de quedar allotjada al portalàmpades i fent contacte amb aquest.
Els cables han d'entrar al cos de la lluminària pels punts previstos pel fabricant.
Toleràncies d'execució:
- Posició: ± 20 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

La instal·lació elèctrica s'ha de fer sense tensió a la línia.
La col·locació i connexionat de la lluminària s'han de fer seguint les instruccions del fabricant.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques tècniques de l'aparell corresponguin a les especificades al projecte.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques de l'element.
Cal comprovar la idoneïtat de la tensió disponible amb la de l'equip de la lluminària.
Un cop instal·lat l'equip, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, cables, etc.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
La instal·lació inclou el subministrament i col·locació de la làmpada.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 60598-1:1996 Luminarias. Parte 1: Requisitos generales y ensayos.
UNE-EN 60598-2-1:1993 Luminarias. Parte 2: Reglas Particulares. Sección uno: Luminarias fijas de uso general.
UNE-EN 60598-2-19:1993 Luminarias. Parte 2: Reglas particulares. Sección diecinueve: Luminarias con circulación de aire (reglas de seguridad).

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació de les lluminàries.
- Control visual de la instal·lació (linealitat, suports).
- Verificar el funcionament de l'enllumenat, comprovant la correcta distribució de les enceses i l'equilibrat de fases, si és el cas.
- Mesurar nivells d'il·luminació
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES:
Es realitzarà el control visual i es verificarà el funcionament de tota la instal·lació.
Es comprovarà l'equilibrat de fases, si és el cas, de forma aleatòria en punts amb diferents distribució.
Es mesuraran els nivells d'il·luminació en cada local de característiques diferents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

## PH INSTAL·LACIONS D'ENLLUMENAT

## PHM ELEMENTS DE SUPORT PER A LLUMS EXTERIORS

## PHM2- COLUMNA, COL·LOCADA

## PHM2-1

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PHM2-143P0.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Suports metàl·lics per a llums exteriors, col·locats ancorats al paviment i els seus components acoblats a aquests.
S'han considerat els elements següents:
- Columnes d'acer galvanitzat de forma recta o troncocónica, ancorades amb un dau de formigó
L'execució de la unitat d'obra inclou les operacions següents:
Suports verticals, ancorats al paviment:
- Formigonament del dau de base, amb les perns d'ancoratge
- L'hissat, fixació i anivellament
- Connexionat a la xarxa
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
SUPORTS VERTICALS:
S'ha d'instal·lar en posició vertical.
Ha de quedar fixada sòlidament a la base de formigó pels seus perns.
La fixació de la platina de base als perns s'ha de fer mitjançant volanderes, femelles i

contrafemelles.
La situació de la porta del compartiment per a accessoris ha de ser la recomenada per l'UNE 72-402.
Ha de quedar connectat al conductor de terra mitjançant la pressió de terminal, cargol i femelles.
Toleràncies d'execució:
- Verticalitat: ± 10 mm/3 m
- Posició: ± 50 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
La instal·lació elèctrica s'ha de fer sense tensió a la línia.
SUPORTS VERTICALS:
S'ha d'utilitzar un camió-grua per descarregar i manipular el pal durant la seva fixació.
Durant el muntatge s'ha de deixar lliure i acotada una zona de radi igual a l'alçària del pal més 5 m.
Cal que la zona de treball quedi degudament senyalitzada amb una tanca i llums vermells durant la nit.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
SUPORTS VERTICALS:
UNE-EN 40-2:2006 Columnas y báculos de alumbrado. Parte 2: Requisitos generales y dimensiones.
UNE-EN 40-5:2003 Columnas y báculos de alumbrado. Parte 5: Requisitos para las columnas y báculos de alumbrado de acero.

## PH INSTAL·LACIONS D'ENLLUMENAT

## PHN LLUMS PER A EXTERIORS

### PHN1- APLIC PER A EXTERIORS AMB LEDS, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PHN1-AE1R.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Llum per a exteriors, col·locat acoblat al suport o encastat.

S'han considerat les unitats d'obra següents:
- Aplics decoratius per a exteriors, amb llums LED, fixats mecànicament als paraments.
S'han considerat els tipus de col·locació següents per als llums decoratius:
- Fixada a la paret mitjançant cargols o perns
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellament
- Connexionat i col·locació de les làmpades
- Comprovació del funcionament
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels aparells han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
Ha de quedar fixat sòlidament al suport, amb el sistema de fixació disposat pel fabricant.
Ha d'estar connectada a la xarxa d'alimentació elèctrica i a la línia de terra.
Cap part accessible de l'element instal·lat no ha d'estar en tensió, fora dels punts de connexió.
No s'han de transmetre esforços entre els elements de la instal·lació elèctrica (tubs i cables) i la lluminària.
Els cables han d'entrar al cos de la lluminària pels punts previstos pel fabricant.
Un cop instal·lat ha de ser possible el desmuntatge de les parts del llum que necessitin manteniment.
LLUM DECORATIU:
Toleràncies d'execució per a llums fixats a la paret o muntats amb lira, pinça o pica:
- Verticalitat: <= 10 mm
- Posició en alçària: ± 20 mm
- Posició lateral: <= 50 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
La instal·lació elèctrica s'ha de fer sense tensió a la línia.
Si incorpora difusor de vidre, es tindrà cura durant la seva manipulació.
Es tindrà cura de no embrutar el difusor ni els components de la òptica durant la col·locació del llum. Si s'embruten es netejaran adequadament.
La col·locació i connexionat de la lluminària s'han de fer seguint les instruccions del fabricant.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques tècniques de l'aparell corresponguin a les especificades al projecte.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques de l'element.
Cal comprovar la idoneïtat de la tensió disponible amb la de l'equip de la lluminària.
Un cop instal·lat l'equip, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, cables, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
UNE-EN 60598-1:2009 Luminarias. Parte 1: Requisitos generales y ensayos.
UNE-EN 60598-2-3:2003 Luminarias. Parte 2-3: Requisitos particulares. Luminarias para alumbrado público.
UNE-EN 60238:2006 Portalámparas con rosca Edison.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació de les lluminàries.
- Control visual de la instal·lació (linealitat, suports).
- Verificar el funcionament de l'enllumenat, comprovant la correcta distribució de les enceses i l'equilibrat de fases, si és el cas.
- Mesurar nivells d'il·luminació
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.

CRITERIS DE PRESA DE MOSTRES:
Es realitzarà el control visual i es verificarà el funcionament de tota la instal·lació.
Es comprovarà l'equilibrat de fases, si és el cas, de forma aleatòria en punts amb diferents distribució.
Es mesuraran els nivells d'il·luminació en cada local de característiques diferents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

## PH INSTAL·LACIONS D'ENLLUMENAT

## PHQ PROJECTORS PER A EXTERIORS

## PHQE- PROJECTOR PER A EXTERIOR AMB LEDS, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PHQE-C09S.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Projector per a exteriors amb reflector, col·locat.
- Projector de forma rectangular, tancat, amb làmpades LED, amb equip elèctric integrat, regulables o no regulables.
S'han considerat els tipus de col·locació següents:
- Acoblada al suport mitjançant brides
- Muntada amb lira mitjançant cargols o perns
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de la unitat d'obra
- Muntatge, fixació i anivellament
- Connexionat
- Comprovació del funcionament
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, cables, etc.
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels aparells han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
Ha de quedar fixat sòlidament al suport, amb el sistema de fixació disposat pel fabricant.
Ha de quedar connectat al conductor de terra mitjançant la pressió de terminal, cargol i femelles.
El suport ha de quedar fixat sòlidament pels punts previstos a les instruccions d'instal·lació del

fabricant.
Els cables han d'entrar al cos de la lluminària pels punts previstos pel fabricant.
Ha de quedar garantit el grau de protecció de la lluminària en el punt d'entrada dels cables.
El cable ha de quedar subjectat per la coberta a la carcassa del projector, de manera que no es transmetin esforços a la connexió elèctrica.
Els conductors de línia, fases i neutre, han de quedar rígidament fixats mitjançant pressió de cargol als borns del llum.
S'ha d'assegurar que la posició no dificulti l'entrada dels cables i l'accés per a la manipulació i la neteja del difusor.
No s'han de transmetre esforços entre els elements de la instal·lació elèctrica (tubs i cables) i la lluminària.
Un cop instal·lat ha de ser possible el desmuntatge de les parts del llum que necessitin manteniment.
Ha d'estar connectada a la xarxa d'alimentació elèctrica i a la línia de terra.
Toleràncies d'execució per a llums fixats a la paret o muntats amb lira:
Toleràncies d'execució:
- Verticalitat: <= 10 mm
- Posició en alçària: ± 20 mm
- Posició lateral: <= 50 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La instal·lació elèctrica s'ha de fer sense tensió a la línia.
Es tindrà cura de no embrutar el difusor ni els components de la òptica durant la col·locació del llum. Si s'embruten es netejaran adequadament.
La col·locació i connexionat de la lluminària s'han de fer seguint les instruccions del fabricant.
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques tècniques de l'aparell corresponguin a les especificades al projecte.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques de l'element.
Cal comprovar la idoneïtat de la tensió disponible amb la de l'equip de la lluminària.
Un cop instal·lat l'equip, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, cables, etc.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.
Real Decreto 1890/2008, de 14 de noviembre, por el que se aprueba el Reglamento de eficiencia energética en instalaciones de alumbrado exterior y sus Instrucciones técnicas complementarias EA-01 a EA-07.

UNE-EN 60598-2-3:2003 Luminarias. Parte 2-3: Requisitos particulares. Luminarias para alumbrado público.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació de les lluminàries.
- Control visual de la instal·lació (linealitat, suports).
- Verificar el funcionament de l'enllumenat, comprovant la correcta distribució de les enceses i l'equilibrat de fases, si és el cas.
- Mesurar nivells d'il·luminació

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.

CRITERIS DE PRESA DE MOSTRES:
Es realitzarà el control visual i es verificarà el funcionament de tota la instal·lació.
Es comprovarà l'equilibrat de fases, si és el cas, de forma aleatòria en punts amb diferents distribució.
Es mesuraran els nivells d'il·luminació en cada local de característiques diferents.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas d'incompliment de la Normativa vigent, es procedirà a la seva adequació.
En cas de deficiències de material o execució, es procedirà d'acord amb el que determini la DF.

## PJ INSTAL·LACIONS DE LAMPISTERIA, REG, PISCINES, APARELLS SANITARIS I AIGUA CALENTA SANITÀRIA

## PJ1 APARELLS SANITARIS

## PJ11 APARELLS SANITARIS PER LA HIGIENE PERSONAL

## PJ117- LAVABO, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJ117-3BMP,PJ117-3BMQ,PJ117-3BTG.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió a la xarxa d'evacuació de lavabo de porcellana o de gres esmaltat.
S'han considerat els tipus de col·locació següents:
- Amb suports murals
- Sobre un peu
- Amb suports murals i mig peu
- Encastat a un taulell
- Semiencastat a un taulell
- Fixat sota taulell
- Recolzat sobre taulell o moble

L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Col·locació del lavabo a l'espai previst
- Connexió a la xarxa d'evacuació
- Connexió a la xarxa d'aigua

CONDICIONS GENERALS:
El lavabo instal·lat ha de reunir les mateixes condicions exigides a l'element simple.
Ha de quedar anivellat en totes dues direccions, a la posició prevista en el projecte.
L'alçària des del nivell del paviment fins el nivell frontal superior del lavabo ha de ser la reflectida en el projecte, o en el seu defecte, la indicada per la DF.
Si el lavabo es col·loca encastat a un taulell, ha d'estar fixat sòlidament a aquest amb el sistema indicat pel fabricant.
Si la col·locació és amb suports murals o sobre un peu, el lavabo ha d'estar fixat sòlidament al parament i recolzat, en el segon cas, sobre el corresponent peu.
L'acord amb el revestiment del parament, i entre el lavabo, el peu i el paviment, o entre el lavabo i el taulell, segons sigui el cas, ha de quedar rejuntat amb silicona neutra.
S'ha de garantir l'estanquitat de la connexió amb el conducte d'evacuació.

Les conduccions metàl·liques de l'aparell han de dur instal·lada la connexió a terra amb cable de coure nu, de secció >= 2,5 mm2.
Toleràncies d'instal·lació:
- Nivell: ± 10 mm
- Caiguda frontal respecte al pla horitzontal: <= 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació dels materials i equips a l'obra
- Verificació de la correcta execució de la instal·lació segons instruccions de fabricant.
- Realització i emissió d'informe amb resultats dels controls i assaigs realitzats, d'acord amb el que s'especifica a la taula d'assaigs i quantificació dels mateixos.
CRITERIS DE PRESA DE MOSTRA
Es realitzarà l'assaig de cabals mínims, considerant el funcionament simultani de les instal·lacions susceptibles de fer-ho a la realitat. Es verificarà: el total de la instal·lació, per plantes o sectors i per zones humides.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió a la xarxa d'evacuació d'inodor de porcellana esmaltada o d'acer inoxidable antivandàlic, de sortida vertical o horitzontal, col·locat amb fixacions verticals o sobre el paviment.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Col·locació de l'inodor a l'espai previst
- Connexió a la xarxa d'evacuació
- Connexió a la xarxa d'aigua
CONDICIONS GENERALS:
L'inodor instal·lat ha de reunir les mateixes condicions exigides a l'element simple.
Ha de quedar anivellat en totes dues direccions, a la posició prevista en el projecte.
La tapa i el seient han de quedar centrats, no oferir resistència ni tenir joc en el seu moviment.
L'alçària des del nivell del paviment fins el nivell frontal superior de l'inodor ha de ser la reflectida en el projecte, o en el seu defecte, la indicada per la DF.
Ha d'estar fixat sòlidament al parament o al paviment, segons el cas, amb les fixacions subministrades pel fabricant.
L'acord amb el paviment ha de quedar rejuntat.
S'ha de garantir l'estanquitat de la connexió amb el conducte d'evacuació mitjançant una pasta segelladora en els aparells de descàrrega horitzontal, o mitjançant un junt de cautxú o de neoprè en els de descàrrega vertical.
Els mecanismes de descàrrega i alimentació han de quedar regulats de manera que l'aparell funcioni correctament.
Les conduccions metàl·liques de l'aparell han de dur instal·lada la connexió a terra amb cable de coure nu, de secció >= 2,5 mm2.
Toleràncies d'instal·lació:
- Nivells: ± 10 mm, Ha de coincidir amb el bidet
- Horitzontalitat: ± 2 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No s'han de col·locar junts de material endurible a les rosques.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació de la correcta instal·lació dels materials i equips a l'obra
- Verificació de la correcta execució de la instal·lació segons instruccions de fabricant.
- Realització i emissió d'informe amb resultats dels controls i assaigs realitzats, d'acord amb el que s'especifica a la taula d'assaigs i quantificació dels mateixos.
CRITERIS DE PRESA DE MOSTRA
Es realitzarà l'assaig de cabals mínims, considerant el funcionament simultani de les instal·lacions susceptibles de fer-ho a la realitat. Es verificarà: el total de la instal·lació, per plantes o sectors i per zones humides.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió a la xarxa d'evacuació d'aigüera de gres esmaltat o d'acer.
S'han considerat els tipus de col·locació següents:
- Amb suports murals
- Encastat a un taulell
- Sobre moble
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Col·locació de l'aigüera a l'espai previst
- Connexió a la xarxa d'evacuació
- Connexió a la xarxa d'aigua
CONDICIONS GENERALS:
L'aigüera instal·lada ha de reunir les mateixes condicions exigides a l'element simple.
Ha de quedar anivellada en totes dues direccions, a la posició prevista en el projecte.
L'alçària des del nivell del paviment fins al nivell frontal superior de l'aigüera ha de ser la reflectida en el projecte o, en el seu defecte, la indicada per la DF.
Ha d'estar fixat sòlidament al parament amb els suports murals, o bé recolzat sobre el moble de suport.
L'acord amb el revestiment i amb el taulell ha de quedar rejuntat amb silicona neutra.
S'ha de garantir l'estanquitat de la connexió amb el conducte d'evacuació.
Toleràncies d'instal·lació:
- Nivell: ± 10 mm
- Caiguda frontal respecte al pla horitzontal: <= 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI

PJ187-3CPD.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació de diferents elements auxiliars per completar la instal·lació d'aparells sanitaris.
S'han considerat els elements següents:
- Tapatubs d'alimentació per a urinari mural
- Tapatubs d'alimentació per a urinari de peu
- Marxapeu per a urinari de peu
- Tapajunts per a urinari de peu
- Tapajunts inferior per a urinari de peu
- Cistella de filferro plastificat
- Fusta per a pica d'aigüera
- Reixa cromada per a abocador

CONDICIONS GENERALS:
L'accessori instal·lat ha de reunir les mateixes condicions exigides a l'element simple.
Ha de quedar anivellat en totes dues direccions, a la posició prevista.
Toleràncies d'instal·lació per a tapatubs, marxapeu i reixa:
- Nivell: El mateix exigit a l'aparell sanitari
- Horitzontalitat: ± 2 mm

TAPATUBS:
L'alçària de muntatge ha de ser l'especificada en el projecte.
Ha d'estar fixat sòlidament al parament amb les fixacions subministrades pel fabricant.
MARXAPEU:
L'alçària de muntatge ha de ser l'especificada en el projecte.
Ha d'estar fixat sòlidament amb morter al pilar de totxana i l'ha de revestir totalment.
SEPARADOR:
Ha d'estar encastat entre dos urinaris, recolzat sobre el pilar central de totxana i collat sòlidament amb morter.
REIXA:
Ha d'estar ben fixada a l'aparell pels punts previstos.
La reixa instal·lada ha de recolzar sobre la protecció de goma col·locada en la part frontal de l'abocador i girar correctament.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
SEPARADOR:
El pilar interior d'obra ha de fer-se des del peu de l'urinari a la base inferior del tapajunts.
Poden col·locar-se barres d'ancoratge per a millorar la solidesa de la fixació.
REIXA:
No s'han de col·locar junts de material endurible a les rosques.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
TAPATUBS, MARXAPEU, CISTELLA I FUSTA:
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió a la xarxa d'aigua d'aixetes i accessoris per a aparells sanitaris, muntades superficialment o encastades.
S'han considerat els elements següents:
- Aixeta connectada al tub d'alimentació
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Col·locació de l'aixeta o l'accessori
- Segellat dels junts
- Connexió a la xarxa d'aigua
CONDICIONS GENERALS:
Un cop col·locada l'aixeta o l'accessori, ha de reunir les mateixes condicions exigides a l'element simple.
L'aixeta, la bateria o el braç de dutxa, ha de quedar anivellada en totes dues direccions, a la posició prevista en el projecte i centrat amb l'especejament de l'enrajolat.
L'alçària de muntatge de l'element ha de ser la reflectida en el projecte o, en el seu defecte, la indicada per la DF.
Ha de quedar ben fixat al seu suport.
S'ha de garantir l'estanquitat de les connexions amb els tubs d'alimentació i amb els de desguàs quan calgui.
En l'aixeta, l'òrgan de comandament de l'aigua calenta ha d'estar col·locat a l'esquerra amb el distintiu vermell i el de l'aigua freda a la dreta amb el distintiu blau.
Toleràncies d'instal·lació:
- Nivell: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La posició de l'element respecte al plà del parament ha de ser l'adequada per a obtenir un bon acord amb el revestiment.
No s'han de col·locar junts de material endurible a les rosques.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
Les zones per soldar s'han de netejar i fregar abans.
El muntatge s'ha de realitzar seguint les instruccions del fabricant.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:

- Comprovació de la correcta instal·lació dels materials i equips a l'obra
- Verificació de la correcta execució de la instal·lació segons instruccions de fabricant.
- Es comprovarà que la pressió mínima ha de ser:
- 100 kPa per aixetes
- 150 kPa per fluxors i calentadors
- Es comprovarà que la pressió en qualsevol punt de consum no pot superar 500 kPa.
- Es verificarà l'existència de dispositius d'estalvi d'aigua en les aixetes en edificis de pública concurrència.
- Realització i emissió d'informe amb resultats dels controls i assaigs realitzats, d'acord amb el que s'especifica a la taula d'assaigs i quantificació dels mateixos.

CRITERIS DE PRESA DE MOSTRA

Es realitzarà l'assaig de cabals mínims, considerant el funcionament simultani de les instal·lacions susceptibles de fer-ho a la realitat. Es verificarà: el total de la instal·lació, per plantes o sectors i per zones humides.

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.

En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

PJ21C-3SHL,PJ21C-3SI3.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió a la xarxa d'aigua d'aixetes i accessoris per a aparells sanitaris, muntades superficialment o encastades.
S'han considerat els elements següents:
- Aixeta connectada al tub d'alimentació
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Col·locació de l'aixeta o l'accessori
- Segellat dels junts
- Connexió a la xarxa d'aigua
CONDICIONS GENERALS:
Un cop col·locada l'aixeta o l'accessori, ha de reunir les mateixes condicions exigides a l'element simple.
L'aixeta, la bateria o el braç de dutxa, ha de quedar anivellada en totes dues direccions, a la posició prevista en el projecte i centrat amb l'especejament de l'enrajolat.
L'alçària de muntatge de l'element ha de ser la reflectida en el projecte o, en el seu defecte, la indicada per la DF.
Ha de quedar ben fixat al seu suport.
S'ha de garantir l'estanquitat de les connexions amb els tubs d'alimentació i amb els de desguàs quan calgui.
En l'aixeta, l'òrgan de comandament de l'aigua calenta ha d'estar col·locat a l'esquerra amb el distintiu vermell i el de l'aigua freda a la dreta amb el distintiu blau.
Toleràncies d'instal·lació:
- Nivell: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
La posició de l'element respecte al plà del parament ha de ser l'adequada per a obtenir un bon acord amb el revestiment.
No s'han de col·locar junts de material endurible a les rosques.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
Les zones per soldar s'han de netejar i fregar abans.
El muntatge s'ha de realitzar seguint les instruccions del fabricant.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

### PJ3D- SIFÓ DE LLAUTÓ PER A LAVABO, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJ3D-3FKP.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·locació i connexió de desguàs o accessori a la xarxa d'evacuació.
S'han considerat els tipus de col·locació següents:
- Soldats a tub de plom
- Roscats a sifó de llautó
- Connectats a tub de PVC
Es consideren incloses dins d'aquesta unitat d'obra les operacions següents:
Soldats a tub de plom:
- Neteja amb abrasiu de l'interior i exterior dels tubs
- Acoblament dels tubs
- Soldat
- Prova de servei de la instal·lació
Connectats a tub de PVC:
- Neteja amb abrasiu de l'interior i exterior dels tubs
- Acoblament dels tubs amb adhesiu o mitjançant junt elàstic
- Prova de servei de la instal·lació
Roscats a sifó de llautó:
- Neteja amb abrasiu de l'interior dels tubs
- Preparació de les unions amb cintes, pasta o estopa
- Roscat dels tubs
- Prova de servei de la instal·lació
CONDICIONS GENERALS:
L'accessori instal·lat ha de reunir les mateixes condicions exigides a l'element simple.
Ha de ser accessible des del local en el que estigui instal·lat.
Cal que quedi suficientment separat dels paraments que l'envolten, de manera que es pugui instal·lar i manipular.
Les unions no han de tenir fuites.
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha d'estar feta la prova d'instal·lació.
Distància en vertical entre la vàlvula de desguàs i la corona del sifó: <= 60 cm
Toleràncies d'instal·lació:
- Posició: La mateixa exigida al sanitari
SOLDATS A UN RAMAL DE PLOM:
La connexió de sortida s'ha de fer per soldadura amb estany.
CONNECTATS A UN RAMAL DE PVC:
La connexió de sortida s'ha de fer encolada amb adhesiu o encaixada amb junt elàstic.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar les feines, s'ha de fer un replanteig previ que ha de ser aprovat per la DF.
El muntatge s'ha de fer seguint les instruccions del fabricant.
S'ha de seguir l'ordre de treballs previst a la DT.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
Durant el procés de col·locació no s'han de produir desperfectes sobre els elements.
Un cop acabades les tasques de muntatge es procedirà a la retirada de l'obra dels embalatges, retalls de tubs, etc.

SOLDATS A UN RAMAL DE PLOM:
Abans de fer l'acoblament per soldadura, s'ha de netejar l'interior i l'exterior del broquet fregant-lo amb paper abrasiu.
CONNECTATS A UN RAMAL DE PVC:
Abans de fer l'acoblament encolat, s'ha de netejar l'interior i l'exterior del broquet fregant-lo amb paper abrasiu, després s'ha d'humitejar amb un dissolvent adient i s'ha d'aplicar l'adhesiu per tal d'evitar la formació de bombolles.
L'acoblament s'ha de fer sense moviments de torsió, després s'ha de netejar l'adhesiu acumulat a l'exterior.
Si la unió es fa mitjançant un junt elàstic, s'ha de netejar l'interior i l'exterior del broquet i després s'ha d'aplicar un lubricant adient, només a l'extrem bisellat del tub.
L'acoblament s'ha de fer amb moviment longitudinal, després cal fer retrocedir el tub 1,5 cm aproximadament, per a facilitar les possibles dilatacions.
ROSCATS:
Abans de fer l'acoblament roscat, s'ha de netejar l'interior del broquet fregant-lo amb paper abrasiu.
No s'han de col·locar junts de material endurible.
Les unions enroscades s'han de preparar amb estopes, pastes o cintes d'estanquitat.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

PJ41-HA1W,PJ41-HA1T,PJ41-HA1V,PJ41-HA1U.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Accessoris i complements de bany col·locats.
S'han considerat els elements següents:
- Accessoris per a banys adaptats, barres fixes, barres abatibles i seients, col·locats amb fixacions mecàniques.
L'execució de la unitat d'obra inclou les operacions següents:
- Accessoris per a banys adaptats:
- Replanteig de la posició de l'element
- Fixació de l'element al parament
- Col·locació dels juntsresponents de l'aparell
CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
ACCESSORIS MURALS:
Cal que quedi suficientment separat dels paraments que l'envolten, de manera que l'ús per al qual es destina sigui l'òptim.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
ACCESSORIS PER A BANYS ADAPTATS:
S'ha d'assegurar una subjecció sòlida i segura.
L'aparell col·locat ha de quedar fixat mitjançant dos suports com a mínim.
Les barres de suport han d'estar col·locades a una alçada entre 0,70 i 0,75 m, perquè permeti agafar-s'hi amb força en la transferència lateral a wàters i bidets.
La barra situada al costat de l'espai d'apropament serà batent.
Tots els accessoris i mecanismes han d'estar col·locats a una alçada no superior a 1,40 m i no inferior a 0,40 m.
Toleràncies d'instal·lació:
- Aplomat (posició vertical): ± 3 mm
- Horitzontalitat (posició horitzontal): ± 3 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de la seva instal·lació es farà un replanteig.

S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Un cop col·locat, es procedirà a la retirada de l'obra dels embalatges i restes de materials.
ACCESSORIS PER A BANYS ADAPTATS:
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
ACCESSORIS PER A BANYS ADAPTATS:
Decret 135/1995, de 24 de març, de desplegament de la Llei 20/1991, de 25 de novembre, de promoció de l'accessibilitat i de supressió de barreres arquitectòniques, i d'aprovació del Codi d'accessibilitat.

### PJ64- FILTRE D'AIGUA AUTONETEJANT, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJ64-9FRM,PJ64-9FRQ.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Instal·lació de filtres de carbó activat, de sorra, o de malla autonetejants.
Filtres dels tipus següents:
- Filtres d'acer inoxidable muntats sobre bancada
- Filtres de polièster muntats entre tubs
- Filtres de malla metàl·lica per a instal·lacions d'aigua freda

Es consideren incloses dins d'aquesta unitat d'obra les operacions següents:
Muntat entre tubs:
- Preparació d'unions
- Connexió a la xarxa d'aigua
- Prova de servei

CONDICIONS GENERALS:
Cal que quedi suficientment separat dels paraments que l'envolten, de manera que es pugui instal·lar i manipular.
Les connexions han de ser per rosca.
Les unions han de ser completament estanques.
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.

Ha d'estar feta la prova d'instal·lació.
MUNTAT ENTRE TUBS:
Ha de recolzar sobre la canonada on va instal·lada.
La canonada no ha de produir cap esforç sobre l'aparell.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Les unions roscades s'han de preparar amb estopa, pasta o cintes d'estanquitat.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.

## PJA PRODUCCIÓ D'AIGUA CALENTA SANITÀRIA

### PJA8- ESCALFADOR ACUMULADOR ELÈCTRIC, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJA8-3HWG,PJA8-3HYY.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Instal·lació d'acumuladors elèctrics de 10 a 200 l de capacitat col·locats horitzontals o verticals.
S'han considerat els tipus de col·locació següents:
- Amb fixacions murals
- Sobre bancades o paviment
Es consideren incloses dins d'aquesta unitat d'obra les operacions següents:
- Fixació de l'aparell

- Connexió a la xarxa de subministrament i distribució d'aigua sanitària
- Connexió a la xarxa elèctrica i de terra
- Prova de servei

CONDICIONS GENERALS:

L'aparell col·locat amb fixacions murals, ha de quedar fixat mitjançant quatre perns de 10 mm de diàmetre, connectats amb contraplaques i encastats 80 mm en el suport.

L'aparell col·locat sobre bancades o paviment, ha de quedar recolzat sobre el suport amb dispositius intermedis per a la seva fixació.

Cal que quedi suficientment separat dels paraments que l'envolten, de manera que es pugui instal·lar i manipular.

Les connexions amb els diferents tubs no han de tenir fuites, han de ser enroscades i amb junt de material elàstic.

Abans i després de l'acumulador s'ha d'instal·lar una aixeta de pas, segons les especificacions del seu plec de condicions.

L'enllaç a la xarxa elèctrica ha de portar connexió a terra.

La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.

Ha d'estar feta la prova d'instal·lació.

L'instal·lador cal que aporti l'acta de posada en servei.

Distància de l'aparell a d'altres aparells amb flama: >= 40 cm

Distància als paraments laterals: >= 15 cm

Toleràncies d'instal·lació:

- Posició: ± 20 mm
- Aplomat (posició vertical): ± 3 mm
- Horitzontalitat (posició horitzontal): ± 3 mm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

Les unions roscades s'han de preparar amb estopa, pasta o cintes d'estanquitat.

L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.

3.- UNITAT I CRITERI D'AMIDAMENT

Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI

Real Decreto 1027/2007, de 20 de julio, por el que se aprueba el Reglamento de Instalaciones Térmicas en los Edificios. (RITE).

Real Decreto 238/2013, de 5 de abril, por el que se modifican determinados artículos e instrucciones técnicas del Reglamento de Instalaciones Térmicas en los Edificios, aprobado por Real Decreto 1027/2007, de 20 de julio.

Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja Tensión. REBT 2002.

Real Decreto 865/2003, de 4 de julio, por el que se establecen los criterios higiénico-sanitarios para la prevención y control de la legionelosis.

Decret 352/2004, de 27 de juliol, pel qual s'estableixen les condicions higièniconsanitàries per a la prevenció i el control de la legionel·losi.

5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA

CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:

Les tasques de control a realitzar són les següents:

- Comprovació de la correcta instal·lació dels materials i equips a l'obra
- Verificar l'estanqueitat a juntes i unions dels equips amb els circuits d'aigua (prova d'estanqueitat).
- Verificar la correcta ubicació dels escalfadors a gas, l'adequació del local amb entrada i sortida d'aire i conducte d'evacuació de fums adequat per garantir el rendiment i la seguretat.
- Verificar estanqueitat dels conductes d'evacuació de fums, la pressa d'anàlisi i la pressa de recollida de condensats.
- Verificar la correcta instal·lació de presa de corrent d'acumuladors elèctrics.
- Verificar la correcta instal·lació de dipòsits d'acumulació d'aigua calenta i dels elements de seguretat.
- Verificar el funcionament dels equips de recirculació d'aigua a instal·lacions amb escalfador d'aigua centralitzat.
- Verificar la conducció de la vàlvula de seguretat al desguàs i el correcte taratge de la mateixa.
- Realitzar les proves de funcionament i ajust del elements de regulació i control.

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:

- Realització i emissió d'informe amb resultats dels controls i dels assaigs realitzats.

CRITERIS DE PRESA DE MOSTRES:

Es comprovarà globalment

INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:

Es cas de deficiències de material o execució, si es pot esmenar sense canviar materials, es procedirà a fer-ho. En cas contrari es procedirà a canviar tot el material afectat.

En cas de manca d'elements o discrepàncies amb el projecte, es procedirà a l'adequació, d'acord amb el determini la DF.

## PJM ELEMENTS DE MESURA, CONTROL I REGULACIÓ

### PJM1- ARMARI METÀL·LIC PER INSTAL·LACIÓ DE COMPTADOR D'AIGUA, MUNTAT (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJM1-H9XR.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Armari metàl·lic amb porta, per a instal·lació de comptador d'aigua, muntat.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Replanteig de la unitat d'obra
- Col·locació i anivellament

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
L'element ha de quedar fixat sòlidament al parament pels punts previstos a la DT del fabricant.
La porta ha d'obrir i tancar correctament.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
- Aplomat: ± 2%

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
El muntatge s'ha de fer seguint les instruccions de la documentació tècnica del fabricant.
S'ha de comprovar que les característiques tècniques del armari corresponen a les especificades al projecte.
Un cop instal·lat l'armari, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, etc.

3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.

4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## PJ INSTAL·LACIONS DE LAMPISTERIA, REG, PISCINES, APARELLS SANITARIS I AIGUA CALENTA SANITÀRIA

## PJM ELEMENTS DE MESURA, CONTROL I REGULACIÓ

## PJM4 COMPTADOR D'AIGUA, COL·LOCAT

## PJM41- COMPTADOR D'AIGUA AMB CONNEXIÓ ROSCADA, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJM41-NAHF.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Aquest plec de condicions tècniques es vàlid per a les següents partides d'obra:
- Comptadors d'aigua amb unions roscades o embridades connectats a una bateria o a un ramal.
- Elements per a la lectura centralitzada de comptadors electrònics
Es consideren incloses dins d'aquesta unitat d'obra les operacions següents:
Per a la col·locació de comptadors:
- Replanteig de la unitat d'obra
- Preparació de les unions
- Col·locació del comptador
- Connexió a la xarxa de fluid amb els seus accessoris corresponents
- Prova de servei
- Retirada de l'obre dels embalatges, restes de materials, etc.
Per a la col·locació del punts de lectura centralitzada:
- Replanteig d'unitat d'obra
- Col·locació del punt de lectura centralitzada
- Execució de les connexions elèctriques
- Comprovació del funcionament
- Retirada de l'obre dels embalatges, restes de materials, etc.
COL.LOCACIÓ DE COMPTADORS:
El comptador ha de quedar instal·lat dins d'una cambra de fàcil accés i amb suficients mitjans d'il·luminació i d'evacuació.
Cal que quedi suficientment separat dels paraments que l'envolten, de manera que es pugui instal·lar i manipular.
Les connexions amb les conduccions d'entrada i de sortida no han de tenir fuites, han de ser enroscades i amb junt de material elàstic.

Abans i després del comptador ha de quedar instal·lada una aixeta de pas i una vàlvula de retenció si el comptador no la porta incorporada, segons les especificacions del seu plec de condicions.
La posició ha de ser la fixada a la DT.
Ha d'estar feta la prova d'instal·lació.
Toleràncies d'instal·lació:
- Posició: ± 20 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
S'ha de comprovar que les característiques del producte corresponen a les especificades al projecte.
Els materials s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
La col·locació de l'element s'ha de fer seguint les indicacions del fabricant.
Un cop instal·lat, s'ha de procedir a la retirada de l'obra de tots els materials sobrants (embalatges, retalls de cables, etc.).
COL.LOCACIÓ DE COMPTADORS:
No es retiraran les proteccions de les boques de connexió fins que no es procedeixi a la seva unió.
Les unions roscades s'han de preparar amb estopa, pasta o cintes d'estanquitat.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Documento Básico de Salubridad DB-HS, parte II del CTE, aprobado por el Real Decreto 314/2006.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL EN COMPTADORS:
Els punts de control més destacables són els següents:
- Comprovació de la correcta implantació dels materials i equips.
- Verificar la correcta instal·lació i dimensions dels elements de la cambra d'escomesa o armari de comptador i elements següents :
- Clau de pas general
- Comptador homologat
- Filtres amb malla d'entre 25 i 50um
- Clau de pas posterior al comptador (si és prevista)
- Vàlvula de retenció
- Sistema de reducció de pressió
- Protecció contra condensacions / tèrmiques / esforços mecànics / sorolls
- Existència de desguàs
- Condicions mínimes de subministre
- Estalvi d'aigua
- Senyalització
- Verificar les dimensions de la cambra d'escomesa o armari de comptador
- Verificar l'assaig de resistència mecànica i Estanqueitat.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL EN COMPTADORS:
- Realització i emissió d'informe amb resultats dels controls i mesures realitzades.
CRITERIS DE PRESA DE MOSTRES EN COMPTADORS:
Es comprovarà globalment
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT EN COMPTADORS:
Es donarà per bona la prova d'estanquitat quan no hi hagi variacions de pressió al manómetre.
En cas de deficiències de material o execució, si es pot esmenar sense canviar materials, s'ha de procedir a fer-ho. En cas contrari, s'ha de procedir a canviar tot el material afectat.
En cas de manca d'elements o discrepàncies amb el projecte, s'ha de procedir a l'adequació, d'acord amb el que determini la DF.

### PJS7- COL·LECTOR PER A ELECTROVÀLVULES, COL·LOCAT (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PJS7-HBCJ,PJS7-HBCK,PJS7-HBCL,PJS7-HBCM.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Col·lector per a electrovàlvules, connectat a la canonada d'alimentació, col·locat.
L'execució de la unitat d'obra inclou les operacions següents:
- Preparació de la zona de treball
- Replanteig de la partida d'obra
- Col·locació del col·lector a la seva posició definitiva
- Connexió amb la xarxa d'alimentació hidràulica amb el sistema d'estanquitat adequat al tipus d'unió
- Comprovació de la partida d'obra executada
- Retirada de l'obra de les restes d'embalatges, retalls de tubs, etc.

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Quedarà separat una distància suficient de les parets del pericó que permeti l'accés i desmuntatge de les connexions hidràuliques i dels components connectats.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs, es farà un replanteig previ que ha de ser aprovat per la DF.
El procés de col·locació no ha de produir desperfectes, ni ha de modificar les condicions exigides per al material.
L'estanquitat de les unions s'ha de realitzar mitjançant els juntsadequats.
Un cop col·locat l'element, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## PM INSTAL·LACIONS CONTRA INCENDIS, DESCÀRREGUES ATMOSFÈRIQUES I DE SEGURETAT

### PM3 EXTINTORS

## PM32- EXTINTOR, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PM32-DZ3K.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Extintors de pols seca polivalent o anhídrid carbònic, pintats o cromats.
S'han considerat els tipus de col·locació següents:
- Amb armari muntat superficialment
- Amb suport a la paret
- Sobre rodes
L'execució de la unitat d'obra inclou les operacions següents:
Col·locat dins d'armari i muntat superficialment:
- Fixació de l'armari al parament.
- Co.locació de l'extintor dins de l'armari.
Col·locat amb suport a la paret:
- Col·locació del suport al parament.
- Col·locació de l'extintor al suport.
Col·locat sobre rodes:
- Subministrament de l'extintor muntat sobre carro amb rodes
CARACTERÍSTIQUES GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
S'ha de situar prop dels accessos a la zona protegida i cal que sigui visible i accessible.
Alçària sobre el paviment de la part superior de l'extintor: <= 1700 mm
Toleràncies d'instal·lació:
- Posició: ± 50 mm
- Horitzontalitat i aplomat: ± 3 mm
COL·LOCAT AMB SUPORT A LA PARET:
El suport ha de quedar fixat sòlidament, pla i aplomat sobre el parament.
COL·LOCAT DINS D'ARMARI I MUNTAT SUPERFICIALMENT:
L'armari ha de quedar fixat sòlidament, plà, aplomat i anivellat sobre el paviment.
COL·LOCAT SOBRE RODES:
L'extintor ha d'anar col·locat sobre el seu suport mòbil de forma estable i segura, de tal manera que permeti el seu transport sense perill de despendre's.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.
Corrección de errores del Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios.
Resolució de 22 de març de 1995, de designació del laboratori general d'assaigs i investigacions com a organisme de control per la certificació de productes, d'acord amb el Reial Decret 1942/1993, que aprova el reglament CPI.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Comprovació que l'empresa instal·ladora es troba inscrita en el registre d'empreses instal·ladores/mantenidores de sistemes de protecció contra incendis.
- Comprovació de la correcta implantació de la instal·lació d'extintors mòbils
- Control de la correcta situació dels extintors segons especificacions del projecte, verificar:
- Col·locació d'extintors a una alçada de <= 1,7 m.
- Accessibilitat i situació propera a una sortida
- Situació a les zones amb més risc d'incendis
- Distància a recórrer fins a arribar a un extintor <= 15 m.
- Senyalització dels extintors

CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Les tasques de control a realitzar són les següents:
- Elaborar informe amb les comprovacions i mesures realitzades
CRITERIS DE PRESA DE MOSTRES:
S'ha de comprovar un nombre determinat d'extintors, fixat en cada cas per la DF. S'ha de procurar mostrejar les diferents zones, especialment aquelles amb un risc més elevat. Zones amb transformadors, motors, calderes, quadres elèctrics, sales de màquines, locals d'emmagatzematge de combustible i productes inflamables, etc.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
En cas de resultats negatius i anomalies, s'han de corregir els defectes sempre que sigui possible, en cas contrari s'ha de substituir el material afectat.

## PM INSTAL·LACIONS CONTRA INCENDIS, DESCÀRREGUES ATMOSFÈRIQUES I DE SEGURETAT

## PMS SENYALITZACIÓ D'INSTAL·LACIONS CONTRA INCENDIS I DE SEGURETAT

### PMS0- RÈTOLS PER A SENYALITZACIÓ, COL·LOCATS

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PMS0-6Z18,PMS0-6Z24.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Plaques de senyalització de vies d'evacuació d'interior d'edificis, col·locades en la seva posició definitiva amb fixacions mecàniques o adherides al parament vertical.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig
- Neteja superficial del parament
- Fixació de l'element
- Neteja
CONDICIONS GENERALS:
L'element de senyalització ha d'estar fixat al suport a la posició indicada a la DT, amb les modificacions introduïdes al replanteig previ, aprovades per la DF.
Quan es col·loqui amb fixacions mecàniques, ha de tenir col·locats i cargolats tots els visos previstos per la seva fixació.
La cara exterior de la placa ha d'estar en un pla vertical, amb l'aresta superior horitzontal.
El caràcter numèric ha d'estar en un pla vertical i correctament orientat.
Toleràncies d'execució:
- Nivell: ± 5 mm
- Aplomat: ± 1 mm/15 cm

2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Quan la placa sigui definitiva,el parament on s'ha de col·locar ha d'estar totalment acabat.
No s'han de produir danys a la pintura ni bonys a la planxa durant la col·locació.
En el cas de plaques de senyalització metàl·liques,no s'ha de foradar la placa per fixar-la. S'han d'utilitzar els forats existents.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat col·locada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
UNE 23033-1:1981 Seguridad contra incendios. Señalización.
UNE 23034:1988 Seguridad contra incendios. Señalización de seguridad. Vías de evacuación.

## PN VÀLVULES, FILTRES, BOMBES I GRUPS DE PRESSIÓ

## PN3 VÀLVULES DE BOLA

## PN38- VÀLVULA DE BOLA METÀL·LICA MANUAL AMB ROSCA, MUNTADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PN38-EC2D.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Vàlvules de bola metàl·liques o sintètiques, muntades.
S'han considerat els elements següents:
- Vàlvules manuals roscades
S'han considerat els tipus de col·locació següents:
- Muntades superficialment
- Muntades en pericó de canalització soterrada
L'execució de la unitat d'obra inclou les operacions següents:
Vàlvules de bola per a col·locar roscades:
- Neteja de rosques i d'interior de tubs
- Preparació de les unions amb cintes
- Connexió de la vàlvula a la xarxa
- Prova de servei
CONDICIONS GENERALS:
Els eixos de la vàlvula i de la canonada han de quedar alineats.
La maneta o volant de la vàlvula ha de ser accessible.
Les vàlvules s'han d'instal·lar situades de manera que es puguin realitzar tasques de manteniment de les diferents parts.

Tant els junts de la vàlvula com les connexions amb la canonada han de ser estanques a la pressió de treball.
S'ha de deixar connectada a la xarxa corresponent, en condicions de funcionament.
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 30 mm
MUNTADES SUPERFICIALMENT:
L'eix d'accionament ha de quedar horitzontal, o en qualsevol posició radial per sobre del pla horitzontal.
La distància entre la vàlvula i la paret ha de ser la necessària perque pugui girar el cos, un cop desmuntat l'eix d'accionament del sistema de tancament.
MUNTADES EN PERICÓ:
L'eix d'accionament ha de quedar vertical, amb la maneta cap amunt, i ha de coincidir amb el centre del pericó.
La distància entre la vàlvula i el fons del pericó ha de ser la necessària perquè pugui girar el cos un cop desmuntat l'eix d'accionament del sistema de tancament.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de la instal·lació de la vàlvula s'ha de netejar l'interior dels tubs.
Les connexions dels diferents elements s'han de realitzar seguint les indicacions del fabricant i amb les eines adequades per tal de no malmetre les diferents peces.
La descàrrega i manipulació de les vàlvules s'ha de fer de forma que no rebin cops.
El tub s'ha d'encaixar sense moviments de torsió.
La unió entre els tubs i vàlvules s'ha de fer garantint la no transmissió de càrregues, la impermeabilitat i l'adherència amb les parets.
Abans de realitzar la unió entre els tubs i les vàlvules cal fer la comprovació que extrems estan ben acabats, nets, sense rebaves i amb els condicions correctes per realitzar la unió.
Un cop acabada la instal·lació, s'ha de netejar interiorment fent-hi passar aigua perquè arrossegui les brosses i els gasos destil·lats produïts pel lubricant o per l'adhesiu i el netejador. No s'ha de fer servir en aquesta operació cap tipus de dissolvent.
En el cas que la canonada sigui per abastament d'aigua, cal fer un tractament de depuració bacteriològic després de rentar-la.
VÀLVULAS DE BOLA PER A COL·LOCAR ROSCADES:
Les unions amb la canonada han de quedar segellades mitjançant cintes d'estanquitat adequades.
L'enroscada, en el seu cas, s'ha de fer sense forçar ni malmetre la rosca.
Abans de la instal·lació de la vàlvula s'han de netejar l'interior dels tubs i les rosques d'unió.
Els protectors de les rosques amb que van proveïdes les vàlvules només s'han de treure en el moment d'executar les unions.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
La normativa ha de ser l'específica a l'ús a què es destini.

## PN VÀLVULES, FILTRES, BOMBES I GRUPS DE PRESSIÓ

## PN4 VÀLVULES DE PAPALLONA

## PN48- VÀLVULA DE PAPALLONA DE MATERIAL SINTÈTIC, MANUAL, EMBRIDADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PN48-AMG8,PN48-AMG7,PN48-AMEX,PN48-AMG6,PN48-AMGP.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Vàlvules de papallona concèntriques, biexcèntriques, manuals o motoritzades, muntades entre brides o embridades.
S'han considerat els tipus de col·locació següents:
- Muntades superficialment
- Muntades en pericó de canalització soterrada
L'execució de la unitat d'obra inclou les operacions següents:
- Neteja del interior i extrems del tub i de les vàlvules.
- Preparació de les unions amb elements d'estanquitat.
- Connexió de la vàlvula a la xarxa.
- En el cas de vàlvules motoritzades connexió a la xarxa elèctrica.
- Prova de servei.
CONDICIONS GENERALS:
Els eixos de la vàlvula i de la canonada han de quedar alineats.
La maneta o volant de la vàlvula ha de ser accessible.
Les vàlvules s'han d'instal·lar situades de manera que es puguin realitzar tasques de manteniment de les diferents parts.
Tant els junts de la vàlvula com les connexions amb la canonada han de ser estanques a la pressió de treball.
El pes de la canonada no ha de descansar sobre la vàlvula.
S'ha de deixar connectada a la xarxa corresponent, en condicions de funcionament.
S'ha de deixar connectada a la xarxa corresponent, en condicions de funcionament.
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Toleràncies d'instal·lació:
- Posició: ± 30 mm
MUNTADES SUPERFICIALMENT:
L'eix d'accionament ha de quedar horitzontal, o en qualsevol posició radial per sobre del pla horitzontal.

## PP MONITORATGE I CONTROL D'INSTAL·LACIONS I INSTAL·LACIONS AUDIOVISUALS I DE COMUNICACIONS

## PP4 CABLES PER A TRANSMISSIÓ DE SENYAL

## PP44- CABLE PER A TRANSMISSIÓ DE DADES AMB CONDUCTORS DE COURE, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PP44-6640.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Cables metàl·lics multiconductors per a la transmissió i el control de senyals analògiques i digitals, col·locats.
S'han contemplat els tipus de cables següents:
- Cables per a instal·lacions verticals i horitzontals en edificis
- Cables per a instal·lacions a l'àrea de treball i cables per a connexionat
S'han contemplat els tipus de col·locació següents:
- Cables col·locats sota canals, safates o tubs
- Cables amb connectors als extrems, col·locats
L'execució de la unitat d'obra inclou les operacions següents:
En cables col·locats sota canals, safates o tubs:
- Col·locació del cable a dintre de l'envoltant de protecció
- Marcat del cable
- Prova de servei
- Retirada de l'obra de les restes d'embalatges, retalls de cables, etc.
En cables amb connectors als extrems:
- Connexió del cable per ambdós extrems amb els equips o preses de senyals
- Comprovació i verificació de la partida d'obra executada
- Retirada de l'obra de les restes d'embalatges, etc.
CONDICIONS GENERALS:
La prova de servei ha d'estar feta.
S'han de verificar totes les connexions que conformen la instal·lació.
L'instal·lador ha d'aportar un certificat de la categoria de la instal·lació.
CABLES COL·LOCATS SOTA CANALS, SAFATES O TUBS:
El cable ha de portar una identificació del circuit al qual pertany.
No es poden transmetre esforços entre el cable i la resta d'elements de la instal·lació.

No hi poden haver empalmaments a dintre del recorregut de la canal, safata o tub.
Els tubs que allotgen cables de comunicacions no poden tenir al seu interior elements d'altres instal·lacions. La secció interior del tub protector ha de ser >= 1,3 vegades la secció del cercle circumscrit al feix dels conductors.
Les canals i safates que allotgen cables de comunicacions no poden tenir en el mateix compartiment del cable de comunicacions elements d'altres instal·lacions.
CABLES AMB CONNECTORS ALS EXTREMS:
La connexió d'ambdós extrems del cable amb els equips i amb les presses de senyal han d'estar fetes. La continuïtat del senyal ha de quedar garantida en els punts de connexió.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
La estesa del cable s'han de fer seguint les instruccions de la documentació tècnica del fabricant. Les connexions s'han de dur a terme amb l'utillatge adequat i respectant les recomanacions del fabricant del cable.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
S'ha de comprovar que les característiques tècniques del cable corresponen a les especificades al projecte.
Un cop acabades les tasques d'estesa i connexió del cable, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de cables, etc.
CABLES PER A INSTAL·LACIONS VERTICALS I HORITZONTALS EN EDIFICIS:
Durant les operacions d'estesa es tindrà cura de que el cable no pateixi tensions excessives. S'ha de vigilar que el cable no es malmeti per radis de curvatura massa petits, ni per contacte amb arestes, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
CABLES COL·LOCATS SOTA CANALS, SAFATES O TUBS:
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI

No es poden transmetre esforços entre el cable i la resta d'elements de la instal·lació.
No hi poden haver empalmaments a dintre del recorregut de la canal, safata o tub.
Els tubs que allotgen cables de comunicacions no poden tenir al seu interior elements d'altres instal·lacions. La secció interior del tub protector ha de ser >= 1,3 vegades la secció del cercle circumscrit al feix dels conductors.
Les canals i safates que allotgen cables de comunicacions no poden tenir en el mateix compartiment del cable de comunicacions elements d'altres instal·lacions.
CABLES AMB CONNECTORS ALS EXTREMS:

La connexió d'ambdós extrems del cable amb els equips i amb les presses de senyal han d'estar fetes. La continuïtat del senyal ha de quedar garantida en els punts de connexió.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
CONDICIONS GENERALS:
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
La estesa del cable s'han de fer seguint les instruccions de la documentació tècnica del fabricant. Les connexions s'han de dur a terme amb l'utillatge adequat i respectant les recomanacions del fabricant del cable.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
La seva instal·lació no ha d'alterar les característiques dels elements.
S'ha de comprovar que les característiques tècniques del cable corresponen a les especificades al projecte.
Un cop acabades les tasques d'estesa i connexió del cable, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de cables, etc.
CABLES PER A INSTAL·LACIONS VERTICALS I HORITZONTALS EN EDIFICIS:
Durant les operacions d'estesa es tindrà cura de que el cable no pateixi tensions excessives. S'ha de vigilar que el cable no es malmeti per radis de curvatura massa petits, ni per contacte amb arestes, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
CABLES AMB CONNECTORS ALS EXTREMS:
Unitat de quantitat necessària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
UNE-EN 50173-1:2018 Tecnología de la información. Sistemas de cableado genérico. Parte 1: Requisitos generales. (Ratificada por AENOR en julio de 2018).

SISTEMES DE CABLEJAT EN INFRAESTRUCTURES COMUNES DE TELECOMUNICACIONS (ICT)
Real Decreto 346/2011, de 11 de marzo, por el que se aprueba el Reglamento regulador de las infraestructuras comunes de telecomunicaciones para el acceso a los servicios de telecomunicación en el interior de las edificaciones.

## PP MONITORATGE I CONTROL D'INSTAL·LACIONS I INSTAL·LACIONS AUDIOVISUALS I DE COMUNICACIONS

## PP7 SISTEMES DE TRANSMISSIÓ DE VEU I DADES

## PP7A- EQUIP ELECTRÒNIC PER A TRANSMISSIÓ DE DADES, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PP7A-H9LK.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Equips electrònics per a transmissió de dades, col·locats.
S'han contemplat les partides d'obra següents:
- Switch col·locat en armari rack de 19" o superficialment
- Router col·locat en armari rack de 19" o superficialment
- Targeta de xarxa amb adaptador RJ45 amb bus de connexió PCI, col·locada a l'interior del PC
- Targeta de xarxa amb adaptador FO SC, amb bus de connexió PCI col·locada a l'interior del PC
- Targeta de xarxa inalàmbrica amb bus de connexió PCI, collocada a l'interior del PC
- Alimentador per a alimentació per ethernet (PoE) d'equips, en armari rack 19" o superficialment
- Punt de connexió inalàmbrica muntada superficialment
- Antena de connexió inalàmbrica muntada superficialment
L'execució de la unitat d'obra inclou les operacions següents:
En elements col·locats superficialment:
- Replanteig del element
- Execució i fixació del element
- Execució de les connexions elèctriques i de senyal
- Prova de funcionament
- Retirada de l'obra de les restes d'embalatges i disposició d'aquests per a la correcta gestió de residus
En elements col·locats dins de l'armari rack de 19":
- Col·locació dins de l'armari
- Execució de les connexions elèctriques i de senyal
- Prova de funcionament
- Retirada de l'obra de les restes d'embalatges i disposició d'aquests per a la correcta gestió de residus
En elements col·locats a l'interior del PC:
- Retirada de la carcassa del PC
- Col·locació de la targeta en la ranura de connexió
- Comprovació del funcionament
- Tancat de la carcassa del PC
- Instal·lació del software subministrat, si és el cas
- Realització de la prova de funcionament
- Retirada de l'obra de les restes d'embalatges i disposició d'aquests per a la correcta gestió de residus
ELEMENTS COL·LOCATS SUPERFICIALMENT:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha de quedar fixat sòlidament pels punts previstos a la documentació tècnica del fabricant i amb el sistema de fixació disposat pel fabricant. Les fixacions no han de transmetre esforços a l'element.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu,

el muntatge i les connexions dels mecanismes han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
L'element ha de quedar connectat a la xarxa d'alimentació elèctrica i en condicions de funcionament.
Els terminals de connexió de dades han de quedar accesibles.
En les instal·lacions amb cables metàl·lics apantallats, l'apantallament no es pot perdre en el connector, per tant, la pantalla del cable s'ha de connectar amb la pantalla del propi connector.
La prova de servei ha d'estar feta.
ELEMENTS COL·LOCATS DINS DE L'ARMARI RACK DE 19":
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha de quedar fixat sòlidament a l'armari pels punts previstos a la documentació tècnica del fabricant i amb el sistema de fixació disposat pel fabricant. No s'han de transmetre esforços entre el plafó i l'armari.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels mecanismes han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
L'element ha de quedar connectat a la xarxa d'alimentació elèctrica i en condicions de funcionament.
Els terminals de connexió de dades de la part frontal han de quedar accessibles.
La porta de l'armari ha de poder obrir i tancar correctament, fins i tot quan hi hagi connectats els cables de la instal·lació de dades.
En les instal·lacions amb cables metàl·lics apantallats, l'apantallament no es pot perdre en el connector, per tant, la pantalla del cable s'ha de connectar amb la pantalla del propi connector.
En les instal·lacions amb cables de fibra òptica, la qualitat i característiques del senyal òptic no poden alterar-se en el punt de connexió entre la fibra i el connector.
Així mateix, no es pot perdre la qualitat i les característiques del senyal òptic per radis de curvatura excessivament petits en el traçat del cable de fibra òptica.
La prova de servei ha d'estar feta.
ELEMENTS COL·LOCATS A L'INTERIOR DEL PC:
La targeta de xarxa ha de quedar introduïda a dintre de la ranura de connexió del PC.
Els connectors de dades de la targeta han de ser accessibles.
La prova de servei ha d'estar feta.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
Tots els elements s'han d'inspeccionar, abans de la seva col·locació, per comprovar que no tenen desperfectes.
S'ha de comprovar que les característiques tècniques de l'element corresponen a les especificades a la DT del projecte i la compatibilitat amb la resta d'elements que formin part del sistema.
Les connexions dels cables amb els connectors s'han de fer amb l'utillatge adequat.
Les connexions s'han de fer seguint les instruccions de la documentació tècnica del fabricant.
La seva instal·lació no ha d'alterar les característiques dels elements.
Les proves i ajustos sobre els equips, si son necessaris, han de ser fetes per personal especialitzat segons les instruccions de la DT del fabricant o de la DT del projecte.
Un cop finalitzat el muntatge cal realitzar les proves de servei i funcionament previstes en la DT del projecte o DT del fabricant. Els resultats de les proves s'han de lliurar a la DF.
Un cop instal·lat l'equip, es procedirà a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, etc. i disposició d'aquests per a la correcta gestió de residus.
Els elements instal·lats, en cas necessari, s'han de protegir per evitar malmetre'ls durant el muntatge d'altres elements o d'acord amb la DT del fabricant o de la DT del projecte.
ELEMENTS COL·LOCATS A L'INTERIOR DEL PC:
Cal seguir les instruccions i procediments definits als manuals de l'element i del PC.
Cal seguir les indicacions i recomanacions de seguretat impreses als equips instal·lats a l'interior del PC.
Cal evitar que les possibles descàrregues elèctriques afectin als elements a instal·lar o al PC.
Les targetes s'han d'introduir a la ranura de connexió pressionant de manera uniforme i sense deformar ni forçar altres components del PC.
No s'ha de deformar la targeta que suporta la ranura de connexió en el moment d'introduir la targeta, per tal de no malmetre el circuit imprès ni cap component electrònic.
No s'han de tocar amb els dits els contactes elèctrics de la targeta.
La targeta s'ha de fixar a la carcassa del PC i no pot quedar només suportada per la ranura de connexió del PC.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat necessària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
Real Decreto 842/2002 de 2 de agosto, por el que se aprueba el Reglamento Electrotécnico de Baja

Tensión. REBT 2002.
* UNE-EN 50173:1997 Tecnologías de la información. Sistemas de cableado genéricos.
* UNE-EN 50173/A1:2000 Tecnologías de la información. Sistemas de cableado genéricos.
* UNE-EN 50173-1:2002 Tecnología de la información. Sistemas de cableado genérico. Parte 1: Requisitos generales y áreas de oficina (Ratificada por AENOR en enero de 2004).

## PP MONITORATGE I CONTROL D'INSTAL·LACIONS I INSTAL·LACIONS AUDIOVISUALS I DE COMUNICACIONS

## PP7 SISTEMES DE TRANSMISSIÓ DE VEU I DADES

## PP7C- PANELL AMB CONNECTORS RJ45 INTEGRATS PER A ARMARI VDI, COL·LOCAT

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PP7C-66U0.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Elements especials per a armaris de comunicacions, col·locats.
S'han contemplat els següents tipus d'elements:
- Plafons amb connectors del tipus RJ45 integrats
- Plafons per a connexions telefòniques amb connectors del tipus 110
- Plafons amb connectors de fibra òptica del tipus SC
- Caixa per a unions de cables de fibra òptica

L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de l'element a l'interior de l'armari
- Fixació a l'armari
- Execució de les connexions
- Prova de servei
- Retirada de l'obra de les restes d'embalatges, retalls de cables, etc.

CONDICIONS GENERALS:
La posició ha de ser la reflectida a la DT o, en el seu defecte, la indicada per la DF.
Ha de quedar fixat sòlidament a l'armari pels punts previstos a la documentació tècnica del fabricant i amb el sistema de fixació disposat pel fabricant. No s'han de transmetre esforços entre el plafó i l'armari.
Tots els materials que intervenen en la instal·lació han de ser compatibles entre si. Per aquest motiu, el muntatge i les connexions dels equips han d'estar fets amb els materials i accessoris subministrats pel fabricant, o expressament aprovats per aquest.
Les connexions han d'estar fetes.
No s'han de transmetre esforços entre la connexió i el mecanisme.

La prova de servei ha d'estar feta.
CONNECTORS DE 8 VIES PER A CABLES AMB CONDUCTORS METÀL·LICS:
L'apantallament de la instal·lació no es pot perdre en el connector , per tant, la pantalla del cable s'ha de connectar amb la pantalla del propi connector.
CONNECTORS PER A CABLES DE FIBRA ÒPTICA:
La qualitat i característica del senyal òptic no poden alterar-se en el punt de connexió entre la fibra i el connector.
Així mateix, no es pot perdre la qualitat i les característiques del senyal òptic per radis de curvatura excessivament petits en el traçat del cable de fibra òptica.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
Abans de començar els treballs de muntatge, s'ha de fer un replanteig que ha de ser aprovat per la DF.
El muntatge s'ha de fer seguint les instruccions de la documentació tècnica del fabricant. S'ha de seguir la seqüència de muntatge proposada pel fabricant.
Tots els elements s'han d'inspeccionar abans de la seva col·locació.
S'ha de comprovar que les característiques tècniques de l'element corresponen a les especificades al projecte.
La seva instal·lació no ha d'alterar les característiques de l'element.
Un cop instal·lat l'equip, s'ha de procedir a la retirada de l'obra de tots els materials sobrants com ara embalatges, retalls de tubs, etc.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat de quantitat instal·lada, mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
NORMATIVA GENERAL:
* UNE-EN 50173:1997 Tecnologías de la información. Sistemas de cableado genéricos.
* UNE-EN 50173/A1:2000 Tecnologías de la información. Sistemas de cableado genéricos.
* UNE-EN 50173-1:2002 Tecnología de la información. Sistemas de cableado genérico. Parte 1: Requisitos generales y áreas de oficina (Ratificada por AENOR en enero de 2004).
CONNECTORS DE 8 VIES PER A CABLES AMB CONDUCTORS METÀL·LICS:
* UNE-EN 60603-7:1999 Conectores para frecuencias inferiores a 3 MHz para uso con tarjetas impresas. Parte 7: Especificación particular para conectores de 8 vías, incluyendo los conectores fijos y libres con características de acoplamiento comunes, con garantía de calidad.
* EN 60603-7-1:2002 Conectores para equipos electrónicos. Parte 7-1: Especificación particular de conectores de 8 vías, blindados, libres y fijos con características de acoplamiento comunes, de calidad evaluada. (Ratificada por AENOR en noviembre de 2002)
* EN 60603-7-7:2002 Conectores para equipos electrónicos. Parte 7-7: Especificación particular para conectores de 8 vías, blindados, libres y fijos, para la transmisión de datos con frecuencias de hasta 600 MHz (categoría 7, blindados). (Ratificada por AENOR en noviembre de 2002).

## PQ EQUIPAMENTS, MOBILIARI I MOBILIARI URBÀ

### PQ1 BANCS

#### PQ11- BANC D'ESTRUCTURA METÀL·LICA, COL·LOCAT (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PQ11-HAN3.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Bancs d'estructura metàl·lica i seient de fusta.
L'execució de la unitat d'obra inclou les operacions següents:
- Replanteig de la posició
- Fixació del banc
CONDICIONS GENERALS:
El banc ha de quedar horitzontal.
Un cop col·locat el banc no ha de tenir deformacions, cops ni d'altres defectes visibles.
Ha d'estar col·locat al lloc indicat a la DT
Toleràncies d'execució:
- Alçària del seient: ± 20 mm
- Horitzontalitat: ± 10 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi ha condicions específiques del procés constructiu.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Recepció del certificat de garantia del fabricant.
- Inspecció visual del material a la seva recepció.
- Comprovacions geomètriques i de dimensions.
- Comprovació del gruix i uniformitat dels recobriments i/o pintura.
CRITERIS DE PRESA DE MOSTRES:
Els controls indicats s'aplicaran a la totalitat dels elements subministrats.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
No s'acceptaran elements de mobiliari urbà que incompleixin alguna de les condicions indicades o que arribin a l'obra sense el certificat de garantia corresponent.

---

## PQ EQUIPAMENTS, MOBILIARI I MOBILIARI URBÀ

## PQ2 PAPERERES

### PQ22- PAPERERA DE PEU, COL·LOCADA

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PQ22-IQF2.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Papereres de peu i murals.
S'han considerat els tipus següents:
- Papereres amb suport ancorat a un dau de formigó.
- Papereres collades al parament.
- Papereres collades al terra.
En actuacions de reparació, s'han considerat els graus de dificultat següents:
- Grau de dificultat associat a la mobilitat en l'actuació:
- Sense dificultat de mobilitat: actuacions en què hi ha una interferència pròpia de l'entorn on es desenvolupen.
- Amb dificultat de mobilitat: actuacions en entorns amb dificultat de mobilitat i/o amb el material aplegat lluny de la zona de treball:
- Actuacions amb dificultat d'accessibilitat, per la poca mobilitat de la maquinària, per l'elevada presència de guals particulars i passos de vianants, per la impossibilitat d'ubicar una plataforma de treball lateral, per la impossibilitat d'ocupació de la calçada per fer l'aplec de materials que impliqui fer l'actuació per fases per tal de mantenir el pas de vianants i/o per estar en una zona amb tràfic rodat important
- Actuacions en les què els materials estan aplegats lluny de la zona de treball per manca d'espai en la proximitat d'on s'executen les tasques.
- Grau de dificultat associat a l'àmbit de l'actuació en funció de l'amplària de la vorera, calçada o plataforma única
- Grau de dificultat associat a la presència d'elements externs a l'actuació:
- Sense afectació per serveis o elements de mobiliari urbà: actuacions sense serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) ni elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc.) que interfereixin (o que puguin interferir) en les tasques
- Amb afectació per serveis o elements de mobiliari urbà: actuacions amb serveis (canalitzacions d'aigua, semàfors, enllumenat, etc.) o elements urbans de grans dimensions (marquesines, mòduls d'aparcament de bicicletes, etc) que interfereixen en les tasques.
- Grau de dificultat associat a l'abast de l'actuació
L'execució de la unitat d'obra inclou les operacions següents:
Papereres amb suport ancorat a un dau de formigó:
- Formigonament del dau d'ancoratge
- Ancoratge del suport de la paparera
- Montatge de la paperera
Papereres collades a paraments:
- Fixació dels elements de suport
- Fixació de la paperera als suports
Papereres collades al terra:
- Fixació dels elements de suport
- Fixació de la paperera als suports
CONDICIONS GENERALS:
Un cop col·locada la paperera no ha de tenir deformacions, cops o d'altres defectes visibles.
Toleràncies d'execució:
- Alçària: ± 20 mm
- Verticalitat: ± 10 mm
PAPERERES AMB SUPORT ANCORAT A DAU DE FORMIGÓ:
El dau d'ancoratge de formigó no ha de quedar visible.
Ancoratge del tub de suport: >= 15 cm
PAPERERES COLLADES A PARAMENTS:
Els elements posteriors de fixació han de quedar col·locats dins de les anelles de suport, fixades a la paret.
Platines de fixació: 25 x 4 mm
PAPERERES COLLADES AL TERRA:
Els elements de fixació han de quedar col·locats dins de les anelles de suport, fixades al terra.
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

PAPERERES ANCORADES A DAU DE FORMIGÓ:
El formigonament del dau d'ancoratge s'ha de fer a una temperatura entre 5°C i 40°C, sense pluja. No s'ha d'utilitzar fins 48 h després de la seva col·locació.
PAPERERES COLLADES A PARAMENTS O AL TERRA:
La temperatura per a realitzar l'ancoratge de les anelles al suport ha d'estar entre 5°C i 40°C.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.
5.- CONDICIONS DE CONTROL D'EXECUCIÓ I DE L'OBRA ACABADA
CONTROL D'EXECUCIÓ. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual del material abans de la seva col·locació, rebutjant les peces malmeses
- Replanteig de la ubicació.
- Comprovació del correcte anivellament, segons criteri de la DF.
CONTROL DE L'OBRA ACABADA. OPERACIONS DE CONTROL:
Els punts de control més destacables són els següents:
- Inspecció visual dels elements col·locats.
CRITERIS DE PRESA DE MOSTRES:
Els controls s'han de realitzar segons les instruccions de la DF.
INTERPRETACIÓ DE RESULTATS I ACTUACIONS EN CAS D'INCOMPLIMENT:
Correcció per part del contractista de les irregularitats observades.

---

## PQ EQUIPAMENTS, MOBILIARI I MOBILIARI URBÀ

### PQ5 TAULELLS

### PQ50- FORMACIÓ DE FORAT SOBRE TAULELL

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PQ50-431F.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Formació de forats amb cantell interior polit o sense polir per a encastar aparells sanitaris a taulells de pedra.
L'execució de la unitat d'obra inclou les operacions següents:
- Foradat del taulell de pedra i polit del cantell interior si s'escau
CONDICIONS GENERALS:
El forat s'ha d'ajustar al diàmetre o perfil previst.

El cantell del forat no pot tenir rugositats apreciables.
Toleràncies d'execució:
- Diàmetre: - 2 mm, - + 5 mm
- Distància entre les cares diametralment oposades:
- Cantell interior sense polir: -5 mm, +10 mm
- Cantell interior polit: ± 5mm
- Distància entre les cares diametralment oposades: ± 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ
No hi han condicions específiques del procés d'execució.
3.- UNITAT I CRITERI D'AMIDAMENT
Unitat mesurada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

---

## PQ EQUIPAMENTS, MOBILIARI I MOBILIARI URBÀ

### PQ5 TAULELLS

#### PQ55- TAULELL SINTÈTIC, COL·LOCAT (D)

0.- ELEMENTS QUE CONTEMPLA EL PLEC

PQ55-HCHM,PQ55-HCHN.

1.- DEFINICIÓ I CONDICIONS DE LES PARTIDES D'OBRA EXECUTADES
Taulells de resines sintètiques amb fibres de fusta, fixats mecànicament sobre estructura de base o sobre moble.
L'execució de la unitat d'obra inclou les operacions següents:
- Fixació de l'estructura de suport al parament, en el seu cas
CONDICIONS GENERALS:
El taulell ha de quedar horitzontal i no ha de tenir esquerdes, trencaments, taques ni escantonaments.
Ha de recolzar correctament sobre els suports o sobre el moble.
Quan vagi col·locat sobre suports, s'han de col·locar els suficients perquè el taulell sigui estable.
Si hi ha equips de mobiliari a sota del taulell, la volada ha d'ajustar-se al projecte o a les directrius fixades per la DF Si no s'especifica, ha de ser >= 1,5 cm.
Toleràncies d'execució:
- Horitzontalitat: ± 0,1 %
- Alçària: ± 5 mm
2.- CONDICIONS DEL PROCÉS D'EXECUCIÓ

No hi han condicions específiques del procés d'instal·lació.
3.- UNITAT I CRITERI D'AMIDAMENT
m de llargària amidada segons les especificacions de la DT.
4.- NORMATIVA DE COMPLIMENT OBLIGATORI
No hi ha normativa de compliment obligatori.

## 1. OBJECTE DE L'ESTUDI DE SEGURETAT I SALUT

### 1.1. Identificació de les obres

L'objecte es redactar el projecte de les noves piscines exteriors i instal·lacions a Llinars del Vallès.

### 1.2. Objecte

El present E.S.S. té com a objectiu establir les bases tècniques, per fixar els paràmetres de la prevenció de riscos professionals durant la realització dels treballs d'execució de les obres del Projecte objecte d'aquest estudi, així com complir amb les obligacions que es desprenen de la Llei 31 / 1995 i del RD 1627 / 1997, amb la finalitat de facilitar el control i el seguiment dels compromisos adquirits al respecte per part del/s Contractista/es.

En el present Estudi de Seguretat i Salut s'ha dut a terme un estudi aprofundit dels riscos inherents a l'execució de l'obra i de les mesures preventives i cautelars conseqüents per garantir la seguretat de les persones en l'execució de les obres en compliment del que determina la Llei 3/2007 del 4 de juliol de l'obra pública en el seu article 18.3.h).

D'aquesta manera, s'integra en el Projecte Executiu/Constructiu, les premisses bàsiques per a les quals el/s Contractista/es constructor/s pugui/n preveure i planificar, els recursos tècnics i humans necessaris per a l'acompliment de les obligacions preventives en aquest centre de treball, de conformitat al seu Pla d'Acció Preventiva propi d'empresa, la seva organització funcional i els mitjans a utilitzar, havent de quedar tot allò recollit al Pla de Seguretat i Salut, que haurà/n de presentar-se al Coordinador de Seguretat i Salut en fase d'Execució, amb antelació a l'inici de les obres, per a la seva aprovació i l'inici dels tràmits de Declaració d'Obertura davant l'Autoritat Laboral.

En cas de què sigui necessari implementar mesures de seguretat no previstes en el present Estudi, a petició expressa del coordinador de seguretat i salut en fase d'execució de l'obra, el contractista elaborarà el corresponent annex al Pla de Seguretat i Salut de l'obra que desenvoluparà i determinarà les mesures de seguretat a dur a terme amb la memòria, plec de condicions, amidaments, preus i pressupost que li siguin d'aplicació si n'és el cas.

## 2. PROMOTOR - PROPIETARI

| | | |
|---|---|---|
| Promotor | : | Ajuntament de Llinars del Vallès |
| NIF | : | P-0810500I |
| Adreça | : | Plaça de la Vila, 1, 08450 |
| Població | : | Llinars del Vallès |

## 3. AUTOR/S DE L'ESTUDI DE SEGURETAT I SALUT

| | | |
|---|---|---|
| Redactor E.S.S. | : | Laia Roca i Berlanga |
| Titulació/ns | : | Arquitecta |
| Col·legiat núm. | : | 28.076-3 |
| Despatx professional | : | Ingeniería y Sistemas Integrales, S.L. |
| Població | : | Barcelona |

## 4. DADES DEL PROJECTE

### 4.1. Autor/s del projecte

| | | |
|---|---|---|
| Autor del projecte : | | Laia Roca i Berlanga |
| Titulació/ns | : | Arquitecta |
| Col·legiat núm. | : | 28.076-3 |
| Despatx professional | : | Ingeniería y Sistemas Integrales, S.L. |
| Població : | | Barcelona |

### 4.2. Tipologia de l'obra

L'objecte es redactar el projecte de les noves piscines exteriors i instal·lacions a Llinars del Vallès.

### 4.3. Situació

| | | |
|---|---|---|
| Emplaçament | | |
| Carrer,plaça | : | Avinguda Pau Casals |
| Número : | | 281 |
| Codi Postal | : | 08450 |
| Població : | | Llinars del Vallès |

### 4.5. Termini d'execució

El termini estimat de duració dels treballs d'execució de l'obra és de 6 mesos.

### 4.6. Mà d'obra prevista

L'estimació de mà d'obra en punta d'execució és de 16 persones.

### 4.7. Oficis que intervenen en el desenvolupament de l'obra

Ajudant ferrallista

Ayudante estructurista, en trabajos de puesta en obra del hormigón.
Peón especializado construcción.

## 4.8. Tipologia dels materials a utilitzar a l'obra

ABOCADOR
ABRAÇADORA
ACCESSORI DE PVC-U PER TUBS DE SANEJAMENT SOTERRAT SENSE PRESSIÓ DE PVC-U
ACCESSORI I ELEMENTS DE MUNTATGE PER A TUB DE PVC
ACCESSORI PER A TUB DE COURE
ACCESSORI PER A TUB DE POLIETILÈ
ACCESSORI PER A TUB DE PVC-U A PRESSIÓ
ACCESSORIS PER A APARELLS SANITARIS
ACCESSORIS PER A BANYS (D)
ACER EN BARRES CORRUGADES
ACER EN BARRES CORRUGADES ELABORAT A L'OBRA
ADDITIU
ADHESIU D'APLICACIÓ UNILATERAL
ADHESIU PER A RAJOLA CERÀMICA
AIGUA
AIGÜERA DE PLANXA D'ACER INOXIDABLE
AÏLLAMENT TÈRMIC PER A TUBS AMB ESCUMES ELASTOMÈRIQUES
AIXETA PER A AIGÜERA
AIXETA PER A APARELLS SANITARIS
AIXETA PER A INODOR
AIXETA PER A SAFAREIG
AIXETA SENZILLA PER A LAVABO
AIXETA TEMPORITZADA PER A DUTXA
AIXETES PER A APARELLS SANITARIS
APARELLS SANITARIS PER LA HIGIENE PERSONAL
APARELLS SANITARIS PER LA NETEJA
APLIC PER A EXTERIORS AMB LEDS
ARMARI METÀL·LIC PER A INSTAL·LACIONS ELÈCTRIQUES (D)
ARMARI PER A COMPTADORS D'AIGUA (D)
ARMARI PER A EXTINTOR
ARMARI RACK METÀL·LIC MURAL PER A SISTEMES DE TRANSMISSIÓ DE VEU, DADES I IMATGE
ASSAIG DE PROVA DE COBERTA
ASSAIG DE PROVA DE TANCAMENT
ASSAIG DE SÒL
BANC DE POSTS DE FUSTA (D)
BARANA D'ACER

BASTIMENT DE BASE DE TUB D'ACER
BASTIMENT DE FUSTA DE PI ROIG PER A PINTAR, PER A PORTES DE FULLES BATENTS
BASTIMENT I TAPA DE FOSA DÚCTIL PER A REGISTRE
BLOC DE MORTER DE CIMENT
BOMBA SUBMERGIBLE D'ESGOTAMENT
BONERA
BRIDA PER A TUB
CABLE DE COURE DE 0,6/1 KV
CABLE DE XARXA AMB CONDUCTORS DE COURE I CONNECTORS ESTANCS
CABLE PER A TRANSMISSIÓ DE DADES AMB CONDUCTORS DE COURE
CAIXA DE DERIVACIÓ QUADRADA
CAIXA DE PROTECCIÓ FUSIBLE PER A INSTAL·LACIONS D'ENLLUMENAT
CAIXA GENERAL DE PROTECCIÓ
CAIXA I BASTIMENT DE BASE PER A PORTA CORREDISSA ENCASTADA
CAIXA PER A MECANISMES
CALÇ
CANAL DE FORMIGÓ POLÍMER AMB PENDENT PER A DRENATGES
CANTONERA PER A ARESTES ENGUIXATS, ARREBOSSATS O ENRAJOLATS
CANTONERA PER A ARREBOSSATS I ENGUIXATS
CIMENT
CINTA ADHESIVA DOBLE CARA
CINTA ADHESIVA PER A PAVIMENTS TÈXTILS
CINTA DE POLIETILÈ AUTOADHESIVA A DUES CARES
CINTA PER A JUNTS
COLUMNA PER A SUPORT DE LLUMS
COMPTADOR D'AIGUA
COMPTADOR D'AIGUA AMB CONNEXIÓ EMBRIDADA
COMPTADOR D'AIGUA AMB CONNEXIÓ ROSCADA
COMPTADOR D'ENERGIA
CONDUCTE CIRCULAR METÀL·LIC
CONDUCTOR DE COURE NU
CONJUNT DE PROTECCIÓ I MESURA (D)
CONNECTOR PER A TRANSMISSIÓ DE VEU I DADES
CORDÓ CEL·LULAR DE POLIETILÈ EXPANDIT PER A REBLERT DE JUNTS
DEPOSICIÓ CONTROLADA DE RESIDUS
DETECTOR DE MOVIMENT I PRESÉNCIA (D)
DISPOSICIÓ DE MATERIAL D'EXCAVACIÓ NO CONTAMINAT A CENTRE DE VALORITZACIÓ
DRETS PER AL SUBMINISTRAMENT D'AIGUA
ELEMENTS AUXILIARS PER A CAIXES I MECANISMES ELÈCTRICS
EQUIP ELECTRÒNIC PER A TRANSMISSIÓ DE DADES
ESCALFADOR ACUMULADOR ELÈCTRIC
ESTRUCTURA PER A CEL RAS CONTINU DE PLAQUES DE GUIX LAMINAT
EXTINTOR MANUAL

FINESTRA PRACTICABLE D'ALUMINI
FORMIGÓ D'ÚS NO ESTRUCTURAL
FORMIGÓ ESTRUCTURAL EN MASSA AMB CIMENT GRIS I GRANULAT NATURAL (CE)
FORMIGÓ ESTRUCTURAL PER ARMAR AMB CIMENT GRIS I GRANULAT NATURAL (CE)
FORMIGÓ SENSE ADDITIUS DESIGNAT PER DOSIFICACIÓ DE CIMENT
FORMIGONS ESTRUCTURALS (CE)
FULLA BATENT PER A PORTA INTERIOR AMB ACABAT DE TAULER DE MELAMINA
GAFES DE PALA I PUNTA
GALZE PER A PORTA CORREDISSA ENCASTADA
GESPA SINTÈTICA
GRAVA DE PEDRERA
GUIX
IMPRIMACIÓ
INODOR
INTERRUPTORS I COMMUTADORS
LÀMINA DE POLIOLEFINES
LÀMINA DE PVC PER A PISCINES
LAVABO
LLUM DECORATIU MODULAR PER A MUNTAR SUPERFICIALMENT AMB LEDS
LLUM DECORATIU TIPUS DOWNLIGHT AMB LEDS
LLUM D'EMERGÈNCIA AMB LÀMPADA LED
MALLA ELECTROSOLDADA DE BARRES CORRUGADES D'ACER
MALLA PER A ARMADURES D'ARREBOSSATS, ENGUIXATS I PINTATS
MANIGUET FLEXIBLE
MAÓ CALAT
MAÓ FORADAT SENZILL
MAONS CERÀMICS
MARC PER A MECANISMES ELÈCTRICS
MASSILLA PER A SEGELLAT DE PLAQUES DE GUIX LAMINAT
MASSILLA PER A SEGELLATS, D'APLICACIÓ AMB PISTOLA
MATERIAL PER A REJUNTAT DE RAJOLES CERÀMIQUES
MATERIALS AUXILIARS PER A COBERTES
MESCLA BITUMINOSA PER A CAPA DE RODADURA AMB ASFALT IMPRÈS
MIRALL
MORTER AMB ADDITIUS
MORTER IMPERMEABILITZANT
MORTER PER A RAM DE PALETA
MORTER SENSE ADDITIUS
PANELL AMB CONNECTORS RJ45 INTEGRATS PER A ARMARI VDI
PANELL LAMINAT DECORATIU D'ALTA PRESSIÓ HPL PER A EXTERIOR
PANELL LAMINAT DECORATIU D'ALTA PRESSIÓ HPL PER A INTERIOR
PANOT PER A VORERA
PAPERERA DE PEU
PART PROPORCIONAL D'ACCESSORIS PER A APARELLS DE PROTECCIÓ
PART PROPORCIONAL D'ACCESSORIS PER A CAIXES
PART PROPORCIONAL D'ACCESSORIS PER A CONDUCTORS ELÈCTRICS DE TENSIÓ BAIXA

PART PROPORCIONAL D'ACCESSORIS PER A MECANISMES
PART PROPORCIONAL D'ACCESSORIS PER A TUBS
PART PROPORCIONAL D'ELEMENTS DE MUNTATGE PER A AÏLLAMENT TÈRMIC DE CANONADES AMB ESCUMES ELASTOMÈRIQUES
PART PROPORCIONAL D'ELEMENTS DE MUNTATGE PER A TUBS DE COURE
PART PROPORCIONAL D'ELEMENTS DE MUNTATGE PER A TUBS DE PVC
PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A CONDUCTORS ELÈCTRICS DE TENSIÓ BAIXA
PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A ELEMENTS DE CONNEXIÓ A TERRA
PART PROPORCIONAL D'ELEMENTS ESPECIALS PER A EXTINTORS
PASSAMUR I ABRAÇADORA PER AL SEGELLAT DE TUBS COMBUSTIBLES I CABLES
PASTA AUTOANIVELLANT
PASTA DE GUIX
PASTA PER A SEGELLAR L'ENLLAÇ D'INODORS, ABOCADORS I PLAQUES TURQUES
PEÇA DE FORMIGÓ PREFABRICAT PER A CORONAMENT DE PARET
PEÇA ESPECIAL DE CERÀMICA AMB DOS CANTELLS EN ESCAIRE
PECES CERÀMIQUES ESPECIALS
PERFIL D'ACER PER A ESTRUCTURES
PERFILERIA PER A APLACATS
PERSIANA ENROTLLABLE D'ALUMINI
PINTURA
PINTURA AMB BAIX CONTINGUT DE DISOLVENTS
PINTURES PER A SISTEMES DE PINTURA DE PROTECCIÓ DE L'ACER
PIQUETA DE CONNEXIÓ A TERRA
PLACA DE CONNEXIÓ A TERRA
PLACA DE GUIX LAMINAT
PLACA FENÒLICA HPL PER A MAMAPARA DIVISÒRIA
PLANXA D'ACER INOXIDABLE PER REVESTIMENTS
PLAQUES I PLANXES DE GUIX
PORTA D'ALUMINI
PORTA DE PERFILS D'ACER LAMINAT
PRESA DE CORRENT
PROGRAMADOR HORARI (D)
PROJECTOR PER A EXTERIOR AMB LEDS
PROVA FINAL I INSPECCIÓ D'INSTAL·LACIÓ (D)
PUNT DE CONNEXIÓ A TERRA
RAJOLA CERÀMICA
RAJOLES, CAIRONS I TOVES CERÀMIQUES
RAMAL PER A ESCOMESA D'AIGUA
REIXA I PROTECCIÓ PER A ABOCADORS
REIXETA D'IMPULSIÓ D'UNA FILERA D'ALETES ORIENTABLES HORITZONTALS
RÈTOL SENYALITZACIÓ
RUIXADOR
SAI DE TECNOLOGIA LINE INTERACTIVE
SEGELLADORA
SEGELLANT LÍQUID DE PVC PUR PER A PAVIMENTS SINTÈTICS
SIFÓ DE LLAUTÓ PER A LAVABO
SIFÓ PER A AIGÜERA
SIFÓ PER A CÀMERES DE DESCÀRREGA
SÒCOL DE MATERIAL SINTÈTIC
SONDA
SORRA
SORRA DE MATERIAL RECICLAT
SORTIDA DE FILS
SUPERMAÓ CERÀMIC
SUPORT PER A CONDUCTES CIRCULARS
TAC MECÀNIC METÀL·LIC
TANCA PER A ESPAIS PÚBLICS
TANCAMENT FIX D'ALUMINI
TAPA DE FORMIGÓ PER A PERICÓ
TAULELL SINTÈTIC (D)
TAULER CONTRAXAPAT DE FUSTA
TAULERS DE FUSTA

TUB DE COURE SEMIDUR
TUB DE POLIETILÈ DE DENSITAT ALTA, PER A XARXES DE DISTRIBUCIÓ D'AIGUA
TUB DE PVC PER A EVACUACIÓ
TUB DE PVC-U A PRESSIÓ
TUB DE PVC-U PER A SANEJAMENT AMB PRESSIÓ
TUB FLEXIBLE PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS DE MATERIAL PLÀSTIC
TUB RÍGID PER A PROTECCIÓ DE CONDUCTORS ELÈCTRICS DE MATERIAL PLÀSTIC
VÀLVULA DE BOLA METÀL·LICA MANUAL AMB BRIDES

VIS D'ACER GALVANITZAT

### 4.9. Maquinària prevista per a executar l'obra

Compressor amb dos martells pneumàtics
Bulldòzer sobre cadenes, d'11 a 17 t, amb escarificadora
Corró vibratori autopropulsat, de 8 a 10 t
Minicarregadora de combustible sobre pneumàtics de 2 a 5,9 t, amb accessori retroexcavador de 40 a 60 cm d'amplària
Minicarregadora de combustible sobre pneumàtics de 2 a 5,9 t
Pala carregadora sobre pneumàtics de 8 a 14 t
Pala excavadora giratòria sobre pneumàtics de 15 a 20 t
Picó vibrant de combustible amb placa de 30x30 cm
Safata vibrant combustible amb placa de 60 cm
Compactador combustible duplex manual de 700 kg
Retroexcavadora sobre pneumàtics de 8 a 10 t
Camió cistella de 10 m d'alçària com a màxim
Camió cisterna de 10 m3
Camió grua
Camió per a transport de 20 t
Camió per a transport de 12 t
Corró vibratori per a formigons i betums autopropulsat pneumàtic
Estenedora per a paviments de mescla bituminosa
Formigonera de 250 l
Formigonera de 165 l
Màquina tallajunts amb disc de diamant per a paviment
Subministrament de contenidor metàl·lic de 8 m3 de capacitat i recollida amb residus inerts o no especials
Equip i elements auxiliars per a soldadura elèctrica
Equip i elements auxiliars per a tall oxiacetilènic
Màquina de pulverització sense aire, amb un cabal de 8 a 12 l/min a 3000 psi (206 bar), relació min. 28:1
Martell trencador manual
Pala cargadora sobre neumáticos de 120 kW/1,9 m³.
Camión cisterna, de 8 m³ de capacidad.
Bandeja vibrante de guiado manual, de 300 kg, anchura de trabajo 70 cm, reversible.
Camión bomba estacionado en obra, para bombeo de hormigón.
Equipo para corte de juntas en soleras de hormigón.
Fratasadora mecánica de hormigón.
Regla vibrante de 3 m.

## 5. INSTAL·LACIONS PROVISIONALS

## 5.1. Instal·lació elèctrica provisional d'obra

És faran els tràmits adients, per tal que la companyia subministradora d'electricitat o una acreditada faci la connexió des de la línia subministradora fins els quadres on s'ha d'instal·lar la caixa general de protecció i els comptadors, des dels quals els Contractistes procediran a muntar la resta de la instal·lació elèctrica de subministrament provisional a l'obra, conforme al Reglament Electrotècnic de Baixa Tensió, segons el projecte d'un instal·lador autoritzat.

Es realitzarà una distribució sectoritzada, que garanteixi l'adient subministrament a tots els talls i punts de consum de l'obra, amb conductor tipus V -750 de coure de seccions adequades canalitzades en tub de PVC, rígid blindat o flexible segons el seu recorregut, però sempre amb l'apantallament suficient per a resistir al pas de vehicles i trànsit normal d'una obra.

La instal·lació elèctrica tindrà una xarxa de protecció de terra mitjançant cable de coure nu que estarà connectat a una javelina, plaques de connexió al terra, segons càlcul del projectista i comprovació de l'instal·lador.

Les mesures generals de seguretat en la instal·lació elèctrica són les següents:

*Connexió de servei*

- Es realitzarà d'acord amb la companyia de subministrament.
- La seva secció vindrà determinada per la potència instal·lada.
- Existirà un mòdul de protecció (fusibles i limitadors de potència).
- Estarà situada sempre fora de l'abast de la maquinària d'elevació i les zones sense pas de vehicles.

- *Quadre General*

e) Disposarà de protecció vers als contactes indirectes mitjançant diferencial de sensibilitat mínima de 300 mA. Per a enllumenat i eines elèctriques de doble aïllament la seva sensibilitat caldrà que sigui de 30 mA.

f) Disposarà de protecció vers als contactes directes per tal que no hi existeixin parts en tensió al descobert (embornals, cargols de connexió, terminals automàtics, etc.).

g) Disposarà d'interruptors de tall magnetotèrmics per a cadascú dels circuits independents. Els dels aparells d'elevació hauran de ser de tall omnipolar (tallaran tots els conductors, inclòs el neutre).

h) Anirà connectat a terra (resistència màxima 78 □). A l'inici de l'obra es realitzarà una connexió al terra provisional que haurà d'estar connectada a l'anell de terres, tot seguit després de realitzats els fonaments.

i) Estarà protegida de la intempèrie.

j) És recomanable l'ús de clau especial per a la seva obertura.

k) Se senyalitzarà amb senyal normalitzada d'advertència de risc elèctric (R.D. 485/97).

- *Conductors*

2. Disposaran d'un aïllament de 1000 v de tensió nominal, que es pot

reconèixer per la seva impressió sobre el mateix aïllament.

3. Els conductors aniran soterrats, o grapats als paraments verticals o sostres allunyats de les zones de pas de vehicles i / o persones.
4. Les empiuladures hauran de ser realitzades mitjançant "jocs" d'endolls, mai amb regletes de connexió, retorciments i embetats.

***d) Quadres secundaris***

– Seguiran les mateixes especificacions establertes pel quadre general i hauran de ser de doble aïllament.
– Cap punt de consum pot estar a més de 25 m d'un d'aquests quadres.
– Encara que la seva composició variarà segons les necessitats, l'aparellatge més convencional dels equips secundaris per planta és el següent:

| | | | |
|---|---|---|---|
| · 1 | Magnetotèrmic general de 4P | : | 30 A. |
| · 1 | Diferencial de 30 A | : | 30 mA. |
| · 1 | Magnetotèrmic 3P | : | 20 mA. |
| · 4 | Magnetotèrmics 2P | : | 16 A. |
| · 1 | Connexió de corrent 3P + T | : | 25 A. |
| · 1 | Connexió de corrent 2P + T | : | 16 A. |
| · 2 | Connexió de corrent 2P | : | 16 A. |
| · 1 | Transformador de seguretat | : | (220 v./ 24 v.). |
| · 1 | Connexió de corrent 2P | : | 16 A. |

- *Connexions de corrent*

– Aniran proveïdes d'embornals de connexió al terra, excepció feta per a la connexió d'equips de doble aïllament.
– S'empararan mitjançant un magnetotèrmic que faciliti la seva desconnexió.
– Es faran servir els següents colors:

| | | |
|---|---|---|
| · Connexió de 24 v | : | Violeta. |
| · Connexió de 220 v | : | Blau. |
| · Connexió de 380 v | : | Vermell |

– No s'empraran connexions tipus "lladre".

- *Maquinària elèctrica*

– Disposarà de connexió a terra.
– Els aparells d'elevació aniran proveïts d'interruptor de tall omnipolar.
– Es connectaran a terra el guiament dels elevadors i els carrils de grua o d'altres aparells d'elevació fixos.
– L'establiment de connexió a les bases de corrent, es farà sempre amb clavilla normalitzada.

- *Enllumenat provisional*

– El circuit disposarà de protecció diferencial d'alta sensibilitat, de 30 mA.
– Els portalàmpades haurà de ser de tipus aïllant.
– Es connectarà la fase al punt central del portalàmpades i el neutre al lateral més pròxim a la virolla.
– Els punts de llum a les zones de pas s'instal·laran als sostres per tal de garantir-ne la inaccessibilitat a les persones.

- *Enllumenat portàtil*

– La tensió de subministrament no ultrapassarà els 24 v o alternativament disposarà de doble aïllament, Classe II de protecció intrínseca en previsió de contactes indirectes.
– Disposarà de mànec aïllant, carcassa de protecció de la bombeta amb capacitat anticops i suport de sustentació.

## 5.2. Instal·lació d'aigua provisional d'obra

Per part del Contractista Principal, es realitzaran les gestions adients davant de la companyia subministradora d'aigua, perquè instal·lin una derivació des de la canonada general al punt on s'ha de col·locar el corresponent comptador i puguin continuar la resta de la canalització provisional per l'interior de l'obra.

La distribució interior d'obra podrà realitzar-se amb canonada de PVC flexible amb els ronsals de distribució i amb canya galvanitzada o coure, dimensionat segons el Codi Tècnic de l'Edificació relatives a fontaneria en els punts de consum, tot allò garantit en una total estanquitat i aïllament dialèctric en les zones necessàries.

## 5.3. Instal·lació de sanejament

Des del començament de l'obra, es connectaran a la xarxa de clavegueram públic, les instal·lacions provisionals d'obra que produeixin abocaments d'aigües brutes.

Si es produís algun retard en l'obtenció del permís municipal de connexió, s'haurà de realitzar, a càrrec del contractista, una fossa sèptica o pou negre tractat amb bactericides.

## 5.4. Altres instal·lacions. Prevenció i protecció contra incendis

Per als treballs que comportin la introducció de flama o d'equip productor d'espurnes a zones amb risc d'incendi o d'explosió, caldrà tenir un permís de forma explícita, fet per una persona responsable, on al costat de les dates inicial i final, la naturalesa i la localització del treball, i l'equip a usar, s'indicaran les precaucions a adoptar respecte als combustibles presents (sòlids, líquids, gasos, vapors, pols), neteja prèvia de la zona i els mitjans addicionals d'extinció, vigilància i ventilació adequats.

Les precaucions generals per la prevenció i la protecció contra incendis seran les següents

– La instal·lació elèctrica haurà d'estar d'acord amb allò establert a la

Instrucció M.I.B.T. 026 del vigent Reglament Electrotècnic de Baixa Tensió per a locals amb risc d'incendis o explosions.

- Es limitarà la presència de productes inflamables en els llocs de treball a les quantitats estrictament necessàries perquè el procés productiu no s'aturi. La resta es guardarà en locals diferents al de treball, i en el cas que això no fos possible es farà en recintes aïllats i condicionats. En tot cas, els locals i els recintes aïllats compliran allò especificat a la Norma Tècnica "MIE-APQ-001 Almacenamiento de líquidos inflamables y combustibles" del Reglament sobre Emmagatzematge de Productes Químics.
- S'instal·laran recipients contenidors hermètics i incombustibles en què s'hauran de dipositar els residus inflamables, retalls, etc.
- Es col·locaran vàlvules antirretorn de flama al bufador o a les mànegues de l'equip de soldadura oxiacetilènica.
- L'emmagatzematge i ús de gasos liquats compliran amb tot allò establert a la instrucció MIE-AP7 del vigent Reglament d'Aparells a pressió en la norma 9, apartats 3 i 4 en allò referent a l'emmagatzematge, la utilització, l'inici del servei i les condicions particulars de gasos inflamables.
- Els camins d'evacuació estaran lliures d'obstacles. Existirà una senyalització indicant els llocs de prohibició de fumar, situació d'extintors, camins d'evacuació, etc.
- Han de separar-se clarament els materials combustibles els uns dels altres, i tots ells han d'evitar qualsevol tipus de contacte amb equips i canalitzacions elèctriques.
- La maquinària, tant fixa com mòbil, accionada per energia elèctrica, ha de tenir les connexions de corrent ben realitzades, i en els emplaçaments fixos, se l'haurà de proveir d'aïllament al terra. Tots els devessalls, ensegellats i deixalles que es produeixin pel treball han de ser retirats amb regularitat, deixant nets diàriament els voltants de les màquines.
- Les operacions de transvasament de combustible han d'efectuar-se amb bona ventilació, fora de la influencia d'espurnes i fonts d'ignició. Han de preveure's també les conseqüències de possibles vessaments durant l'operació, pel que caldrà tenir a mà, terra o sorra.
- La prohibició de fumar o encendre qualsevol tipus de flama ha de formar part de la conducta a seguir en aquests treballs.
- Quan es transvasin líquids combustibles o s'omplin dipòsits hauran de parar-se els motors accionats amb el combustible que s'està transvasant.
- Quan es fan regates o forats per permetre el pas de canalitzacions, han d'obturar-se ràpidament per evitar el pas de fum o flama d'un recinte de l'edifici a un altre, evitant-se així la propagació de l'incendi. Si aquests forats s'han practicat en parets tallafocs o en sostres, la mencionada obturació haurà de realitzar-se de forma immediata i amb productes que assegurin l'estanquitat contra fum, calor i flames.
- En les situacions descrites anteriorment (magatzems, maquinària fixa o mòbil, transvasament de combustible, muntatge d'instal·lacions energètiques) i en aquelles, altres en què es manipuli una font d'ignició, cal col·locar extintors, la càrrega i capacitat dels quals estigui en consonància amb la naturalesa del material combustible i amb el seu volum, així com sorra i terra a on es maneguin líquids inflamables, amb l'eina pròpia per estendre-la. En el cas de grans quantitats d'aplecs, emmagatzement o concentració d'embalatges o devessalls, han de completar-se els mitjans de protecció amb mànegues de rec que proporcionin aigua abundant.

- *Emplaçament i distribució dels extintors a l'obra*

Els principis bàsics per l'emplaçament dels extintors, són:

- Els extintors manuals es col·locaran, senyalitzats, sobre suports fixats a paraments verticals o pilars, de forma que la part superior de l'extintor quedi com a màxim a 1,70 m del sòl.

- En àrees amb possibilitats de focs "A", la distància a recórrer horitzontalment, des de qualsevol punt de l'àrea protegida fins a aconseguir l'extintor adequat més pròxim, no excedirà de 25 m.
- En àrees amb possibilitats de focs "B", la distància a recórrer horitzontalment, des de qualsevol punt de l'àrea protegida fins a aconseguir l'extintor adequat més pròxim, no excedirà de 15 m.
- Els extintors mòbils hauran de col·locar-se en aquells punts on s'estimi que existeix una major probabilitat d'originar-se un incendi, a ser possible, pròxims a les sortides i sempre en llocs de fàcil visibilitat i accés. En locals grans o quan existeixin obstacles que dificultin la seva localització, s'assenyalarà convenientment la seva ubicació.

## 6. SERVEIS DE SALUBRITAT I CONFORT DEL PERSONAL

Les instal·lacions provisionals d'obra s'adaptaran a les característiques especificades als articles 15 i ss del R.D. 1627/97, de 24 d'octubre, relatiu a les DISPOSICIONS MÍNIMES DE SEGURETAT I SALUT A LES OBRES DE CONSTRUCCIÓ.

Per al servei de neteja d'aquestes instal·lacions higièniques, es responsabilitzarà a una persona o un equip, els quals podran alternar aquest treball amb altres propis de l'obra.
*En situació de risc sanitari caldrà preveure un increment de la desinfecció i neteja del espais destinats a quest serveis (1 neteja/desinfecció diària), d'acord amb les instruccions de les autoritats sanitàries.*

Per l'execució d'aquesta obra, es disposarà de les instal·lacions del personal que es defineixen i detallen tot seguit:

### 6.1. Serveis higiènics

- Lavabos

Com a mínim un per a cada 10 persones.
*En situació de risc sanitari Covid-19 cal que estiguin dotats d'ampolles amb hidrogel desinfectant amb dosificadors automàtics, i tovalloles de paper, i un cubell específic per recollir el material de protecció d'un sol ús.*

- Cabines d'evacuació

S'ha d'instal·lar una cabina d'1,5 $m^2$ x 2,3 m d'altura, dotada de placa turca, com a mínim, per a cada 25 persones

- Local de dutxes

Cada 10 treballadors, disposaran d'una cabina de dutxa de dimensions mínimes d'1,5 $m^2$ x 2,3 m d'altura, dotada d'aigua freda-calenta, amb terra antilliscant.

### 6.2. Vestuaris

Superfície aconsellable 2 $m^2$ per treballador contractat.
*En situació de risc sanitari Covid-19 es recomana una superfície per treballador de 4 m2 per garantir les distàncies entre usuaris de 2 m.*

## 6.3. Menjador

Diferent del local de vestuari. A efectes de càlcul haurà de considerar-se entre 1,5 i 2 $m^2$ per treballador que mengi a l'obra.
*En situació de risc sanitari Covid-19 es recomana una superfície per treballador de 4 m2 per garantir les distàncies entre usuaris de 2 m.*

Equipat amb banc allargat o cadires, proper a un punt de subministrament d'aigua (1 aixeta i pica rentaplats per a cada 10 comensals), mitjans per a escalfar menjars (1 microones per a cada 10 comensals), i cubell hermètic (60 l de capacitat, amb tapa) per a dipositar les escombraries.

## 6.4. Local de descans

En aquelles obres que s'ocupen simultàniament més de 50 treballadors durant més de 3 mesos, és recomanable que s'estableixi un recinte destinat exclusivament al descans del personal, situat el més pròxim possible al menjador i serveis.

A efectes de càlcul haurà de considerar-se 3 $m^2$ per usuari habitual.
*En situació de risc sanitari Covid-19 es recomana una superfície per treballador de 6 m2 per garantir les distàncies entre usuaris de 2 m.*

## 6.5. Local d'assistència a accidentats

En aquells centres de treball que ocupin simultàniament més de 50 treballadors durant més d'un mes, s'establirà un recinte destinat exclusivament a les cures del personal d'obra. Els locals de primers auxilis disposaran, com a mínim, de:

- una farmaciola,
- una llitera,
- una font d'aigua potable.

El material i els locals de primers auxilis hauran d'estar senyalitzats clarament i situats a prop dels llocs de treball.

El terra i les parets del local d'assistència a accidentats, han de ser impermeables, pintats preferiblement en colors clars. Lluminós, caldejat a l'estació freda, ventilat si fos necessari de manera forçada en cas de dependències subterrànies. Haurà de tenir a la vista el quadre d'adreces i telèfons dels centres assistencials més pròxims, ambulàncies i bombers.

En obres a les quals el nivell d'ocupació simultani estigui entre els 25 i els 50 treballadors, el local d'assistència a accidentats podrà ser substituït per un armari farmaciola emplaçat a l'oficina d'obra. L'armari farmaciola, custodiat pel socorrista de l'obra, haurà d'estar dotat com a mínim de: alcohol, aigua oxigenada, pomada antisèptica, gases, benes sanitàries de diferents grandàries, benes elàstiques compressives autoadherents, esparadrap, tiretes, mercurocrom o antisèptic equivalent, analgèsics, bicarbonat, pomada per a picades d'insectes, pomada per a cremades, tisores, pinces, dutxa portàtil per a ulls, termòmetre clínic, caixa de guants esterilitzats i torniquet.

Per a contractacions inferiors, podrà ser suficient disposar d'una farmaciola de butxaca o portàtil, custodiada per l'encarregat.

El Servei de Prevenció de l'empresa contractista establirà els medis materials i humans addicionals per tal d'efectuar la Vigilància de la Salut d'acord al que estableix la llei 31/95.

A més, es disposarà d'una farmaciola portàtil amb el contingut següent:

- desinfectants i antisèptics autoritzats,
- gases estèrils,
- cotó hidròfil,
- benes,
- esparadrap,
- apòsits adhesius,
- estisores,
- pinces,
- guants d'un sol ús
- *en situació de risc sanitari Covid-19 termòmetre sense contacte*

El material de primers auxilis es revisarà periòdicament, i es reposarà de manera immediata el material utilitzat o caducat.

## 7. ÀREES AUXILIARS

### 7.1. Centrals i plantes

Estaran ubicades estratègicament en funció de les necessitats de l'obra. En el trànsit de vehicles als seus accessos es tindrà molta cura pel que fa a l'ordre, abalisament i senyalització, amb una amplada mínima de la zona de rodadura de 6 m i pòrtic de gàlib de limitació en altura, mínima de 4 m.

L'accés a la instal·lació resta restringida exclusivament al personal necessari per a la seva explotació, restant expressament abalisada, senyalitzada i prohibida la presència de tota persona en el radi de gir de la dragalina. Tots els accessos o passarel·les situats a altures superiors a 2 m sobre el sòl o plataforma de nivell inferior, disposarà de barana reglamentària d'1 m d'altura.

Els elements mòbils i transmissions estaran apantallats a les zones de treball o de pas susceptibles de possibilitar atrapaments o en el seu defecte es trobaran degudament senyalitzats. Els buits horitzontals estaran condemnats i, si no fos possible com en el cas de la fossa del skip, es disposarà de baranes laterals reglamentàries d'1 m d'altura i topall per a rodadura de vehicles.

La construcció de l'estacada destinada a la contenció i separació d'àrids, serà ferma i arriostrada en previsió de bolcades.

Les sitges de ciment no seran hermètiques, per evitar l'efecte de la pressió. La boca de recepció de la sitja estarà condemnada amb un sòlid engraellat o relliga metàl·lica. La tapa disposarà de barana perimetral reglamentària d'1 m d'altura. L'accés mitjançant escala "de gat" estarà protegida mitjançant argolles metàl·liques (Ø 0,80 m) a partir de 2 m de l'arrancada.

La instal·lació elèctrica complirà amb les especificacions del Reglament Electrotècnic de Baixa Tensió.

Les operacions de manteniment preventiu es realitzaran de conformitat a les instruccions del fabricant o importador.

## 7.2. Tallers

Estaran ubicats estratègicament en funció de les necessitats de l'obra.

De forma general els locals destinats a tallers, tindran les següents dimensions mínimes (descomptats els espais ocupats per màquines, aparells, instal·lacions i/o materials): 3 m d'altura de pis a sostre, 2 $m^2$ de superfície i 10 $m^3$ de volum per treballador.

La circulació del personal i els materials estarà ordenada amb molta cura, abalisada i senyalitzada, amb una amplada mínima de la zona de pas de personal (sense càrrega) d'1,20 $m^2$ per a passadissos principals (1 m en passadissos secundaris) independent de les vies de manutenció mecànica de materials. En zones de pas, la separació entre màquines i/o equips mai no serà inferior a 0,80 m (comptat des del punt més sortint del recorregut de l'òrgan mòbil més pròxim). Al voltant dels equips que generin calor radiant, es mantindrà un espai lliure no inferior a 1,50 m, estaran apantallats i disposaran de mitjans portàtils d'extinció adequats. Les instal·lacions provisionals suspeses sobre zones de pas estaran canalitzades a una altura mínima d'1,90 m sobre el nivell del paviment.

La intensitat mínima d'il·luminació, en els llocs d'operació de les màquines i equips, serà de 200 lux. La il·luminació d'emergència serà capaç de mantenir, al menys durant una hora, una intensitat de 5 lux, i la seva font d'energia serà independent del sistema normal d'il·luminació.

L'accés, als diferents tallers provisionals d'obra, ha de restar restringit exclusivament al personal adscrit a cada un d'ells, restant expressament abalisada, senyalitzada i prohibida la presència de tota persona en el radi d'actuació de càrregues suspeses, així com en els de desplaçament i servituds de màquines i/o equips. Tots els accessos o passarel·les situades a altures superiors a 2 m sobre el sòl o plataforma de nivell inferior, disposarà de barana reglamentària d'1 m d'altura.

Els elements mòbils i transmissions estaran apantallats a les zones de treball o de pas susceptibles de possibilitar atrapaments o en el seu defecte es trobaran degudament senyalitzats. Els buits horitzontals seran condemnats.

La instal·lació elèctrica complirà amb les especificacions del Reglament Electrotècnic de Baixa Tensió.

Les operacions de manteniment preventiu de la maquinària es realitzaran de conformitat a les instruccions del fabricant o importador.

Les emanacions de pols, fibres, fums, gasos, vapors o boirines disposaran d'extracció localitzada, en la mesura del possible, evitant la seva difusió per l'atmosfera. En els tallers tancats, el subministrament d'aire fresc i net per hora i ocupant serà, al menys, de 30 a 50 $m^3$, llevat que s'efectuï una renovació total d'aire diversos cops per hora (no inferior a 10 cops).

### 7.3. Zones d'apilament. Magatzems

Els materials emmagatzemats a l'obra, hauran de ser els compresos entre els valors "mínims-màxims", segons una adequada planificació, que impedeixi estacionaments de materials i/o equips inactius que puguin ésser causa d'accident.

Els Mitjans Auxiliars d'Utilitat Preventiva, necessaris per a complementar la manipulació manual o mecànica dels materials apilats, hauran estat previstos en la planificació dels treballs.

Les zones d'apilament provisional estaran balisades, senyalitzades i il·luminades adequadament.

De forma general el personal d'obra (tant propi com subcontractat) haurà rebut la formació adequada respecte als principis de manipulació manual de materials. De forma més singularitzada, els treballadors responsables de la realització de maniobres amb mitjans mecànics, tindran una formació qualificada de les seves comeses i responsabilitats durant les maniobres.

## 8. TRACTAMENT DE RESIDUS

El Contractista és responsable de gestionar els sobrants de l'obra de conformitat amb les directrius del Decret 89/2010 de 29 de juny pel que s'aprova el Programa de gestió de residus de la construcció de Catalunya (PROGROC), i del R.D. 105/2008, d'1 de febrer, regulador dels enderrocs i d'altres residus de construcció, a fi i efecte de minimitzar la producció de residus de construcció com a resultat de la previsió de determinats aspectes del procés, que cal considerar tant en la fase de projecte com en la d'execució material de l'obra i/o l'enderroc o desconstrucció.

Al projecte s'ha avaluat el volum i les característiques dels residus que previsiblement s'originaran i les instal·lacions de reciclatge més properes per tal que el Contractista triï el lloc on portarà els seus residus de construcció.

Els residus es lliuraran a un gestor autoritzat, finançant el contractista, els costos que això comporti.

Si a les excavacions i buidats de terres apareixen antics dipòsits o canonades, no detectades prèviament, que continguin o hagin pogut contenir productes tòxics i contaminants, es buidaran prèviament i s'aïllaran els productes corresponents de l'excavació per ser evacuats independentment de la resta i es lliuraran a un gestor autoritzat.

*En situació de risc sanitari Covid-19, cal gestionar de forma separada de la resta, els residus dels cubells on es recullen els EPIs d'un sol ús, iles tovalloles de paper del rentat de mans i aparells.*

## 9. TRACTAMENT DE MATERIALS I/O SUBSTÀNCIES PERILLOSES

El Contractista es responsable d'assegurar-se per mediació de l'Àrea d'Higiene Industrial del seu Servei de Prevenció, la gestió del control dels possibles efectes contaminants dels residus o materials emprats a l'obra, que puguin generar potencialment malalties o patologies professionals als treballadors i/o tercers exposats al seu contacte i/o manipulació.

L'assessoria d'Higiene Industrial comprendrà la identificació, quantificació, valoració i propostes de correcció dels factors ambientals, físics, químics i biològics, dels materials i/o substàncies perilloses, per a fer-los compatibles amb les possibilitats d'adaptació de la majoria (gairebé totalitat) dels treballadors i/o tercers aliens exposats. Als efectes d'aquest projecte, els paràmetres de mesura s'establirà mitjançant la fixació dels valors límit TLV (Threshold Limits Values) que fan referència als nivells de contaminació d'agents físics o químics, per sota dels quals els treballadors poden estar exposats sense perill per a la seva salut. El TLV s'expressa amb un nivell de contaminació mitjana en el temps, per a 8 h/dia i 40 h/setmana.

### 9.1. Manipulació

En funció de l'agent contaminant, del seu TLV, dels nivells d'exposició i de les possibles vies d'entrada a l'organisme humà, el Contractista haurà de reflectir en el seu Pla de Seguretat i Salut les mesures correctores pertinents per a establir unes condicions de treball acceptables per als treballadors i el personal exposat, de forma singular a:

- Amiant.
- Plom. Crom, Mercuri, Níquel.
- Sílice.
- Vinil.
- Urea formol.
- Ciment.
- Soroll.
- Radiacions.
- Productes tixotròpics (bentonita)
- Pintures, dissolvents, hidrocarburs, coles, resines epoxi, greixos, olis.
- Gasos liquats del petroli.
- Baixos nivells d'oxigen respirable.
- Animals.
- Entorn de drogodependència habitual.

### 9.2. Delimitació / condicionament de zones d'apilament

Les substàncies i/o els preparats es rebran a l'obra etiquetats de forma clara, indeleble i com a mínim amb el text en idioma espanyol.

L'etiqueta ha de contenir:

a. Denominació de la substància d'acord amb la legislació vigent o en el seu defecte nomenclatura de la IUPAC. Si és un preparat, la denominació o nom comercial.
b. Nom comú, si és el cas.
c. Concentració de la substància, si és el cas. Si és tracta d'un preparat, el nom químic de les substàncies presents.
d. Nom, direcció i telèfon del fabricant, importador o distribuïdor de la substància o preparat perillós.
e. Pictogrames i indicadors de perill, d'acord amb la legislació vigent.
f. Riscos específics, d'acord amb la legislació vigent.
g. Consells de prudència, d'acord amb la legislació vigent.
h. El número CEE, si en té.
i. La quantitat nominal del contingut (per preparats).

El fabricant, l'importador o el distribuïdor haurà de facilitar al Contractista destinatari, la fitxa de seguretat del material i/o la substància perillosa, abans o en el moment del primer lliurament.

Les condicions bàsiques d'emmagatzematge, apilament i manipulació d'aquests materials i/o substàncies perilloses, estaran adequadament desenvolupades en el Pla de Seguretat del Contractista, partint de les següents premisses:

- *Explosius*

L'emmagatzematge es realitzarà en polvorins/minipolvorins que s'ajustin als requeriments de les normes legals i reglaments vigents. Estarà adequadament senyalitzada la presència d'explosius i la prohibició de fumar.

- *Comburents, extremadament inflamables i fàcilment inflamables*

Emmagatzematge en lloc ben ventilat. Estarà adequadament senyalitzada la presència de comburents i la prohibició de fumar.

Estaran separats els productes inflamables dels comburents.

El possible punt d'ignició més pròxim estarà suficientment allunyat de la zona d'apilament.

- *Tòxics, molt tòxics, nocius, carcinògens, mutagènics, tòxics per a la reproducció*

Estarà adequadament senyalitzada la seva presència i disposarà de ventilació eficaç.

Es manipularà amb Equips de Protecció Individual adequats que assegurin l'estanquitat de l'usuari, en previsió de contactes amb la pell.

- *Corrosius, Irritants, sensibilitzants*

Estarà adequadament senyalitzada la seva presència.

Es manipularan amb Equips de Protecció Individual adequats (especialment guants, ulleres i màscara de respiració) que assegurin l'estanquitat de l'usuari, en previsió de contactes amb la pell i les mucoses de les vies respiratòries.

## 10. UNITATS CONSTRUCTIVES

MOVIMENTS DE TERRES
CÀRREGA I TRANSPORT DE TERRES O RUNES
ESTRUCTURES
ESTRUCTURES AMB PARETS DE CÀRREGA
COBERTES
INSTAL.LACIÓ DE CLARABOIES, LLUERNARIS I ACABAMENTS DE COBERTES
TANCAMENTS I DIVISÒRIES
TANCAMENTS EXTERIORS ( OBRA )
TANCAMENTS EXTERIORS ( PREFABRICATS, METÀL·LICS, FORMIGÓ, SANDWICH )
DIVISÒRIES ( OBRA )
DIVISÒRIES ( PREFABRICATS, PLADUR, ALUMINI, FUSTA, ETC. )
IMPERMEABILITZACIONS - AÏLLAMENTS I JUNTES
COBERTES PLANES
IMPERMEABILITZACIÓ DE MURS DE CONTENCIÓ I ELEMENTS SOTERRATS
AÏLLAMENTS AMB PLAQUES, MANTES, LÀMINES, ETC.
JUNTS ( FORMACIÓ - REBLERTS - SEGELLATS )
REVESTIMENTS
AMORFS ( ARREBOSSATS - ENGUIXATS - ESTUCATS )
ENRAJOLATS I APLACATS DE PECES ( PEDRA, CERAMICA, MORTER CIMENT, ESCOPIDORS, ETC. )
CEL RASOS
PINTATS I ENVERNISATS
PAVIMENTS
ENRAJOLATS I APLACATS DE PECES AMB PULIT ( PEDRA, CERAMICA, MORTER CIMENT, ESCOPIDORS, ETC.)
PAVIMENTS SINTÈTICS ( PVC, GOMA, MOQUETES, ETC. )
TANCAMENTS I DIVISÒRIES PRACTICABLES, BARANES I PROTECCIONS FIXES
TANCAMENTS PRACTICABLES EXTERIORS I BARANES DE FUSTA
TANCAMENTS PRACTICABLES INTERIORS DE FUSTA
TANCAMENTS PRACTICABLES I BARANES DE PVC, ALUMINI, ACER
ENVIDRAMENTS
COL·LOCACIÓ DE VIDRES
INSTAL.LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA
INSTAL.LACIONS DE CLIMATITZACIÓ, CALEFACCIÓ I VENTILACIÓ MECÀNICA
CANONADES PER A GASOS I FLUIDS
TUBS MUNTATS SUPERFICIALMENT

MOBILIARI, APARELLS, ELECTRODOMESTICS

## 11. SISTEMES I/O ELEMENTS DE SEGURETAT I SALUT INHERENTS O INCORPORATS AL MATEIX PROCÉS CONSTRUCTIU

Tot projecte constructiu o disseny d'equip, mitjà auxiliar, màquina o ferramenta a utilitzar a l'obra, objecte del present Estudi de Seguretat i Salut, s'integrarà en el procés constructiu, sempre d'acord amb els "Principios de la Acción Preventiva" (Art. 15 L. 31/1995 de 8 de novembre), els "Principios Aplicables durante la Ejecución de las Obras" (Art. 10 RD. 1627/1997 de 24 d'octubre) i el Codi Tècnic de l'Edificació, entre altres reglaments connexos, i atenent les Normes Tecnològiques de l'Edificació, Instruccions Tècniques Complementàries i Normes UNE o Normes Europees, d'aplicació obligatòria i/o aconsellada.

## 12. MEDIAMBIENT LABORAL

### 12.1. Agents atmosfèrics

Caldrà indicar quins són els possibles agents atmosfèrics que poden afectar a l'obra i quines condicions s'hauran de tenir en compte per prevenir els riscos que se'n derivin.

### 12.2. Il·luminació

Encara que la generalitat dels treballs de construcció es realitzen amb llum natural, hauran de tenir-se presents en el Pla de Seguretat i Salut algunes consideracions respecte a la utilització d'il·luminació artificial, necessària en talls, tallers, treballs nocturns o sota rasant.

Es procurarà que la intensitat lluminosa en cada zona de treball sigui uniforme, evitant els reflexos i enlluernaments al treballador així com les variacions brusques d'intensitat.

En els locals amb risc d'explosió pel gènere de les seves activitats, substàncies emmagatzemades o ambients perillosos, la il·luminació elèctrica serà antideflagrant.

En els llocs de treball en els que una fallida de l'enllumenat normal suposi un risc per als treballadors, es disposarà d'un enllumenat d'emergència d'evacuació i de seguretat.

Les intensitats mínimes d'il·luminació artificial, segons els distints treballs relacionats amb la construcció, seran els següents:

| | | |
|---|---|---|
| 25-50 lux | : | En patis de llums, galeries i altres llocs de pas en funció de l'ús ocasional - habitual. |
| 100 lux | : | Operacions en les quals la distinció de detalls no sigui essencial, tals com la manipulació de mercaderies a granel, l'apilament de materials o l'amassat i lligat de conglomerats hidràulics. Baixes exigències visuals. |
| 100 lux | : | Quan sigui necessària una petita distinció de detalls, com en sales de màquines i calderes, ascensors, magatzems i dipòsits, vestuaris i banys petits del personal. Baixes exigències visuals. |
| 200 lux | : | Si és essencial una distinció moderada de detalls com en els muntatges mitjans, en treballs senzills en bancs de taller, treballs en màquines, fratasat de paviments i tancament mecànic. Moderades exigències visuals. |
| 300 lux | : | Sempre que sigui essencial la distinció mitjana de detalls, com treballs mitjans en bancs de taller o en màquines i treballs d'oficina en general. |
| 500 lux | : | Operacions en les que sigui necessària una distinció mitja de detalls, tals com treballs d'ordre mitjà en bancs de taller o en màquines i treballs d'oficina en general. Altes exigències visuals. |
| 1000 lux | : | En treballs on sigui indispensable una fina distinció de detalls sota condicions de constant contrast, durant llargs períodes de temps, tals com muntatges delicats, treballs fins en banc de taller o màquina, màquines d'oficina i dibuix artístic lineal. Exigències visuals molt altes. |

Els serveis de prevenció seran els encarregats d'estimar la magnitud o nivells del risc, les situacions en les que aquest es produeix, així com controlar periòdicament les condicions, l'organització dels mètodes de treball i la salut dels treballadors amb la finalitat de prendre les decisions per a eliminar, controlar o reduir el risc mitjançant mesures de prevenció a l'origen, organitzatives, de prevenció col·lectiva, de protecció individual, formatives i informatives.

## 12.3. Soroll

Per a facilitar el seu desenvolupament al Pla de Seguretat i Salut del contractista, es reprodueix un quadre sobre els nivells sonors generats habitualment en la indústria de la construcció:

| | | |
|---|---|---|
| Compressor | ..... | 82-94 dB |
| Equip de clavar pilots (a 15 m de distància) | ..... | 82 dB |
| Formigonera petita < 500 lts. | ..... | 72 dB |
| Formigonera mitjana > 500 lts. | ..... | 60 dB |
| Martell pneumàtic (en recinte angost) | ..... | 103 dB |
| Martell pneumàtic (a l'aire lliure) | ..... | 94 dB |
| Esmeriladora de peu | ..... | 60-75 dB |
| Camions i dumpers | ..... | 80 dB |
| Excavadora | ..... | 95 dB |
| Grua autoportant | ..... | 90 dB |
| Martell perforador | ..... | 110 dB |
| Mototrailla | ..... | 105 dB |
| Tractor d'orugues | ..... | 100 dB |
| Pala carregadora d'orugues | ..... | 95-100 dB |
| Pala carregadora de pneumàtics | ..... | 84-90 dB |
| Pistoles fixaclaus d'impacte | ..... | 150 dB |
| Esmeriladora radial portàtil | ..... | 105 dB |
| Tronçadora de taula per a fusta | ..... | 105 dB |

Les mesures a adoptar, que hauran de ser adequadament tractades al Pla de Seguretat i Salut pel contractista, per a la prevenció dels riscos produïts pel soroll seran, en ordre d'eficàcia:

1er.- Supressió del risc en origen.

2on.- Aïllament de la part sonora.

3er.- Equip de Protecció Individual (EPI) mitjançant taps o orelleres.

Els serveis de prevenció seran els encarregats d'estimar la magnitud o els nivells de risc, les situacions en les que aquest es produeix, així com controlar periòdicament les condicions, l'organització dels mètodes de treball i la salut dels treballadors amb la finalitat de prendre les decisions per a eliminar, controlar o reduir el risc mitjançant mesures de prevenció a l'origen, organitzatives, de prevenció col·lectiva, de protecció individual, formatives i informatives

## 12.4. Pols

La permanència d'operaris en ambients polserígens, pot donar lloc a les següents afeccions:

- Rinitis
- Asma bronquial
- Bronquitis destructiva
- Bronquitis crònica
- Efisemes pulmonars
- Neumoconiosis
- Asbestosis (asbest – fibrociment - amiant)
- Càncer de pulmó (asbest – fibrociment - amiant)
- Mesotelioma (asbest – fibrociment - amiant)

La patologia serà d'un o d'altre tipus, segons la naturalesa de la pols, la seva concentració i el temps d'exposició.

En la construcció és freqüent l'existència de pols amb contingut de sílice lliure ($Si\ O_2$) que és el component que ho fa especialment nociu, com a causant de la neumoconiosis. El problema de presència massiva de fibres d'amiant en suspensió, necessitarà d'un Pla específic de desamiantat que excedeix a les competències del present Estudi de Seguretat i Salut, i que haurà de ser realitzat per empreses especialitzades.

La concentració de pols màxima admissible en un ambient al qual els operaris es trobin exposats durant 8 hores diàries, 5 dies a la setmana, és en funció del contingut de sílice en suspensió, el que ve donat per la fórmula:

$$C = \frac{10}{\%\ Si\ O_2 + 2}\ mg / m^3$$

Tenint en compte que la mostra recollida haurà de respondre a la denominada "fracció respirable", que correspon a la pols realment inhalada, ja que, de l'existent en l'ambient, les partícules més grosses són retingudes per la pituïtària i les més fines són expeses amb l'aire respirat, sense haver-se fixat en els pulmons.

Els treballs en els quals és habitual la producció de pols, són fonamentalment els següents:

- Escombrat i neteja de locals
- Manutenció de runes
- Demolicions
- Treballs de perforació
- Manipulació de ciment
- Raig de sorra
- Tall de materials ceràmics i lítics amb serra mecànica
- Pols i serradures per tronçat mecànic de fusta
- Esmerilat de materials
- Pols i fums amb partícules metàl·liques en suspensió, en treballs de soldadura
- Plantes de matxuqueix i classificació
- Moviments de terres
- Circulació de vehicles
- Polit de paraments
- Plantes asfàltiques

A més a més dels Equips de Protecció Individual necessaris, com màscares i ulleres contra la pols, convé adoptar les següents mesures preventives:

| ACTIVITAT | MESURA PREVENTIVA |
|---|---|
| Neteja de locals | Ús d'aspiradora i regat previ |
| Manutenció de runes | Regat previ |
| Demolicions | Regat previ |
| Treballs de perforació | Captació localitzada en carros perforadors o injecció d'aigua |

| | |
|---|---|
| Manipulació de ciment | Filtres en sitges o instal·lacions confinades |
| Raig de sorra o granalla | Equips semiautònoms de respiració |
| Tall o polit de materials ceràmics o lítics | Addició d'aigua micronitzada sobre la zona de tall |
| Treballs de la fusta, desbarbat i soldadura elèctrica | Aspiració localitzada |
| Circulació de vehicles | Regat de pistes |
| Plantes de matxuqueix i plantes asfàltiques | Aspiració localitzada |

Els serveis de prevenció seran els encarregats d'estimar la magnitud o nivells del risc, les situacions en les que aquest es produeix, així com controlar periòdicament les condicions, l'organització dels mètodes de treball i la salut dels treballadors amb la finalitat de prendre les decisions per a eliminar, controlar o reduir el risc mitjançant mesures de prevenció a l'origen, organitzatives, de prevenció col·lectiva, de protecció individual, formatives i informatives.

## 12.5. Ordre i neteja

El Pla de Seguretat i Salut del contractista haurà d'indicar com pensa fer front a les actuacions bàsiques d'ordre i neteja en la materialització d'aquest projecte, especialment pel que fa a:

1er.- Retirada dels objectes i coses innecessàries.
2on.- Emplaçament de les coses necessàries en el seu respectiu lloc d'apilament.
3er.- Normalització interna d'obra dels tipus de recipients i plataformes de transport de materials a granel. Pla de manutenció intern d'obra.
4art.- Ubicació dels baixants de runes i recipients per a apilament de residus i la seva utilització. Pla d'evacuació de residus.
5è.- Neteja de claus i restes de material d'encofrat.
6è.- Desallotjament de les zones de pas, de cables, mànegues, fleixos i restes de matèria. Il·luminació suficient.
7è.- Retirada d'equips i ferramentes, descansant simplement sobre superfícies de suport provisionals.
8è.- Drenatge de vessaments en forma de tolls de carburants o greixos.
9è.- Senyalització dels riscos puntuals per falta d'ordre i neteja.
10è.- Manteniment diari de les condicions d'ordre i neteja. Brigada de neteja.
11è.- Informació i formació exigible als gremis o als diferents participants en els treballs directes i indirectes de cada partida inclosa en el projecte en el que és relatiu al manteniment de l'ordre i neteja inherents a l'operació realitzada.

*En situació de risc sanitari Covid-19, cal garantir una vegada al dia la neteja i desinfecció de les eines de treball, els vehicles utilitzats pels treballadors, els locals sanitaris, vestidors, menjadors i espais de descans.*

En els punts de radiacions el consultor hauria d'identificar els possibles treballs on es poden donar aquest tipus de radiacions i indicar les mesures protectores a prendre.

## 12.6. Radiacions no ionitzants

Són les radiacions amb la longitud d'ona compresa entre 10-6 cm i 10 cm, aproximadament.

Normalment, no provoquen la separació dels electrons dels àtoms dels que formen part, però no per això deixen de ser perilloses. Comprenen: Radiació ultraviolada (UV), infraroja (IR), làser, microones, ultrasònica i de freqüència de ràdio.

Les radiacions no ionitzants són aquelles regions de l'espectre electromagnètic on l'energia dels fotons emesos és insuficient. Es considera que el límit més baix de longitud d'ona per a aquestes radiacions no ionitzants és de 100 nm (nanòmetre) inclosos en aquesta categoria estan les regions comunament conegudes com bandes infraroja, visible i ultraviolada.

Els treballadors més freqüents i intensament sotmesos a aquests riscos són els soldadors, especialment els de soldadura elèctrica.

Radiacions infraroges

Aquest tipus de radiació és ràpidament absorbida per els teixits superficials, produint un efecte d'escalfament. En el cas dels ulls, a l'absorbir-se la calor pel cristal·lí i no dispersar-se ràpidament, pot produir cataractes. Aquest tipus de lesió s'ha considerat la malaltia professional més probable en ferrers, bufadors de vidre i operaris de forns.

Totes les fonts de radiació IR intensa hauran d'estar dotades de sistemes de protecció tant propers a la font com sigui possible, per aconseguir la màxima absorció de calor i prevenir que la radiació penetri als ulls dels operaris. En cas d'utilització d'ulleres normalitzades, haurà d'incrementar-se adequadament la il·luminació del recinte, de manera que s'eviti la dilatació de la pupil·la de l'ull.

A les obres de construcció, els treballadors que estan més freqüentment exposats a aquestes radiacions són els soldadors, especialment quan realitzen soldadures elèctriques. Així mateix, s'ha de considerar l'entorn de l'obra, com a possible font de les radiacions.

La resposta primària a aquestes absorcions d'energia és de tipus tèrmic, afectant principalment a la pell en forma de: cremades agudes, augment de la dilatació dels vasos capil·lars i un increment de la pigmentació que pot ser persistent.

De forma general, tots aquells processos industrials realitzats en calent fins a l'extrem de desprendre llum, generen aquest tipus de radiació.

Radiacions visibles

L'òrgan afectat més important és l'ull, sent transmeses aquestes longituds d'ona, a través dels mitjans oculars sense apreciable absorció abans d'aconseguir la retina.

Radiacions ultraviolades

La radiació UV és aquella que té una longitud d'ona entre els 400 nm (nanometres) i els 10 nm. Queda inclosa dins de la radiació solar, i es genera artificialment per a molts propòsits en indústries, laboratoris i hospitals. Es divideix convencionalment en tres regions:

UVA: 315 - 400 nm de longitud d'ona.

UVB: 280 - 315 nm de longitud d'ona.

UVC: 200 - 280 nm de longitud d'ona.

La radiació a la regió UVA, la més propera a l'espectre UV, és emprada àmpliament a la indústria i representa poc risc, pel contrari les radiacions UVB i UVC, són més perilloses. La norma més completa és nord americana i està, acceptada per la WHO (World Health Organization).

Les radiacions a les regions UVB i UVC tenen efectes biològics que varien marcadament amb la longitud d'ona, sent màxims entorn als 270 nm (la llàntia de quars amb vapor de mercuri a baixa pressió té una emissió a 254 nm aproximadament). També varien amb el temps d'exposició i amb la intensitat de la radiació. La exposició radiant d'ulls o pell no protegits, per a un període de vuit hores haurà d'estar limitada.

La protecció contra la sobreexposició de fonts potents que poden constituir riscos, haurà de dur-se a terme mitjançant la combinació de mesures organitzatives, d'apantallaments o resguards i de protecció personal. Sense oblidar que s'ha d'intentar substituir el que és perillós pel que comporta poc o cap risc, d'acord a la llei de prevenció de riscos laborals.

S'haurà de posar especial èmfasi en els apantallaments i en les mesures de substitució, per a minimitzar el tercer, que implica la necessitat de protecció personal.

Tots els usuaris de l'equip generador de radiació UV han de conèixer perfectament la naturalesa dels riscos involucrats. En l'equip, o prop d'ell, s'han de disposar senyals d'advertència adequades al cas. La limitació d'accés a la instal·lació, la distància de l'usuari respecte a la font i la limitació del temps d'exposició, constitueixen mesures organitzatives a tenir en compte.

No es poden emetre de forma indiscriminada radiacions UV en l'espai de treball, per exemple realitzant l'operació en un recinte confinat o en una àrea adequadament protegida. Dins de l'àrea de protecció, s'ha de reduir la intensitat de la radiació reflexada, emprant pintures de color negre mate. En el cas de fonts potents, on se sospiti que sigui possible una exposició per sobre del valor límit admissible, haurà de disposar-se de mitjans de protecció que dificultin i facin impossible el flux radiant lliure, directe i reflexat. Quant la naturalesa del treball requereixi que l'usuari operi junt a una font de radiació UV no protegida, haurà de fer-se ús dels mitjans de protecció personal. Els ulls estaran protegits amb ulleres o màscara de protecció facial, de manera que s'absorbeixin les radiacions que sobre ells incideixin. Anàlogament, hauran de protegir-se les mans, utilitzant guants de cotó, i la cara, emprant qualsevol tipus de protecció facial.

L'exposició dels ulls i pell no protegits a la radiació UV pot conduir a una inflamació dels teixits, temporal o prolongada, amb riscos variables. En el cas de la pell, pot donar lloc a un eritema similar a una cremada solar i, en el cas dels ulls, a una conjuntivitis i queratitis (o inflamació de la còrnia), de resultats imprevisibles.

La font és bàsicament el sol però també es troben en les activitats industrials de la construcció: llums fluorescents, incandescents i de descàrrega gasosa, operacions de soldadura (TIG-MIG), bufador d'arc elèctric i làsers.

Les mesures de control per a prevenir exposicions indegudes a les radiacions no ionitzants se centren en l'emprament de pantalles, blindatges i Equips de Protecció Individual (per exemple pantalla de soldadura amb visor de cèl·lula fotosensible), procurant mantenir distàncies adequades per a reduir, tenint en compte l'efecte de proporcionalitat inversa al quadrat de la distància, la intensitat de l'energia radiant emesa des de fonts que es propaguen en diferent longitud d'ona.

Làser

La missió d'un làser és la de produir un raig d'alta densitat i s'ha emprat en camps tan diversos com cirurgia, topografia o comunicació. Es construeixen unitats amb força polsant o continua de radiació, tant visible com invisible. Aquestes unitats, si són suficientment potents, poden danyar la pell i, en particular, els ulls si estan exposats a la radiació. La unitat polsant d'alta energia és particularment perillosa quan el polze curt de radiació impacte en el teixit causant una amplia lesió al voltant del mateix. Els làsers d'ona continua també poden causar danys en els ulls i la pell. Els de radiació IR i V presentaran perill per a la retina, en forma de cremades; els de radiació UV e IR poden suposar un risc per a la còrnia i el cristal·lí. D'una manera general, la pell és menys sensible a la radiació làser i en el cas d'unitats de radiació V i IR de grans potències, poden ocasionar cremades.

Els làsers s'han classificat, d'acord amb els riscos associats al seu ús, en els dos grups i quatre classes següents:

j) Grup A: unitats intrínsecament segures i aquelles que cauen dins de les classes I y II.
   - Classe I: els nivells d'exposició màxima permissible no poden ser excedits.
   - Classe II: de risc baix; emissió limitada a 1 mW en menys de 0,25 s, entre 400 nm i 700 nml; es preveuen els riscos per desviament de la radiació reflexada incloent la resposta de centelles.

k) Grup B: tots els làsers presents o de ona continua amb potencia major d'1 mW, com es defineix a les classes IIIa, IIIb i IV respectivament.
   - Classe IIIa: risc baix; emissió limitada a 5 vegades la corresponent a la classe II; l'ús d'instruments òptics pot resultar perillós.
   - Classe IIIb: risc mitjà; major límit d'emissió; l'impacte sobre l'ull pot resultar perillós, però no respecte a la reflexió difusa.
   - Classe IV: risc alt; major límit d'emissió; l'impacte per reflexió difusa pot ser perillós; poden causar foc i cremar la pell. El grau de protecció necessari depèn de la longitud d'ona i de l'energia emesa per la radiació. Qualsevol equip base s'ha de dissenyar d'acord amb mesures de seguretat apropiades, com per exemple, encaixonament protector, obturador d'emissió, senyal automàtica de emissió, etc.

Els làsers poden produir llum visible (400-700 nm), alguna radiació UV (200-400 nm), o comunament radiació IR (700 nm – 1 m).

A continuació, es presenta una guia de riscos associats amb unitats concretes de raigs làser:

a) Amb làsers de la classe IIIa (< 5 mW), s'ha de prevenir únicament la visió directa del raig.
b) Amb els de la classe IIIb i potències compreses entre 5 mW y 500 mW, s'ha de prevenir l'impacte de la radiació directa i de reflexió especular, en els ulls no protegits, que pot resultar perillós.
c) Amb làsers de la classe IV i potències majors de 500 mW, s'ha de prevenir l'impacte de la radiació directa, de les reflexions secundaries i de les reflexions difuses, que pot resultar perillós.

   A més dels riscos associats a aquest tipus de radiació, s'ha de tenir en compte els deguts a les unitats d'energia elèctrica emprats per a subministrar energia a l'equip làser. A continuació, es dóna un codi de pràctica que cobreix personal, àrea de treball, equip i operació, respectivament, en l'ús de làsers.

   Tots els usuaris s'han de sotmetre a un examen oftalmològic periòdicament, fent èmfasi especial en les condicions de la retina. Les persones que treballen amb la classe IIIb i IV, tindran al mateix temps un examen mèdic d'inspecció de danys a la pell.

d) Amb prioritat a qualsevol autorització, el contractista s'assegurarà que els operaris autoritzats estan degudament entrenats tant en procediment de

treball segur com en el coneixement dels riscos potencials associats amb la radiació i equip que la genera.

e) Qualsevol exposició accidental que suposi impacte en els ulls, haurà de ser registrada i comunicada al departament mèdic.

f) La pràctica amb làser del grup B requereix la mesura general de protecció ocular, però que mai serà utilitzada per visió directa del raig.

- Àrea de treball:

a) L'equip làser s'instal·larà en una àrea o recinte degudament controlats. La il·luminació del recinte haurà de ser tal manera que eviti la dilatació de la pupil·la de l'ull i així disminuir la possibilitat de lesió.

b) Els raigs làser reflectits poden ser tant perillosos com els directes, i per tant, hauran d'eliminar-se les superfícies reflectants i polides.

c) A l'àrea de treball s'haurà d'investigar periòdicament la presència de qualsevol gas tòxic que pugui generar-se durant el treball, per exemple, l'ozó.

d) S'han de col·locar senyals lluminoses d'advertència en totes les zones d'entrada als recintes en els que els làsers funcionin. Quant la senyal estigui en acció, haurà de prohibir-se l'accés al mateix. L'equip de subministrament de potència al làser ha de disposar de protecció especial.

e) Allà on sigui necessari, s'ha de prevenir la possibilitat de desviament del raig fora de l'àrea de control, mitjançant proteccions i blindatges. En el cas de radiació IR, ha d'emprar-se materials no inflamables per a proporcionar aquestes barreres físiques al voltant del làser. En aquests casos, s'ha d'evitar la proximitat de materials inflamables o explosius.

- Equip:

a) Qualsevol operació de manteniment haurà de dur-se solament si la força està desconnectada.

b) Tots els làsers, hauran de disposar de rètols d'advertència que tindran en compte la classe de làser a que correspon i el tipus de radiació visible o invisible que genera l'aparell.

c) Quan els aparells que pertanyen al grup B no s'utilitzin, s'hauran de treure les claus de control d'engegada, així com la de control de força, que quedaran custodiades per la persona responsable autoritzada per el treball amb làser en el laboratori.

d) Les ulleres protectores normalitzats, hauran de comprovar-se regularment i han de seleccionar-se d'acord amb la longitud d'ona de la radiació emesa per el làser en ús.

e) Qualsevol protector de pantalla que s'utilitzi, haurà de ser de material absorbent que previngui la reflexió especular.

- Operació:

a) Únicament el mínim nombre de persones requerides en l'operació es trobaran dins de l'àrea de control; no obstant, en el cas de làser de la classe IV, al menys dos persones estaran sempre presents durant l'operació.

b) Únicament personal autoritzat tindrà permís per a muntar, ajustar i operar l'equip de làser.
c) L'equip de làser haurà d'operar el temps mínim requerit per a la realització dels treballs, no es deixarà en funcionament sense estar vigilat.
d) Com a procediment de protecció general, hauran d'utilitzar-se ulleres que previnguin el risc de dany ocular.
e) L'equip de làser haurà de ser muntat a una alçada que mai superi la corresponent al pit de l'operador.
f) S'ha de tenir especial cura en la radiació làser invisible, essent essencial la utilització d'un escut protector al llarg de tota la trajectòria.
g) Donat que els làsers polsants presenten un risc incrementat per l'operador, com a guia d'alineació del raig, han d'emprar-se làsers de baixa potència d'heli o neó que pertanyin a la classe II, i no conformar-se amb una indicació somera de la direcció que adoptarà el raig. En aquests casos, sempre s'ha d'utilitzar la protecció ocular.

**Els serveis de prevenció seran els encarregats d'estimar la magnitud o nivells del risc, les situacions en les que aquest es produeix, així com controlar periòdicament les condicions, l'organització dels mètodes de treball i la salut dels treballadors amb la finalitat de prendre les decisions per a eliminar, controlar o reduir el risc mitjançant mesures de prevenció en l'origen, organitzatives, de prevenció col·lectiva, de protecció individual, formatives i informatives.**

En construcció acostuma a emprar-se monogràficament en l'establiment d'alineacions i nivells topogràfics.

Per la seva extrema perillositat, quan el làser estigui enfocat paral·lel al sòl, l'àrea de perill s'haurà d'acordonar. L'Equip de Protecció Individual contra el làser són les ulleres de protecció completa, amb el visor dotat del filtre adequat al tipus de làser que es tracti.

## 12.7. Radiacions ionitzants

Dins de l'àmbit de la construcció existeixen pocs treballs propis en els que es generen aquests tipus de riscos, malgrat que si existeixen situacions on es puguin donar aquest tipus de radiació, com són:

- Detecció de defectes de soldadura o esquerdes en canonades, estructures i edificis.
- Control de densitats "in situ" pel mètode nuclear.
- Control d'irregularitats en el nivell d'omplenat de recipients o grans dipòsits.
- Identificació de trajectòries, emprant traçadors en corrents hidràuliques, sediments, moviment de granels, etcètera.

Serà obligació del contractista amb la col·laboració del seu servei de prevenció determinar un procediment de treball segur per a realitzar les esmentades operacions.

També es pot considerar una possible generació de riscos en treballs realitzats dintre d'un entorn o en proximitat de determinades instal·lacions, com poden ser:

- Les instal·lacions on es realitzin exàmens de maletes i embalums en els

aeroports; detecció de cartes bomba.

- Les instal·lacions mèdiques on es realitzin pràctiques de teràpia, mitjançant radiacions ionizants.
- Les instal·lacions mèdiques on es realitzen pràctiques de diagnòstic amb raigs X amb equips amb un potencial d'operació per disseny, sigui major de 70 Kilovolts.
- Les instal·lacions mèdiques on es manipula o es tracti material radioactiu, en forma de fonts no segellades, per a ús en teràpia o diagnòstic amb tècniques "in vivo".
- Les instal·lacions d'ús industrial on es tracti o manipuli material radioactiu.
- Els acceleradors de partícules o d'investigació o d'ús industrial.
- Les instal·lacions i equips per a gammagrafía o radiografia industrial, sigui mitjançant l'ús de fonts radioactius o equips emissors de raig X.
- Els dipòsits de residus radioactius, tant transitoris com definitius.
- Les instal·lacions on es produeixin, fabriqui, repari o es faci manutenció de fonts o equips generadors de radiacions ionitzants.
- Control d'irregularitats en l'espessor de blocs de paper, làmines de plàstic i fulles de metall o en el nivell d'omplenat de recipients o grans dipòsits.
- Estimació de l'antiguitat de substàncies, emprant el carboni-14 o altres isòtops, com l'argó-40 o el fòsfor-32.
- Il·luminació passiva de rellotges o de sortides d'emergència.

Les funcions de protecció radiològica són responsabilitat del titular de la instal·lació, essent el Consell de Seguretat Nuclear el qui decidirà si han de ser encomanades a un Servei de Protecció Radiològica propi del titular o a una Unitat Tècnica de Protecció Radiològica contractada a l'efecte.

La reacció d'un individu a l'exposició a les radiacions depèn de la dosi, del volum i del tipus dels teixits irradiats.

Encara que poden ocórrer en combinació, correntment es fa una distinció entre dues classes fonamentals d'accidents per radiació, és dir: a) Irradiació externa accidental (per exemple en treballs de radiografiat de soldadura). b) Contaminació radioactiva accidental.

Els nivells màxims de dosi permesa han estat fixats tenint en compte que el cos humà pot tolerar una certa quantitat de radiació sense perjudicar el funcionament del seu organisme en general. Aquests nivells són, per a persones que treballen en Zones Controlades (per exemple edifici de contenció de central nuclear) i tenint en compte l'efecte acumulatiu de les radiacions sobre l'organisme, 5 rems per any ó 300 milirems per setmana. Per a detectar i amidar els nivells de radiació, s'empren els comptadors Geiger.

Per al control de la dosi rebuda, s'ha de tenir en compte tres factors: a) temps de treball. b) distància de la font de radiació. c) Apantallament. El temps de treball permès s'obté dividint la dosi màxima autoritzada per la dosi rebuda en un moment donat. La dosi rebuda és inversament proporcional al quadrat de la distància a la font de radiació. Els materials que s'empren habitualment com barreres d'apantallament són el formigó i el plom, encara que també se n'usen d'altres com l'acer, totxos

massissos de fang, granit, calcària, etc., en general, l'espessor necessari està en funció inversa de la densitat del material.

Per a verificar les dosis de radiació rebudes s'utilitzen dosímetres individuals, que poden consistir en una pel·lícula dosimètrica o un estildosímetre integrador de butxaca. Sempre que no s'especifiqui el contrari, el dosímetre individual es durà a la butxaca o davanter de la roba de treball, tenint especial cura en no col·locar els dosímetres sobre cap objecte que absorbeixi radiació (per exemple objectes metàl·lics).

Haurà de dur-se un Llibre de registre, on figurarà les dosis rebudes per cadascun dels treballadors professionalment exposats a radiacions.

## 13. MANIPULACIÓ DE MATERIALS

Tota manutenció de material comporta un risc, per tant, des del punt de vista preventiu, s'ha de tendir a evitar tota manipulació que no sigui estrictament necessària, en virtut del conegut axioma de seguretat que diu que "el treball més segur és aquell que no es realitza".

Per a manipular materials és preceptiu prendre les següents precaucions elementals:

- Començar per la càrrega o material que apareix més superficialment, és dir el primer i més accessible.
- Lliurar el material, no tirar-lo.
- Col·locar el material ordenat i en cas d'apilat estratificat, que aquest es realitzi en piles estables, lluny de passadissos o llocs on pugui rebre cops o desgastar-se.
- Utilitzar guants de treball i calçat de seguretat amb puntera metàl·lica i embuatada en empenya i turmells.
- En el manejament de càrregues llargues entre dues o més persones, la càrrega pot mantenir-se en la mà, amb el braç estirat al llarg del cos, o bé sobre l'espatlla.
- S'utilitzaran les ferramentes i mitjans auxiliars adequats per al transport de cada tipus de material.
- En les operacions de càrrega i descàrrega, es prohibirà col·locar-se entre la part posterior del camió i una plataforma, pal, pilar o estructura vertical fixa.
- Si durant la descàrrega s'utilitzen ferramentes, com braços de palanca, ungles, potes de cabra o similar, disposar la maniobra de tal manera que es garanteixi el que no es vingui la càrrega damunt i que no rellisqui.

En el relatiu a la manipulació de materials el contractista en l'elaboració del Pla de Seguretat i Salut haurà de tenir en comte les següents premisses:

Intentar evitar la manipulació manual de càrregues mitjançant:

- Automatització i mecanització dels processos.
- Mesures organitzatives que eliminin o minimitzin el transport.

Adoptar Mesures preventives quan no es pugui evitar la manipulació com:

- Utilització d'ajudes mecàniques.
- Reducció o redisseny de la càrrega.
- Actuació sobre l'organització del treball.
- Millora de l'entorn de treball.

Dotar als treballadors de la formació i informació en temes que incloguin:

- Ús correcte de les ajudes mecàniques.
- Ús correcte dels equips de protecció individual.
- Tècniques segures per a la manipulació de càrregues.
- Informació sobre el pes i centre de gravetat.

***Els principis bàsics de la manutenció de materials***

1er.- El temps dedicat a la manipulació de materials és directament proporcional a l'exposició al risc d'accident derivat de dita activitat.

2on.-Procurar que els diferents materials, així com la plataforma de suport i de treball de l'operari, estiguin a la mateixa alçada en què s'ha de treballar amb ells.

3er.- Evitar el dipositar els materials directament sobre el terra, fer-ho sempre sobre catúfols o contenidors que permetin el seu trasllat a dojo.

4art.-Escurçar tant com sigui possible les distàncies a recórrer pel material manipulat, evitant estacionaments intermedis entre el lloc de partida del material manipulat evitant estacionaments intermedis entre el lloc de partida del material i l'emplaçament definitiu de la seva posada en obra.

5è- Traginar sempre els materials a dojo, mitjançant palonniers, catúfols, contenidors o palets, en lloc de portar-los d'un en un.

6è.- No tractar de reduir el nombre d'ajudants que recullin i traginin els materials, si això comporta ocupar els oficials o caps d'equip en operacions de manutenció, coincidint en franges de temps perfectament aprofitables per l'avanç de la producció.

7è.- Mantenir esclarits, senyalitzats i enllumenats, els llocs de pas dels materials a manipular.

*Manejament de càrregues sense mitjans mecànics*

Per a l'hissat manual de càrregues la totalitat del personal d'obra haurà rebut la formació bàsica necessària, comprometent-se a seguir els següents passos:

1er.- Apropar-se el més possible a la càrrega.

2on.- Assentar els peus fermament.

3er.- Ajupir-se doblegant els genolls.

4art.- Mantenir l'esquena dreta.

5è.- Subjectar l'objecte fermament.

6è.- L'esforç d'aixecar l'han de realitzar els músculs de les cames.

7è.- Durant el transport, la càrrega haurà de romandre el més a prop possible del cos.

8è.- Per al manejament de peces llargues per una sola persona s'actuarà segons els següents criteris preventius:

h) Durà la càrrega inclinada per un dels seus extrems, fins l'altura de l'espatlla.
i) Avançarà desplaçant les mans al llarg de l'objecte, fins arribar al centre de gravetat de la càrrega.
j) Es col·locarà la càrrega en equilibri sobre l'espatlla.
k) Durant el transport, mantindrà la càrrega en posició inclinada, amb l'extrem davanter aixecat.

9è.- És obligatòria la inspecció visual de l'objecte pesat a aixecar, per a eliminar arestes afilades.

10è.- Està prohibit aixecar més de 50 kg de forma individual. El valor límit de 30 Kg per homes, pot superar-se puntualment a 50 Kg quan es tracti de descarregar un material per a col·locar-lo sobre un mitjà mecànic de manutenció. En el cas de tractar-se de dones, es redueixen aquests valors a 15 i 25 Kg respectivament.

11è.- És obligatori la utilització d'un codi de senyals quan s'ha d'aixecar un objecte entre uns quants, per a suportar l'esforç al mateix temps. Pot ser qualsevol sistema a condició que sigui conegut o convingut per l'equip.

## 14. MITJANS AUXILIARS D'UTILITAT PREVENTIVA (MAUP)

Als efectes del present Estudi de Seguretat i Salut, tindran la consideració de MAUP, tot Mitjà Auxiliar dotat de Protecció, Resguard, Dispositiu de Seguretat, Operació seqüencial, Seguretat positiva o Sistema de Protecció Col·lectiva, que originàriament ve integrat, de fàbrica, en l'equip, màquina o sistema, de forma solidària i indisociable, de tal manera que s'interposi, o apantalli els riscos d'abast o simultaneïtat de l'energia fora de control, i els treballadors, personal aliè a l'obra i/o materials, màquines, equips o ferramentes pròximes a la seva àrea d'influència, anul·lant o reduint les conseqüències d'accident. La seva operativitat resta garantida pel fabricant o distribuïdor de cadascun dels components, en les condicions d'utilització i manteniment per ell prescrites. El contractista resta obligat a la seva adequada elecció, seguiment i control d'ús.

Els MAUP més rellevants, previstos per a l'execució del present projecte són els indicats a continuació:

| Codi | UA | Descripció |
|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requi reglamentaris en previsió de caigudes per a la realització d'estructures, tancamer cobertes, i altres treballs en alçada |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superi a 7 m amb sistema de seguretat integrat |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat ar tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (H 1000) |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment entramat de platines metàl·liques i rampes articulades, baranes metàl·liqu reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix |
| HX11X022 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment entramat de platines metàl·liques i rampes articulades, baranes metàl·liqu reglamentàries |
| HX11X038 | u | Plataforma horitzontal per aplec de materials en cobertes inclinades |
| HX11X052 | u | Pont volat semiprefabricat per treballs en ràfecs amb plataforma de treball i bara perimetral amb els requisits reglamentaris amb sistema de seguretat integrat |

## 15. SISTEMES DE PROTECCIÓ COL·LECTIVA (SPC)

Als efectes del present Estudi de Seguretat i Salut, tindran la consideració de Sistemes de Protecció Col·lectiva, el conjunt d'elements associats, incorporats al sistema constructiu, de forma provisional i adaptada a l'absència de protecció integrada de major eficàcia (MAUP), destinats a apantallar o condonar la possibilitat de coincidència temporal de qualsevol tipus d'energia fora de control, present en l'ambient laboral, amb els treballadors, personal aliè a l'obra i/o materials, màquines, equips o ferramentes pròximes a la seva àrea d'influència, anul·lant o reduint les conseqüències d'accident. La seva operativitat garanteix la integritat de les persones o objectes protegits, sense necessitat d'una participació per a assegurar la seva eficàcia. Aquest últim aspecte és el que estableix la seva diferència amb un Equip de Protecció Individual (EPI).

En absència d'homologació o certificació d'eficàcia preventiva del conjunt d'aquests Sistemes instal·lats, el contractista fixarà en el seu Pla de Seguretat i Salut, referència i relació dels Protocols d'Assaig, Certificats o Homologacions adoptades i/o requerits als instal·ladors, fabricants i/o proveïdors, per al conjunt dels esmentats Sistemes de Protecció Col·lectiva.

Els SPC més rellevants previstos per a l'execució del present projecte són els indicats en l'annex d'aquesta memòria que contindrà les fitxes amb RISC-AVALUACIÓ-MESURES

## 16. CONDICIONS DELS EQUIPS DE PROTECCIÓ INDIVIDUAL (EPI)

Als efectes del present Estudi de Seguretat i Salut, tindran la consideració d'Equips de Protecció Individual, aquelles peces de treball que actuen a mode de coberta o pantalla portàtil, individualitzada per a cada usuari, destinats a reduir les conseqüències derivades del contacte de la zona del cos protegida, amb una energia fora de control, d'intensitat inferior a la previsible resistència física de l'EPI.

La seva utilització haurà de quedar restringida a l'absència de garanties preventives adequades, per inexistència de MAUP, o en el seu defecte SPC d'eficàcia equivalent.

Tots els equips de protecció individual estaran degudament certificats, segons normes harmonitzades CE. Sempre de conformitat als R.D. 1407/92, R.D.159/95 i R.D. 773/97.

El Contractista Principal portarà un control documental del seu lliurament individualitzat al personal (propi o subcontractat), amb el corresponent avís de recepció signat pel beneficiari.

En els casos en què no existeixin normes d'homologació oficial, els equips de protecció individual seran normalitzats pel constructor, per al seu ús en aquesta obra, triats d'entre els que existeixin en el mercat i que reuneixin una qualitat adequada a les respectives prestacions. Per aquesta normalització interna s'haurà de comptar amb el vist-i-plau del tècnic que supervisa el compliment del Pla de Seguretat i Salut per part de la Direcció d'Obra o Direcció Facultativa/Direcció d'Execució.

Al magatzem d'obra hi haurà permanentment una reserva d'aquests equips de protecció, de manera que pugui garantir el subministrament a tot el personal sense que se'n produeixi, raonablement, la seva carència.

En aquesta previsió cal tenir en compte la rotació del personal, la vida útil dels equips i la data de caducitat, la necessitat de facilitar-los a les visites d'obra, etc.

Els EPI més rellevants, previstos per a l'execució material del present projecte són els indicats en l'annex d'aquesta memòria que contindrà les fitxes amb RISC-AVALUACIÓ-MESURES

## 17. RECURSOS PREVENTIUS

La legislació que s'ha de complir respecte a la presència de recursos preventius a les obres de construcció està contemplada a la llei 54/2003. D'acord amb aquesta llei, la presència dels recursos preventius a les obres de construcció serà preceptiva en els següents casos:

*I) Quan els riscos es puguin veure agreujats o modificats en el desenvolupament del procés o l'activitat, per la concurrència d'operacions diverses que es desenvolupen successivament o simultàniament i que facin precís el control de la correcta aplicació dels mètodes de treball. La presència de recursos*

*preventius de cada contractista serà necessari quan, durant l'obra, es desenvolupin treballs amb riscos especials, com es defineixen en el real decret 1627/97.*

m) *Quan es realitzin activitats o processos que reglamentàriament es considerin perillosos o amb riscos especials.*

n) *Quan la necessitat d'aquesta presència sigui requerida per la Inspecció de Treball i Seguretat Social, si les circumstàncies del cas ho exigissin degut a les condicions de treball detectades.*

Quan a les obres de construcció coexisteixen contractistes i subcontractistes que, de forma successiva o simultània, puguin constituir un risc especial per interferència d'activitats, la presència dels "*Recursos preventius*" és, en aquests casos, necessària.
*En situació de risc sanitari Covid-19 es recomana preveure un equip de neteja i desinfecció dels equips i eines de l'obra per tant es recomana incrementar les hores previstes de recurs preventiu.*

Els recursos preventius són necessaris quan es desenvolupin treballs amb riscos especials, definits a l'annex II del RD 1627/97:

1. *Treballs amb riscos especialment greus d'enterrament, enfonsament o caiguda d'altura, per les particulars característiques de l'activitat desenvolupada, els procediments aplicats, o l'entorn del lloc de treball.*
2. *Treballs en els quals l'exposició a agents químics o biològics suposi un risc d'especial gravetat, o pels que la vigilància específica de la salut dels treballadors sigui legalment exigible.*
3. *Treballs amb exposició a radiacions ionitzants pels que la normativa específica obliga a la delimitació de zones controlades o vigilades.*
4. *Treballs a la proximitat de línies elèctriques d'alta tensió.*
5. *Treballs que exposin a risc d'ofegament per immersió.*
6. *Obres d'excavació de túnels, pous i altres treballs que suposin moviments de terra subterranis.*
7. *Treballs realitzats en immersió amb equip subaquàtic.*
8. *Treballs realitzats en caixons d'aire comprimit.*
9. *Treballs que impliquin l'ús d'explosius.*
10. *Treballs que requereixin muntar o desmuntar elements prefabricats pesats.*

A continuació es detallen, de forma orientativa, les activitats de l'obra del present estudi de seguretat i salut, en base a l'avaluació de riscos d'aquest, que requereixen la presència de recurs preventiu:

## 18. SENYALITZACIÓ I ABALISAMENT

Quant a la senyalització de l'obra, és necessari distingir entre la que es refereix a la que demanda de l'atenció per part dels treballadors i aquella que correspon al tràfic exterior afectat per l'obra. En el primer cas són d'aplicació les prescripcions establertes per el Reial Decret 485/1997, de 14 d'abril. La senyalització i el abalisament de tràfic vénen regulats, entre altra normativa, per la Norma 8.3-I.C. de la Direcció General de Carreteres i no és objecte de l'Estudi de Seguretat i Salut. Aquesta distinció no exclou la possible complementació de la senyalització de tràfic durant l'obra quan aquesta mateixa es faci exigible per a la seguretat dels treballadors que treballin a la immediació d'aquest tràfic.

S'ha de tenir en compte que la senyalització per si mateixa no elimina els riscos, malgrat això la seva observació quan és l'apropiada i està ben col·locada, fa que l'individu adopti conductes segures. No és suficient amb col·locar un plafó a les entrades de les obres, si després en la pròpia obra no se senyalitza l'obligatorietat d'utilitzar cinturó de seguretat al col·locar les mires per a realitzar el tancament de façana. La senyalització abundant no garanteix una bona senyalització, ja que el treballador acaba fent cas omís de qualsevol tipus de senyal.

El R.D.485/97 estableix que la senyalització de seguretat i salut en el treball haurà d'utilitzar-se sempre que l'anàlisi dels riscos existents, les situacions d'emergència previsibles i les mesures preventives adoptades, posin de manifest la necessitat de:

- Cridar l'atenció dels treballadors sobre l'existència de determinats riscos, prohibicions o obligacions.
- Alertar als treballadors quan es produeixi una determinada situació d'emergència que requereixi mesures urgents de protecció o evacuació.
- Facilitar als treballadors la localització i identificació de determinats mitjans o instal·lacions de protecció, evacuació, emergència o primers auxilis.
- Orientar o guiar als treballadors que realitzin determinades maniobres perilloses.

La senyalització no haurà de considerar-se una mesura substitutiva de les mesures tècniques i organitzatives de protecció col·lectiva i haurà d'utilitzar-se quan, mitjançant aquestes últimes, no hagi estat possible eliminar els riscos o reduir-los suficientment.

Tampoc haurà de considerar-se una mesura substitutiva de la formació i informació

dels treballadors en matèria de seguretat i salut en el treball.

Així mateix, segons s'estableix en el R.D. 1627/97, s'haurà de complir que:

11. Les vies i sortides específiques d'emergència hauran de senyalitzar-se conforme al R.D. 485/97, tenint en compte que aquesta senyalització haurà de fixar-se en els llocs adequats i tenir la resistència suficient.
12. Els dispositius no automàtics de lluita contra incendis hauran d'estar senyalitzats conforme al R.D. 485/97, tenint en compte que aquesta senyalització haurà de fixar-se en els llocs adequats i tenir la resistència suficient.
13. El color utilitzat per a la il·luminació artificial no podrà alterar o influir en la percepció de les senyals o panells de senyalització.
14. Les portes transparents hauran de tenir una senyalització a l'altura de la vista.
15. Quan existeixin línies d'estesa elèctrica àrees, en el cas que vehicles l'obra haguessin de circular sota l'estesa elèctrica s'utilitzarà una senyalització d'advertència.

La implantació de la senyalització i balisament s'ha de definir en els plànols de l'Estudi de Seguretat i Salut i s'ha de tenir en compte en les fitxes d'activitats, al menys respecte els riscos que no s'hagin pogut eliminar.

## 19. CONDICIONS D'ACCÉS I AFECTACIONS DE LA VIA PÚBLICA

En el PLA DE SEGURETAT I SALUT el Contractista definirà les desviacions i passos provisionals per a vehicles i vianants, els circuits i trams de senyalització, la senyalització, les mesures de protecció i detecció, els paviments provisionals, les modificacions que comporti la implantació de l'obra i la seva execució, diferenciant, si és cas, les diferents fases d'execució. A aquests efectes, es tindrà en compte el que determina la Normativa per a la informació i senyalització d'obres al municipi i la Instrucció Municipal sobre la instal·lació d'elements urbans a l'espai públic de la ciutat que correspongui.

Quan correspongui, d'acord amb les previsions d'execució de les obres, es diferenciarà amb claredat i per cadascuna de les distintes fases de l'obra, els àmbits de treball i els àmbits destinats a la circulació de vehicles i vianants, d'accés a edificis i guals, etc.., i es definiran les mesures de senyalització i protecció que corresponguin a cadascuna de les fases.

És obligatori comunicar l'inici, l'extensió, la naturalesa dels treballs i les modificacions de la circulació de vehicles provocades per les obres, a la Guàrdia Municipal i als Bombers o a l'Autoritat que correspongui.

Quan calgui prohibir l'estacionament en zones on habitualment és permès, es col·locarà el cartell de "SENYALITZACIÓ EXCEPCIONAL" (1050 X 600 mm), amb 10

dies d'antelació a l'inici dels treballs, tot comunicant-ho a la Guàrdia Municipal o l'Autoritat que correspongui.

En la desviació o estrenyiment de passos per a vianants es col·locarà la senyalització corresponent.

No es podrà començar l'execució de les obres sense haver procedit a la implantació dels elements de senyalització i protecció que corresponguin, definits al PLA DE SEGURETAT aprovat.

El contractista de l'obra serà responsable del manteniment de la senyalització i elements de protecció implantats.

Els accessos de vianants i vehicles, estaran clarament definits, senyalitzats i separats

## 19.1. Normes de Policia

- *Control d'accessos*

Una vegada establerta la delimitació del perímetre de l'obra, conformats els tancaments i accessos per els vianants i de vehicles, el contractista amb la col·laboració del seu servei de prevenció definirà, dins del Pla de Seguretat i Salut, el procés per al control d'entrada i sortida de vehicles en general (inclosa la maquinària com grues mòbils, retroexcavadores) i de personal de manera que garanteixi l'accés únicament a persones autoritzades.

Quan la delimitació de l'obra no es pugui portar a terme, per les pròpies circumstàncies de l'obra, el contractista, al menys haurà de garantir, l'accés controlat a les instal·lacions d'ús comú de l'obra, i haurà d'assegurar que les entrades a l'obra estiguin senyalitzades, i que quedin tancades les zones que puguin presentar riscos

- *Coordinació d'interferències i seguretat a peu d'obra*

El contractista, quan sigui necessari, donat el volum d'obra, el valor dels materials emmagatzemats i altres circumstàncies que així ho aconsellin, definirà un procés per garantir l'accés controlat a les instal·lacions que suposin risc personal i/o comú per a l'obra i l'intrusisme a l'interior de l'obra en tallers, magatzems, vestuaris i d'altres instal·lacions d'ús comú o particular.

## 19.2. Àmbit d'ocupació de la via pública

- *Ocupació del tancament de l'obra*

S'entén per àmbit d'ocupació el realment ocupat, incloent tanques, elements de protecció, baranes, bastides, contenidors, casetes, etc.

En el PLA DE SEGURETAT I SALUT EN EL TREBALL s'especificarà la delimitació de l'àmbit d'ocupació de l'obra i es diferenciarà clarament si aquest canvia en les diferents fases de l'obra. L'àmbit o els àmbits d'ocupació quedaran clarament dibuixats en plànols per fases i interrelacionats amb el procés constructiu.

L'amplada màxima a ocupar serà proporcional a l'amplada de la vorera. L'espai lliure per a pas de vianants no serà inferior a un terç (1/3) de l'amplada de la vorera existent.

En cap cas es podrà ocupar una amplada superior a tres (3) metres mesurats des de la línia de façana, ni més de dos terços (2/3) de l'amplada de la vorera, si no queda al menys una franja d'amplada mínima d'un metre i quaranta centímetres (1,40 m) per a pas de vianants.

Quan, per l'amplada de la vorera, no sigui possible deixar un pas per a vianants d'un metre i quaranta centímetres (1,40 m) es permetrà, durant l'execució dels treballs a planta baixa, la col·locació de tanques amb un sortint màxim de seixanta centímetres (60 cm) deixant un pas mínim per a vianants d'un metre (1 m). Per a l'enderrocament de les plantes superiors a la planta baixa, es col·locarà una tanca a la línia de façana i es farà una protecció volada per la retenció d'objectes despresos de les cotes superiors. Si la vorera és inferior a un metre seixanta centímetres (1,60 cm) durant els treballs a la planta baixa, el pas per a vianants d'un metre (1 m) d'amplada podrà ocupar part de la calçada en la mesura que calgui. En aquest cas, s'haurà de delimitar i protegir amb tanques l'àmbit del pas de vianants.

- *Situació de casetes i contenidors.*

S'indicaran en el PLA DE SEGURETAT I SALUT les àrees previstes per aquest fi.

- Les casetes, contenidors, tallers provisionals i aparcament de vehicles d'obra, se situaran en una zona propera a l'obra que permeti aplicar els següents criteris:
  - Preferentment, a la vorera, deixant un pas mínim d'un metre i quaranta centímetres (1,40 m) per a pas de vianants per la vorera.
  - A la vorera, deixant un pas mínim d'un metre i quaranta centímetres (1,40 m) per a pas de vianants per la zona d'aparcament de la calçada sense envair cap carril de circulació.
  - Si no hi ha prou espai a la vorera, es col·locaran a la zona d'aparcament de la calçada procurant no envair cap carril de circulació i deixant sempre com a mínim un metre (1m) per a pas de vianants a la vorera.

- Es protegirà el pas de vianants i es col·locarà la senyalització corresponent.

- *Situació de grues-torre i muntacàrregues*

Només podran estar emplaçats a l'àmbit de l'obra.

- *Canvis de la Zona Ocupada*

Qualsevol canvi en la zona ocupada que afecti l'àmbit de domini públic es considerarà una modificació del PLA DE SEGURETAT I SALUT EN EL TREBALL i s'haurà de documentar i tramitar d'acord amb el R.D. 1627/97.

### 19.3. Tancaments de l'obra que afecten l'àmbit públic

- *Tanques*

| | |
|---|---|
| Situació | Delimitaran el perímetre de l'àmbit de l'obra o, en ordenació entre mitgeres, tancaran el front de l'obra o solar i els laterals de la part de vorera ocupada. |
| Tipus de tanques | Es formaran amb xapa metàl·lica opaca o a base de plafons prefabricats o d'obra de fàbrica arrebossada i pintada. |
| | Les empreses promotores podran presentar a l'Ajuntament per a la seva homologació, si s'escau, el seu propi model de tanca per tal d'emprar-lo en totes les obres que facin. |
| | Les tanques metàl·liques de 200 x 100 cm només s'admeten per a proteccions provisionals en operacions de càrrega, desviacions momentànies de trànsit o similars. |
| | En cap cas s'admet com a tanca el simple abalisat amb cinta de PVC, malla electrosoldada de ferrallista, xarxa tipus tenis de polipropilè (habitualment de color taronja), o elements tradicionals de delimitacions provisionals de zones de risc. |
| Complements | Totes les tanques tindran balisament lluminós i elements reflectants en tot el seu perímetre. |

| | |
|---|---|
| Manteniment | El Contractista vetllarà pel correcte estat de la tanca, eliminant grafittis, publicitat il·legal i qualsevol altre element que deteriori el seu estat original. |

- *Accés a l'obra*

| | |
|---|---|
| Portes | Les tanques estaran dotades de portes d'accés independent per a vehicles i per al personal de l'obra.<br><br>No s'admet com a solució permanent d'accés la retirada parcial del tancament. |

### 19.4. Operacions que afecten l'àmbit públic

- *Entrades i sortides de vehicles i maquinària.*

| | |
|---|---|
| Vigilància | Personal responsable de l'obra s'encarregarà de dirigir les operacions d'entrada i sortida, avisant els vianants a fi d'evitar accidents. |
| Aparcament | Fora de l'àmbit del tancament de l'obra no podran estacionar-se vehicles ni maquinària de l'obra, excepte a la reserva de càrrega i descàrrega de l'obra quan existeixi zona d'aparcament a la calçada. |
| Camions en espera | Si no hi ha espai suficient dins de l'àmbit del tancament de l'obra per acollir els camions en espera, caldrà preveure i habilitar un espai adequat a aquest fi fora de l'obra.<br><br>El PLA DE SEGURETAT preveurà aquesta necessitat, d'acord amb la programació dels treballs i els mitjans de càrrega, descàrrega i transport interior de l'obra. |

- *Càrrega i descàrrega*

Les operacions de càrrega i descàrrega s'executaran dintre l'àmbit del tancament de l'obra. Quan això no sigui possible, s'estacionarà el vehicle en el punt més proper a la tanca de l'obra, es desviaran els vianants fora de l'àmbit d'actuació, s'ampliarà el perímetre tancat de l'obra i es prendran les següents mesures:

- S'habilitarà un pas per als vianants. Es deixarà un pas mínim d'un metre i quaranta centímetres (1,40 m) d'ample per a la vorera o per a la zona d'aparcament de la calçada, sense envair cap carril de circulació. Si no és suficient i/o si cal envair el carril de circulació que correspongui i contactar prèviament amb la Guàrdia Urbana.
- Es protegirà el pas de vianants amb tanques metàl·liques de 200 x 100 cm, delimitant el camí pels dos costats i es col·locarà la senyalització que correspongui.
- La separació entre les tanques metàl·liques i l'àmbit d'operacions o el vehicle, formarà una franja de protecció l'amplada de la qual dependrà del tipus de productes a carregar o descarregar i que establirà el Cap d'Obra prèvia consulta al Coordinador de Seguretat de l'obra.
- Acabades les operacions de càrrega i descàrrega, es retiraran les tanques metàl·liques es netejarà el paviment.
- Es controlarà la descàrrega dels camions formigonera a fi d'evitar abocaments sobre la calçada.

- *Descàrrega, apilament i evacuació de terres i runa*

Descàrrega

La descàrrega de runa des dels diferents nivells de l'obra, aprofitant la força de la gravetat, serà per canonades (cotes superiors) o mecànicament (cotes sota rasant), fins els contenidors o tremuges, que hauran de ser cobertes amb lones o plàstics opacs a fi d'evitar pols. Les canonades o cintes d'elevació i transport de material es col·locaran sempre per l'interior del recinte de l'obra.

Apilament.

No es poden acumular terres, runa i deixalles en l'àmbit de domini públic, excepte si és per a un termini curt i si s'ha obtingut un permís especial de l'Ajuntament, i sempre s'ha de dipositar en tremuges o en contenidors homologats.

Si no es disposa d'aquesta autorització ni d'espais adequats, les terres es carregaran directament sobre camions per a la seva evacuació immediata.

A manca d'espai per a col·locar els contenidors en l'àmbit del tancament de l'obra, es col·locaran sobre la vorera en el punt més proper a la tanca, deixant un pas per als vianants d'un metre i quaranta centímetres (1,40 m) d'amplada com a mínim.

S'evitarà que hi hagi productes que sobresurtin del contenidor.

Es netejarà diàriament la zona afectada i després de retirat el contenidor.

Els contenidors, quan no s'utilitzin, hauran de ser retirats.

Evacuació

Si la runa es carrega sobre camions, aquests hauran de portar la caixa tapada amb una lona o un plàstic opac a fi d'evitar la producció de pols, i el seu transport ho serà a un abocador autoritzat. El mateix es farà en els transports dels contenidors.

- *Proteccions per a evitar la caiguda d'objectes a la via pública*

Al PLA DE SEGURETAT s'especificaran, per cada fase d'obra, les mesures i proteccions previstes per a garantir la seguretat de vianants i vehicles i evitar la caiguda d'objectes a la via pública, tenint en compte les distàncies, en projecció vertical, entre els treballs en altura, el tancament de l'obra i la vorera o zona de pas de vianants o vehicles.

Bastides

Es col·locaran bastides perimetrals a tots els paraments exteriors a la construcció a realitzar.

Les bastides seran metàl·liques i modulars. Tindran una protecció de la caiguda de materials i elements formant un entarimat horitzontal a 2,80 m d'alçada, preferentment de peces metàl·liques, fixat a l'estructura vertical i horitzontal de la bastida, així com una marquesina inclinada en voladís que sobresurti 1,50 m, com a mínim, del pla de la bastida.

Les bastides seran tapades perimetralment i a tota l'alçada de l'obra, des de l'entarimat de visera, amb una xarxa o lones opaques que eviti la caiguda d'objectes i la propagació de pols.

Xarxes

Sempre que s'executin treballs que comportin perill per als vianants, pel risc de caiguda de materials o elements, es col·locaran xarxes de protecció entre les plantes, amb sistemes homologats, de forjat, perimetrals a totes les façanes.

Grues torre

En el PLA DE SEGURETAT s'indicarà l'àrea de funcionament del braç i les mesures que es prendran en el cas de superar els límits del solar o del tancament de l'obra.

El carro del qual penja el ganxo de la grua no podrà sobrepassar aquests límits. Si calgués fer-ho, en algun moment, es prendran les mesures indicades per a càrregues i descàrregues.

## 19.5. Neteja i incidència sobre l'ambient que afecten l'àmbit públic

- *Neteja*

Els contractistes netejaran i regaran diàriament l'espai públic afectat per l'activitat de l'obra i especialment després d'haver efectuat càrregues i descàrregues o operacions productores de pols o deixalles.

Es vigilarà especialment l'emissió de partícules sòlides (pols, ciment, etc.).

Caldrà prendre les mesures pertinents per evitar les roderes de fang sobre la xarxa viària a la sortida dels camions de l'obra. A tal fi, es disposarà, abans de la sortida del tancament de l'obra, una solera de formigó o planxes de "relliga" de 2 x 1 m, com a mínim, sobre la qual s'aturaran els camions i es netejaran per reg amb mànega cada parella de rodes.

Està prohibit efectuar la neteja de formigoneres al clavegueram públic.

- *Sorolls. Horari de treball*

Les obres es realitzaran entre les 8,00 i les 20,00 hores dels dies feiners.

Fora d'aquest horari, només es permet realitzar activitats que no produeixin sorolls més enllà d'allò que estableixen les OCAF. Les obres realitzades fora d'aquest horari hauran de ser específicament autoritzades per l'Ajuntament.

Excepcionalment i amb l'objecte de minimitzar les molèsties que determinades operacions poden produir sobre l'àmbit públic i la circulació o per motius de seguretat, l'Ajuntament podrà obligar que alguns treballs s'executin en dies no feiners o en un horari específic.

- *Pols*

Es regaran les pistes de circulació de vehicles.

Es regaran els elements a enderrocar, la runa i tots els materials que puguin produir pols.

En el tall de peces amb disc s'hi afegirà aigua.

Les sitges de ciment estaran dotades de filtre.

## 19.6. Residus que afecten a l'àmbit públic

El contractista, dins del Pla de Seguretat i Salut, definirà amb la col·laboració del seu servei de prevenció, els procediments de treball per a l'emmagatzematge i retirada de cadascun dels diferents tipus de residus que es puguin generar a l'obra.

El contractista haurà de donar les oportunes instruccions als treballadors i subcontractistes, comprovant que ho comprenen i ho compleixen.

## 19.7. Circulació de vehicles i vianants que afecten l'àmbit públic

- *Senyalització i protecció*

Si el pla d'implantació de l'obra comporta la desviació del trànsit rodat o la reducció de vials de circulació, s'aplicaran les mesures definides a la Norma de Senyalització d'Obres 8.3-

Està prohibida la col·locació de senyals no autoritzades pels Serveis Municipals.

- *Dimensions mínimes d'itineraris i passos per a vianants*

Es respectaran les següents dimensions mínimes:

– En cas de restricció de la vorera, l'amplada de pas per a vianants no serà inferior a un terç (1/3) de l'amplada de la vorera existent.
– L'amplada mínima d'itineraris o de passos per a vianants serà d'un metre i quaranta centímetres (1,40 m).

- *Elements de protecció*

Pas vianants — Tots els passos de vianants que s'hagin d'habilitar es protegiran, pels c costats, amb tanques o baranes resistents, ancorades o enganxades terra, d'una alçada mínima d'un metre (1 m) amb travesser intermed entornpeus de vint centímetres (0,20 m) a la base. L'alçada de passarel·la no sobrepassarà els quinze centímetres (0,15 m).

Els elements que formin les tanques o baranes seran preferentme
continus. Si són calats, les separacions mínimes no podran ser superi
a quinze centímetres (015 m).

Forats i rases

Si els vianants han de passar per sobre els forats o les rases,
col·locaran xapes metàl·liques fixades, de resistència suficient, totalme
planes i sense ressalts.

Si els forats o les rases han de ser evitats, les baranes o tanques
protecció del pas es col·locaran a 45° en el sentit de la marxa.

- *Enllumenat i abalisament lluminós*

Els senyals i els elements d'abalisament aniran degudament il·luminats encara que hi hagi enllumenat públic.

S'utilitzarà pintura i material reflectant o fotoluminiscent, tant per a la senyalització vertical i horitzontal, com per als elements d'abalisament.

Els itineraris i passos de vianants estaran convenientment il·luminats al llarg de tot el tram (intensitat mínima 20 lux).

Les bastides de paraments verticals que ocupin vorera o calçada tindran abalisament lluminós i elements reflectants a totes les potes en tot el seu perímetre exterior.

La delimitació d'itineraris o passos per a vianants formada amb tanques metàl·liques de 200 x 100 cm, tindran abalisament lluminós en tot el seu perímetre.

- *Abalisament i defensa*

Els elements d'abalisament i defensa a emprar per passos per a vehicles seran els designats com tipus TB, TL i TD a la Norma de carreteres 8.3 – IC. amb el següent criteri d'ubicació d'elements d'abalisament i defensa:

o) En la delimitació de la vora del carril de circulació de vehicles contigu al tancament de l'obra.
p) En la delimitació de vores de passos provisionals de circulació de vehicles contigus a passos provisionals per a vianants.
q) Per impedir la circulació de vehicles per una part d'un carril, per tot un carril o per diversos carrils, en estrenyiments de pas i/o disminució del número de carrils.

r) En la delimitació de vores en la desviació de carrils en el sentit de circulació, per salvar l'obstacle de les obres.
s) En la delimitació de vores de nous carrils de circulació per a passos provisionals o per a establir una nova ordenació de la circulació, diferent de la que hi havia abans de les obres.

Es col·locaran elements de defensa TD – 1 quan, en vies d'alta densitat de circulació, en vies ràpides, en corbes pronunciades, etc.., la possible desviació d'un vehicle de l'itinerari assenyalat pugui produir accidents a vianants o a treballadors (desplaçament o enderroc del tancament de l'obra o de baranes de protecció de pas de vianants, xoc contra objectes rígids, bolcar el vehicle per l'existència de desnivells, etc..,).

Quan l'espai disponible sigui mínim, s'admetrà la col·locació d'elements de defensa TD – 2.

- *Paviments provisionals*

El paviment serà dur, no lliscant i sense regruixos diferents dels propis del gravat de les peces. Si és de terres, tindrà una compactació del 90% PM (Pròctor Modificat).

Si cal ampliar la vorera per a pas de vianants per la calçada, es col·locarà un entarimat sobre la part ocupada de la calçada formant un pla horitzontal amb la vorera i una barana fixa de protecció.

- *Accessibilitat de persones amb mobilitat reduïda*

Si la via o vies de l'entorn de l'obra estan adaptades d'acord amb el que disposa el Decret 135/1995 de 24 de març, i no hi ha itinerari alternatiu, els passos o itineraris provisionals compliran les següents condicions mínimes:

- Alçada lliure d'obstacles de 2,10 m.
- En els canvis de direcció, l'amplada mínima de pas haurà de permetre inscriure un cercle d'1,5 m de diàmetre.
- No podran haver-hi escales ni graons aïllats.
- El pendent longitudinal serà com a màxim del 8% i el pendent transversal del 2%.
- El paviment serà dur, no lliscant i sense regruixos diferents als propis del gravat de peces. Si és de terres tindrà una compactació del 90% PM (Pròctor Modificat).
- Els guals tindran una amplada mínima d'un metre i vint centímetres (1,20 m) i un pendent màxim del 12%.

Si hi ha itinerari alternatiu, s'indicarà, en els punts de desviació cap a l'itinerari alternatiu, col·locant un senyal tipus D amb el símbol internacional d'accessibilitat I una fletxa de senyalització.

- *Manteniment*

La senyalització i els elements d'abalisament es fixaran de tal manera que impedeixi el seu desplaçament i dificulti la seva subtracció.

La senyalització, l'abalisament, els paviments, l'enllumenat i totes les proteccions dels itineraris, desviacions i passos per a vehicles i vianants es conservaran en perfecte estat durant la seva vigència, evitant la pèrdua de condicions perceptives o de seguretat.

Els passos i itineraris es mantindran nets.

- *Retirada de senyalització i abalisament*

Acabada l'obra es retiraran tots els senyals, elements, dispositius i abalisament implantats.

El termini màxim per a l'execució d'aquestes operacions serà d'una setmana, un cop acabada l'obra o la part d'obra que exigís la seva implantació.

## 19.8. Protecció i trasllat d'elements emplaçats a la via pública

- *Arbres i jardins*

Al PLA DE SEGURETAT s'assenyalaran tots els elements vegetals i l'arbrat existent a la via pública que estiguin a la zona de les obres i al seu llindar. L'Entitat Municipal responsable de Parcs i Jardins emetrà un informe previ preceptiu.

Mentre durin les obres es protegirà l'arbrat, els jardins i les espècies vegetals que puguin quedar afectades, deixant al seu voltant una franja d'un (1) metre de zona no ocupada. El contractista vetllarà, perquè els escossells i les zones ajardinades estiguin sempre lliures d'elements estranys, deixalles, escombraries i runa. S'hauran de regar periòdicament, sempre que això no es pugui fer normalment des de l'exterior de la zona d'obres.

Els escossells que quedin inclosos dins l'àmbit d'estrenyiment de pas per a vianants s'hauran de tapar de manera que la superfície sigui contínua i sense ressalts.

- *Parades d'autobús, quioscos, bústies*

A causa de la implantació del tancament de l'obra, ja sigui, perquè queden al seu interior o per quedar en zona de pas restringit, caldrà preveure el trasllat provisional de parades d'autobús, quioscos, bústies de Correus o elements similars emplaçats a l'espai públic.

En aquest cas, caldrà indicar-ho en el PLA DE SEGURETAT, preveure el seu emplaçament durant el temps que durin les obres i contactar amb els serveis corresponents per tal de coordinar les operacions.

## 20. RISCOS DE DANYS A TERCERS I MESURES DE PROTECCIÓ

### 20.1. Riscos de danys a tercers

Els riscs que durant les successives fases d'execució de l'obra podrien afectar persones o objectes annexos que en depenguin són els següents:

- Caiguda al mateix nivell.
- Atropellaments.
- Col·lisions amb obstacles a la vorera.
- Caiguda d'objectes.

### 20.2. Mesures de protecció a tercers

Es consideraran les següents mesures de protecció per a cobrir el risc de les persones que transiten pels voltants de l'obra:

16. Muntatge de tanca metàl·lica a base d'elements prefabricats de 2 m. d'alçada, separant el perímetre de l'obra, de les zones de trànsit exterior.
17. Per a la protecció de persones i vehicles que transitin pels carrers limítrofs, s'instal·larà un passadís d'estructura consistent en l'assenyalament, que haurà de ser òptic i lluminós a la nit, per a indicar el gàlib de les proteccions al tràfic rodat. Ocasionalment es podrà instal·lar en el perímetre de la façana una marquesina en voladís de material resistent.
18. Si fos necessari ocupar la vorera durant l'aplec de materials a l'obra, mentre duri la maniobra de descàrrega, es canalitzarà el trànsit de vianants per l'interior del passadís de vianants i el de vehicles fora de les zones d'afectació de la maniobra, amb protecció a base de reixes metàl·liques de separació d'àrees i es col·locaran llums de gàlib nocturns i senyals de trànsic que avisin als vehicles de la situació de perill.
19. En funció del nivell d'intromissió de tercers a l'obra, es pot considerar la conveniència de contractar un servei de control d'accessos a l'obra, a càrrec d'un Servei de Vigilància patrimonial, expressament per a aquesta funció.

## 21. PREVENCIÓ DE RISCOS CATASTRÒFICS

Els principals riscos catastròfics considerats com remotament previsibles per aquesta obra són:

- Incendi, explosió i/o deflagració.
- Inundació.
- Col·lapse estructural per maniobres fallides.
- Atemptat patrimonial contra la Propietat i/o contractistes.
- Enfosament de càrregues o aparells d'elevació.

Per a cobrir las eventualitats pertinents, el Contractista redactarà i inclourà com annex al seu Pla de Seguretat i Salut un "Pla d'Emergència Interior", cobrin les següents mesures mínimes:

1.- Ordre i neteja general.

2.- Accessos i vies de circulació interna de l'obra.

3.- Ubicació d'extintors i d'altres agents extintors.

4.- Nomenament i formació de la Brigada de Primera Intervenció.

5.- Punts de trobada.

6.- Assistència Primers Auxilis.

## 22. PREVISIONS DE SEGURETAT PELS TREBALLS POSTERIORS

Previsions i informacions útils per efectuar al seu dia, en les degudes condicions de seguretat i salut, els previsibles treballs posteriors (manteniment) segons art. 5.6 RD.1627/97

## 23. ANNEX: FITXES D'ACTIVITATS-RISC-AVALUACIÓ-MESURES

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /3 /4 /6 /9 /10 /11 /14 /16 /18 /25 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H142CD70 | u | Pantalla facial per a protecció de riscs mecànics, amb visor de malla de reixeta metàl·lica, per acoblar al casc amb arnès abatible, homologada segons UNE-EN 1731 | 10 |
| H1432012 | u | Protector auditiu d'auricular, acoblat al cap amb arnès i orelleres antisoroll, homologat segons UNE-EN 352-1 i UNE-EN 458 | 14 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /3 /4 /6 /9 /10 /11 /25 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /3 /4 /6 /9 /10 /11 /14 /16 /18 /25 |
| H1465277 | u | Parella de botes baixes de seguretat industrial per a encofrador, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i amb | 6 |

| | | | |
|---|---|---|---|
| | | plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | |
| H146J364 | u | Parella de plantilles anticlaus de fleix d'acer de 0,4 mm de gruix, de 120 kg de resistència a la perforació, pintades amb pintures epoxi i folrades, homologades segons UNE-EN ISO 20344 i UNE-EN 12568 | 6 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /3 /4 /6 /9 /10 /11 /14 /16 /18 /25 |
| H1482222 | u | Camisa de treball per a construcció, de polièster i cotó (65%-35%), color beix amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 25 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H148D900 | u | Arnès per a senyalista, amb tires reflectants a la cintura, al pit, a l'esquena i als tirants, homologat segons UNE-EN 340 i UNE-EN 471 | 4 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 2 /4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 /4 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a | 1 |

| | | | |
|---|---|---|---|
| | | proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H152PB21 | m | Marquesina de protecció en voladiu de 3 m amb perfils d'acer IPN 140 fixats al sostre o llosa amb cargols passants i taulons de fusta, inclinació en l'extrem de 30 °, desmuntatge inclòs | 4 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /3 /4 /6 /9 /25 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 /4 |
| H1534001 | u | Peça de plàstic en forma de bolet, de color vermell, per a protecció dels extrems de les armadures per a qualsevol diàmetre, amb desmuntatge inclòs | 1 /2 /6 |
| H15A2021 | u | Torreta per al formigonat de pilars | 1 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /16 /25 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /16 /25 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /16 /25 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 10 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 2 /4 /9 /10 |
| H1426160 | u | Ulleres de seguretat per a protecció de riscs mecànics, amb muntura universal, amb visor de malla de reixeta metàl·lica, homologades segons UNE-EN 1731 | 10 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànіga llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 15 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 2 /4 /9 /10 /14 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /9 /14 /15 |
| H1465376 | u | Parella de botes baixes de seguretat industrial per a soldador, resistents a la humitat, de pell rectificada adobada al crom, amb turmellera encoixinada, amb llengüeta de manxa de despreniment ràpid, puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 10 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 9 /10 /14 /15 |
| H1482222 | u | Camisa de treball per a construcció, de polièster i cotó (65%-35%), color beix amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X038 | u | Plataforma horitzontal per aplec de materials en cobertes inclinades | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 4 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H15A2024 | u | Catifa portàtil de neoprè per a treball en plans inclinats | 2 |

## MESURES PREVENTIVES

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /16 /17 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 9 /10 /11 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /17 /18 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /16 /17 /18 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb | 4 |

| | | | |
|---|---|---|---|
| | | paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 /4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 4 /10 /17 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /16 /17 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H142AC60 | u | Pantalla facial per a soldadura elèctrica, amb marc abatible de mà i suport de polièster reforçat amb fibra de vidre vulcanitzada d'1,35 mm de gruix, amb visor inactínic semifosc amb protecció DIN 12, homologada segons UNE-EN 175 | 15 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànega llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 15 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 9 /10 /11 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera | 1 /2 /4 /6 /9 /10 /11 /14 |

| | | | |
|---|---|---|---|
| | | encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | /17 /18 |
| H1465376 | u | Parella de botes baixes de seguretat industrial per a soldador, resistents a la humitat, de pell rectificada adobada al crom, amb turmellera encoixinada, amb llengüeta de manxa de despreniment ràpid, puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 15 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /11 /14 /15 /16 /17 /18 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1488580 | u | Davantal per a soldador, de serratge, homologat segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 15 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |

| | | | |
|---|---|---|---|
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 /15 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /15 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /15 /16 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /15 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 17 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |

| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /11 /14 /16 /17 /18 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a | 1 |

| | | | |
|---|---|---|---|
| | | proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 /4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 6 /10 /17 |

## MESURES PREVENTIVES

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /16 /17 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /18 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 9 /10 /11 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /17 /18 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /11 /16 /17 /18 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb | 4 |

tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 /4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 10 /17 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /14 /15 /18 /21 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 14 /18 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1432012 | u | Protector auditiu d'auricular, acoblat al cap amb arnès i orelleres antisoroll, homologat segons UNE-EN 352-1 i UNE-EN 458 | 14 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànіga llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 15 /21 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 6 /9 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /9 /14 /15 /18 /21 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /14 /15 /16 /18 /21 |
| H1482222 | u | Camisa de treball per a construcció, de polièster i cotó (65%-35%), color beix amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, | 4 |

| | | | |
|---|---|---|---|
| | | homologada segons UNE-EN 471 | |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512010 | m2 | Protecció de projecció de partícules incandescents amb manta ignífuga, xarxa de seguretat normalitzada (UNE-EN 1263-1) poliamida no regenerada, de tenacitat alta, nuada amb corda perimetral de poliamida i corda de cosit de 12 mm de diàmetre i amb el desmuntatge inclòs | 21 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 |

| | | | |
|---|---|---|---|
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /15 /16 /17 /18 /21 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /15 /16 /17 /18 /21 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /15 /16 /17 /18 /21 |
| HM31161J | u | Extintor de pols seca, de 6 kg de càrrega, amb pressió incorporada, pintat, amb suport a la paret i amb el desmuntatge inclòs | 21 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000041 | Substituir la fabricació a obra per la prefabricació a taller | 9 |
| I0000045 | Formació | 13 /21 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 /17 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000065 | Evitar procés de soldadura a l'obra | 15 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000079 | Realitzar els treballs a l´aire lliure, sempre a sotavent | 17 |
| I0000080 | Elecció dels materials al disseny del projecte | 17 |
| I0000081 | Canvi o modificació del procés de treball | 17 |
| I0000082 | Aïllament del procés | 17 |
| I0000086 | Substituir els materials amb substàncies nocives | 18 |
| I0000097 | Substituir l'inflamable per no infamable | 21 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per | 4 /13 |

| | | |
|---|---|---|
| | manipular càrregues | |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 /9 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

## E07.E02 IMPERMEABILITZACIÓ DE MURS DE CONTENCIÓ I ELEMENTS SOTERRATS

IMPERMEABILITZACIÓ DE MURS DE CONTENCIÓ I ELEMENTS SOTERRATS DE FORMIGÓ ARMAT MITJANÇANT L'APLICACIÓ D'EMULSIONS, PINTURES I MEMBRANES

### EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 2 /4 /6 /9 /10 /14 /18 /21 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1432012 | u | Protector auditiu d'auricular, acoblat al cap amb arnès i orelleres antisoroll, homologat segons UNE-EN 352-1 i UNE-EN 458 | 14 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànega llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 21 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 9 /10 /14 /18 /21 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, | 16 |

| | | | |
|---|---|---|---|
| | | amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 2 /4 /6 /9 /10 /14 /18 /21 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 2 /4 /6 /9 /10 /14 /16 /18 /21 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512010 | m2 | Protecció de projecció de partícules incandescents amb manta ignífuga, xarxa de seguretat normalitzada (UNE-EN 1263-1) poliamida no regenerada, de tenacitat alta, nuada amb corda perimetral de poliamida i corda de cosit de 12 mm de diàmetre i amb el desmuntatge inclòs | 21 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 2 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H154M029 | u | Mampara plegable de protecció contra projecció de partícules de tauler de fusta amb acabat estratificat, d'alçària 2 m i amplària 3 m, i amb el desmuntatge inclòs | 21 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 2 /4 /6 /9 /10 /13 /16 /17 /18 /21 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 2 /4 /6 /9 /10 /13 /16 /17 /18 /21 |
| HBBAC005 | u | Senyal indicativa de la ubicació d'equips d'extinció d'incendis, normalitzada amb pictograma blanc sobre fons vermell, de forma rectangular o quadrada, costat major 29 cm, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 21 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el | 2 /4 /6 /9 /10 /13 /16 /17 /18 /21 |

| | | | |
|---|---|---|---|
| | | desmuntatge inclòs | |
| HM31161J | u | Extintor de pols seca, de 6 kg de càrrega, amb pressió incorporada, pintat, amb suport a la paret i amb el desmuntatge inclòs | 21 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /14 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 9 /10 /14 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /14 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN | 1 /2 /4 /6 /9 /10 /14 /16 |

| | | | |
|---|---|---|---|
| | | 340 | |
| H1482222 | u | Camisa de treball per a construcció, de polièster i cotó (65%-35%), color beix amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats | 1 /2 /6 |

| | | | |
|---|---|---|---|
| | | amb forats al sostre | |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 /4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons | 1 /2 /6 /9 /10 |

| | | | |
|---|---|---|---|
| | | blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | /13 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /6 /9 /10 /13 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /6 /9 /10 /13 /17 /18 |

MESURES PREVENTIVES

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H147D501 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus absorbent d'energia, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 355 | 1 |

| | | | |
|---|---|---|---|
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481542 | u | Granota de treball per a guixaires i/o pintors, de polièster i cotó (65%-35%), color blanc, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1484110 | u | Samarreta de treball, de cotó | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |
| HX11X052 | u | Pont volat semiprefabricat per treballs en ràfecs amb plataforma de treball i barana perimetral amb els requisits reglamentaris amb sistema de seguretat integrat | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |

| | | | |
|---|---|---|---|
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152PA11 | m | Marquesina de protecció de 2,5 m amb estructura metàl·lica tubular i plataforma de fusta, desmuntatge inclòs | 4 |
| H152PB21 | m | Marquesina de protecció en voladiu de 3 m amb perfils d'acer IPN 140 fixats al sostre o llosa amb cargols passants i taulons de fusta, inclinació en l'extrem de 30 °, desmuntatge inclòs | 4 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 4 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 4 /17 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H147D501 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus absorbent d'energia, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 355 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1482222 | u | Camisa de treball per a construcció, de polièster i cotó (65%-35%), color beix amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |
| HX11X052 | u | Pont volat semiprefabricat per treballs en ràfecs amb plataforma de treball i barana perimetral amb els requisits reglamentaris amb sistema de seguretat integrat | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152PA11 | m | Marquesina de protecció de 2,5 m amb estructura metàl·lica tubular i plataforma de fusta, desmuntatge inclòs | 4 |
| H152PB21 | m | Marquesina de protecció en voladiu de 3 m amb perfils d'acer IPN 140 fixats al sostre o llosa amb cargols passants i taulons de fusta, inclinació en l'extrem de 30 °, desmuntatge inclòs | 4 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 4 |

| | | | |
|---|---|---|---|
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /16 /17 /18 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 4 /17 |

MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 /17 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 /16 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000033 | Solicitar habilitació professional del personal encarregat del manteniment de l'obra | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /13 /18 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 /17 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000064 | Suspensió de les feines a cobertes inclinades amb vent superior a 40 km/h | 14 |

| | | |
|---|---|---|
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000078 | Evitar processos de divissió de material en sec | 17 |
| I0000079 | Realitzar els treballs a l´aire lliure, sempre a sotavent | 17 |
| I0000082 | Aïllament del procés | 17 |
| I0000084 | Talls amb serra de trepar per via humida, amb proteccións integrades | 17 |
| I0000085 | Ventilació de les zones de treball | 17 |
| I0000086 | Substituir els materials amb substàncies nocives | 18 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 4 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

### EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /9 /10 /14 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /9 /10 /14 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |

| | | | |
|---|---|---|---|
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /9 /10 /14 |
| H147D501 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus absorbent d'energia, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 355 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481542 | u | Granota de treball per a guixaires i/o pintors, de polièster i cotó (65%-35%), color blanc, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /9 /10 /14 |
| H1484110 | u | Samarreta de treball, de cotó | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |

| | | | |
|---|---|---|---|
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152PA11 | m | Marquesina de protecció de 2,5 m amb estructura metàl·lica tubular i plataforma de fusta, desmuntatge inclòs | 4 |
| H152PB21 | m | Marquesina de protecció en voladiu de 3 m amb perfils d'acer IPN 140 fixats al sostre o llosa amb cargols passants i taulons de fusta, inclinació en l'extrem de 30 °, desmuntatge inclòs | 4 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 4 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000033 | Solicitar habilitació professional del personal encarregat del manteniment de l'obra | 4 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |

| | | |
|---|---|---|
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /13 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 4 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /9 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

## E08.E04 PINTATS I ENVERNISATS

PINTAT D'ESTRUCTURES, PARAMENTS, ELEMENTS DE TANCAMENT, PROTECCIÓ, CALEFACCIÓ, TUBS I ENVERNISSATS

### EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|

| | | | |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /9 /10 /14 /16 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1432012 | u | Protector auditiu d'auricular, acoblat al cap amb arnès i orelleres antisoroll, homologat segons UNE-EN 352-1 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H14462N4 | u | Semimàscara filtrant de protecció contra partícules d'eficacia mitja, tipus FFP, classe 2, (FFP2), no reutilitzable (NR), segons norma UNE-EN 149, sense vàlvula | 17 |
| H145B002 | u | Parella de guants de protecció contra riscs mecànics per manipulació de paqueteria i/o materials sense arestes vives, nivell 2, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /9 /10 /14 /18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /9 /10 /14 /18 |
| H147D501 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus absorbent d'energia, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 355 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481542 | u | Granota de treball per a guixaires i/o pintors, de polièster i cotó (65%-35%), color blanc, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /9 /10 /14 /16 /18 |
| H1484110 | u | Samarreta de treball, de cotó | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X052 | u | Pont volat semiprefabricat per treballs en ràfecs amb plataforma de treball i barana perimetral amb els requisits reglamentaris amb sistema de seguretat integrat | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512005 | m2 | Protecció col·lectiva vertical de bastides tubulars i/o muntacàrregues amb malla de polipropilè tupida tipus mosquitera, traus perimetrals amb reforç i corda de diàmetre 6 mm i amb el desmuntatge inclòs | 4 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152PA11 | m | Marquesina de protecció de 2,5 m amb estructura metàl·lica tubular i plataforma de fusta, desmuntatge inclòs | 4 |
| H152PB21 | m | Marquesina de protecció en voladiu de 3 m amb perfils d'acer IPN 140 fixats al sostre o llosa amb cargols passants i taulons de fusta, inclinació en l'extrem de 30 °, desmuntatge inclòs | 4 |
| H154M029 | u | Mampara plegable de protecció contra projecció de partícules de tauler de fusta amb acabat estratificat, d'alçària 2 m i amplària 3 m, i amb el desmuntatge inclòs | 17 /18 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 /17 /18 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 /17 /18 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1432012 | u | Protector auditiu d'auricular, acoblat al cap amb arnès i orelleres antisoroll, homologat segons UNE-EN 352-1 i UNE-EN 458 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /9 /10 /11 /14 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /18 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /16 /18 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, | 14 |

| | | | |
|---|---|---|---|
| | | butxaques exteriors | |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 /17 /18 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell | 1 /2 /4 /6 /9 /10 /11 /13 |

| | | | |
|---|---|---|---|
| | | explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | /16 /17 /18 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 10 |

| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /17 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /16 /17 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |

### MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

### SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de | 1 |

| | | | |
|---|---|---|---|
| | | malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 /6 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 1 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HDS11411 | m | Baixant de runes de tub de PVC, de 40 cm de diàmetre, amb boques de descàrrega, brides i acoblament, col·locat i amb el desmuntatge inclòs | 6 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000013 | Ordre i neteja | 2 /6 /17 |

| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 |
| H147D102 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un element d'amarrament composat per un terminal manufacturat, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 354 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /16 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |

| | | | |
|---|---|---|---|
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512007 | m | Protecció col·lectiva vertical del perímetre de les façanes contra caigudes de persones u objectes, amb suport metàl·lic tipus mènsula, de llargària 2,5 m, barra porta xarxes horitzontal, serjant d'ancoratge al sostre, xarxa de seguretat horitzontal i amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H1512212 | m | Protecció col·lectiva vertical del perímetre del sostre amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, d'alçària 5 m, amb ancoratges d'emborsament inferior, fixada al sostre cada 0.5 amb ganxos embeguts en el formigó, cordes d'hissat i subjecció de 12 mm de diàmetre, pescant metàl·lic de forca fixats al sostre cada 4,5 m amb ganxos embeguts en el formigó, en 1a col·locació i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 1 /2 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 /17 |

|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /21 |
| H1411112 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, dotat d'il·luminació autònoma, homologat segons UNE-EN 812 | 14 |
| H1414119 | u | Casc de seguretat, de polietilè, amb un pes màxim de 400 g, amb pantalla facial amb visor de malla de reixeta metàl·lica, acoblada amb arnès abatible, homologat segons UNE-EN 812 i UNE-EN 1731 | 20 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 |
| H1423230 | u | Ulleres de seguretat per a tall oxiacetilènic, amb muntura universal de barnilla d'acer recoberta de PVC, amb visors circulars de 50 mm de D foscos de color DIN 5, homologades segons UNE-EN 175 i UNE-EN 169 | 10 |
| H142AC60 | u | Pantalla facial per a soldadura elèctrica, amb marc abatible de mà i suport de polièster reforçat amb fibra de vidre vulcanitzada d'1,35 mm de gruix, amb visor inactínic semifosc amb protecció DIN 12, homologada segons UNE-EN 175 | 10 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H14462N4 | u | Semimàscara filtrant de protecció contra partícules d'eficacia mitja, tipus FFP, classe 2, (FFP2), no reutilitzable (NR), segons norma UNE-EN 149, sense vàlvula | 17 |
| H144E406 | u | Filtre mixte contra gasos i partícules, homologat segons UNE-EN 14387 i UNE-EN 12083 | 17 |
| H144JA20 | u | Equip autònom de respiració amb mascareta amb visor panoràmic per a ambients amb un nivell d'oxigen inferior al 16% d'alta toxicitat, regulador de pressió positiva, avisador acústic a 50 bar i botella de 7 l a 200 bar, amb autonomia de 45 minuts, vàlvula d'exhalació | 21 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 /15 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànega llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 10 /15 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /9 /10 /11 /20 /21 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 /11 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H145K397 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 1, logotip color blanc, tensió màxima 7500 V, homologats segons UNE-EN 420 | 16 |
| H1461110 | u | Parella de botes d'aigua de PVC de canya alta, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /20 /21 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a | 1 |

| | | | |
|---|---|---|---|
| | | subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481242 | u | Granota de treball per a construcció, de polièster i cotó (65%-35%), color beix, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 6 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /20 /21 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 /11 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1488580 | u | Davantal per a soldador, de serratge, homologat segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |

### MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

### SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512010 | m2 | Protecció de projecció de partícules incandescents amb manta ignífuga, xarxa de seguretat normalitzada (UNE-EN 1263-1) poliamida no regenerada, de tenacitat alta, nuada amb corda perimetral de poliamida i corda de cosit de 12 mm de diàmetre i amb el desmuntatge inclòs | 10 /15 /21 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |

| | | | |
|---|---|---|---|
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 2 /6 /11 /15 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H154M029 | u | Mampara plegable de protecció contra projecció de partícules de tauler de fusta amb acabat estratificat, d'alçària 2 m i amplària 3 m, i amb el desmuntatge inclòs | 10 /15 /20 /21 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |
| H16C0003 | d | Detector de gasos portàtil, per a espais confinats, amb detector de gas combustible, O2, CO i H2S | 17 /20 /21 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /15 /16 /17 /20 /21 |
| HBBAA007 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 10 cm, amb cartell explicatiu rectangular, per ser vista fins 3 m, fixada i amb el desmuntatge inclòs | 16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /15 /16 /17 /20 /21 |
| HBBAC005 | u | Senyal indicativa de la ubicació d'equips d'extinció d'incendis, normalitzada amb pictograma blanc sobre fons vermell, de forma rectangular o quadrada, costat major 29 cm, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 20 /21 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /14 /15 /16 /17 /20 /21 |
| HM31161J | u | Extintor de pols seca, de 6 kg de càrrega, amb pressió incorporada, pintat, amb suport a la paret i amb el desmuntatge inclòs | 10 /20 /21 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |

| | | |
|---|---|---|
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000011 | Incorporar al projecte mesures de protecció per al muntatge i manteniment de la instal.lació | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 /17 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000033 | Solicitar habilitació professional del personal encarregat del manteniment de l'obra | 4 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /13 /21 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 /17 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000065 | Evitar procés de soldadura a l'obra | 15 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000078 | Evitar processos de divissió de material en sec | 17 |
| I0000080 | Elecció dels materials al disseny del projecte | 17 |
| I0000082 | Aïllament del procés | 17 |
| I0000085 | Ventilació de les zones de treball | 17 |
| I0000091 | No soldar sobre contenidors de materials inflamables o explosius (pintures, dissolvents, etc) | 20 |
| I0000092 | Utilitzar aigua sabonosa per a detectar fuites de gas | 20 |
| I0000093 | Evitar unions de mangueres amb filferros | 20 |
| I0000094 | Revisió periòdica dels equips de treball | 20 |
| I0000095 | Impedir el contacte de l'acetilè amb el coure | 20 |
| I0000096 | No fumar | 20 |
| I0000097 | Substituir l'inflamable per no infamable | 21 |
| I0000099 | Establir una zona de protecció de radi 10 m, en treballs de soldadura i tall amb serra radial | 20 /21 |
| I0000123 | Assegurar l'absència de tensió | 16 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 1 /4 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 /9 |

| | | |
|---|---|---|
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 16 /17 /21 |
| I0000158 | Accessoris dielectrics (escala, banqueta, bastida, perxa de terra) si hi ha risc contacte elèctric | 16 |
| I0000159 | Per manipular càrregues llargues amb grua, utilitzar biga de repartiment | 4 /11 |
| I0000160 | Traslladar materials amb la grua dins d'una caixa o sarcòfeg | 4 /11 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |
| I0000165 | En manipular sistemes elèctrics, connexions, etc, verificar que les linies no estan en tensió | 16 /21 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /16 /20 /21 |
| H1411112 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, dotat d'il·luminació autònoma, homologat segons UNE-EN 812 | 14 |
| H1411115 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, amb tires reflectants, homologat segons UNE-EN 812 | 12 |
| H1414119 | u | Casc de seguretat, de polietilè, amb un pes màxim de 400 g, amb pantalla facial amb visor de malla de reixeta metàl·lica, acoblada amb arnès abatible, homologat segons UNE-EN 812 i UNE-EN 1731 | 10 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1423230 | u | Ulleres de seguretat per a tall oxiacetilènic, amb muntura universal de barnilla d'acer recoberta de PVC, amb visors circulars de 50 mm de D foscos de color DIN 5, homologades segons UNE-EN 175 i UNE-EN 169 | 10 |
| H142AC60 | u | Pantalla facial per a soldadura elèctrica, amb marc abatible de mà i suport de polièster reforçat amb fibra de vidre vulcanitzada d'1,35 mm de gruix, amb visor inactínic semifosc amb protecció DIN 12, homologada segons UNE-EN 175 | 10 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H14462N4 | u | Semimàscara filtrant de protecció contra partícules d'eficacia mitja, tipus FFP, classe 2, (FFP2), no reutilitzable (NR), segons norma UNE-EN 149, sense vàlvula | 17 |
| H144E406 | u | Filtre mixte contra gasos i partícules, homologat segons UNE-EN 14387 i UNE-EN 12083 | 17 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 /15 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i màniga llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 10 /15 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 /20 /21 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 /11 /12 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1461110 | u | Parella de botes d'aigua de PVC de canya alta, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta | 16 |

| | | | |
|---|---|---|---|
| | | metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /18 /20 /21 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /18 /20 /21 |
| H1481654 | u | Granota de treball per a soldadors i/o treballadors de tubs, de cotó sanforitzat (100%), color blau vergara, trama 320, amb butxaques interiors dotades de cremalleres metàl·liques, homologada segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 /11 /12 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1488580 | u | Davantal per a soldador, de serratge, homologat segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |

### MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

### SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512010 | m2 | Protecció de projecció de partícules incandescents amb manta ignífuga, xarxa de seguretat normalitzada (UNE-EN 1263-1) poliamida no regenerada, de tenacitat alta, nuada amb corda perimetral de poliamida i | 10 /15 /21 |

| | | | |
|---|---|---|---|
| | | corda de cosit de 12 mm de diàmetre i amb el desmuntatge inclòs | |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 18 |
| H153A9F1 | u | Topall per a descàrrega de camions en excavacions, de 4 m d'amplada amb tauló de fusta i perfils IPN 100 clavat al terreny i amb el desmuntatge inclòs | 12 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H154M029 | u | Mampara plegable de protecció contra projecció de partícules de tauler de fusta amb acabat estratificat, d'alçària 2 m i amplària 3 m, i amb el desmuntatge inclòs | 10 /15 /17 /21 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |
| H16C0003 | d | Detector de gasos portàtil, per a espais confinats, amb detector de gas combustible, O2, CO i H2S | 17 /20 /21 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |
| HBBAA007 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 10 cm, amb cartell explicatiu rectangular, per ser vista fins 3 m, fixada i amb el desmuntatge inclòs | 1 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |

| | | | |
|---|---|---|---|
| HBBAC005 | u | Senyal indicativa de la ubicació d'equips d'extinció d'incendis, normalitzada amb pictograma blanc sobre fons vermell, de forma rectangular o quadrada, costat major 29 cm, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 20 /21 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |
| HM31161J | u | Extintor de pols seca, de 6 kg de càrrega, amb pressió incorporada, pintat, amb suport a la paret i amb el desmuntatge inclòs | 10 /20 /21 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 /17 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 /11 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000033 | Solicitar habilitació professional del personal encarregat del manteniment de l'obra | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /12 /13 /18 /21 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000051 | Adequació dels recorreguts de la maquinària | 12 |
| I0000053 | Procediment d'utilització de la maquinària | 12 |
| I0000054 | Ús de recolzaments hidràulics | 12 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 /17 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000065 | Evitar procés de soldadura a l'obra | 15 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |

| | | |
|---|---|---|
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000078 | Evitar processos de divissió de material en sec | 17 |
| I0000079 | Realitzar els treballs a l´aire lliure, sempre a sotavent | 17 |
| I0000080 | Elecció dels materials al disseny del projecte | 17 |
| I0000082 | Aïllament del procés | 17 |
| I0000083 | Dispositius d'alarma | 17 |
| I0000085 | Ventilació de les zones de treball | 17 |
| I0000086 | Substituir els materials amb substàncies nocives | 17 /18 |
| I0000091 | No soldar sobre contenidors de materials inflamables o explosius (pintures, dissolvents, etc) | 20 |
| I0000092 | Utilitzar aigua sabonosa per a detectar fuites de gas | 20 |
| I0000093 | Evitar unions de mangueres amb filferros | 20 |
| I0000094 | Revisió periòdica dels equips de treball | 20 |
| I0000095 | Impedir el contacte de l'acetilè amb el coure | 20 |
| I0000096 | No fumar | 20 |
| I0000099 | Establir una zona de protecció de radi 10 m, en treballs de soldadura i tall amb serra radial | 20 /21 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 1 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 /9 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 21 |
| I0000158 | Accessoris dielectrics (escala, banqueta, bastida, perxa de terra) si hi ha risc contacte elèctric | 16 |
| I0000159 | Per manipular càrregues llargues amb grua, utilitzar biga de repartiment | 4 /11 |
| I0000160 | Traslladar materials amb la grua dins d'una caixa o sarcòfeg | 4 /11 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /16 /20 /21 |
| H1411112 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, dotat d'il·luminació autònoma, homologat segons UNE-EN 812 | 14 |
| H1411115 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, amb tires reflectants, homologat segons UNE-EN 812 | 12 |
| H1414119 | u | Casc de seguretat, de polietilè, amb un pes màxim de 400 g, amb pantalla facial amb visor de malla de reixeta metàl·lica, acoblada amb arnès abatible, homologat segons UNE-EN 812 i UNE-EN 1731 | 10 /18 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 /18 |
| H1423230 | u | Ulleres de seguretat per a tall oxiacetilènic, amb muntura universal de barnilla d'acer recoberta de PVC, amb visors circulars de 50 mm de D foscos de color DIN 5, homologades segons UNE-EN 175 i UNE-EN 169 | 10 |
| H142AC60 | u | Pantalla facial per a soldadura elèctrica, amb marc abatible de mà i suport de polièster reforçat amb fibra de vidre vulcanitzada d'1,35 mm de gruix, amb visor inactínic semifosc amb protecció DIN 12, homologada segons UNE-EN 175 | 10 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1445003 | u | Mascareta de protecció respiratòria, homologada segons UNE-EN 140 | 17 |
| H14462N4 | u | Semimàscara filtrant de protecció contra partícules d'eficacia mitja, tipus FFP, classe 2, (FFP2), no reutilitzable (NR), segons norma UNE-EN 149, sense vàlvula | 17 |
| H144E406 | u | Filtre mixte contra gasos i partícules, homologat segons UNE-EN 14387 i UNE-EN 12083 | 17 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 /15 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de | 10 /15 |

| | | | |
|---|---|---|---|
| | | cotó, i màniga llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 /20 /21 |
| H145E003 | u | Parella de guants contra agents químics i microorganismes, homologats segons UNE-EN 374-1, UNE-EN ISO 11298-2, UNE-EN 1998-3 i UNE-EN 420 | 18 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 /11 /12 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1461110 | u | Parella de botes d'aigua de PVC de canya alta, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /18 /20 /21 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /14 /15 /18 /20 /21 |
| H1481654 | u | Granota de treball per a soldadors i/o treballadors de tubs, de cotó sanforitzat (100%), color blau vergara, trama 320, amb butxaques interiors dotades de cremalleres metàl·liques, homologada segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 /11 /12 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1488580 | u | Davantal per a soldador, de serratge, homologat segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512010 | m2 | Protecció de projecció de partícules incandescents amb manta ignífuga, | 10 /15 /21 |

| | | | |
|---|---|---|---|
| | | xarxa de seguretat normalitzada (UNE-EN 1263-1) poliamida no regenerada, de tenacitat alta, nuada amb corda perimetral de poliamida i corda de cosit de 12 mm de diàmetre i amb el desmuntatge inclòs | |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 18 |
| H153A9F1 | u | Topall per a descàrrega de camions en excavacions, de 4 m d'amplada amb tauló de fusta i perfils IPN 100 clavat al terreny i amb el desmuntatge inclòs | 12 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H154M029 | u | Mampara plegable de protecció contra projecció de partícules de tauler de fusta amb acabat estratificat, d'alçària 2 m i amplària 3 m, i amb el desmuntatge inclòs | 10 /15 /17 /21 |
| H15A2017 | u | Extractor localitzat de gasos contaminants en treballs de soldadura amb velocitat de captura de 0.5 a 1 m/s, col·locat | 17 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |
| H16C0003 | d | Detector de gasos portàtil, per a espais confinats, amb detector de gas combustible, O2, CO i H2S | 17 /20 /21 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |
| HBBAA007 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 10 cm, amb cartell explicatiu rectangular, per ser vista fins 3 m, fixada i amb el desmuntatge inclòs | 1 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |
| HBBAC005 | u | Senyal indicativa de la ubicació d'equips d'extinció d'incendis, normalitzada | 20 /21 |

| | | | |
|---|---|---|---|
| | | amb pictograma blanc sobre fons vermell, de forma rectangular o quadrada, costat major 29 cm, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /12 /13 /14 /15 /16 /17 /18 /20 /21 |
| HM31161J | u | Extintor de pols seca, de 6 kg de càrrega, amb pressió incorporada, pintat, amb suport a la paret i amb el desmuntatge inclòs | 10 /20 /21 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 /17 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000033 | Solicitar habilitació professional del personal encarregat del manteniment de l'obra | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /12 /13 /18 /21 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000051 | Adequació dels recorreguts de la maquinària | 12 |
| I0000053 | Procediment d'utilització de la maquinària | 12 |
| I0000054 | Ús de recolzaments hidràulics | 12 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 /17 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000065 | Evitar procés de soldadura a l'obra | 15 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |

| | | |
|---|---|---|
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000078 | Evitar processos de divissió de material en sec | 17 |
| I0000079 | Realitzar els treballs a l´aire lliure, sempre a sotavent | 17 |
| I0000080 | Elecció dels materials al disseny del projecte | 17 |
| I0000082 | Aïllament del procés | 17 |
| I0000083 | Dispositius d'alarma | 17 |
| I0000085 | Ventilació de les zones de treball | 17 |
| I0000086 | Substituir els materials amb substàncies nocives | 17 /18 |
| I0000091 | No soldar sobre contenidors de materials inflamables o explosius (pintures, dissolvents, etc) | 20 |
| I0000092 | Utilitzar aigua sabonosa per a detectar fuites de gas | 20 |
| I0000093 | Evitar unions de mangueres amb filferros | 20 |
| I0000094 | Revisió periòdica dels equips de treball | 20 |
| I0000095 | Impedir el contacte de l'acetilè amb el coure | 20 |
| I0000096 | No fumar | 20 |
| I0000099 | Establir una zona de protecció de radi 10 m, en treballs de soldadura i tall amb serra radial | 20 /21 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 11 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 /9 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 16 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /6 /9 /10 /11 /14 |
| H1411112 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, dotat d'il·luminació autònoma, homologat segons UNE-EN 812 | 14 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 |
| H142BA00 | u | Pantalla facial per a protegir contra la projecció de partícules i a l'encebament d'arcs elèctrics, de policarbonat transparent, per a acoblar al casc amb arnès dielèctric | 10 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i màniga llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 10 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /6 /9 /10 /11 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 11 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1461110 | u | Parella de botes d'aigua de PVC de canya alta, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /6 /9 /10 /11 /14 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /6 /9 /10 /11 /14 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |

| | | | |
|---|---|---|---|
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 11 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |

| | | | |
|---|---|---|---|
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000011 | Incorporar al projecte mesures de protecció per al muntatge i manteniment de la instal.lació | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000045 | Formació | 10 /13 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000064 | Suspensió de les feines a cobertes inclinades amb vent superior a 40 km/h | 14 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |

| | | |
|---|---|---|
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000123 | Assegurar l'absència de tensió | 16 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 11 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000158 | Accessoris dielectrics (escala, banqueta, bastida, perxa de terra) si hi ha risc contacte elèctric | 16 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |
| I0000165 | En manipular sistemes elèctrics, connexions, etc, verificar que les linies no estan en tensió | 16 |

### EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /9 /10 /14 |
| H1411112 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, dotat d'il·luminació autònoma, homologat segons UNE-EN 812 | 14 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 /14 |
| H142BA00 | u | Pantalla facial per a protegir contra la projecció de partícules i a l'encebament d'arcs elèctrics, de policarbonat transparent, per a acoblar al casc amb arnès dielèctric | 10 |
| H1431101 | u | Protector auditiu de tap d'escuma, homologat segons UNE-EN 352-2 i UNE-EN 458 | 14 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE- | 14 |

| | | | |
|---|---|---|---|
| | | EN 511 i UNE-EN 420 | |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànega llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 10 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /9 /10 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1461110 | u | Parella de botes d'aigua de PVC de canya alta, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /9 /10 /14 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /9 /10 /14 |
| H1482422 | u | Camisa de treball per a muntatges i/o treballs mecànics, soldadors i/o treballadors de tubs, de polièster i cotó (65%-35%), color blavenc amb butxaques interiors, trama 240, homologada segons UNE-EN 340 | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1486241 | u | Casaca tipus enginyer, de polièster embuatada amb material aïllant, butxaques exteriors | 14 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |

### MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |

### SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota | 1 |

| | | | |
|---|---|---|---|
| | | l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H152M671 | m | Barana de protecció prefabricada per a forats d'ascensor, d'alçària 1 m, fixada amb cargols d'ataconat als brancals de fàbrica i amb el desmuntatge inclòs | 1 |
| H152N681 | m | Barana de protecció sobre sostre o llosa, d'alçària 1 m, enjovada en cèrcol perimetral de formigó cada 2,5 m i amb el desmuntatge inclòs | 1 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /9 /10 /13 /16 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /15 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 10 |
| H1423230 | u | Ulleres de seguretat per a tall oxiacetilènic, amb muntura universal de barnilla d'acer recoberta de PVC, amb visors circulars de 50 mm de D foscos de color DIN 5, homologades segons UNE-EN 175 i UNE-EN 169 | 10 |
| H142AC60 | u | Pantalla facial per a soldadura elèctrica, amb marc abatible de mà i suport de polièster reforçat amb fibra de vidre vulcanitzada d'1,35 mm de gruix, amb visor inactínic semifosc amb protecció DIN 12, homologada segons UNE-EN 175 | 10 |
| H1459630 | u | Parella de guants per a soldador, amb palmell de pell, folre interior de cotó, i mànega llarga de serratge folrada de dril fort, homologats segons UNE-EN 407 i UNE-EN 420 | 10 /15 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 /11 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /11 /15 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147K602 | u | Sistema de subjecció en posició de treball i prevenció de pèrdua d'equilibri, compost d'una banda de cintura, sivella, recolzament dorsal, elements d'enganxament, connector, element d'amarrament del sistema d'ajust de longitud, homologat segons UNE-EN 358, UNE-EN 362, UNE-EN 354 i UNE-EN 364 | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |

| | | | |
|---|---|---|---|
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /15 |
| H1481654 | u | Granota de treball per a soldadors i/o treballadors de tubs, de cotó sanforitzat (100%), color blau vergara, trama 320, amb butxaques interiors dotades de cremalleres metàl·liques, homologada segons UNE-EN 340, UNE-EN 470-1 i UNE-EN 348 | 10 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 /11 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X003 | u | Bastida modular amb estructura tubular i sistema de seguretat amb tots els requisits reglamentaris en previsió de caigudes per a la realització d'estructures, tancaments, cobertes, i altres treballs en alçada | 1 |
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H1521431 | m | Barana de protecció per a escales, d'alçària 1 m, amb travesser de tauló de fusta fixada amb suports de muntant metàl·lic amb mordassa per al sostre i amb el desmuntatge inclòs | 1 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 4 |
| H15B0007 | u | Pantalla aïllant per a treballs en zones d'influència de línies elèctriques en tensió | 16 |
| H15B6006 | u | Aïllant de cautxú per a conductor de línia elèctrica en tensió, de llargària 3 m | 16 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell | 1 /2 /4 /6 /9 /10 /11 /16 |

| | | | |
|---|---|---|---|
| | | explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /16 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000005 | Integrar la seguretat al disseny arquitectònic | 1 |
| I0000006 | Disseny i estudi de les mesures preventives en fase de projecte | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000009 | Realitzar el reblert de l´extradós del mur quan aquest estigui en condicions d'entrar en servei | 1 |
| I0000011 | Incorporar al projecte mesures de protecció per al muntatge i manteniment de la instal.lació | 1 |
| I0000012 | Assegurar les escales de mà | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 /11 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 /11 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000042 | Evitar processos de manipulació de materials a obra | 9 |
| I0000045 | Formació | 10 /13 |
| I0000047 | Planificació i procediments per a la càrrega i descàrrega de materials | 11 |
| I0000050 | No treballar ni estar al radi d'acció de les càrregues suspesses | 11 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000065 | Evitar procés de soldadura a l'obra | 15 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 16 |
| I0000159 | Per manipular càrregues llargues amb grua, utilitzar biga de repartiment | 11 |
| I0000160 | Traslladar materials amb la grua dins d'una caixa o sarcòfeg | 4 |

| | | |
|---|---|---|
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /16 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 16 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1464420 | u | Parella de botes de mitja canya, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora | 1 /2 /4 /6 /9 /10 |

| | | | |
|---|---|---|---|
| | | d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /14 /16 |
| H1485140 | u | Armilla de treball, de polièster embuatada amb material aïllant | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1489890 | u | Jaqueta de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques, homologada segons UNE-EN 340 | 14 |

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |
| HX11X052 | u | Pont volat semiprefabricat per treballs en ràfecs amb plataforma de treball i barana perimetral amb els requisits reglamentaris amb sistema de seguretat integrat | 1 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H15118D1 | m2 | Protecció amb vela de lona de polietilè per a proteccions superficials contra caigudes, amb malla de reforç i traus perimetrals, corda de subjecció, de diàmetre 12 mm, amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda | 1 |

| | | | |
|---|---|---|---|
| | | perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 4 |
| H1531114 | u | Plataforma en voladís, abatible per a càrrega i descàrrega de materials, d'1.4x1,7 m de planxa d'acer gofrada i perfils portants d'acer UPN 160, amb baranes laterals metàl·liques i cadena d'accés, fixada amb puntals i amb el desmuntatge inclòs | 4 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| H15A2024 | u | Catifa portàtil de neoprè per a treball en plans inclinats | 1 /2 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /13 /16 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000018 | No alterar bruscament l'estabilitat de l'edifici | 4 |
| I0000020 | No realitzar treballs a la mateixa vertical | 4 |
| I0000021 | Establir punts de referència per a controlar els moviments de l'estructura | 4 |
| I0000022 | Condena de la planta inferior en que s'ha de formigonar | 4 |
| I0000023 | Solicitar dades de les característiques físiques de les terres | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000041 | Substituir la fabricació a obra per la prefabricació a taller | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /13 |

| | | |
|---|---|---|
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000064 | Suspensió de les feines a cobertes inclinades amb vent superior a 40 km/h | 14 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 4 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 /6 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 14 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 16 |
| I0000158 | Accessoris dielectrics (escala, banqueta, bastida, perxa de terra) si hi ha risc contacte elèctric | 16 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |
| I0000165 | En manipular sistemes elèctrics, connexions, etc, verificar que les linies no estan en tensió | 16 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /14 /16 |
| H1414119 | u | Casc de seguretat, de polietilè, amb un pes màxim de 400 g, amb pantalla facial amb visor de malla de reixeta metàl·lica, acoblada amb arnès abatible, homologat segons UNE-EN 812 i UNE-EN 1731 | 14 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 16 |
| H1457520 | u | Parella de guants aïllants del fred i absorbents de les vibracions, de PVC sobre suport d'escuma de poliuretà, folrats interiorment amb teixit hidròfug reversible, amb maniguets fins a mig avantbraç, homologats segons UNE-EN 511 i UNE-EN 420 | 14 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 |
| H145F004 | u | Parella de guants d'alta visibilitat pigmentats en color fosforescent per a estibadors de càrregues amb grua i/o senyalistes, homologats segons UNE-EN 471 i UNE-EN 420 | 4 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1464420 | u | Parella de botes de mitja canya, amb sola antilliscant i folrades de niló rentable, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 14 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /14 /16 |
| H1485140 | u | Armilla de treball, de polièster embuatada amb material aïllant | 14 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1489890 | u | Jaqueta de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques, homologada segons UNE-EN 340 | 14 |

## MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent | 1 |

| | | | |
|---|---|---|---|
| | | nivell, superiors a 7 m amb sistema de seguretat integrat | |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AEL1 | m2 | Protecció horitzontal d'obertures amb malla electrosoldada de barres corrugades d'acer 10x 10 cm i de 3 - 3 mm de diàmetre embegut en el formigó i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 4 |
| H1542013 | u | Protecció solar de la zona de treball de 4x8 m i 3 m d'alçària, a base de perfils metàl·lics ancorats a terra, corda de fibra vegetal tensada, vela de polietilè perforada amb traus perimetrals nuada a les cordes i amb el desmuntatge inclòs | 14 |
| H1549002 | m | Pantalla de protecció per a treballs exposats al vent, d'alçària 2,5 m de planxa nervada d'acer galvanitzat, tornapuntes de perfils d'acer ancorats al terreny amb formigó cada 1,5 m i amb el desmuntatge inclòs | 14 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |

## MESURES PREVENTIVES

| Codi | Descripció | Riscos |
|---|---|---|
| I0000002 | Planificar els treballs per a mantenir el màxim de temps possible les proteccions | 1 |
| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000041 | Substituir la fabricació a obra per la prefabricació a taller | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |

## EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /14 /16 |
| H1421110 | u | Ulleres de seguretat antiimpactes estàndard, amb muntura universal, amb visor transparent i tractament contra l'entelament, homologades segons UNE-EN 167 i UNE-EN 168 | 16 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /14 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /4 /6 /9 /10 /14 |
| H147D405 | u | Sistema anticaiguda compost per un arnès anticaiguda amb tirants, bandes secundàries, bandes subglúties, bandes de cuixa, recolzament dorsal per a subjecció, elements d'ajust, element dorsal d'enganxament d'arnès anticaiguda i sivella, incorporat a un subsistema anticaiguda de tipus lliscant sobre línia d'ancoratge flexible de llargaria 10 m, homologat segons UNE-EN 361, UNE-EN 362, UNE-EN 364, UNE-EN 365 i UNE-EN 353-2 | 1 |
| H147L015 | u | Aparell d'ancoratge per a equip de protecció individual contra caiguda d'alçada, homologat segons UNE-EN 795, amb fixació amb tac mecànic | 1 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /14 /16 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, | 4 /14 |

| | | | |
|---|---|---|---|
| | | homologada segons UNE-EN 471 | |
| H1487350 | u | Impermeable amb jaqueta, caputxa i pantalons, per a edificació, de PVC soldat de 0,3 mm de gruix, homologat segons UNE-EN 340 | 14 |
| H1489890 | u | Jaqueta de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques, homologada segons UNE-EN 340 | 14 |

MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X004 | u | Barana definitiva, prevista en projecte, per a protecció de caigudes a diferent nivell | 1 |
| HX11X005 | u | Escala modular d'estructura porticada, per accedir a cotes de diferent nivell, superiors a 7 m amb sistema de seguretat integrat | 1 |
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | 4 |

SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H15118D1 | m2 | Protecció amb vela de lona de polietilè per a proteccions superficials contra caigudes, amb malla de reforç i traus perimetrals, corda de subjecció, de diàmetre 12 mm, amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152J105 | m | Cable fiador per al cinturó de seguretat, fixat en ancoratges de servei i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 4 |
| H15A2024 | u | Catifa portàtil de neoprè per a treball en plans inclinats | 1 /2 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |

| | | | |
|---|---|---|---|
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /13 /16 |

MESURES PREVENTIVES

| Codi | Descripció | Riscos |

| I0000003 | Itineraris preestablerts i balissats per al personal | 1 |
| I0000004 | Revisió i manteniment periòdic de SPC | 1 |
| I0000007 | Adoptar les mesures preventives necessàries per al manteniment correcte posterior | 1 |
| I0000008 | Personal qualificat per a treballs en alçada | 1 |
| I0000013 | Ordre i neteja | 2 /6 |
| I0000014 | Preparació i manteniment de les superfícies de treball | 2 /6 |
| I0000015 | Organització de les zones de pas i emmagatzematge | 2 /6 |
| I0000017 | Als plans inclinats, treballar sobre superfícies rugoses i no lliscants | 2 |
| I0000025 | Planificació d'àrees i llocs de treball | 4 |
| I0000026 | Planificació de recorreguts i maniobres per a màquines i camions | 4 |
| I0000027 | Elecció dels mitjans auxiliars de manteniment | 4 |
| I0000028 | Impedir l'accés de personal dins del radi d'acció de càrregues suspeses | 4 |
| I0000029 | No balancejar les càrregues suspeses | 4 |
| I0000030 | Suspendre i aixecar les càrregues dins de l'envolcall o fleixos originals | 4 |
| I0000031 | Per a la manipulació de materials voluminosos i/o pesats, solicitar un procediment de treball específic | 4 |
| I0000038 | Substituir lo manual per lo mecànic | 9 /10 |
| I0000039 | Planificació de compra i programa de manteniment d'eines | 9 |
| I0000040 | Formació de l'operari en l'ús i manteniment d'eines | 9 |
| I0000041 | Substituir la fabricació a obra per la prefabricació a taller | 9 |
| I0000044 | Evitar processos de tallat de materials a l'obra | 10 |
| I0000045 | Formació | 10 /13 |
| I0000046 | Evitar processos d'ajust en obra | 10 |
| I0000055 | Elecció dels equips de manteniment | 13 |
| I0000056 | Paletització i eines ergonòmiques | 13 |
| I0000058 | Adaptar la feina a les característiques individuals de la persona que la realitza | 13 |
| I0000059 | Elecció dels materials alternatius poc pessats i més manegables | 13 |
| I0000060 | Suspensió de les feines en condicions extremes | 14 |
| I0000061 | Rotació dels llocs de treball | 14 |
| I0000062 | Planificar els treballs per a realitzar-los en zones protegides | 14 |
| I0000063 | En cas de vent, apuntalament i fixació de tots els elements inestables | 14 |
| I0000064 | Suspensió de les feines a cobertes inclinades amb vent superior a 40 km/h | 14 |
| I0000067 | No treballar al costat de linies elèctriques amb cables nusos | 16 |
| I0000068 | Elecció i manteniment de les eines elèctriques | 16 |
| I0000069 | Formació i habilitació específica per a cada eina | 16 |
| I0000070 | Compliment del REBT pel que fa a equips de protecció | 16 |
| I0000071 | Revisió de la posta a terra | 16 |
| I0000072 | Realitzar els treballs sobre superfícies seques | 16 |
| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000151 | Per treballs en alçada utilitzar plataformes elevadores mecàniques o hidràuliques | 1 /4 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 6 |
| I0000155 | Controlar la temperatura i velocitat del vent als llocs de treball | 2 /14 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |
| I0000165 | En manipular sistemes elèctrics, connexions, etc, verificar que les linies no estan en tensió | 16 |

### EQUIPS PROTECCIÓ INDIVIDUAL

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H1411111 | u | Casc de seguretat per a ús normal, contra cops, de polietilè amb un pes màxim de 400 g, homologat segons UNE-EN 812 | 1 /2 /4 /6 /9 /10 /11 /16 |
| H145C002 | u | Parella de guants de protecció contra riscs mecànics comuns de construcció nivell 3, homologats segons UNE-EN 388 i UNE-EN 420 | 1 /2 /4 /6 /9 /10 /11 |
| H145K153 | u | Parella de guants de material aïllant per a treballs elèctrics, classe 00, logotip color beix, tensió màxima 500 V, homologats segons UNE-EN 420 | 16 |
| H1463253 | u | Parella de botes dielèctriques resistents a la humitat, de pell rectificada, amb turmellera encoixinada sola antilliscant i antiestàtica, falca amortidora per al taló, llengüeta de manxa, de despreniment ràpid, sense ferramenta metàl·lica, amb puntera reforçada, homologades segons DIN 4843 | 16 |
| H1465275 | u | Parella de botes baixes de seguretat industrial per a treballs de construcció en general, resistents a la humitat, de pell rectificada, amb turmellera encoixinada, amb puntera metàl·lica, sola antilliscant, falca amortidora d'impactes al taló i sense plantilla metàl·lica, homologades segons UNE-EN ISO 20344, UNE-EN ISO 20345, UNE-EN ISO 20346 i UNE-EN ISO 20347 | 1 /2 /6 /9 /10 /11 |
| H147N000 | u | Faixa de protecció dorslumbar | 13 |
| H1481442 | u | Granota de treball per a muntatges i/o treballs mecànics, de polièster i cotó (65%-35%), color blau vergara, trama 240, amb butxaques interiors, homologada segons UNE-EN 340 | 1 /2 /4 /6 /9 /10 /11 /16 |
| H1485800 | u | Armilla reflectant amb tires reflectants a la cintura, al pit i a l'esquena, homologada segons UNE-EN 471 | 4 |

### MITJANS AUXILIARS D'UTILITAT PREVENTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| HX11X019 | m | Marquesina de protecció en voladiu en bastida tubular amb sistema de seguretat amb tots els requisits reglamentaris, normalitzada i incorporada UNE-EN 12810-1 (HD-1000) | 4 |
| HX11X021 | u | Passadís de protecció prefabricat metàl·lic amb sistema de seguretat amb | 4 |

| | | | |
|---|---|---|---|
| | | tots els requisits reglamentaris, de llargària 2,5 m, d'amplària 1,1 m, amb paviment de entramat de platines metàl·liques i rampes articulades, baranes metàl·liques reglamentàries, muntants de 2 m d'alçada, sostre de xapa d'acer de 3 mm de gruix | |

## SISTEMES DE PROTECCIÓ COL·LECTIVA

| Codi | UA | Descripció | Riscos |
|---|---|---|---|
| H15118D1 | m2 | Protecció amb vela de lona de polietilè per a proteccions superficials contra caigudes, amb malla de reforç i traus perimetrals, corda de subjecció, de diàmetre 12 mm, amb el desmuntatge inclòs | 1 |
| H1512013 | m2 | Protecció col·lectiva vertical dels laterals dels forats de les escales en tota l'alçada amb xarxa-teló normalitzada (UNE-EN 1263-1) de poliamida no regenerada, de tenacitat alta nuada amb corda perimetral de poliamida, ancoratge de fleix perforat i clau d'impacte d'acer i corda de cosit de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H15151A1 | m2 | Protecció col·lectiva vertical de bastida tubular amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, corda de subjecció de 6 mm de diàmetre i amb el desmuntatge inclòs | 1 |
| H151A1K1 | m2 | Protecció col·lectiva horitzontal d'obertures amb xarxa per a proteccions superficials contra caigudes, de fil trenat de poliamida no regenerada, de tenacitat alta, de 4 mm de diàmetre, 80x80 mm de pas de malla, corda perimetral de poliamida de 12 mm de diàmetre nuada a la xarxa, fixada amb fleix i tacs d'expansió i amb el desmuntatge inclòs | 1 |
| H151AJ01 | m2 | Protecció horitzontal d'obertures d'1 m de diàmetre com a màxim, en sostres, amb fusta i amb el desmuntatge inclòs | 1 |
| H152U000 | m | Tanca d'advertència o abalisament d'1 m d'alçada amb malla de polietilè taronja, fixada a 1 m del perímetre del sostre amb suports d'acer allotjats amb forats al sostre | 4 |
| HBBAA005 | u | Senyal de prohibició, normalitzada amb pictograma negre sobre fons blanc, de forma circular amb cantells i banda transversal descendent d'esquerra a dreta a 45°, en color vermell, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAB115 | u | Senyal d'obligació, normalitzada amb pictograma blanc sobre fons blau, de forma circular amb cantells en color blanc, diàmetre 29 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |
| HBBAE001 | u | Rètol adhesiu ( MIE-RAT.10 ) de maniobra per a quadre o pupitre de control elèctric, adherit | 16 |
| HBBAF004 | u | Senyal d'advertència, normalitzada amb pictograma negre sobre fons groc, de forma triangular amb el cantell negre, costat major 41 cm, amb cartell explicatiu rectangular, per ser vista fins 12 m de distància, fixada i amb el desmuntatge inclòs | 1 /2 /4 /6 /9 /10 /11 /13 /16 |

## MESURES PREVENTIVES

| I0000073 | Disposar de quadres elèctrics secundaris | 16 |
| I0000152 | Utilitzar mitjans mecànics(grues, transpalets, plataformes elevadores) per manipular càrregues | 11 /13 |
| I0000154 | Verificar nivell lumínic mínim (250 lux) a itineraris i llocs de treball | 2 |
| I0000156 | Detecció xarxes instal·lacions encastades o soterrades | 16 |
| I0000161 | Verificar que les connexions de les màquines es facin amb endolls reglamentaris | 16 |
| I0000164 | Manipular els vidres amb ventoses de seguretat | 6 |
| I0000165 | En manipular sistemes elèctrics, connexions, etc, verificar que les linies no estan en tensió | 16 |

## 24. ANNEX RECOMANACIONS COVID-19

ORIENTACIONS PREVENTIVES DAVANT EL COVID-19 A LES OBRES DE CONSTRUCCIÓ (Font Ministerio de Trabajo y Economía Social y Instituto Nacional de Seguridad y Salud en el Trabajo)

En aquest document es recull una selecció no exhaustiva de recomanacions i mesures, fonamentalment de caràcter organitzatiu, per garantir la protecció de la salut dels treballadors davant l'exposició a COVID-19 en les obres de construcció.

Prèviament, s'exposen algunes qüestions relacionades amb la gestió de la seguretat i salut laboral a les obres de construcció que s'han de tenir en compte a l'hora de valorar l'adopció de les mesures previstes en aquest document.

Consideracions essencials

• A causa de la pandèmia originada pel coronavirus SARS-CoV-2, l'activitat a les obres de construcció es va suspendre temporalment. Abans de la represa de la feina en les mateixes, s'han d'adoptar mesures per protegir els treballadors davant el contagi tenint en compte que aquestes afectaran, molt probablement, a les condicions tècniques i organitzatives de la feina, als terminis d'execució i als costos de l'obra. No obstant això, és essencial assumir aquests canvis extra- ordinaris, així com integrar les recomanacions i instruccions que en cada moment dictin les autoritats sanitàries, per tal de frenar la pandèmia i reduir el nombre d'afectats.

• Una de les característiques de les obres de construcció és la intervenció de nombroses figures en la gestió de la seguretat i salut laboral de les mateixes (promotor, coordinats-r en matèria de seguretat i salut, direcció facultativa, contractistes, subcontractistes, treballadors

autònoms, etc.). És especialment rellevant, en la situació actual, la coordinació i cooperació entre totes elles, cadascuna des del paper que li correspongui exercir, per promoure, valorar, acordar, planificar, implantar i controlar les mesures extraordinàries que siguin necessàries per evitar el contagi per SARS-CoV-2.

• Com ja s'ha dit anteriorment, l'organització que s'havia previst en l'obra (prèviament a la pandèmia) haurà de ser modificada per adaptar-la a les noves circumstàncies. Aquestes modificacions, com qualsevol canvi que afecti l'organització de l'obra, hauran de quedar reflectides en el pla de seguretat i salut en el treball. D'aquesta manera, tots els intervinents en l'obra tindran constància i coneixeran les noves mesures que es van a implantar. Això no obstant, s'ha de buscar la fórmula que permeti dur a terme l'anterior amb la major celeritat possible. Així, es pot acordar entre les diferents figures (per exemple: mitjançant reunions telemàtiques) les accions més adequades per evitar el contagi en l'obra i recollir aquests acords en actes, protocols, etc. que poden ser incorporats a el pla de seguretat i salut en el treball. Ca- be remarcar, que el llibre d'incidències hauria de ser utilitzat, en aquests casos, per deixar constància de les modificacions de l'esmentat pla.

• L'anterior, amb les particularitats que correspongui, serà aplicable igualment a les obres que no requereixin la redacció d'un projecte.

• Un cop s'hagin realitzat els ajustos necessaris en l'organització de l'obra i, abans d'iniciar els treballs, s'haurà de garantir que es disposa dels mitjans materials (per exemple: senyalització, mampares de material transparent, etc.) que s'ha previst utilitzar i que tots els intervinents en l'obra estan correctament informats sobre les noves mesures que hagi estat necessari adoptar.

Mesures prèvies a l'inici de l'activitat

• El desplaçament a l'obra es realitzarà preferentment de forma individual.

• El servei sanitari de el servei de prevenció de riscos laborals (SPRL) de cada empresa inter- viniente en l'obra haurà d'avaluar l'existència de treballadors especialment sensibles a la infecció per SARS-CoV-2 i, en conseqüències, s'han de determinar les mesures de prevenció , adaptació i protecció addicionals necessàries.

• Es conscienciarà als treballadors sobre la importància de comunicar, el més aviat possible, si presenten símptomes compatibles amb la malaltia o, si escau, quan hagin estat en contacte estret amb persones que els presentin. A aquest efecte, en l'obra s'informarà als treballadors sobre quins són els símptomes de COVID-19.

• S'informarà i formarà els treballadors sobre els riscos derivats de SARS-CoV-2, amb especial atenció a les vies de transmissió, i les mesures de prevenció i protecció adoptades.

• Es consultarà els treballadors i es consideraran les seves propostes.

Mesures tècniques i organitzatives

• La transmissió de l'coronavirus SARS-CoV-2 pot produir-se bé per entrar en contacte directe amb una persona contagiada, bé per entrar en contacte amb superfícies o objectes contaminades. Per tant, s'han d'adoptar mesures per evitar les dues vies de transmissió. En aquest document s'exposen algunes possibles actuacions que es podrien dur a terme per evitar el contagi perquè, en cada obra en concret, es determini quines són les més adequades i viables. El que s'ha dit anteriorment s'ha d'entendre sense perjudici de qualsevol altra mesura que, en funció de les característiques dels treballs i / o emplaçament de l'obra, es consideri oportú adoptar, encara que no es trobi entre les opcions proposades en el present document.

• S'identificaran aquelles actuacions en l'obra que puguin realitzar-se sense necessitat de presència física a la mateixa, promovent altres formes de dur-les a terme (per exemple: les reunions de coordinació poden fer de manera telemàtica, el coordinador en matèria de seguretat i salut en el treball i / o la direcció facultativa poden donar algunes de les instruccions per telèfon / correu electrònic, fins i tot utilitzar eines audiovisuals per

comprovar que les instruccions s'han dut a terme). Quan s'hagin de visitar l'obra, es planificarà de manera que es minimitzi el contacte amb altres persones.

• En cas de ser necessaris desplaçaments en vehicle per l'obra, es limitarà el nombre de persones que ocupen el vehicle simultàniament tractant de mantenir la distància social recomanada, augmentant la freqüència dels desplaçaments si fos necessari.

• En la mesura que es pugui, es minimitzarà la concurrència en l'obra a fi de reduir el nombre de persones afectades en cas de contagi (per exemple: espaiant els treballs en el temps de manera que es redueixi la coincidència de treballadors, encara que això impliqui ampliar els terminis d'execució).

• S'organitzaran els treballs de forma que es mantingui una distància de seguretat de 2 metres entre treballadors. Alguns dels ajusts que podrien valorar són: reubicació dels llocs de treball dins l'obra, posposar alguns treballs per evitar la coincidència en el mateix espai i al mateix temps, assignar horaris específics per a cada activitat i treballador per àrees de l'obra, etc...

• Això implica haver de revisar la programació de l'obra i analitzar quines activitats de les que estava previst realitzar simultàniament podran seguir duent-se a terme d'acord amb el que s'ha planificat o, en cas contrari, haurà d'adaptar-la programació inicial de l'obra perquè les mateixes puguin executar-se mantenint la distància social recomanada.

• Quan l'anterior no resulti factible, es valorarà la instal·lació de barreres físiques com mampares de materials transparents (plàstic dur rígid, metacrilat, vidre o, en defecte dels anteriors, plàstic dur flexible -generalment subministrat en rollos-) per no obstaculitzar la visibilitat dels treballadors resistents a trencament per impacte i fàcils de netejar i desinfectar. Han de disposar, si cal, d'elements que les facin fàcilment identificables per evitar risc de cops o xocs.

• Quan estigués prevista l'execució d'una determinada tasca per part de diversos treballadors i no resulti viable mantenir la separació de 2 m entre ells ni la instal·lació de barreres físiques per separar-los, s'estudiaran altres opcions per fer-la (per exemple: de forma mecanitzada o utilitzant equips de treball que permetin que els treballadors estiguin prou allunyats). Quan no sigui possible aplicar cap de les opcions assenyalades anteriorment, d'acord amb la informació recollida mitjançant l'avaluació de riscos laborals, s'estudiaran altres alternatives de protecció adequades (com pot ser el cas de l'ús d'equips de protecció personal). Si cap de les mesures indicades resultés factible, es valorarà l'ajornament de l'execució de la tasca fins que la situació de crisi originada pel SARS-CoV-2 remeti i així ho determinin les autoritats sanitàries.

• De la mateixa manera s'organitzarà l'ús de les zones comunes (menjador, lavabos, vestuaris, etc.) per garantir que puguin respectar les distàncies de seguretat en tot moment. Si fos necessari, s'habilitaran més zones comuns o s'instal·laran barreres de separació físiques, com mampares de materials transparents (plàstic dur rígid, metacrilat, vidre o, en defecte dels anteriors, plàstic dur flexible -generalment subministrat en rotllos-) per no obstaculitzar la visibilitat dels treballadors. Els materials seran resistents al trencament per impacte i fàcils de netejar i desinfectar. Han de disposar, si cal, d'elements que les facin fàcilment identificables per evitar risc de cops o xocs. Les zones comunes s'han de desinfectar periòdicament, preferiblement entre usos.

• Es recomana l'ús individualitzat d'eines i altres equips de treball han de desinfectar després de la seva utilització. Quan l'ús d'eines o altres equips no sigui exclusiu d'un sol treballador, es desinfectaran entre usos. En aquells casos en què s'hagin llogat equips de treball (per exemple: PEMP, bastides, maquinària per a moviment de terres, etc.), serà imprescindible la desinfecció dels mateixos abans de la seva utilització en l'obra i després del mateix per evitar la propagació de virus entre diferents obres. S'ha d'acordar amb les empreses de lloguer d'equips de treball qui es responsabilitza d'aquesta desinfecció i amb quins productes s'ha de fer.

• En aquelles obres que es realitzin en un recinte tancat, aquest s'ha de ventilar periòdicament.

• S'adoptaran mesures perquè únicament accedeixi a l'obra personal autoritzat i

s'establiran els mitjans d'informació necessaris (per exemple, cartells, notes informatives, megafonia, etc.) per garantir que totes les persones que accedeixin coneixen i assumeixen les mesures adoptades per evitar contagis.

• S'adoptaran mesures per evitar el contagi en aquelles situacions en què personal aliè a l'obra hagi de accedir necessàriament a la mateixa, bé mantenint la distància recomanada, bé mitjançant separacions físiques. Concretament, per al cas de la recepció de materials en l'obra poden adoptar, entre altres, les següents mesures:

- S'informarà, amb antelació suficient, als subministradors de material sobre aquelles mesures que s'hagin adoptat excepcionalment en l'obra en relació amb la recepció de mercaderia i altres generals que hagin de conèixer.

- Es organitzarà la recepció dels materials perquè no coincideixin diferents subministradors en l'obra.

- Es realitzarà la descàrrega de material en zones específiques de l'obra evitant la concurrència amb els treballadors de la mateixa (excepte amb els quals sigui imprescindible).

- Quan sigui personal de l'obra qui descarregui el material, el conductor haurà de romandre a la cabina de el vehicle.

- Quan sigui el transportista el que realitzi la càrrega / descàrrega de la mercaderia, aquesta es disposarà en llocs específics per dur a terme aquesta operació sense entrar en contacte amb cap persona de l'obra o mantenint una distància de 2 metres.

- Es fomentarà, en tot cas, la descàrrega mecanitzada de el material havent d'evitar l'ús dels equips destinats a tal fi per part de diversos treballadors o havent de netejar-se i desinfectar aquests adequadament després de cada ús. Això s'aplicarà, igualment, en aquells casos en què es cedeixin els equips a la transportista perquè sigui ell mateix qui els utilitzi.

- S'acordaran amb el subministrador de material, prèviament, formes alternatives per al lliurament i recepció dels albarans que evitin el contacte amb personal de l'obra (per exemple: correu electrònic, telèfon, etc.).

• Per a la desinfecció de les superfícies i equips, s'utilitzaran dilucions de lleixiu comercial (20-30 ml aprox. En 1 litre d'aigua), d'alcohol (al menys 70 º) o altres virucides autoritzats .

• Els treballadors han de cooperar en les mesures preventives adoptades.

• Amb caràcter general, no serà necessari l'ús d'EPI addicionals als requerits per l'activitat laboral.

Higiene personal

Es reforçaran les següents mesures:

• Rentat freqüent de mans amb aigua i sabó o solució hidroalcohòlica.

• Cobrir-se el nas i la boca a la tossir i esternudar amb un mocador d'un sol ús.

• Evitar tocar-se ulls, nas i boca.

• S'evitarà fumar, beure o menjar sense rentar-se prèviament les mans.

• Es facilitarà el material necessari perquè els treballadors reforcin les mesures d'higiene personal al llarg de la jornada podent lliurar, a aquest efecte, un kit personal (aigua i sabó o gel hidroalcohòlic, mocadors d'un sol ús, etc.).

• De la mateixa manera, es col·locaran a les zones comunes gels hidroalcohòlics i mocadors d'un sol ús, així com contenidors amb tapa i obertura de pedal per als mocadors

usats.

PLEC

# 1. DEFINICIÓ I ABAST DEL PLEC

## 1.1. Identificació de les obres

L'objecte es redactar el projecte de les noves piscines exteriors i instal·lacions a Llinars del Vallès.

## 1.2. Objecte

**Aquest Plec de Condicions de l'Estudi de Seguretat i Salut comprèn el conjunt d'especificacions que hauran d'acomplir tant el Pla de Seguretat i Salut del Contractista com a document de Gestió Preventiva (Planificació, Organització, Execució i Control) de l'obra, les diferents proteccions a emprar per la reducció dels riscos (Mitjans Auxiliars d'Utilitat Preventiva, Sistemes de Protecció Col·lectiva, Equips de Protecció Individual), Implantacions provisionals per a la Salubritat i Confort dels treballadors, així com les tècniques de la seva implementació a l'obra i les que hauran de manar l'execució de qualsevol tipus d'instal·lacions i d'obres accessòries. Per a qualsevol tipus d'especificació no inclosa en aquest Plec, es tindran en compte les condicions tècniques que es derivin d'entendre com a normes d'aplicació:**

- Tots aquells continguts al:
  - Plec General de Condicions Tècniques de l'Edificació'', confeccionat pel Centre Experimental d'Arquitectura, aprovat pel Consell Superior de Col·legis d'Arquitectes i adaptat a les seves obres per la ''Direcció General d'Arquitectura''. (cas d'Edificació)
  - ''Plec de Clàusules Administratives Generals, per a la Contractació d'Obres de l'Estat'' i adaptat a les seves obres per la ''Direcció de Política Territorial i Obres Públiques''. (cas d'Obra Pública)
- Les contingudes al Reglament General de Contractació de l'Estat, Normes Tecnològiques de l'Edificació publicades pel ''Ministerio de la Vivienda'' i posteriorment pel ''Ministerio de Obras Públicas y Urbanismo''.
- La normativa legislativa vigent d'obligat compliment i les condicionades per les companyies subministradores de serveis públics, totes elles al moment de l'oferta.

## 1.3. Documents que defineixen l'Estudi de Seguretat i Salut

Segons la normativa legal vigent, Art. 5, 2 del R.D. 1627/1997, de 24 d'octubre sobre ''DISPOSICIONS MÍNIMES DE SEGURETAT I DE SALUT A LES OBRES DE CONSTRUCCIÓ'', l'Estudi de Seguretat haurà de formar part del Projecte d'Execució d'Obra o, al seu defecte, del Projecte d'Obra, havent de ser coherent amb el contingut del mateix i recollir les mesures preventives adequades als riscos que comporta la realització de l'obra, contenint com a mínim els següents documents:

Memòria: Descriptiva dels procediments, equips tècnics i medis auxiliars que hagin d'utilitzar-se o que la seva utilització es pugui preveure; identificació dels riscos laborals que puguin ser evitats, indicant a l'efecte les mesures tècniques necessàries per fer-ho; relació dels riscos laborals que no es

puguin eliminar conforme als assenyalats anteriorment, especificant les mesures preventives i proteccions tècniques tendents a controlar i reduir els esmentats riscos i valorant la seva eficàcia, en especial quan es proposin mesures alternatives.

Plec: De condicions particulars en el que es tindran en compte les normes legals i reglamentaries aplicables a les especificacions tècniques pròpies de l'obra que es tracti, així com les prescripcions que s'hauran de complir en relació amb les característiques, l'ús i la conservació de les màquines, utensilis, eines, sistemes i equips preventius.

Plànols: On es desenvolupen els gràfics i esquemes necessaris per la millor definició i comprensió de les mesures preventives definides a la Memòria, amb expressió de les especificacions tècniques necessàries.

Amidaments: De totes les unitats o elements de seguretat i salut al treball que hagin estat definits o projectats.

Pressupost: Quantificació del conjunt de despeses previstes per l'aplicació i execució de l'Estudi de Seguretat i Salut.

## 1.4. Compatibilitat i relació entre els esmentats documents

L'estudi de Seguretat i Salut forma part del Projecte d'Execució d'obra, o en el seu cas, del Projecte d'Obra, havent de ser cadascun dels documents que l'integren, coherents amb el contingut del Projecte, i recollir les mesures preventives, de caràcter pal·liatiu, adequades als riscos, no eliminats o reduïts a la fase de disseny, que comporti la realització de l'obra, en els terminis i circumstàncies socio-tècniques on la mateixa es tingui que materialitzar.

El Plec de Condicions Particulars, els Plànols i Pressupost de l'Estudi de Seguretat i Salut són documents contractuals, que restaran incorporats al Contracte i, per tant, són d'obligat acompliment, llevat modificacions degudament autoritzades.

La resta de Documents o dades de l'Estudi de Seguretat i Salut són informatius, i estan constituïts per la Memòria Descriptiva, amb tots els seus Annexos, els Detalls Gràfics d'interpretació, els Amidaments i els Pressupostos Parcials.

Els esmentats documents informatius representen només una opinió fonamentada de l'Autor de l'Estudi de Seguretat i Salut, sense que això suposi que es responsabilitzi de la certesa de les dades que se subministren. Aquestes dades han de considerar-se, tant sols,

com a complement d'informació que el Contractista ha d'adquirir directament i amb els seus propis mitjans.

Només els documents contractuals, constitueixen la base del Contracte; per tant el Contractista no podrà al·legar, ni introduir al seu Pla de Seguretat i Salut, cap modificació de les condicions del Contracte en base a les dades contingudes als documents informatius, llevat que aquestes dades apareguin a algun document contractual.

El Contractista serà, doncs, responsable de les errades que puguin derivar-se de no obtenir la suficient informació directa, que rectifiqui o ratifiqui la continguda als documents informatius de l'Estudi de Seguretat i Salut.

Si hi hagués contradicció entre els Plànols i les Prescripcions Tècniques Particulars, en cas d'incloure's aquestes com a document que complementi el Plec de Condicions Generals del Projecte, té prevalença el que s'ha prescrit en les Prescripcions Tècniques Particulars. En qualsevol cas, ambdós documents tenen prevalença sobre les Prescripcions Tècniques Generals.

El que s'ha esmentat al Plec de condicions i només als Plànols, o viceversa, haurà de ser executat com si hagués estat exposat a ambdós documents, sempre que, a criteri de l'Autor de l'Estudi de Seguretat i Salut, quedin suficientment definides les unitats de Seguretat i Salut corresponent, i aquestes tinguin preu al Contracte.

## 2. DEFINICIONS I COMPETÈNCIES DELS AGENTS DEL FET CONSTRUCTIU

Dins l'àmbit de la respectiva capacitat de decisió cadascun dels actors del fet constructiu, estan obligats a prendre decisions ajustant-se als Principis Generals de l'Acció Preventiva (Art. 15 a la L. 31/1995) :

l) Evitar els riscos.
m) Avaluar els riscos que no es poden evitar.
n) Combatre els riscos en el seu origen.
o) Adaptar la feina a la persona, en particular al que fa referència a la concepció dels llocs de treball, com també a l'elecció dels equips i els mètodes de treball i de producció, amb l'objectiu específic d'atenuar la feina monòtona i repetitiva i de reduir-ne els efectes a la salut.
p) Tenir en compte l'evolució de la tècnica.
q) Substituir el que sigui perillós pel que comporti poc perill o no en comporti cap.
r) Planificar la prevenció, amb la recerca d'un conjunt coherent que hi integri la tècnica, l'organització de la feina, les condicions de treball, les relacions socials i la influència dels factors ambientals al treball.
s) Adoptar mesures que donin prioritat a la protecció col·lectiva respecte de la individual.
t) Facilitar les corresponents instruccions als treballadors.

### 2.1. Promotor

Als efectes del present Estudi de Seguretat i Salut, serà considerat Promotor qualsevol persona, física o jurídica, pública o privada, que, individual o col·lectivament, decideixi, impulsi, programi i financi, amb recursos propis o aliens, les obres de construcció per sí mateix, o per la seva posterior alienació, lliurament o cessió a tercers sota qualsevol títol.

Competències en matèria de Seguretat i Salut del Promotor:

u) Designar al tècnic competent per la Coordinació de Seguretat i Salut en fase de Projecte, quan sigui necessari o es cregui convenient.

v) Designar en fase de Projecte, la redacció de l'Estudi de Seguretat, facilitant al Projectista i al Coordinador respectivament, la documentació i informació prèvia necessària per l'elaboració del Projecte i redacció de l'Estudi de Seguretat i Salut, així com autoritzar als mateixos les modificacions pertinents.

w) Facilitar que el Coordinador de Seguretat i Salut en la fase de projecte intervingui en totes les fases d'elaboració del projecte i de preparació de l'obra.

x) Designar el Coordinador de Seguretat i Salut en fase d'Obra per l'aprovació del Pla de Seguretat i Salut, aportat pel contractista amb antelació a l'inici de les obres, el qual Coordinarà la Seguretat i Salut en fase d'execució material de les mateixes.

y) La designació dels Coordinadors en matèria de Seguretat i Salut no eximeix al Promotor de les seves responsabilitats.

z) El Promotor es responsabilitza que tots els agents del fet constructiu tinguin en compte les observacions del Coordinador de Seguretat i Salut, degudament justificades, o bé proposin unes mesures d'una eficàcia, pel cap baix, equivalents.

## 2.2. Coordinador de Seguretat i Salut

**El Coordinador de Seguretat i Salut serà als efectes del present Estudi de Seguretat i Salut, qualsevol persona física legalment habilitada pels seus coneixements específics i que compti amb titulació acadèmica en Construcció.**

És designat pel Promotor en qualitat de Coordinador de Seguretat: a) En fase de concepció, estudi i elaboració del Projecte o b) Durant l'Execució de l'obra.

El Coordinador de Seguretat i Salut i Salut forma part de la Direcció d'Obra o Direcció Facultativa/Direcció d'Execució.

Competències en matèria de Seguretat i Salut del Coordinador de Seguretat del Projecte:

El Coordinador de Seguretat i Salut en fase de projecte, és designat pel Promotor quan en l'elaboració del projecte d'obra intervinguin varis projectistes.

Les funcions del Coordinador en matèria de Seguretat i Salut durant l'elaboració del projecte, segons el R.D. 1627/1997, són les següents:

aa) Vetllar per a què en fase de concepció, estudi i elaboració del Projecte, el Projectista tingui en consideració els ''Principis Generals de la Prevenció en matèria de Seguretat i Salut'' (Art. 15 a la L.31/1995), i en particular:
   - Prendre les decisions constructives, tècniques i d'organització amb la finalitat de planificar les diferents feines o fases de treball que es desenvolupin simultània o successivament.
   - Estimar la duració requerida per l'execució de les diferents feines o fases de treball.

bb) Traslladar al Projectista tota la informació preventiva necessària que li cal per integrar la Seguretat i Salut a les diferents fases de concepció, estudi i elaboració del projecte d'obra.

Tenir en compte, cada vegada que sigui necessari, qualsevol estudi de seguretat i salut o estudi bàsic, així com les previsions i informacions útils per efectuar al seu dia, amb les degudes condicions de seguretat i salut, els previsibles treballs posteriors (manteniment).

Coordinar l'aplicació del que es disposa en els punts anteriors i redactar o fer redactar l'Estudi de Seguretat i Salut.

<u>Competències en matèria de Seguretat i Salut del Coordinador de Seguretat i Salut d'Obra</u>:

El Coordinador de Seguretat i Salut en fase d'execució d'obra, és designat pel Promotor en tots aquells casos en què intervé més d'una empresa i treballadors autònoms o diversos treballadors autònoms.

Les funcions del Coordinador en matèria de Seguretat i Salut durant l'execució de l'obra, segons el R.D. 1627/1997, són les següents:

- Coordinar l'aplicació dels Principis Generals de l'Acció Preventiva (Art. 15 L. 31/1995) :

  5. En el moment de prendre les decisions tècniques i d'organització amb el fi de planificar les diferents tasques o fases de treball que s'hagin de desenvolupar simultània o successivament.
  6. En l'estimació de la durada requerida per a l'execució d'aquests treballs o fases de treball.

- Coordinar les activitats de l'obra per garantir que els Contractistes, i, si n'hi ha dels Subcontractistes i els treballadors autònoms, apliquin de manera coherent i responsable els Principis de l'Acció Preventiva que recull l'article 15 de la Llei de Prevenció de Riscos Laborals (L.31/1995 de 8 de novembre) durant l'execució de l'obra i, en particular, en les tasques o activitats al què es refereix l'article 10 del R.D. 1627/1997 de 24 d'octubre sobre Disposicions mínimes de Seguretat i Salut a les obres de construcció:
  e) El manteniment de l'obra en bon estat d'ordre i neteja.

f) L'elecció de l'emplaçament dels llocs i àrees de treball, tenint en compte les seves condicions d'accés, i la determinació de les vies o zones de desplaçament o circulació.

g) La manipulació dels diferents materials i la utilització dels mitjans auxiliars.

h) El manteniment, el control previ a la posta en servei i el control periòdic de les instal·lacions i dispositius necessaris per a l'execució de l'obra, a fi de corregir els defectes que pugin afectar a la seguretat i la salut dels treballadors.

i) La delimitació i el condicionament de les zones d'emmagatzematge i dipòsit dels diferents materials, en particular si es tracta de matèries o substàncies perilloses.

j) La recollida dels materials perillosos utilitzats.

k) L'emmagatzematge i l'eliminació o evacuació dels residus i deixalles.

l) L'adaptació, d'acord amb l'evolució de l'obra, del període de temps efectiu que haurà de dedicar-se als diferents treballs o fases de treball.

m) La informació i coordinació entre els contractistes, subcontractistes i treballadors autònoms.

n) Les interaccions i incompatibilitats amb qualsevol tipus de treball o activitat que es realitzi en l'obra o a prop del lloc de l'obra.

- Aprovar el Pla de Seguretat i Salut (PSS) elaborat pel contractista i, si s'escau, les modificacions que s'hi haguessin introduït. La Direcció Facultativa prendrà aquesta funció quan no calgui la designació de Coordinador.
- Organitzar la coordinació d'activitats empresarials prevista en l'article 24 de la Llei de Prevenció de Riscos Laborals.
- Coordinar les accions i funcions de control de l'aplicació correcta dels mètodes de treball.
- Adoptar les mesures necessàries perquè només puguin accedir a l'obra les persones autoritzades.

El Coordinador de Seguretat i Salut en la fase d'execució de l'obra respondrà davant del Promotor, del compliment de la seva funció com staff assessor especialitzat en Prevenció de la Sinistralitat Laboral, en col·laboració estricta amb els diferents agents que intervinguin a l'execució material de l'obra. Qualsevol divergència serà presentada al Promotor com a màxim patró i responsable de la gestió constructiva de la promoció de l'obra, a fi que aquest prengui, en funció de la seva autoritat, la decisió executiva que calgui.

Les responsabilitats del Coordinador no eximiran de les seves responsabilitats al Promotor, Fabricants i Subministradors d'equips, eines i mitjans auxiliars, Direcció d'Obra o Direcció Facultativa, Contractistes, Subcontractistes, treballadors autònoms i treballadors.

## 2.3. Projectista

És el tècnic habilitat professionalment que, per encàrrec del Promotor i amb subjecció a la normativa tècnica i urbanística corresponent, redacta el Projecte.

Podran redactar projectes parcials del Projecte, o parts que el complementin, altres tècnics, de forma coordinada amb l'autor d'aquest, contant en aquest cas, amb la col·laboració del Coordinador de Seguretat i Salut designat pel Promotor.

Quan el Projecte es desenvolupa o completa mitjançant projectes parcials o d'altres documents tècnics, cada projectista assumeix la titularitat del seu projecte.

Competències en matèria de Seguretat i Salut del Projectista:

- Tenir en consideració els suggeriments del Coordinador de Seguretat i Salut en fase de Projecte per integrar els Principis de l'Acció Preventiva (Art. 15 L. 31/1995), prendre les decisions constructives, tècniques i d'organització que puguin afectar a la planificació dels treballs o fases de treball durant l'execució de les obres.
- Acordar, en el seu cas, amb el promotor la contractació de col·laboracions parcials.

## 2.4. Director d'Obra

És el tècnic habilitat professionalment que, formant part de la Direcció d'Obra o Direcció Facultativa, dirigeix el desenvolupament de l'obra en els aspectes tècnics, estètics, urbanístics i mediambientals, de conformitat amb el Projecte que el defineix, la llicència constructiva i d'altres autoritzacions preceptives i les condicions del contracte, amb l'objecte d'assegurar l'adequació al fi proposat. En el cas que el Director d'Obra dirigeixi a més a més l'execució material de la mateixa, assumirà la funció tècnica de la seva realització i del control qualitatiu i quantitatiu de l'obra executada i de la seva qualitat.

Podran dirigir les obres dels projectes parcials altres tècnics, sota la coordinació del Director d'Obra, contant amb la col·laboració del Coordinador de Seguretat i Salut en fase d'Obra, nomenat pel Promotor.

Competències en matèria de Seguretat i Salut del Director d'Obra:

- Verificar el replanteig, l'adequació dels fonaments, estabilitat dels terrenys i de l'estructura projectada a les característiques geotècniques del terreny.
- Si dirigeix l'execució material de l'obra, verificar la recepció d'obra dels productes de construcció, ordenant la realització dels assaigs i proves precises; comprovar els nivells, desploms, influència de les condicions ambientals en la realització dels treballs, els materials, la correcta execució i disposició dels elements constructius, de les instal·lacions i dels Medis Auxiliars d'Utilitat Preventiva i la Senyalització, d'acord amb el Projecte i l'Estudi de Seguretat i Salut.
- Resoldre les contingències que es produeixin a l'obra i consignar en el Llibre d'Ordres i Assistència les instruccions necessàries per la correcta interpretació del Projecte i dels Medis Auxiliars d'Utilitat Preventiva i solucions de Seguretat i Salut Integrada previstes en el mateix.
- Elaborar a requeriment del Coordinador de Seguretat i Salut o amb la seva conformitat, eventuals modificacions del projecte, que vinguin exigides per la marxa de l'obra i que puguin afectar a la Seguretat i Salut dels treballs, sempre que les mateixes s'adeqüin a les disposicions normatives contemplades a la redacció del Projecte i del seu Estudi de Seguretat i Salut.
- Subscriure l'Acta de Replanteig o començament de l'obra, confrontant prèviament amb el Coordinador de Seguretat i Salut l'existència prèvia de l'Acta d'Aprovació

del Pla de Seguretat i Salut del contractista.

- Certificar el final d'obra, simultàniament amb el Coordinador de Seguretat, amb els visats que siguin preceptius.
- Conformar les certificacions parcials i la liquidació final de les unitats d'obra i de Seguretat i Salut executades, simultàniament amb el Coordinador de Seguretat.
- Les instruccions i ordres que doni la Direcció d'Obra o Direcció Facultativa, seran normalment verbals, tenint força per obligar a tots els efectes. Els desviaments respecte al compliment del Pla de Seguretat i Salut, s'anotaran pel Coordinador al Llibre d'incidències
- Elaborar i subscriure conjuntament amb el Coordinador de Seguretat, la Memòria de Seguretat i Salut de l'obra finalitzada, per lliurar-la al promotor, amb els visats que foren perceptius.

## 2.5. Contractista o constructor (empresari principal) i Subcontractistes

Definició de Contractista:

És qualsevol persona, física o jurídica, que individual o col·lectivament, assumeix contractualment davant el Promotor, el compromís d'executar, en condicions de solvència i Seguretat, amb medis humans i materials, propis o aliens, les obres o part de les mateixes amb subjecció al contracte, el Projecte i el seu Estudi de Seguretat i Salut.

Definició de Subcontractista:

És qualsevol persona física o jurídica que assumeix contractualment davant el contractista, empresari principal, el compromís de realitzar determinades parts o instal·lacions de l'obra, amb subjecció al contracte, al Projecte i al Pla de Seguretat, del Contractista, pel que es regeix la seva execució.

Competències en matèria de Seguretat i Salut del Contractista i/o Subcontractista:

- El Contractista haurà d'executar l'obra amb subjecció al Projecte, directrius de l'Estudi i compromisos del Pla de Seguretat i Salut, a la legislació aplicable i a les instruccions del Director d'Obra, i del Coordinador de Seguretat i Salut, amb la finalitat de dur a terme les condicions preventives de la sinistralitat laboral i l'assegurament de la qualitat, compromeses en el Pla de Seguretat i Salut i exigides en el Projecte
- Tenir acreditació empresarial i la solvència i capacitació tècnica, professional i econòmica que l'habiliti per al compliment de les condicions exigibles per actuar com constructor (i/o subcontractista, en el seu cas), en condicions de Seguretat i Salut.
- Designar al Cap d'Obra que assumirà la representació tècnica del Constructor (i/o Subcontractista, en el seu cas), a l'obra i que per la seva titulació o experiència haurà de tenir la capacitat adequada d'acord amb les característiques i complexitat de l'obra.
- Assignar a l'obra els medis humans i materials que la seva importància ho requereixi.
- Formalitzar les subcontractacions de determinades parts o instal·lacions de l'obra dins dels límits establerts en el Contracte i conforme amb la llei de la subcontractació 32/2006 i el Reial Decret 1109/2007.
- Redactar i signar el Pla de Seguretat i Salut que desenvolupi l'Estudi de Seguretat i Salut del Projecte. El Subcontractista podrà incorporar els suggeriments de millora corresponents a la seva especialització, en el Pla de Seguretat i Salut del Contractista i presentar-los a l'aprovació del Coordinador de Seguretat.
- El representant legal del Contractista signarà l'Acta d'Aprovació del Pla de Seguretat i Salut conjuntament amb el Coordinador de Seguretat.
- Signar l'Acta de Replanteig o començament i l'Acta de Recepció de l'obra.
- Aplicarà els Principis de l'Acció Preventiva que recull l'article 15 de la Llei de

Prevenció de Riscos Laborals, en particular, en desenvolupar les tasques o activitats indicades en l'esmentat article 10 del R.D. 1627/1997:

o) Complir i fer complir al seu personal allò establert en el Pla de Seguretat i Salut (PSS).

p) Complir la normativa en matèria de prevenció de riscos laborals, tenint en compte, si s'escau, les obligacions que fan referència a la coordinació d'activitats empresarials previstes en l'article 24 de la Llei de Prevenció de Riscos Laborals, i en conseqüència complir el R.D. 171/2004, i també complir les disposicions mínimes establertes en l'annex IV del R.D. 1627/1997, durant l'execució de l'obra.

q) Informar i facilitar les instruccions adequades als treballadors autònoms sobre totes les mesures que s'hagin d'adoptar pel que fa a la seguretat i salut a l'obra.

r) Atendre les indicacions i complir les instruccions del Coordinador en matèria de seguretat i salut durant l'execució de l'obra, i si és el cas, de la Direcció Facultativa.

- Els Contractistes i Subcontractistes seran responsables de l'execució correcta de les mesures preventives fixades en el Pla de Seguretat i Salut (PSS) en relació amb les obligacions que corresponen directament a ells o, si escau, als treballadors autònoms que hagin contractat.
- A més, els Contractistes i Subcontractistes respondran solidàriament de les conseqüències que es derivin de l'incompliment de les mesures previstes al Pla, als termes de l'apartat 2 de l'article 42 de la Llei de Prevenció de Riscos Laborals.
- El Contractista principal haurà de vigilar el compliment de la normativa de prevenció de riscos laborals per part de les empreses Subcontractistes.
- Abans de l'inici de l'activitat a l'obra, el Contractista principal exigirà als Subcontractistes que acreditin per escrit que han realitzat, per als treballs a realitzar, l'avaluació de riscos i la planificació de la seva activitat preventiva. Així mateix, el Contractista principal exigirà als Subcontractistes que acreditin per escrit que han complert les seves obligacions en matèria d'informació i formació respecte als treballadors que hagin de prestar servei a l'obra.
- El Contractista principal haurà de comprovar que els Subcontractistes que concorren a l'obra han establert entre ells els medis necessaris de coordinació.
- Les responsabilitats del Coordinador, de la Direcció Facultativa i del Promotor no eximiran de les seves responsabilitats als Contractistes i al Subcontractistes.
- El Constructor serà responsable de la correcta execució dels treballs mitjançant l'aplicació de Procediments i Mètodes de Treball intrínsecament segurs (SEGURETAT INTEGRADA), per assegurar la integritat de les persones, els materials i els mitjans auxiliars fets servir a l'obra.
- El Contractista principal facilitarà per escrit a l'inici de l'obra, el nom del Director Tècnic, que serà creditor de la conformitat del Coordinador i de la Direcció Facultativa. El Director Tècnic podrà exercir simultàniament el càrrec de Cap d'Obra, o bé, delegarà l'esmentada funció a altre tècnic, Cap d'Obra, amb coneixements contrastats i suficients de construcció a peu d'obra. El Director Tècnic, o en absència el Cap d'Obra o l'Encarregat General, ostentaran successivament la prelació de representació del Contractista a l'obra.
- El representant del Contractista a l'obra, assumirà la responsabilitat de l'execució de les activitats preventives incloses al present Plec i el seu nom figurarà al Llibre d'Incidències.
- Serà responsabilitat del Contractista i del Director Tècnic, o del Cap d'Obra i/o Encarregat en el seu cas, l'incompliment de les mesures preventives, a l'obra i entorn material, de conformitat a la normativa legal vigent.
- El Contractista també serà responsable de la realització del Pla de Seguretat i Salut (PSS), així com de l'específica vigilància i supervisió de seguretat, tant del personal propi com subcontractat, així com de facilitar les mesures sanitàries de caràcter preventiu laboral, formació, informació i capacitació del personal, conservació i reposició dels elements de protecció personal dels treballadors, càlcul i dimensions dels Sistemes de Proteccions Col·lectives i en

especial, les baranes i passarel·les, condemna de forats verticals i horitzontals susceptibles de permetre la caiguda de persones o objectes, característiques de les escales i estabilitat dels esglaons i recolzadors, ordre i neteja de les zones de treball, enllumenat i ventilació dels llocs de treball, bastides, apuntalaments, encofrats i estintolaments, aplecs i emmagatzematges de materials, ordre d'execució dels treballs constructius, seguretat de les màquines, grues, aparells d'elevació, mesures auxiliars i equips de treball en general, distància i localització d'estesa i canalitzacions de les companyies subministradores, així com qualsevol altre mesura de caràcter general i d'obligat compliment, segons la normativa legal vigent i els costums del sector i que pugui afectar a aquest centre de treball.

- El contractista ha de designar la presència de resursos preventius i es determinarà la forma de dur-los a terme en el pla de seguretat i salut, segons la disposició addicional catorzena de la Llei 31/1995, de 8 de novembre, de prevenció de riscos laborals i desenvolupada pel Reial Decret 604/2006.
- El Director Tècnic (o el Cap d'Obra), visitaran l'obra com a mínim amb una cadència diària i hauran de donar les instruccions pertinents a l'Encarregat General, que haurà de ser una persona de provada capacitat pel càrrec, haurà d'estar present a l'obra durant la realització de tot el treball que s'executi. Sempre que sigui preceptiu i no existeixi altra designada a l'efecte, s'entendrà que l'Encarregat General és al mateix temps el Supervisor General de Seguretat i Salut del Centre de Treball per part del Contractista, amb independència de qualsevol altre requisit formal.
- L'acceptació expressa o tàcita del Contractista pressuposa que aquest ha reconegut l'emplaçament del terreny, les comunicacions, accessos, afectació de serveis, característiques del terreny, mides de seguretats necessàries, etc. i no podrà al·legar en el futur ignorància d'aquestes circumstàncies.
- El Contractista haurà de disposar de les pòlisses d'assegurança necessària per a cobrir les responsabilitats que puguin esdevenir per motius de l'obra i el seu entorn, i serà responsable dels danys i prejudicis directes o indirectes que pugui ocasionar a tercers, tant per omissió com per negligència, imprudència o impericia professional, del personal al seu càrrec, així com del Subcontractistes, industrials i/o treballadors autònoms que intervinguin a l'obra.
- Les instruccions i ordres que doni la Direcció d'Obra o Direcció Facultativa, seran normalment verbals, tenint força per obligar a tots els efectes. Els desviaments respecte al compliment del Pla de Seguretat i Salut, s'anotaran pel Coordinador al Llibre d'Incidències.
  En cas d'incompliment reiterat dels compromisos del Pla de Seguretat i Salut (PSS), el Coordinador i Tècnics de la Direcció d'Obra o Direcció Facultativa, Constructor, Director Tècnic, Cap d'Obra, Encarregat, Supervisor de Seguretat, Delegat Sindical de Prevenció o els representants del Servei de Prevenció (propi o concertat) del Contractista i/o Subcontractistes, tenen el dret a fer constar al Llibre d'Incidències, tot allò que consideri d'interès per a reconduir la situació als àmbits previstos al Pla de Seguretat i Salut de l'obra.
- Les condicions de seguretat i salut del personal, dins de l'obra i els seus desplaçaments a/o des del seu domicili particular, seran responsabilitat dels Contractistes i/o Subcontractistes així com dels propis treballadors Autònoms.
- També serà responsabilitat del Contractista, el tancament perimetral del recinte de l'obra i protecció de la mateixa, el control i reglament intern de policia a l'entrada, per a evitar la intromissió incontrolada de tercers aliens i curiosos, la protecció d'accessos i l'organització de zones de pas amb destinació als visitants de les oficines d'obra.
- El Contractista haurà de disposar d'un senzill, però efectiu, Pla d'Emergència per a l'obra, en previsió d'incendis, pluges, glaçades, vent, etc. que puguin posar en situació de risc al personal d'obra, a tercers o als medis e instal·lacions de la pròpia obra o limítrofs.
- El Contractista i/o Subcontractistes tenen absolutament prohibit l'ús d'explosius sense autorització escrita de la Direcció d'Obra o Direcció Facultativa.
- La utilització de grues, elevadors o d'altres màquines especials, es realitzarà

per operaris especialitzats i posseïdors del carnet de grua torre, del títol d'operador de grua mòbil i en altres casos l'acreditació que correspongui, sota la supervisió d'un tècnic especialitzat i competent a càrrec del Contractista. El Coordinador rebrà una copia de cada títol d'habilitació signat per l'operador de la màquina i del responsable tècnic que autoritza l'habilitació avalant-hi la idoneïtat d'aquell per a realitzar la seva feina, en aquesta obra en concret.

- Tot operador de grua mòbil haurà d'estar en possessió del carnet de gruista segons l'Instrucció Tècnica Complementaria "MIE-AEM-4" aprovada per RD 837/2003 expedit pel òrgan competent o en el seu defecte certificat de formació com a operador de grua de l'Institut Gaudí de la Construcció o entitat similar; tot ell per garantir el total coneixement dels equips de treballs de forma que es pugui garantir el màxim de seguretat a les tasques a desenvolupar.
- El delegat del contractista haurà de certificar que tot operador de grua mòbil es troba en possessió del carnet de gruista segons especificacions del paràgraf anterior, així mateix haurà de certificar que totes les grues mòbils que s'utilitzin a l'obra compleixen totes i cadascunes de l'especificacions establertes a l'ITC "MIE-AEM-4".

## 2.6. Treballadors Autònoms

Persona física diferent al Contractista i/o Subcontractista que realitzarà de forma personal i directa una activitat professional, sense cap subjecció a un contracte de treball, i que assumeix contractualment davant el Promotor, el Contractista o el Subcontractista el compromís de realitzar determinades parts o instal·lacions de l'obra.

Competències en matèria de Seguretat i Salut del Treballador Autònom:

- Aplicar els Principis de l'Acció Preventiva que es recullen en l'article 15 de la Llei de Prevenció de Riscos Laborals, en particular, en desenvolupar les tasques o activitats indicades en l'article 10 del R.D. 1627/1997.
- Complir les disposicions mínimes de seguretat i salut, que estableix l'annex IV del R.D. 1627/1997, durant l'execució de l'obra.
- Complir les obligacions en matèria de prevenció de riscos que estableix pels treballadors l'article 29, 1,2, de la Llei de Prevenció de Riscos Laborals.
- Ajustar la seva actuació en l'obra conforme als deures de coordinació d'activitats empresarials establerts en l'article 24 de la Llei de Prevenció de Riscos Laborals, participant, en particular, en qualsevol mesura d'actuació coordinada que s'hagi establert.
- Utilitzar els equips de treball d'acord amb allò disposat en el R.D. 1215/1997, de 18 de juliol, pel qual s'estableixen les disposicions mínimes de seguretat i salut per a la utilització dels equips de treball per part dels treballadors.
- Escollir i utilitzar els equips de protecció individual, segons preveu el R.D. 773/1997, de 30 de maig, sobre disposicions mínimes de seguretat i salut relativa a la utilització dels equips de protecció individual per part dels treballadors.
- Atendre les indicacions i complir les instruccions del Coordinador en matèria de seguretat i de salut durant l'execució de l'obra i de la Direcció d'Obra o Direcció Facultativa, si n'hi ha.
- Els treballadors autònoms hauran de complir allò establert en el Pla de Seguretat i Salut (PSS):
  - s) La maquinària, els aparells i les eines que s'utilitzen a l'obra, han de respondre a les prescripcions de seguretat i salut, equivalents i pròpies, dels equipaments de treball que l'empresari Contractista posa a disposició dels

seus treballadors.

t) Els autònoms i els empresaris que exerceixen personalment una activitat a l'obra, han d'utilitzar equipament de protecció individual apropiat, i respectar el manteniment en condicions d'eficàcia dels diferents sistemes de protecció col·lectiva instal·lats a l'obra, segons el risc que s'ha de prevenir i l'entorn del treball.

### 2.7. Treballadors

Persona física diferent al Contractista, Subcontractista i/o Treballador Autònom que realitzarà de forma personal i directa una activitat professional remunerada per compte aliè, amb subjecció a un contracte laboral, i que assumeix contractualment davant l'empresari el compromís de desenvolupar a l'obra les activitats corresponents a la seva categoria i especialitat professional, seguint les instruccions d'aquell.

Competències en matèria de Seguretat i Salut del Treballador:

- El deure d'obeir les instruccions del Contractista en allò relatiu a Seguretat i Salut.
- El deure d'indicar els perills potencials.
- Té responsabilitat dels actes personals.
- Té el dret a rebre informació adequada i comprensible i a formular propostes, en relació a la seguretat i salut, en especial sobre el Pla de Seguretat i Salut (PSS).
- Té el dret a la consulta i participació, d'acord amb l'article 18, 2 de la Llei de Prevenció de Riscos Laborals.
- Té el dret a adreçar-se a l'autoritat competent.
- Té el dret a interrompre el treball en cas de perill imminent i seriós per a la seva integritat i la dels seus companys o tercers aliens a l'obra.
- Té el dret de fer us i el fruit d'unes instal·lacions provisionals de Salubritat i Confort, previstes especialment pel personal d'obra, suficients, adequades i dignes, durant el temps que duri la seva permanència a l'obra.

## 3. DOCUMENTACIÓ PREVENTIVA DE CARÀCTER CONTRACTUAL

### 3.1. Interpretació dels documents vinculants en matèria de Seguretat i Salut

Excepte en el cas que l'escriptura del Contracte o Document de Conveni Contractual ho indiqui específicament d'altra manera, l'ordre de prelació dels Documents contractuals en matèria de Seguretat i Salut per aquesta obra serà el següent:

- Escriptura del Contracte o Document del Conveni Contractual.
- Bases del Concurs.
- Plec de Prescripcions per la Redacció dels Estudis de Seguretat i Salut i la Coordinació de Seguretat i salut en fases de Projecte i/o d'Obra.
- Plec de Condicions Generals del Projecte i de l'Estudi de Seguretat i Salut.
- Plec de Condicions Facultatives i Econòmiques del Projecte i de l'Estudi de Seguretat i Salut.
- Procediments Operatius de Seguretat i Salut i/o Procediments de control Administratiu de Seguretat, redactats durant la redacció del Projecte i/o durant l'Execució material de l'Obra, pel Coordinador de Seguretat.
- Plànols i Detalls Gràfics de l'Estudi de Seguretat i Salut.

- Pla d'Acció Preventiva de l'empresari-contractista.
- Pla de Seguretat i Salut de desenvolupament de l'Estudi de Seguretat i Salut del Contractista per l'obra en qüestió.
- Protocols, procediments, manuals i/o Normes de Seguretat i Salut interna del Contractista i/o Subcontractistes, d'aplicació en l'obra.

Feta aquesta excepció, els diferents documents que constitueixen el Contracte seran considerats com mútuament explicatius, però en el cas d'ambigüitats o discrepàncies interpretatives de temes relacionats amb la Seguretat, seran aclarides i corregides pel Director d'Obra qui, després de consultar amb el Coordinador de Seguretat, farà l'ús de la seva facultat d'aclarir al Contractista les interpretacions pertinents.

Si en el mateix sentit, el Contractista descobreix errades, omissions, discrepàncies o contradiccions tindrà que notificar-ho immediatament per escrit al Director d'Obra qui després de consultar amb el Coordinador de Seguretat, aclarirà ràpidament tots els assumptes, notificant la seva resolució al Contractista. Qualsevol treball relacionat amb temes de Seguretat i Salut, que hagués estat executat pel Contractista sense prèvia autorització del Director d'Obra o del Coordinador de Seguretat, serà responsabilitat del Contractista, restant el Director d'Obra i el Coordinador de Seguretat, eximits de qualsevol responsabilitat derivada de les conseqüències de les mesures preventives, tècnicament inadequades, que hagin pogut adoptar el Contractista pel seu compte.

En el cas que el contractista no notifiqui per escrit el descobriment d'errades, omissions, discrepàncies o contradiccions, això, no tan sols no l'eximeix de l'obligació d'aplicar les mesures de Seguretat i Salut raonablement exigibles per la reglamentació vigent, els usos i la praxi habitual de la Seguretat Integrada en la construcció, que siguin manifestament indispensables per dur a terme l'esperit o la intenció posada en el Projecte i l'Estudi de Seguretat i Salut, si no que hauran de ser materialitzats com si haguessin estat completes i correctament especificades en el Projecte i el corresponent Estudi de Seguretat i Salut.

Totes les parts del contracte s'entenen complementàries entre si, per la qual cosa qualsevol treball requerit en un sol document, encara que no estigui esmentat en cap altre, tindrà el mateix caràcter contractual que si s'hagués recollit en tots.

## 3.2. Vigència de l'Estudi de Seguretat i Salut

El Coordinador de Seguretat, a la vista dels continguts del Pla de Seguretat i Salut aportat pel Contractista, com document de gestió preventiva d'adaptació de la seva pròpia ''cultura preventiva interna d'empresa'' el desenvolupament dels continguts del Projecte i l'Estudi de Seguretat i Salut per l'execució material de l'obra, podrà indicar en l'Acta d'Aprovació del Pla de Seguretat, la declaració expressa de subsistència, d'aquells aspectes que puguin estar, a criteri del Coordinador, millor desenvolupats en l'Estudi de Seguretat, com ampliadors i complementaris dels continguts del Pla de Seguretat i Salut del Contractista.

Els Procediments Operatius i/o Administratius de Seguretat, que pugessin redactar el Coordinador de Seguretat i Salut amb posterioritat a l'Aprovació del Pla de Seguretat i Salut, tindrà la consideració de document de desenvolupament de l'Estudi i Pla de Seguretat, essent, per tant, vinculants per les parts contractants.

### 3.3. Pla de Seguretat i Salut del Contractista

D'acord al que es disposa el R.D. 1627 / 1997, cada contractista està obligat a redactar, abans de l'inici dels seus treballs a l'obra, un Pla de Seguretat i Salut adaptant aquest E.S.S. als seus medis, mètodes d'execució i al ''PLA D'ACCIÓ PREVENTIVA INTERNA D'EMPRESA'', realitzat de conformitat al R.D.39 / 1997 ''LLEI DE PREVENCIÓ DE RISCOS LABORALS'' (Arts. 1, 2 ap. 1, 8 i 9) .

El Contractista en el seu Pla de Seguretat i Salut està obligat a incloure els requisits formals establerts a l'Art. 7 del R.D. 1627/ 1997, no obstant, el Contractista té plena llibertat per estructurar formalment aquest Pla de Seguretat i Salut .

El Contractista, en el seu Pla de Seguretat i Salut, adjuntarà, com a mínim, els plànols següents amb els continguts que en cada cas s'indiquen.

- Ubicació dels serveis públics.
    - Electricitat.
    - Clavegueram.
    - Aigua potable.
    - Gas.
    - Oleoductes.
    - Altres.
- Situació i amplada dels carrers (reals i previstos).
    - Accessos al recinte.
    - Garites de control d'accessos.
- Acotat del perímetre del solar.
- Distàncies de l'edifici amb els límits del solar.
- Edificacions veïnes existents.
- Servituds.

Plànols en planta d'ordenació general de l'obra, segons les diverses fases previstes en funció del seu pla d'execució real. Indicant:

- Tancament del solar.
- Murs de contenció, atalussats, pous, talls del terreny i desnivells.
- Nivells definitius dels diferents accessos al solar i rasants de vials colindants.
- Ubicació d'instal·lacions d'implantació provisional per al personal d'obra:
    - Banys: Equipament (lavabos, retretes, dutxes, escalfador..,).
    - Vestuaris del personal: Equipament (taquilles, bancs correguts, estufes..,).
    - Refectori o Menjador: Equipament (taules, seients, escalfaplats, frigorífic..,).
    - Farmaciola: Equipament.
    - Altres.
- Llocs destinats a apilaments.
    - Àrids i materials ensitjats.
    - Armadures, barres, tubs i biguetes.
    - Materials paletitzats.
    - Fusta.
    - Materials ensacats.
    - Materials en caixes.
    - Materials en bidons.
    - Materials solts.
    - Runes i residus.
    - Ferralla.
    - Aigua.
    - Combustibles.

    - Substàncies tòxiques.
    - Substàncies explosives i/o deflagrants.
- Ubicació de maquinària fixa i àmbit d'influència previst.
    - Aparells de manutenció mecànica: grues torre, muntacàrregues, cabrestants, maquinetes, baixants de runes, cintes transportadores, bomba d'extracció de fluids.
    - Estació de formigonat.
    - Sitja de morter.
    - Planta de piconament i/o selecció d'àrids.
- Circuits de circulació interna de vehicles, límits de circulació i zones d'aparcament. Senyalització de circulació.
- Circuits de circulació interna del personal d'obra. Senyalització de Seguretat.
- Esquema d'instal·lació elèctrica provisional.
- Esquema d'instal·lació d'il·luminació provisional.
- Esquema d'instal·lació provisional de subministrament d'aigua.

Plànols en planta i seccions d'instal·lació de Sistemes de Protecció Col·lectiva.
(*) Representació cronològica per fases d'execució.

- Protecció en previsió de caigudes de persones o objectes des de buits verticals de façanes:

    - Ubicació de bastida porticada d'estructura tubular cobrint la totalitat dels fronts de façana en avançament simultani a l'execució d'estructura fins l'acabament de tancaments i coberta.(*).

      (*) Sistema de Protecció Col·lectiva preferent

    - Ubicació i replanteig del conjunt de forques metàl·liques i xarxes de seguretat.(*).

      (*) En cas de no realitzar-se seguretat integrada amb bastides tubulars, prèvia justificació en l'ESS.

    - Ubicació i replanteig de xarxes de desencofrat.

    - Ubicació i replanteig de baranes de seguretat (*).

      (*) En cas de no realitzar-se seguretat integrada amb bastides tubulars, prèvia justificació en l'ESS.

    - Ubicació i replanteig de marquesines en voladís de seguretat (*).

      (*) En cas de no realitzar-se seguretat integrada amb bastides tubulars, prèvia justificació en l'ESS.

- Protecció en previsió de caigudes de persones o objectes des de buits verticals d'escales:

    - Ubicació i replanteig de xarxes verticals de seguretat en perímetre i buit de travessers d'escales (*).

      (*) Sistema de Protecció Col·lectiva preferent.

    - Ubicació i replanteig de baranes de seguretat en perímetre i buit de travessers d'escales.

- Protecció en previsió de caigudes de persones o objectes des de buits horitzontals de patis de llums, xemeneies, buits d'instal·lacions i encofrats.

- Ubicació i replanteig de condemna amb malla electrosoldada enjovat en el cèrcol perimetral (*).

  (*) Sistema de Protecció Col·lectiva preferent en forjat

- Ubicació i replanteig de xarxes horitzontals de seguretat en patis interiors.

- Planta d'estructura amb ubicació i replanteig de xarxes horitzontals de seguretat sota taulers i sotaponts d'encofrats horitzontals recuperables.

- Ubicació i replanteig d'entarimat horitzontal de fusta colada en passos d'instal·lacions, arquetes i registres provisionals.

- Ubicació i replanteig de barana perimetral de seguretat.

Plànols de proteccions en plataformes i zones de pas. Contingut:

- Passarel·les (ubicació i elements constitutius).
- Escales provisionals.
- Detalls de tapes provisionals d'arquetes o de buits.
- Abalisament i senyalització de zones de pas.
- Condemna d'accessos i proteccions en contenció d'estabilitat de terrenys.
- Ubicació de bastides penjades: Projecte i replanteig dels pescants i les guindoles.
- Sàgola de cable per a ancoratge i lliscament de cinturó de seguretat en perímetres exteriors amb risc de caigudes d'altura.

Plànol o plànols de distribució d'elements de seguretat per a l'ús i manteniment posterior de l'obra executada (*).

- Bastides suspeses sobre guindoles carrileres per a neteja de façana.

- Plataformes lliscants sobre carrils per a manteniment de paraments verticals.

- Bastides especials.

- Plataformes en voladís i moll de descàrrega escamotejables per a introducció i evacuació d'equips.

- Baranes perimetrals escamotejables per a treballs de manteniment en cobertes no transitables.

- Escales de gat amb enclavament d'accessos i equipament de Sistema de Protecció Col·lectiva.

- Replanteig d'ancoratges i sàgoles per a cinturons en façanes, xemeneies, finestrals i patis.

- Replanteig de pescants escamotejables o bigues retràctils.

- Escala d'incendis i/o mànega tèxtil ignífuga d'evacuació.

- Altres.

  (*) Tant sols en cas que estiguin contemplats en el Projecte Executiu.

Plànol d'evacuació interna d'accidentats (*).

- Plànol de carrers per a evacuació d'accidentats en obres urbanes.
- Plànol de carreteres per a evacuació d'accidentats en obres aïllades.

(*) Tant sols per a obres complexes o especials.

### 3.4. El "Llibre d'Incidències"

A l'obra existirà, adequadament protocolitzat, el document oficial ''Llibre d'incidències'', facilitat pel Col·legi Professional corresponent al qual pertanyi el tècnic que hagi aprovat el pla de seguretat i salut o per l'Oficina de Supervisió de Projectes o òrgan equivalent quan es tracti d'obres de les Administracions públiques.

Segons l'article 13 del Real Decret 1627/97 de 24 d'Octubre, modificat pel RD 1109/2007 , aquest llibre haurà d'estar permanentment a l'obra, en poder del coordinador de seguretat i salut , i a la disposició de la direcció d'obra o direcció facultativa , contractistes , subcontractistes i treballadors autònoms, les persones o òrgans amb responsabilitat en matèria de prevenció de les empreses que intervinguin en l'obra, tècnics dels òrgans especialitzats en matèria de seguretat i salut en el treball de les Administracions públiques competents, o en el seu cas, del representant dels treballadors, els quals podran realitzar les anotacions que considerin adequades respecte a les desviacions en el compliment del Pla de Seguretat i Salut.

Quan es realitzi una anotació en el llibre d'incidències, el coordinador en matèria de seguretat i salut durant l'execució de l'obra o, quan no sigui necessària la designació de coordinador, la direcció facultativa, la notificarà al contractista afectat i als representants dels treballadors d'aquest i només en el cas que l'anotació es refereixi a qualsevol incompliment dels advertiments o observacions prèviament anotades en aquest llibre així com en el supòsit de paralització dels treballs, s'ha de remetre una còpia a la Inspecció de Treball i Seguretat Social en el termini de vint-i-quatre hores i s'especificarà si l'anotació efectuada suposa una reiteració d'una advertència o observació anterior o si, per contra, es tracta d'una nova observació.

### 3.5. Caràcter vinculant del Contracte o document del "Conveni de Prevenció i Coordinació" i documentació contractual annexa en matèria de Seguretat

El CONVENI DE PREVENCIÓ i COORDINACIÓ subscrit entre el Promotor (o el seu representant), Contractista, Projectista, Coordinador de Seguretat, Direcció d'Obra o Direcció Facultativa i Representant Sindical Delegat de Prevenció, podrà ésser elevat a escriptura pública a requeriment de les parts atorgants del mateix, essent de compte exclusiva del Contractista totes les despeses notarials i fiscals que es derivin.

El Promotor podrà prèvia notificació escrita al Contractista, assignar totes o part de les seves facultats assumides contractualment, a la persona física, jurídica o corporació que tingues a be designar a l'efecte, segons procedeixi.

Els terminis i provisions de la documentació contractual contemplada en l'apartat 2.1. del present Plec, junt amb els terminis i provisions de tots els documents aquí incorporats per referència, constitueixen l'acord ple i total entre les parts i no durà a terme cap acord o enteniment de cap naturalesa, ni el Promotor farà cap endossament o representacions al Contractista, excepte les que s'estableixin expressament mitjançant contracte. Cap modificació verbal als mateixos tindrà validesa o força o efecte algun.

El Promotor i el Contractista s'obligaran a si mateixos i als seus successors, representants legals i/o concessionaris, amb respecte al pactat en la documentació contractual vinculant en matèria de Seguretat. El Contractista no es agent o representant legal del Promotor, pel que aquest no serà responsable de cap manera de les obligacions o responsabilitats en què incorri o assumeixi el Contractista.

No es considerarà que alguna de les parts hagi renunciat a algun dret, poder o privilegi atorgat per qualsevol dels documents contractuals vinculants en matèria de Seguretat, o provisió dels mateixos, llevat que tal renúncia hagi estat degudament expressada per escrit i reconeguda per les parts afectades.

Tots els recursos o remeis brindats per la documentació contractual vinculant en matèria de Seguretat, hauran de ser presos i interpretats com acumulatius, és a dir, addicionals a qualsevol altre recurs prescrit per la llei.

Les controvèrsies que puguin sorgir entre les parts, respecte a la interpretació de la documentació contractual vinculant en matèria de Seguretat, serà competència de la jurisdicció civil. No obstant, es consideraran actes jurídics separables els que es dicten en relació amb la preparació i adjudicació del Contracte i, en conseqüència, podran ser impugnats davant l'ordre jurisdiccional contenciós-administratiu d'acord amb la normativa reguladora de l'esmentada jurisdicció.

## 4. NORMATIVA LEGAL D'APLICACIÓ

Per a la realització del Pla de Seguretat i Salut, el Contractista tindrà en compte la normativa existent i vigent en el decurs de la redacció de l'ESS (o EBSS), obligatòria o no, que pugui ésser d'aplicació.

A títol orientatiu, i sense caràcter limitatiu, s'adjunta una relació de normativa aplicable. El Contractista, no obstant, afegirà al llistat general de la normativa aplicable a la seva obra les esmenes de caràcter tècnic particular que no siguin a la relació i correspongui aplicar al seu Pla.

### 4.1. Textos generals

- Convenis col·lectius.
- "Reglamento de seguridad e higiene en el trabajo en la industria de la construcción. OM 20 de mayo de 1952 (BOE 15 de junio de 1958)". Modificada per "Orden 10 de diciembre de 1953 (BOE 2 de febrero de 1956)" i "Orden 23 de de septiembre 1966 (BOE 1 de octubre de 1966)". Derogada

parcialment per "Orden 20 de enero de 1956 (BOE 2 de febrero de 1956)" i "R.D. 2177/2004 (BOE 13 de noviembre de 2004)".

- "Ordenanza general de seguridad e higiene en el trabajo. OM 9 de marzo de 1971 (BOE 16 de marzo de 1971)", en vigor parts del títol II. Derogada parcialment per "R.D. 1316/1989 (BOE 2 de noviembre de 1989)", "Ley 31/1995 (BOE 10 de noviembre de 1995)", R.D. 486/1997 (BOE 23 de abril de 1997)", "R.D. 664/1997 (BOE 24 de mayo de 1997)", "R.D. 665/1997 (BOE 24 de mayo de 1997)", "R.D. 773/1997 (BOE 12 de junio de 1997)", "R.D. 1215/1997 (BOE 7 de agosto de 1997)", "R.D. 614/2001 (BOE 21 de junio de 2001)" i "R.D. 349/2003 (BOE 5 de abril de 2003)".

- "Regulación de la jornada de trabajo, jornadas especiales y descanso. R.D. 2001/1983 de 28 de julio (BOE 29 de julio de 1983)". Modificada per "R.D. 2403/1985 (BOE 30 de diciembre de 1985)", "R.D. 1346/1989 (BOE 7 de noviembre 1989)" i anul·lada parcialment per "R.D. 1561/1995 de 21 de septiembre (BOE 26 de septiembre de 1995)".

- "Orden de 20 de septiembre de 1986, por la que se establece el modelo de libro de incidencias correspondiente a las obras en las que sea obligatorio un estudio de Seguridad e Higiene en el trabajo (BOE de 13 de octubre de 1986)".

- "Establecimiento de modelos de notificación de accidentes de trabajo. OM 16 de diciembre de 1987 (BOE 29 de diciembre de 1987)".

- "Instrumento de ratificación de 17 de julio de 1990 del Convenio de 24 de junio de 1986 sobre Utilización del asbesto en condiciones de seguridad (número 162 de la OIT), adoptado en Ginebra (BOE de 23 de noviembre de 1990)".

- "Ley de prevención de riesgos laborales. Ley 31/1995 de noviembre (BOE 10 de noviembre de 1995)". Complementada per "R.D. 614/2001 de 8 de junio (BOE 21 de junio de 2001)".

- "Real Decreto 363/1995, de 10 de marzo, por la que se aprueba el reglamento sobre notificación de sustancias nuevas y clasificación, envasado y etiquetado de sustancias peligrosas (BOE de 5 de junio de 1995)".

- "Real Decreto 1561/1995, de 21 de septiembre, sobre jornadas especiales de trabajo (BOE de 26 de septiembre de 1995)".

- "Reglamento de los servicios de prevención. R.D. 39/1997 de 17 de enero (BOE 31 de enero de 1997)". Complementat per "Orden de 22 de abril de 1997 (BOE 24 de abril de 1997)" i "R.D. 688/2005 (BOE 11 de junio de 2006)". Modificat per "R.D. 780/1998 de 30 de abril (BOE 1 de mayo de 1998)" i "R.D. 604/2006 (BOE 29 de mayo de 2006)".

- "Disposiciones mínimas de seguridad y salud en los lugares de trabajo. R.D. 486/1997 de 14 de abril de 1997 (BOE 23 de abril de 1997)". Complementat per "Orden TAS/2947/2007 (BOE 11 de octubre de 2007)" i modificat per "R.D. 2177/2004 (BOE 13 de noviembre de 2004)".

- "Disposiciones mínimas de seguridad y salud relativas a la manipulación manual de cargas que comporten riesgos, en particular dorsolumbares, para los trabajadores. R.D. 487/1997 de 14 de abril de 1997 (BOE 23 de abril de 1997)".

- "Disposiciones mínimas de seguridad y salud para la utilización por los trabajadores de los equipos de trabajo. R.D. 1215/1997 de 18 de julio (BOE 7 de agosto de 1997)".

- "Disposiciones mínimas destinadas a proteger la seguridad y la salud de los trabajadores en las actividades mineras. R.D. 1389/1997 de 5 de septiembre (BOE 7 de octubre de 1997)".

- "Disposiciones mínimas de seguridad y salud en las obras de construcción. R.D. 1627/1997 de 24 de octubre (BOE 25 de octubre de 1997)". Modificat per "R.D. 2177/2004 (BOE 13 de noviembre 2004)" i "R.D. 604/2006 (BOE 29 de mayo de 2006)". Complementat per "R.D. 1109/2007 (BOE 25 de agosto de

2007)".

- Ordre de 12 de gener de 1998, per la qual s'aprova el model de Llibre d'Incidències en les obres de construcció (DOGC Diari Oficial de la Generalitat de Catalunya de 27 de gener de 1998).
- "Disposiciones mínimas de seguridad y salud en el trabajo en el ámbito de las empresas de trabajo temporal. R.D. 216/1999 de 5 de febrero (BOE 24 de febrero de 1999)".

- "Orden PRE/2056/2013, de 7 de noviembre, por la que se modifica el anexo VI

del Reglamento sobre clasificación, envasado y etiquetado de preparados peligrosos, aprobado por el Real Decreto 255/2003, de 28 de febrero."

- "Resolución de 8 de noviembre de 2013, de la Dirección General de Empleo, por la que se registra y publica el Acta de los acuerdos sobre el procedimiento para la homologación de actividades formativas en materia de prevención de riesgos laborales, así como sobre el Reglamento de condiciones para el mantenimiento de la homologación de actividades formativas en materia de prevención de riesgos laborales de acuerdo con lo establecido en el V Convenio colectivo del sector de la construcción."
- "Resolución de 15 de noviembre de 2013, de la Secretaría de Estado de Administraciones Públicas, por la que se actualiza y dispone la publicación del Sistema de Gestión de la Prevención de Riesgos Laborales en la Administración General del Estado."
- "Real Decreto 842/2013, de 31 de octubre, por el que se aprueba la clasificación de los productos de construcción y de los elementos constructivos en función de sus propiedades de reacción y de resistencia frente al fuego (BOE 281, de 23 de noviembre de 2013)."
- "Directiva 2013/59/Euratom del Consejo, de 5 de diciembre de 2013, por la que se establecen normas de seguridad básicas para la protección contra los peligros derivados de la exposición a radiaciones ionizantes, y se derogan las Directivas 89/618/Euratom, 90/641/Euratom, 96/29/Euratom, 97/43/Euratom y 2003/122/Euratom."
- "Real Decreto 97/2014, de 14 de febrero, por el que se regulan las operaciones de transporte de mercancías peligrosas por carretera en territorio espanyol (BOE 50, de 27 de febrero de 2014)."
- "Real Decreto 337/2014, de 9 de mayo, por el que se aprueban el Reglamento sobre condiciones técnicas y garantías de seguridad en instalaciones eléctricas de alta tensión y sus Instrucciones Técnicas Complementarias ITC-RAT 01 a 23."
- Llei 13/2014, del 30 d'octubre, d'accessibilitat.
- "Reglamento (UE) no 1303/2014 de la Comisión, de 18 de noviembre de 2014, sobre la especificación técnica de interoperabilidad relativa a la «seguridad en los túneles ferroviarios» del sistema ferroviario de la Unión Europea."
- "Reglamento (UE) 2015/282 de la Comisión, de 20 de febrero de 2015, por el que se modifican, con relación al estudio ampliado de toxicidad para la reproducción en una generación, los anexos VIII, IX y X del Reglamento (CE) no 1907/2006 del Parlamento Europeo y del Consejo, relativo al registro, la evaluación, la autorización y la restricción de las sustancias y preparados químicos (REACH)."
- "Reglamento (UE) 2015/326 de la Comisión, de 2 de marzo de 2015, por el que se modifica, con relación a los hidrocarburos aromáticos policíclicos y los ftalatos, el anexo XVII del Reglamento (CE) nº 1907/2006 del Parlamento Europeo y del Consejo, relativo al registro, la evaluación, la autorización y la restricción de las sustancias y preparados químicos (REACH)."
- "Real decreto 598/2015, de 3 de julio, por el que se modifican el Real Decreto 39/1997, de 17 de enero, por el que se aprueba el Reglamento de los servicios de prevención , y otros Reales Decretos : el RD 485/97, el RD 665/97 y el RD 374/2001."
- "Real decreto 840/2015, de 21 de septiembre, por el que se aprueban medidas de control de los riesgos inherentes a los accidentes graves en los que intervengan sustancias peligrosas."
- "Real decreto 899/2015, de 9 de octubre, por el que se modifica el Real Decreto 39/1997, de 17 de enero, por el que se aprueba el Reglamento de los Servicios de Prevención."

- "Real decreto 901/2015, de 9 de octubre, por el que se modifica el Real Decreto 843/2011, de 17 de junio, por el que se establecen los criterios básicos sobre la organización de recursos para desarrollar la actividad sanitaria de los servicios de prevención."
- "Orden ESS/2259/2015, de 22 de octubre, por la que se modifica la Orden TIN/2504/2010, de 20 de septiembre, por la que se desarrolla el Real Decreto 39/1997, de 17 de enero, por el que se aprueba el Reglamento de los Servicios de Prevención, en lo referido a la acreditación de entidades especializadas como servicios de prevención, memoria de actividades preventivas y autorización para realizar la actividad de auditoría del sistema de prevención de las empresas."
- "Real decreto 1054/2015, de 20 de noviembre, por el que se aprueba el Plan Estatal de Protección Civil ante el Riesgo Radiológico."
- "Real decreto 1072/2015, de 27 de noviembre, por el que se modifica el Real Decreto 2200/1995, de 28 de diciembre, por el que se aprueba el Reglamento de la Infraestructura para la Calidad y la Seguridad Industrial."
- "Directiva (UE) 2017/164 de la Comisión, de 31 de enero de 2017, por la que se establece una cuarta lista de valores límite de exposición profesional indicativos de conformidad con la Directiva 98/24/CE del Consejo y por la que se modifican las Directivas 91/322/CEE, 2000/39/CE y 2009/161/UE de la Comisión."
- "Real Decreto 115/2017, de 17 de febrero, por el que se regula la comercialización y manipulación de gases fluorados y equipos basados en los mismos, así como la certificación de los profesionales que los utilizan y por el que se establecen los requisitos técnicos para las instalaciones que desarrollen actividades que emitan gases fluorados (BOE 42, de 18 de febrero de 2017)."
- "Real Decreto 656/2017, de 23 de junio, por el que se aprueba el Reglamento de Almacenamiento de Productos Químicos y sus Instrucciones Técnicas Complementarias MIE APQ 0 a 10 (BOE 176, de 25 de julio de 2017)."
- "Ley 9/2017, de 8 de noviembre, de Contratos del Sector Público, por la que se transponen al ordenamiento jurídico español las Directivas del Parlamento Europeo y del Consejo 2014/23/UE y 2014/24/UE, de 26 de febrero de 2014 (BOE 272, de 09 de novembre de 2017)."
- "Orden TEC/1146/2018, de 22 de octubre, por la que se aprueba la instrucción técnica complementaria 04.7.06 "Control de gases tóxicos en la atmósfera de las actividades subterráneas" y se modifica la instrucción técnica complementaria 05.0.02 "Especificaciones para minas subterráneas de carbón y labores con riesgo de explosión. Contenidos límites de metano en la corriente de aire", del Reglamento General de Normas Básicas de Seguridad Minera."
- "Resolución de 14 de noviembre de 2018, de la Dirección General de Industria y de la Pequeña y Mediana Empresa, por la que se actualiza el listado de normas de la instrucción técnica complementaria ITC-ICG 11 del Reglamento técnico de distribución y utilización de combustibles gaseosos, aprobado por el Real Decreto 919/2006, de 28 de julio."
- "Orden PCI/1319/2018, de 7 de diciembre, por la que se modifica el Anexo II del Real Decreto 1513/2005, de 16 de diciembre, por el que se desarrolla la Ley 37/2003, de 17 de noviembre, del ruido, en lo referente a la evaluación del ruido ambiental"
- "Reglamento (UE) 2020/171 de la Comisión de 6 de febrero de 2020 por el que se modifica el anexo XIV del Reglamento (CE) nº 1907/2006 del Parlamento Europeo y del Consejo, relativo al registro, la evaluación, la autorización y la restricción de las sustancias y preparados químicos (REACH)."
- "Reglamento (UE) 2020/878 de la Comisión de 18 de junio de 2020 por el que se modifica el anexo II del Reglamento (CE) nº 1907/2006 del Parlamento Europeo y del Consejo, relativo al registro, la evaluación, la autorización y la

restricción de las sustancias y mezclas químicas (REACH)."

- "Real Decreto 1154/2020, de 22 de diciembre, por el que se modifica el Real Decreto 665/1997, de 12 de mayo, sobre la protección de los trabajadores contra los riesgos relacionados con la exposición a agentes cancerígenos durante el trabajo."
- "Real Decreto-ley 3/2021, de 2 de febrero, por el que se adoptan medidas para la reducción de la brecha de género y otras materias en los ámbitos de la Seguridad Social y económico."

## 4.2. Condicions ambientals

- Ordre de 27 de juny de 1985, sobre inscripció d'empreses amb risc per amiant (DOGC Diari Oficial de la Generalitat de Catalunya de 05 d'agost de 1985).
- Ordre de 30 de juny de 1987, sobre registre de dades de control de l'ambient laboral i vigilància mèdica en empreses amb risc d'amiant (DOGC Diari Oficial de la Generalitat de Catalunya de 10 de juliol de 1987).
- "Real Decreto 108/1991, de 1 de febrero, sobre la prevención y reducción de la contaminación del medio ambiente producida por el amianto (BOE de 6 de febrero de 1991)".
- "Real Decreto 664/1997, de 12 de mayo, sobre la protección de los trabajadores contra los riesgos relacionados con la exposición a agentes biológicos durante el trabajo (BOE de 24 de mayo de 1997)". Modificat per "Orden de 25 de marzo de 1998".
- "Real Decreto 665/1997, de 12 de mayo, sobre la protección de los trabajadores contra los riesgos relacionados con la exposición a agentes cancerígenos durante el trabajo (BOE de 24 de mayo de 1997)". Modificat per "Real Decreto 1124/2000 (BOE de 17 de junio de 2000)" i "Real Decreto 349/2003 (BOE de 5 de abril de 2003)".
- "Real decreto 212/2002, de 22 de febrero de 2002, por el que se regulan las emisiones sonoras en el entorno debidas a determinadas máquinas de uso al aire libre (BOE de 1 de marzo de 2002)". Modificat per "Real Decreto 524/2006 (BOE de 4 de mayo de 2006)".
- "Real Decreto 681/2003, de 12 de junio, sobre la protección de la salud y la seguridad de los trabajadores expuestos a los riesgos derivados de atmósferas explosivas en el lugar de trabajo (BOE de 18 de junio de 2003).
- "Ley ordinaria 37/2003 del Ruido de 17 de noviembre (BOE de 18 noviembre de2003)". Desenvolupada per "Real Decreto 1513/2005 (BOE de 17 de diciembre de 2005)" i "Real Decreto 1367/2007 (BOE de 23 de octubre 2007)".
- "Protección de los trabajadores ante los riesgos derivados de la exposición al ruido durante el trabajo. Real Decreto 286/2006, de 10 de marzo, sobre la protección de la salud y seguridad de los trabajadores contra los riesgos relacionados con la exposición al ruido. (BOE 11 de marzo de 2006)".
- "Real decreto 1367/2007, de 19 de octubre, por el que se desarrolla la Ley 37/2003, de 17 de noviembre, del Ruido, en lo referente a zonificación acústica, objetivos de calidad y emisiones acústicas (BOE de 23 de octubre de 2007)".
- "Ley 34/2007, de 15 de noviembre, de calidad del aire y protección de la atmósfera (BOE de 16 de noviembre de 2007)".
- "Real Decreto 553/2020, de 2 de junio, por el que se regula el traslado de residuos en el interior del territorio del Estado."
- "Orden TES/1180/2020, de 4 de diciembre, por la que se adapta en función del progreso técnico el Real Decreto 664/1997, de 12 de mayo, sobre la protección de los trabajadores contra los riesgos relacionados con la exposición a agentes

biológicos durante el trabajo."

### 4.3. Incendis

- Ordenances municipals.
- Decret 64/1995, de 7 de març, pel qual s'estableixen mesures de prevenció d'incendis forestals (DOGC Diari Oficial de la Generalitat de Catalunya de 10 de març de 1995) i desenvolupada per Ordre MAB/62/2003 (DOGC Diari Oficial de la Generalitat de Catalunya de 24 de Febrer de 2003).
- "Real Decreto 513/2017, de 22 de mayo, por el que se aprueba el Reglamento de instalaciones de protección contra incendios (BOE 139, de 12 de junio de 2017)."

### 4.4. Instal·lacions elèctriques

- "Orden de 18 de julio de 1978, por la que se aprueba la Norma Tecnológica NTE-IEE/1978, "Instalaciones de electricidad: alumbrado exterior" (BOE de 12 de agosto de 1978)".
- Resolució de 4 de novembre de 1988, per la qual s'estableix un certificat sobre compliment de les distàncies reglamentàries d'obres i construccions a línies elèctriques (DOGC Diari Oficial de la Generalitat de Catalunya de 30 de novembre de 1988).
- "Ley 54/1997, de 27 de noviembre de 1997, del Sector Eléctrico (BOE de 28 de noviembre de 1997)". Complementada per "Real Decreto 1955/2000 (BOE de 27 de diciembre de 2000)".
- Llei 6/2001, de 31 de maig, d'ordenació ambiental de l'enllumenament per a la protecció del medi nocturn (DOGC Diari Oficial de la Generalitat de Catalunya de 12 de juny de 2001).
- "Real Decreto 614/2001, de 8 de junio, sobre disposiciones mínimas para la protección de la salud y seguridad de los trabajadores frente al riesgo eléctrico (BOE de 21 de junio de 2001)".
- Decret 329/2001, de 4 de desembre, pel qual s'aprova el Reglament del subministrament elèctric (DOGC Diari Oficial de la Generalitat de Catalunya de 18 de desembre de 2001).
- "Reglamento electrotécnico de baja tensión. R.D. 842/2002 de 2 de agosto (BOE de 18 de septiembre de 2002)".
- "Sentencia de 17 de febrero de 2004, de la Sala Tercera del Tribunal Supremo, por la que se anula el inciso 4.2.c.2 de la ITC-BT-03 anexa al Reglamento Electrónico para baja tensión, aprobado por Real Decreto 842/2002, de 2 de agosto".
- "Real decreto 223/2008, de 15 de febrero, del Ministerio de Industria, Turismo y Comercio por el que se aprueban el Reglamento sobre condiciones técnicas y garantías de seguridad en líneas eléctricas de alta tensión y sus instrucciones técnicas complementarias ITC-LAT 01 a 09 (BOE de 19 de marzo de 2008)".
- "Instrucciones Técnicas Complementarias del Reglamento electrotécnico de baja tensión: ITC-BT-09 Instalaciones de alumbrado exterior e ITC-BT-33 Instalaciones provisionales y temporales de obras".

## 4.5. Equips i maquinària

- "Orden de 30 de julio de 1974, por la que se determinan las condiciones que deben reunir los aparatos elevadores de propulsión hidráulica y las normas para la aprobación de sus equipos impulsores (BOE de 9 de agosto de 1974)".
- "Reglamento de aparatos de elevación y su mantenimiento. R.D. 2291/1985 de 8 de noviembre (BOE de 11 de diciembre de 1985)". Derogat parcialment per "R.D. 1314/1997 (BOE de 30 de septiembre de 1997)".
- "Real Decreto 474/1988, de 30 de marzo, por el que se dictan las disposiciones de aplicación de la Directiva del Consejo de las Comunidades Europeas 84/528/CEE sobre aparatos elevadores y de manejo mecánico (BOE de 20 de mayo de 1988)".
- "Resolución de 3 abril de 1997, de la Dirección General de Tecnología y Seguridad Industrial por la que se autoriza la instalación de ascensores sin cuarto de máquinas (BOE de 23 de abril de 1997)".
- "Real Decreto 488/1997, de 14 de abril, sobre disposiciones mínimas de seguridad y salud relativas al trabajo con equipos que incluyen pantallas de visualización (BOE de 23 de abril de 1997)".
- "Disposiciones mínimas de seguridad y salud relativas a la utilización por los trabajadores de equipos de protección Individual. RD 773/1997 de 30 de mayo (BOE 12 de junio de 1997)".
- "Real Decreto 1215/1997, de 18 de julio por el que se establecen las disposiciones mínimas de seguridad y salud para la utilización por los trabajadores de los equipos de trabajo (BOE de 7 de agosto de 1997)". Modificat per "Real Decreto 2177/2004 (BOE de 13 de noviembre de 2004)".
- "Resolución de 10 de septiembre de 1998, de la Dirección General de Tecnología y Seguridad Industrial, por la que se autoriza la Instalación de ascensores con máquinas en foso (BOE de 25 septiembre de 1998)."
- "Real Decreto 1849/2000, de 10 de noviembre, del Reglamento de seguridad en las máquinas, por el que se derogan diferentes disposiciones en materia de normalización y homologación de productos industriales (BOE de 2 de diciembre de 2000."
- "Real Decreto 2177/2004, de 12 de noviembre, por el que se modifica el Real Decreto 1215/1997, de 18 de julio, por el que se establecen las disposiciones mínimas de seguridad y salud para la utilización por los trabajadores de los equipos de trabajo, en materia de trabajos temporales en altura (BOE de 13 de noviembre de 2004)".
- "Real Decreto 1311/2005, de 4 de noviembre de 2005, sobre la protección de la salud y la seguridad de los trabajadores frente a los riesgos derivados o que puedan derivarse de la exposición a vibraciones mecánicas (BOE de 5 de noviembre de 2005)"."Real Decreto 2060/2008, de 12 de diciembre, por el que se aprueba el Reglamento de equipos a presión y sus instrucciones técnicas complementarias (BOE 31, de 5 de febrero de 2009).
- "Real Decreto 1644/2008, de 10 de octubre, por el que se establecen las normas para la comercialización y puesta en servicio de las màquines (BOE 246, de 11 de octubre de 2008)."
- "Real Decreto 2060/2008, de 12 de diciembre, por el que se aprueba el Reglamento de equipos a presión y sus instrucciones técnicas complementarias (BOE 31, de 5 de febrero de 2009)."
- "Real Decreto 1388/2011, de 14 de octubre, por el que se dictan las disposiciones de aplicación de la Directiva 2010/35/UE del Parlamento Europeo y del Consejo de 16 de junio de 2010 sobre equipos a presión transportables y por la que se derogan las Directivas 76/767/CEE, 84/525/CEE, 84/526/CEE, 84/527/CEE y 1999/36/CE."

- "Real Decreto 494/2012, de 9 de marzo, por el que se modifica el Real Decreto 1644/2008, de 10 de octubre, por el que se establecen las normas para la comercialización y puesta en servicio de las máquinas, para incluir los riesgos de aplicación de plaguicidas."
- "Real Decreto 88/2013, de 8 de febrero, por el que se aprueba la Instrucción Técnica Complementaria AEM 1 "Ascensores" del Reglamento de aparatos de elevación y manutención, aprobado por Real Decreto 2291/1985, de 8 de novembre (BOE 46, de 22 de febrero de 2013)."
- "Real decreto 709/2015, de 24 de julio, por el que se establecen los requisitos esenciales de seguridad para la comercialización de los equipos a presión (BOE 210, de 2 de septiembre de 2015)."
- "Real Decreto 203/2016, de 20 de mayo, por el que se establecen los requisitos esenciales de seguridad para la comercialización de ascensores y componentes de seguridad para ascensores (BOE 126, de 25 de mayo de 2016)."
- "Real Decreto 115/2017, de 17 de febrero, por el que se regula la comercialización y manipulación de gases fluorados y equipos basados en los mismos, así como la certificación de los profesionales que los utilizan y por el que se establecen los requisitos técnicos para las instalaciones que desarrollen actividades que emitan gases fluorados."
- "Real Decreto 656/2017, de 23 de junio, por el que se aprueba el Reglamento de Almacenamiento de Productos Químicos y sus Instrucciones Técnicas Complementarias MIE APQ 0 a 10."
- "Orden FOM/606/2018, de 25 de mayo, sobre el contenido del informe anual para el transporte de mercancías peligrosas por carretera."
- Instruccions Tècniques Complementaries:

  "ITC – MIE – AEM2: Grúas torre desmontables para obras. RD 836/2003 de 27 de mayo de 2003 (BOE 17 de julio de 2003)".

  "ITC – MIE – AEM3: Carretas automotrices de manutención. OM. 26 de mayo de 1989 (BOE 9 de junio de 1989)".

  "ITC – MIE – AEM4: Reglamento de aparatos de elevación y manutención, referentes a grúas móviles autopropulsadas. RD 837/2003 de 27 de mayo de 2003 (BOE 17 de julio de 2003)".

  "Norma UNE-58921-IN Instrucciones para la instalación, manejo, mantenimiento, revisiones e inspecciones de las plataformas elevadoras móviles de personal (PEMP)".

## 4.6. Equips de protecció individual

- "Comercialización y libre circulación intracomunitaria de los equipos de protección individual. R.D. 1407/1992 de 20 de noviembre (BOE 28 de diciembre de 1992)". Modificat per "OM de 16 de mayo de 1994", per "R.D. 159/1995 de 3 de febrero (BOE 8 de marzo de 1995)" i per la "Resolución de 27 de mayo de 2002 (BOE 4 de julio de 2002)". Complementat per la "Resolución de 25 de abril de 1996 (BOE de 28 de mayo de 1996)", "Resolución de 18 de marzo de 1998 (BOE de 22 de abril de 1998)", "Resolución de 29 de abril de 1999 (BOE de 29 de junio de 1999)", "Resolución de 28 de julio de 2000 (BOE de 8 de septiembre de 2000)" i "Resolución de 7 de septiembre de 2001 (BOE de 27 de septiembre de 2001)".
- "Real Decreto 159/1995, de 3 de febrero , por el que se modifica el Real Decreto 1407/1992, de 20 de noviembre, por el que se regula las condiciones para la comercialización y libre circulación intracomunitaria de los equipos de protección individual (BOE de 8 de marzo de 1995) modificado por Orden de

20 de febrero de 1997 (BOE de 6 de marzo de 1997)".

- "R.D. 773/1997 de 30 de mayo, sobre disposiciones mínimas de seguridad y salud relativas a la utilización por los trabajadores de equipos de protección individual".
- "Decisión de la Comisión, de 16 de marzo de 2006, relativa a la publicación de las referencias de la norma EN 143:2000, Equipos de protección respiratoria. Filtros contra partículas. Requisitos, ensayos, marcado, de conformidad con la Directiva 89/686/CEE del Consejo (equipos de protección individual) [notificada con el número C(2006) 777]".
- "Directiva 2014/68/UE del Parlamento Europeo y del Consejo, de 15 de mayo de 2014, relativa a la armonización de las legislaciones de los Estados miembros sobre la comercialización de equipos a presión (refundición)."
- "Decisión de Ejecución (UE) 2020/668 de la Comisión de 18 de mayo de 2020 relativa a las normas armonizadas para los equipos de protección individual elaboradas en apoyo del Reglamento (UE) 2016/425 del Parlamento Europeo y del Consejo."
- Normes Tècniques Reglamentàries.

## 4.7. Senyalització

- "Disposiciones mínimas en materia de señalización de seguridad y salud en el trabajo. R.D. 485/1997 (BOE 23 de abril de 1997)".
- "Orden de 31 de agosto de 1987 sobre Señalización, balizamiento, defensa, limpieza y terminación de obras fijas en vías fuera de poblado (BOE de 18 de septiembre de 1987)".
- Normes sobre senyalització d'obres en carreteres. "Instrucción 8.3. IC del MOPU".

## 4.8. Diversos

- "Orden de 20 de junio de 1986 sobre Catalogación y Homologación de los explosivos, productos explosivos y sus accesorios (BOE de 1 de julio de 1986)".
- "Orden de 16 de diciembre de 1987 por la que se establecen nuevos modelos para la notificación de accidentes de trabajo y se dan instrucciones para su cumplimentación y tramitación (BOE de 29 de diciembre de 1987)". Modificada per "Orden TAS/2926/2002 (BOE de 21 de noviembre de 2002)".
- "Resolución de 1 de agosto de 2007, de la Dirección General de Trabajo, por la que se inscribe en el registro y publica el IV Convenio Colectivo General del Sector de la Construcción (BOE de 17 de agosto de 2007)".
- Convenis col·lectius.
- "Real Decreto 1591/2009, de 16 de octubre, por el que se regulan los productos sanitarios (BOE 268 de 6 de noviembre de 2009)."
- "Orden TIN/1071/2010, de 27 de abril, sobre los requisitos y datos que deben reunir las comunicaciones de apertura o de reanudación de actividades en los centros de Trabajo."
- "Directiva 2014/28/UE del Parlamento Europeo y del Consejo, de 26 de febrero de 2014, relativa a la armonización de las legislaciones de los Estados miembros en materia de comercialización y control de explosivos con fines civiles (refundición)."

- "Real Decreto 130/2017, de 24 de febrero, por el que se aprueba el Reglamento de Explosivos (BOE 54, de 4 de marzo de 2017)."
- "Real decreto 257/2018, de 4 de mayo, por el que se modifica el Real Decreto 1299/2006, de 10 de noviembre, por el que se aprueba el cuadro de enfermedades profesionales en el sistema de la Seguridad Social y se establecen criterios para su notificación y registro."

# 5. CONDICIONS ECONÒMIQUES

## 5.1. Criteris d'aplicació

L' Art. 5, 4 del R.D. 1627 / 1997, de 24 d'octubre, manté per al sector de la construcció, la necessitat d'estimar l'aplicació de la Seguretat i Salut com un cost ''afegit'' a l'Estudi de Seguretat i Salut, i per conseqüent, incorporat al Projecte.

El pressupost per a l'aplicació i execució de l'estudi de Seguretat i Salut, haurà de quantificar el conjunt de ''despeses'' previstes, tant pel que es refereix a la suma total com a la valoració unitària d'elements, amb referència al quadre de preus sobre el que es calcula. Sols podran figurar partides alçades en els casos d'elements o operacions de difícil previsió.

Els amidaments, qualitats i valoració recollides en el pressupost de l'Estudi de Seguretat i Salut podran ser modificades o substituïdes per alternatives proposades pel Contractista en el seu Pla de Seguretat i Salut, prèvia justificació tècnica degudament motivada, sempre que això no suposi disminució de l'import total ni dels nivells de protecció continguts en l'Estudi de Seguretat i Salut. A aquests efectes, el pressupost del E.S.S. haurà d'anar incorporant al pressupost general de l'obra com un capítol més del mateix.

La tendència a integrar la Seguretat i Salut (pressupost de Seguretat i Salut = 0), es contempla en el mateix cos legal quan el legislador indica que, no s'inclouran en el pressupost de l'Estudi de Seguretat i Salut els costos exigits per la correcta execució professional dels treballs, conforme a les normes reglamentàries en vigor i els criteris tècnics generalment admesos, emanats dels organismes especialitzats. Aquest criteri es l'aplicat en el present E.S.S. en l'apartat relatiu a Medis Auxiliars d'Utilitat Preventiva (MAUP).

## 5.2. Certificació del pressupost del Pla de Seguretat i Salut

Si bé el Pressupost de Seguretat, amb criteris de ''Seguretat Integrada'' hauria d'estar inclòs en les partides del Projecte, de forma no segregable, per les obres de Construcció, es precisa l'establiment d'un criteri respecte a la certificació de les partides contemplades en el pressupost del Pla de Seguretat i Salut del Contractista per cada obra.

El pressupost de seguretat i salut s'abonarà d'acord amb el que indiqui el corresponent contracte d'obra.

### 5.3. Revisió de preus del Pla de Seguretat i Salut

Els preus aprovats pel Coordinador de Seguretat i Salut continguts en el Pla de Seguretat i Salut del Contractista, es mantindrà durant la totalitat de l'execució material de les obres.

Excepcionalment, quan el contracte s'hagi executat en un 20% i transcorregut com a mínim un any des de la seva adjudicació, podrà contemplar-se la possibilitat de revisió de preus del pressupost de Seguretat, mitjançant els índexs o fórmules de caràcter oficial que determini l'òrgan de contractació, en els terminis contemplats en en la Llei 9/2017, de 8 de novembre, de Contractes de Sector Públic, per la qual es transposen a l'ordenament jurídic espanyol les Directives de el Parlament Europeu i de Consell 2014/23 / UE i 2014/24 / UE, de 26 de febrer de 2014.

### 5.4. Penalitzacions per incompliment en matèria de Seguretat

**La reiteració d'incompliments en l'aplicació dels compromisos adquirits en el Pla de Seguretat i Salut, a criteri per unanimitat del Coordinador de Seguretat i Salut i dels restants components de la Direcció d'Obra o Direcció Facultativa, per acció u omissió del personal propi i/o Subcontractistes i Treballadors Autònoms contractats per ell, duran aparellats conseqüentment per el Contractista, les següents Penalitzacions:**

| | | | |
|---|---|---|---|
| 1.- | MOLT LLEU | : | 3% del Benefici Industrial de l'obra contractada |
| 2.- | LLEU | : | 20% del Benefici Industrial de l'obra contractada |
| 3.- | GREU | : | 75% del Benefici Industrial de l'obra contractada |
| 4.- | MOLT GREU | : | 75% del Benefici Industrial de l'obra contractada |
| 5.- | GRAVÍSSIM | : | Paralització dels treballadors +100% del Benefici Industrial de l'obra contractada + Pèrdua d'homologació com Contractista, per la mateixa Propietat, durant 2 anys. |

## 6. CONDICIONS TÈCNIQUES GENERALS DE SEGURETAT

### 6.1. Previsions del Contractista a l'aplicació de les Tècniques de Seguretat

La Prevenció de la Sinistralitat Laboral, pretén aconseguir uns objectius concrets, en el nostre cas, detectar i corregir els riscos d'accidents laborals.

El Contractista Principal haurà de reflectir al seu Pla de Seguretat i Salut la manera concreta de desenvolupar les Tècniques de Seguretat i Salut i com les aplicarà en aquesta obra.

Tot seguit s'anomenen a títol orientatiu una sèrie de descripcions de les diferents Tècniques Analítiques i Operatives de Seguretat:

– *Tècniques analítiques de seguretat*

Les Tècniques Analítiques de Seguretat i Salut tenen com a objectiu exclusiu la detecció de riscos i la recerca de les causes.

*Prèvies als accidents.-*

- Inspeccions de seguretat.
- Anàlisi de treball.
- Anàlisi Estadística de la sinistralitat.
- Anàlisi del entorn de treball.

*Posteriors als accidents.-*

- Notificació d'accidents.
- Registre d'accidents
- Investigació Tècnica d'Accidents.

– *Tècniques operatives de seguretat.*

Les Tècniques Operatives de Seguretat i Salut pretenen eliminar les Causes i a través d'aquestes corregir el Risc

Segons que l'objectiu de l'acció correctora hagi d'operar sobre la conducta humana o sobre els factors perillosos mesurats, el Contractista haurà de demostrar al seu Pla de Seguretat i Salut i Higiene que té desenvolupat un sistema d'aplicació de Tècniques Operatives sobre

*El Factor Tècnic:*

- Sistemes de Seguretat
- Proteccions col·lectives i Resguards
- Manteniment Preventiu
- Proteccions Personals
- Normes
- Senyalització

*El Factor Humà:*

- Test de Selecció prelaboral del personal.
- Reconeixements Mèdics prelaborals.
- Formació
- Aprenentatge
- Propaganda
- Acció de grup
- Disciplina
- Incentius

## 6.2. Condicions Tècniques del Control de Qualitat de la Prevenció

El Contractista inclourà a les Empreses Subcontractades i treballadors Autònoms, lligats amb ell contractualment, en el desenvolupament del seu Pla de Seguretat i Salut; haurà d'incloure els documents tipus en el seu format real, així com els procediments de complimentació fets servir a la seva estructura empresarial, per a controlar la qualitat de la Prevenció de la Sinistralitat Laboral. Aportem al present Estudi de Seguretat, a títol de guia, l'enunciat dels més importants:

- Programa implantat a l'empresa, de Qualitat Total o el reglamentari Pla d'Acció Preventiva.
- Programa Bàsic de Formació Preventiva estandarditzat pel Contractista Principal
- Formats documentals i procediments de complimentació, integrats a l'estructura de gestió empresarial, relatius al Control Administratiu de la Prevenció.
- Comitè i/o Comissions vinculats a la Prevenció
- Documents vinculants, actes i/o memoràndums.
- Manuals i/o Procediments Segurs de Treball, d'ordre intern d'empresa
- Control de Qualitat de Seguretat del Producte.

## 6.3. Condicions Tècniques dels Òrgans de l'Empresa Contractista competents en matèria de Seguretat i Salut

El comitè o les persones encarregades de la promoció, coordinació i vigilància de la Seguretat i Salut de l'obra seran almenys els mínims establerts per la normativa vigent pel cas concret de l'obra de referència, assenyalant-se específicament al Pla de Seguretat, la seva relació amb l'organigrama general de Seguretat i Salut de l'empresa adjudicatària de les obres.

El Contractista acreditarà l'existència d'un Servei Tècnic de Seguretat i Salut (propi o concertat) com a departament staff depenent de l'Alta Direcció de l'Empresa Contractista, dotat dels recursos, medis i qualificació necessària conforme al R.D. 39 /1997 ''Reglamento de los Servicios de Prevención''. En tot cas el constructor comptarà amb l'ajut del Departament Tècnic de Seguretat i Salut de la Mútua d'Accidents de Treball amb la que tingui establerta pòlissa.

El Coordinador de Seguretat i Salut podrà vedar la participació en aquesta obra del Delegat Sindical de Prevenció que no reuneixi, al seu criteri, la capacitació tècnica preventiva pel correcte compliment de la seva important missió.

L'empresari Contractista com a màxim responsable de la Seguretat i Salut de la seva empresa, haurà de fixar els àmbits de competència funcional dels Delegats Sindicals de Prevenció en aquesta obra.

L'obra disposarà de Tècnic de Seguretat i Salut (propi o concertat) a temps parcial, que assessori als responsables tècnics (i conseqüentment de seguretat) de l'empresa constructora en matèria preventiva, així com una Brigada de reposició i manteniment de les proteccions de seguretat, amb indicació de la seva composició i temps de dedicació a aquestes funcions.

### 6.4. Obligacions de l'Empresa Contractista competent en matèria de Medicina del Treball

El Servei de Medicina del Treball integrat en el Servei de Prevenció, o en el seu cas, el Quadre Facultatiu competent, d'acord amb la reglamentació oficial, serà l'encarregat de vetllar per les condicions higièniques que haurà de reunir el centre de treball.

Respecte a les instal·lacions mèdiques a l'obra existiran almenys una farmaciola d'urgència, que estarà degudament assenyalada i contindrà allò disposat a la normativa vigent i es revisarà periòdicament el control d'existències.

Al Pla de Seguretat i Salut i Higiene el contractista principal desenvoluparà l'organigrama així com les funcions i competències de la seva estructura en Medicina Preventiva.

Tot el personal de l'obra (Propi, Subcontractat o Autònom), amb independència del termini de durada de les condicions particulars de la seva contractació, haurà d'haver passat un reconeixement mèdic d'ingrés i estar classificat d'acord amb les seves condicions psicofísiques.

**Independentment del reconeixement d'ingrés, s'haurà de fer a tots els treballadors del Centre de Treball (propis i Subcontractats), segons ve assenyalat a la vigent reglamentació al respecte, com a mínim un reconeixement periòdic anual.**

Paral·lelament l'equip mèdic del Servei de Prevenció de l'empresa (Propi, Mancomunat, o assistit per Mútua d'Accidents) haurà d'establir al Pla de Seguretat i Salut un programa d'actuació cronològica a les matèries de la seva competència:

- Higiene i Prevenció al treball.

- Medicina preventiva dels treballadors.
- Assistència Mèdica.
- Educació sanitària i preventiva dels treballadors.
- Participació en comitè de Seguretat i Salut.
- Organització i posta al dia del fitxer i arxiu de medicina d'Empresa.

### 6.5. Competències dels Col·laboradors Prevencionistes a l'obra

D'acord amb les necessitats de disposar d'un interlocutor alternatiu en absència del Cap d'Obra es nomenarà un Supervisor de Seguretat i Salut (equivalent a l'antic Vigilant de Seguretat), considerant-se en principi l'Encarregat General de l'obra, com a persona més adient per a complir-ho, en absència d'un altre treballador més qualificat en aquests treballs a criteri del Contractista. El seu nomenament es formalitzarà per escrit i es notificarà al Coordinador de Seguretat.

S'anomenarà un Socorrista, preferiblement amb coneixements en Primers Auxilis, amb la missió de realitzar petites cures i organitzar l'evacuació dels accidentats als centres assistencials que correspongui que a més a més serà l'encarregat del control de la dotació de la farmaciola.

A efectes pràctics, i amb independència del Comitè de Seguretat i Salut, si la importància de l'obra ho aconsella, es constituirà a peu d'obra una ''Comissió Tècnica Interempresarial de Responsables de Seguretat'', integrat pels màxims Responsables Tècnics de les Empreses participants a cada fase d'obra, aquesta ''comissió'' es reunirà com a mínim mensualment, i serà presidida pel Cap d'Obra del Contractista, amb l'assessorament del seu Servei de Prevenció (propi o concertat).

### 6.6. Competències de Formació en Seguretat a l'obra

El Contractista haurà d'establir al Pla de Seguretat i Salut un programa d'actuació que reflecteixi un sistema d'entrenament inicial bàsic de tots els treballadors nous. El mateix criteri es seguirà si són traslladats a un nou lloc de treball, o ingressin com a operadors de màquines, vehicles o aparells d'elevació.

S'efectuarà entre el personal la formació adequada per assegurar el correcte ús dels medis posats al seu abast per millorar el seu rendiment, qualitat i seguretat del seu treball.

## 7. PLEC DE CONDICIONS TÈCNIQUES ESPECÍFIQUES DE SEGURETAT DELS EQUIPS, MÀQUINES I/O MÀQUINES-FERRAMENTES

## 7.1. Definició i característiques dels Equips, Màquines i/o Màquines-Ferramentes

– *Definició*

És un conjunt de peces o òrgans units entre si, dels quals un al menys és mòbil i, en el seu cas, d'òrgans d'accionament, circuits de comandament i de potència, etc., associats de forma solidària per a una aplicació determinada, en particular destinada a la transformació, tractament, desplaçament i accionament d'un material.

El terme equip i/o màquina també cobreix:

- Un conjunt de màquines que estiguin disposades i siguin accionades per a funcionar solidàriament.
- Un mateix equip intercanviable, que modifiqui la funció d'una màquina, que es comercialitza en condicions que permetin al propi operador, acoblar a una màquina, a una sèrie d'elles o a un tractor, sempre que aquest equip no sigui una peça de recanvi o una ferramenta.

Quan l'equip, màquina i/o màquina ferramenta disposi de components de seguretat que es comercialitzin per separat per a garantir una funció de seguretat en el seu ús normal, aquests adquireixen als efectes del present Estudi de Seguretat i Salut la consideració de Mitjà Auxiliar d'Utilitat Preventiva (MAUP).

– *Característiques*

Els equips de treball i màquines aniran acompanyats d'unes instruccions d'utilització, esteses pel fabricant o importador, en les quals figuraran les especificacions de manutenció, instal·lació i utilització, així con les normes de seguretat i qualsevol altra instrucció que de forma específica siguin exigides en les corresponents Instruccions Tècniques Complementàries (ITC), les quals inclouran els plànols i esquemes necessaris per al manteniment i verificació tècnica, estant ajustats a les normes UNE que li siguin d'aplicació. Portaran a més a més, una placa de material durador i fixada amb solidesa en lloc ben visible, en la qual figuraran, com a mínim, les següents dades:

- Nom del fabricant.
- Any de fabricació, importació i/o subministrament.
- Tipus i número de fabricació.
- Potència en Kw.
- Contrasenya d'homologació CE i certificat de seguretat d'ús d'entitat acreditada, si procedeix.

## 7.2. Condicions d'elecció, utilització, emmagatzematge i manteniment dels Equips, Màquines i/o Màquines-Ferramentes

– *Elecció d'un Equip*

Els Equips, Màquines i/o Màquines Ferramentes hauran de seleccionar-se en base a uns criteris de garanties de Seguretat per als seus operadors i respecte al seu Medi Ambient de Treball.

– *Condicions d'utilització dels Equips, Màquines i/o Màquines ferramentes*

Són les contemplades en l'Annex II del R.D. 1215, de 18 de juliol sobre ''Disposicions mínimes de Seguretat i Salut per a la utilització pels treballadors dels Equips de treball'':

– *Emmagatzematge i manteniment*

- Se seguiran escrupolosament les recomanacions d'emmagatzematge i esment, fixats pel fabricant i contingudes en la seva ''Guia de manteniment preventiu''.
- Es reemplaçaran els elements, es netejaran, engreixaran, pintaran, ajustaran i es col·locaran en el lloc assignat, seguint les instruccions del fabricant.
- S'emmagatzemaran en compartiments amplis i secs, amb temperatures compreses entre 15 i 25ºC.
- L'emmagatzematge, control d'estat d'utilització i els lliuraments d'Equips estaran documentades i custodiades, amb justificant de recepció de conformitat, lliurament i rebut, per un responsable tècnic, delegat per l'usuari.

## 7.3. Normativa aplicable

– Directives comunitàries relatives a la seguretat de les màquines, transposicions i dates d'entrada en vigor

Sobre comercialització i/o posada en servei en la Unió Europea

Directiva fonamental.

- Directiva 2006/42/CE de Parlament Europeu i de Consell, de 17 de maig de 2006, relativa a les màquines i per la qual es modifica la Directiva 95/16 / CE (refosa)).

  Entrada en vigor del "Real Decreto 1644/2008, de 10 de octubre, por el que se establecen las normas para la comercialización y puesta en servicio de las máquinas."

Excepcions:

- Carretons automotors de manutenció: l'1/7/95, amb període transitori fins l'1/1/96.
- Màquines per a elevació o desplaçament de persones: el 9/2/95, amb període transitori fins l'1/1/97.
- Components de seguretat (inclou ROPS i FOPS, vegeu la Comunicació de la Comissió 94/C253/03 -D.O.C.E. ISP C253, de 10/9/94): el 9/2/95, amb període transitori fins l'1/1/97.
- Marcat: el 9/2/95, amb període transitori fins l'1/1/97.

Altres Directives.

- Directiva del Consell 73/23/CEE, de 19/2/73, relativa a l'aproximació de les legislacions dels Estats membres sobre el material elèctric destinat a utilitzar-se amb determinats límits de tensió (D.O.C.E. Núm. L 77, de 26/3/73), modificada per la Directiva del Consell 93/68/CEE.

  Transposada pel Reial Decret 7/1988, de 8 de gener (B.O.E. de 14/1/88), modificat pel Reial Decret 154/1995 de 3 de febrer (B.O.E. de 3/3/95).

Entrada en vigor del R.D. 7/1988: l'1/12/88.

Entrada en vigor del R.D. 154/1995: el 4/3/95, amb període transitori fins l'1/1/97.

A aquest respecte veure també la Resolució d'11/6/98 de la Direcció General de Tecnologia i Seguretat Industrial (B.O.E. de 13/7/98).

- Directiva 2014/29/UE d'Parlament Europeu i de Consell, de 26 de febrer de 2014, sobre l'harmonització de les legislacions dels Estats membres en matèria de comercialització dels recipients a pressió simples.
- Directiva 2014/30/UE d'Parlament Europeu i de Consell, de 26 de febrer de 2014, sobre l'harmonització de les legislacions dels Estats membres en matèria de compatibilitat electromagnètica (refosa).
- Directiva 2014/34/UE d'Parlament Europeu i de Consell, de 26 de febrer de 2014, sobre l'harmonització de les legislacions dels Estats membres en matèria d'aparells i sistemes de protecció per a ús en atmosferes potencialment explosives (refosa).
- Directiva 2014/68/UE d'Parlament Europeu i de Consell, de 15 de maig de 2014, relativa a l'harmonització de les legislacions dels Estats membres sobre la comercialització d'equips a pressió.
- Reglament (UE) 2016/426 de el Parlament Europeu i de Consell, de 9 de març de 2016, sobre els aparells que cremen combustibles gasosos i pel qual es deroga la Directiva 2009/142 / CE.
- Onze Directives, amb les seves corresponents modificacions i adaptacions al progrés tècnic, relatives a l'aproximació de les legislacions dels Estats membres sobre determinació de l'emissió sonora de màquines i materials utilitzats en les obres de construcció.

  Transposades pel Reial Decret 212/2002, de 22 de febrer (B.O.E. d'1/3/02); Ordre Ministerial de 18/7/1991 (B.O.E. de 26/7/91), Reial Decret 71/1992, de 31 de gener (B.O.E. de 6/2/92) i Ordre Ministerial de 29/3/1996 (B.O.E. de 12/4/96).

  Entrada en vigor: En funció de cada directiva.

Sobre utilització de màquines i equips per al treball:

- Directiva 2009/104/CE de Parlament Europeu i de Consell, de 16 de setembre de 2009, relativa a les disposicions mínimes de seguretat i de salut per a la utilització pels treballadors en el treball dels equips de treball (segona Directiva específica conformement a l'article 16, apartat 1, de la Directiva 89/391/ CEE).

– Normativa d'aplicació restringida

- Reial Decret 1849/2000, de 10 de Novembre, pel qual es deroguen diferents disposicions en matèria de normalització i homologació de productes industrials (B.O.E. de 2/12/2000), i Ordre Ministerial de 8/4/1991, per la qual s'aprova la Instrucció Tècnica Complementària MSG-SM-1 del Reglament de Seguretat de les Màquines, referent a màquines, elements de màquines o sistemes de protecció, usats (B.O.E. d'11/5/91).
- Ordre Ministerial, de 26/5/1989, per la qual s'aprova la Instrucció Tècnica Complementària MIE-AEM-3 del Reglament d'Aparells d'Elevació i Manutenció referent a Carretons automotors de manutenció (B.O.E. de 9/6/89).
- Reial Decret 836/2003, de 27 de juny, per la qual s'aprova la nova Instrucció Tècnica Complementària MIE-AEM-2 del Reglament d'Aparells d'elevació i Manutenció, referent a Grues Torre desmuntables per a obres (B.O.E. de 17/7/03).
- Reial Decret 837/2003, de 27 de juny, pel qual s'aprova el nou text modificat i refós de la Instrucció Tècnica Complementària MIE-AEM-4 del Reglament d'Aparells d'elevació i Manutenció, referent a Grues mòbils autopropulsades usades (B.O.E. de 17/7/03).
- Reial Decret 1849/2000, de 10 de novembre, pel qual es deroguen diferents disposicions en matèria de normalització i homologació de productes industrials (B.O.E. de 2/12/00).
- Ordre Ministerial, de 9/3/1971, per la qual s'aprova l'Ordenança General de

Seguretat i Higiene en el Treball (B.O.E. de 16/3/71; B.O.E. de 17/3/71 i B.O.E. de 6/4/71). Anul·lada parcialment per R.D 614/2001 de 8 de juny. BOE de 21 de juny de 2001.

2 NGX010 m² Geotextil no tejido sintético, termosoldado, de polipropileno, con una resistencia a la tracción longitudinal de 8,0 kN/m, una resistencia a la tracción transversal de 10,1 kN/m, una apertura de cono al ensayo de perforación dinámica según UNE-EN ISO 13433 inferior a 40 mm, resistencia CBR a punzonamiento 0,3 kN y una masa superficial de 120 g/m². Colocación en obra: con solapes y con piquetas de anclaje de acero, en forma de L, de 6 mm de diámetro (2 ud/m²), directamente sobre el terreno.
Incluye: Colocación del geotextil. Resolución de solapes y uniones. Fijación del geotextil.
Criterio de medición de proyecto: Superficie medida según documentación gráfica de Proyecto.
Criterio de medición de obra: Se medirá la superficie realmente ejecutada según especificaciones de Proyecto, incluyendo las entregas y los solapes.

Junta estanca entre el vas i les platges.
Aplicar a banda i banda de la junta i immediatament col·locar la banda elàstica. Model EPOXICOL marca Fixcer o equivalent.
Solapar una banda amb la següent uns 5 cm i segellar el solapament amb aire calent a 320ºC; a continuació aplicar l'EPOXICOL al formigó i la banda sobre aquest. Model FIX-TAPE 170mm marca Fixcer o equivalent.
Embotir amb força dins de la junta el foam. Model SELLALASTIC FOAM de diàmetre 15mm marca Fixcer o equivalent.
Per a un ample de junta 10 mm i una profunditat de: 9 mm. Model SELLALASTIC Gris marca Fixcer o equivalent.
Inclou porexpan a la junta de dilatació entre soleres.
Inclòs subministrament i instal·lació de tots els elements per a un correcte acabat.

1 PJM45-MACA u Comptador Predator tipus Woltmann 2´´-50 mm
Comptador de turbina axial, tipus Woltmann, de lectura directa als rodets numerats. Comptador d'esfera seca, amb transmissió magnètica. Rellotgeria i turbina fàcilment extraïble. Preequipat per a emissió de polsos i amb opció de telelectura.
Sense necessitat de trams rectilinis, ni a l'entrada ni a la sortida del comptador. U0-D0.
Alta precisió en el mesurament. R160
Possibilitat d'instal·lació vertical i horitzontal.
Fàcil instal·lació de l'emissor de polsos
Inclòs subministrament i instal·lació.

Armari Sonda tres nivells
Armari per al control de nivells de depòsit, que disposa de tres sondes de control.
- Nivell de seguretat mínim de bombament. Per a les bombes si el nivell d'aigua no té el mínim exigit per a la bomba.
- Nivell d'emplenat. Dona senyal a l'electrovàlvula d'emplenat per mantenir el nivell correcte d'aigua de la piscina. Senyal de l'electrovàlvula a 220 V II i 24 V II.
- Nivell d'arrencada forçada: Arrenca el grup de bombament quan el vas de compensació arriba al nivell de desguàs (trencament o fallada de la vàlvula antiretorn).
Model R3-SEV marca Fluidra o equivalent
Inclòs subministrament i instal·lació.

10 PJ65-3GAI u

Equip floculació continu
Equip automàtic dosificador de floculant amb cabal regulable per a aigües de piscines.
Inclou:
-Bomba regulable des de 151cm3/h fins a 1,5L/h
-Vàlvula d'injecció
-Vàlvula de peu
-tub d´aspiració i tub d´impulsió.
Model 54528 marca Fluidra o equivalent.
Inclòs subministrament i instal·lació.

Armari Sonda tres nivells
Armari per al control de nivells de depòsit, que disposa de tres sondes de control.
- Nivell de seguretat mínim de bombament. Per a les bombes si el nivell d'aigua no té el mínim exigit per a la bomba.
- Nivell d'emplenat. Dona senyal a l'electrovàlvula d'emplenat per mantenir el nivell correcte d'aigua de la piscina. Senyal de l'electrovàlvula a 220 V II i 24 V II.
- Nivell d'arrencada forçada: Arrenca el grup de bombament quan el vas de compensació arriba al nivell de desguàs (trencament o fallada de la vàlvula antiretorn).
Model R3-SEV marca Fluidra o equivalent
Inclòs subministrament i instal·lació.

1 PJT3-HBPA u

Unitat de regulació i control totalment automatitzada amb lectures simultànies, de pH i clor. GUARDIAN POOL NN 2 pH/ppm Cl
La nova unitat Guardian Pool combina els elements de control i dosificació tradicionals amb un control digital total dels seus valors, cosa que facilita la gestió dels paràmetres de la piscina i el seu historial, per analitzar o detectar possibles errors.
Guardian Pool destaca pel seu alt rendiment en el control i la regulació dels productes químics que es fan servir en piscines públiques i privades.
Pantalla tàctil de 7" d'alta resolució amb disseny innovador, actualització del microprogramari a través del port USB (que també es fa servir per descarregar les dades de la piscina).
Compatible amb Fluidra Connect per a una millor gestió remota de tots els paràmetres.
Model 72720 marca Fluidra o equivalent.

1 UPE041 u

Dutxa per a piscina, d'acer inoxidable, amb monocomandament i ruixador fix amb sistema anticalç i efecte pluja. Inclos anclatges, topes, embellidors, juntes, tacs i cargols, racor de connexió, canonades per a conducció d'aigua i elements d'anclatge. Model Chrome marca AstralPool o equivalent. Inclòs subministrament i instal·lació de tots els elements fins un correcte acabat.
Característiques tècniques:
- Tub d'acer inoxidable AISI-304L i marc d'alumini.
- Color a definir per la DF.
- Ruixador anticalç i efecte pluja.
- Aixeta rentapeus.
- Fàcil instal·lació: presa a la part inferior o lateral/darrere (compatible amb connexió de mànega).

|---|---|---|---|

1 PJA8-3HWG u Escalfador acumulador elèctric de 200 l de capacitat, de 2.200 W de potència, horitzontal. Model Concept 200 HZ marca Themor o equivalent. Dissenyat segons els requisits del REGLAMENTO (UE) 814/2013, amb una classe d'eficiència energètica en aigua calenta sanitària segons REGLAMENTO (UE) 812/2013
Amb un temps d'escalfament de 5h 7 min (65ºC, (delta) T= 50ºC), i un consum de manteniment de 1,81 kWh/24H (65ºC). Amb el màxim estalvi i la durabilitat que permet millorar l'etiqueta ERP.
Durabilitat:
- Cuba vitrificada.
- Resistència blindada.
Estalvi energètic:
- Termòstat exterior que permet seleccionar la temperatura desitjada a cada moment (litratges de 15 a 100 L).
- Aïllament dalta densitat.
- Sistema BriseJet que garanteix l'estratificació òptima de l'aigua.
Garantia:
- 3 anys de garantia total i 3 anys a la cuba.
Classificació ERP: C
Inclòs subministrament i instal·lació.

|---|---|---|---|
| 1 | QDE02A | m² | Coberta plana no transitable, no ventilada, enjardinada extensiva (ecològica), pendent de l'1% al 5%. Formada per les capes següents:<br>- Formació de pendents: mitjançant encintat de careners, aiguafons i juntes amb mestres de maó ceràmic buit doble i capa d'argila expandida, abocada en sec i consolidada a la seva superfície amb beurada de ciment, proporcionant una resistència a compressió d'1 MPa i amb una conductivitat tèrmica de 0,0; amb capa de |

# AMIDAMENTS

regularització de morter de ciment, industrial, M-5 de 4 cm de gruix, acabat remolinat
- Impermeabilització: tipus monocapa, adherida, formada per làmina de betum modificat amb elastòmer SBS, LBM(SBS)-50/G-FP prèvia imprimació amb emulsió asfàltica aniònica amb càrregues tipus EB
- Capa separadora sota protecció: geotèxtil no teixit compost per fibres de polièster unides per agatejat, (150 g/m²)
- Capa drenant i retenidora d'aigua: làmina drenant i retenidora d'aigua d'estructura nodular de polietilè d'alta densitat (PEAD/HDPE), amb nòduls de 20 mm d'alçada, formada per membrana de polietilè d'alta densitat amb relleu en con truncat i perforacions
- Capa filtrant: geotèxtil no teixit sintètic, termosoldat, de polipropilè-polietilè, amb una resistència a la tracció longitudinal de 16 kN/m, una resistència a la tracció transversal de 16,5 kN/m, una obertura de con a l'assaig de perforació dinàmica segons UNE-EN 7 kN i una massa superficial de 200 g/m²
- Capa de protecció: capa de roca volcànica de 3 cm de gruix, sobre base de substrat orgànic de 6 cm de gruix.
S'inclou l'execució i el segellat de les juntes i l'execució de remats a les trobades amb paraments i desguassos. Replanteig dels punts singulars. Replanteig dels pendents i traçat de careners, aiguafons i juntes. Formació de pendents mitjançant encintat de careners, aiguafons i juntes amb mestres de maó. Farciment de juntes amb poliestirè expandit. Abocament en sec de l'argila expandida fins assolir el nivell de coronació de les mestres, i consolidació amb beurada de ciment. Abocament, estesa i reglejat de la capa de morter de regularització. Neteja i preparació de la superfície. Aplicació de l´emulsió asfàltica. Col·locació de la impermeabilització. Col·locació de la capa drenant i retenidora d'aigua. Col·locació de la capa filtrant. Estès del substrat i la roca volcànica.
Inclòs subministrament i instal·lació de tots els elements fins a un correcte acabat.

# Quadre de preus I

# QUADRE DE PREUS NÚMERO 1

| NÚMERO | CODI | UA | DESCRIPCIÓ | PREU |
|---|---|---|---|---|
| P-1 | ANE010 | m² | Encachado en caja para base de solera de 20 cm de espesor, mediante relleno y extendido en tongadas de espesor no superior a 20 cm de gravillas procedentes de cantera caliza de 20/40 mm; y posterior compactación mediante equipo manual con bandeja vibrante, sobre la explanada homogénea y nivelada; previo rebaje y cajeado en tierra, con empleo de medios mecánicos.<br>(DEU EUROS AMB QUARANTA-DOS CÈNTIMS) | 10,42 € |
| P-2 | ANS010 | m² | Solera de hormigón con malla electrosoldada de 15 cm de espesor, realizada con hormigón HM-25/F/20/X0 fabricado en central y vertido con bomba, con malla electrosoldada superior como armadura de reparto, ME 20x20 Ø 5-5 B 500 T 6x2,20 UNE-EN 10080, extendido y vibrado manual mediante regla vibrante, con acabado superficial mediante fratasadora mecánica; con juntas de retracción de 5 mm de espesor, mediante corte con disco de diamante. Incluso panel de poliestireno expandido de 3 cm de espesor, para la ejecución de juntas de dilatación.<br>(TRENTA-QUATRE EUROS AMB DISSET CÈNTIMS) | 34,17 € |
| P-3 | CRL010 | m² | Capa de hormigón de limpieza y nivelado de fondos de cimentación, de 10 cm de espesor, de hormigón HL-150/B/20, fabricado en central y vertido desde camión, en el fondo de la excavación previamente realizada.<br>(SET EUROS AMB CINQUANTA-QUATRE CÈNTIMS) | 7,54 € |
| P-4 | CSL010 | m³ | Losa de cimentación de hormigón armado, realizada con hormigón HA-35/F/20/XC3+XA3 fabricado en central, con cemento SR, con aditivo hidrófugo, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 85 kg/m³; acabado superficial liso mediante regla vibrante. Incluso armaduras para formación de foso de ascensor, refuerzos, pliegues, encuentros, arranques y esperas en muros, escaleras y rampas, cambios de nivel, alambre de atar, y separadores.<br>(DOS-CENTS SEIXANTA EUROS AMB DOTZE CÈNTIMS) | 260,12 € |
| P-5 | CSV010 | m³ | Zapata corrida de cimentación, de hormigón armado, realizada en excavación previa, con hormigón HA-25/F/20/XC2 fabricado en central, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 180 kg/m³. Incluso armaduras de espera de los pilares u otros elementos, alambre de atar, y separadores.<br>(TRES-CENTS VUITANTA-DOS EUROS AMB NORANTA-UN CÈNTIMS) | 382,91 € |
| P-6 | EHL010 | m² | Losa maciza de hormigón armado, horizontal, con altura libre de planta de hasta 3 m, canto 20 cm, realizada con hormigón HA-35/F/20/XC3+XA3 fabricado en central, con cemento SR, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 21 kg/m²; montaje y desmontaje de sistema de encofrado continuo, con acabado tipo industrial para revestir, formado por: superficie encofrante de tableros de madera tratada, reforzados con varillas y perfiles, amortizables en 25 usos; estructura soporte horizontal de sopandas metálicas y accesorios de montaje, amortizables en 150 usos y estructura soporte vertical de puntales metálicos, amortizables en 150 usos. Incluso nervios y zunchos perimetrales de planta y huecos, alambre de atar, separadores, aplicación de líquido desencofrante y agente filmógeno, para el curado de hormigones y morteros.<br>(CENT EUROS AMB QUARANTA-TRES CÈNTIMS) | 100,43 € |
| P-7 | EHM010 | m³ | Muro de hormigón armado 2C, de hasta 3 m de altura, espesor 30 cm, superficie plana, realizado con hormigón HA-30/F/20/XD2+XA2 fabricado en central, con cemento SR, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 50 kg/m³, ejecutado en condiciones complejas; montaje y desmontaje de sistema de encofrado con acabado tipo industrial para revestir, realizado con paneles metálicos modulares, amortizables en 150 usos. Incluso alambre de atar, separadores, pasamuros para paso de los tensores y líquido desencofrante, para evitar la adherencia del hormigón al encofrado.<br>(TRES-CENTS QUARANTA-UN EUROS AMB QUARANTA-QUATRE CÈNTIMS) | 341,44 € |
| P-8 | EHM011 | m² | Montaje y desmontaje en una cara del muro, de sistema de encofrado a dos caras con acabado tipo industrial para revestir, realizado con paneles metálicos modulares, amortizables en 150 usos, para formación de muro de hormigón armado, de hasta 3 m de altura y superficie plana, para contención de tierras. Incluso colocación de elementos para paso de instalaciones, pasamuros para paso de los tensores, elementos de sustentación, | 17,36 € |

Formada per les capes següents:<br>- Formació de pendents: mitjançant encintat de careners, aiguafons i juntes amb mestres de maó ceràmic buit doble i capa d'argila expandida, abocada en sec i consolidada a la seva superfície amb beurada de ciment, proporcionant una resistència a compressió d'1 MPa i amb una conductivitat tèrmica de 0,0; amb capa de regularització de morter de ciment, industrial, M-5 de 4 cm de gruix, acabat remolinat<br>- Impermeabilització: tipus monocapa, adherida, formada per làmina de betum modificat amb elastòmer SBS, LBM(SBS)-50/G-FP prèvia imprimació amb emulsió asfàltica aniònica amb càrregues tipus EB<br>- Capa separadora sota protecció: geotèxtil no teixit compost per fibres de polièster unides per agatejat, (150 g/m²)<br>- Capa drenant i retenidora d'aigua: làmina drenant i retenidora d'aigua d'estructura nodular de polietilè d'alta densitat (PEAD/HDPE), amb nòduls de 20 mm d'alçada, formada per membrana de polietilè d'alta densitat amb relleu en con truncat i perforacions<br>- Capa filtrant: geotèxtil no teixit sintètic, termosoldat, de polipropilè-polietilè, amb una resistència a la tracció longitudinal de 16 kN/m, una resistència a la tracció transversal de 16,5 kN/m, una obertura de con a l'assaig de perforació dinàmica segons UNE-EN 7 kN i una massa superficial de 200 g/m²<br>- Capa de protecció: capa de roca volcànica de 3 cm de gruix, sobre base de substrat orgànic de 6 cm de gruix.<br>S'inclou l'execució i el segellat de les juntes i l'execució de remats a les trobades amb paraments i desguassos. Replanteig dels punts singulars. Replanteig dels pendents i traçat de careners, aiguafons i juntes. Formació de pendents mitjançant encintat de careners, aiguafons i juntes amb mestres de maó. Farciment de juntes amb poliestirè expandit. Abocament en sec de l'argila expandida fins assolir el nivell de coronació de les mestres, i consolidació amb beurada de ciment. Abocament, estesa i reglejat de la capa de morter de regularització. Neteja i preparació de la superfície. Aplicació de l´emulsió asfàltica. Col·locació de la impermeabilització. Col·locació de la capa drenant i retenidora d'aigua. Col·locació de la capa filtrant. Estès del substrat i la roca volcànica.<br>Inclòs subministrament i instal·lació de tots els elements fins a un correcte acabat.<br>(VUITANTA-DOS EUROS AMB VINT-I-NOU CÈNTIMS) | 82,29 € |
| P-319 | UPE041 | u | Dutxa per a piscina, d'acer inoxidable, amb monocomandament i ruixador fix amb sistema anticalç i efecte pluja. Inclos anclatges, topes, embellidors, juntes, tacs i cargols, racor de connexió, canonades per a conducció d'aigua i elements d'anclatge. Model Chrome marca AstralPool o equivalent. Inclòs subministrament i instal·lació de tots els elements fins un correcte acabat.<br>Característiques tècniques:<br>• Tub d'acer inoxidable AISI-304L i marc d'alumini.<br>• Color a definir per la DF.<br>• Ruixador anticalç i efecte pluja.<br>• Aixeta rentapeus.<br>• Fàcil instal·lació: presa a la part inferior o lateral/darrere (compatible amb connexió de mànega).<br><br>(SIS-CENTS QUARANTA EUROS AMB NORANTA-CINC CÈNTIMS) | 640,95 € |

# QUADRE DE PREUS NÚMERO 2

| NÚMERO | CODI | UA | DESCRIPCIÓ | | PREU |
|---|---|---|---|---|---|
| P-1 | ANE010 | m² | Encachado en caja para base de solera de 20 cm de espesor, mediante relleno y extendido en tongadas de espesor no superior a 20 cm de gravillas procedentes de cantera caliza de 20/40 mm; y posterior compactación mediante equipo manual con bandeja vibrante, sobre la explanada homogénea y nivelada; previo rebaje y cajeado en tierra, con empleo de medios mecánicos. | **10,42** | € |
| | MT01ARE020 | m³ | Gravilla de cantera, de piedra caliza, de 20 a 40 mm de diámetro. | 3,41000 | € |
| | | | Altres conceptes | 7,01000 | € |
| P-2 | ANS010 | m² | Solera de hormigón con malla electrosoldada de 15 cm de espesor, realizada con hormigón HM-25/F/20/X0 fabricado en central y vertido con bomba, con malla electrosoldada superior como armadura de reparto, ME 20x20 Ø 5-5 B 500 T 6x2,20 UNE-EN 10080, extendido y vibrado manual mediante regla vibrante, con acabado superficial mediante fratasadora mecánica; con juntas de retracción de 5 mm de espesor, mediante corte con disco de diamante. Incluso panel de poliestireno expandido de 3 cm de espesor, para la ejecución de juntas de dilatación. | **34,17** | € |
| | MT07ACO020 | Ud | Separador homologado para malla electrosoldada superior. | 1,78000 | € |
| | MT07AME010 | m² | Malla electrosoldada ME 20x20 Ø 5-5 B 500 T 6x2,20 UNE-EN 10080. | 2,55600 | € |
| | MT1DA3T1 | m³ | Hormigón HM-25/F/20/X0, fabricado en central. | 12,26554 | € |
| | MT16PEA020 | m² | Panel rígido de poliestireno expandido, según UNE-EN 13163, mecanizado lateral recto, de 30 mm de espesor, resistencia térmica 0,8 m²K/W, conductividad térmica 0,036 W/(mK), para junta de dilatación. | 0,08500 | € |
| | | | Altres conceptes | 17,48346 | € |
| P-3 | CRL010 | m² | Capa de hormigón de limpieza y nivelado de fondos de cimentación, de 10 cm de espesor, de hormigón HL-150/B/20, fabricado en central y vertido desde camión, en el fondo de la excavación previamente realizada. | **7,54** | € |
| | MT10HMF011 | m³ | Hormigón de limpieza HL-150/B/20, fabricado en central. | 6,82185 | € |
| | | | Altres conceptes | 0,71815 | € |
| P-4 | CSL010 | m³ | Losa de cimentación de hormigón armado, realizada con hormigón HA-35/F/20/XC3+XA3 fabricado en central, con cemento SR, con aditivo hidrófugo, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 85 kg/m³; acabado superficial liso mediante regla vibrante. Incluso armaduras para formación de foso de ascensor, refuerzos, pliegues, encuentros, arranques y esperas en muros, escaleras y rampas, cambios de nivel, alambre de atar, y separadores. | **260,12** | € |
| | MT10AB1G1 | m³ | Hormigón HA-35/F/20/XC3+XA3, fabricado en central, con cemento SR, con aditivo hidrófugo. | 117,15900 | € |
| | MT07ACO020 | Ud | Separador homologado para cimentaciones. | 0,70000 | € |
| | MT07ACO010 | kg | Acero en barras corrugadas, UNE-EN 10080 B 500 S, suministrado en obra en barras sin elaborar, de varios diámetros. | 96,23700 | € |
| | MT08VAR050 | kg | Alambre galvanizado para atar, de 1,30 mm de diámetro. | 0,58225 | € |
| | | | Altres conceptes | 45,44175 | € |
| P-5 | CSV010 | m³ | Zapata corrida de cimentación, de hormigón armado, realizada en excavación previa, con hormigón HA-25/F/20/XC2 fabricado en central, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 180 kg/m³. Incluso armaduras de espera de los pilares u otros elementos, alambre de atar, y separadores. | **382,91** | € |
| | MT07ACO020 | Ud | Separador homologado para cimentaciones. | 0,98000 | € |
| | MT10AB1M1 | m³ | Hormigón HA-25/F/20/XC2, fabricado en central. | 85,56900 | € |
| | MT07ACO010 | kg | Ferralla elaborada en taller industrial con acero en barras corrugadas, UNE-EN 10080 B 500 S, de varios diámetros. | 262,80000 | € |
| | MT08VAR050 | kg | Alambre galvanizado para atar, de 1,30 mm de diámetro. | 0,54800 | € |
| | | | Altres conceptes | 33,01300 | € |
| P-6 | EHL010 | m² | Losa maciza de hormigón armado, horizontal, con altura libre de planta de hasta 3 m, canto 20 cm, realizada con hormigón HA-35/F/20/XC3+XA3 fabricado en central, con cemento SR, | **100,43** | € |

# QUADRE DE PREUS NÚMERO 2

| NÚMERO | CODI | UA | DESCRIPCIÓ | | PREU |
|---|---|---|---|---|---|
| | | | y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 21 kg/m²; montaje y desmontaje de sistema de encofrado continuo, con acabado tipo industrial para revestir, formado por: superficie encofrante de tableros de madera tratada, reforzados con varillas y perfiles, amortizables en 25 usos; estructura soporte horizontal de sopandas metálicas y accesorios de montaje, amortizables en 150 usos y estructura soporte vertical de puntales metálicos, amortizables en 150 usos. Incluso nervios y zunchos perimetrales de planta y huecos, alambre de atar, separadores, aplicación de líquido desencofrante y agente filmógeno, para el curado de hormigones y morteros. | | |
| | MT08DBA010 | l | Agente desmoldeante, a base de aceites especiales, emulsionable en agua, para encofrados metálicos, fenólicos o de madera. | 0,04920 | € |
| | MT10AB1G3 | m³ | Hormigón HA-35/F/20/XC3+XA3, fabricado en central, con cemento SR. | 22,54560 | € |
| | MT08VAR050 | kg | Alambre galvanizado para atar, de 1,30 mm de diámetro. | 0,34524 | € |
| | MT07ACO010 | kg | Ferralla elaborada en taller industrial con acero en barras corrugadas, UNE-EN 10080 B 500 S, de varios diámetros. | 30,66000 | € |
| | MT08EVA030 | m² | Estructura soporte para encofrado recuperable, compuesta de: sopandas metálicas y accesorios de montaje. | 0,65002 | € |
| | MT50SPA081 | Ud | Puntal metálico telescópico, de hasta 3 m de altura. | 0,47709 | € |
| | MT07ACO020 | Ud | Separador homologado para losas macizas. | 0,24000 | € |
| | MT08CUR020 | l | Agente filmógeno, para el curado de hormigones y morteros. | 0,21300 | € |
| | MT08EFT030 | m² | Tablero de madera tratada, de 22 mm de espesor, reforzado con varillas y perfiles. | 1,82248 | € |
| | MT08VAR060 | kg | Puntas de acero de 20x100 mm. | 0,31880 | € |
| | MT08CIM030 | m³ | Madera de pino. | 0,97083 | € |
| | | | Altres conceptes | 42,13774 | € |
| P-7 | EHM010 | m³ | Muro de hormigón armado 2C, de hasta 3 m de altura, espesor 30 cm, superficie plana, realizado con hormigón HA-30/F/20/XD2+XA2 fabricado en central, con cemento SR, y vertido con bomba, y acero UNE-EN 10080 B 500 S, con una cuantía aproximada de 50 kg/m³, ejecutado en condiciones complejas; montaje y desmontaje de sistema de encofrado con acabado tipo industrial para revestir, realizado con paneles metálicos modulares, amortizables en 150 usos. Incluso alambre de atar, separadores, pasamuros para paso de los tensores y líquido desencofrante, para evitar la adherencia del hormigón al encofrado. | **341,44** | **€** |
| | MT07ACO010 | kg | Acero en barras corrugadas, UNE-EN 10080 B 500 S, suministrado en obra en barras sin elaborar, de varios diámetros. | 56,61000 | € |
| | MT10AB1K1 | m³ | Hormigón HA-30/F/20/XD2+XA2, fabricado en central, con cemento SR. | 108,96900 | € |
| | MT08EME075 | Ud | Estructura soporte de sistema de encofrado vertical, para muros de hormigón a dos caras, de hasta 3 m de altura, formada por tornapuntas metálicos para estabilización y aplomado de la superficie encofrante. | 10,20932 | € |
| | MT08DBA010 | l | Agente desmoldeante, a base de aceites especiales, emulsionable en agua, para encofrados metálicos, fenólicos o de madera. | 0,32800 | € |
| | MT07ACO020 | Ud | Separador homologado para muros. | 0,48000 | € |
| | MT08VAR050 | kg | Alambre galvanizado para atar, de 1,30 mm de diámetro. | 0,89050 | € |
| | MT08EME070 | m² | Paneles metálicos modulares, para encofrar muros de hormigón de hasta 3 m de altura. | 7,42500 | € |
| | MT08VAR204 | Ud | Pasamuros de PVC para paso de los tensores del encofrado, de varios diámetros y longitudes. | 3,28041 | € |
| | | | Altres conceptes | 153,24777 | € |
| P-8 | EHM011 | m² | Montaje y desmontaje en una cara del muro, de sistema de encofrado a dos caras con acabado tipo industrial para revestir, realizado con paneles metálicos modulares, amortizables en 150 usos, para formación de muro de hormigón armado, de hasta 3 m de altura y superficie plana, para contención de tierras. Incluso colocación de elementos para paso de instalaciones, pasamuros para paso de los tensores, elementos de sustentación, fijación y apuntalamiento necesarios para su estabilidad; y líquido desencofrante, para evitar la adherencia del hormigón al encofrado. | **17,36** | **€** |

| | B2RA-28TP | t | Disposició controlada en centre de selecció i transferència de residus barrejats no perillosos amb una densitat 0,17 t/m3, procedents de construcció o demolició, amb codi 17 09 04 segons la Llista Europea de Residus | 21,51520 | € |
| | | | Altres conceptes | 0,00480 | € |
| P-29 | P4E4-13PX1 | m2 | Paret estructural de dues cares vistes, de 10 cm de gruix, de bloc foradat de morter de ciment R-6, llis, de 400x100x200 mm, amb components hidrofugants, de cara vista, gris, categoria I segons norma UNE-EN 771-3, col·locat amb ciment pòrtland amb filler calcari CEM II/B-L 32,5 R segons UNE-EN 197-1, en sacs i amb una resistència a compressió de la paret de 3 N/mm2 amb traves i brancals massissats amb formigonament per a fàbrica de blocs de morter de ciment, amb formigó per armar HA - 30 / B / 20 / XC3 + XS1 amb una quantitat de ciment de 350 kg/m3 i relació aigua ciment =< 0.5, col·locat manualment i armat amb acer en barres corrugades elaborat a l'obra B500S de límit elàstic >= 500 N/mm2 per a l'armadura de parets de blocs de morter de ciment, m2 de superfície realment executada sense incloure cèrcols ni llindes | **32,37** | € |
| | | | Altres conceptes | 32,37000 | € |
| P-30 | P4E4-13PX8 | m2 | Paret estructural de dues cares vistes, de 15 cm de gruix, de bloc foradat de morter de ciment R-6, llis, de 400x150x200 mm, amb components hidrofugants, de cara vista, gris, categoria I segons norma UNE-EN 771-3, col·locat amb ciment pòrtland amb filler calcari CEM II/B-L 32,5 R segons UNE-EN 197-1, en sacs i amb una resistència a compressió de la paret de 3 N/mm2 amb traves i brancals massissats amb formigonament per a fàbrica de blocs de morter de ciment, amb formigó per armar HA - 30 / B / 20 / XC3 + XS1 amb una quantitat de ciment de 350 kg/m3 i relació aigua ciment =< 0.5, col·locat manualment i armat amb acer en barres corrugades elaborat a l'obra B500S de límit elàstic >= 500 N/mm2 per a l'armadura de parets de blocs de morter de ciment, m2 de superfície realment executada sense incloure cèrcols ni llindes | **35,29** | € |
| | | | Altres conceptes | 35,29000 | € |
| P-31 | P5V0-02AG | u | Prova d'estanquitat de coberta plana impermeabilitzada amb làmina bituminosa modificada, segons la norma UNE 104401 | **456,58** | € |
| | BVA5-02AC | u | Prova d'estanquitat de coberta plana impermeabilitzada amb làmina bituminosa modificada, segons la norma UNE 104401 | 456,58000 | € |
| | | | Altres conceptes | 0,00000 | € |
| P-32 | P5Z15-4Z2 | m2 | Formació de pendents amb formigó de 150 kg/m3, amb una proporció en volum 1:4:8, amb ciment pòrtland amb filler calcari CEM II/B-L 32,5 R i granulat de pedra calcària de grandària màxima 20 mm, elaborat a l'obra amb formigonera de 165 l, de 10 cm de gruix mitjà | **12,44** | € |
| | | | Altres conceptes | 12,44000 | € |
| P-33 | P5Z15-4Z2Y | m2 | Formació de pendents amb formigó de 150 kg/m3, amb una proporció en volum 1:4:8, amb ciment pòrtland amb filler calcari CEM II/B-L 32,5 R i granulat de pedra calcària de grandària màxima 20 mm, elaborat a l'obra amb formigonera de 165 l, de 20 cm de gruix mitjà | **24,73** | € |
