| BFWF-09VY | u | Accessori per a tubs de polietilè de densitat alta, de 90 mm de diàmetre nominal exterior, de plàstic, per a connectar a pressió | 42,22000 | € |
| BFY3-065M | u | Part proporcional d'elements de muntatge per a aïllament tèrmic d'escuma elastomèrica, de 25 mm de gruix | 0,14000 | € |
| BFYC-04OK | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 22 mm de diàmetre nominal, per a soldar per capilaritat | 0,40000 | € |
| BFYC-04OL | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 42 mm de diàmetre nominal, per a soldar per capilaritat | 0,81000 | € |
| BFYC-04OQ | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 15 mm de diàmetre nominal, per a soldar per capilaritat | 0,30000 | € |
| BFYC-04OU | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 28 mm de diàmetre nominal, per a soldar per capilaritat | 0,45000 | € |
| BFYC-04OX | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 18 mm de diàmetre nominal, per a soldar per capilaritat | 0,34000 | € |
| BFYC-04OY | u | Part proporcional d'elements de muntatge, per a tub de coure sanitari de 35 mm de diàmetre nominal, per a soldar per capilaritat | 0,57000 | € |
| BFYG-08X0 | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 125 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 0,91000 | € |
| BFYG-08X4 | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 200 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 2,33000 | € |
| BFYG-08X6 | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 250 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 3,61000 | € |
| BFYG-08XE | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 110 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 0,72000 | € |
| BFYG-08XG | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 140 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 1,15000 | € |
| BFYG-08XI | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 63 mm de diàmetre nominal exterior, unió elàstica amb anella elastomèrica d'estanquitat | 0,24000 | € |
| BFYG-08XM | u | Part proporcional d'elements de muntatge per a tub de PVC-U a pressió, de 25 mm de diàmetre nominal exterior, encolat | 0,05000 | € |
| BG10-J1R0 | u | Quadre General de Distribució (Q.G.D.), segons esquemes unifilars del projecte. Inclou aparellatge elèctric, rotulació i accesoris. Inclou subministrament de tots els elements, col·locació, instal·lació i posada en funcionament. | 5.610,27000 | € |
| BG10-J1R1 | u | Quadre Secundari Depuració (Q.S.D.), segons esquemes unifilars del projecte. Inclou aparellatge elèctric, rotulació i accesoris. Inclou subministrament de tots els elements, col·locació, instal·lació i posada en funcionament. | 2.245,26000 | € |
| BG12-0G8U | u | Caixa de derivació quadrada de plàstic, de 95x95 mm, amb grau de protecció IP-65 i per a muntar superficialment | 7,21000 | € |

MATERIALS

| CODI | UA | DESCRIPCIÓ | PREU | |
|---|---|---|---|---|
| BG16-0BVO | u | Caixa general de protecció de polièster reforçat amb fibra de vidre, de 100 A, segons esquema Unesa número 7, seccionable en càrrega (BUC), inclosa base portafusibles trifàsica (sense fusibles), neutre seccionable, borns de connexió i grau de protecció IP-43, IK09 | 113,26000 | € |
| BG1B-H64J | u | Conjunt de protecció i mesura del tipus TMF1 per a subministrament trifàsic individual superior a 15 kW, per a mesura directa, potència màxima de 43,64 kW, tensió de 400 V, format per conjunt de caixes modulars de doble aïllament de polièster reforçat amb fibra de vidre de mides totals 540x810x171 mm, amb base de fusibles (sense incloure els fusibles), sense equip de comptage, amb ICP-M tetrapolar (4P) de 63 A d'intensitat nominal i poder de tall superior a 4,5 kA i sense interruptor diferencial | 334,79000 | € |
| BG2P-1KUW | m | Tub rígid de PVC, de 20 mm de diàmetre nominal, aïllant i no propagador de la flama, amb una resistència a l'impacte de 2 J, resistència a compressió de 1250 N i una rigidesa dielèctrica de 2000 V | 0,95000 | € |
| BG2P-1KUX | m | Tub rígid de PVC, de 25 mm de diàmetre nominal, aïllant i no propagador de la flama, amb una resistència a l'impacte de 2 J, resistència a compressió de 1250 N i una rigidesa dielèctrica de 2000 V | 1,39000 | € |
| BG2Q-1KSU | m | Tub flexible corrugat de PVC, de 20 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte d'1 J, resistència a compressió de 320 N i una rigidesa dielèctrica de 2000 V | 0,25000 | € |
| BG2Q-1KSV | m | Tub flexible corrugat de PVC, de 25 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte d'1 J, resistència a compressió de 320 N i una rigidesa dielèctrica de 2000 V | 0,33000 | € |
| BG2Q-1KSW | m | Tub flexible corrugat de PVC, de 32 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte d'1 J, resistència a compressió de 320 N i una rigidesa dielèctrica de 2000 V | 0,50000 | € |
| BG2Q-1KTE | m | Tub corbable corrugat de polietilè, de doble capa, llisa la interior i corrugada l'exterior, de 90 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte de 20 J, resistència a compressió de 450 N, per a canalitzacions soterrades | 2,11000 | € |
| BG2Q-1KTK | m | Tub corbable corrugat de PVC, de 65 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte de 6 J, resistència a compressió de 250 N, per a canalitzacions soterrades | 1,16000 | € |
| BG2Q-1KTN | m | Tub corbable corrugat de PVC, de 50 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte de 3 J, resistència a compressió de 250 N, per a canalitzacions soterrades | 0,81000 | € |
| BG33-G2RB | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RV-K, construcció segons norma UNE 21123-2, tripolar, de secció 3x2,5 mm2, amb coberta del cable de PVC, classe de reacció al foc Eca segons la norma UNE-EN 50575 | 1,86000 | € |
| BG33-G2VM | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RZ1-K (AS), construcció segons norma UNE 21123-4, tripolar, de secció 3x4 mm2, amb coberta del cable de poliolefines, classe de reacció al foc Cca-s1b, d1, a1 segons la norma UNE-EN 50575 amb baixa emissió fums | 3,31000 | € |
| BG33-G2VO | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RZ1-K (AS), construcció segons norma UNE 21123-4, tripolar, de secció 3x2,5 mm2, amb coberta del cable de poliolefines, classe de reacció al foc Cca-s1b, d1, a1 segons la norma UNE-EN 50575 amb baixa emissió fums | 2,34000 | € |
| BG33-G2WX | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RZ1-K (AS), construcció segons norma UNE 21123-4, pentapolar, de secció 5x4 mm2, amb coberta del cable de poliolefines, classe de reacció al foc Cca-s1b, d1, a1 segons la norma UNE-EN 50575 amb baixa emissió fums | 5,21000 | € |
| BG33-G2WY | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RZ1-K (AS), construcció segons norma UNE 21123-4, pentapolar, de secció 5x6 mm2, amb coberta del cable de poliolefines, classe de reacció al foc Cca-s1b, d1, a1 segons la norma UNE-EN 50575 amb baixa emissió fums | 7,32000 | € |
| BG33-G2X0 | m | Cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RZ1-K (AS), construcció segons norma UNE 21123-4, pentapolar, de secció 5x10 mm2, amb coberta del cable de poliolefines, classe de reacció al foc Cca-s1b, d1, a1 segons la norma UNE-EN 50575 amb baixa emissió fums | 10,93000 | € |
| BG3I-06W3 | m | Conductor de coure nu, unipolar de secció 1x35 mm2 | 2,24000 | € |
| BG3I-06W4 | m | Conductor de coure nu, unipolar de secció 1x50 mm2 | 3,20000 | € |
| BG4M-VLEO | u | Caixa de protecció fusible per a instal·lacions d'enllumenat, entrada 4x25 mm2 i sortida 2x6 mm2, amb born auxiliar, amb fusibles cilíndrics UTE mida 0 de 10x38 mm, de 6A, allotjats en la pròpia tapa de policarbonat, grau de protecció IP 13, per a col·locar superficial | 17,32000 | € |

| BG64-07EI | u | Caixa per a mecanismes, per a un element, preu alt | 1,85000 | € |
| BG66-1OA0 | u | Bastidor per a caixa rectangular per al muntatge de mecanismes modulars, d'1 mòdul, per a fixar a caixa de mecanismes rectangular | 0,85000 | € |
| BG69-1NHN | u | Interruptor, de tipus modular d'1 mòdul estret, unipolar (1P), 16 A/250 V, amb tecla i làmpada pilot, preu mitjà, per a muntar sobre bastidor o caixa | 5,55000 | € |
| BG69-1NI0 | u | Commutador de creuament per a muntar superficialment, unipolar (1P), 10 AX/250 V, amb tecla i amb caixa de superfície estanca, amb grau de protecció IP-55, preu mitjà, | 14,48000 | € |
| BG69-1NKD | u | Interruptor per a muntar superficialment, unipolar (1P), 16 AX/250 V, amb tecla i amb caixa de superfície estanca, amb grau de protecció IP-55, preu mitjà, | 5,65000 | € |
| BG6D-1OB2 | u | Marc per a l'adaptació de mecanismes modulars a caixa rectangular, d'1 mòdul, preu alt | 1,83000 | € |
| BG6G-1NY2 | u | Presa de corrent de tipus universal, bipolar amb presa de terra lateral (2P+T), 16 A 250 V, amb tapa, preu mitjà, per a encastar | 3,44000 | € |
| BG6G-1NY8 | u | Presa de corrent per a muntar superficialment, bipolar amb presa de terra lateral (2P+T), 16 A 250 V, amb tapa i caixa estanca, amb grau de protecció IP-55, preu alt | 7,91000 | € |
| BG6G-1NYI | u | Presa de corrent bipolar amb presa de terra lateral (2P+T), 16 A 250 V, amb tapa, amb grau de protecció IP-44, preu alt, per a encastar | 9,57000 | € |
| BG6G-1NYU | u | Presa de corrent de tipus modular d'1 mòdul estret, bipolar (2P), 16 A 250 V, amb tapa, preu superior, per a muntar sobre bastidor o caixa | 4,86000 | € |
| BG6J-07O2 | u | Sortida de fils, de tipus universal, per a conductors, amb tapa, preu alt, per a encastar | 6,34000 | € |
| BG75-H6HA | u | Programador electrònic astronòmic, amb 3 línies de sortida amb poder de tall de 16A a 230 V, programació diaria i setmanal, interval mínim de programació d'1 min, per a muntar superficialment o a carril DIN | 128,72000 | € |
| BG83-H6J2 | u | Subministrament i col·locació de detector de presència amb activació per infraroig i rearme mitjançant so, amb un abast màxim de 6 metres, amb un angle de detecció de 90º, amb sistema de connexionat a tres fils, amb sortida per relé una potència màxima de 1000 VA, amb una tensió de funcionament de 220 v / 50hz, amb un temps temporitzat regulable entre 4 segons i 9 minuts, model Luxomat M+S-3H, ref 0770080 de la marca Temper o equivalent. Inclòs caixa d'encastar, marc, i accessoris. Totalment instal·lat i en funcionament. | 73,89000 | € |
| BGC4-2O00 | u | Sistema d'alimentació ininterrompuda del tipus line interactive amb modulació d'ample de polsos (PWM), classificació VI segons la norma EN 62040-3, de 600 VA de potència, temps d'autonomia de 10 minuts, tensió d'entrada/sortida 230 V/230 V, freqüències de funcionament 50/60 Hz, rendiment total > 98, factor de potència de sortida 0,6, sobrecàrrega admissible del 110% 5min/120% 100ms, comunicació remota mitjançant port USB, comunicació local amb display LCD, bateries de plom tipus AGM, amb 2 preses de corrent del schuko+protecció, format torre | 50,63000 | € |
| BGD2-06US | u | Placa de connexió a terra d'acer quadrada (massissa), de 0,3 m2 de superfície i de 3 mm de gruix | 48,72000 | € |
| BGD4-16WD | u | Punt de connexió a terra amb pont seccionador de platina de coure, muntat en caixa estanca i per muntar superficialment | 34,80000 | € |
| BGD5-06SU | u | Piqueta de connexió a terra d'acer i recobriment de coure, de 1500 mm de llargària, de 14,6 mm de diàmetre, de 300 µm | 17,66000 | € |
| BGW2-093I | u | Part proporcional d'accessoris de caixa general de protecció | 11,71000 | € |
| BGW2-093M | u | Part proporcional d'accessoris de caixa de derivació quadrada | 0,31000 | € |
| BGW8-0ASI | u | Part proporcional d'accessoris per a interruptors i commutadors | 0,35000 | € |
| BGW8-0ASJ | u | Part proporcional d'accessoris per a endolls | 0,36000 | € |
| BGWC-09N4 | u | Part proporcional d'accessoris per a tubs rígids de PVC | 0,14000 | € |
| BGWD-0AS6 | u | Part proporcional d'accessoris per a caixes seccionadores fusibles | 0,38000 | € |
| BGWF-0ARJ | u | Part proporcional d'accessoris per a conductors de coure nus | 0,32000 | € |
| BGY3-0B2S | u | Part proporcional d'elements especials per a conductors de coure nus | 0,21000 | € |

| BH12-2XRQ | u | Llumenera led decorativa estanca de policarbonat, de 1.250 mm de longitud, de 23,5 W de potència de la llumenera, 2.900 lm de flux lluminós, protecció IP65, no regulable, per a muntar superficialment model Coreline estanca G2 marca Philips o equivalent. Inclòs subministrament i instal·lació. | 81,43000 | € |
| BH12-2XSA | u | Llumenera de superfície protecció IP54 de longitud 729 mm, potència 17W, flux lluminós 1460 lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment i en linealment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 163,75000 | € |
| BH12-2XSB | u | Llumenera de superfície protecció IP54 de longitud 869 mm, potència 20W, flux lluminós 1755 lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 175,77000 | € |
| BH12-2XSC | u | Llumenera de superfície protecció IP54 de longitud 1429 mm, potència 34W, flux lluminós 2925 lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 236,84000 | € |
| BH12-2XSD | u | Llumenera de superfície protecció IP54 de longitud 1709 mm, potència 41W, flux lluminós 3510lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 242,71000 | € |
| BH12-2XSE | u | Llumenera de superfície protecció IP54 de longitud 1991 mm, potència 48W, flux lluminós 4095lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 333,86000 | € |
| BH12-2XSG | u | Llumenera de superfície protecció IP54 de longitud 2411 mm, potència 58W, flux lluminós 4970lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 371,66000 | € |
| BH12-2XSH | u | Llumenera de superfície protecció IP54 de longitud 2551 mm, potència 61W, flux lluminós 5265lm, temperatura de color 3000 K amb carcassa de perfil d´alumini anoditzat amb acabat blanc. Difusor de policarbonat esmerilat i tapes d´alumini de 5 mm, per a muntar superficialment. Model U60 marca OM o equivalent. Inclòs subministrament, també dels elements auxiliars com tapes i elements d'unió i instal·lació de tots els elements. | 383,67000 | € |
| BH65-2IJF | u | Llum d'emergència amb làmpada led, amb una vida útil de 100000 h, permanent i estanca amb grau de protecció IP66, aïllament classe II, amb un flux aproximat de 440 a 470 lm, 1 h d'autonomia, de forma rectangular amb difusor i cos de policarbonat, preu alt | 112,33000 | € |
| BHM2-13J8P | u | Columna cilíndrica de secció circular de 7,5 m d'alçària, vertical, fabricada amb planxa d'acer estructural no aliat de designació S235JR segons norma UNE-EN 10025-2 de 3 mm de gruix com a mínim, de 127 mm de diàmetre, amb 2 braços de 100 cm de sortint, preparada per a la col·locació suspesa de 2 llums, placa d'ancoratge quadrada de 160000 mm i 10 mm de gruix amb 4 cartel·les de reforç i 4 forats colissos per a perns M25, amb anella de reforç en la base de 350 mm d'alçària i 4 mm de gruix, amb 1 porta de 120x300 mm ajustada al fust amb pany normalitzat, amb reforç interior de la columna en la zona de la porta, acabat galvanitzat en calent, fabricació segons la norma UNE-EN 40-5 | 737,28000 | € |
| BHN1-2GT8 | u | Focus tipus LED amb punxó de jardí orientable amb un grau de protecció IP65/67, 12 W de potència, 3.000 K de temperatura de color, 73 mm d'amplada i 255 mm d'alçada. Model VT-857, marca V-TAC o equivalent. Inclòs subministrament i instal·lació. | 27,00000 | € |
| BHQ6-2Y9S | u | Projector per a exterior amb leds amb distribució de la llum asimètrica extensiva, de 200 W de potència, flux lluminós de 26600 lm, amb equip elèctric no regulable, aïllament classe I, cos d'alumini fos a pressió amb recubriment negre en pols i difusor de vidre frontal, grau de protecció IP66, col·locat. Model Elia marca Gewiss o equivalent. | 368,72000 | € |

| BN37-0X7O | u | Vàlvula de bola segons norma UNE-EN 13709, manual, amb brides, de 2 vies, de 20 mm de diàmetre nominal, de 16 bar de pressió nominal, cos de dues peces de fosa d'acer inoxidable 1.4408 (CF8M), bola d'acer inoxidable 1.4401 (AISI 316), eix d'acer inoxidable 1.4401 (AISI 316), seient de tefló PTFE, accionament per palanca | 63,86000 | € |
| BN37-0X7Y | u | Vàlvula de bola segons norma UNE-EN 13709, manual, amb brides, de 2 vies, de 80 mm de diàmetre nominal, de 40 bar de pressió nominal, cos de dues peces de fosa d'acer inoxidable 1.4408 (CF8M), bola d'acer inoxidable 1.4401 (AISI 316), eix d'acer inoxidable 1.4401 (AISI 316), seient de tefló PTFE, accionament per palanca | 482,95000 | € |
| BN37-0X86 | u | Vàlvula de bola segons norma UNE-EN 13709, manual, amb brides, de 2 vies, de 25 mm de diàmetre nominal, de 16 bar de pressió nominal, cos de dues peces de fosa d'acer inoxidable 1.4408 (CF8M), bola d'acer inoxidable 1.4401 (AISI 316), eix d'acer inoxidable 1.4401 (AISI 316), seient de tefló PTFE, accionament per palanca | 83,67000 | € |
| BN37-0X89 | u | Vàlvula de bola segons norma UNE-EN 13709, manual, amb brides, de 2 vies, de 40 mm de diàmetre nominal, de 16 bar de pressió nominal, cos de dues peces de fosa d'acer inoxidable 1.4408 (CF8M), bola d'acer inoxidable 1.4401 (AISI 316), eix d'acer inoxidable 1.4401 (AISI 316), seient de tefló PTFE, accionament per palanca | 147,92000 | € |
| BN38-0XCH | u | Vàlvula de bola manual amb rosca, de dues peces amb pas total, d'acer inoxidable 1.4408 (AISI 316), de diàmetre nominal 3/4 *, de 64 bar pressió nominal, de preu alt | 11,53000 | € |
| BN48-2JFX | u | Vàlvula de papallona concèntrica, segons norma UNE-EN ISO 16136, funcionament manual, amb brides i unions encolades, DN 65 (per a tubs de diàmetre 75 mm), de 10 bar de pressió nominal, cos de PVC-U, disc de PVC-U, anell d'etilè propilè diè (EPDM), eix d'acer zincat i accionament per palanca | 54,84000 | € |
| BN48-2JFZ | u | Vàlvula de papallona concèntrica, segons norma UNE-EN ISO 16136, funcionament manual, amb brides i unions encolades, DN 25 (per a tubs de diàmetre 25 mm), de 10 bar de pressió nominal, cos de PVC-U, disc de PVC-U, anell d'etilè propilè diè (EPDM), eix d'acer zincat i accionament per palanca | 14,06000 | € |
| BN48-2JG0 | u | Vàlvula de papallona concèntrica, segons norma UNE-EN ISO 16136, funcionament manual, amb brides i unions encolades, DN 150 (per a tubs de diàmetre 160 mm), de 6 bar de pressió nominal, cos de PVC-U, disc de PVC-U, anell d'etilè propilè diè (EPDM), eix d'acer zincat i accionament per palanca | 140,20000 | € |
| BN48-2JG2 | u | Vàlvula de papallona concèntrica, segons norma UNE-EN ISO 16136, funcionament manual, amb brides i unions encolades, DN 200 (per a tubs de diàmetre 200 mm), de 6 bar de pressió nominal, cos de PVC-U, disc de PVC-U, anell d'etilè propilè diè (EPDM), eix d'acer zincat i accionament per palanca | 228,28000 | € |
| BN48-2JGA | u | Vàlvula de papallona concèntrica, segons norma UNE-EN ISO 16136, funcionament manual, amb brides i unions encolades, DN 100 (per a tubs de diàmetre 110 mm), de 10 bar de pressió nominal, cos de PVC-U, disc de PVC-U, anell d'etilè propilè diè (EPDM), eix d'acer zincat i accionament per palanca | 74,73000 | € |
| BN81-2LJ3 | u | Vàlvula de retenció de clapeta amb molla, segons la norma UNE-EN ISO 16137, amb brides, DN 100 (per a tub de 110 mm de diàmetre nominal), de 10 bar de pressió nominal, cos de PVC-U i junts d'estanqueïtat d'etilè propilè diè (EPDM) | 77,99000 | € |
| BN86-0X1O | u | Vàlvula de retenció de disc manual per a muntar entre brides, de 80 mm de diàmetre nominal, de 40 bar de PN, temperatura màxima 200 °C, cos d'acer inoxidable 1.4401 (AISI 316), de preu alt | 133,89000 | € |
| BN86-0X1V | u | Vàlvula de retenció de disc manual per a muntar entre brides, de 20 mm de diàmetre nominal, de 40 bar de PN, temperatura màxima 200 °C, cos d'acer inoxidable 1.4401 (AISI 316), de preu alt | 19,69000 | € |
| BN89-215C | u | Vàlvula de retenció de disc amb rosca, diàmetre nominal 3/4*, execució normal, cos de llautó, disc d'acer inoxidable 1.4301 (AISI 304), seient de cautxú nitril (NBR), molla d'acer inoxidable 1.4301 (AISI 304), pressió màxima 16 bar, temperatura màxima 100 °C | 4,51000 | € |
| BNN2-3449 | u | Bomba submergible d'esgotament amb connexió roscada de 1* de diàmetre nominal, rotor de tipus obert fabricat en tecnopolímer amb un pas útil de sòlids de 9 mm de diàmetre, motor monofàsic de 230 V i 0,47 kW de potència nominal a 2900 rpm, grau de protecció IP68, cos d'acer inoxidable 1.4301 (AISI 304) | 152,55000 | € |
| BP44-1A3X | m | Cable per a transmissió de dades amb conductors de coure, de 4 parells, categoria 6a F/UTP, aïllament de poliolefina i coberta de poliolefina, de baixa emissió de fums i opacitat reduïda, no propagador de la flama segons UNE-EN 60332-1-2, classe de reacció al foc Dca-s2, d2, a2 segons la norma UNE-EN 50575 | 0,80000 | € |
| BP48-21PK | u | Cable de xarxa de 4 parellls, estanc, amb 2 connectors RJ45 categoria 6 U/FTP d'1,6 a 3,2 m de llargària, amb un grau de protecció IP-65 | 4,80000 | € |

|---|---|---|---|---|
| MT14IEA020C | kg | Emulsión asfáltica aniónica con cargas tipo EB, según UNE 104231. | 2,78000 | € |
| MT14JI341 | m² | Geotextil no tejido sintético, termosoldado, de polipropileno, con una resistencia a la tracción longitudinal de 8 kN/m, una resistencia a la tracción transversal de 10,1 kN/m, una apertura de cono al ensayo de perforación dinámica según UNE-EN ISO 13433 inferior a 40 mm, resistencia CBR a punzonamiento 0,3 kN y una masa superficial de 120 g/m², según UNE-EN 13252. | 0,89000 | € |
| MT14LGA010O | m² | Lámina de betún modificado con elastómero SBS, LBM(SBS)-50/G-FP, de 3,5 mm de espesor, masa nominal 5 kg/m², con armadura de fieltro de poliéster reforzado y estabilizado de 150 g/m², con autoprotección mineral de color verde, con resistencia a la penetración de raíces. Según UNE-EN 13707. | 8,74000 | € |
| MT16PEA020B | m² | Panel rígido de poliestireno expandido, según UNE-EN 13163, mecanizado lateral recto, de 20 mm de espesor, resistencia térmica 0,55 m²K/W, conductividad térmica 0,036 W/(mK), para junta de dilatación. | 1,13000 | € |
| MT16PEA020C | m² | Panel rígido de poliestireno expandido, según UNE-EN 13163, mecanizado lateral recto, de 30 mm de espesor, resistencia térmica 0,8 m²K/W, conductividad térmica 0,036 W/(mK), para junta de dilatación. | 1,70000 | € |
| MT1DA3T1 | m³ | Hormigón HM-25/F/20/X0, fabricado en central. | 77,63000 | € |
| MT35TTA030 | Ud | Puente para comprobación de puesta a tierra de la instalación eléctrica. | 38,81000 | € |
| MT35TTS010B | Ud | Soldadura aluminotérmica del cable conductor a redondo. | 3,48000 | € |
| MT35WWW020 | Ud | Material auxiliar para instalaciones de toma de tierra. | 0,97000 | € |
| MT47PEP042A | Ud | Dutxa per a piscina, d'acer inoxidable, amb monocomandament i ruixador fix amb sistema anticalç i efecte pluja. Inclos anclatges, topes, embellidors, juntes, tacs i cargols, racor de connexió, canonades per a conducció d'aigua i elements d'anclatge. Model Chrome marca AstralPool o equivalent. Inclòs subministrament i instal·lació de tots els elements fins un correcte acabat.<br>Característiques tècniques:<br>• Tub d'acer inoxidable AISI-304L i marc d'alumini.<br>• Color a definir per la DF.<br>• Ruixador anticalç i efecte pluja.<br>• Aixeta rentapeus.<br>• Fàcil instal·lació: presa a la part inferior o lateral/darrere (compatible amb connexió de mànega). | 442,13000 | € |
| MT48MAL015C | Ud | Piqueta de anclaje de acero, en forma de L, de 6 mm de diámetro, para sujeción de redes y mallas al terreno. | 0,57000 | € |
| MT48SAD010 | l | Sustrato orgánico, para cubiertas ajardinadas extensivas. | 0,16000 | € |
| MT48SAD020 | kg | Roca volcánica de distintas granulometrías, para colocar sobre el sustrato orgánico en cubiertas ajardinadas extensivas. | 0,22000 | € |
| MT50SPA081A | Ud | Puntal metálico telescópico, de hasta 3 m de altura. | 17,67000 | € |
| R3-SEV | u | Armari Sonda tres nivells<br>Armari per al control de nivells de depòsit, que disposa de tres sondes de control.<br>- Nivell de seguretat mínim de bombament. Per a les bombes si el nivell d'aigua no té el mínim exigit per a la bomba.<br>- Nivell d'emplenat. Dona senyal a l'electrovàlvula d'emplenat per mantenir el nivell correcte d'aigua de la piscina. Senyal de l'electrovàlvula a 220 V II i 24 V II.<br>- Nivell d'arrencada forçada: Arrenca el grup de bombament quan el vas de compensació arriba al nivell de desguàs (trencament o fallada de la vàlvula antiretorn).<br>Model R3-SEV marca Fluidra o equivalent<br>Inclòs subministrament i instal·lació. | 675,85000 | € |

Peça especial de coronament vora cantonada de rajola de gres ceràmic de color rosso, de dimensions 62,6x62.6x2.2 mm. Ref 664 1A model Cuore Rosso A. Borde Prestige N Esq. marca Rosa Gres o equivalent. Fixada amb ciment cola d'alta adherència amb textura gel model TECNOCOL GEL gris marca Fixcer o equivalent. I juntes de 2 mm realitzades amb beurada de mortr epoxi anti-àcid blanc o translúcid model CERPOXI marca Fixcer o equivalent.

Característiques tècniques:
- ISO 10545 - 2 Característiques dimensionals: Exigida
- ISO 10545 - 3 Absorció d'aigua: E = 0,5 %
- ISO 10545-4 Força de trencament: = 1.300 N i Resistència a la flexió: = 35 N/mm2
- ISO 10545 - 9 Resistència al xoc tèrmic: Exigida
- ISO 10545 - 12 Resistència a la gelada: Exigida
- ISO 10545 - 13 Resistència química: A/LA/HA
- ISO 10545 - 14 Resistència a les taques: Classe 3

Model TD-1000/200 SILENT ECOWATT CAV marca Soler & Palau o equivalent. Ventiladors helicocentrífugs de mínim 200 m3/h fins a 800 m3/h, extremadament silenciosos, fabricats en material plàstic, cos-motor desmuntable sense necessitat de tocar els conductes, juntes de goma en impulsió i descàrrega per reforçar l'estanquitat. Motor brushless de corrent continu, d'alt rendiment i baix consum, alimentació 230V±15%/50-60Hz, classe B, IP44, rodaments de boles i caixa de borns externa. Equipats amb un sensor que permet la creació d'un sistema de cabal constant (CAV), tipus plug & play. Capacitat per treballar de -20 a +40ºC. Indicats per a sistemes d'aportació d'aire o recirculació on s'instal·len filtres. Inclòs subministrament i instal·lació. | **Rend.: 1,000** | | | **709,04** **€** |

|---|---|---|---|---|

- tub corbable corrugat de polietilè, de doble capa, llisa la interior i corrugada l'exterior, de 90 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte de 20 J, resistència a compressió de 450 N, muntat com a canalització soterrada

- tub flexible corrugat de PVC, de 32 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte d'1 J, resistència a compressió de 320 N i una rigidesa dielèctrica de 2000 V, muntat encastat

- conductor de coure nu, unipolar de secció 1x35 mm2, muntat superficialment

- placa de connexió a terra d'acer, quadrada (massissa), de superfície 0,3 m2, de 3 mm de gruix i soterrada

- cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RV-K, construcció segons norma UNE 21123-2, tripolar, de secció 3x2,5 mm2, amb coberta del cable de PVC, classe de reacció al foc Eca segons la norma UNE-EN 50575, col·locat superficialment

- caixa de protecció fusible per a instal·lacions d'enllumenat, entrada 4x25 mm2 i sortida 2x6 mm2, amb born auxiliar, amb fusibles cilíndrics UTE mida 0 de 10x38 mm, de 6A, allotjats en la pròpia tapa de policarbonat, IP 13 col·locada superficialment

Equipats amb:
-Manòmetres
-Purges d'aire i aigua
-Tap de buidatge.
-Velocitat màx de filtració 30 m³/h/m².
-Cabal 46m3/h
-Connexions D.90mm
-Pressió màxima 2,5 Kg/cm²
Model 00696 marca Fluidra o equivalent.
Inclòs subministrament i instal·lació.

**P-260** **PJA8-3HWG** u Escalfador acumulador elèctric de 200 l de capacitat, de 2.200 W de potència, horitzontal. Model Concept 200 HZ marca Themor o equivalent. Dissenyat segons els requisits del REGLAMENTO (UE) 814/2013, amb una classe d'eficiència energètica en aigua calenta sanitària segons REGLAMENTO (UE) 812/2013
Amb un temps d'escalfament de 5h 7 min (65ºC, (delta) T= 50ºC), i un consum de manteniment de 1,81 kWh/24H (65ºC). Amb el màxim estalvi i la durabilitat que permet millorar l'etiqueta ERP.
Durabilitat:
- Cuba vitrificada.
- Resistència blindada.
Estalvi energètic:
- Termòstat exterior que permet seleccionar la temperatura desitjada a cada moment (litratges de 15 a 100 L).
- Aïllament dalta densitat.
- Sistema BriseJet que garanteix l'estratificació òptima de l'aigua.
Garantia:
- 3 anys de garantia total i 3 anys a la cuba.
Classificació ERP: C
Inclòs subministrament i instal·lació.

**P-277** **PJT3-HBPA** u Unitat de regulació i control totalment automatitzada amb lectures simultànies, de pH i clor. GUARDIAN POOL NN 2 pH/ppm Cl
La nova unitat Guardian Pool combina els elements de control i dosificació tradicionals amb un control digital total dels seus valors, cosa que facilita la gestió dels paràmetres de la piscina i el seu historial, per analitzar o detectar possibles errors.
Guardian Pool destaca pel seu alt rendiment en el control i la regulació dels productes químics que es fan servir en piscines públiques i privades.
Pantalla tàctil de 7" d'alta resolució amb disseny innovador, actualització del microprogramari a través del port USB (que també es fa servir per descarregar les dades de la piscina).
Compatible amb Fluidra Connect per a una millor gestió remota de tots els paràmetres.
Model 72720 marca Fluidra o equivalent.
Inclòs subministrament i instal·lació. **Rend.: 1,000** **2.846,82 €**

**P-318** **QDE02A** m² Coberta plana no transitable, no ventilada, enjardinada extensiva (ecològica), pendent de l'1% al 5%. Formada per les capes següents: **Rend.: 1,000** **82,29 €**

- Formació de pendents: mitjançant encintat de careners, aiguafons i juntes amb mestres de maó ceràmic buit doble i capa d'argila expandida, abocada en sec i consolidada a la seva superfície amb beurada de ciment, proporcionant una resistència a compressió d'1 MPa i amb una conductivitat tèrmica de 0,0; amb capa de regularització de morter de ciment, industrial, M-5 de 4 cm de gruix, acabat remolinat
- Impermeabilització: tipus monocapa, adherida, formada per làmina de betum modificat amb elastòmer SBS, LBM(SBS)-50/G-FP prèvia imprimació amb emulsió asfàltica aniònica amb càrregues tipus EB
- Capa separadora sota protecció: geotèxtil no teixit compost per fibres de polièster unides per agatejat, (150 g/m²)
- Capa drenant i retenidora d'aigua: làmina drenant i retenidora d'aigua d'estructura nodular de polietilè d'alta densitat (PEAD/HDPE), amb nòduls de 20 mm d'alçada, formada per membrana de polietilè d'alta densitat amb relleu en con truncat i perforacions
- Capa filtrant: geotèxtil no teixit sintètic, termosoldat, de polipropilè-polietilè, amb una resistència a la tracció longitudinal de 16 kN/m, una resistència a la tracció transversal de 16,5 kN/m, una obertura de con a l'assaig de perforació dinàmica segons UNE-EN 7

|---|---|---|---|---|

kN i una massa superficial de 200 g/m²
- Capa de protecció: capa de roca volcànica de 3 cm de gruix, sobre base de substrat orgànic de 6 cm de gruix.
S'inclou l'execució i el segellat de les juntes i l'execució de remats a les trobades amb paraments i desguassos. Replanteig dels punts singulars. Replanteig dels pendents i traçat de careners, aiguafons i juntes. Formació de pendents mitjançant encintat de careners, aiguafons i juntes amb mestres de maó. Farciment de juntes amb poliestirè expandit. Abocament en sec de l'argila expandida fins assolir el nivell de coronació de les mestres, i consolidació amb beurada de ciment. Abocament, estesa i reglejat de la capa de morter de regularització. Neteja i preparació de la superfície. Aplicació de l´emulsió asfàltica. Col·locació de la impermeabilització. Col·locació de la capa drenant i retenidora d'aigua. Col·locació de la capa filtrant. Estès del substrat i la roca volcànica.
Inclòs subministrament i instal·lació de tots els elements fins a un correcte acabat.

| 1 | PHM2-143P0 | u | Columna cilíndrica de secció circular de 7,5 m d'alçària, vertical, fabricada amb planxa d'acer estructural no aliat de designació S235JR segons norma UNE-EN 10025-2 de 3 mm de gruix com a mínim, de 127 mm de diàmetre, amb 2 braços de 100 cm de sortint, preparada per a la col·locació suspesa de 2 llums, placa d'ancoratge quadrada de 160000 mm i 10 mm de gruix amb 4 cartel·les de reforç i 4 forats colissos per a perns M25, amb anella de reforç en la base de 350 mm d'alçària i 4 mm de gruix, amb 1 porta de 120x300 mm ajustada al fust amb pany normalitzat, amb reforç interior de la columna en la zona de la porta, acabat galvanitzat en calent, fabricació segons la norma UNE-EN 40-5, inclòs:<br><br>- excavació de pou aïllat de fins a 2 m de fondària, en terreny no classificat, amb mitjans mecànics, de 0,8 x 0,8 x 1 m (amplària x llargària x fondària)<br><br>- fonamentació de formigó en massa amb additiu hidròfug HM - 20 / B / 20 / X0 amb una quantitat de ciment de 200 kg/m3 i relació aigua ciment =< 0.6, de 0,8 x 0,8 x 0,8 m (amplària x llargària x alçària)<br><br>- tub corbable corrugat de polietilè, de doble capa, llisa la interior i corrugada l'exterior, de 90 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte de 20 J, resistència a compressió de 450 N, muntat com a canalització soterrada<br><br>- tub flexible corrugat de PVC, de 32 mm de diàmetre nominal, aïllant i no propagador de la flama, resistència a l'impacte d'1 J, resistència a compressió de 320 N i una rigidesa dielèctrica de 2000 V, muntat encastat<br><br>- conductor de coure nu, unipolar de secció 1x35 mm2, muntat superficialment<br><br>- placa de connexió a terra d'acer, quadrada (massissa), de superfície 0,3 m2, de 3 mm de gruix i soterrada<br><br>- cable amb conductor de coure de tensió assignada0,6/1 kV, de designació RV-K, construcció segons norma UNE 21123-2, tripolar, de secció 3x2,5 mm2, amb coberta del cable de PVC, classe de reacció al foc Eca segons la norma UNE-EN 50575, col·locat superficialment<br><br>- caixa de protecció fusible per a instal·lacions d'enllumenat, entrada 4x25 mm2 i sortida 2x6 mm2, amb born auxiliar, amb fusibles cilíndrics UTE mida 0 de 10x38 mm, de 6A, allotjats en la pròpia tapa de policarbonat, IP 13 col·locada superficialment (P - 224) | 957,50 | 2,000 | 1.915,00 |
| 2 | PHQE-C09S | u | Projector per a exterior amb leds amb distribució de la llum asimètrica extensiva, de 200 W de potència, flux lluminós de 26600 lm, temperatura de color 3000 K, amb equip elèctric no regulable, aïllament classe I. Cos fabricat amb alumini, pintat amb pintura electrostàtica en pols de color negre i difusor de vidre frontal, grau de | 392,09 | 8,000 | 3.136,72 |

| | | | | | | |
|---|---|---|---|---|---|---|
| | | | protecció IP66, vida de leds 50.000 h, col·locat. Model Elia marca Gewiss o equivalent. (P - 226) | | | |
| 3 | PG12-DHBA | u | Caixa de derivació quadrada de plàstic, de 95x95 mm, amb grau de protecció IP-65, muntada superficialment (P - 182) | 14,78 | 35,000 | 517,30 |
| 4 | PH57-B39Z | u | Llum d'emergència amb làmpada led, amb una vida útil de 100000 h, permanent i estanca amb grau de protecció IP66, aïllament classe II, amb un flux aproximat de 440 a 470 lm, 1 h d'autonomia, de forma rectangular amb difusor i cos de policarbonat, preu alt, col·locat superficial (P - 223) | 119,59 | 1,000 | 119,59 |
| 5 | PH11-AZWO | m | Tira LED flexible de 220V, IP67, 15W/m de potència per encastar a carril. Model B1535-BF marca B-Led o equivalent. Carril per encastar format per perfil d'alumini per tira LED, difusor opal i tapes als extrems. Model PXG-205 marca B-Led o equivalent. Inclòs subministrament i instal·lació. (P - 214) | 62,49 | 41,600 | 2.599,58 |
| 6 | PHN1-AE1R | u | Focus tipus LED amb punxó de jardí orientable amb un grau de protecció IP65/67, 12 W de potència, 3.000 K de temperatura de color, 73 mm d'amplada i 255 mm d'alçada. Model VT-857, marca V-TAC o equivalent. Inclòs subministrament i instal·lació. (P - 225) | 41,52 | 13,000 | 539,76 |
| 7 | PH13-BZCX | u | Llumenera led decorativa estanca de policarbonat, de 1.250 mm de longitud, de 23,5 W de potència de la llumenera, 2.900 lm de flux lluminós, protecció IP65, no regulable, per a muntar superficialment model Coreline estanca G2 marca Philips o equivalent. Inclòs subministrament i instal·lació. (P - 222) | 95,95 | 8,000 | 767,60 |
| 8 | PEVB-6PHS | u | Sonda lluminositat ambient, amb accessoris de muntatge, muntada i connectada (P - 157) | 76,11 | 1,000 | 76,11 |
| 9 | PG75-H944 | u | Programador electrònic astronòmic, amb 3 línies de sortida amb poder de tall de 16A a 230 V, programació diaria i setmanal, interval mínim de programació d'1 min, muntat superficialment o a carril DIN i connectat (P - 209) | 136,90 | 1,000 | 136,90 |

| 1 | PEM6-B66E | u | Ventiladors Helicocentrífugs Ultrasilenciosos de Baix Consum per a un cabal d'aire de 450 m3/h. Model TD-1000/200 SILENT ECOWATT CAV marca Soler & Palau o equivalent. Ventiladors helicocentrífugs de mínim 200 m3/h fins a 800 m3/h, extremadament silenciosos, fabricats en material plàstic, cos-motor desmuntable sense necessitat de tocar els conductes, juntes de goma en impulsió i descàrrega per reforçar l'estanquitat. Motor brushless de corrent continu, d'alt rendiment i baix consum, alimentació 230V±15%/50-60Hz, classe B, IP44, rodaments de boles i caixa de borns externa. Equipats amb un sensor que permet la creació d'un sistema de cabal constant (CAV), tipus plug & play. Capacitat per treballar de -20 a +40ºC. Indicats per a sistemes d'aportació d'aire o recirculació on s'instal·len filtres. Inclòs subministrament i instal·lació. (P - 156) | 709,04 | 1,000 | 709,04 |

|---|---|---|---|---|---|---|
| 1 | PJ21P-3XZV | u | Ruixador amb ròtula, d'aspersió regulable, mural, per a muntar superficialment, d'alumini anoditzat, amb entrada de 1/2´´. Ref. 28 094 000 sèrie Relexa Plus 50 marca GROHE o equivalent. Inclòs subministrament i instal·lació. (P - 240) | 35,74 | 5,000 | 178,70 |
| 2 | PJ21E-3UGL | u | Aixeta temporitzada barrejadora per a dutxa, mural, amb instal·lació muntada encastada, de llautó cromat, amb entrada de d 1/2´´ i sortida de d 1/2´´ , amb vàlvula de buidat i conducte guia. Ref. 98951 model ALPA 90 ARTE-E EMPORTADO, marca Presto o equivalent. Inclou subministramenti instal·lació de tots els elements necessaris per la seva col·locació, instal·lació i posada en funcionament.<br>Característiques:<br>- Aixeta temporitzada mescladora per a instal·lació encastada amb cos de llautó i polsador cromat. Regulador automàtic de cabal.<br>- Cabal 8l/min. Model PLE: cABAL 5 L/MIN.<br>- Tancament automàtic: 30s ( 10s/+5s).<br>- Entrada i sortida G3/4.<br>- Subministrat amb: juntes filtro, juntes planes. (P - 239) | 391,60 | 5,000 | 1.958,00 |
| 3 | PN38-EC2D | u | Vàlvula de bola manual amb rosca, de dues peces amb pas total, d'acer inoxidable 1.4408 (AISI 316), de diàmetre nominal 3/4, de 64 bar de PN i preu alt, muntada superficialment (P - 288) | 19,52 | 10,000 | 195,20 |
| 4 | PN89-KZ3D | u | Vàlvula de retenció de disc amb rosca, diàmetre nominal 3/4*, execució normal, cos de llautó, disc d'acer inoxidable 1.4301 (AISI 304), seient de cautxú nitril (NBR), molla d'acer inoxidable 1.4301 (AISI 304), pressió màxima 16 bar, temperatura màxima 100 °C, roscada (P - 301) | 16,61 | 10,000 | 166,10 |
| 5 | PJ41-HA1T | u | Seient abatible mural per a dutxa de bany adaptat, amb banqueta de 350x450 mm, d'alumini recobert de niló, col·locat amb fixacions mecàniques (P - 243) | 419,64 | 1,000 | 419,64 |
| 6 | PJ41-HA1V | u | Barra mural fixa en angle per a bany adaptat, de 600 i 600 mm de llargària i 35 mm de D, de tub d'acer inoxidable, col·locat amb fixacions mecàniques (P - 245) | 150,87 | 1,000 | 150,87 |
| 7 | PJ41-HA1U | u | Barra mural fixa vertical recta per a bany adaptat, de 800 mm de llargària i 35 mm de D, de tub d'acer inoxidable, col·locat amb fixacions mecàniques (P - 244) | 83,22 | 1,000 | 83,22 |

# EL.01

PISCINA

NOTA 1 : LA PLATJA QUE ENVOLTA EL VAS I LA RAMPA HAN D'ESTAR ENRASADES, AMB EL PAVIMENT SENSE CAP RESSALT.

NOTA 2 : LA REIXA DE L'EMBORNAL DE DESGUÀS PERIMETRAL AL VAS HA DE QUEDAR ENRASADA AMB EL PAVIMENT CIRCUMDANT, ELS SEUS FORATS HAN DE SER INFERIORS A 1 CM I S'HAN DE SITUAR EN SENTIT SENTIT PERPENDICULAR AL FLUX DE CIRCULACIÓ D'ENTRADA I DE SORTIDA DE LA RAMPA.

NOTA 3 : LA RAMPA HA DE DISPOSAR ALS DOS COSTATS DE PASSAMANS I BARANES, I DE SÒCOL AL COSTAT O ALS COSTATS LLIURES, CONTINUS EN TOT EL RECORREGUT, AMB UNA PROLONGACIÓ HORITZONTAL DE 0,30 M A L'EXTREM SUPERIOR. ELS EXTREMS HAN D'ACABAR EN ANCORATGE FINS A TERRA O LA PARET AMB CANTELLS SUAUS I ARRODONITS.

NOTA 4 : LA RAMPA HA DE TENIR UN PAVIMENT ANTILLISCANT DE COLOR I TEXTURA CONTRASTATS AMB ELS MATERIALS DEL SEU ENTORN, QUE EN FACILITI A TOTHOM LA PERCEPCIÓ VISUAL I TÀCTIL.

NOTA 5 : AL PAVIMENT DE LA PLATJA DE LA PISCINA, AL COSTAT DE L'INICI I EL FINAL DE LA RAMPA, S'HA DE SENYALITZAR EL VALOR DE LA PROFUNDITAT DE L'AIGUA DINS DEL VAS DE LA PISCINA.

NOTA 6 : LA VORA PERIMETRAL DE LA PISCINA ADJACENT A LA RAMPA HA DE DISPOSAR DE LA BARANA PRÒPIA DE LA RAMPA, QUE S'HA DE SENYALITZAR L'EXISTÈNCIA PER EVITAR POSSIBLES ACCIDENTS DE PERSONES QUE VULGUIN ACCEDIR AL VAS DE LA PISCINA DES D'AQUESTA ZONA POC PROFUNDA DE LA RAMPA

PASSAMÀ SUPERIOR ALÇADA ENTRE 0.90 I 1.10M I PASSAMÀ INFERIOR ENTRE 0.65M I 0.75

ESPAI DE GIR DE DIÀMETRE 1,50 m

## SERVEIS HIGIÈNICS ADAPTATS

NOTA 1 : ES COL·LOCARÀ UN PICTOGRAMA DE SERVEIS ACCESSIBLES SITUAT ENTRE 0,80 I 1,20m AL COSTAT DEL MARC DE LA PORTA

NOTA 2 : LES PORTES HAN DE TENIR UNA AMPLADA MÍNIMA DE 70cm i S'HAN D'OBRIR CAP A L'EXTERIOR

NOTA 3 : EL MECANISME D'OBERTURA DE LA PORTA ESTARA SITUAT ENTRE 0,80 I 1,20m, DE FUNCIONAMENT A PRESSIÓ O PALANCA

NOTA 4 : ENTRE 0 I 0,7m D'ALÇADA RESPECTE EL TERRA HI HA UN ESPAI LLIURE DE GIR D'1,5m DE DIÀMETRE

NOTA 5 : ELS ACCESSORIS I MECANISMES SE SITUARAN A UNA ALÇADA ENTRE 0,8 I 1,2m

NOTA 6 : L'ESPAI INFERIOR MÍNIM SOTA EL LAVABO SERÀ DE 70cm

NOTA 7 : EL CANTELL INFERIOR DELS MIRALLS ESTARA A UNA ALÇADA MÀXIMA DE 90cm

NOTA 8 : EL RENTAMANS NO TÉ PEDESTAL NI MOBILIARI INFERIOR I LA CARA SUPERIOR ESTARÀ SITUADA ENTRE 70 I 85 cm D'ALÇADA

NOTA 9 : ELS ESPAIS D'APROPAMENT LATERAL AL VÀTER I A LA DUTXA TINDRÀN UNA AMPLADA MÍNIMA DE 0,8m

NOTA 10 : LES BARRES DE SUPORT ESTARAN SITUADES A UNA ALÇADA ENTRE 70 I 75cm DEL TERRA, TINDRAN UNA LONGITUD IGUAL O SUPERIOR A 70cm I SERAN BATENTS

NOTA 11 : L'ALÇADA DEL SEIENT DE L'INODOR ESTARÀ SITUADA ENTRE 45 I 50cm

NOTA 12 : L'ESPAI DE TRANSFERÈNCIA DE LA DUTXA SERÀ IGUAL O SUPERIOR A 80cm

NOTA 13 : A LES DUTXES ES COL·LOCARÀ UNA BARRA HORITZONTAL SITUADA ENTRE 70 I 75cm D'ALÇADA I UNA BARRA VERTICAL SITUADA A 60 cm DE LA PARET, PER SOBRE DE LA BARRA HORITZONTAL, O DUES BARRES HORITZONTALS FENT UN ANGLE RECTE

NOTA 14 : EL SEIENT DE LA DUTXA FARÀ UN MÍNIM DE 40X40X45cm D'ALÇADA, SERÀ ABATIBLE I DISPOSARÀ DE RESPATLLER

NOTA 15 : LA GRIFERIA SERÀ TIPUS MONOMANDO AMB PALANCA GERONTOLÒGICA

ESPAI DE GIR DE DIÀMETRE 1,50 m

ESPAI DE TRANSFERÈNCIA EN SERVEIS ACCESSIBLES EN INODOR, ESPAI DE TRANSFERÈNCIA LATERAL D'AMPLADA IGUAL O SUPERIOR A 80 CM, I DE FONS IGUAL O SUPERIOR A 75 CM.

ESPAI DE TRANSFERÈNCIA EN SERVEIS ACCESSIBLES EN LAVABO, ESPAI DE TRANSFERÈNCIA LATERAL D'AMPLADA IGUAL O SUPERIOR A 80 CM, DE LONGITUD IGUAL O SUPERIOR A 150 CM EN CAS D'APROXIMACIÓ LATERAL, I DE 120 CM EN CAS D'APROXIMACIÓ FRONTAL

BARRES HORITZONTALS, DE LONGTUD 70CM O SUPERIOR, SITUADES A UNA ALTURA DE 70-75 CM, SEPARADES ENTRE SI 65-70 CM

MOBILIARI ADAPTAT PER A DUTXA

ESPAI DE TRANSFERÈNCIA EN SERVEIS ACCESSIBLES EN DUTXA, ESPAI DE TRANSFERÈNCIA LATERAL D'AMPLADA IGUAL O SUPERIOR A 80 CM, DE LONGITUD IGUAL O SUPERIOR A 120 CM

## CUADRO DE ANCLAJES SEGÚN CE

| POSICIÓN I (Arm. inferior) | | POSICIÓN II (Arm. superior) | |
|---|---|---|---|
| ACERO Ø mm. | HORMIGÓN cm. | ACERO Ø mm. | HORMIGÓN cm. |
| Ø6 | 15 | Ø6 | 25 |
| Ø8 | 20 | Ø8 | 30 |
| Ø10 | 25 | Ø10 | 35 |
| Ø12 | 30 | Ø12 | 45 |
| Ø16 | 50 | Ø16 | 70 |
| Ø20 | 75 | Ø20 | 105 |
| Ø25 | 120 | Ø25 | 170 |
| Ø32 | 195 | Ø32 | 275 |

NOTAS:
- El solape en zonas de tracción (ARMADO SUPERIOR EN SOPORTES Y ARMADO INFERIOR EN EL CENTRO DEL VANO), será igual de dos veces la longitud de anclaje.
- El solape en zonas de compresión (ARMADO INFERIOR EN SOPORTES, Y ARMADO SUPERIOR EN EL CENTRO DEL VANO), será igual a una vez la longitud de anclaje.
- En caso de duda utilizar siempre como longitud de solape, dos veces la longitud de anclaje.

### LONGITUDES DE SOLAPE EN PIEZAS VERTICALES

| ACERO Ø mm. | HORMIGÓN cm. | ACERO Ø mm. | HORMIGÓN cm. |
|---|---|---|---|
| Ø12 | 40 | Ø20 | 80 |
| Ø16 | 60 | Ø25 | 125 |

## DISPOSICIÓN DE SEPARADORES

| | |
|---|---|
| Elementos superficiales horizontales (losas, forjados, zapatas y losas de cimentación, etc.) | |
| Emparrillado inferior | 50 Ø ó 100 cms.* |
| Emparrillado superior | 50 Ø ó 50 cms.* |
| Elementos superficiales verticales (muros, pantallas, etc.) | |
| Emparrillado trasdos | 50 Ø ó 50 cms.* |
| Emparrillado intrados | 50 Ø ó 50 cms.* |
| Separación entre emparrillados | cada 100 cms. |
| Vigas (1) | 100 cms.* |
| Soportes (1) | 100 Ø ó 200 cms.* |

(1) NOTA: Se dispondrán, al menos, tres planos de separadores por vano, en el caso de las vigas, y por tramo, en el caso de los soportes, acoplados a los cercos o estribos

Ø de la armadura a la que se acople el separador.

## CARACTERISTICAS HORMIGON SEGÚN CE

HORMIGON (CIMENTACIÓN)

| | |
|---|---|
| HA-25/F/40/XC2 | |
| Hormigón armado | 25 N/mm2 |
| Consistencia | Fluida |
| Tamaño del arido | 40 mm |
| Tipo de ambiente | XC2 |
| Recubrimiento | 50 mm |
| Aditivos | Consultar D.F. |
| Docilidad: Consistencia | Fluida |
| Docilidad: Compactación | vibrado mecánico |
| Docilidad: Asentamiento en el cono de Abrams | 6-9 cm |
| Resistencia | 7 días: 18 N/mm2 — 28 días: 25 N/mm2 |

ACERO

| | |
|---|---|
| Tipo de acero | B-500-S |
| Limite elastico´(N/mm2) | 500 |

CONTROL DE RESISTENCIA

| | |
|---|---|
| Nivel | Estadístico/Normal |
| Clase de probeta | Cilíndrica |
| Tiempos de rotura | 7 y 28 días |
| Lotes de control | 500 m2 ó 100 m3 |
| Número de amasadas por lote | 2 |
| Num. de series de probetas por amasada | 3 |
| Num. de probetas por cada serie | 6 (1 a 7 días, 3 a 28 días, 2 de reserva) |
| Otros ensayos segun CE | Cono Abrams |
| Control del acero | Normal |

## COEFICIENTES DE SEGURIDAD ADOPTADOS

HORMIGON

| | | | | |
|---|---|---|---|---|
| Coefic. parciales de seguridad (γc) | Situación persistente: 1,50 | | | |
| | Situación accidental: 1,50 | | | |
| Recubrimiento nominal (mm) | | lateral | superior | inferior |
| | cimenta./ contención | 50 | 50 | 70 |
| | pilares/ pantallas | 35 | - | - |
| | vigas/ forjados | 35 | 35 | 35 |

ACERO

| | |
|---|---|
| Coefic. parciales de seguridad (γs) | Situación persistente: 1,15 |
| | Situación accidental: 1,00 |

El acero a emplear en las armaduras deberá estar certificado

EJECUCION. Coef. parciales de Seg. ESTADO LÍMITE ÚLTIMO

| Nivel de control | TIPO DE ACCION | Situac. permanente o transitoria | | Situación accidental | |
|---|---|---|---|---|---|
| | | favorable | desfavora. | favorable | desfavora. |
| NORMAL | Variable | γQ=0,00 | γQ=1,50 | γQ=0,00 | γQ=1,00 |
| | Perman. | γG=1,35 | | | |

## DATOS RELATIVOS A LA CIMENTACIÓN

Hormigones: Pobre Fck 15 N/mm$^2$
Cimentación Fck 25 N/mm$^2$
Acero: L.E. 5100 Kg/cm$^2$

Tensión admisible considerada: 2.0 bar

Canto zapatas: 50cm, sobre un lecho de hormigón pobre hasta encontrar firme, sobre margas según geotécnico.

Recubrimento mínimo de 5 cm. (hormigonado contra el terreno 7 cm.)

El relleno del extrados de los muros de contención se hará con terraplén:
30°
densidad: 1.80 Tn/m
cohesión: 0.0 Kg/cm

y se ejecutará una vez se hayan realizado las losas, forjados o jácenas incidentes en el mismo.

## FABRICA DE BLOQUE

CARACTERISTICAS DEL LADRILLO:
- Tipo de bloque: Bloque de hormigón
- Dimensiones: 30x15x20
- Resistencia: 100 kg/cm2

CARACTERISTICAS DEL MORTERO (M-80):
- Cemento: Tipo I, clase 35
- Cal: No
- TMA Arena: 3,30 mm
- Plasticidad: Sograsa
- Resistencia: 80 kg/cm2

CARACTERISTICAS DE LA FABRICA:
- Tipo de aparejo: De sogas
- Espesor de las juntas: 1,5 a 1 cm
- Resistencia: 16 kg/cm2

No se permitirán las rozas horizontales.

Se colocará una armadura tipo "MURFOR" cada tres hiladas de bloque, y sistemáticamente en penúltima hilada de los antepechos sobre los dinteles.

Se macizará y armará todas las esquinas o un bloque cada tres metros, en toda la vertical de la fábrica.

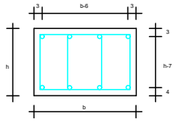
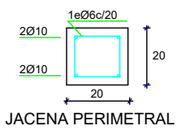
NOTAS

## ATENCIÓN

Consultar en los planos de arquitectura y replanteo la posición y forma de los elementos representados es estos documentos.
En este plano sólo se acotan las medidas propias de los elementos estructurales.



## NOTAS LOSAS MACIZAS



- Todas las jácenas, vigas y zunchos no detallados referenciados con (J.T.) se armarán según la jácena tipo o las secciones de las jácenas detalladas en los planos.
- Cuando se adopten estos parámetros de armado en la planta sólo se representarán los refuerzos y estarán denominadas como sigue:

+[nº hierros]Ø[diametro] ([longitud])
ejem.: +2Ø12 (225)

- La posición superior o inferior del acero, estará representada en los planos por encima o debajo encima o debajo de la geometría respectivamente
- La armadura se organizará en dos capas una para la longitudinal y otra para la transversal, incluyendo el armado base y el refuerzo
- La armadura de la losa propiamente dicha se situará por el exterior de las jácenas planas embebidas.
- El recubrimienro mínimo de cualquiera de las armaduras, será de 3cm.

| **Ø20** | 80 | Ø20 | 120 |
| **Ø25** | 120 | Ø25 | 170 |
| **Ø32** | 195 | Ø32 | 275 |

**NOTAS:**
- El solape en zonas de tracción (ARMADO SUPERIOR EN SOPORTES Y ARMADO INFERIOR EN EL CENTRO DEL VANO), será igual de dos veces la longitud de anclaje.
- El solape en zonas de compresión (ARMADO INFERIOR EN SOPORTES, Y ARMADO SUPERIOR EN EL CENTRO DEL VANO), será igual a una vez la longitud de anclaje.
- En caso de duda utilizar siempre como longitud de solape, dos veces la longitud de anclaje.

LONGITUDES DE SOLAPE EN PIEZAS VERTICALES

# ESQUEMA DE PRINCIPI DE FILTRACIÓ DE LA PISCINA GRAN

TEMPS D'EMPLENAT: 13 HORES

TEMPS DE RECIRCULACIÓ: 2,4 HORES

NIVELL BOIES DIPÒSIT REGULADOR:
1– Senyal de nivell mínim en piscina: per grup de bombeig.
2– Senyal de seguretat nivell mínim: obre electrovàlvula agua de aporte.
3– Senyal arranc forçat bombes per rotura o fallada de vàlvula antiretorn.

Nota: Els circuits dels dosificadors estaran enclavats amb les bombes de filtració, de manera que no es pugui dosificar cap producte químic si no s'està filtran.

EMMAGATZEMATGE DEL CLOR MITJANÇANT GARRAFES

- CIRCUIT DE PRESA DE NETEJAFONS AMB CANONADA DE PVC PN10 AMB ACCESORIS CORRESPONENTS

SANEJAMENT

LLEGENDA

S/E

| DIÀMETRE DE CONNEXIÓ DE APARELLS PLÀSTIC | APARELL |
|---|---|
| 32 | RENTAMANS |
| 40 | DUTXA |
| 110 | INODOR AMB CISTERNA |
| 40 | PICA DE CUINA |
| 110 | ABOCADOR |

NOTA 1: TOTS ELS APARELLS TINDRAN UNA VÀLVULA DE TALL JUST ABANS DEL SEU CONNEXIONAT I A L'ENTRADA DEL SEU ESPAI

NOTA 2:

| | |
|---|---|
| A | ABOCADOR |
| C | CAFETERA |
| D | DUTXA |
| F | FILTRE DE PISCINA |
| Pi | PICA DE CUINA |
| Rm | RENTAMANS |
| WC | VÀTER |

NOTA 3: EL DESGUÀS DE RENTAMANS I DUTXES ES REALITZARÀ MITJANÇANT SIFÓ INDIVIDUAL PER CADASCUN APARELL SANITARI.

NOTA 4: LA PENDENT DE LES CANONADES DE DESGUÀS DE RENTAMANS I AIGÜERES SERÀ ENTRE UN 2,5% Y 5%.

NOTA 5: S'EVITARÀ SEMPRE QUE SIGUI POSSIBLE ENFRONTAMENT DE DOS DESGUASSOS AMB UNA CANONADA COMÚ.

NOTA 6: AL TRAVESSAR ELS MURS ES FARÀ SERVIR PASSAMURS DE PLÀSTIC DINTRE DELS QUALS LES CANONADES PUGUIN LLISCAR-SE NO QUEDANT MAI UNA JUNTA DINS D'AQUEST PASSAMURS.

NOTA 7: LA XARXA HORITZONTAL DE DESGUÀS, A L'EDIFICI ES FARÀ AMB PENDENTS ⩾1,5%.

NOTA 8: EL DESGUÀS DE L'AIGÜERA ES REALITZA MITJANÇANT SIFÓ INDIVIDUAL REGISTRABLE ABANS DE LA SEVA CONNEXIÓ AL BAIXANT.

NOTA 9: PROTECCIÓ DELS MATERIALS UTILITZATS AMB RESPECTE A LA AGRESSIÓ AMBIENTAL, RESPECTE D'ALTRES MATERIALS NO COMPATIBLES I DE LES AIGÜES BRUTES.

NOTA 10: BUSCAR SEMPRE RESOLDRE LA POSSIBILITAT DE DILATACIÓ EN LES CONDUCCIONS RESPECTE A SÍ MATEIXES I RESPECTE A LES TROBADES AMB ALTRES ELEMENTS CONSTRUCTIUS. AIXÒ PRODUEIX LA INDEPENDÈNCIA TOTAL DE LA XARXA AMB RESPECTE ALS ELEMENTS ESTRUCTURALS DE L'EDIFICI PER IMPEDIR ELS MOVIMENTS RELATIUS ENTRE UNS I ALTRES. SON NECESSARIS ELEMENTS ELÀSTICS D'INTERPOSICIÓ.

NOTA 11: LA DISPOSICIÓ DE SOBREEIXIDOR EN RENTAMANS I AIGÜERES ES OBLIGATÒRIA.

NOTA 12: S'ADMET PENDENTS FINS A UN 10% EN DUTXES.

NOTA 13: ELS BAIXANTS SERAN DE LA MATEIXA DIMENSIÓ EN TOTA LA SEVA LONGITUD.

CLAVEGUERÓ AMB TUB DE PVC-U DE PARET MASSISSA PER A SANEJAMENT D':
- AIGÜES RESIDUALS
- AIGÜES PLUVIALS

CLAVEGUERÓ AMB TUB DE PVC-U DE PARET COMPACTE PER A SANEJAMENT SOTERRAT AMB PRESSIÓ

PUNT DE DESGUÀS:
- AIGÜES RESIDUALS
- AIGÜES PLUVIALS

00.00 CIRCUIT.MODEL

00.01 PROJECTOR ESTANC LED PER EXTERIOR MUNTAT SOBRE BÀCUL, IP66, 200W DE POTÈNCIA, 3.000K I DE DIMENSIONS: 418x330x330. MARCA: GEWISS, MODEL: ELIA FL, REFERÈNCIA: GWF1100ZC830 O EQUIVALENT

00.02 TIRA LED FLEXIBLE DE 220V, IP67, 15W/M DE POTÈNCIA, MARCA: B.LED, MODEL: B1535-BF O EQUIVALENT AMB PERFIL D'ALUMINI PER ENCASTAR AMB DIFUSOR I TAPES AL FINAL, MARCA: B.LED, MODEL: PXG-205 O EQUIVALENT

00.03 FOCUS TIPUS LED DE JARDÍ ORIENTABLE, GRAU DE PROTECCIÓ IP65, 12W DE POTÈNCIA, 3000 K, 73 MM D'AMPLADA I 255 MM D'ALÇADA. MARCA: V-TAC I MODEL: VT-857 O EQUIVALENT.

00.05 LLUMENERA D'EMERGÈNCIA ESTANCA AMB LÀMPADA LED I AUTONOMIA DE 1h I 450 LUMENS, MODEL: HYDRAG P8, MARCA: DAISALUX O EQUIVALENT

00.06 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 729 mm, POTÈNCIA 17 W, FLUX LLUMINÓS 1460 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.07 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 869 mm, POTÈNCIA 20 W, FLUX LLUMINÓS 1755 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.08 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 1429 mm, POTÈNCIA 34 W, FLUX LLUMINÓS 2925 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.09 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 1709 mm, POTÈNCIA 41 W, FLUX LLUMINÓS 3510 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.10 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 1991 mm, POTÈNCIA 48 W, FLUX LLUMINÓS 4095 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.11 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 2341 mm, POTÈNCIA 56 W, FLUX LLUMINÓS 4825 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.12 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 2411 mm, POTÈNCIA 58 W, FLUX LLUMINÓS 4970 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

00.13 LLUMINÀRIA DE SUPERFÍCIE IP54 DE LONGITUD 2551 mm, POTÈNCIA 61 W, FLUX LLUMINÓS 5265 lm, TEMPERATURA DE COLOR 3000 K AMB CARCASSA DE PERFIL D'ALUMINI ANODITZAT AMB ACABAT BLANC. DIFUSOR DE POLICARBONAT ESMERILAT I TAPES D'ALUMINI DE 5 mm. MODEL: U60 MARCA: OM O EQUIVALENT.

PRESA DE CORRENT TIPUS SHUCKO DE 16 A MARC I CAIXA PER ENCASTAR

NOTA 1: EL CABLE ES COL.LOCARÀ SOBRE UNA CAPA D'ESPESSOR MÍNIM 0,05 M DE SORRA DE MINA O DE RIU RENTADA. PER SOBRE DEL CABLE ANIRÀ UNA CAPA DE SORRA TAMISSADA D'ESPESSOR MÍNIM 0,10 M. AMBDUES CAPES OCUPARAN L'AMPLADA DE LA RASSA, LA QUAL PERMETRÀ MANTENIR UNA SEPARACIÓ MÍNIMA ENTRE CABLES I PARETS LATERALS DE 0,05 M

NOTA 2: PER SOBRE DEL CABLE ANIRÀ COL.LOCADA UNA LLOSA DE FORMIGÓ PER PROTECCIÓ MECÀNICA I SENYALITZACIÓ A UNA DISTÀNCIA MÍNIMA DEL PAVIMENT DE 0,10 M I DE LA PART SUPERIOR DEL CABLE DE 0,25 M

NOTA 3: QUAN ES DISPOSI D'UN PUNT DE CONNEXIONAT ELÈCTRIC NO PRÒXIM A CAP PARAMENT VERTICAL LA LÍNIA ES DISTRIBUIRÀ SOTA TUB D'ACER GALVANITZAT SITUAT DINTRE DE LA CAPA DE COMPRESSIÓ DEL FORJAT.

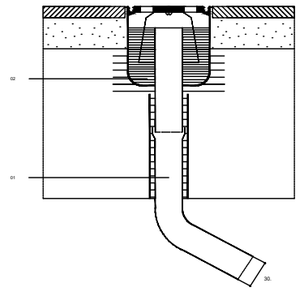
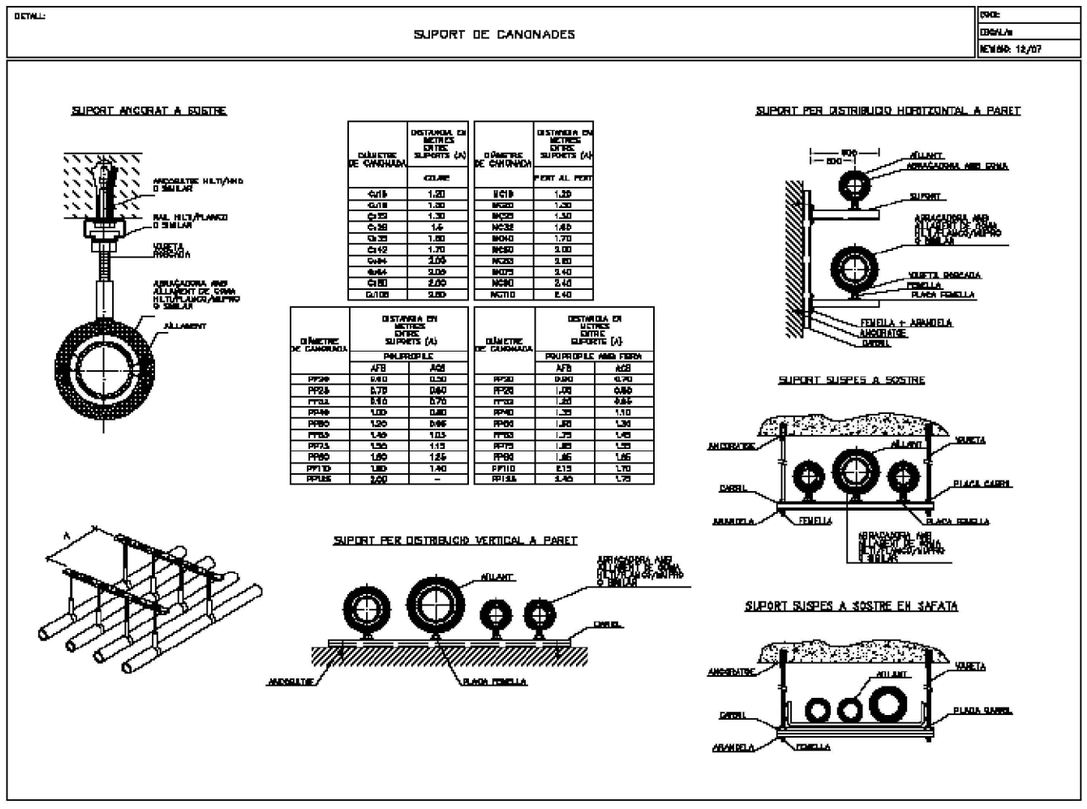
# RE.01



## ARQUETA SIFONICA

| | | |
|---|---|---|
| 01 | EAT- 2 | Cerco de perfil laminado L 505 al que iran soldadas las armaduras de la tapa de hormigon. |
| 02 | EFL- 6 | Muro aparejado de 12 cm de ladrillo macizo R-100 kg/cm, con juntas de mortero M-40 de espesor 1 cm |
| 03 | EHL- 2 | Armadura formada por redondos de diametro 8 mm de acero AE 42 formando reticula cada 10 cm. |
| 04 | EHL- 4 | Losa sustentada en 4 bordes de hormigon de resistencia caracteristica 175 kg/cm |
| 05 | RPE- 14 | Enfoscado con mortero 1:3 y bruñido. Angulos redondeados. |
| 06 | RSS- 1 | Solera y formacion de pendientes de hormogon en masa de resistencia caracteristica 100 kg/cm. |



## DEGUAS DE LAVABO AMB SIFO INDIVIDUAL

1. TUB DE PVC. DAMETRE 35 mm
2. VALVULA DE DESGUAS AMB PRESA PER SOBREEXIDOR, DIAMETRE INTERIOR 35 mm
3. SIFO P. DIAMETRE INTERIOR 35 mm

## SUMIDERO SIFONICO PARA LOCALES HUMEDOS

| | |
|---|---|
| ISS-1. | Tubo de plomo. Diametro interior 30 mm. Se soldara en un extremo al mangullo de desague del sumidero previo abocardado al menos en una longitud igual a su diametro. El otro extremo se soldara al bote sifonico, derivacion o mangueton del inodoro. |
| | La soldadura se hara con estano al 33 %. El curvado se hara con radio interior minimo igual a 60 mm. Los pasos a traves del forjado se haran con contratubo de fibrocemento ligero con una holgura mi- nima de 10 mm. que se reta cara con masilla asfaltica. Los tramos horizontales tendran una pendiente mi- nima del 25 % y maxima del 10 %. Se sujetaran mediante bridas dispuestas cada 700 mm. |
| ISS-13. | Sumidero sifonico de salida vertical. Diametro interior 30 mm. Se colocara sobre lecho de masilla asfaltica y enrasado con pavimiento. |

## TUBERIES DESCOBERTES FIXACIÓ D'ABRAÇADORES

A : Solució dolenta
Fixació incorrecta, el tub no té possibilitat de bellugar-se

B: Solució bona
Fixació correcta, permet la dilatació del tub.

# Dades del client que sol·licita la feina

Ajuntament de Llinars del Vallès

# Introducció i antecedents

A petició l'Ajuntament de Llinars del Vallès es realitza l'aixecament topogràfic de lde part dels entorns de la zona de l'Esportiu de Llinars del Vallès. Es representaran els límits existents (tanques, marques i murs actuals), la resta dels elements significatius de l'àmbit com ara l'arbrat existent (amb tronc > 30cm) i els serveis a peu de carrer. També es representarà l'altimetria donant punts de cota i corbes de nivell de la zona terreny. Finalment, també a petició del client es realitza el replanteig del límit oest de la parcel·la a partir de les dades escripturals i de la realitat física.

Àmbit de l'aixecament topogràfic marcat en carbassa (Fons cartogràfic ICGC)

# Aixecament i replanteig topogràfic

## Metodologia i instruments per a l'aixecament I replanteig topogràfic

Es realitza  un aixecament topogràfic durant el mes de maig de 2024 de la realitat física inclosa en el perímetre de l'àmbit.

L'àrea de treball permet  l'ús de la tecnologia GNSS utilitzant les constel·lacions GPS, GNSS, Galieo i Beidou. Aquesta metodologia permet enllaçar amb el sistema de referència oficial ETRS89 - UTM F31 N.

Aquest sistema de mesura ofereix una precisió suficient pel tipus de treball a realitzar:

- 2 cm planimetria i 3 cm altimetria en sistema relatiu.

- 4 cm planimetria i 6 cm altimetria en sistema absolut.

Aixecament de l'àrea de treball en GNSS

El model de l'equip utilitzat és el següent:

- Recepto GNSS AlphaGEO Matrix II

El sistema de referència emprat és el ETRS89 (marc CATNET) i en altimetria s'ha utilitzat el geoide EGM08D595. Les coordenades estan expressades en la projecció UTM (FUS 31). S'han utilitzat correccions a temps real a través del servei RTKAT de CATNET (ICGC) emprant les estacions virtuals amb les següents coordenades:

Aixecament de l'àrea de treball en GNSS

## Representació gràfica

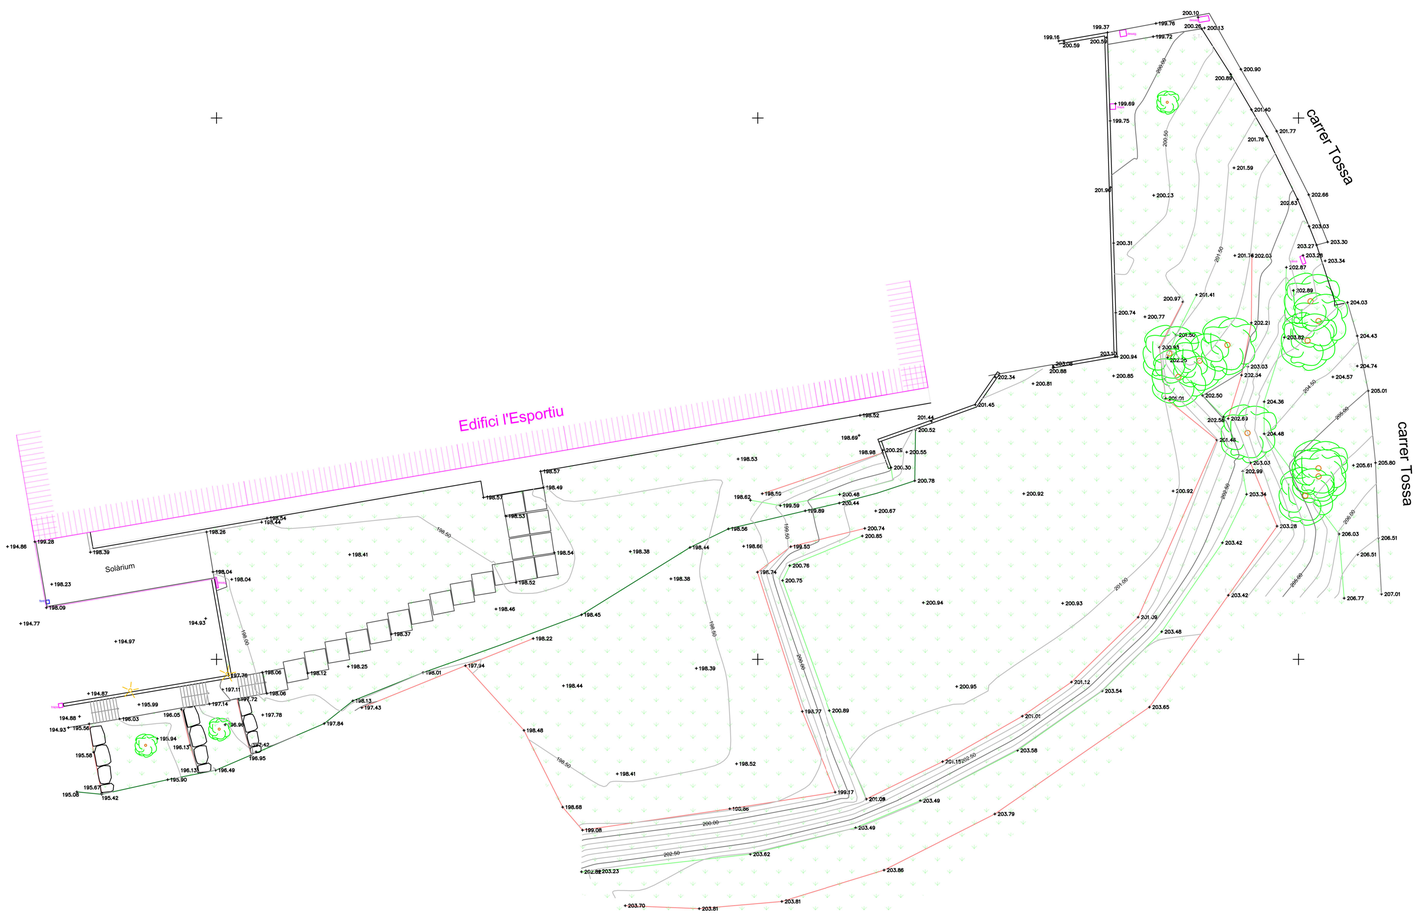
Per a la representació gràfica de l'aixecament topogràfic s'ha emprat l'eina CAD. Per la part

d'altimetria s'ha utilitzat el programari MDT.

Les especificacions tècniques de l'aixecament topogràfic realitzat són les corresponents a una representació a escala: 1: 200.

A part dels límits de la de la parcel·la, s'han donat trapes dels vorals, caixes, trapes, fanals i desaigües. També s'han donat cotes de fora la zona de l'aixecament (parcel·les veïnes i via pública).

El resultat del treball és el d'un full DIN-A1 que representa tota l'àrea mesurada a escala 1: 200.



## Incidències

No hi ha hagut incidències destacables.

## 1. ANTECEDENTS I OBJECTIUS

Aquest estudi geotècnic, encarregat per l'**AJUNTAMENT DE LLINARS DEL VALLÈS**, s'ha realitat pel projecte de construcció d'una piscina exterior a l'avinguda Pau Casals nº 281, present a la localitat de Llinars del Vallès (figura 1).

**Segons el *Documento Básico SE-C***, a efectes del reconeixement del terreny, aquesta construcció, es corresponen amb un tipus de construcció C-0 i amb un grup de terreny T-1, ja que es preveu la construcció d'edificacions auxiliars amb una sola planta baixa amb una superfície construïda inferior a 300 $m^2$ (figura 2).

**Els objectius principals d'aquest estudi**, es resumeixen a continuació:

- Estudi del context geològic de la zona.
- Identificació i caracterització de les característiques geotècniques de les diferents unitats litològiques detectades, mitjançant la realització de sondeigs mecànics a rotació amb extracció de mostra contínua, proves de penetració dinàmica súperpesada (DPSH), assaigs de penetració estàndard (SPT) i assaigs de laboratori tant d'identificació (humitat natural, densitat natural, grau d'expansivitat del sòl, agressivitat del mateix enfront el formigó, ...) com de resistència i deformació (compressió simple, tall directe, ...).
- Determinació de la presència de nivell freàtic, la seva fondària i si presenta agressivitat enfront el formigó segons el *Código Estructural (R.D. 470/2021).*
- Estudi de la fonamentació pel cas actual, tenint en compte les característiques geotècniques de les diferents unitats litològiques detectades durant l'execució dels treballs de camp.
- Estudi de la ripabilitat.
- Determinació de l'acceleració sísmica bàsica (ab/g), del coeficient de contribució (K) i del coeficient del terreny (C) segons la *Norma de Construcción Sismorresistente (NCSE-02) RD 997/02*.
- Determinació del grup de municipis on s'engloba la zona d'estudi, en base a l'Apèndix B de l'Annex II del *Documento Básico HS Salubridad-Sección HS 6 Protección frente a la exposición al radón.*

**Figura 1.** Vista aèria de la zona d'estudi, emmarcada en groc (font *Google Maps)*.

**Tabla 3.1. Tipo de construcción**

| Tipo | Descripción (1) |
|---|---|
| C-0 | Construcciones de menos de 4 plantas y superficie construida inferior a 300 m$^2$ |
| C-1 | Otras construcciones de menos de 4 plantas |
| C-2 | Construcciones entre 4 y 10 plantas |
| C-3 | Construcciones entre 11 a 20 plantas |
| C-4 | Conjuntos monumentales o singulares, o de más de 20 plantas. |

(1) En el cómputo de plantas se incluyen los sótanos.

**Tabla 3.2. Grupo de terreno**

| Grupo | Descripción |
|---|---|
| T-1 | Terrenos favorables: aquellos con poca variabilidad, y en los que la práctica habitual en la zona es de cimentación directa mediante elementos aislados. |
| T-2 | Terrenos intermedios: los que presentan variabilidad, o que en la zona no siempre se recurre a la misma solución de cimentación, o en los que se puede suponer que tienen rellenos antrópicos de cierta relevancia, aunque probablemente no superen los 3,0 m. |
| T-3 | Terrenos desfavorables: los que no pueden clasificarse en ninguno de los tipos anteriores. De forma especial se considerarán en este grupo los siguientes terrenos:<br>a) Suelos expansivos<br>b) Suelos colapsables<br>c) Suelos blandos o sueltos<br>d) Terrenos kársticos en yesos o calizas<br>e) Terrenos variables en cuanto a composición y estado<br>f) Rellenos antrópicos con espesores superiores a 3 m<br>g) Terrenos en zonas susceptibles de sufrir deslizamientos<br>h) Rocas volcánicas en coladas delgadas o con cavidades<br>i) Terrenos con desnivel superior a 15º<br>j) Suelos residuales<br>k) Terrenos de marismas |

**Figura 2.** Tipus de Construcció i tipus de Terreny (font: *Documento Básico SE-C, pàg. 11 i 12*).

## 2. TREBALLS DE RECONEIXEMENT

Els treballs de reconeixement de la zona d'estudi han consistit en el següent:

- ✓ Visita del geòleg a l'emplaçament per a verificar la maquinària més adient per a la realització del treballs de camp, tenint en compte tant l'accés com la geologia de la zona.
- ✓ Supervisió "in situ" pel geòleg de les perforacions realitzades.
- ✓ Realització de ***2 proves de penetració dinàmica súperpesada (DPSH)*** fins els 2.0-3.6 metres de fondària on s'ha obtingut el rebuig a la sonda (figura 3).
  Aquestes fondàries fan referència les boques de la perforació.

  A l'assaig (DPSH), s'ha de comptar el número de cops necessaris per clavar una puntaza de forma cònica normalitzada de diàmetre 50.5 mm, mitjançant una maça de 63.5 ± 0.5 kg. de pes que cau des d'una alçada de 76 cm. La freqüència de copeig és de 15-30 cops per minut. Amb aquests valors de $N_{20}$ (nº de cops necessaris per clavar la puntaza 20 cm. en el terreny), es genera una gràfica on s'indica el número de cops per cada fondària del sondeig.

  A *l'Annex gràfic* queden registrades a les gràfiques obtingudes.

**Figura 3.** Execució dels DPSH P-1 i P-2.

- ✓ Realització de ***2 sondeigs mecànics a rotació amb extracció de mostra contínua*** mitjançant bateries simples i corones de widia fins els 10.0 metres de fondària. Aquesta fondària fa referència a la boca de la perforació (figura 4).

  Tots els testimonis obtinguts durant la perforació dels sondeigs a rotació, han sigut descrits i analitzats per un geòleg i dipositats, seqüencialment, en caixes porta mostres tal i com es pot observar a cadascuna dels columnes estratigràfiques de l'*Annex gràfic*.

**Figura 4.** Execució dels sondeigs a rotació S-1R i S-2R.

- ✓ Durant la realització dels sondeigs a rotació s'han realitzat ***8 assaigs de penetració estàndard (SPT)*** i s'han agafat ***6 mostres inalterades*** per a la realització d'assaigs de laboratori.

  L'assaig SPT, és una prova de penetració dinàmica que determina la resistència del sòl a la penetració d'un agafamostres tubular d'acer, a l'interior del sondeig, de manera que permet obtenir una mostra representativa, encara que alterada, del subsòl.

  Consisteix en contar el número de cops (N) necessaris per penetrar en el subsòl mitjançant el colpeix d'una maça de 63.5 kg ± 0.5 kg. de pes que cau des d'una alçada de 760 mm ± 10 mm. En concret, la penetració es realitza en quatre trams de 15 cm. de longitud, sent el valor $N_{30}$ al corresponent amb la suma dels cops dels dos trams centrals.

  Amb les mostres inalterades i SPT recollits als sòls, s'han realitzat els següents assaigs de laboratori:

| TIPUS D'ASSAIG | NORMA | Nº ASSAIGS |
|---|---|---|
| Granulometria | UNE 103-101-95 | 2 |
| Humitat natural | UNE 103-300-93 | 3 |
| Pes específic de les partícules sòlides | UNE 103-302-94 | 1 |
| Densitat natural | UNE 103-301-94 | 3 |
| Expansivitat Lambe | UNE 103-600-96 | 3 |
| Contingut en sulfats | UNE 83963:2008 | 5 |
| Compressió simple | UNE 103-400-93 | 2 |
| Tall directe | UNE 103-401-98 | 1 |
| ***Aquests assaigs han sigut realitzats per TERRES Laboratori de Ciències de la Terra, S.L., acreditat per la Generalitat de Catalunya.*** | | |

## 3. EMPLAÇAMENT

La zona d'estudi es localitza al costat del centre esportiu L'Esportiu de Llinars, present a l'avinguda Pau Casals nº 281 de la localitat de Llinars del Vallès (veure figura 5), situant-se els sondeigs a rotació i els DPSH tal i com es presenta al plànol adjunt a l'annex gràfic i a la figura 6.

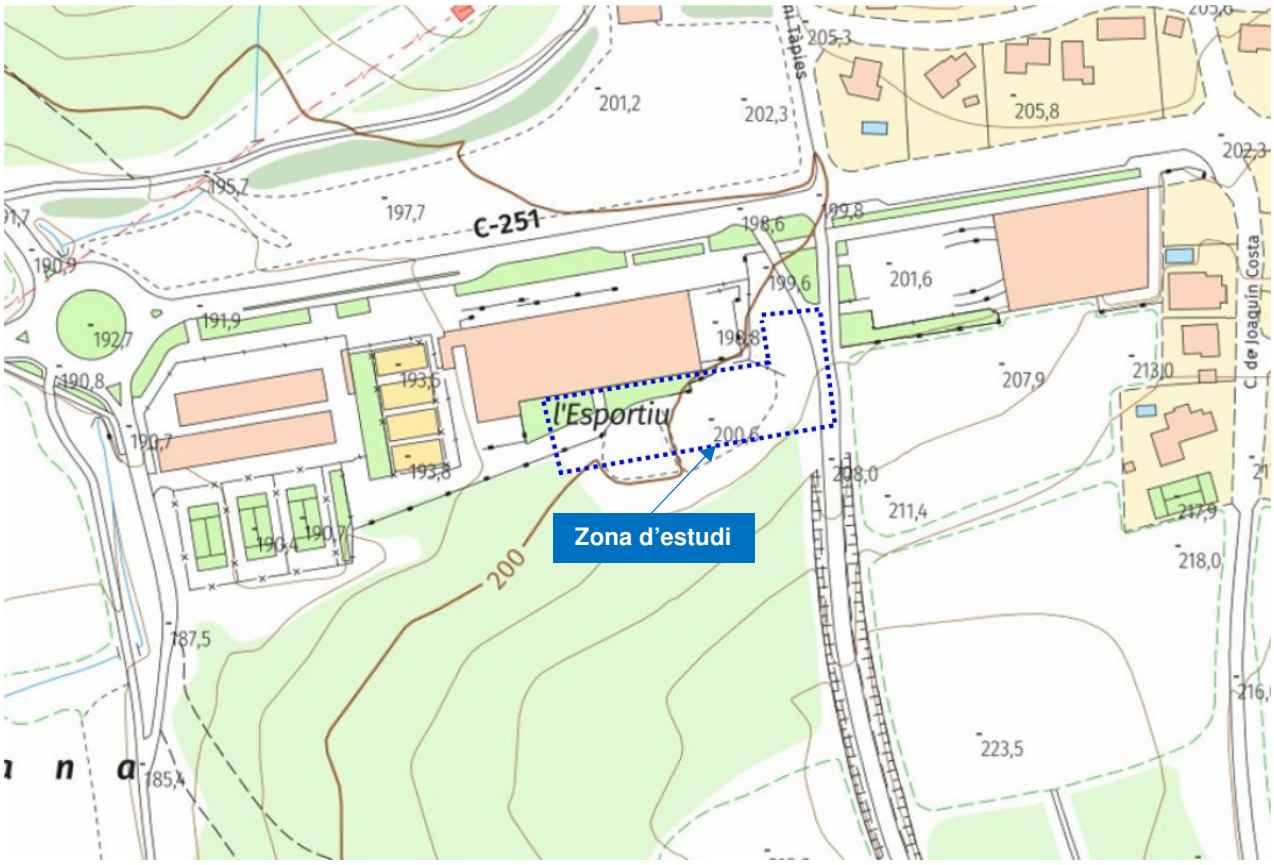

**Figura 5.** Localització de la zona d'estudi, emmarcada en blau (font *Institut Cartogràfic i Geològic de Catalunya, ICGC*).

La zona d'estudi té forma rectangular i presenta una topografia irregular, fet pel que les diferències topogràfiques entre les boques dels sondeigs a rotació i els DPSH són d'ordre centimètric a mètric.

Segons el plànol topogràfic facilitat per la propietat, les boques dels sondeigs es detecten a les següents cotes topogràfiques:

| DPSH | COTA TOPOGRÀFICA |
|---|---|
| P-1 | +200.9 m |
| P-2 | +198.4 m |

| SONDEIG A ROTACIÓ | COTA TOPOGRÀFICA |
|---|---|
| S-1R | +200.7 m |
| S-2R | +200.9 m |

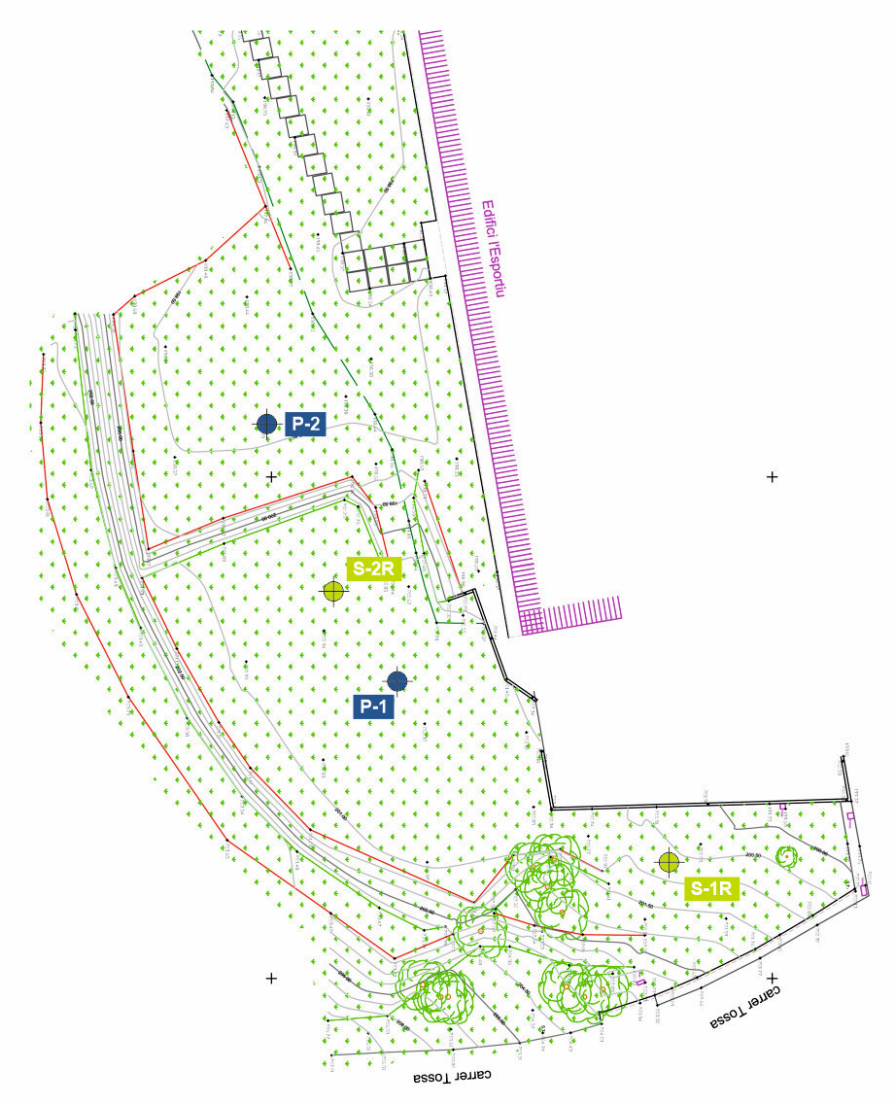

**Figura 6.** Plànol de situació dels sondeigs a rotació i DPSH.

# 4. DESCRIPCIÓ GEOLÒGICA I GEOTÈCNICA

## 4.1. Context geològic

La zona d'estudi es localitza a la part meridional de la Serralada Litoral Catalana, la qual es troba travessada per una sèrie de rieres i torrents que drenen direcció mar.

Geològicament, aquesta serralada, es troba orientada de NE a SW i és subparal·lela a la línia de costa, com a resultat de l'aixecament del sòcol durant l'orogènia Alpina. Es troba constituïda per batòlits plutònics (granítics o granodiorítics de gra mig a groller, rics en minerals com el quars, l' ortosa i la plagioclasa i, en menor grau, la biotita, l'hornblenda i la moscovita). Externament, existeixen dics de roques filonianes d'espessor centimètric i longituds quilomètriques d'origen porfídic, pegmatìtic o aplític.

Superficialment, aquestes litologies es troben alterats per la caolitinització dels feldspats i la cloritització de les biotites, donant lloc al sauló.

Aquest substrat rocós presenta espessors de centenars de metres per sobre del qual, es distribueixen de manera discontínua els sediments d'edat Quaternària (graves, argiles, sorres), tant si és d'origen al·luvial associat a torrents, de col·luvió o piemont o, com sòls eluvials resultats de l'alteració "in situ" d'aquest substrat rocós. No obstant, la nostra zona d'estudi es localitza molt a prop del riu Mogent, fet pel que es detecten els dipòsits fluvials d'aquest riu. En concret es detecten, principalment, nivells detrítics (sorres, graves, còdols i blocs) amb intercalacions secundàries de nivells cohesius (argiles).

La zona d'estudi es troba ubicada en la fulla nº 41 (Vallès Oriental) del Mapa Geològic Comarcal editat per la Generalitat de Catalunya a escala 1:50.000.

A la figura 7 es pot observar el mapa geològic de l'àrea d'estudi.

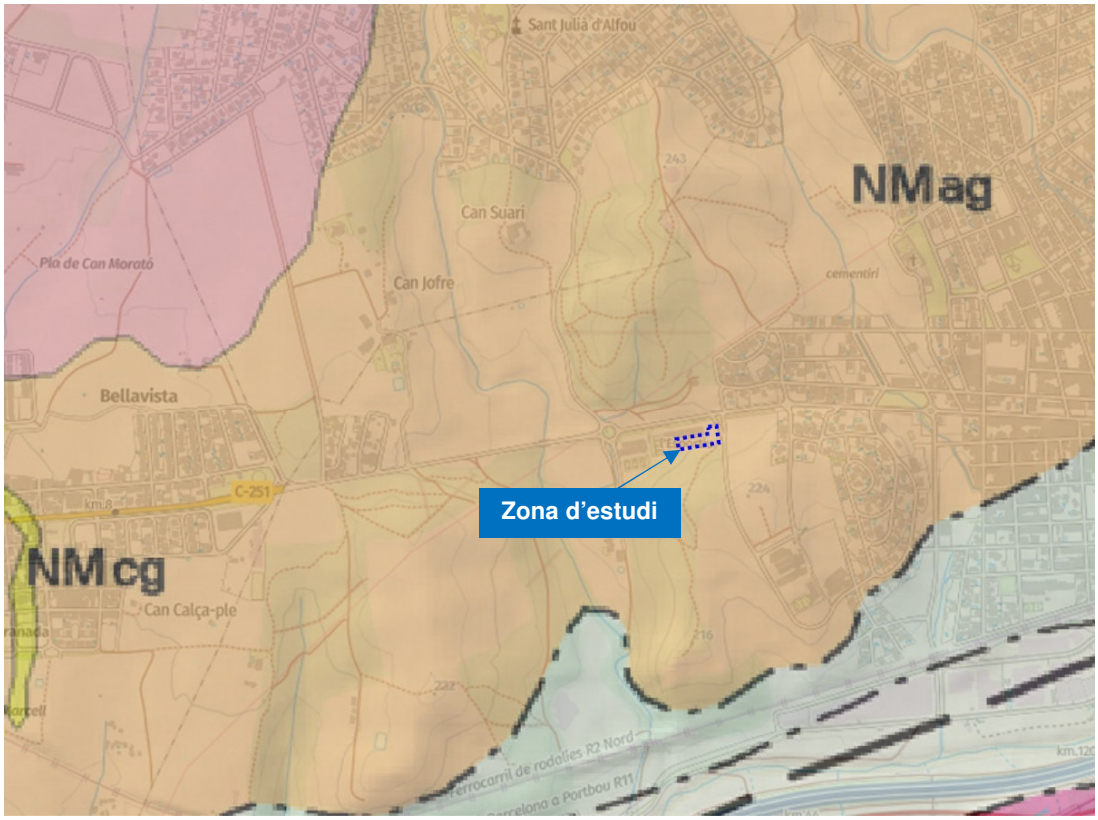

**Figura 7.** Context geològic de la zona d'estudi, emmarcada en blau (font *Institut Cartogràfic i Geològic de Catalunya, ICGC*).

## 4.2. Característiques geotècniques

Una vegada finalitzats els diferents sondeigs a rotació, les proves de penetració dinàmica (DPSH) i analitzades les mostres de sòls, s'han pogut determinar les característiques geotècniques de les diferents litologies detectades.

Les unitats geotècniques diferenciades són les següents:

- Unitat de reblert
- Substrat Terciari

A continuació, es farà una descripció de cadascuna de les unitats així com, s'exposaran les seves característiques geotècniques principals.

### 4.2.1. Unitat de reblert

Superficialment, es detecta una unitat de reblert que presenta una composició litològica heterogènia, detectant-se nivells de sorres fines a mitges amb restes vegetals i nivells de llims marró foscos amb graves, restes vegetals i antròpiques (cascots) disperses (figura 8).

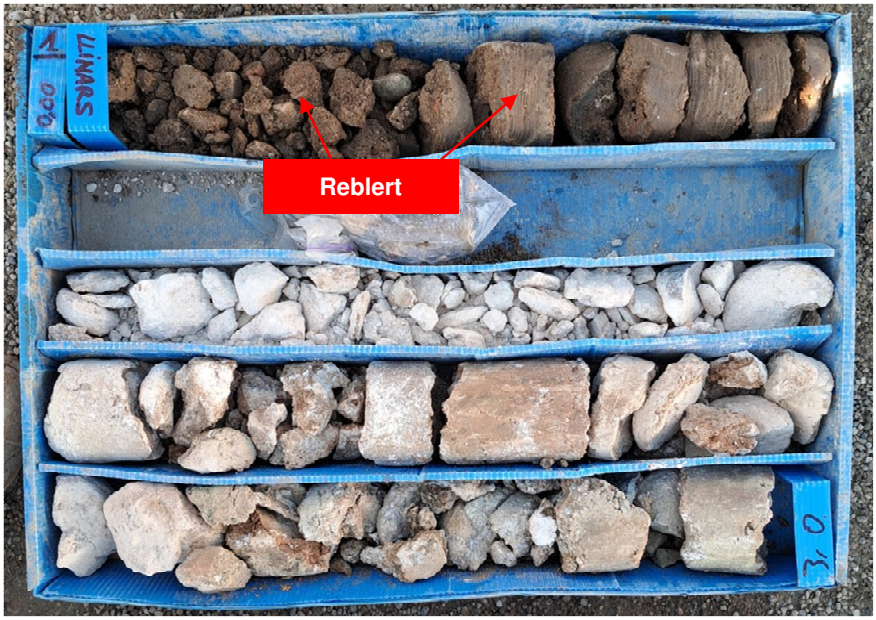

**Figura 8.** Aspecte que presenten els sòls de la unitat de reblert.

Una vegada finalitzades totes les perforacions, s'ha pogut verificar que, en els punts investigats, aquesta unitat arriba fins a les següents fondàries (referides a les boques de les mateixes):

| SONDEIG A ROTACIÓ | FONDÀRIA |
|---|---|
| S-1R | 0.8 m |
| S-2R | 0.2 m |

| DPSH | FONDÀRIA |
|---|---|
| P-1 | 0.4 m |
| P-2 | 0.4 m |

Donat el seu origen antròpic, no es descarta que en algun punt de l'emplaçament aquesta unitat pugui presentar un espessor superior a l'observat als sondeigs realitzats.

Aquests materials, habitualment, es troben associats a assentaments incontrolables degut a l'heterogeneïtat que presenta la seva estructura interna. Per tant, ja que presenten un comportament tenso-deformacional molt variable, no es consideren *apte per a resoldre cap tipus de fonamentació.*

Les característiques geotècniques d'aquesta unitat són les següents:

| ASSAIG | RESULTAT |
|---|---|
| Densitat natural estimada, ρ (t/m$^3$) | 1.70-1.75 |
| Cohesió estimada, c (Kg/cm$^2$) | Nul·la-0.05 |
| Angle de fregament intern estimat, φ (º) | 24.0-25.0 |
| Assaig DPSH, $N_{20}$ (nº cops/20 cm.) | 5-10 |

### 4.2.2. Substrat Terciari

Finalment, per sota de la unitat de reblert i fins a la fondària màxima assolida pels sondeigs a rotació i els DPSH, es detecta el Substrat Terciari de la zona, constituït pels següents nivells litològics:

- ***Nivells cohesius*** d'argiles llimoses i argiles sorrenques de tonalitats marrons a marró blanquinoses (figura 9). Es detecten nivells de tonalitats marró blanquinoses molt carbonatats amb carbonat càlcic pulverulent.
  Aquests sòls es poden catalogar com a CL-ML/CL-SC, segons la classificació USCS (Unified Soil Classification System).
  Des del punt de vista tenso-deformacional, aquests sòls mostren consistències fermes a dures.
  Cal indicar que, aquests nivells cohesius, per exposició continuada als agents atmosfèrics, pateixen processos de meteorització que redueixen considerablement les seves característiques resistents, cohesives i friccionals.

- ***Nivells detrítics*** de sorres fines a mitges marrons amb matriu argilosa i graves disperses (figura 9).
  Aquests sòls es poden catalogar com a SC/SC-GC, segons la classificació USCS (Unified Soil Classification System), com a fracció grollera secundària es detecten còdols de pissarra dispersos.
  Des del punt de vista tenso-deformacional, aquests sòls mostren compacitats denses.

- ***Nivells cimentats*** gruix centimètric a decimètric. Aquest nivell es troba constituït per sorres cimentades i per crostes carbonatades (figura 9). Des del punt de vista tenso-deformacional, aquests materials presenten consistències rocoses.
  Aquests sòls representen el constituent secundari d'aquesta unitat geotècnica.

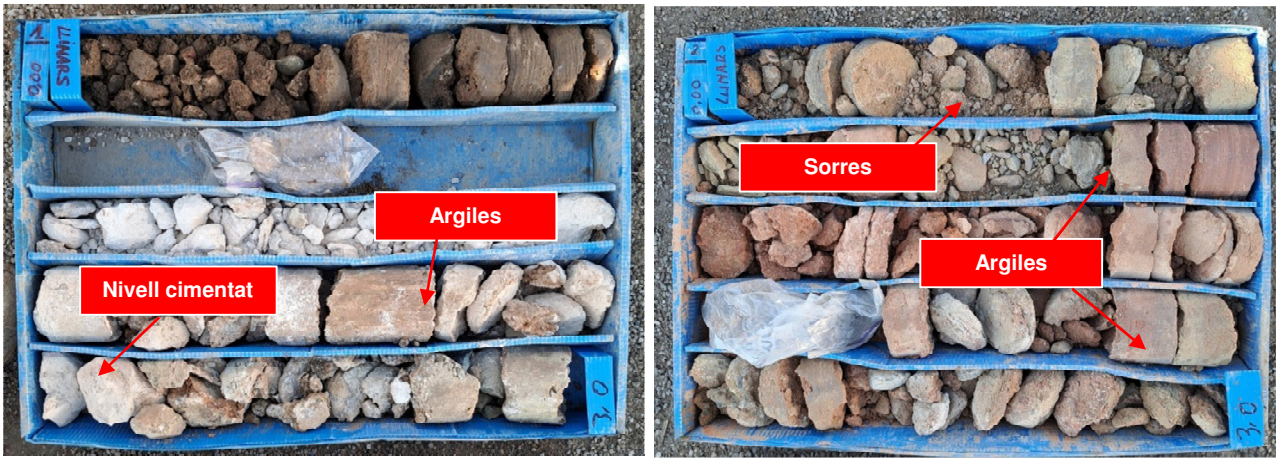

**Figura 9**. Detall dels nivells presents al Substrat Terciari.

Aquests nivells presenten una distribució espaial erràtica, tant longitudinalment com verticalment.

Degut a que aquest sòls, representen el substrat de la zona d'estudi, presentaran un gruix superior a vàries desenes de metres, mantenint o augmentant en fondària, les seves característiques geotècniques.

A mode de resum, des del punt de vista geotècnic, aquesta unitat mostra nivells cohesius (argiles llimoses i argiles sorrenques) amb consistències fermes a dures amb intercalacions de nivells detrítics (sorres) de compacitats denses i nivells cimentats de consistència rocosa.

A la següent taula s'indiquen les característiques geotècniques d'aquesta unitat geotècnica:

| ASSAIG | RESULTAT | |
|---|---|---|
| Classificació USCS | CL-SC/CL-ML (argiles) | SC/SC-GC (sorres) |
| Granulometria, $T_{0.08}$ (%) | --- | 21.9-35.6 |
| Humitat natural, W (%) | 9.2-14.6 | 8.01 |
| Pes específic aparent, G (t/m$^3$) | --- | 2.70 |
| Densitat natural, ρ (t/m$^3$) | 2.13-2.16 | 1.99 |
| Índex d'inflament, $I_H$ (MPa) | 0.11-0.12 (2) | 0.02 (3) |
| Canvi potencial de volum | Marginal (2) | No crític (3) |
| Contingut en sulfats (mg $SO_4^{2-}$/kg mostra) | <399-<463 (4) | <353-<396 (4) |
| Cohesió, c (Kg/cm$^2$) | 0.25-0.35 (1) | 0.23 |
| Angle de fregament intern, φ (º) | 26.0-27.0 (1) | 42.9 |

(*) Estas condiciones no se dan en la práctica.

**Figura 11.** Classificació de l'agressivitat química dels sòls, roques i aigües

(font: Código Estructural, R.D. 470/2021).

## 5.- HIDROGEOLOGIA

### 5.1. Nivell freàtic

En el moment de perforació dels diferents sondeigs a rotació i DPSH (novembre de 2024), no es va detectar la presència del nivell freàtic fins la profunditat màxima assolida dels sondeigs.

Als penetròmetres, no s'ha pogut mesurar la posició del nivell freàtic perquè les parets es van desmoronar.

Cal indicar que en èpoques d'elevades precipitacions no es descarta la presència de circulacions d'aigua pels trams més permeables o pels límits estratigràfics.

Finalment indicar que l'execució dels sondeigs coincideix amb un època de forta sequera.

### 5.2. Grau de permeabilitat segons DB-HS1

Les unitats geotècniques detectades, presenten els següents coeficients de permeabilitat del terreny i grau d'impermeabilitat segons el DB-HS1:

| | UNITAT GEOTÈCNICA | | PRESÈNCIA D'AIGUA | COEFICIENT DE PERMEABILITAT DEL TERRENY | GRAU D'IMPERMEABILITAT |
|---|---|---|---|---|---|
| **SÒLS** | Unitat de reblert | | Baixa | $K_s>10^{-5}$ cm/s | 2 |
| | Substrat Terciari | Nivells cohesius | Baixa | $K_s\leq10^{-5}$ cm/s | 1 |
| | | Nivells detrítics | Baixa | $K_s>10^{-5}$ cm/s | 2 |
| Segons el *Documento Básico HS1 de Protección frente a humedad (figura 12).* | | | | | |

**Tabla 2.3** ***Grado de impermeabilidad*** **mínimo exigido a los suelos**

| | Coeficiente de permeabilidad del terreno | |
|---|---|---|
| **Presencia de agua** | **$K_s>10^{-5}$ cm/s** | **$K_s\leq10^{-5}$ cm/s** |
| **Alta** | 5 | 4 |
| **Media** | 4 | 3 |
| **Baja** | 2 | 1 |

**Figura 12.** Grau d'impermeabilitat per sòls

(font *Documento Básico HS1 de Protección frente a humedad).*

# 6.- FONAMENTACIÓ

## 6.1. Introducció

Segons la informació facilitada per la Propietat, a la zona d'estudi es preveu la construcció d'una piscina exterior i d'una sèrie d'edificacions auxiliars. Es pot considerar que l'execució de la piscina implicarà l'excavació del terreny de l'ordre de 2.0 m respecte la cota actual.

La fonamentació de la piscina es podrà resoldre de manera superficial amb llosa de fonamentació encastada al Substrat Terciari que es detectarà a cota d'excavació. També la fonamentació de les altres estructures es podran resoldre de manera superficial amb sabates aïllades o corregudes encastades al Substrat Terciari.

Al següent apartat s'indicaran els valors de capacitat portant per aquests tipus de fonamentació.

## 6.2. Fonamentacions directes

Tal i com s'ha comentat a l'anterior apartat, la fonamentació de les noves estructures es podria resoldre de manera directa mitjançant llosa de fonamentació, sabates aïllades o corregudes degudament encastades en al Substrat Terciari que, els punts investigats, es detecta a partir de les següents fondàries (referides a les boques de les perforacions):

| SONDEIG A ROTACIÓ | FONDÀRIA |
|---|---|
| S-1R | 0.8 m |
| S-2R | 0.6 m |

| DPSH | FONDÀRIA |
|---|---|
| P-1 | 0.6 m |
| P-2 | 0.4 m |

Es recomana que la fonamentació s'encasti un mínim de 50 cm a dins del Substrat Terciari.

Segons la formulació emprada (*veure Annex de càlcul*), pel disseny d'aquest tipus de fonamentació directa degudament encastada en el Substrat Terciari, es podrien aplicar els següents valors de càrrega admissible per sabates aïllades i corregudes:

| TIPUS DE FONAMENTACIÓ | DIMENSIONS FONAMENTACIÓ (B / L / D) [1] | FS [2] | CÀRREGA ADMISSIBLE ($q_{adm}$) | ASSENTAMENT (S) [3] |
|---|---|---|---|---|
| Sabata aïllada | B=L=1.0-2.0 m<br>D=0.5 m | 3 | 2.45 kg/cm$^2$ | 0.75-0.90 cm |
| Sabata correguda | B=1.0-1.5 m<br>L= 10-15 m<br>D=0.5 m | 3 | 1.95 kg/cm$^2$ | 0.55-0.80 cm |

[1] B=amplada fonamentació, L= longitud fonamentació, D=encastament mínim aconsellat a dins de la unitat geotècnica.
[2] FS=Factor de seguretat inclòs en el càlcul de la càrrega admissible.
[3] Per a fonamentacions directes, l'assentament (S) es considera admissible quan és inferior a 1 polsada (1 polsada=2.54 cm).

En el cas de la llosa de fonamentació, es podrà aplicar el següent valor de capacitat portant:

| TIPUS DE FONAMENTACIÓ | DIMENSIONS FONAMENTACIÓ (B / L / D) [1] | FS [2] | CÀRREGA ADMISSIBLE ($q_{adm}$) | ASSENTAMENT (S) [3] |
|---|---|---|---|---|
| Llosa de fonamentació | B= 10.0 m<br>L=20.0 m<br>D=0.5 m | 3 | 2.00 kg/cm$^2$ | 2.68-3.05 cm |

[1] B=amplada fonamentació, L= longitud fonamentació, D=encastament mínim aconsellat a dins de la unitat geotècnica.
[2] FS=Factor de seguretat inclòs en el càlcul de la càrrega admissible.
[3] Per a fonamentacions directes amb llosa de fonamentació, l'assentament (S) es considera admissible quan és inferior a 2 polsades (2 polsades=5.08 cm).

Pel disseny d'aquesta llosa de fonamentació, es podrà aplicar un coeficient de balast, $K_{30}$ pel Substrat Terciari de 5.0 Kg/cm$^2$.

## 7.- RIPABILITAT I EMPENTA DE TERRES

Tenint en compte les característiques geotècniques que presenten les diferents unitats litològiques diferenciades, durant l'execució de les noves fonamentacions, es podrien tenir en compte les següents consideracions:

- Les baixes característiques geotècniques que presenta la unitat de reblert (baixa a nul·la cohesió, inestabilitat estructural, baixes característiques geotècniques, ...).
- La baixa cohesió que presenten els nivells detrítics que constitueixen el Substrat Terciari.
- L'elevada consistència que presenta el Substrat Terciari.
- La presència de nivells cimentats.
- La possible presència de nivell freàtic.

Pel disseny dels elements de contenció de terres, es podrien aplicar els següents valors de resistència al tall (cohesió i angle de fregament intern) i densitat natural per a les diferents unitats litològiques detectades:

| UNITAT GEOTÈCNICA | | DENSITAT NATURAL ($t/m^3$) | COHESIÓ ($Kg/cm^2$) | ANGLE DE FREGAMENT INTERN (º) |
|---|---|---|---|---|
| Unitat de reblert | | 1.73 | 0.03 | 24.5 |
| Substrat Terciari | Nivells cohesius | 1.95 | 0.25 | 26.0 |
| | Nivells detrítics | 1.90 | 0.15 | 43.0 |

## 8.- SISMICITAT

La perillositat sísmica del territori nacional queda reflexada en el mapa de la figura 13, el qual facilita, expressat en relació al valor de la gravetat *g*, l'acceleració sísmica bàsica $a_b$ (valor característic de l'acceleració horitzontal de la superfície del terreny) i, el coeficient de contribució *K* (considera la influència dels diferents terratrèmols esperats en la perillositat sísmica de cada punt).

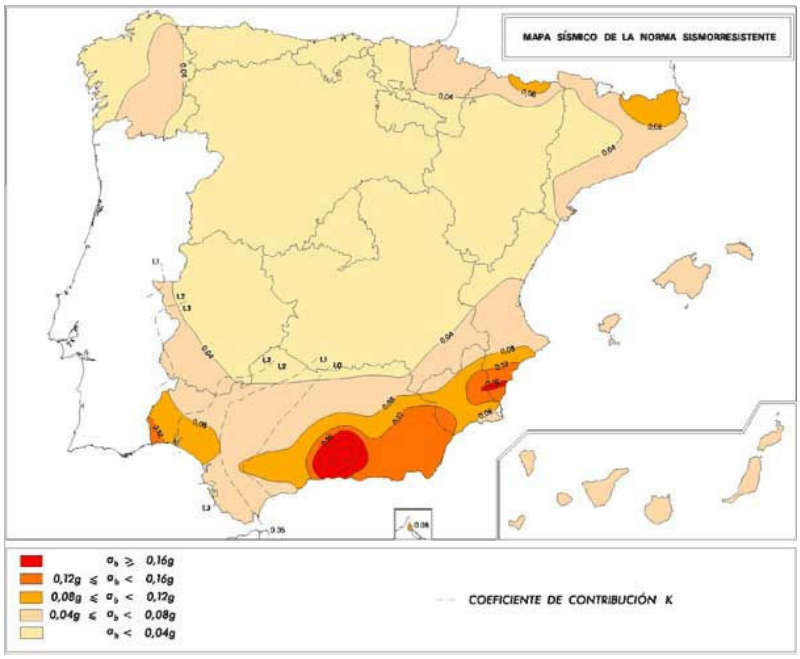

**Figura 13.** Mapa de perillositat sísmica (font *Norma de Construcción Sismorresistente, NCSE-02*).

Seguint les indicacions de la *Norma de Construcción Sismorresistente (NCSE-02), RD 997/2002*, es poden determinar els següents paràmetres:

- **Acceleració sísmica bàsica ab/g,** pel municipi de Llinars del Vallès: 0.04
- **Coeficient de contribució K,** pel municipi de Llinars del Vallès: 1.0
- **Coeficients del terreny C**, per a cadascuna de les unitats litològiques detectades:

| UNITAT GEOTÈCNICA | TIPUS DE SÒL | COEFICIENT C |
|---|---|---|
| Unitat de reblert | IV | 2.0 |
| Substrat Terciari | II | 1.3 |

## 9.- PROTECCIÓ ENFRONT A L'EXPOSICIÓ AL RADÓ

En base a l'Apèndix B de l'Annex II del *Documento Básico HS Salubridad-Sección HS 6 Protección frente a la exposición al radón*, el terme municipal de Llinars del Vallès queda inclòs en la classificació del grup de municipis de la **zona II** (figura 14).

A l'Annex II, s'estableix com a nivell de referència pel *promig anual de concentració de radó* a l'interior dels locals habitables un valor de 300 Bq/m$^3$ d'aire. Aquest valor serveix per a limitar el risc d'exposició al radó dels usuaris dels locals habitables.

A l'Apèndix C de l'Annex II, queden reflexades les especificacions bàsiques per a determinar el promig anual de concentració de radó (Rn-222) a l'aire dels locals habitables de l'edifici projectat així com, el procés per a la seva determinació subdividit en tres fases (mostreig, medició i estimació del promig anual de concentració de radó) a dissenyar pel projectista, la direcció facultativa o entitat de control i el laboratori acreditat. Per tant, aquest conjunt d'actuacions, queda fora de l'abast d'aquest estudi geotècnic.

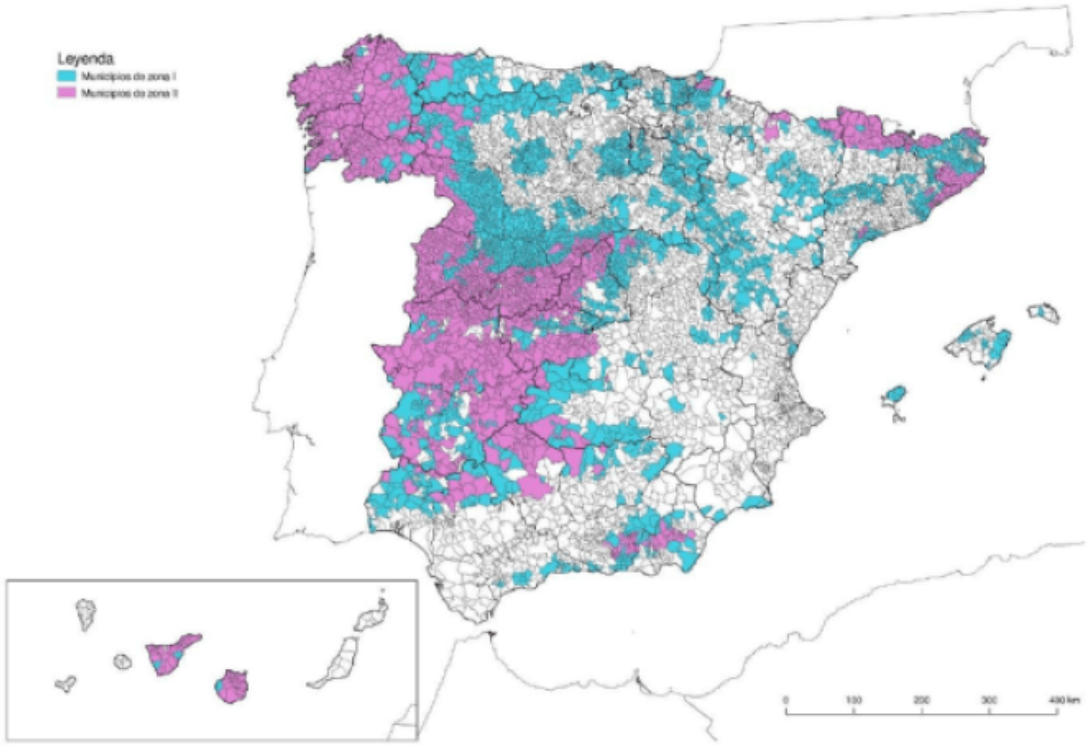

**Figura 14.** Mapa de municipis classificats per nivells de potencial de radó (font *Anejo II. DB-HS Salubridad*).

.

## 10.- CONCLUSIONS

A continuació s'exposaran les conclusions més importants extretes d'aquest estudi geotècnic realitzat a l'avinguda Pau Casals nº 281 de Llinars del Vallès:

- A la zona d'estudi es preveu la construcció d'una piscina exterior i una sèrie d'estructures associades. Es considera que l'execució de la piscina implicarà l'excavació del terreny de l'ordre de 2.0 m respecte la cota actual, en canvi la resta d'estructures no implicaran l'excavació del terreny, només la necessària per l'execució de les fonamentacions.

- **La successió litostratigràfica** obtinguda ha estat la següent:

  - *Unitat de reblert* d'un espessor comprès entre 0.2 m i 0.8 m. Aquesta unitat no es considera apte pel recolzament de cap tipus de fonamentació.
  - *Substrat Terciari* constituïda per nivells d'argiles llimoses i argiles sorrenques de tonalitats marrons a marró blanquinoses de consistències fermes a dures, nivells de sorres fines a mitges amb còdols dispersos i abundant matriu que presenten compacitats denses i nivells cimentats de consistència rocosa.

- No s'han de considerar riscos de l'**agressivitat** del terreny enfront del formigó segons el Código Estructural (R.D. 470/2021).

- El Substrat Terciari presenta un **grau d'expansivitat baix-mig**.

- No s'ha detectat el **nivell freàtic** fins la fondària màxima assolida pels sondeigs. No obstant no es descarta que en èpoques d'elevades precipitacions es presentin circulacions d'aigua pels trams més permeables o pels límits estratigràfics. Cal indicar que els sondeigs s'han realitzat en una època de forta sequera.

- Segons la informació facilitada es preveu la construcció d'una piscina exterior que implicaria l'excavació del terreny de l'ordre de 2.0 m respecte la cota actual i la construcció d'estructures secundàries que no implicarien l'excavació del terreny respecte la cota actual. La fonamentació d'aquestes estructures es podria resoldre de manera directa mitjançant **sabates aïllades, sabates corregudes o llosa de fonamentació** degudament encastades al Substrat Terciari
  Al subapartat 6.2. queda reflexat el valor de càlcul per aquest tipus de fonamentació.

- Per a **l'execució de les fonamentacions**, s'aconsella tenir en compte les recomanacions de l'apartat 7.0 d'aquest informe.

- **L'acceleració sísmica bàsica** ($a_b/g$) de Llinars del Vallès és de 0.04.

- En base a l'Apèndix B de l'Annex II del *Documento Básico HS Salubridad-Sección HS 6 Protección frente a la exposición al radón*, el terme municipal de Llinars del Vallès queda **inclòs** en la classificació del grup de municipis de la zona II.

Els resultats i conclusions obtingudes en aquest estudi, es basen únicament en els treballs realitzats dins la zona d'estudi.

Sant Andreu de la Barca, novembre de 2024

Miguel López Somoza

## CONTINGUT ANNEX DE CÀLCUL

Fonamentacions superficials

**LSM LOSOM Consultoria geotècnica, medi ambient i fonamentacions especials, S.L.**
c/Josep Pla nº 14, 3r-2a 08740 Sant Andreu de la Barca (Barcelona) Tel.: 93 682 18 96 e-mail: m.lopez@losom.es www.losom.es

# FONAMENTACIONS DIRECTES

Pel càlcul de la càrrega d'enfonsament s'ha utilitzat la formulació generalitzada proposada per Brinch Hansen (1970):

$$q_h = (c*N_c*s_c*d_c*i_c) + (q_0*N_q*s_q*d_q*i_q) + (½*B*\gamma*N_\gamma*s_\gamma*d_\gamma*i_\gamma)$$

| **On:** | |
|---|---|
| $d_c$, $d_q$, $d_\gamma$ = | coeficients d'influència (depèn de la fondària del plànol inferior de la sabata). |
| $s_c$, $s_q$, $s_\gamma$ = | factors d'influència (depèn de la forma en planta de la sabata). |
| $i_c$, $i_q$, $i_\gamma$ = | factors d'influència (depèn de la inclinació de la càrrega). |

*Factors de correcció deguts a la influència de la fondària de la fonamentació*

Per tenir en compte aquest efecte, que òbviament augmenta la tensió d'enfonsament disponible, es fa servir un coeficient de correcció $d_c$, a aplicar al termini de cohesió, funció de la relació fondària/ample de la fonamentació definit per la següent expressió (Blanco, 1997):

$$d_c = 1 + 0'35\frac{D}{B}$$

| **On:** | **D** = espessor del terreny per sobre de la base de la sabata.<br>**B** = ample sabata. |
|---|---|

Els factors corresponents als termes de densitat i de sobrecàrrega poden considerar-se la unitat ($d_\gamma$=1, $d_q$ = 1).

*Factors de correcció deguts a la influencia de la forma de la fonamentació*

En general, la tensió d'enfonsament d'una sabata circular o quadrada resulta major que la d'una sabata indefinida. L'efecte de la forma del fonament es té en compte mitjançant els factors de correcció que s'indiquen a continuació:

- Terme $N_c$:
  - $s_c$= *1'20*, per a sabata circular
  - $s_c = 1 + 0'2\frac{B}{L}$, per a sabata rectangular d'ample B i longitud L en planta

- Terme $N_q$:

- $s_q$= *1'20*, per a sabata circular
- $s_q = 1 + 1'5 \cdot tan\phi' \cdot \frac{B}{L}$, per a sabata rectangular

- Terme $N_\gamma$:
  - $s_\gamma$= *0'60*, per a sabata circular
  - $s_\gamma = 1 + 0'1\frac{B}{L}$, per a sabata rectangular

*Factors de correcció deguts a la influència de l'excentricitat de la fonamentació*

Els coeficients a aplicar per efecte de l'existència de components horitzontals de càrregues sobre la sabata són:

- Terme $N_q$:

  $i_q = (1-0'7 \cdot tan\delta_B)^3 \cdot (1- tan\delta_L)$

- Terme $N_c$:

  $i_c = \frac{i_q \cdot N_q - 1}{N_q - 1}$; para $\phi'=0$: $i_c = 0'5 \cdot \left(1 + \sqrt{1 - \frac{H}{B \cdot L \cdot c}}\right)$

- Terme $N_\gamma$:

  $i_\gamma = (1-tan\delta_B)^3 \cdot (1- tan\delta_L)$

| **On:** | $\delta_B$, $\delta_L$ = angles de desviació de la càrrega respecte a la vertical. |
|---|---|

## CÀLCUL D'ASSENTAMENTS MITJANÇANT EL MÈTODE ELÀSTIC

Aquest mètode consisteix en suposar que el sòl correspon a un semiespai elàstic, homogeni i isòtrop amb mòdul d'elasticitat E i coeficient de Poisson ν (semiespai de Boussinesq, 1876 i 1885), pel que existeixen nombroses solucions matemàtiques ja resoltes, tant sobre distribució de tensions, com de deformacions i assentaments en superfície.

Un dels casos més comuns seria el d'un rectangle com a càrrega uniforme, pel que s'exposa la següent solució pel càlcul d'assentaments en superfície:

$$S = [K*(q*B*(1-\nu^2))]/E$$

| **On:** | |
|---|---|
| **S =** | Assentament total de la fonamentació. |
| **q =** | Pressió neta aplicada. |
| **B =** | Ample fonamentació. |
| **ν =** | Coeficient de Poisson. |
| **E =** | Mòdul de deformació. |
| **K =** | Coeficient de forma (taula 1). |

**Taula 1.-**Valors del coeficient K. (Blanco, 1997).

| Forma de la carga m = L/B | K | | |
|---|---|---|---|
| | Esquina | Centro | Carga rígida |
| m = 1 | K en la esquina = 1/2 K en el centro | 1,12 | 0,88 |
| m = 1,5 | | 1,36 | 1,08 |
| m = 2 | | 1,53 | 1,22 |
| m = 3 | | 1,78 | 1,44 |
| m = 4 | | 1,96 | 1,61 |
| m = 5 | | 2,10 | 1,72 |
| m = 6 | | 2,23 | |
| m = 7 | | 2,33 | |
| m = 8 | | 2,42 | |
| m = 9 | | 2,49 | |
| m = 10 | | 2,53 | 2,12 |
| m = 20 | | 2,95 | |
| m = 30 | | 3,23 | |
| m = 40 | | 3,42 | |
| m = 50 | | 3,54 | |
| m = 100 | | 4,00 | |

## ASSAIGS DE CONTINGUT EN SULFATS SOLUBLES D'UN SÒL — UNE103202/95 i UNE 83963/2008

Determinació qualitativa segons norma UNE 103202/95

Data d'inici d'assaig: 3/12/2024 pH de la suspensió: 7,2

Data finalització d'assaig: 4/12/2024 Resultat: **NEGATIU (No detectat)**

% de material que passa pel UNE 2: 79

**RESULTATS**

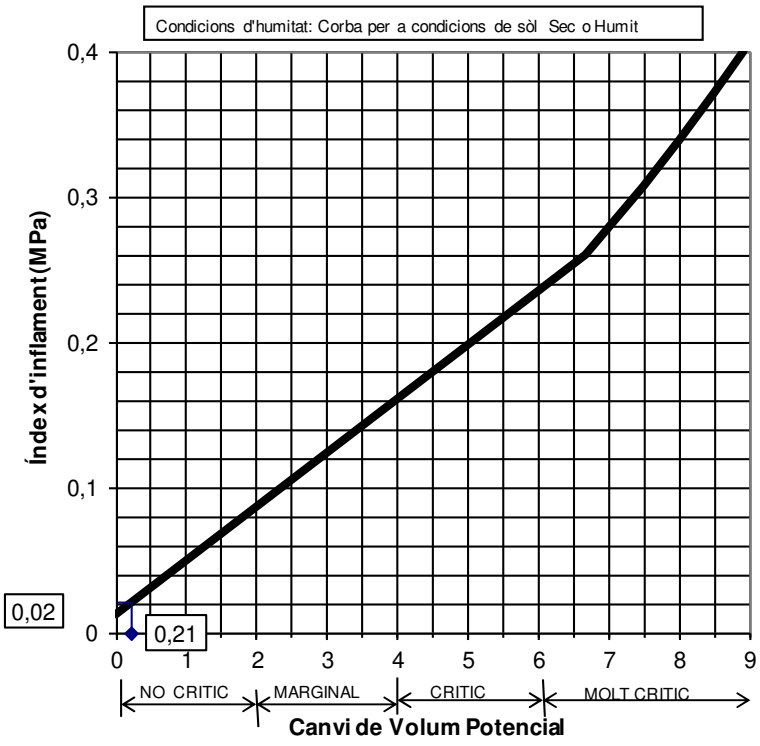
| | | |
|---|---|---|
| **Contingut en sulfats solubles de quantitat analitzada (%$SO_4^{2-}$):** | **<** | **0,05** |
| **Contingut sulfats solubles respecte mostra original (%$SO_4^{2-}$):** | **<** | **0,04** |

Equivalències del resultat respecte de la mostra total:

**Expressat en $SO^{3-}$:** **< 0,03 %**

**Expressat en $CaSO_4 \cdot 2H_2O$:** **< 0,09 %**

**Expressat en mg $SO_4^{2-}$ per kg sòl sec:** **< 396**



## ASSAIG D'EXPANSIVITAT D'UN SÒL EN L'APARELL LAMBE — UNE 103600/96

Data inici de l'assaig: 3/12/2024 Data final de l'assaig: 4/12/2024

Condicions de l'assaig:

| Humitat | Compactació |
|---|---|
| Sec (w 50) | 3 capes/ 7 cops per capa |

Constant de l'anell dinamomètric (N/div): 10,05 (Data de calibratge): 29/2/2024

**RESULTATS:** **Índex d'inflament (MPa)** **0,02**

**Cànvi potencial de volun** **0,21 NO CRÍTIC**

## LABORATORI D'ASSAIGS PER AL CONTROL DE QUALITAT DE L'EDIFICACIÓ

**Declaració Responsable núm. L0600319 de 30 de gener de 2018 a la Generalitat de Catalunya.**

L'abast d'actuació inclós a les Declaracions Responsables inscrites a l'Agència de l'Habitatge de Catalunya (Generalitat de Catalunya) i al Registre General del Codi Tècnic de l'Edificació es pot consultar a www.gencat.cat i a www.codigotecnico.org.

**Dades del peticionari:**

0971 LOSOM Consultoria Geotècnica, Medioambiental i Fonaments Especials, S.L.
C/ Josep Pla nº 14, 3er, 2ª 08740 - Sant Andreu de la Barca TF:93 682 18 96 NIF: B-66631664

**Identificació de la mostra donada pel peticionari:** ***LLINARS***
**Referència donada pel peticionari:** ***Sondeig: S-1***
**Altres referències de la mostra:** ***Profunditat: 3,6 a 4,0 m***
**Data de recepció:** 27/11/2024 **Origen:** Portada pel peticionari
**Tipus de mostra:** Inalterada
**Referència donada pel tractament en el nostre laboratori:** N17883/6
**Envolcall:** Tub de PVC **Dimensions / pes:** 60 cm de longitud i 6 cm de diàmetre
**Descripció de la mostra:**

***Sorra de gra fi amb abundant matriu argilosa marró (algun petit nucli més argilós i cohesiu). Baixa humitat. Hi ha alguna grava fina granítica i de quars blanc.***

**Treballs sol·licitats i realitzats:**

X Determinació del contingut en sulfats solubles segons UNE 83963/2008 i UNE 103202/95

X Assaig de tall directe segons UNE 107892-10/2019 tipus UU no submergit amb càrregues 1, 2 i 3 Kg/cm² **(Nota 1)**

**Resultats dels assaigs:** Queden reflectits en els fulls següents de l'informe.

**OBSERVACIONS:** **Cops de clava:** **(Donat pel peticionari)**

En el laboratori resta mostra sobrant de tipus ***representatiu*** emmagatzemat convenientment.
Si no hi ha indicació contrària per part del peticionari, aquest sobrant serà destruït a partir de la data: **11/01/2025**

**HISTÒRIC**

Històric: Laboratori Acreditat per DGAP, Resolució de 7 de setembre de 2005 (Ref.06046GTL05(B)
Ambit d'assaigs de laboratori de geotècnia (GTL), assaigs bàsics.

Laboratori Acreditat per DGQEiRH, Resolució de 2 d' abril de 2009 (Ref.06046GTL05(B+C)
Ambit d'assaigs de laboratori de geotècnia (GTL), assaigs complementaris de resistència i deformació de roques.

Declaració Responsable núm. L0600006 presentada el 17 de març de 2010 a la Generalitat de Catalunya.
Declaració Responsable núm L0600016 presentada el 02 de juny de 2010 a la Generalitat de Catalunya.
Declaració Responsable núm L0600199 presentada el 02 de juliol de 2012 a la Generalitat de Catalunya.
Declaració Responsable núm L0600212 presentada el 31 de gener de 2013 a la Generalitat de Catalunya.
Declaració Responsable núm L0600224 presentada el 08 de novembre de 2013 a la Generalitat de Catalunya.

**Els càlculs i actes presents han estat realitzades amb el programa de càlcul i software elaborat integrament per TERRES LCT,SLL en revisió nº 10.13**

**VALORS PER A INTERPRETACIÓ RECTA DE REGRESSIÓ**

| | Tensió Normal KPa | Àrea corregida mm² | Tensió tangencial KPa |
|---|---|---|---|
| Proveta nº 1: | 112,16 | 1748,8 | 81,14 |
| Proveta nº 2: | 224,31 | 1748,8 | 156,83 |
| Proveta nº 3: | 336,47 | 1748,8 | 237,37 |

Equació de la recta de regressió: $\zeta = 0{,}6965 \cdot \sigma + 23{,}3167$

Aquest document consta de 4 pàgines inclosa la present, enumerades de l'1 al 4.
La reproducció d'aquest document sols esta autoritzada si es fa en la seva totalitat i amb la conformitat del laboratori.
Els resultats reflectits en aquest informe es refereixen única i exclusivament a la mostra indicada i assajada pel laboratori segons la norma relacionada o condicions d'assaig demanada.
